Cloudera Manager Configuration Properties Reference

Refer to the links below for a list of available Cloudera Runtime 7.1.3.0 configuration properties available in Cloudera Manager 7.1.3.

ADLS Connector Properties in Cloudera Runtime 7.1

Role groups:

Service-Wide

Advanced

ADLS Connector Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

ADLS_CONNECTOR_service_env_safety_valve

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Cloud Account Name

Description

Name of an Azure account. The associated keys are emitted to Hue, Impala and the Hive Metastore Server.

Related Name

Default Value

API Name

cloud_account

Required

true

Hue Browser Data Lake Store**Description**

This is required only for clusters using Hue with ADLS Gen1. Determines the Data Lake Store for the Hue browser. This is usually of the form: yourstorename.azuredatalakestore.net.

Related Name**Default Value****API Name**

hue_browser_dls

Required

false

Credentials Protection Policy**Description**

Determines a security policy for the distribution of Azure account credentials to cluster services. 'More Secure': Encrypted at all times and directly available to a limited set of services. 'Less Secure': Credentials may be in plain text in some configuration files for specific services in the cluster.

Related Name**Default Value**

SECURE

API Name

key_distribution_policy

Required

true

Suppressions**Suppress Parameter Validation: ADLS Connector Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ADLS Connector Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_adls_connector_service_env_safety_valve

Required

true

Suppress Parameter Validation: Hue Browser Data Lake Store**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Browser Data Lake Store parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_browser_dls

Required

true

Suppress Configuration Validator: ADLS Hue Browser DLS required validator**Description**

Whether to suppress configuration warnings produced by the ADLS Hue Browser DLS required validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_browser_dls_required_validator

Required

true

Atlas Properties in Cloudera Runtime 7.1

Role groups:

Atlas Server**Advanced****Atlas Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

ATLAS_SERVER_role_env_safety_valve

Required

false

Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties**Description**

For advanced use only. A string to be inserted into conf/atlas-application.properties for this role only.

Related Name**Default Value****API Name**

conf/atlas-application.properties_role_safety_valve

Required

false

Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-atlas-audit.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-atlas-audit.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-atlas-audit.xml_role_safety_valve

Required

false

Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-atlas-policymgr-ssl.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-atlas-policymgr-ssl.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-atlas-policymgr-ssl.xml_role_safety_valve

Required

false

Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-atlas-security.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-atlas-security.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-atlas-security.xml_role_safety_valve

Required

false

Atlas Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Atlas Server Log Directory****Description**

The log directory for log files of the role Atlas Server.

Related Name

atlas.log.base.dir

Default Value

/var/log/atlas

API Name

log_dir

Required

false

Atlas Server Logging Threshold**Description**

The minimum log level for Atlas Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Atlas Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Atlas Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Atlas Server Max Log Size

Description

The maximum size, in megabytes, per log file for Atlas Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

atlas_server_fd_thresholds

Required

false

Atlas Server Host Health Test

Description

When computing the overall Atlas Server health, consider the host's health.

Related Name**Default Value**

true

API Name

atlas_server_host_health_enabled

Required

false

Atlas Server Process Health Test

Description

Enables the health test that the Atlas Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

atlas_server_scm_health_enabled

Required

false

Enable Health Alerts for this Role**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a `DataNode` fires if the `DataNode` has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Admin Password****Description**

Password for the Atlas Admin user configured in property atlas.admin.username with default value named "admin". Password should be minimum 8 characters with minimum one alphabet and one numeric. Unsupported special characters are " ' \ ` ' .

Related Name

atlas.admin.password

Default Value**API Name**

atlas_admin_password

Required

false

Admin Username**Description**

Admin Login user.

Related Name

atlas.admin.username

Default Value

admin

API Name

atlas_admin_username

Required

false

Audit ZooKeeper Session Timeout**Description**

Audit ZooKeeper Session Timeout

Related Name

atlas.audit.zookeeper.session.timeout.ms

Default Value

1 minute(s)

API Name

atlas_audit_zookeeper_session_timeout_ms

Required

false

Enable File Authentication

Description

Whether file-based authentication is enabled.

Related Name

atlas.authentication.method.file

Default Value

false

API Name

atlas_authentication_method_file

Required

false

Path to Credentials for File-based Login.

Description

Path to Credentials for File-based Login

Related Name

atlas.authentication.method.file.filename

Default Value

ATLAS_USER_CREDENTIALS_CONF_PATH/users-credentials.properties

API Name

atlas_authentication_method_file_filename

Required

false

Enable LDAP Authentication

Description

Whether LDAP is used for authentication.

Related Name

atlas.authentication.method.ldap

Default Value

false

API Name

atlas_authentication_method_ldap

Required

false

AD Base DN

Description

The Distinguished Name (DN) of the starting point for directory server searches.

Related Name

atlas.authentication.method.ldap.ad.base.dn

Default Value**API Name**

atlas_authentication_method_ldap_ad_base_dn

Required

false

AD Bind DN Username**Description**

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search.

Related Name`atlas.authentication.method.ldap.ad.bind.dn`**Default Value****API Name**`atlas_authentication_method_ldap_ad_bind_dn`**Required**

false

AD Bind DN Password**Description**

Password for the account that can search

Related Name`atlas.authentication.method.ldap.ad.bind.password`**Default Value****API Name**`atlas_authentication_method_ldap_ad_bind_password`**Required**

false

AD User Default Role**Description**

AD User default Role

Related Name`atlas.authentication.method.ldap.ad.default.role`**Default Value**`ROLE_USER`**API Name**`atlas_authentication_method_ldap_ad_default_role`**Required**

false

AD Domain Name (Only for AD)**Description**

AD domain, only used if Authentication method is AD

Related Name`atlas.authentication.method.ldap.ad.domain`**Default Value**

API Name`atlas_authentication_method_ldap_ad_domain`**Required**`false`**AD Referral****Description**

This parameter is only used if Authentication method is AD. Set to follow if multiple ADsss servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

Related Name`atlas.authentication.method.ldap.ad.referral`**Default Value**`ignore`**API Name**`atlas_authentication_method_ldap_ad_referral`**Required**`false`**AD URL****Description**

AD URL, only used if Authentication method is AD

Related Name`atlas.authentication.method.ldap.ad.url`**Default Value****API Name**`atlas_authentication_method_ldap_ad_url`**Required**`false`**AD User Search Filter****Description**

AD User Search Filter

Related Name`atlas.authentication.method.ldap.ad.user.searchfilter`**Default Value**`(sAMAccountName=0)`**API Name**`atlas_authentication_method_ldap_ad_user_searchfilter`**Required**`false`**LDAP DN****Description**

The Distinguished Name (DN) of the starting point for directory server searches.

Related Name

atlas.authentication.method.ldap.base.dn

Default Value**API Name**

atlas_authentication_method_ldap_base_dn

Required

false

LDAP Bind DN Username**Description**

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search.

Related Name

atlas.authentication.method.ldap.bind.dn

Default Value**API Name**

atlas_authentication_method_ldap_bind_dn

Required

false

LDAP Bind DN Password**Description**

Password for the account that can search in LDAP

Related Name

atlas.authentication.method.ldap.bind.password

Default Value**API Name**

atlas_authentication_method_ldap_bind_password

Required

false

LDAP User Default Role**Description**

LDAP User Default Role

Related Name

atlas.authentication.method.ldap.default.role

Default Value

ROLE_USER

API Name

atlas_authentication_method_ldap_default_role

Required

false

LDAP Group-Role Attribute

Description

LDAP Group-Role Attribute

Related Name

atlas.authentication.method.ldap.groupRoleAttribute

Default Value

cn

API Name

atlas_authentication_method_ldap_groupRoleAttribute

Required

false

LDAP Group-Search Base

Description

LDAP Group-Search Base

Related Name

atlas.authentication.method.ldap.groupSearchBase

Default Value**API Name**

atlas_authentication_method_ldap_groupSearchBase

Required

false

LDAP Group-Search Filter

Description

LDAP Group-Search Filter

Related Name

atlas.authentication.method.ldap.groupSearchFilter

Default Value**API Name**

atlas_authentication_method_ldap_groupSearchFilter

Required

false

LDAP Referral

Description

This parameter is only used if Authentication method is LDAP. Set to follow if multiple LDAP servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

Related Name

atlas.authentication.method.ldap.referral

Default Value

ignore

API Name

atlas_authentication_method_ldap_referral

Required

false

LDAP Authentication Type**Description**

The LDAP type (ldap, ad, or none).

Related Name

atlas.authentication.method.ldap.type

Default Value

none

API Name

atlas_authentication_method_ldap_type

Required

false

LDAP UGI Groups**Description**

LDAP UGI Groups

Related Name

atlas.authentication.method.ldap.ugi-groups

Default Value

false

API Name

atlas_authentication_method_ldap_ugi_groups

Required

false

LDAP Server URL**Description**

LDAP Server URL. Sample values = ldap://localhost:389 or ldaps://localhost:636

Related Name

atlas.authentication.method.ldap.url

Default Value**API Name**

atlas_authentication_method_ldap_url

Required

false

LDAP User Search Filter**Description**

LDAP User Search Filter

Related Name

atlas.authentication.method.ldap.user.searchfilter

Default Value**API Name**`atlas_authentication_method_ldap_user_searchfilter`**Required**`false`**User DN Pattern****Description**

User DN Pattern. This pattern is used to create a distinguished name (DN) for a user during login

Related Name`atlas.authentication.method.ldap.userDNpattern`**Default Value**`uid=`**API Name**`atlas_authentication_method_ldap_userDNpattern`**Required**`false`**Enable PAM Authentication****Description**

Whether PAM is used for authentication.

Related Name`atlas.authentication.method.pam`**Default Value**`true`**API Name**`atlas_authentication_method_pam`**Required**`false`**Enable Knox Trusted Proxy Support****Description**

Determine if the Atlas service should allow authentication using Knox trusted proxy.

Related Name`atlas.authentication.method.trustedproxy`**Default Value**`true`**API Name**`atlas_authentication_method_trustedproxy`**Required**`false`**Kafka Zookeeper Connection Timeout****Description**

Kafka Zookeeper Connection Timeout**Related Name**

atlas.kafka.zookeeper.connection.timeout.ms

Default Value

30 second(s)

API Name

atlas_kafka_zookeeper_connection_timeout_ms

Required

false

Kafka ZooKeeper Session Timeout**Description**

Kafka ZooKeeper Session Timeout

Related Name

atlas.kafka.zookeeper.session.timeout.ms

Default Value

1 minute(s)

API Name

atlas_kafka_zookeeper_session_timeout_ms

Required

false

Kafka ZooKeeper Sync Time**Description**

Kafka ZooKeeper Sync Time

Related Name

atlas.kafka.zookeeper.sync.time.ms

Default Value

20 millisecond(s)

API Name

atlas_kafka_zookeeper_sync_time_ms

Required

false

Atlas Max Heapsize**Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

atlas_max_heap_size

Default Value

2 GiB

API Name

atlas_max_heap_size

Required

true

Knox Proxy User Groups

Description

Accepts a list of group names. The Knox user can impersonate only the users that belong to the groups specified in the list. The wildcard value * may be used to allow impersonation of any user belonging to any group.

Related Name

atlas.proxyuser.knox.groups

Default Value

*

API Name

atlas_proxyuser_knox_groups

Required

false

Knox Proxy User Hosts

Description

Accepts a list of IP addresses, IP addressranges in CIDR format and/or host names. The Knox user can impersonate only the requests coming from hosts specified in the list. The wildcard value * may be used to allow impersonation from any host.

Related Name

atlas.proxyuser.knox.hosts

Default Value

*

API Name

atlas_proxyuser_knox_hosts

Required

false

Knox Proxy User Users

Description

Accepts a list of usernames. The Knox user can impersonate only the users specified in the list. The wildcard value * may be used to allow impersonation of any user.

Related Name

atlas.proxyuser.knox.users

Default Value

*

API Name

atlas_proxyuser_knox_users

Required

false

Proxy Users

Description

Atlas service can be proxied through Knox, hence need to configure the proxy users using which Atlas service can be proxied

Related Name

atlas.proxyusers

Default Value**API Name**

atlas_proxyusers

Required

false

Server Bind Address**Description**

The Server will bind to this address.

Related Name

atlas.server.bind.address

Default Value

0.0.0.0

API Name

atlas_server_bind_address

Required

false

Simple Authz policy file**Description**

Path for the Simple Authz Policies File.

Related Name

atlas.simple.authz.policy.file

Default Value

ATLAS_SIMPLE_AUTHZ_POLICY_CONF_PATH/atlas-simple-authz-policy.json

API Name

atlas_simple_authz_policy_file

Required

false

Initial Solr Replication Factor for Collections**Description**

Solr Replication Factor for Collections. This only affects the initial setting and has no effect once Atlas has started for the first time.

Related Name

atlas_solr_replication_factor

Default Value

1

API Name

atlas_solr_replication_factor

Required

false

Initial Solr Shards for Atlas Collections**Description**

Solr Shards for Collections. This only affects the initial setting and has no effect once Atlas has started for the first time.

Related Name

atlas_solr_shards

Default Value

1

API Name

atlas_solr_shards

Required

false

Excluded Wire Encryption Protocols**Description**

A comma-separated list of the wire encryption protocols to exclude when TLS is enabled. Some versions of cURL do not work with TLSv1.2.

Related Name

atlas.ssl.exclude.protocols

Default Value

TLSv1.2

API Name

atlas_ssl_exclude_protocols

Required

false

Knox SSO browser User-Agent**Description**

Knox SSO browser User-Agent

Related Name

atlas.sso.knox.browser.useragent

Default Value**API Name**

atlas_sso_knox_browser_useragent

Required

false

Enable Knox SSO**Description**

Enable Knox SSO

Related Name

atlas.sso.knox.enabled

Default Value

false

API Name

atlas_sso_knox_enabled

Required

false

Knox SSO provider URL**Description**

Knox SSO provider URL.

Related Name

atlas.sso.knox.providerurl

Default Value**API Name**

atlas_sso_knox_providerurl

Required

false

Knox SSO Public-Key**Description**

Knox SSO Public-Key

Related Name

atlas.sso.knox.publicKey

Default Value**API Name**

atlas_sso_knox_publicKey

Required

false

Atlas Server Diagnostics Collection Timeout**Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name**Default Value**

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Kafka Message Retention Time**Description**

The maximum time for retaining Kafka messages for topic ATLAS_HOOK. If set to -1, no time limit will be applied. This configuration will be only effective for pre-start initialization of Atlas service and ineffective once the ATLAS_HOOK topic is created for Atlas.

Related Name

retention.ms

Default Value

31 day(s)

API Name

kafka_message_retention_ms

Required

false

Ranger Atlas Plugin Audit Hdfs Spool Directory Path**Description**

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/atlas/audit/hdfs/spool

API Name

ranger_atlas_plugin_hdfs_audit_spool_directory

Required

true

Ranger Atlas Plugin Policy Cache Directory Path**Description**

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.atlas.policy.cache.dir

Default Value

/var/lib/ranger/atlas/policy-cache

API Name

ranger_atlas_plugin_policy_cache_directory

Required

true

Ranger Atlas Plugin Audit Solr Spool Directory Path**Description**

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/atlas/audit/solr/spool

API Name

ranger_atlas_plugin_solr_audit_spool_directory

Required

true

Ranger Plugin Trusted Proxy IP Address**Description**

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.atlas.trusted.proxy.ipaddress

Default Value**API Name**

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address**Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.atlas.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Server HTTP port****Description**

Server HTTP port

Related Name

atlas.server.http.port

Default Value

31000

API Name

atlas_server_http_port

Required

false

Server HTTPS Port**Description**

Server HTTPS Port

Related Name

atlas.server.https.port

Default Value

31443

API Name

atlas_server_https_port

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Atlas Server TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Atlas Server might connect to. This is used when Atlas Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

truststore.file

Default Value**API Name**

ssl_client_truststore_location

Required

false

Atlas Server TLS/SSL Client Trust Store Password**Description**

The password for the Atlas Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Atlas Server**Description**

Encrypt communication between clients and Atlas Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

atlas.enableTLS

Default Value

false

API Name

ssl_enabled

Required

false

Atlas Server TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Atlas Server is acting as a TLS/SSL server.

Related Name

password

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Atlas Server TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Atlas Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

keystore.file

Default Value**API Name**

ssl_server_keystore_location

Required

false

Atlas Server TLS/SSL Server JKS Keystore File Password**Description**

The password for the Atlas Server JKS keystore file.

Related Name

keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Parameter Validation: Admin Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_admin_password

Required

true

Suppress Parameter Validation: Admin Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_admin_username

Required

true

Suppress Parameter Validation: Path to Credentials for File-based Login.

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Path to Credentials for File-based Login. parameter.

