Configuring Ranger KMS High Availability

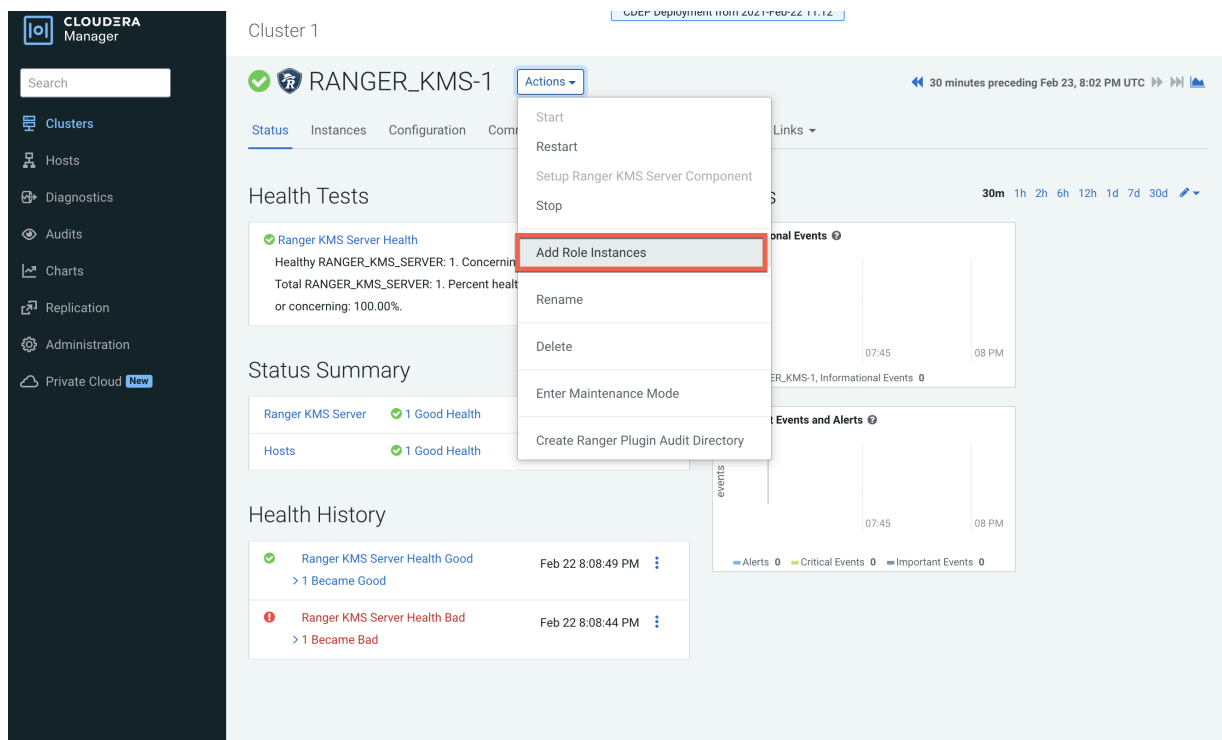

How to configure Ranger KMS high availability (HA) for Ranger KMS.

Configure High Availability for Ranger KMS with DB

Use the following steps to configure high availability for Ranger KMS with an associated keystore database.

