<b>Atlas index repair configuration.....</b>	<b>4</b>
--	----------

## Atlas index repair configuration

You can use reindexing to troubleshoot Atlas basic search inconsistency.

In your Cloudera Manager instance running the Atlas service, add the following in Atlas Server Advanced Configuration Snippet (Safety Valve) for `conf/atlas-application.properties`.

```
atlas.rebuild.index=true
```

```
atlas.patch.numWorkers=3
```

```
atlas.patch.batchSize=300
```

**Attention:**

- You must revert back this configuration once the reindexing is completed, else the reindexing takes place on every restart.
- The reindexing process will be done during Atlas restart, so Atlas will not be reachable till reindexing process is completed.
- The time taken for reindexing depends upon the amount of data.

Later, restart the Atlas Service.