Related Name

Default Value

false

API Name

role_config_suppression_atlas_authentication_method_file_filename

Required

true

Suppress Parameter Validation: AD Base DN**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AD Base DN parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_ad_base_dn

Required

true

Suppress Parameter Validation: AD Bind DN Username**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AD Bind DN Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_ad_bind_dn

Required

true

Suppress Parameter Validation: AD Bind DN Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AD Bind DN Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_ad_bind_password

Required

true

Suppress Parameter Validation: AD User Default Role**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AD User Default Role parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_ad_default_role

Required

true

Suppress Parameter Validation: AD Domain Name (Only for AD)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AD Domain Name (Only for AD) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_ad_domain

Required

true

Suppress Parameter Validation: AD URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AD URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_ad_url

Required

true

Suppress Parameter Validation: AD User Search Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the AD User Search Filter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_ad_user_searchfilter

Required

true

Suppress Parameter Validation: LDAP DN

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP DN parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_base_dn

Required

true

Suppress Parameter Validation: LDAP Bind DN Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind DN Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_bind_dn

Required

true

Suppress Parameter Validation: LDAP Bind DN Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind DN Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_bind_password

Required

true

Suppress Parameter Validation: LDAP User Default Role

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User Default Role parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_atlas_authentication_method_ldap_default_role`**Required**`true`**Suppress Parameter Validation: LDAP Group-Role Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group-Role Attribute parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_atlas_authentication_method_ldap_grouproleattribute`**Required**`true`**Suppress Parameter Validation: LDAP Group-Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group-Search Base parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_atlas_authentication_method_ldap_groupsearchbase`**Required**`true`**Suppress Parameter Validation: LDAP Group-Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group-Search Filter parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_atlas_authentication_method_ldap_groupsearchfilter`**Required**`true`**Suppress Parameter Validation: LDAP Server URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Server URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_url

Required

true

Suppress Parameter Validation: LDAP User Search Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User Search Filter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_user_searchfilter

Required

true

Suppress Parameter Validation: User DN Pattern**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the User DN Pattern parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_authentication_method_ldap_userdnpattern

Required

true

Suppress Parameter Validation: Atlas Max Heapsize**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Max Heapsize parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_max_heap_size

Required

true

Suppress Parameter Validation: Knox Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_proxyuser_knox_groups

Required

true

Suppress Parameter Validation: Knox Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_proxyuser_knox_hosts

Required

true

Suppress Parameter Validation: Knox Proxy User Users**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Users parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_proxyuser_knox_users

Required

true

Suppress Parameter Validation: Proxy Users**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Users parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_proxyusers

Required

true

Suppress Parameter Validation: Server Bind Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server Bind Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_server_bind_address

Required

true

Suppress Parameter Validation: Server HTTP port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server HTTP port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_server_http_port

Required

true

Suppress Parameter Validation: Server HTTPS Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server HTTPS Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_server_https_port

Required

true

Suppress Parameter Validation: Atlas Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_server_role_env_safety_valve

Required

true

Suppress Parameter Validation: Simple Authz policy file**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Simple Authz policy file parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_simple_authz_policy_file

Required

true

Suppress Parameter Validation: Excluded Wire Encryption Protocols**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Excluded Wire Encryption Protocols parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_ssl_exclude_protocols

Required

true

Suppress Parameter Validation: Knox SSO browser User-Agent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox SSO browser User-Agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_sso_knox_browser_useragent

Required

true

Suppress Parameter Validation: Knox SSO provider URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox SSO provider URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_sso_knox_providerurl

Required

true

Suppress Parameter Validation: Knox SSO Public-Key**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox SSO Public-Key parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas_sso_knox_publickey

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_conf/atlas-application.properties_role_safety_valve`**Required**`true`**Suppress Parameter Validation: Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-atlas-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-atlas-audit.xml parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_conf/ranger-atlas-audit.xml_role_safety_valve`**Required**`true`**Suppress Parameter Validation: Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-atlas-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-atlas-policymgr-ssl.xml parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_conf/ranger-atlas-policymgr-ssl.xml_role_safety_valve`**Required**`true`**Suppress Parameter Validation: Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-atlas-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-atlas-security.xml parameter.

Suppress Parameter Validation: Atlas Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Atlas Server Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Ranger Atlas Plugin Audit Hdfs Spool Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Atlas Plugin Audit Hdfs Spool Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_atlas_plugin_hdfs_audit_spool_directory

Required

true

Suppress Parameter Validation: Ranger Atlas Plugin Policy Cache Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Atlas Plugin Policy Cache Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_atlas_plugin_policy_cache_directory

Required

true

Suppress Parameter Validation: Ranger Atlas Plugin Audit Solr Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Atlas Plugin Audit Solr Spool Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_atlas_plugin_solr_audit_spool_directory

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Atlas Server TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Atlas Server TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Atlas Server TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server TLS/SSL Server JKS Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Atlas Server TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Atlas Server TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Server TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_atlas_atlas_server_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_atlas_atlas_server_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_atlas_atlas_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_atlas_atlas_server_log_directory_free_space

Gateway

Advanced

Atlas Client Advanced Configuration Snippet (Safety Valve) for atlas-conf/atlas-client.properties

Description

For advanced use only, a string to be inserted into the client configuration for atlas-conf/atlas-client.properties.

Related Name**Default Value****API Name**

atlas-conf/atlas-client.properties_client_config_safety_valve

Required

false

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/atlas

API Name

client_config_root_dir

Required

true

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

50

API Name

client_config_priority

Required

true

Security

Gateway TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This is used when Gateway is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

atlas.kafka.ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Gateway TLS/SSL Client Trust Store Password

Description

The password for the Gateway TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

atlas.kafka.ssl.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Suppressions

Suppress Parameter Validation: Atlas Client Advanced Configuration Snippet (Safety Valve) for atlas-conf/atlas-client.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Client Advanced Configuration Snippet (Safety Valve) for atlas-conf/atlas-client.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_atlas-conf/atlas-client.properties_client_config_safety_valve

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Gateway TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Service-Wide**Advanced****Atlas Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ATLAS_service_env_safety_valve

Required

false

System Group**Description**

The group that this service's processes should run as.

Related Name**Default Value**

atlas

API Name

process_groupname

Required

true

System User**Description**

The user that this service's processes should run as.

Related Name

Default Value

atlas

API Name

process_username

Required

true

Monitoring**Healthy Atlas Server Monitoring Thresholds****Description**

The health test thresholds of the overall Atlas Server health. The check returns "Concerning" health if the percentage of "Healthy" Atlas Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Atlas Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 90.0 %

API Name

ATLAS_ATLAS_SERVER_healthy_thresholds

Required

false

Enable Service Level Health Alerts**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Configuration Validator: Atlas Server TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the Atlas Server TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Atlas Server TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the Atlas Server TLS/SSL Server JKS Keystore Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: Atlas Server TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the Atlas Server TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Atlas Server TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the Atlas Server TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Atlas Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Atlas Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_atlas_server_count_validator

Required

true

Suppress Parameter Validation: Atlas Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_atlas_service_env_safety_valve

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Atlas Plugin Hdfs Audit Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Atlas Plugin Hdfs Audit Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_atlas_plugin_hdfs_audit_directory

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Atlas Server Health**Description**

Whether to suppress the results of the Atlas Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_atlas_atlas_server_healthy

Required

true

Core Configuration Properties in Cloudera Runtime 7.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/hadoop

API Name

client_config_root_dir

Required

true

Core Configuration Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh

Description

For advanced use only, key-value pairs (one on each line) to be inserted into the client configuration for hadoop-env.sh

Related Name**Default Value****API Name**

core_client_env_safety_valve

Required

false

Client Java Configuration Options

Description

These are Java command-line arguments. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name**Default Value**

-Djava.net.preferIPv4Stack=true

API Name

core_client_java_opts

Required

false

Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Logs**Gateway Logging Threshold****Description**

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name

Default Value

90

API Name

client_config_priority

Required

true

Resource Management

Client Java Heap Size in Bytes

Description

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

Related Name

Default Value

256 MiB

API Name

core_client_java_heapsize

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Core Configuration Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Core Configuration Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_core_client_env_safety_valve

Required

true

Suppress Parameter Validation: Client Java Configuration Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Client Java Configuration Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_core_client_java_opts

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Service-Wide

Advanced

Core Configuration Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

CORE_SETTINGS_service_env_safety_valve

Required

false

Cluster-wide Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only, a string to be inserted into core-site.xml. Applies to all roles and client configurations in this HDFS service as well as all its dependent services. Any configs added here will be overridden by their default values in HDFS (which can be found in hdfs-default.xml).

Related Name

Default Value

API Name

core_site_safety_valve

Required

false

HDFS Service Advanced Configuration Snippet (Safety Valve) for hadoop-policy.xml

Description

For advanced use only, a string to be inserted into hadoop-policy.xml. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

hadoop_policy_config_safety_valve

Required

false

HDFS Advanced Configuration Snippet (Safety Valve) for ssl-client.xml

Description

For advanced use only, a string to be inserted into ssl-client.xml. Applies cluster-wide, but can be overridden by individual services.

Related Name

Default Value**API Name**

hdfs_ssl_client_safety_valve

Required

false

HDFS Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml**Description**

For advanced use only, a string to be inserted into ssl-server.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hdfs_ssl_server_safety_valve

Required

false

System Group**Description**

The group that this service's processes should run as (except the HttpFS server, which has its own group)

Related Name**Default Value**

hdfs

API Name

process_groupname

Required

true

System User**Description**

The user that this service's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_username

Required

true

Monitoring**Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

*

API Name

HTTP_proxy_user_groups_list

Required

false

HTTP Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'. This is used by WebHCat.

Related Name

hadoop.proxyuser.HTTP.hosts

Default Value

*

API Name

HTTP_proxy_user_hosts_list

Required

false

HttpFS Proxy User Groups

Description

Comma-delimited list of groups to allow the HttpFS user to impersonate. The default '*' allows all groups. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.httpfs.groups

Default Value

*

API Name

httpfs_proxy_user_groups_list

Required

false

HttpFS Proxy User Hosts

Description

Comma-delimited list of hosts where you allow the HttpFS user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.proxyuser.httpfs.hosts

Default Value

*

API Name

httpfs_proxy_user_hosts_list

Required

false

Hue Proxy User Groups

Description

Comma-delimited list of groups that you want to allow the Hue user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.hue.groups

Default Value

*

API Name

hue_proxy_user_groups_list

Required

false

Hue Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the Hue user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.hue.hosts

Default Value

*

API Name

hue_proxy_user_hosts_list

Required

false

Impala Proxy User Groups**Description**

Comma-delimited list of groups that you want to allow the Impala user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.impala.groups

Default Value

*

API Name

impala_proxy_user_groups_list

Required

false

Impala Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the Impala user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.impala.hosts

Default Value

*

API Name

impala_proxy_user_hosts_list

Required

false

Knox Proxy User Groups**Description**

Comma-delimited list of groups that you want to allow the Knox user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.knox.groups

Default Value

*

API Name

knox_proxy_user_groups_list

Required

false

Knox Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the Knox user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.knox.hosts

Default Value

*

API Name

knox_proxy_user_hosts_list

Required

false

Livy Proxy User Groups

Description

Comma-delimited list of groups that you want to allow the Livy user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.livy.groups

Default Value

*

API Name

livy_proxy_user_groups_list

Required

false

Livy Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the Livy user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.livy.hosts

Default Value

*

API Name

livy_proxy_user_hosts_list

Required

false

Oozie Proxy User Groups**Description**

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.oozie.groups

Default Value

*

API Name

oozie_proxy_user_groups_list

Required

false

Oozie Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.proxyuser.oozie.hosts

Default Value

*

API Name

oozie_proxy_user_hosts_list

Required

false

Phoenix Proxy User Groups**Description**

Comma-delimited list of groups that you want to allow the Phoenix user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.phoenix.groups

Default Value

*

API Name

phoenix_proxy_user_groups_list

Required

false

Phoenix Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the Phoenix user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.phoenix.hosts

Default Value

*

API Name

phoenix_proxy_user_hosts_list

Required

false

Service Monitor Proxy User Groups

Description

Allows the Cloudera Service Monitor user to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. This property is used only if Service Monitor is using a different Kerberos principal than the Hue service. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.smon.groups

Default Value

*

API Name

smon_proxy_user_groups_list

Required

false

Service Monitor Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the Cloudera Service Monitor user to impersonate other users. The default '*' allows all hosts. This property is used only if Service Monitor is using a different Kerberos principal than the Hue service. To disable entirely, use a string that does not correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.smon.hosts

Default Value

*

API Name

smon_proxy_user_hosts_list

Required

false

Telemetry Publisher Proxy User Groups

Description

Allows the Cloudera Telemetry Publisher user to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. This property is used only if Telemetry Publisher is using a different Kerberos principal than the Hue service. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.telepub.groups

Default Value

*

API Name

telepub_proxy_user_groups_list

Required

false

Telemetry Publisher Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the Cloudera Telemetry Publisher user to impersonate other users. The default '*' allows all hosts. This property is used only if Telemetry Publisher is using a different Kerberos principal than the Hue service. To disable entirely, use a string that does not correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.telepub.hosts

Default Value

*

API Name

telepub_proxy_user_hosts_list

Required

false

YARN Proxy User Groups**Description**

Comma-delimited list of groups that you want to allow the YARN user to impersonate. The default '*' allows all groups. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.yarn.groups

Default Value

*

API Name

yarn_proxy_user_groups_list

Required

false

YARN Proxy User Hosts**Description**

Comma-delimited list of hosts that you want to allow the YARN user to impersonate. The default '*' allows all hosts. To disable entirely, use a string that does not correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.yarn.hosts

Default Value

*

API Name

yarn_proxy_user_hosts_list

Required

false

Security**Additional Rules to Map Kerberos Principals to Short Names****Description**

Additional mapping rules that will be inserted before rules generated from the list of trusted realms and before the default rule. After changing this value and restarting the service, any services depending on this one must be restarted as well. The `hadoop.security.auth_to_local` property is configured using this information. Default rules are generated by Cloudera Manager and substituted in place of the literal `{DEFAULT_RULES}` if it is specified in this value.

Related Name**Default Value**

DEFAULT_RULES

API Name

extra_auth_to_local_rules

Required

false

Authorized Admin Groups**Description**

Comma-separated list of groups authorized to perform admin operations on Hadoop. This is emitted only if authorization is enabled.

Related Name**Default Value****API Name**

hadoop_authorized_admin_groups

Required

false

Authorized Admin Users**Description**

Comma-separated list of users authorized to perform admin operations on Hadoop. This is emitted only if authorization is enabled.

Related Name**Default Value**

*

API Name

hadoop_authorized_admin_users

Required

false

Authorized Groups**Description**

Comma-separated list of groups authorized to used Hadoop. This is emitted only if authorization is enabled.

Related Name**Default Value****API Name**

hadoop_authorized_groups

Required

false

Authorized Users**Description**

Comma-separated list of users authorized to used Hadoop. This is emitted only if authorization is enabled.

Related Name**Default Value**

*

API Name

hadoop_authorized_users

Required

false

Hadoop User Group Mapping Search Base**Description**

The search base for the LDAP connection. This is a distinguished name, and will typically be the root of the LDAP directory.

Related Name

hadoop.security.group.mapping.ldap.base

Default Value**API Name**

hadoop_group_mapping_ldap_base

Required

false

Hadoop User Group Mapping LDAP Bind User Password**Description**

The password of the bind user.

Related Name

hadoop.security.group.mapping.ldap.bind.password

Default Value**API Name**

hadoop_group_mapping_ldap_bind_passwd

Required

false

Hadoop User Group Mapping LDAP Bind User Distinguished Name**Description**

Distinguished name of the user to bind to AD as for user authentication search/bind and group lookup for role authorization. For openLDAP based directories this should be a DN string, for Active Directory this can be just a username, combined with the "Active Directory Domain" value for login. For example username in the field and example.com in the active directory domain will result in the User Principal Name value of username@example.com being used to bind. If you put a UPM value here, do not over-configure the "active directory domain" field otherwise you will end up presenting username@example.com@example.com for binds. AD will accept a UPN value or the DN value as a valid Bind DN; An example of a Distinguished Name (DN): CN=cdh admin,OU=svcaccount,DC=example,DC=com An example of a UPN value: cdhadmin@example.com

Related Name

hadoop.security.group.mapping.ldap.bind.user

Default Value**API Name**

hadoop_group_mapping_ldap_bind_user

Required

false

Hadoop User Group Mapping LDAP Group Search Filter**Description**

An additional filter to use when searching for groups.

Related Name

hadoop.security.group.mapping.ldap.search.filter.group

Default Value

(objectClass=group)

API Name

hadoop_group_mapping_ldap_group_filter

Required

false

Hadoop User Group Mapping LDAP Group Name Attribute**Description**

The attribute of the group object that identifies the group name. The default will usually be appropriate for all LDAP systems.

Related Name

hadoop.security.group.mapping.ldap.search.attr.group.name

Default Value

cn

API Name

hadoop_group_mapping_ldap_group_name_attr

Required

false

Hadoop User Group Mapping LDAP TLS/SSL Truststore**Description**

File path to a jks-format truststore containing the TLS/SSL certificate used sign the LDAP server's certificate. Note that in previous releases this was erroneously referred to as a "keystore".

Related Name

hadoop.security.group.mapping.ldap.ssl.keystore

Default Value**API Name**

hadoop_group_mapping_ldap_keystore

Required

false

Hadoop User Group Mapping LDAP TLS/SSL Truststore Password**Description**

The password for the TLS/SSL truststore.

Related Name

hadoop.security.group.mapping.ldap.ssl.keystore.password

Default Value**API Name**

hadoop_group_mapping_ldap_keystore_passwd

Required

false

Hadoop User Group Mapping LDAP Group Membership Attribute**Description**

The attribute of the group object that identifies the users that are members of the group. The default will usually be appropriate for any LDAP installation.

Related Name

hadoop.security.group.mapping.ldap.search.attr.member

Default Value

member

API Name

hadoop_group_mapping_ldap_member_attr

Required

false

Hadoop User Group Mapping LDAP URL**Description**

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps://. The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used,

and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name

hadoop.security.group.mapping.ldap.url

Default Value**API Name**

hadoop_group_mapping_ldap_url

Required

false

Hadoop User Group Mapping LDAP TLS/SSL Enabled**Description**

Whether or not to use TLS/SSL when connecting to the LDAP server.

Related Name

hadoop.security.group.mapping.ldap.use.ssl

Default Value

false

API Name

hadoop_group_mapping_ldap_use_ssl

Required

false

Hadoop User Group Mapping LDAP User Search Filter**Description**

An additional filter to use when searching for LDAP users. The default will usually be appropriate for Active Directory installations. If connecting to a generic LDAP server, "sAMAccountName" will likely be replaced with "uid". {0} is a special string used to denote where the username fits into the filter.

Related Name

hadoop.security.group.mapping.ldap.search.filter.user

Default Value

(&(objectClass=user)(sAMAccountName={0}))

API Name

hadoop_group_mapping_ldap_user_filter

Required

false

Hadoop HTTP Authentication Cookie Domain**Description**

The domain to use for the HTTP cookie that stores the authentication token. In order for authentication to work correctly across all Hadoop nodes' web-consoles the domain must be correctly set. Important: when using IP addresses, browsers ignore cookies with domain settings. For this setting to work properly all nodes in the cluster must be configured to generate URLs with hostname.domain names on it.

Related Name

Default Value**API Name**

hadoop_http_auth_cookie_domain

Required

false

Hadoop RPC Protection**Description**

Quality of protection for secured RPC connections between NameNode and HDFS clients. For effective RPC protection, enable Kerberos authentication.

Related Name

hadoop.rpc.protection

Default Value

authentication

API Name

hadoop_rpc_protection

Required

false

Enable Kerberos Authentication for HTTP Web-Consoles**Description**

Enables Kerberos authentication for Hadoop HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled for the HDFS service.

Related Name**Default Value**

false

API Name

hadoop_secure_web_ui

Required

false

Hadoop Secure Authentication**Description**

Choose the authentication mechanism used by Hadoop

Related Name

hadoop.security.authentication

Default Value

simple

API Name

hadoop_security_authentication

Required

false

Hadoop Secure Authorization**Description**

Enable authorization

Related Name

hadoop.security.authorization

Default Value

false

API Name

hadoop_security_authorization

Required

false

Hadoop User Group Mapping Implementation

Description

Class for user to group mapping (get groups for a given user).

Related Name

hadoop.security.group.mapping

Default Value

org.apache.hadoop.security.ShellBasedUnixGroupsMapping

API Name

hadoop_security_group_mapping

Required

false

Hadoop TLS/SSL Enabled

Description

Enable TLS/SSL encryption for HDFS, MapReduce, and YARN web UIs, as well as encrypted shuffle for MapReduce and YARN.