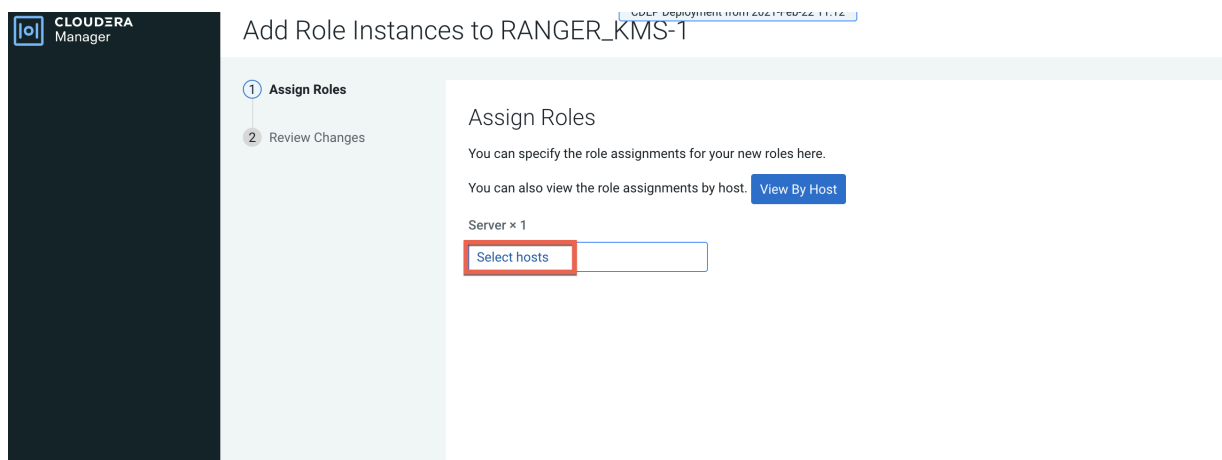

Procedure

1. In Cloudera Manager, select Ranger KMS, then select Actions > Add Role Instances.

The screenshot shows the Cloudera Manager interface for the 'RANGER_KMS-1' cluster. The left sidebar contains navigation links for Clusters, Hosts, Diagnostics, Audits, Charts, Replication, Administration, and Private Cloud. The main panel displays the 'RANGER_KMS-1' configuration page, which includes tabs for Status, Instances, Configuration, and Components. The 'Status' tab is active, showing a 'Health Tests' section with a green checkmark indicating 'Ranger KMS Server Health' is good. Below this is a 'Status Summary' section showing 'Ranger KMS Server' and 'Hosts' both with a 'Good Health' status. The 'Health History' section shows a log of health changes. On the right, there are charts for 'Personal Events' and 'Events and Alerts'. The 'Actions' dropdown menu is open, and the 'Add Role Instances' option is highlighted with a red box.

2. On the Assign Roles page, click Select hosts.

The screenshot shows the 'Assign Roles' page in Cloudera Manager for the 'RANGER_KMS-1' cluster. The left sidebar is the same as in the previous screenshot. The main panel shows the 'Assign Roles' page with a progress indicator showing '1 Assign Roles' and '2 Review Changes'. The 'Assign Roles' section contains instructions on how to specify role assignments and a 'View By Host' button. Below this, it shows 'Server x 1' and a 'Select hosts' button, which is highlighted with a red box.

- On the selected hosts page, select a backup Ranger KMS host. A Ranger KMS (RK) icon appears in the Added Roles column for the selected host. Click OK to continue.

Note: These steps show how to add one additional backup Ranger KMS host, but you can use the same procedure to add multiple Ranger KMS hosts.

2 Hosts Selected

Select hosts for a new or existing role. The host list is filtered to remove hosts that are not valid candidates; these include hosts that are unhealthy, members of other clusters, or have an incompatible version of the software installed on them.

Enter hostnames: host01, IP addresses or rack

<input type="checkbox"/>	Hostname	IP Address	Rack	Cores	Physical Memory	Existing Roles	Added Roles
<input checked="" type="checkbox"/>	cloudera71-21...	172.27.0.1	/default	80	251.6 GiB	AS, CCS, G, HB..., RS, DN, G, G, G, ID, KB, KC, KG, M, L, G, LS, RA, RT, RU, RK..., SRS, G, G, SM..., SR..., SR..., G, G, NM, ZS	RK...
<input checked="" type="checkbox"/>	cloudera71-21...	172.27.0.1	/default	32	251.6 GiB	RS, DN, G, G, ID, KB, KC, TS, L, G, G, SR..., SR..., G, NM	RK...
<input type="checkbox"/>	cloudera71-21...	172.27.0.2	/default	32	251.6 GiB	M, B, NN, NF..., SNN, G, HMS, G, HS2, LB, HS, KTR, ICS, ISS, G, KB, KC, LHBI, TS, L, G, AP, ES, HM, RM, SM, OS, SS, G, HS, G, G, JHS, RM, S	

1 - 3 of 3

Cancel OK

- The Assign Roles page is redisplayed with the new backup host. Click Continue.

1 - 2 of 2

7. In Cloudera Manager, select the Ranger service, click Ranger Admin Web UI, then log in as the Ranger KMS user (the default credentials are keyadmin/admin123). Click the Edit icon for the cm_kms service, then update the KMS URL property.

- Add the new KMS host using the following format:
kms://http@<kms_host1>;http@<kms_host2>:<kms_port>/kms
- The default port is 9292. For example:
kms://http@kms_host1;http@kms_host2:9292/kms
- If SSL is enabled, use https and port 9494. For example:
kms://http@kms_host1;http@kms_host2:9494/kms

Click Test Connection to confirm the settings, then click Save to save your changes.

