## What's New in HDF 3.4.1.1

HDF 3.4.1.1 is a maintenance release that includes mainly bug fixes. There are no new features introduced in this release.

For information on the fixed bugs, see *Fixed Issues*.

### Related Information

[Fixed Issues](#)

## Unsupported Features

Some features exist within HDF 3.4.1.1, but Hortonworks does not currently support these capabilities.

## Technical Preview Features

The following features are available within 3.4.1.1 but are not ready for production deployment. Hortonworks encourages you to explore these technical preview features in non-production environments and provide feedback on your experiences through the [Hortonworks Community Forums](#).

**Table 1: Technical Previews**

Component	Feature
MiNiFi	Android/iOS MiNiFi libraries for mobile integration

## Community Driven Features

The following features are developed and tested by the Hortonworks community but are not officially supported by Hortonworks. These features are excluded for a variety of reasons, including insufficient reliability or incomplete test case coverage, declaration of non-production readiness by the community at large, and feature deviation from Hortonworks best practices. Do not use these features in your production environments.

**Note:**

**Unsupported HDP Components**

NiFi processors available in HDF 3.4.1.1 have been tested against the following HDP components:

- Hive 1.2.1000.2.6.5.0-292
- Hive3 3.1.0.3.0.0.0-1634
- Hadoop: 2.7.3
- HBase: 1.1.2

Using NiFi processors to interact with other configurations of Hive, Hadoop, and HBase is not covered by Hortonworks Support.

## Unsupported Customizations

Hortonworks cannot guarantee that default NiFi processors are compatible with proprietary protocol implementations or proprietary interface extensions. For example, we support interfaces like JMS and JDBC that are built around standards, specifications, or open protocols. But we do not support customizations of those interfaces, or proprietary extensions built on top of those interfaces.

## Behavior Changes

Behavioral changes denote a marked change in behavior from the previously released version to this version of software.

There are no behavioral changes in this release.

## Apache Patch Information

The following sections list patches in each HDF 3.4.1.1 component beyond what was fixed in the base version of the Apache component.

### NiFi Patches

This release provides NiFi 1.9.0 and the listed Apache patches.

- [NIFI-6097](#): Upgrade jackson-databind direct dependencies.
- [NIFI-6105](#): Arrays of records/maps not handled correctly in Record processors.
- [NIFI-6150](#): Content Repo not getting cleaned up.
- [NIFI-6155](#): Framework task that checks if a component should run is not protected by try/catch.
- [NIFI-6215](#): Cannot swap in Flowfiles.
- [NIFI-6236](#): Content Repo not getting cleaned up when using VolatileFlowFileRepository.

For information about Apache NiFi patches fixed in HDF 3.4.0, see <https://docs.hortonworks.com/HDPDocuments/HDF3/HDF-3.4.0/release-notes/content/patches-nifi.html>.

Pay attention to the build version of your JDK because some later builds are fixed as described in JDK-8256818.</p> <p>Workaround:</p> <p>Consider using a more recent version of the JDK like 8u282, or builds of the JDK where the issue is fixed.</p>

DOCS-6263	KAFKA-7697	Kafka	<p>Description of the problem:</p> <p>You may experience a performance deterioration after upgrade to HDF 3.4.x with Kafka version 2.1.0.</p> <p>Workaround:</p> <p>To work around this issue, upgrade to HDF 3.5.x or see your support representative for an available hotfix.</p>
BUG-120051	<a href="#">NIFI-6285</a>	NiFi	<p>Description of the problem:</p> <p>When you configure a NiFi Connection by changing the Load Balance Strategy, NiFi automatically redistributes the data as needed. If this occurs while data is swapped out from the NiFi process, however, this can result in the data not being swapped back in. When this occurs, the data remains in the queue and not be processed.</p> <p>Associated error message:</p> <p>You may see an error message in the logs, similar to:  Encountered unknown Swap File ./flowfile_repository/swap/1557762343026-9e6b1ea4-016a-1000-ffff-ffff9a287a94-0ef48376-b919-4aae-9b72-0e7acfd1bf9.rebalance.swap;  will ignore this Swap File.  This file should be cleaned up manually.</p> <p>To avoid this issue:</p> <p>To avoid this, ensure that you stop the Processor upstream of any connection and allow the queue to empty before changing the Load Balance Strategy.</p> <p>To work around this issue:</p> <p>To work around this issue if you do encounter it, shut down NiFi and rename the files in the FlowFile Repository's "swap" directory such that it matches the pattern &lt;timestamp&gt;-&lt;connection identifier&gt;-&lt;uuid&gt;.local.swap instead of &lt;timestamp&gt;-&lt;connection identifier&gt;-&lt;uuid&gt;.&lt;other-partition-name&gt;.swap and then restart NiFi. Be sure only to rename those Swap Files whose name contains the relevant connection's identifier.</p>