Related Name

hadoop.ssl.enabled

Default Value

false

API Name

hdfs_hadoop_ssl_enabled

Required

false

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

hdfs

API Name

kerberos_princ_name

Required

true

Log and Query Redaction Policy

Description

Note: Do not edit this property in the classic layout. Switch to the new layout to use preconfigured redaction rules and test your rules inline. Use this property to define a list of rules to be followed for redacting sensitive information from log files and query strings. Click + to add a new redaction rule. You can choose one of the preconfigured rules or add a custom rule. When specifying a custom rule, the Search field should contain a regular expression that will be matched against the data. If a match is found, it is replaced by the contents of the Replace field. Trigger is an optional field. It can be used to specify a simple string to be searched in the data. If the string is found, the redactor attempts to find a match for the Search regex. If no trigger is specified, redaction occurs by matching the Search regular expression. Use the Trigger field to enhance performance: simple string matching is faster than regular expression matching. Test your rules by entering sample text into the Test Redaction Rules text box and clicking Test Redaction. If no rules match, the text you entered is returned unchanged.

Related Name

redaction_policy

Default Value

```
version: 1, rules: [ description: Redact passwords from json files, trigger: password, search:
\password\[ ]*:[ ]*[^\\]+, caseSensitive: false, replace: \password\: \LOG-REDACTED\ ,
description: Redact password\u003d and password:, trigger: password, search: password[:\u003d]

Default Value

true

API Name

redaction_policy_enabled

Required

false

Enable Security Audit Logger

Description

Enable security audit logger for HDFS and dependent services

Related Name

security_logger_enabled

Default Value

true

API Name

security_logger_enabled

Required

false

Cluster-Wide Default TLS/SSL Client Truststore Location

Description

Path to the TLS/SSL client truststore file. Defines a cluster-wide default that can be overridden by individual services. This truststore must be in JKS format. The truststore contains certificates of trusted servers, or of Certificate Authorities trusted to identify servers. The contents of the truststore can be modified without restarting any roles. By default, changes to its contents are picked up within ten seconds. If not set, the default Java truststore is used to verify certificates.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Cluster-Wide Default TLS/SSL Client Truststore Password

Description

Password for the TLS/SSL client truststore. Defines a cluster-wide default that can be overridden by individual services.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Hadoop TLS/SSL Server Keystore Key Password

Description

Password that protects the private key contained in the server keystore used for encrypted shuffle and encrypted web UIs. Applies to all configurations of daemon roles of this service.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**`ssl_server_keystore_keypassword`**Required**`false`**Hadoop TLS/SSL Server Keystore File Location****Description**

Path to the keystore file containing the server certificate and private key used for encrypted shuffle and encrypted web UIs. Applies to configurations of all daemon roles of this service.

Related Name`ssl.server.keystore.location`**Default Value****API Name**`ssl_server_keystore_location`**Required**`false`**Hadoop TLS/SSL Server Keystore File Password****Description**

Password for the server keystore file used for encrypted shuffle and encrypted web UIs. Applies to configurations of all daemon roles of this service.

Related Name`ssl.server.keystore.password`**Default Value****API Name**`ssl_server_keystore_password`**Required**`false`**SSL/TLS Cipher Suite****Description**

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

Related Name`ssl.server.exclude.cipher.list`**Default Value**`modern2018`**API Name**`tls_ciphers`

Required

false

Trusted Kerberos Realms**Description**

List of Kerberos realms that Hadoop services should trust. If empty, defaults to the `default_realm` property configured in the `krb5.conf` file. After changing this value and restarting the service, all services depending on this service must also be restarted. Adds mapping rules for each domain to the `hadoop.security.auth_to_local` property in `core-site.xml`.

Related Name**Default Value****API Name**

trusted_realms

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Storage Operations

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/hadoop

API Name

client_config_root_dir

Required

true

Core Configuration Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh

Description

For advanced use only, key-value pairs (one on each line) to be inserted into the client configuration for hadoop-env.sh

Related Name**Default Value****API Name**

core_client_env_safety_valve

Required

false

Client Java Configuration Options

Description

These are Java command-line arguments. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name**Default Value**

-Djava.net.preferIPv4Stack=true

API Name

core_client_java_opts

Required

false

Storage Operations Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Storage Operations Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

STORAGEOPERATIONS_role_env_safety_valve

Required

false

Logs**Storage Operations Logging Threshold****Description**

The minimum log level for Storage Operations logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Storage Operations Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Storage Operations logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Storage Operations Max Log Size**Description**

The maximum size, in megabytes, per log file for Storage Operations logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Balancer Log Directory**Description**

Directory where Balancer will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/

API Name

storageoperations_log_dir

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

`90`

API Name

`client_config_priority`

Required

`true`

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

`rlimit_fds`

Required

`false`

Resource Management

Client Java Heap Size in Bytes

Description

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

256 MiB

API Name

core_client_java_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Suppress Parameter Validation: Data Analytics Studio Eventprocessor TLS/SSL Client Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Data Analytics Studio Eventprocessor TLS/SSL Client Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Data Analytics Studio Eventprocessor TLS/SSL Server JKS Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Data Analytics Studio Eventprocessor TLS/SSL Server JKS Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Data Analytics Studio Eventprocessor TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Data Analytics Studio Eventprocessor TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_das_das_event_processor_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_das_das_event_processor_file_descriptor

Required

Data Analytics Studio Webapp Server**Advanced****Data Analytics Studio Webapp Server Advanced Configuration Snippet (Safety Valve) for conf/props/webapp.properties****Description**

For advanced use only. A string to be inserted into conf/props/webapp.properties for this role only.

Related Name**Default Value****API Name**

conf/props/webapp.properties_role_safety_valve

Required

false

Data Analytics Studio Webapp Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-hive-audit.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-hive-audit.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-hive-audit.xml_role_safety_valve

Required

false

Data Analytics Studio Webapp Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-hive-policymgr-ssl.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-hive-policymgr-ssl.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-hive-policymgr-ssl.xml_role_safety_valve

Required

false

Data Analytics Studio Webapp Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-hive-security.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-hive-security.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-hive-security.xml_role_safety_valve

Required

false

Data Analytics Studio Webapp Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

DAS_WEBAPP_role_env_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Monitoring**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

das_webapp_fd_thresholds

Required

false

Data Analytics Studio Webapp Server Host Health Test**Description**

When computing the overall Data Analytics Studio Webapp Server health, consider the host's health.

Related Name**Default Value**

true

API Name

das_webapp_host_health_enabled

Required

false

Data Analytics Studio Webapp Server Process Health Test**Description**

Enables the health test that the Data Analytics Studio Webapp Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

das_webapp_scm_health_enabled

Required

false

Enable Health Alerts for this Role**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

DAS Webapp Port**Description**

Port to access the DAS UI

Related Name

data_analytics_studio_webapp_server_port

Default Value

30800

API Name

data_analytics_studio_webapp_server_port

Required

true

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name`rm_custom_resources`**Required**`false`**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**`500`**API Name**`rm_io_weight`**Required**`true`**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Data Analytics Studio Webapp Server TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Data Analytics Studio Webapp Server might connect to. This is used when Data Analytics Studio Webapp Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

das.webapp.ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Data Analytics Studio Webapp Server TLS/SSL Client Trust Store Password**Description**

The password for the Data Analytics Studio Webapp Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

das.webapp.ssl.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Data Analytics Studio Webapp Server**Description**

Encrypt communication between clients and Data Analytics Studio Webapp Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

data_analytics_studio_webapp_ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Data Analytics Studio Webapp Server TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Data Analytics Studio Webapp Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

data_analytics_studio_webapp_keystore_file

Default Value**API Name**

ssl_server_keystore_location

Required

false

Data Analytics Studio Webapp Server TLS/SSL Server JKS Keystore File Password**Description**

The password for the Data Analytics Studio Webapp Server JKS keystore file.

Related Name

das_webapp_keystore_password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Configuration Validator: Additional Webapp Classpath**Description**

Whether to suppress configuration warnings produced by the Additional Webapp Classpath configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_additional_classpath

Required

true

Suppress Configuration Validator: DAS Webapp Admin Port**Description**

Whether to suppress configuration warnings produced by the DAS Webapp Admin Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_admin_port

Required

true

Suppress Configuration Validator: Knox Proxy doAs Param Name**Description**

Whether to suppress configuration warnings produced by the Knox Proxy doAs Param Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_doas_param_name

Required

true

Suppress Configuration Validator: Knox JWT Cookie Name**Description**

Whether to suppress configuration warnings produced by the Knox JWT Cookie Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_knox_cookie_name

Required

true

Suppress Configuration Validator: Knox JWT Cookie Public Key**Description**

Whether to suppress configuration warnings produced by the Knox JWT Cookie Public Key configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_knox_publickey

Required

true

Suppress Configuration Validator: Knox SSO Endpoint**Description**

Whether to suppress configuration warnings produced by the Knox SSO Endpoint configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_knox_sso_url

Required

true

Suppress Configuration Validator: Knox Logout Endpoint**Description**

Whether to suppress configuration warnings produced by the Knox Logout Endpoint configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_data_analytics_studio_webapp_knox_ssout_url

Required

true

Suppress Configuration Validator: Knox Redirect Url Param**Description**

Whether to suppress configuration warnings produced by the Knox Redirect Url Param configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_knox_url_query_param

Required

true

Suppress Configuration Validator: Knox SPNEGO User**Description**

Whether to suppress configuration warnings produced by the Knox SPNEGO User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_knox_user

Required

true

Suppress Configuration Validator: Knox Useragent**Description**

Whether to suppress configuration warnings produced by the Knox Useragent configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_knox_useragent

Required

true

Suppress Configuration Validator: DAS Webapp Port**Description**

Whether to suppress configuration warnings produced by the DAS Webapp Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_server_port

Required

true

Suppress Configuration Validator: Knox SPNEGO Name Rules**Description**

Whether to suppress configuration warnings produced by the Knox SPNEGO Name Rules configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_data_analytics_studio_webapp_spnego_name_rules

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Ranger Hive Plugin Audit Hdfs Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the Ranger Hive Plugin Audit Hdfs Spool Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_hive_plugin_hdfs_audit_spool_directory

Required

true

Suppress Configuration Validator: Ranger Hive Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Hive Plugin Policy Cache Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_hive_plugin_policy_cache_directory

Required

true

Suppress Configuration Validator: Ranger Hive Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Hive Plugin Audit Solr Spool Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_hive_plugin_solr_audit_spool_directory

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_role_triggers`**Required**`true`**Suppress Configuration Validator: Data Analytics Studio Webapp Server TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the Data Analytics Studio Webapp Server TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ssl_client_truststore_location`**Required**`true`**Suppress Configuration Validator: Data Analytics Studio Webapp Server TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Data Analytics Studio Webapp Server TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ssl_client_truststore_password`**Required**`true`**Suppress Configuration Validator: Data Analytics Studio Webapp Server TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Data Analytics Studio Webapp Server TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ssl_server_keystore_location`**Required**`true`

Suppress Configuration Validator: Data Analytics Studio Webapp Server TLS/SSL Server JKS Keystore File Password

Description

Whether to suppress configuration warnings produced by the Data Analytics Studio Webapp Server TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Data Analytics Studio Eventprocessor Count Validator

Description

Whether to suppress configuration warnings produced by the Data Analytics Studio Eventprocessor Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_das_event_processor_count_validator

Required

true

Suppress Parameter Validation: Hive Secure Session Parameters

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Secure Session Parameters parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_das_hive_secure_session_params

Required

true

Suppress Parameter Validation: Hive Session Parameters**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Session Parameters parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_das_hive_session_params

Required

true

Suppress Parameter Validation: Data Analytics Studio Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Data Analytics Studio Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_das_service_env_safety_valve

Required

true

Suppress Configuration Validator: Data Analytics Studio Webapp Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Data Analytics Studio Webapp Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_das_webapp_count_validator

Required

true

Suppress Parameter Validation: DAS Database Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DAS Database Hostname parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_data_analytics_studio_database_host

Required

true

Suppress Parameter Validation: DAS Database Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DAS Database Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_data_analytics_studio_database_name

Required

true

Suppress Parameter Validation: DAS Database Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DAS Database Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_data_analytics_studio_database_password

Required

true

Suppress Parameter Validation: DAS Database Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DAS Database Port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_data_analytics_studio_database_port

Required

true

Suppress Parameter Validation: DAS Database Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the DAS Database Username parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_data_analytics_studio_database_username

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Hive Plugin Hdfs Audit Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Hive Plugin Hdfs Audit Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_hive_plugin_hdfs_audit_directory

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Data Context Connector Properties in Cloudera Runtime 7.1

Role groups:

Gateway

Advanced**Deploy Directory****Description**

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/hive

API Name

client_config_root_dir

Required

true

Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only, a string to be inserted into the client configuration for hive-site.xml.

Related Name**Default Value****API Name**

hive_client_config_safety_valve

Required

false

Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into the client configuration for hive-env.sh

Related Name**Default Value****API Name**

hive_client_env_safety_valve

Required

false

Client Java Configuration Options**Description**

These are Java command-line arguments. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name**Default Value**

API Name

hive_client_java_opts

Required

false

Hive Metastore Connection Timeout**Description**

Timeout for requests to the Hive Metastore Server. Consider increasing this if you have tables with a lot of metadata and see timeout errors. Used by most Hive Metastore clients such as Hive CLI and HiveServer2, but not by Impala. Impala has a separately configured timeout.

Related Name

hive.metastore.client.socket.timeout

Default Value

5 minute(s)

API Name

hive_metastore_timeout

Required

false

Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Logs**Gateway Logging Threshold****Description**

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

90

API Name

client_config_priority

Required

true

Resource Management

Client Java Heap Size in Bytes

Description

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

2 GiB

API Name

hive_client_java_heapsize

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_config_safety_valve

Required

true

Suppress Parameter Validation: Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_env_safety_valve

Required

true

Suppress Parameter Validation: Client Java Configuration Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Client Java Configuration Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_java_opts

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Service-Wide**Advanced****Data Context Connector Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

DATA_CONTEXT_CONNECTOR_service_env_safety_valve

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

API Name

client_config_priority

Required

true

HBase Client Get Timeout For Secondary Region Replicas**Description**

If a get operation is performed with 'Consistency.TIMELINE', the read RPC is sent to the primary RegionServer first. After this timeout, parallel RPC for secondary region replicas is also sent if the primary does not respond. After this, the result is returned from whichever RPC is finished first. If the response returns from the primary region replica, that data is the most recent. Result.isStale() API has been added to inspect the staleness. If the result is from a secondary region, Result.isStale() is set to true.

Related Name

hbase.client.primaryCallTimeout.get

Default Value

10 second(s)

API Name

hbase_client_primaryCallTimeout_get

Required

false

HBase Client Multiget Timeout For Secondary Region Replicas**Description**

If a multiget operation is performed with 'Consistency.TIMELINE', the read RPC is sent to the primary RegionServer first. After this timeout, a parallel RPC for secondary region replicas is also sent if the primary does not respond. After this, the result is returned from whichever RPC is finished first. If the response returns from the primary region replica, that the data is the most recent. Result.isStale() API has been added to inspect the staleness. If the result is from a secondary region, Result.isStale() is set to true.

Related Name

hbase.client.primaryCallTimeout.multiget

Default Value

10 second(s)

API Name

hbase_client_primaryCallTimeout_multiget

Required

false

HBase Client Scanner Timeout**Description**

Scanner Timeout, in milliseconds, for HBase Clients. Scanner related RPCs will apply this timeout against the RegionServers they talk to.

Related Name

hbase.client.scanner.timeout.period

Default Value

1 minute(s)

API Name

hbase_client_scanner_timeout_period

Required

false

Enable Client RPC Threads Interruption**Description**

Whether to enable interruption of RPC threads at the client. The default value of true enables primary RegionServers to access data from other regions' secondary replicas.

Related Name

hbase.ipc.client.allowsInterrupt

Default Value

true

API Name

hbase_ipc_client_allowsInterrupt

Required

false

Resource Management**Client Java Heap Size in Bytes****Description**

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

256 MiB

API Name

hbase_client_java_heapsize

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: HBase Client Scanner Timeout exceeds Lease Period Validator

Description

Whether to suppress configuration warnings produced by the HBase Client Scanner Timeout exceeds Lease Period Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_client_server_scanner_rpc_timeout_validator

Required

true

Suppress Parameter Validation: HBase Client Advanced Configuration Snippet (Safety Valve) for hbase-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Client Advanced Configuration Snippet (Safety Valve) for hbase-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_client_config_safety_valve

Required

true

Suppress Parameter Validation: HBase Client Environment Advanced Configuration Snippet (Safety Valve) for hbase-env.sh**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Client Environment Advanced Configuration Snippet (Safety Valve) for hbase-env.sh parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_client_env_safety_valve

Required

true

Suppress Parameter Validation: Client Java Configuration Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Client Java Configuration Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_client_java_opts