8. In Cloudera Manager click the Ranger KMS service, then select Actions > Create Ranger Plugin Audit Directory.

9. In Cloudera Manager, select Ranger KMS, then click Configuration.

a) Use the Add (+) icons for the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml property to add the following properties, then click Save Changes.

- `hadoop.kms.authentication.zk-dt-secret-manager.enable = true`
- `hadoop.kms.authentication.zk-dt-secret-manager.zkConnectionString = <Zookeeper hostname>:2181`

Note: In a cluster with multiple ZK hosts, include them as a comma-separated list.
For example: `hadoop.kms.authentication.zk-dt-secret-manager.zkConnectionString = <ZK_hostname1>:2181,<ZK_hostname2>:2181,....,<ZK_hostnameN>:2181`.

- `hadoop.kms.authentication.zk-dt-secret-manager.znodeWorkingPath = <provide a znode working path other than /zkdt-sm to avoid collision>`

For example:

`hadoop.kms.authentication.zk-dt-secret-manager.znodeWorkingPath = testzkms`

Note: Do not put a leading slash at the beginning of the znode working path.

- `hadoop.kms.authentication.zk-dt-secret-manager.zkAuthType = sasl`
- `hadoop.kms.authentication.zk-dt-secret-manager.kerberos.keytab = {{CMF_CONF_DIR}}/ranger_kms.keytab`

The screenshot shows the Cloudera Manager interface for configuring Ranger KMS. The left sidebar contains navigation links for Clusters, Hosts, Diagnostics, Audits, Charts, Replication, Administration, and Private Cloud. The main content area is titled 'Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml'. It features a 'Filters' panel on the left with sections for SCOPE (RANGER_KMS-1 (Service-Wide) 0, Ranger KMS Server 1), CATEGORY (Advanced 1, Database 0, Logs 0, Main 0, Monitoring 0, Performance 0, Ports and Addresses 0, Resource Management 0, Security 0, Stacks Collection 0), and STATUS (Error 0, Warning 0, Edited 1, Non-default 1, Has Overrides 0). The main table lists configuration properties with their names, values, and descriptions. The properties are: `hadoop.kms.authentication.zk-dt-secret-manager.enable` (true), `hadoop.kms.authentication.zk-dt-secret-manager.zkConnectionString` (hwx.site:2181), `hadoop.kms.authentication.zk-dt-secret-manager.znodeWorkingPath` (testzkms), `hadoop.kms.authentication.zk-dt-secret-manager.zkAuthType` (sasl), and `hadoop.kms.authentication.zk-dt-secret-manager.kerberos.keytab` ((CMF_CONF_DIR)/ranger_kms.keytab). At the bottom, there is a 'Save Changes (CTRL+S)' button.

10. Update the following Ranger KMS configuration properties, then click Save Changes.

- `hadoop.kms.authentication.signer.secret.provider = zookeeper`
- `hadoop.kms.authentication.signer.secret.provider.zookeeper.auth.type = sasl`

12. Click the Stale Configuration Restart icon.

The screenshot shows the Cloudera Manager interface for Cluster 1. The left sidebar contains navigation options: Clusters, Hosts, Diagnostics, Audits, Charts, Replication, Administration, Private Cloud (New), Parcels, Running Commands, Support, and admin. The main panel displays the configuration for RANGER_KMS-1. The 'Configuration' tab is selected, showing a search bar with the text 'hadoop.kms.cache.enable'. A 'Filters' sidebar on the left lists various categories and their counts. A 'Stale Configuration: Restart needed' tooltip is visible over the 'Actions' button. The main content area shows the 'Hadoop KMS Cache Enable' configuration with a checked 'Ranger KMS Server Default Group' checkbox. The bottom right has a 'Save Changes (CTRL+S)' button.

13. On the Stale Configurations page, click Restart Stale Services.

14. On the Restart Stale Services page, select the Re-deploy client configuration checkbox, then click Restart Now.

15. A progress indicator page appears while the services are being restarted. When the services have restarted, click Finish.

Configure High Availability for Ranger KMS with KTS

Use the following steps to configure high availability for Ranger KMS with Key Trustee Server as the backing key store.