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

HBase REST Server

Advanced**HBase REST Server Advanced Configuration Snippet (Safety Valve) for hbase-site.xml****Description**

For advanced use only. A string to be inserted into hbase-site.xml for this role only.

Related Name**Default Value****API Name**

hbase_restserver_config_safety_valve

Required

false

Java Configuration Options for HBase REST Server**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

hbase_restserver_java_opts

Required

false

HBase REST Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

HBASERESTSERVER_role_env_safety_valve

Required

false

HBase REST Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**HBase REST Server Log Directory****Description**

Directory where HBase REST Server will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hbase

API Name

hbase_restserver_log_dir

Required

false

HBase REST Server Logging Threshold**Description**

The minimum log level for HBase REST Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

HBase REST Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for HBase REST Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

HBase REST Server Max Log Size**Description**

The maximum size, in megabytes, per log file for HBase REST Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

hbaserestserver_fd_thresholds

Required

false

HBase REST Server Host Health Test**Description**

When computing the overall HBase REST Server health, consider the host's health.

Related Name**Default Value**

true

API Name

hbaserestserver_host_health_enabled

Required

false

HBase REST Server Process Health Test**Description**

Enables the health test that the HBase REST Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

hbaserestserver_scm_health_enabled

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute

- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- `{"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"}` This rule sends events to Cloudera Manager for every `StringIndexOutOfBoundsException`, up to a maximum of 10 every minute.
- `{"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"}` In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with `alert = false` will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Navigator Audit Failure Thresholds

Description

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures

Description

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

`mgmt_navigator_failure_window`

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Enable HBase REST Server Read Only Mode****Description**

When false, all HTTP methods are permitted (GET/PUT/POST/DELETE). When true, only GET is permitted.

Related Name

hbase.rest.readonly

Default Value

false

API Name

hbase_restserver_readonly

Required

false

Performance**HBase REST Server Maximum Threads****Description**

Maximum size of the HBase REST Server thread pool. The server can process this number of concurrent requests. Setting this too high can lead to out of memory errors.

Related Name

hbase.rest.threads.max

Default Value

100

API Name

hbase_restserver_threads_max

Required

true

HBase REST Server Minimum Threads

Description

Minimum size of the HBase REST Server thread pool. The server will maintain at least this number of threads in the pool at all times. The thread pool can grow up to the maximum size set by `hbase.rest.threads.max`.

Related Name

`hbase.rest.threads.min`

Default Value

2

API Name

`hbase_restserver_threads_min`

Required

true

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

`rlimit_fds`

Required

false

Ports and Addresses

HBase REST Server DNS Network Interface

Description

The name of the DNS network interface from which an HBase REST Server should report its IP address.

Related Name

`hbase.rest.dns.interface`

Default Value**API Name**

`hbase_restserver_dns_interface`

Required

false

HBase REST Server DNS Name Server

Description

The host name or IP address of the DNS name server which an HBase REST Server should use to determine the host name used for communication and display purposes.

Related Name

`hbase.rest.dns.nameserver`

Default Value**API Name**`hbase_restserver_dns_nameserver`**Required**`false`**HBase REST Server Host Address****Description**

HBase REST Server will bind to this address.

Related Name`hbase.rest.host`**Default Value**`0.0.0.0`**API Name**`hbase_restserver_host`**Required**`false`**HBase REST Server Web UI Bind to Wildcard Address****Description**

If true, HBase REST Server Web UI will bind to a wildcard address (0.0.0.0). Otherwise it will bind to a host name. Only available in CDH 4.3 and later.

Related Name`hbase.rest.info.bindAddress`**Default Value**`true`**API Name**`hbase_restserver_info_bind_to_wildcard`**Required**`false`**HBase REST Server Web UI Port****Description**

The port that HBase REST Server Web UI binds to.

Related Name`hbase.rest.info.port`**Default Value**`8085`**API Name**`hbase_restserver_info_port`**Required**`true`**HBase REST Server Port****Description**

The port that HBase REST Server binds to.

Related Name

hbase.rest.port

Default Value

20550

API Name

hbase_restserver_port

Required

true

Resource Management

Java Heap Size of HBase REST Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

1 GiB

API Name

hbase_restserver_java_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**`rm_custom_resources`**Required**`false`**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**`500`**API Name**`rm_io_weight`**Required**`true`**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**HBase REST Server TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when HBase REST Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

hbase.rest.ssl.keystore.store

Default Value**API Name**

hbase_restserver_keystore_file

Required

false

HBase REST Server TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when HBase REST Server is acting as a TLS/SSL server.

Related Name

hbase.rest.ssl.keystore.keypassword

Default Value**API Name**

hbase_restserver_keystore_keypassword

Required

false

HBase REST Server TLS/SSL Server JKS Keystore File Password**Description**

The password for the HBase REST Server JKS keystore file.

Related Name

hbase.rest.ssl.keystore.password

Default Value**API Name**

hbase_restserver_keystore_password

Required

false

Enable TLS/SSL for HBase REST Server

Description

Encrypt communication between clients and HBase REST Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hbase.rest.ssl.enabled

Default Value

false

API Name

hbase_restserver_ssl_enable

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**HBase Thrift Server Log Directory****Description**

Directory where HBase Thrift Server will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hbase

API Name

hbase_thriftserver_log_dir

Required

false

HBase Thrift Server Logging Threshold**Description**

The minimum log level for HBase Thrift Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

HBase Thrift Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for HBase Thrift Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

HBase Thrift Server Max Log Size

Description

The maximum size, in megabytes, per log file for HBase Thrift Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

hbasethriftserver_fd_thresholds

Required

false

HBase Thrift Server Host Health Test**Description**

When computing the overall HBase Thrift Server health, consider the host's health.

Related Name**Default Value**

true

API Name

hbasethriftserver_host_health_enabled

Required

false

HBase Thrift Server Process Health Test**Description**

Enables the health test that the HBase Thrift Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

hbasethriftserver_scm_health_enabled

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files

Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Navigator Audit Failure Thresholds

Description

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Enable HBase Thrift Server Compact Protocol****Description**

Use the TCompactProtocol instead of the default TBinaryProtocol. TCompactProtocol is a binary protocol that is more compact than the default and typically more efficient.

Related Name

hbase.regionserver.thrift.compact

Default Value

true

API Name

hbase_thriftserver_compact

Required

false

Enable HBase Thrift Server Framed Transport**Description**

Use framed transport. When using the THsHaServer or TNonblockingServer, framed transport is always used irrespective of this configuration value.

Related Name

hbase.regionserver.thrift.framed

Default Value

true

API Name

hbase_thriftserver_framed

Required

false

HBase Thrift Server Type

Description

Type of HBase Thrift Server.

Related Name

hbase.regionserver.thrift.server.type

Default Value

threadpool

API Name

hbase_thriftserver_type

Required

false

Performance

HBase Thrift Server Min Worker Threads

Description

The "core size" of the thread pool. New threads are created on every connection until this many threads are created.

Related Name

hbase.thrift.minWorkerThreads

Default Value

200

API Name

hbase_thriftserver_min_worker_threads

Required

false

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**HBase Thrift Server Bind Address****Description**

Address to bind the HBase Thrift Server to. When using the THsHaServer or the TNonblockingServer, always binds to 0.0.0.0 irrespective of this configuration value.

Related Name

hbase.regionserver.thrift.ipaddress

Default Value

0.0.0.0

API Name

hbase_thriftserver_bindaddress

Required

false

HBase Thrift Server DNS Network Interface**Description**

The name of the DNS network interface from which an HBase Thrift Server should report its IP address.

Related Name

hbase.thrift.dns.interface

Default Value**API Name**

hbase_thriftserver_dns_interface

Required

false

HBase Thrift Server DNS Name Server**Description**

The host name or IP address of the DNS name server which an HBase Thrift Server should use to determine the host name used for communication and display purposes.

Related Name

hbase.thrift.dns.nameserver

Default Value**API Name**

hbase_thriftserver_dns_nameserver

Required

false

HBase Thrift Server Web UI Bind to Wildcard Address**Description**

If true, HBase Thrift Server Web UI will bind to a wildcard address (0.0.0.0). Otherwise it will bind to a host name. Only available in CDH 4.3 and later.

Related Name

hbase.thrift.info.bindAddress

Default Value

true

API Name

hbase_thriftserver_info_bind_to_wildcard

Required

false

HBase Thrift Server Web UI Port

Description

The port that HBase Thrift Server Web UI binds to.

Related Name

hbase.thrift.info.port

Default Value

9095

API Name

hbase_thriftserver_info_port

Required

true

HBase Thrift Server Port

Description

The port that HBase Thrift Server binds to.

Related Name

hbase.regionserver.thrift.port

Default Value

9090

API Name

hbase_thriftserver_port

Required

true

Resource Management

Java Heap Size of HBase Thrift Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

hbase_thriftserver_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

HBase Thrift Server over HTTP TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when HBase Thrift Server over HTTP is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

hbase.thrift.ssl.keystore.store

Default Value**API Name**

hbase_thriftserver_http_keystore_file

Required

false

HBase Thrift Server over HTTP TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when HBase Thrift Server over HTTP is acting as a TLS/SSL server.

Related Name

hbase.thrift.ssl.keystore.keypassword

Default Value**API Name**

hbase_thriftserver_http_keystore_keypassword

Required

false

HBase Thrift Server over HTTP TLS/SSL Server JKS Keystore File Password**Description**

The password for the HBase Thrift Server over HTTP JKS keystore file.

Related Name

hbase.thrift.ssl.keystore.password

Default Value**API Name**

hbase_thriftserver_http_keystore_password

Required

false

Enable TLS/SSL for HBase Thrift Server over HTTP**Description**

Encrypt communication between clients and HBase Thrift Server over HTTP using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hbase.thrift.ssl.enabled

Default Value

false

API Name

hbase_thriftserver_http_use_ssl

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: HBase Kerberos Secure Thrift Server Validator**Description**

Whether to suppress configuration warnings produced by the HBase Kerberos Secure Thrift Server Validator configuration validator.

Required

false

Master Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Master Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

MASTER_role_env_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value`/tmp`**API Name**`oom_heap_dump_dir`**Required**`false`**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_heap_dump_enabled`**Required**`true`**Kill When Out of Memory****Description**

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_sigkill_enabled`**Required**`true`**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**`false`**API Name**`process_auto_restart`**Required**`true`**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Master Log Directory

Description

Directory where Master will place its log files.

Related Name

hadoop.log.dir

Default Value

	/var/log/hbase
API Name	
	hbase_master_log_dir
Required	
	false

Master Logging Threshold

Description	The minimum log level for Master logs
Related Name	
Default Value	INFO
API Name	
	log_threshold
Required	
	false

Master Maximum Log File Backups

Description	The maximum number of rolled log files to keep for Master logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	
	max_log_backup_index
Required	
	false

Master Max Log Size

Description	The maximum size, in megabytes, per log file for Master logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	
	max_log_size
Required	
	false

Metrics

Extended Period

Description	
-------------	--

Time period in seconds to reset long-running metrics (e.g. compactions). This is an HBase specific configuration.

Related Name

hbase.extendedperiod

Default Value

1 hour(s)

API Name

hbase_metrics_extended_period

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for

that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, exceptiontype: java.io.IOException , alert: false, rate: 0, exceptiontype: java.net.SocketException , alert: false, rate: 0, exceptiontype: java.net.SocketClosedException , alert: false, rate: 0, exceptiontype: java.io.EOFException , alert: false, rate: 0, exceptiontype: java.nio.channels.CancelledKeyException , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. API Name

log_event_whitelist

Required

false

HBase Master Canary Health Test

Description

Enables the health test that a client can connect to the HBase Master

Related Name**Default Value**

true

API Name

master_canary_health_enabled

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

master_fd_thresholds

Required

false

Garbage Collection Duration Thresholds

Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

master_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period

Description

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

master_gc_duration_window

Required

false

Master Host Health Test**Description**

When computing the overall Master health, consider the host's health.

Related Name**Default Value**

true

API Name

master_host_health_enabled

Required

false

HBase Regions In Transition Over Threshold Health Test**Description**

Enable the health test that checks if there are regions in transition over the threshold configured in HBase.

Related Name**Default Value**

true

API Name

master_regions_in_transition_health_enabled

Required

false

Master Process Health Test**Description**

Enables the health test that the Master's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

master_scm_health_enabled

Required

false

Health Test Startup Tolerance**Description**

The amount of time allowed after this role is started that failures of health tests that rely on communication with this role will be tolerated.

Related Name**Default Value**

5 minute(s)

API Name

master_startup_tolerance

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

master_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

master_web_metric_collection_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check

Description

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**HBase Master Handler Count****Description**

Number of RPC Server instances spun up on HBase Master.

Related Name

hbase.master.handler.count

Default Value

25

API Name

hbase_master_handler_count

Required

false

HBase Master Log Cleaner Plugins**Description**

A comma-separated list of LogCleanerDelegate(s) that are used in LogsCleaner. WAL/HLog cleaner(s) are called in order, so put the log cleaner that prunes the most log files in the front. To implement your own LogCleanerDelegate, add it to HBase's classpath and add the fully-qualified class name here. You should always add the above default log cleaners in the list, unless you have a special reason not to.

Related Name

hbase.master.logcleaner.plugins

Default Value

API Name

hbase_master_logcleaner_plugins

Required

false

Maximum Time to Keep HLogs**Description**

Maximum time an HLog remains in the .oldlogdir directory until an HBase Master thread deletes it.

Related Name

hbase.master.logcleaner.ttl

Default Value

1 minute(s)

API Name

hbase_master_logcleaner_ttl

Required

false

Set HBase Master UI to read-only.**Description**

Read-only mode for the HBase Master UI disallows operations from the UI which change the state of HBase, such as triggering compactions or splits.

Related Name

hbase.master.ui.readonly

Default Value

true

API Name

hbase_master_ui_readonly

Required

false

Performance**Region Closing Threads****Description**

Number of pooled threads to handle region closing in the master.

Related Name

hbase.master.executor.closeregion.threads

Default Value

5

API Name

hbase_master_executor_closeregion_threads

Required

false

Region Opening Threads**Description**

Number of pooled threads to handle region opening in the master.

Related Name

hbase.master.executor.openregion.threads

Default Value

5

API Name

hbase_master_executor_openregion_threads

Required

false

RegionServer Recovery Threads

Description

Number of pooled threads to handle the recovery of the RegionServers in the master.

Related Name

hbase.master.executor.serverops.threads

Default Value

5

API Name

hbase_master_executor_serverops_threads

Required

false

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

HBase Master Bind to Wildcard Address

Description

When true, HBase Master will bind to 0.0.0.0. Only available with CDH 4.3 and later.

Related Name

hbase.master.ipc.address

Default Value

true

API Name

hbase_master_bind_to_wildcard_address

Required

true

HBase Master DNS Network Interface**Description**

The name of the DNS network interface from which an HBase Master should report its IP address.

Related Name

hbase.master.dns.interface

Default Value**API Name**

hbase_master_dns_interface

Required

false

HBase Master DNS Name Server**Description**

The host name or IP address of the DNS name server which an HBase Master should use to determine the host name used for communication and display purposes.

Related Name

hbase.master.dns.nameserver

Default Value**API Name**

hbase_master_dns_nameserver

Required

false

HBase Master Web UI Address**Description**

The address for the HBase Master web UI

Related Name

hbase.master.info.bindAddress

Default Value**API Name**

hbase_master_info_bindAddress

Required

false

HBase Master Web UI Port**Description**

The port for the HBase Master web UI. Set to -1 to disable the HBase Master web UI.

Related Name

hbase.master.info.port

Default Value

16010

API Name

hbase_master_info_port

Required

false

HBase Master Port**Description**

The port that the HBase Master binds to.

Related Name

hbase.master.port

Default Value

16000

API Name

hbase_master_port

Required

false

Resource Management**Java Heap Size of HBase Master in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

hbase_master_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
 These settings override other cgroup settings.

Related Name

`custom.cgroups`

Default Value**API Name**

`rm_custom_resources`

Required

`false`

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

`blkio.weight`

Default Value

`500`

API Name

`rm_io_weight`

Required

`true`

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

`memory.limit_in_bytes`

Default Value

`-1 MiB`

API Name

`rm_memory_hard_limit`

Required

`true`

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Require EXEC privilege to execute coprocessor calls

Description

If this setting is enabled and ACL based access control is active (the AccessController coprocessor is installed either as a system coprocessor or on a table as a table coprocessor) then you must grant all relevant users EXEC privilege if they require the ability to execute coprocessor endpoint calls. EXEC privilege, like any other permission, can be granted globally to a user, or to a user on a per table or per namespace basis. For more information on coprocessor endpoints, see the coprocessor section of the HBase online manual. For more information on granting or revoking permissions using the AccessController, see the security section of the HBase online manual.

Related Name

hbase.security.exec.permission.checks

Default Value

false

API Name

hbase_security_exec_permission_checks

Required

false

HBase Master TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HBase Master might connect to. This is used when HBase Master is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**

master_truststore_file

Required

false

HBase Master TLS/SSL Client Trust Store Password**Description**

The password for the HBase Master TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

master_truststore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

Required

true

Suppress Parameter Validation: HBase Master Log Cleaner Plugins**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Master Log Cleaner Plugins parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_master_logcleaner_plugins

Required

true

Suppress Parameter Validation: HBase Master Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Master Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_master_port

Required

true

Suppress Parameter Validation: Master Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: Master Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_master_role_env_safety_valve

Required

true

Suppress Parameter Validation: HBase Master TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Master TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_master_truststore_file

Required

true

Suppress Parameter Validation: HBase Master TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Master TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_master_truststore_password

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_master_audit_health

Required

true

Suppress Health Test: HBase Master Canary

Description

Whether to suppress the results of the HBase Master Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_master_canary_health`**Required**`true`**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_master_file_descriptor`**Required**`true`**Suppress Health Test: GC Duration****Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_master_gc_duration`**Required**`true`**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_master_heap_dump_directory_free_space`**Required**`true`

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_master_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_master_log_directory_free_space

Required

true

Suppress Health Test: HBase Regions In Transition Over Threshold

Description

Whether to suppress the results of the HBase Regions In Transition Over Threshold health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_master_regions_in_transition_over_threshold

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_master_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_master_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_master_unexpected_exits

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_master_web_metric_collection

Required

true

RegionServer

Advanced

Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)

Description

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into `hadoop-metrics2.properties`.

Related Name**Default Value****API Name**

`hadoop_metrics2_safety_valve`

Required

`false`

BucketCache IOEngine

Description

Where to store the contents of the BucketCache. Either "offheap" or `file:/path/to/file` -- this should be a file in the local file system (not HDFS), and is generally a file on ramdisk or SSD (not spinning disk). If this is set to "offheap" then Java's `-XX:MaxDirectMemorySize` is set to the value of `hbase.bucketcache.size` plus 1GB for short-circuit reads.

Related Name

`hbase.bucketcache.ioengine`

Default Value**API Name**

`hbase_bucketcache_ioengine`

Required

`false`

BucketCache Size

Description

The total size of the BucketCache, in megabytes. The size to configure depends on the amount of memory available to HBase, or the size of a local SSD. If `hbase.bucketcache.ioengine` is set to "offheap", then the bucketcache consumes the configured amount of memory from Java's Direct Memory.

Related Name

`hbase.bucketcache.size`

Default Value

`1 GiB`

API Name

`hbase_bucketcache_size`

Required

`false`

HBase Coprocessor Region Classes

Description

List of coprocessors that are loaded by default on all tables. For any override coprocessor method, these classes will be called in order. After implementing your own coprocessor, just put it in HBase's classpath and add the fully qualified class name here. A coprocessor can also be loaded on demand by setting HTableDescriptor.

Related Name

hbase.coprocessor.region.classes

Default Value**API Name**

hbase_coprocessor_region_classes

Required

false

Canary Interval**Description**

Duration between consecutive checks done by the Canary.

Related Name**Default Value**

6 second(s)

API Name

hbase_regionserver_canary_interval

Required

false

Canary Timeout**Description**

Timeout for Canary to perform its checks.

Related Name**Default Value**

15 second(s)

API Name

hbase_regionserver_canary_timeout

Required

false

RegionServer Advanced Configuration Snippet (Safety Valve) for hbase-site.xml**Description**

For advanced use only. A string to be inserted into hbase-site.xml for this role only.

Related Name**Default Value****API Name**

hbase_regionserver_config_safety_valve

Required

false

Java Configuration Options for HBase RegionServer

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS -XX:ReservedCodeCacheSize=256m

API Name

hbase_regionserver_java_opts

Required

false

Write-Ahead Log (WAL) Codec Class

Description

Configuration key for the class to use when encoding cells in the Write-Ahead Log (WAL)

Related Name

hbase.regionserver.wal.codec

Default Value**API Name**

hbase_regionserver_wal_codec

Required

false

RegionServer Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value`/tmp`**API Name**`oom_heap_dump_dir`**Required**`false`**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_heap_dump_enabled`**Required**`true`**Kill When Out of Memory****Description**

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_sigkill_enabled`**Required**`true`**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**`false`**API Name**`process_auto_restart`**Required**`true`**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

RegionServer Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

REGIONSERVER_role_env_safety_valve

Required

false

Logs

RegionServer Log Directory

Description

Directory where RegionServer will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hbase

API Name

hbase_regionserver_log_dir

Required

false

RegionServer Logging Threshold

Description

The minimum log level for RegionServer logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

RegionServer Maximum Log File Backups

Description

The maximum number of rolled log files to keep for RegionServer logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

RegionServer Max Log Size

Description

The maximum size, in megabytes, per log file for RegionServer logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Metrics**Extended Period****Description**

Time period in seconds to reset long-running metrics (e.g. compactions). This is an HBase specific configuration.

Related Name

hbase.extendedperiod

Default Value

1 hour(s)

API Name

hbase_metrics_extended_period

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. API Name

log_event_whitelist

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**`monitoring_metric_filter`**Required**

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name`process_swap_memory_thresholds`**Required**

false

HBase RegionServer Compaction Queue Monitoring Thresholds**Description**

The health test thresholds of the weighted average size of the HBase RegionServer compaction queue over a recent period. See HBase RegionServer Compaction Queue Monitoring Period.

Related Name**Default Value**

Warning: 10.0, Critical: Never

API Name

regionserver_compaction_queue_thresholds

Required

false

HBase RegionServer Compaction Queue Monitoring Period

Description

The period over which to compute the moving average of the compaction queue size.

Related Name**Default Value**

5 minute(s)

API Name

regionserver_compaction_queue_window

Required

false

HBase Region Server Connectivity Tolerance at Startup

Description

The amount of time to wait for the HBase Region Server to fully start up and connect to the HBase Master before enforcing the connectivity check.

Related Name**Default Value**

3 minute(s)

API Name

regionserver_connectivity_tolerance

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

regionserver_fd_thresholds

Required

false

HBase RegionServer Flush Queue Monitoring Thresholds

Description

The health test thresholds of the average size of the HBase RegionServer flush queue over a recent period. See HBase RegionServer Flush Queue Monitoring Period.

Related Name**Default Value**

Warning: 10.0, Critical: Never

API Name

regionserver_flush_queue_thresholds

Required

false

HBase RegionServer Flush Queue Monitoring Period

Description

The period over which to compute the moving average of the flush queue size.

Related Name**Default Value**

5 minute(s)

API Name

regionserver_flush_queue_window

Required

false

Garbage Collection Duration Thresholds

Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

regionserver_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period

Description

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

regionserver_gc_duration_window

Required

false

RegionServer Host Health Test**Description**

When computing the overall RegionServer health, consider the host's health.

Related Name**Default Value**

true

API Name

regionserver_host_health_enabled

Required

false

HBase RegionServer to Master Connectivity Test**Description**

Enables the health test that the RegionServer is connected to the Master

Related Name**Default Value**

true

API Name

regionserver_master_connectivity_enabled

Required

false

HBase RegionServer Memstore Size Thresholds**Description**

The health test thresholds of the total size of RegionServer's memstores. Specified as a percentage of the configured upper limit. See Maximum Size of All Memstores in RegionServer.

Related Name**Default Value**

Warning: 95.0 %, Critical: 100.0 %

API Name

regionserver_memstore_size_thresholds

Required

false

HBase RegionServer HDFS Read Latency Thresholds**Description**

The health test thresholds of the latency that the RegionServer sees for HDFS read operations

Related Name**Default Value**

Warning: 50 millisecond(s), Critical: 100 millisecond(s)

API Name

regionserver_read_latency_thresholds

Required

false

HBase RegionServer HDFS Read Latency Monitoring Period**Description**

The period over which to compute the moving average of the HDFS read latency of the HBase RegionServer.

Related Name**Default Value**

5 minute(s)

API Name

regionserver_read_latency_window

Required

false

RegionServer Process Health Test**Description**

Enables the health test that the RegionServer's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

regionserver_scm_health_enabled

Required

false

Percentage of Heap Used by HStoreFile Index**Description**

The health test thresholds of the size used by the HStoreFile index. Specified as a percentage of the total heap size.

Related Name**Default Value**

Warning: 10.0 %, Critical: Never

API Name

regionserver_store_file_idx_size_thresholds

Required

false

HBase RegionServer HDFS Sync Latency Thresholds**Description**

The health test thresholds for the latency of HDFS write operations that the RegionServer detects

Related Name**Default Value**

Warning: 500 millisecond(s), Critical: 5 second(s)

API Name

regionserver_sync_latency_thresholds

Required

false

HBase RegionServer HDFS Sync Latency Monitoring Period**Description**

The period over which to compute the moving average of the HDFS sync latency of the HBase RegionServer.

Related Name**Default Value**

5 minute(s)

API Name

regionserver_sync_latency_window

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

regionserver_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

regionserver_web_metric_collection_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**HBase Hash Type****Description**

The hashing algorithm for use in HashFunction. Two values are supported: 'murmur' (for MurmurHash) and 'jenkins' (for JenkinsHash).

Related Name

hbase.hash.type

Default Value

murmur

API Name

hbase_hash_type

Required

false

HBase HRegion Major Compaction**Description**

The time, in milliseconds, between 'major' compactions of all HStoreFiles in a region. To disable automated major compactions, set this value to 0.

Related Name

hbase.hregion.majorcompaction

Default Value

7 day(s)

API Name

hbase_hregion_majorcompaction

Required

false

HBase HRegion Major Compaction Jitter**Description**

Jitter outer bound for major compactions.
On each RegionServer, the hbase.region.majorcompaction interval is multiplied by a random fraction that is inside the bounds of this maximum. This + or - product is added to when the next major compaction is to run. Major compaction should not occur on every RegionServer at the same time. The smaller this number, the closer together the compactions.

Related Name

hbase.hregion.majorcompaction.jitter

Default Value

0.5

API Name

hbase_hregion_majorcompaction_jitter

Required

false

HBase Maximum File Size

Description

Maximum HStoreFile size. If any one of a column families' HStoreFiles has grown to exceed this value, the hosting HRegion is split in two.

Related Name

hbase.hregion.max.filesize

Default Value

10 GiB

API Name

hbase_hregion_max_filesize

Required

false

HBase Memstore Block Multiplier

Description

Blocks writes if the size of the memstore increases to the value of 'hbase.hregion.block.memstore' multiplied by the value of 'hbase.hregion.flush.size' bytes. This setting is useful for preventing runaway memstore during spikes in update traffic. Without an upper-bound, memstore fills such that when it flushes, the resultant process of flushing files take a long time to compact or split, or worse, an "out of memory" error occurs.

Related Name

hbase.hregion.memstore.block.multiplier

Default Value

2

API Name

hbase_hregion_memstore_block_multiplier

Required

false

HBase Memstore Flush Size

Description

Memstore will be flushed to disk if size of the memstore exceeds this value in number of bytes. This value is checked by a thread that runs the frequency specified by hbase.server.thread.wakefrequency.

Related Name

hbase.hregion.memstore.flush.size

Default Value

128 MiB

API Name

hbase_hregion_memstore_flush_size

Required

false

Chunk Size Allocated by MSLAB Allocation Scheme

Description

The size of the chunks allocated by MSLAB, in bytes.

Related Name`hbase.hregion.memstore.mslab.chunksize`**Default Value**`2 MiB`**API Name**`hbase_hregion_memstore_mslab_chunksize`**Required**`false`**Enable MSLAB Allocation Scheme****Description**

Enable MemStore-Local Allocation Buffer (MSLAB) Allocation Scheme. Note: This feature is experimental in CDH3.

Related Name`hbase.hregion.memstore.mslab.enabled`**Default Value**`true`**API Name**`hbase_hregion_memstore_mslab_enabled`**Required**`false`**Maximum Byte Array from MSLAB Allocation Scheme****Description**

The maximum size byte array that should come from the MSLAB, in bytes.

Related Name`hbase.hregion.memstore.mslab.max.allocation`**Default Value**`256 KiB`**API Name**`hbase_hregion_memstore_mslab_max_allocation`**Required**`false`**HBase Memstore Pre-close Flush Size****Description**

If the memstores in a region are this size or larger when closing, run a pre-flush process to clear out memstores before putting up the region closed flag and taking the region offline. On close, a flush process is run under the close flag up to empty memory. During this time, the region is offline and no writes are taken. If the memstore content is large, the flush process could take a long time to complete. The pre-flush process cleans out the bulk of the memstore before putting up the close flag and taking the region offline, so that the flush process that runs under the close flag has little to do.

Related Name`hbase.hregion.preclose.flush.size`**Default Value**`5 MiB`

API Name`hbase_hregion_preclose_flush_size`**Required**`false`**HStore Blocking Store Files****Description**

If there are more than this number of HStoreFiles in any one HStore, then updates are blocked for this HRegion until a compaction is completed, or until the value specified for 'hbase.hstore.blockingWaitTime' has been exceeded.

Related Name`hbase.hstore.blockingStoreFiles`**Default Value**`16`**API Name**`hbase_hstore_blockingStoreFiles`**Required**`false`**HStore Blocking Wait Time****Description**

The period of time that an HRegion will block updates after reaching the HStoreFile limit that is specified by 'hbase.hstore.blockingStoreFiles'. After this time has elapsed, the HRegion will stop blocking updates even if a compaction has not been completed.

Related Name`hbase.hstore.blockingWaitTime`**Default Value**`1 minute(s), 30 second(s)`**API Name**`hbase_hstore_blockingWaitTime`**Required**`false`**Maximum Number of HStoreFiles Compaction****Description**

Maximum number of HStoreFiles to compact per minor compaction.

Related Name`hbase.hstore.compaction.max`**Default Value****API Name**`hbase_hstore_compaction_max`**Required**`false`

HStore Compaction Threshold

Description

If this number of HStoreFiles in any one HStore is exceeded, then a compaction is run to rewrite all HStoreFiles files as one HStoreFile. (One HStoreFile is written per flush of memstore.) You can delay compaction by specifying a larger number, but the compaction will take longer when it does run. During a compaction, updates cannot be flushed to disk. Long compactons require memory sufficient to carry the logging of all updates across the duration of the compaction. If too large, clients timeout during compaction.

Related Name

hbase.hstore.compactionThreshold

Default Value

3

API Name

hbase_hstore_compactionThreshold

Required

false

Enable Replication To Secondary Region Replicas

Description

Whether asynchronous WAL replication to the secondary region replicas is enabled. If enabled, a replication peer named 'region_replica_replication' is created that tails the logs and replicates the mutations to region replicas for tables that have region replication > 1. Disabling this replication also requires disabling the replication peer using shell or the ReplicationAdmin Java class. Replication to secondary region replicas works over standard intercluster replication. If disabled explicitly, enable replication by setting 'hbase.replication' to true for this feature to work.

Related Name

hbase.region.replica.replication.enabled

Default Value

false

API Name

hbase_region_replica_replication_enabled

Required

false

HBase RegionServer Interface Class

Description

An interface that is assignable to HRegionInterface. Used in HBase Client for opening a proxy to a remote HBase RegionServer.

Related Name

hbase.regionserver.class

Default Value**API Name**

hbase_regionserver_class

Required

false

RegionServer Codecs

Description

Comma-separated list of codecs that the RegionServer requires to start. Use this setting to make sure that all RegionServers joining a cluster are installed with a particular set of codecs.

Related Name

hbase.regionserver.codecs

Default Value**API Name**

hbase_regionserver_codecs

Required

false

Low Watermark for Memstore Flush

Description

Controls when memstores are forced to flush to make room in memory. The memstore will begin flushing when this threshold is reached. Prior to CDH 5.8.0, this amount is the percentage of the heap size of the Region Server and you can set it equal to 'Maximum Size of All Memstores in RegionServer' for minimal possible flushing. In CDH 5.8.0 and later, this amount is the percentage of memstore memory and you can set it equal to 1.0 for minimal possible flushing.

Related Name

hbase.regionserver.global.memstore.size.lower.limit

Default Value

0.95

API Name

hbase_regionserver_global_memstore_lowerLimit

Required

false

Maximum Size of All Memstores in RegionServer

Description

Maximum size of all memstores in a RegionServer before new updates are blocked and flushes are forced.

Related Name

hbase.regionserver.global.memstore.size

Default Value

0.4

API Name

hbase_regionserver_global_memstore_upperLimit

Required

false

HBase RegionServer Handler Count

Description

Number of RPC Server instances spun up on RegionServers.

Related Name

hbase.regionserver.handler.count

Default Value

30

API Name

hbase_regionserver_handler_count

Required

false

HLog Reader Implementation**Description**

The HLog file reader implementation.

Related Name

hbase.regionserver.hlog.reader.impl

Default Value**API Name**

hbase_regionserver_hlog_reader_impl

Required

false

HLog Writer Implementation**Description**

The HLog file writer implementation.

Related Name

hbase.regionserver.hlog.writer.impl

Default Value**API Name**

hbase_regionserver_hlog_writer_impl

Required

false

HBase RegionServer Lease Period**Description**

The lease period, in milliseconds, for the HBase RegionServer. Clients must report in within this period or else they are considered dead.

Related Name

hbase.client.scanner.timeout.period

Default Value

1 minute(s)

API Name

hbase_regionserver_lease_period

Required

false

HBase RegionServer Log Roll Period**Description**

Period, in milliseconds, at which to roll the commit log.

Related Name

hbase.regionserver.logroll.period

Default Value

1 hour(s)

API Name

hbase_regionserver_logroll_period

Required

false

Maximum number of Write-Ahead Log (WAL) files**Description**

Maximum number of Write-Ahead Log (WAL) files. This value multiplied by HDFS Block Size (dfs.blocksize) is the size of the WAL that will need to be replayed when a server crashes. This value is inversely proportional to the frequency of flushes to disk.

Related Name

hbase.regionserver.maxlogs

Default Value

32

API Name

hbase_regionserver_maxlogs

Required

false

HBase RegionServer Meta-Handler Count**Description**

Number of handlers for processing priority requests in a RegionServer.

Related Name

hbase.regionserver.metahandler.count

Default Value

10

API Name

hbase_regionserver_metahandler_count

Required

false

HBase RegionServer Message Interval**Description**

Interval, in milliseconds, between messages from the RegionServer to the HBase Master. Use a high value such as 3000 for clusters that have more than 10 hosts.

Related Name

hbase.regionserver.msginterval

Default Value

3 second(s)

API Name

hbase_regionserver_msginterval

Required

false

RegionServer Reservation Blocks**Description**

The number of reservation blocks that are used to prevent unstable RegionServers caused by an OOME.

Related Name

hbase.regionserver.nbreservationblocks

Default Value

4

API Name

hbase_regionserver_nbreservationblocks

Required

false

Synch Interval of HLog Entries**Description**

Sync the HLog to HDFS after this interval, in milliseconds, if it has not accumulated the number of HLog Entries specified to trigger a sync.

Related Name

hbase.regionserver.optionallogflushinterval

Default Value

1 second(s)

API Name

hbase_regionserver_optionallogflushinterval

Required

false

HBase Region Split Limit**Description**

Limit for the number of regions after which no more region splitting should take place. This is not a hard limit for the number of regions but acts as a guideline for the RegionServer to stop splitting after a certain limit.

Related Name

hbase.regionserver.regionSplitLimit

Default Value

2147483647

API Name

hbase_regionserver_regionSplitLimit

Required

false

Per-RegionServer Number of WAL Pipelines**Description**

When using Multiple HDFS WAL as the WALProvider, sets how many write-ahead-logs each RegionServer should run. Will result in this number of HDFS pipelines. Writes for a given Region only go to a single pipeline, spreading total RegionServer load.

Related Name

hbase.wal.regiongrouping.numgroups

Default Value

1

API Name

hbase_regionserver_wal_pipelines

Required

false

WAL Provider**Description**

The implementation that should be used by the RegionServer for the write-ahead-log.

Related Name

hbase.wal.provider

Default Value

multiwal

API Name

hbase_regionserver_wal_provider

Required

false

WAL HSM Storage Policy**Description**

The Hierarchical Storage Management policy that should be used by the RegionServer for the write-ahead-log. Using an SSD policy will have no effect unless HDFS HSM is configured to know which drives are SSDs. See [Enabling HSM with HBase](#) .

Related Name

hbase.wal.storage.policy

Default Value

NONE

API Name

hbase_regionserver_wal_storage_policy

Required

false

HFile Block Cache Size**Description**

Percentage of maximum heap (-Xmx setting) to allocate to block cache used by HFile/StoreFile. To disable, set this value to 0 .

Related Name

hfile.block.cache.size

Default Value

0.4

API Name

hfile_block_cache_size

Required

false

Performance**RegionServer IPC Read Threadpool Size****Description**

Read threadpool size used by the RegionServer HBase IPC Server.

Related Name

hbase.ipc.server.read.threadpool.size

Default Value

10

API Name

hbase_ipc_server_read_threadpool_size

Required

false

Region Mover Threads**Description**

Number of threads to use while loading and unloading regions to or from a RegionServer. Can be used to increase the speed of decommissioning or rolling restart operations.

Related Name**Default Value**

1

API Name

hbase_regionserver_regionmover_thread_count

Required

true

RegionServer Small Compactions Thread Count**Description**

Number of threads for completing small compactions.

Related Name

hbase.regionserver.thread.compaction.small

Default Value

1

API Name

hbase_regionserver_thread_compaction_small

Required

false

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value**

32768

API Name

rlimit_fds

Required

false

Ports and Addresses

HBase RegionServer Bind to Wildcard Address

Description

When true, HBase RegionServer will bind to 0.0.0.0. Only available in CDH 4.3 and later.

Related Name

hbase.regionserver.ipc.address

Default Value

true

API Name

hbase_regionserver_bind_to_wildcard_address

Required

true

RegionServer DNS Network Interface

Description

The name of the DNS Network Interface from which a RegionServer should report its IP address.

Related Name

hbase.regionserver.dns.interface

Default Value**API Name**

hbase_regionserver_dns_interface

Required

false

RegionServer DNS Nameserver

Description

The host name or IP address of the DNS name server which a RegionServer should use to determine the host name used by the HBase Master for communication and display purposes.

Related Name

hbase.regionserver.dns.nameserver

Default Value**API Name**

hbase_regionserver_dns_nameserver

Required

false

HBase RegionServer Web UI Address**Description**

The address for the HBase RegionServer web UI

Related Name

hbase.regionserver.info.bindAddress

Default Value**API Name**

hbase_regionserver_info_bindAddress

Required

false

HBase RegionServer Web UI port**Description**