Procedure

1. In Cloudera Manager, select Ranger KMS KTS, then select Actions > Add Role Instances.

The screenshot shows the Cloudera Manager interface for a cluster named 'RANGER_KMS_KTS-1'. The left sidebar contains navigation links for Clusters, Hosts, Diagnostics, Audits, Charts, Replication, Administration, Private Cloud, Parcels, Running Commands, Support, and an admin user. The main content area displays the cluster's status, including Health Tests, Status Summary, and Health History. The 'Actions' dropdown menu is open, showing options like Start, Restart, Create Backup, Stop, Add Role Instances (highlighted with a red box), Rename, Delete, Enter Maintenance Mode, Create Ranger Plugin Audit Directory, and Ranger KMS ACL import.

2. On the Assign Roles page, click Select hosts.

The screenshot shows the 'Assign Roles' page in Cloudera Manager. The page title is 'Add Role Instances to RANGER_KMS_KTS-1'. The left sidebar shows the 'Assign Roles' step selected. The main content area contains instructions on how to specify role assignments and a 'View By Host' button. Below this, it shows 'Ranger KMS Server with KTS × 1' and a 'Select hosts' button, which is highlighted with a red box.

- On the selected hosts page, select a backup Ranger KMS KTS host. A Ranger KMS KTS (RK) icon appears in the Added Roles column for the selected host. Click OK to continue.

Note: These steps show how to add one additional backup Ranger KMS KTS host, but you can use the same procedure to add multiple Ranger KMS KTS hosts.

2 Hosts Selected

Select hosts for a new or existing role. The host list is filtered to remove hosts that are not valid candidates; these include hosts that are unhealthy, members of other clusters, or have an incompatible version of the software installed on them.

Q Enter hostnames: host01, IP addresses or rack

-
- The screenshot displays the Cloudera Manager interface for the 'RANGER_KMS_KTS-1' cluster. The 'Instances' tab is selected, showing a table of roles. An 'Actions' dropdown menu is open, listing various management options. The table includes columns for Hostname, Commission State, and Role Group. The roles listed are 'dhoyle715kmskts-3.dhoyle715kmskts.root.hwx.site' (Commissioned, Ranger KMS Server with KTS Default Group) and 'dhoyle715kmskts-2.dhoyle715kmskts.root.hwx.site' (Commissioned, Ranger KMS Server with KTS Default Group). The interface also shows a sidebar with navigation options and a top status bar indicating the cluster is running with an outdated configuration.
- | Hostname | Commission State | Role Group |
|---|------------------|--|
| dhoyle715kmskts-3.dhoyle715kmskts.root.hwx.site | Commissioned | Ranger KMS Server with KTS Default Group |
| dhoyle715kmskts-2.dhoyle715kmskts.root.hwx.site | Commissioned | Ranger KMS Server with KTS Default Group |

7. If necessary, synchronize the KMS KTS private key.

Check the catalina.out file in the Ranger KMS KTS log directory for the following error:

```
java.io.IOException: Unable to verify private key match between KMS hosts.  
Verify private key files have been synced  
between all KMS hosts. Aborting to prevent data inconsistency.
```

To determine whether the KMS KTS private keys are different, compare the MD5 hash of the private keys. On each Ranger KMS KTS host, run the following command:

```
md5sum /var/lib/kms-keytrustee/keytrustee/.keytrustee/secring.gpg
```

If the output is different on both instances, Cloudera recommends following security best practices and transferring the private key using offline media, such as a removable USB drive. For convenience (for example, in a development or testing environment where maximum security is not required), you can copy the private key over the network by running the following rsync command on the original Ranger KMS KTS host:

```
rsync -zav /var/lib/kms-keytrustee/keytrustee/.keytrustee root@kms02.e  
xample.com:/var/lib/kms-keytrustee/keytrustee/.
```

8. Restart the Ranger KMS KTS service.

9. In Cloudera Manager, select the Ranger service, click Ranger Admin Web UI, then log in as the Ranger KMS user (the default credentials are keyadmin/admin123). Click the Edit icon for the cm_kms service, then update the KMS URL property.

- Add the new KMS host using the following format:

kms://http@<kms_kts_host1>;http@<kms_kts_host2>:<kms_port>/kms

- The default port is 9292. For example:

kms://http@kms_kts_host1;http@kms_kts_host2:9292/kms

- If SSL is enabled, use https and port 9494. For example:

kms://http@kms_kts_host1;http@kms_kts_host2:9494/kms

Click Test Connection to confirm the settings, then click Save to save your changes.