The port for the HBase RegionServer web UI. Set to -1 to disable RegionServer web UI.

Related Name

hbase.regionserver.info.port

Default Value

16030

API Name

hbase_regionserver_info_port

Required

false

HBase RegionServer Port**Description**

The port that an HBase RegionServer binds to.

Related Name

hbase.regionserver.port

Default Value

16020

API Name

hbase_regionserver_port

Required

false

Resource Management**Java Heap Size of HBase RegionServer in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

4 GiB

API Name

hbase_regionserver_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Require EXEC privilege to execute coprocessor calls****Description**

If this setting is enabled and ACL based access control is active (the AccessController coprocessor is installed either as a system coprocessor or on a table as a table coprocessor) then you must grant all relevant users EXEC privilege if they require the ability to execute coprocessor endpoint calls. EXEC privilege, like any other permission, can be granted globally to a user, or to a user on a per table or per namespace basis. For more information on coprocessor endpoints, see the coprocessor section of the HBase online manual. For more information on granting or revoking permissions using the AccessController, see the security section of the HBase online manual.

Related Name`hbase.security.exec.permission.checks`**Default Value**`false`**API Name**`hbase_security_exec_permission_checks`**Required**`false`**HBase Region Server TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HBase Region Server might connect to. This is used when HBase Region Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**`regionserver_truststore_file`**Required**`false`**HBase Region Server TLS/SSL Client Trust Store Password****Description**

The password for the HBase Region Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**`regionserver_truststore_password`**Required**`false`**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name`stacks_collection_data_retention`**Default Value**`100 MiB`

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that

have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_metrics2_safety_valve

Required

API Name

role_config_suppression_hbase_regionserver_dns_nameserver

Required

true

Suppress Configuration Validator: HBase Region Server Memstore Lower Limit Validator**Description**

Whether to suppress configuration warnings produced by the HBase Region Server Memstore Lower Limit Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_global_memstore_lowerlimit_validator

Required

true

Suppress Parameter Validation: HLog Reader Implementation**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HLog Reader Implementation parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_hlog_reader_impl

Required

true

Suppress Parameter Validation: HLog Writer Implementation**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HLog Writer Implementation parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_hlog_writer_impl

Required

true

Suppress Parameter Validation: HBase RegionServer Web UI Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase RegionServer Web UI Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_info_bindaddress

Required

true

Suppress Parameter Validation: HBase RegionServer Web UI port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase RegionServer Web UI port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_info_port

Required

true

Suppress Parameter Validation: Java Heap Size of HBase RegionServer in Bytes**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of HBase RegionServer in Bytes parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_java_heapsize

Required

true

Suppress Parameter Validation: Java Configuration Options for HBase RegionServer**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for HBase RegionServer parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_java_opts

Required

true

Suppress Parameter Validation: RegionServer Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the RegionServer Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hbase_regionserver_log_dir

Required

true

Suppress Configuration Validator: HBase RegionServer Multiple HDFS WAL with Replication Validator**Description**

Whether to suppress configuration warnings produced by the HBase RegionServer Multiple HDFS WAL with Replication Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_multiwal_replication_validator

Required

true

Suppress Parameter Validation: HBase RegionServer Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase RegionServer Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_port

Required

true

Suppress Parameter Validation: Write-Ahead Log (WAL) Codec Class**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Write-Ahead Log (WAL) Codec Class parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_wal_codec

Required

true

Suppress Parameter Validation: RegionServer Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the RegionServer Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: RegionServer File Descriptor Limit Validator**Description**

Whether to suppress configuration warnings produced by the RegionServer File Descriptor Limit Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_regionserver_fd_limit_validator

Required

true

Suppress Parameter Validation: RegionServer Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the RegionServer Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_regionserver_role_env_safety_valve

Required

true

Suppress Parameter Validation: HBase Region Server TLS/SSL Client Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Region Server TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_regionserver_truststore_file

Required

true

Suppress Parameter Validation: HBase Region Server TLS/SSL Client Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Region Server TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_regionserver_truststore_password

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_audit_health

Required

true

Suppress Health Test: Compaction Queue Size

Description

Whether to suppress the results of the Compaction Queue Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_compaction_queue

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_file_descriptor

Required

true

Suppress Health Test: Flush Queue Size

Description

Whether to suppress the results of the Flush Queue Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_flush_queue

Required

true

Suppress Health Test: GC Duration

Description

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_region_server_gc_duration

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_log_directory_free_space

Required

true

Suppress Health Test: Cluster Connectivity

Description

Whether to suppress the results of the Cluster Connectivity health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_master_connectivity

Required

true

Suppress Health Test: Memstore Size

Description

Whether to suppress the results of the Memstore Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_memstore_size

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_scm_health

Required

true

Suppress Health Test: Store File Index Size

Description

Whether to suppress the results of the Store File Index Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_region_server_store_file_idx_size

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_unexpected_exits

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_region_server_web_metric_collection

Required

true

Service-Wide

Advanced

HBase Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties

Description

For advanced use only, a string to be inserted into atlas-application.properties. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

application_properties_safety_valve

Required

false

Enable Atlas Hook

Description

Enable Atlas Hook to generate Metadata / Lineage information. This Atlas hook is only for the instance of HBase that the Atlas service is using. No other instance of HBase can or should enable this hook.

Related Name**Default Value**

false

API Name

hbase_atlas_hook_enable

Required

false

HBase Coprocessor Abort on Error

Description

Set to true to cause the hosting server (Master or RegionServer) to abort if a coprocessor throws a Throwable object that is not IOException or a subclass of IOException. Setting it to true might be useful in development environments where one wants to terminate the server as soon as possible to simplify coprocessor failure analysis.

Related Name

hbase.coprocessor.abortonerror

Default Value

false

API Name

hbase_coprocessor_abort_on_error

Required

false

HBase Service Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only, a string to be inserted into core-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hbase_core_site_safety_valve

Required

false

Dynamic Jars Directory**Description**

The directory from which the custom filter, comparator, and exception JARs can be loaded without the need to restart. However, an already loaded class would not be un-loaded. Specify a full hadoop filesystem URL.

Related Name

hbase.dynamic.jars.dir

Default Value**API Name**

hbase_dynamic_jars_dir

Required

false

Enable HBase Canary**Description**

Start a process to periodically check that RegionServer is alive when RegionServer is started. Note: This canary is different from the Cloudera Service Monitoring canary and is provided by the HBase service itself.

Related Name**Default Value**

false

API Name

hbase_regionserver_enable_canary

Required

false

HBase Service Advanced Configuration Snippet (Safety Valve) for hbase-site.xml**Description**

For advanced use only, a string to be inserted into hbase-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hbase_service_config_safety_valve

Required

false

HBase Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hbase_service_env_safety_valve

Required

false

Skip Region Reload During Rolling Restart**Description**

Whether the step to reload regions back onto the original RegionServers should be skipped during rolling restart. This can be used to increase the speed of rolling restart or upgrade operations, but can result in regions being moved multiple times, decreasing performance for clients during rolling restart.

Related Name**Default Value**

false

API Name

hbase_skip_reload_during_rr

Required

true

HBase Snapshot Service Advanced Configuration Snippet (Safety Valve) for mapred-site.xml**Description**

For advanced use only, a string to be inserted into mapred-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hbase_snapshot_mapreduce_config_safety_valve

Required

false

HBase Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml**Description**

For advanced use only, a string to be inserted into ssl-server.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value**

API Name

hbase_ssl_server_safety_valve

Required

false

Enable dynamic loading of filter, comparator and exception classes**Description**

Whether to dynamically load certain classes

Related Name

hbase.use.dynamic.jars

Default Value

false

API Name

hbase_use_dynamic_jars

Required

true

HBase User to Impersonate**Description**

The user the management services impersonate when connecting to HBase. If no value is specified, the HBase superuser is used.

Related Name**Default Value****API Name**

hbase_user_to_impersonate

Required

false

HBASE Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties**Description**

For advanced use only, a string to be inserted into the client configuration for navigator.client.properties.

Related Name**Default Value****API Name**

navigator_client_config_safety_valve

Required

false

System Group**Description**

The group that this service's processes should run as.

Related Name**Default Value**

hbase

API Name

process_groupname

Required

true

System User**Description**

The user that this service's processes should run as.

Related Name**Default Value**

hbase

API Name

process_username

Required

true

HBase Service Advanced Configuration Snippet (Safety Valve) for ranger-hbase-audit.xml**Description**

For advanced use only, a string to be inserted into ranger-hbase-audit.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_audit_safety_valve

Required

false

HBase Service Advanced Configuration Snippet (Safety Valve) for ranger-hbase-security.xml**Description**

For advanced use only, a string to be inserted into ranger-hbase-security.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_security_safety_valve

Required

false

Backup**Enable Indexing****Description**

Allow indexing of tables in HBase by Lily HBase Indexer. Note: Replication must be enabled for indexing to work.

Related Name**Default Value**

false

API Name

hbase_enable_indexing

Required

false

Enable Replication**Description**

Allow HBase tables to be replicated.

Related Name

hbase.replication

Default Value

false

API Name

hbase_enable_replication

Required

false

Replication Batch Size**Description**

Maximum number of hlog entries to replicate in one go. If this is large, and a consumer takes a while to process the events, the HBase RPC call will time out.

Related Name

replication.source.nb.capacity

Default Value

1000

API Name

hbase_replication_source_nb_capacity

Required

false

Replication Source Ratio**Description**

Ratio of Lily HBase Indexers used by each HBase RegionServer while doing replication.

Related Name

replication.source.ratio

Default Value

1.0

API Name

hbase_replication_source_ratio

Required

false

Enable Snapshots

Description

Enable snapshots. Disabling snapshots requires deletion of all snapshots before restarting the HBase master; the HBase master will not start if snapshots are disabled and snapshots exist.

Related Name

hbase.snapshot.enabled

Default Value

true

API Name

hbase_snapshot_enabled

Required

false

HBase Master Snapshot Timeout

Description

The maximum amount of time the HBase master waits for a snapshot to complete.

Related Name

hbase.snapshot.master.timeout.millis

Default Value

5 minute(s)

API Name

hbase_snapshot_master_timeout_millis

Required

false

HBase RegionServer Snapshot Timeout

Description

The maximum amount of time the Hbase RegionServer waits for a snapshot to complete.

Related Name

hbase.snapshot.region.timeout

Default Value

5 minute(s)

API Name

hbase_snapshot_region_timeout

Required

false

Amazon S3 Access Key ID for Remote Snapshots

Description

Access key ID required to access Amazon S3 to store remote snapshots.

Related Name**Default Value****API Name**

hbase_snapshot_s3_access_key_id

Required

false

Amazon S3 Path for Remote Snapshots**Description**

Amazon S3 path where remote snapshots should be stored.

Related Name**Default Value****API Name**

hbase_snapshot_s3_path

Required

false

Scheduler Pool for Remote Snapshots in AWS S3**Description**

Name of the scheduler pool to use for MR jobs created during export/import of remote snapshots in AWS S3.

Related Name**Default Value****API Name**

hbase_snapshot_s3_scheduler_pool

Required

false

AWS S3 Secret Access Key for Remote Snapshots**Description**

AWS secret access key required to access S3 to store remote snapshots.

Related Name**Default Value****API Name**

hbase_snapshot_s3_secret_access_key

Required

false

Cloudera Navigator**Enable Audit Collection****Description**

Enable collection of audit events from the service's roles.

Related Name

navigator.audit.enabled

Default Value

true

API Name

navigator_audit_enabled

Required

false

Audit Event Filter**Description**

Event filters are defined in a JSON object like the following: { "defaultAction": ("accept", "discard"), "rules": [{ "action": ("accept", "discard"), "fields": [{ "name": "fieldName", "match": "regex" }] }] } A filter has a default action and a list of rules, in order of precedence. Each rule defines an action, and a list of fields to match against the audit event. A rule is "accepted" if all the listed field entries match the audit event. At that point, the action declared by the rule is taken. If no rules match the event, the default action is taken. Actions default to "accept" if not defined in the JSON object. The following is the list of fields that can be filtered for HBase events:

- allowed: whether the operation was allowed or denied.
- username: the user performing the action.
- tableName: the table affected by the operation.
- family: the column family affected by the operation.
- qualifier: the qualifier the operation.
- action: the action being performed.

The default HBase audit event filter discards events that affect the internal -ROOT-, .META. and _acl_ tables.

Related Name

navigator.event.filter

Default Value

comment: [The default HBase audit event filter discards events that affect the , internal -ROOT-, .META. and _acl_ tables.], defaultAction: accept, rules: [action: discard, fields: [name: tableName, match: (?:-ROOT-|.META.|_acl_|hbase:meta|hbase:acl)]]

API Name

navigator_audit_event_filter

Required

false

Audit Queue Policy**Description**

Action to take when the audit event queue is full. Drop the event or shutdown the affected process.

Related Name

navigator.batch.queue_policy

Default Value

DROP

API Name

navigator_audit_queue_policy

Required

false

Audit Event Tracker**Description**

Configures the rules for event tracking and coalescing. This feature is used to define equivalency between different audit events. When events match, according to a set of configurable parameters, only one entry in the audit list is generated for all the matching events. Tracking works by keeping a reference to events when they first appear, and comparing other incoming events against the "tracked" events according to the rules defined here. Event trackers are defined in a JSON object like the following: { "timeToLive" : [integer], "fields" : [{ "type" : [string], "name" : [string] }] } Where:

- **timeToLive**: maximum amount of time an event will be tracked, in milliseconds. Must be provided. This defines how long, since it's first seen, an event will be tracked. A value of 0 disables tracking.
- **fields**: list of fields to compare when matching events against tracked events.

Each field has an evaluator type associated with it. The evaluator defines how the field data is to be compared. The following evaluators are available:

- **value**: uses the field value for comparison.
- **username**: treats the field value as a user name, and ignores any host-specific data. This is useful for environment using Kerberos, so that only the principal name and realm are compared.

The following is the list of fields that can be used to compare HBase events:

- **operation**: the HBase operation being performed.
- **username**: the user performing the action.
- **ipAddress**: the IP from where the request originated.
- **allowed**: whether the operation was allowed or denied.
- **tableName**: the name of the table affected by the operation.
- **family**: the column family affected by the operation.
- **qualifier**: the qualifier of the operation.

The default event tracker for HBase services defines equality by comparing the username, operation, table name, family, and qualifier of the events.

Related Name

navigator_event_tracker

Default Value

comment: [The default event tracker for HBase services defines equality by , comparing the username, operation, table name, family, and qualifier of , the events.], timeToLive: 60000, fields: [type: value, name: tableName , type: value, name: family , type: value, name: qualifier , type: value, name: operation , type: username, name: username]

API Name

navigator_event_tracker

Required

false

Logs

Audit Log Directory

Description

Path to the directory where audit logs will be written. The directory will be created if it doesn't exist.

Related Name

audit_event_log_dir

Default Value

/var/log/hbase/audit

API Name

audit_event_log_dir

Required

false

Maximum Audit Log File Size**Description**

Maximum size of audit log file in MB before it is rolled over.

Related Name

navigator.audit_log_max_file_size

Default Value

100 MiB

API Name

navigator_audit_log_max_file_size

Required

false

Number of Audit Logs to Retain**Description**

Maximum number of rolled-over audit logs to retain. The logs are not deleted if they contain audit events that have not yet been propagated to the Audit Server.

Related Name

navigator.client.max_num_audit_log

Default Value

10

API Name

navigator_client_max_num_audit_log

Required

false

Monitoring**Enable Log Event Capture****Description**

When set, each role identifies important log events and forwards them to Cloudera Manager.

Related Name**Default Value**

true

API Name

catch_events

Required

false

Enable Service Level Health Alerts**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

HBase Active Master Detection Window

Description

The tolerance window that will be used in HBase service tests that depend on detection of the active HBase Master.

Related Name**Default Value**

3 minute(s)

API Name

hbase_active_master_detection_window

Required

false

Backup Masters Health Test

Description

When computing the overall HBase cluster health, consider the health of the backup HBase Masters.

Related Name**Default Value**

true

API Name

hbase_backup_masters_health_enabled

Required

false

HBase Canary Unhealthy Region Count Alert Threshold

Description

An alert is published if the HBase region health canary detects at least this many unhealthy regions. This setting takes precedence over the `hbase_canary_alert_unhealthy_region_percent_threshold` config.

Related Name**Default Value****API Name**

`hbase_canary_alert_unhealthy_region_count_threshold`

Required

false

HBase Canary Unhealthy Region Percentage Alert Threshold

Description

An alert is published if the HBase region health canary detects at least this percentage of total regions are unhealthy. This threshold is used if the explicit count is not set via the `hbase_canary_alert_unhealthy_region_count_threshold` config.

Related Name**Default Value**

0.1

API Name

`hbase_canary_alert_unhealthy_region_percent_threshold`

Required

false

HBase Erasure Code Canary

Description

Enables the canary that checks if erasure coding is set for hbase root directory.

Related Name**Default Value**

true

API Name

`hbase_erasure_code_canary_enabled`

Required

false

Active Master Health Test

Description

When computing the overall HBase cluster health, consider the active HBase Master's health.

Related Name**Default Value**

true

API Name

`hbase_master_health_enabled`

Required

false

HBase Region Health Canary**Description**

Enables the canary that checks HBase region availability by scanning a row from every region.

Related Name**Default Value**

true

API Name

hbase_region_health_canary_enabled

Required

false

HBase Region Health Canary Exclude Tables**Description**

Tables to exclude in the HBase Region Health Canary which will scan a row from every region.

Related Name**Default Value****API Name**

hbase_region_health_canary_exclude_tables

Required

false

HBase Region Health Canary Slow Run Alert Enabled**Description**

An alert is published if the HBase region health canary runs slowly.

Related Name**Default Value**

true

API Name

hbase_region_health_canary_slow_run_alert_enabled

Required

false

Healthy RegionServer Monitoring Thresholds**Description**

The health test thresholds of the overall RegionServer health. The check returns "Concerning" health if the percentage of "Healthy" RegionServers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" RegionServers falls below the critical threshold.

Related Name**Default Value**

Warning: 95.0 %, Critical: 90.0 %

API Name

hbase_regionservers_healthy_thresholds

Required

false

Log Event Retry Frequency**Description**

The frequency in which the log4j event publication appender will retry sending undelivered log events to the Event server, in seconds

Related Name**Default Value**

30

API Name

log_event_retry_frequency

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

API Name

service_triggers

Required

true

Service Monitor Client Config Overrides

Description

For advanced use only, a list of configuration properties that will be used by the Service Monitor instead of the current client configuration for the service.

Related Name

Default Value

```
<property> <name>zookeeper.recovery.retry</name> <value>0</value> </property> <property>
<name>zookeeper.recovery.retry.intervalmill</name> <value>3000</value> </property>
<property> <name>hbase.zookeeper.recoverable.waittime</name> <value>1000</value> </
property> <property> <name>zookeeper.session.timeout</name> <value>30000</value> </
property> <property> <name>hbase.rpc.timeout</name> <value>10000</value> </property>
<property> <name>hbase.client.retries.number</name> <value>1</value> </property> <property>
<name>hbase.client.rpc.maxattempts</name> <value>1</value> </property> <property>
<name>hbase.client.operation.timeout</name> <value>10000</value> </property>
```

API Name

smon_client_config_overrides

Required

false

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

Other

Atlas Service

Description

Name of the Atlas service that this Hbase service instance depends on

Related Name

Default Value

API Name

atlas_service

Required

false

Maximum Size of HBase Client KeyValue

Description

Specifies the combined maximum allowed size of a KeyValue instance. This option configures an upper boundary for a single entry saved in a storage file. This option prevents a region from

splitting if the data is too large. Set this option to a fraction of the maximum region size. To disable this check, use a value of zero or less.

Related Name

hbase.client.keyvalue.maxsize

Default Value

10 MiB

API Name

hbase_client_keyvalue_maxsize

Required

false

HBase Client Pause**Description**

A general client pause time value. Used mostly as a time period to wait before retrying operations such as a failed get or region lookup.

Related Name

hbase.client.pause

Default Value

100 millisecond(s)

API Name

hbase_client_pause

Required

false

Maximum HBase Client Retries**Description**

Maximum number of client retries. Used as a maximum for all operations such as fetching of the root region from the root RegionServer, getting a cell's value, and starting a row update.

Related Name

hbase.client.retries.number

Default Value

10

API Name

hbase_client_retries_number

Required

false

HBase Client Scanner Caching**Description**

Number of rows to fetch when calling next on a scanner if it is not served from memory. Higher caching values enable faster scanners but require more memory and some calls of next may take longer when the cache is empty.

Related Name

hbase.client.scanner.caching

Default Value

100

API Name

hbase_client_scanner_caching

Required

false

HBase Client Write Buffer**Description**

Write buffer size in bytes. A larger buffer requires more memory on both the client and the server because the server instantiates the passed write buffer to process it but reduces the number of remote procedure calls (RPC). To estimate the amount of server memory used, multiply the value of 'hbase.client.write.buffer' by the value of 'hbase.regionserver.handler.count'.

Related Name

hbase.client.write.buffer

Default Value

2 MiB

API Name

hbase_client_write_buffer

Required

false

Graceful Shutdown Timeout**Description**

Timeout for graceful shutdown of this HBase service. Once this timeout is reached, any remaining running roles are abruptly shutdown. A value of 0 means no timeout.

Related Name**Default Value**

3 minute(s)

API Name

hbase_graceful_stop_timeout

Required

true

HBoss Maximum Number of S3 Connections**Description**

Controls the maximum number of simultaneous connections to S3 from HBoss.

Related Name

fs.s3a.connection.maximum

Default Value

300

API Name

hbase_hboss_fs_s3a_connection_maximum

Required

false

HBoss S3A Implementation Class

Description

The implementation to use (HBoss) for S3A FileSystem access.

Related Name

fs.s3a.impl

Default Value

org.apache.hadoop.hbase.oss.HBaseObjectStoreSemantics

API Name

hbase_hboss_fs_s3a_impl

Required

false

HBoss Maximum Number of Concurrent S3 Uploads

Description

Maximum number of concurrent active (part)uploads, which each use a thread from the threadpool.

Related Name

fs.s3a.threads.max

Default Value

200

API Name

hbase_hboss_fs_s3a_threads_max

Required

false

HBoss Lock Implementation

Description

The HBoss implementation to use for distributing locking on top of S3A.

Related Name

fs.hboss.sync.impl

Default Value

org.apache.hadoop.hbase.oss.sync.ZKTreeLockManager

API Name

hbase_hboss_fs_sync_impl

Required

false

HBoss Wrapped S3A Implementation Class

Description

The implementation which HBoss should instantiate for S3A FileSystem access.

Related Name

fs.hboss.fs.s3a.impl

Default Value

org.apache.hadoop.fs.s3a.S3AFileSystem

API Name

hbase_hboss_wrapped_fs_s3a_impl

Required

false

Enable HBase REST Server Proxy Users**Description**

Use this to allow proxy users on HBase REST server, which is mainly needed for "doAs" functionality.

Related Name

hbase.rest.support.proxyuser

Default Value

false

API Name

hbase_restserver_support_proxyuser

Required

false

RPC Timeout**Description**

Timeout for all HBase RPCs in milliseconds.

Related Name

hbase.rpc.timeout

Default Value

1 minute(s)

API Name

hbase_rpc_timeout

Required

false

HBase Server Thread Wake Frequency**Description**

Period of time, in milliseconds, to pause between searches for work. Used as a sleep interval by service threads such as a META scanner and log roller.

Related Name

hbase.server.thread.wakefrequency

Default Value

10 second(s)

API Name

hbase_server_thread_wakefrequency

Required

false

HBase Superusers**Description**

List of users or groups, who are allowed full privileges, regardless of stored ACLs, across the cluster. Only used when HBase security is enabled.

Related Name

hbase.superuser

Default Value**API Name**

hbase_superuser

Required

false

Enable HBase Thrift Http Server**Description**

Use this to enable Http server usage on thrift, which is mainly needed for "doAs" functionality.

Related Name

hbase.regionserver.thrift.http

Default Value

false

API Name

hbase_thriftserver_http

Required

false

Enable HBase Thrift Proxy Users**Description**

Use this to allow proxy users on thrift gateway, which is mainly needed for "doAs" functionality.

Related Name

hbase.thrift.support.proxyuser

Default Value

false

API Name

hbase_thriftserver_support_proxyuser

Required

false

HDFS WAL Directory**Description**

The HDFS directory used for the WAL, shared by HBase RegionServers.

Related Name

hbase.wal.dir

Default Value**API Name**

hbase_wal_dir

Required

false

HDFS Root Directory

Description

The HDFS directory shared by HBase RegionServers.

Related Name

hbase.rootdir

Default Value

/hbase

API Name

hdfs_rootdir

Required

true

HDFS Service

Description

Name of the HDFS service that this HBase service instance depends on

Related Name**Default Value****API Name**

hdfs_service

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.hbase.trusted.proxy.ipaddress

Default Value**API Name**

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded for IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.hbase.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Ranger Service

Description

Name of the Ranger service that this Hbase service instance depends on

Related Name**Default Value****API Name**

ranger_service

Required

false

ZooKeeper Connection Retry Pause Duration

Description

Period of time, in milliseconds, to pause between connection retries to ZooKeeper. Used together with `${zookeeper.retries}` in an exponential backoff fashion when making queries to ZooKeeper.

Related Name

zookeeper.pause

Default Value**API Name**

zookeeper_pause

Required

false

ZooKeeper Connection Retries

Description

The number of times to retry connections to ZooKeeper. Used for reading and writing root region location. Used together with `${zookeeper.pause}` in an exponential backoff fashion when making queries to ZooKeeper.

Related Name

zookeeper.retries

Default Value**API Name**

zookeeper_retries

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this HBase service instance depends on.

Related Name**Default Value****API Name**

zookeeper_service

Required

true

ZooKeeper Session Timeout**Description**

ZooKeeper session timeout in milliseconds. HBase passes this to the ZooKeeper quorum as the suggested maximum time for a session. See http://hadoop.apache.org/zookeeper/docs/current/zookeeperProgrammers.html#ch_zkSessions The client sends a requested timeout, the server responds with the timeout that it can give the client.

Related Name

zookeeper.session.timeout

Default Value

60000

API Name

zookeeper_session_timeout

Required

false

ZooKeeper Znode Parent**Description**

The root znode for HBase in ZooKeeper. All of HBase's ZooKeeper files that are configured with a relative path will go under this node. By default, all of HBase's ZooKeeper file paths are configured with a relative path, so they will all go under this directory unless changed.

Related Name

zookeeper.znode.parent

Default Value

/hbase

API Name

zookeeper_znode_parent

Required

true

ZooKeeper Znode Rootserver**Description**

Path to ZooKeeper Node holding root region location. This is written by the HBase Master and read by clients and RegionServers. If a relative path is given, the parent folder will be `${zookeeper.znode.parent}`. By default, the root location is stored at `/hbase/root-region-server`.

Related Name

zookeeper.znode.rootserver

Default Value

root-region-server

API Name

zookeeper_znode_rootserver

Required

true

Performance

Enable HDFS Short-Circuit Read

Description

Enable HDFS short-circuit read. This allows a client colocated with the DataNode to read HDFS file blocks directly. This gives a performance boost to distributed clients that are aware of locality.

Related Name

dfs.client.read.shortcircuit

Default Value

true

API Name

dfs_client_read_shortcircuit

Required

false

HDFS Hedged Read Threadpool Size

Description

Size of the threadpool used for hedged reads in hdfs clients. If a read from a block is slow, a parallel 'hedged' read will be started against a different block replica. The first one to return with a result is used while the other one is cancelled. This 'hedged' read feature helps rein in the outliers. A value of zero disables the feature.

Related Name

dfs.client.hedged.read.threadpool.size

Default Value

0

API Name

hbase_server_dfs_client_hedged_read_threadpool_size

Required

false

HDFS Hedged Read Delay Threshold

Description

Duration to wait before starting up a 'hedged' read.

Related Name

dfs.client.hedged.read.threshold.millis

Default Value

500 millisecond(s)

API Name

hbase_server_dfs_client_hedged_read_threshold_millis

Required

false

SplitLog Manager Timeout

Description

Timeout (in ms) for the distributed log splitting manager to receive response from a worker.

Related Name

hbase.splitlog.manager.timeout

Default Value

2 minute(s)

API Name

hbase_service_splitlog_manager_timeout

Required

false

Proxy**HBase Proxy User Groups****Description**

Comma-delimited list of groups that you want to allow the HBase user to impersonate. The default '*' allows all groups. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'. Note: This property is used only if HBase REST/Thrift Server Authentication is enabled.

Related Name

hadoop.proxyuser.hbase.groups

Default Value

*

API Name

hbase_proxy_user_groups_list

Required

false

HBase Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the HBase user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that does not correspond to a host name, such as '_no_host'. Note: This property is used only if HBase REST/Thrift Server Authentication is enabled.

Related Name

hadoop.proxyuser.hbase.hosts

Default Value

*

API Name

hbase_proxy_user_hosts_list

Required

false

Security**HBase Cell-Level ACLs****Description**

Enable HBase cell-level ACLs.

Related Name

hbase.security.access.early_out

Default Value

false

API Name

hbase_cell_acl_authorization

Required

false

Web UI TLS/SSL Encryption Enabled**Description**

Enable TLS/SSL encryption for HBase web UIs.

Related Name

hbase.ssl.enabled

Default Value

false

API Name

hbase_hadoop_ssl_enabled

Required

false

HBase REST Authentication**Description**

If this is set to "kerberos", HBase REST Server will authenticate its clients. HBase Proxy User Hosts and Groups should be configured to allow specific users to access HBase through REST Server.

Related Name

hbase.rest.authentication.type

Default Value

simple

API Name

hbase_restserver_security_authentication

Required

false

HBase Row-Level Authorization**Description**

Enable HBase row-level authorization.

Related Name

hbase.row.level.authorization

Default Value

false

API Name

hbase_row_level_authorization

Required

false

HBase Transport Security

Description

Configure the type of encrypted communication to be used with RPC.

Related Name

hbase.rpc.protection

Default Value

authentication

API Name

hbase_rpc_protection

Required

false

HBase Secure RPC Engine

Description

Set to true to use HBase Secure RPC Engine for remote procedure calls (RPC). This is only effective in simple authentication mode. Does not provide authentication for RPC calls, but provides user information in the audit logs. Changing this setting requires a restart of this and all dependent services and redeployment of client configurations, along with a restart of the Service Monitor management role.

Related Name

hbase.secure.rpc.engine

Default Value

false

API Name

hbase_secure_rpc_engine

Required

false

HBase Secure Authentication

Description

Choose the authentication mechanism used by HBase.

Related Name

hbase.security.authentication

Default Value

simple

API Name

hbase_security_authentication

Required

false

HBase Secure Authorization

Description

Enable HBase authorization.

Related Name

hbase.security.authorization

Default Value

false

API Name

hbase_security_authorization

Required

false

HBase Thrift Authentication**Description**

If this is set, HBase Thrift Server authenticates its clients. HBase Proxy User Hosts and Groups should be configured to allow specific users to access HBase through Thrift Server.

Related Name

hbase.thrift.security.qop

Default Value

none

API Name

hbase_thriftserver_security_authentication

Required

true

Kerberos Principal**Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

hbase

API Name

kerberos_princ_name

Required

true

Ranger DFS Audit Path**Description**

The DFS path on which Ranger audits are written. The special placeholder '\${ranger_base_audit_url}' should be used as the prefix, in order to use the centralized location defined in the Ranger service.

Related Name

xasecure.audit.destination.hdfs.dir

Default Value

\$ranger_base_audit_url/hbase

API Name

ranger_audit_hdfs_dir

Required

false

Ranger Audit DFS Spool Dir

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/hbase/audit/hdfs/spool

API Name

ranger_audit_hdfs_spool_dir

Required

false

Ranger Audit Solr Spool Dir

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/hbase/audit/solr/spool

API Name

ranger_audit_solr_spool_dir

Required

false

Ranger Policy Cache Directory

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.hbase.policy.cache.dir

Default Value

/var/lib/ranger/hbase/policy-cache

API Name

ranger_policy_cache_dir

Required

false

HBase TLS/SSL Server JKS Keystore Key Password

Description

The password that protects the private key contained in the JKS keystore used when HBase is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

HBase TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when HBase is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

HBase TLS/SSL Server JKS Keystore File Password**Description**

The password for the HBase JKS keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: HBase Client Scanner Timeout exceeds Lease Period Validator**Description**

Whether to suppress configuration warnings produced by the HBase Client Scanner Timeout exceeds Lease Period Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_client_server_scanner_rpc_timeout_validator

Required

true

Suppress Configuration Validator: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_metrics2_safety_valve

Required

true

Suppress Configuration Validator: BucketCache IOEngine**Description**

Whether to suppress configuration warnings produced by the BucketCache IOEngine configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_bucketcache_ioengine

Required

true

Suppress Configuration Validator: HBase Client Advanced Configuration Snippet (Safety Valve) for hbase-site.xml**Description**

Whether to suppress configuration warnings produced by the HBase Client Advanced Configuration Snippet (Safety Valve) for hbase-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_client_config_safety_valve

Required

true

Suppress Configuration Validator: HBase Client Environment Advanced Configuration Snippet (Safety Valve) for hbase-env.sh**Description**

Whether to suppress configuration warnings produced by the HBase Client Environment Advanced Configuration Snippet (Safety Valve) for hbase-env.sh configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_client_env_safety_valve

Required

true

Suppress Configuration Validator: Client Java Configuration Options**Description**

Whether to suppress configuration warnings produced by the Client Java Configuration Options configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_client_java_opts

Required

true

Suppress Configuration Validator: HBase Coprocessor Master Classes**Description**

Whether to suppress configuration warnings produced by the HBase Coprocessor Master Classes configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_hbase_coprocessor_master_classes`**Required**`true`**Suppress Configuration Validator: HBase Coprocessor Region Classes****Description**

Whether to suppress configuration warnings produced by the HBase Coprocessor Region Classes configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hbase_coprocessor_region_classes`**Required**`true`**Suppress Configuration Validator: HBase HRegion Major Compaction****Description**

Whether to suppress configuration warnings produced by the HBase HRegion Major Compaction configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hbase_hregion_majorcompaction`**Required**`true`**Suppress Configuration Validator: HBase Kerberos Secure Thrift Server Validator****Description**

Whether to suppress configuration warnings produced by the HBase Kerberos Secure Thrift Server Validator configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hbase_kerberos_secure_thrift_validator`**Required**`true`**Suppress Configuration Validator: Master Advanced Configuration Snippet (Safety Valve) for hbase-site.xml****Description**

Whether to suppress configuration warnings produced by the Master Advanced Configuration Snippet (Safety Valve) for hbase-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_master_config_safety_valve

Required

true

Suppress Configuration Validator: HBase Master DNS Network Interface**Description**

Whether to suppress configuration warnings produced by the HBase Master DNS Network Interface configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_master_dns_interface

Required

true

Suppress Configuration Validator: HBase Master DNS Name Server**Description**

Whether to suppress configuration warnings produced by the HBase Master DNS Name Server configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_master_dns_nameserver

Required

true

Suppress Configuration Validator: HBase Master Web UI Address**Description**

Whether to suppress configuration warnings produced by the HBase Master Web UI Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_master_info_bindaddress

Required

true

Suppress Configuration Validator: HBase Master Web UI Port

Description

Whether to suppress configuration warnings produced by the HBase Master Web UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_master_info_port

Required

true

Suppress Configuration Validator: Java Configuration Options for HBase Master

Description

Whether to suppress configuration warnings produced by the Java Configuration Options for HBase Master configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_master_java_opts

Required

true

Suppress Configuration Validator: Master Log Directory

Description

Whether to suppress configuration warnings produced by the Master Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_master_log_dir

Required

true

Suppress Configuration Validator: HBase Master Log Cleaner Plugins

Description

Whether to suppress configuration warnings produced by the HBase Master Log Cleaner Plugins configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_hbase_master_logcleaner_plugins`**Required**`true`**Suppress Configuration Validator: HBase Master Port****Description**

Whether to suppress configuration warnings produced by the HBase Master Port configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hbase_master_port`**Required**`true`**Suppress Configuration Validator: HBase RegionServer Interface Class****Description**

Whether to suppress configuration warnings produced by the HBase RegionServer Interface Class configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hbase_regionserver_class`**Required**`true`**Suppress Configuration Validator: RegionServer Codecs****Description**

Whether to suppress configuration warnings produced by the RegionServer Codecs configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hbase_regionserver_codecs`**Required**`true`**Suppress Configuration Validator: RegionServer Advanced Configuration Snippet (Safety Valve) for hbase-site.xml****Description**

Whether to suppress configuration warnings produced by the RegionServer Advanced Configuration Snippet (Safety Valve) for hbase-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_config_safety_valve

Required

true

Suppress Configuration Validator: RegionServer DNS Network Interface**Description**

Whether to suppress configuration warnings produced by the RegionServer DNS Network Interface configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_dns_interface

Required

true

Suppress Configuration Validator: RegionServer DNS Nameserver**Description**

Whether to suppress configuration warnings produced by the RegionServer DNS Nameserver configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_dns_nameserver

Required

true

Suppress Configuration Validator: HBase Region Server Memstore Lower Limit Validator**Description**

Whether to suppress configuration warnings produced by the HBase Region Server Memstore Lower Limit Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_global_memstore_lowerlimit_validator

Required

true

Suppress Configuration Validator: HLog Reader Implementation

Description

Whether to suppress configuration warnings produced by the HLog Reader Implementation configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_hlog_reader_impl

Required

true

Suppress Configuration Validator: HLog Writer Implementation

Description

Whether to suppress configuration warnings produced by the HLog Writer Implementation configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_hlog_writer_impl

Required

true

Suppress Configuration Validator: HBase RegionServer Web UI Address

Description

Whether to suppress configuration warnings produced by the HBase RegionServer Web UI Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_info_bindaddress

Required

true

Suppress Configuration Validator: HBase RegionServer Web UI port

Description

Whether to suppress configuration warnings produced by the HBase RegionServer Web UI port configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_hbase_regionserver_info_port`**Required**`true`**Suppress Configuration Validator: Java Heap Size of HBase RegionServer in Bytes****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of HBase RegionServer in Bytes configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hbase_regionserver_java_heapsize`**Required**`true`**Suppress Configuration Validator: Java Configuration Options for HBase RegionServer****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for HBase RegionServer configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hbase_regionserver_java_opts`**Required**`true`**Suppress Configuration Validator: RegionServer Log Directory****Description**