The screenshot shows the Ranger Admin Web UI interface for editing the cm_kms service. The top navigation bar includes 'Ranger', 'Access Manager', 'Audit', 'Encryption', and 'Settings'. The user 'keyadmin' is logged in. The 'Service Manager' tab is active, and the 'Edit Service' sub-tab is selected. The 'Active Status' is set to 'Enabled'. The 'Select Tag Service' dropdown is set to 'Select Tag Service'. The 'Config Properties' section includes fields for 'KMS URL *', 'Username *', and 'Password *'. The 'KMS URL' field contains the value 'jhoyier:rkmskts-3.djhoyier:rkmskts:root:mx.site:9292/kms'. The 'Username' field contains 'keyadmin' and the 'Password' field is masked with dots. Below these fields is the 'Add New Configurations' section, which contains a table with one row: 'policy.download.auth.users' with the value 'keyadmin,rangerkms'. A '+' button is used to add new configurations. At the bottom of the form is a 'Test Connection' button. The footer contains 'Save', 'Cancel', and 'Delete' buttons.

10. In Cloudera Manager click the Ranger KMS KTS service, then select Actions > Create Ranger Plugin Audit Directory.

11. In Cloudera Manager, select Ranger KMS KTS, then click Configuration.

- a) Use the Add (+) icons for the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml property to add the following properties, then click Save Changes.

- `hadoop.kms.authentication.zk-dt-secret-manager.enable = true`
- `hadoop.kms.authentication.zk-dt-secret-manager.zkConnectionString = <Zookeeper hostname>:2181`
- `hadoop.kms.authentication.zk-dt-secret-manager.znodeWorkingPath = <provide a znode working path other than /zkdt-sm to avoid collision>`

For example:

```
hadoop.kms.authentication.zk-dt-secret-manager.znodeWorkingPath = testzkzkms
```

Note: Do not put a leading slash at the beginning of the znode working path.

- `hadoop.kms.authentication.zk-dt-secret-manager.zkAuthType = sasl`
- `hadoop.kms.authentication.zk-dt-secret-manager.kerberos.keytab = {{CMF_CONF_DIR}}/ranger_kms_kts.keytab`

14. On the Stale Configurations page, click Restart Stale Services.

15. On the Restart Stale Services page, select the Re-deploy client configuration checkbox, then click Restart Now.

16. A progress indicator page appears while the services are being restarted. When the services have restarted, click Finish.

Overriding custom keystore alias on a Ranger KMS Server

Use this procedure to override the custom keystore alias on a Ranger KMS server.

About this task

The custom keystore alias may need to be overridden in the following scenarios:

- User has manually enabled TLS/SSL during fresh installations of Ranger KMS and Ranger KMS with Key Trustee Server (KTS), and the keystore alias was not added to the hostname.
- User has upgraded from CDP-DC 7.0.3 with Key Trustee KMS and Ranger to CDP-DC 7.1.1 (where Ranger KMS with KTS is added during the upgrade) in a TLS/SSL environment in which TLS/SSL was manually enabled, and the keystore alias was not added to the hostname.

Overriding custom keystore alias while configuring TLS/SSL on a single instance of Ranger KMS Server

Procedure

1. In Cloudera Manager, select Ranger KMS > Configuration and use the Add (+) icon for the Ranger KMS Service Advanced Configuration Snippet (Safety valve) for conf/ranger-kms-site.xml property to add the following property:

```
ranger.service.https.attrib.keystore.keyalias = <expected alias>
```

2. Click Save Changes.
3. Restart the Ranger KMS service.

Overriding custom keystore alias while configuring TLS/SSL on multiple instances of Ranger KMS Server

Procedure

1. In Cloudera Manager, select Ranger KMS > Instances and select Ranger KMS Server role > Configuration. Use the Add (+) icons for the Ranger KMS Server Advanced Configuration Snippet (Safety valve) for conf/ranger-kms-site.xml property to add the following property:

```
ranger.service.https.attrib.keystore.keyalias = <expected alias>
```

This overrides the configuration on the host on which the current Ranger KMS Server role is available.

2. Repeat Step 1 for all the other Ranger KMS Servers to override the configuration by using the Ranger KMS Server Advanced Configuration Snippet (Safety valve) for conf/ranger-kms-site.xml property.
3. Restart the Ranger KMS service.

Note: When high-availability has been enabled for Ranger KMS, the keystore may not have the same alias for different KMS instances. In such cases, use FQDN as the alias or add the custom key alias configuration in the Ranger KMS Server Advanced Configuration Snippet (Safety valve) for conf/ranger-kms-site.xml property of each host.