Whether to suppress configuration warnings produced by the RegionServer Log Directory configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hbase_regionserver_log_dir`**Required**`true`**Suppress Configuration Validator: HBase RegionServer Multiple HDFS WAL with Replication Validator****Description**

Whether to suppress configuration warnings produced by the HBase RegionServer Multiple HDFS WAL with Replication Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_multiwal_replication_validator

Required

true

Suppress Configuration Validator: HBase RegionServer Port**Description**

Whether to suppress configuration warnings produced by the HBase RegionServer Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_port

Required

true

Suppress Configuration Validator: Write-Ahead Log (WAL) Codec Class**Description**

Whether to suppress configuration warnings produced by the Write-Ahead Log (WAL) Codec Class configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_regionserver_wal_codec

Required

true

Suppress Configuration Validator: HBase REST Server Advanced Configuration Snippet (Safety Valve) for hbase-site.xml**Description**

Whether to suppress configuration warnings produced by the HBase REST Server Advanced Configuration Snippet (Safety Valve) for hbase-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_config_safety_valve

Required

true

Suppress Configuration Validator: HBase REST Server DNS Network Interface**Description**

Whether to suppress configuration warnings produced by the HBase REST Server DNS Network Interface configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_dns_interface

Required

true

Suppress Configuration Validator: HBase REST Server DNS Name Server**Description**

Whether to suppress configuration warnings produced by the HBase REST Server DNS Name Server configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_dns_nameserver

Required

true

Suppress Configuration Validator: HBase REST Server Host Address**Description**

Whether to suppress configuration warnings produced by the HBase REST Server Host Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_host

Required

true

Suppress Configuration Validator: HBase REST Server Web UI Port**Description**

Whether to suppress configuration warnings produced by the HBase REST Server Web UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_info_port

Required

true

Suppress Configuration Validator: Java Configuration Options for HBase REST Server**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for HBase REST Server configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_java_opts

Required

true

Suppress Configuration Validator: HBase REST Server TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the HBase REST Server TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_keystore_file

Required

true

Suppress Configuration Validator: HBase REST Server TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the HBase REST Server TLS/SSL Server JKS Keystore Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_keystore_keypassword

Required

true

Suppress Configuration Validator: HBase REST Server TLS/SSL Server JKS Keystore File Password

Description

Whether to suppress configuration warnings produced by the HBase REST Server TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_keystore_password

Required

true

Suppress Configuration Validator: HBase REST Server Log Directory

Description

Whether to suppress configuration warnings produced by the HBase REST Server Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_log_dir

Required

true

Suppress Configuration Validator: HBase REST Server Port

Description

Whether to suppress configuration warnings produced by the HBase REST Server Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_restserver_port

Required

true

Suppress Configuration Validator: HBase Thrift Server Bind Address

Description

Whether to suppress configuration warnings produced by the HBase Thrift Server Bind Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_bindaddress

Required

true

Suppress Configuration Validator: HBase Thrift Server Advanced Configuration Snippet (Safety Valve) for hbase-site.xml

Description

Whether to suppress configuration warnings produced by the HBase Thrift Server Advanced Configuration Snippet (Safety Valve) for hbase-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_config_safety_valve

Required

true

Suppress Configuration Validator: HBase Thrift Server DNS Network Interface

Description

Whether to suppress configuration warnings produced by the HBase Thrift Server DNS Network Interface configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_dns_interface

Required

true

Suppress Configuration Validator: HBase Thrift Server DNS Name Server

Description

Whether to suppress configuration warnings produced by the HBase Thrift Server DNS Name Server configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_dns_nameserver

Required

true

Suppress Configuration Validator: HBase Thrift Server over HTTP TLS/SSL Server JKS Keystore File Location

Description

Whether to suppress configuration warnings produced by the HBase Thrift Server over HTTP TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_http_keystore_file

Required

true

Suppress Configuration Validator: HBase Thrift Server over HTTP TLS/SSL Server JKS Keystore Key Password

Description

Whether to suppress configuration warnings produced by the HBase Thrift Server over HTTP TLS/SSL Server JKS Keystore Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_http_keystore_keypassword

Required

true

Suppress Configuration Validator: HBase Thrift Server over HTTP TLS/SSL Server JKS Keystore File Password

Description

Whether to suppress configuration warnings produced by the HBase Thrift Server over HTTP TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_http_keystore_password

Required

true

Suppress Configuration Validator: HBase Thrift Server Web UI Port

Description

Whether to suppress configuration warnings produced by the HBase Thrift Server Web UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_info_port

Required

true

Suppress Configuration Validator: Java Configuration Options for HBase Thrift Server**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for HBase Thrift Server configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_java_opts

Required

true

Suppress Configuration Validator: HBase Thrift Server Log Directory**Description**

Whether to suppress configuration warnings produced by the HBase Thrift Server Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_log_dir

Required

true

Suppress Configuration Validator: HBase Thrift Server Port**Description**

Whether to suppress configuration warnings produced by the HBase Thrift Server Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_thriftserver_port

Required

true

Suppress Configuration Validator: HBase REST Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the HBase REST Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hbaserestserver_role_env_safety_valve

Required

true

Suppress Configuration Validator: HBase Thrift Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the HBase Thrift Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hbasethriftserver_role_env_safety_valve

Required

true

Suppress Configuration Validator: Master Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Master Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Rules to Extract Events from Log Files**Description**

Whether to suppress configuration warnings produced by the Rules to Extract Events from Log Files configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Configuration Validator: Master Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Master Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_master_role_env_safety_valve

Required

true

Suppress Configuration Validator: HBase Master TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the HBase Master TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_master_truststore_file

Required

true

Suppress Configuration Validator: HBase Master TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the HBase Master TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_master_truststore_password

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: RegionServer File Descriptor Limit Validator**Description**

Whether to suppress configuration warnings produced by the RegionServer File Descriptor Limit Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_regionserver_fd_limit_validator

Required

true

Suppress Configuration Validator: RegionServer Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the RegionServer Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_regionserver_role_env_safety_valve

Required

true

Suppress Configuration Validator: HBase Region Server TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the HBase Region Server TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_regionserver_truststore_file

Required

true

Suppress Configuration Validator: HBase Region Server TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the HBase Region Server TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_regionserver_truststore_password

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: HBase Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_application_properties_safety_valve

Required

true

Suppress Parameter Validation: Audit Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Log Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_audit_event_log_dir

Required

true

Suppress Configuration Validator: Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Configuration Validator: Secure Web UI Validator**Description**

Whether to suppress configuration warnings produced by the Secure Web UI Validator configuration validator.

Related Name**Default Value**

false

API Name`service_config_suppression_hadoop_secure_web_ui`**Required**`true`**Suppress Configuration Validator: HBase Authentication And Authorization Validation****Description**

Whether to suppress configuration warnings produced by the HBase Authentication And Authorization Validation configuration validator.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hbase_authentication_and_authorization_validator`**Required**`true`**Suppress Parameter Validation: HBase Service Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Service Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hbase_core_site_safety_valve`**Required**`true`**Suppress Parameter Validation: Dynamic Jars Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Dynamic Jars Directory parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hbase_dynamic_jars_dir`**Required**`true`**Suppress Parameter Validation: HBoss S3A Implementation Class****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBoss S3A Implementation Class parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hbase_hboss_fs_s3a_impl

Required

true

Suppress Parameter Validation: HBoss Lock Implementation**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBoss Lock Implementation parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hbase_hboss_fs_sync_impl

Required

true

Suppress Parameter Validation: HBoss Wrapped S3A Implementation Class**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBoss Wrapped S3A Implementation Class parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hbase_hboss_wrapped_fs_s3a_impl

Required

Required

true

Suppress Parameter Validation: HDFS Root Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Root Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_rootdir

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Configuration Validator: Master Count Validator**Description**

Whether to suppress configuration warnings produced by the Master Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_master_count_validator

Required

true

Suppress Parameter Validation: Audit Event Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Filter parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_audit_event_filter

Required

true

Suppress Parameter Validation: HBASE Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBASE Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_client_config_safety_valve

Required

true

Suppress Parameter Validation: Audit Event Tracker**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Tracker parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_event_tracker

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger DFS Audit Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_dir

Required

true

Suppress Parameter Validation: Ranger Audit DFS Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Parameter Validation: HBase Service Advanced Configuration Snippet (Safety Valve) for ranger-hbase-audit.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Service Advanced Configuration Snippet (Safety Valve) for ranger-hbase-audit.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_safety_valve

Suppress Configuration Validator: ZooKeeper Max Session Timeout Validator**Description**

Whether to suppress configuration warnings produced by the ZooKeeper Max Session Timeout Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_max_session_timeout_validator

Required

true

Suppress Parameter Validation: ZooKeeper Znode Parent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Znode Parent parameter.

Related Name

Default Value

false

API Name

service_config_suppression_zookeeper_znode_parent

Required

true

Suppress Parameter Validation: ZooKeeper Znode Rootserver

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Znode Rootserver parameter.

Related Name

Default Value

false

API Name

service_config_suppression_zookeeper_znode_rootserver

Required

true

Suppress Health Test: HBase Master Health

Description

Whether to suppress the results of the HBase Master Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_hbase_master_health

Required

true

Suppress Health Test: RegionServer Health

Description

Whether to suppress the results of the RegionServer Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

true

HDFS Properties in Cloudera Runtime 7.1

Role groups:

Balancer

Advanced

Balancer Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml

Description

For advanced use only. A string to be inserted into hdfs-site.xml for this role only.

Related Name**Default Value****API Name**

balancer_config_safety_valve

Required

false

Java Configuration Options for Balancer

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

balancer_java_opts

Required

false

Balancer Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Logs

Balancer Log Directory

Description

Directory where Balancer will place its log files.

Related Name**Default Value**

/var/log/hadoop-hdfs

API Name

balancer_log_dir

Required

false

Balancer Logging Threshold

Description

The minimum log level for Balancer logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Balancer Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Balancer logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Balancer Max Log Size

Description

The maximum size, in megabytes, per log file for Balancer logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- alert - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- rate (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- periodminutes - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- threshold - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- content - match only those messages for which contents match this regular expression.
- exceptiontype - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .* , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. API Name

log_event_whitelist

Required

false

Other**Dispatcher Threads****Description**

Thread pool size for dispatching block moves.

Related Name

dfs.balancer.dispatcherThreads

Default Value

200

API Name

dfs_balancer_dispatcher_threads

Required

false

Minimum Block Size**Description**

Smallest block to consider for moving.

Related Name

dfs.balancer.getBlocks.min-block-size

Default Value

10 MiB

API Name

dfs_balancer_get_blocks_min_block_size

Required

false

Block Metadata Batch Size**Description**

Amount of block metadata to retrieve at a time.

Related Name

dfs.balancer.getBlocks.size

Default Value

2 GiB

API Name

dfs_balancer_get_blocks_size

Required

false

Maximum Concurrent Moves**Description**

Number of block moves to permit in parallel.

Related Name

dfs.datanode.balance.max.concurrent.moves

Default Value

50

API Name

dfs_balancer_max_concurrent_moves

Required

false

Maximum Iteration Size**Description**

Maximum amount of data to move per node in each iteration of the balancer.

Related Name

dfs.balancer.max-size-to-move

Default Value

10 GiB

API Name

dfs_balancer_max_size_to_move

Required

false

Mover Threads**Description**

Thread pool size for executing block moves.

Related Name

dfs.balancer.moverThreads

Default Value

1000

API Name

dfs_balancer_mover_threads

Required

false

Excluded Hosts

Description

Hosts to exclude from the balancing process.

Related Name**Default Value****API Name**

rebalancer_exclude_hosts

Required

false

Included Hosts

Description

Hosts to include in the balancing process (uses all, if none specified).

Related Name**Default Value****API Name**

rebalancer_include_hosts

Required

false

Source Hosts

Description

Manual override to specify which DataNodes should be used to off-load data to less full nodes.

Related Name**Default Value****API Name**

rebalancer_source_hosts

Required

false

Rebalancing Threshold

Description

The percentage deviation from average utilization, after which a node will be rebalanced. (for example, '10.0' for 10%).

Related Name**Default Value**

10.0 %

API Name

rebalancer_threshold

Required

false

Rebalancing Policy

Description

The policy that should be used to rebalance HDFS storage. The default DataNode policy balances the storage at the DataNode level. This is similar to the balancing policy from prior releases. The BlockPool policy balances the storage at the block pool level as well as at the DataNode level. The BlockPool policy is relevant only to a Federated HDFS service.

Related Name

Default Value

DataNode

API Name

rebalancing_policy

Required

false

Resource Management

Java Heap Size of Balancer in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

1 GiB

API Name

balancer_java_heapsize

Required

false

Suppressions

Suppress Parameter Validation: Balancer Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Balancer Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_balancer_config_safety_valve

Required

true

Suppress Parameter Validation: Java Configuration Options for Balancer

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Balancer parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_balancer_java_opts

Required

true

Suppress Parameter Validation: Balancer Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Balancer Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_balancer_log_dir

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Balancer Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Balancer Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: Excluded Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Excluded Hosts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rebalancer_exclude_hosts

Required

true

Suppress Parameter Validation: Included Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Included Hosts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rebalancer_include_hosts

Required

true

Suppress Parameter Validation: Source Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Source Hosts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rebalancer_source_hosts

Required

true

DataNode

Advanced

DataNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml

Description

For advanced use only. A string to be inserted into hdfs-site.xml for this role only.

Related Name**Default Value****API Name**

datanode_config_safety_valve

Required

false

Java Configuration Options for DataNode

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

datanode_java_opts

Required

false

DataNode Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

DATANODE_role_env_safety_valve

Required

false

Available Space Policy Balanced Preference

Description

Only used when the DataNode Volume Choosing Policy is set to Available Space. Controls what percentage of new block allocations will be sent to volumes with more available disk space than others. This setting should be in the range 0.0 - 1.0, though in practice 0.5 - 1.0, since there should be no reason to prefer that volumes with less available disk space receive more block allocations.

Related Name

dfs.datanode.available-space-volume-choosing-policy.balanced-space-preference-fraction

Default Value

0.75

API Name

dfs_datanode_available_space_balanced_preference

Required

true

Available Space Policy Balanced Threshold

Description

Only used when the DataNode Volume Choosing Policy is set to Available Space. Controls how much DataNode volumes are allowed to differ in terms of bytes of free disk space before they are considered imbalanced. If the free space of all the volumes are within this range of each other, the volumes will be considered balanced and block assignments will be done on a pure round robin basis.

Related Name

dfs.datanode.available-space-volume-choosing-policy.balanced-space-threshold

Default Value

10 GiB

API Name

dfs_datanode_available_space_balanced_threshold

Required

true

DataNode Volume Choosing Policy

Description

DataNode Policy for picking which volume should get a new block. The Available Space policy is only available starting with CDH 4.3.

Related Name

dfs.datanode.fsdataset.volume.choosing.policy

Default Value

org.apache.hadoop.hdfs.server.datanode.fsdataset.RoundRobinVolumeChoosingPolicy

API Name

dfs_datanode_volume_choosing_policy

Required

true

Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)

Description

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into hadoop-metrics2.properties.

Related Name**Default Value****API Name**

hadoop_metrics2_safety_valve

Required

false

DataNode Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Erase Coding**DataNode Striped Read Reconstruction Threads****Description**

The number of threads that a DataNode can use during background data reconstruction.

Related Name

dfs.datanode.ec.reconstruction.threads

Default Value

20

API Name

erasure_coding_reconstruction_threads

Required

false

DataNode Striped Read Reconstruction Timeout**Description**

The timeout for striped reads during background data reconstruction.

Related Name

dfs.datanode.ec.reconstruction.stripedread.timeout.millis

Default Value

5 second(s)

API Name

erasure_coding_reconstruction_timeout_millis

Required

false

Erasure Coding Reconstruction Weight

Description

The relative weight of resources used by EC for data recovery. The number of blocks that must be read is based on the EC policy used. For example, RS-6-3-1024k requires six blocks to be read. Replication only requires one block to be read. Higher values result in fewer reconstruction tasks being able to run concurrently. The number of blocks required to be read to recover data is multiplied by this weight to determine the total weight of the recovery task. The total weight of the recovery task counts against the limit set with the `dfs.namenode.replication.max-streams` property.

Related Name

`dfs.datanode.ec.reconstruction.xmits.weight`

Default Value

0.5

API Name

`erasure_coding_reconstruction_xmits_weight`

Required

false

Logs

DataNode Log Directory

Description

Directory where DataNode will place its log files.

Related Name

`hadoop.log.dir`

Default Value

`/var/log/hadoop-hdfs`

API Name

`datanode_log_dir`

Required

false

DataNode Logging Threshold

Description

The minimum log level for DataNode logs

Related Name**Default Value**

INFO

API Name

`log_threshold`

Required

false

DataNode Maximum Log File Backups

Description

The maximum number of rolled log files to keep for DataNode logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

DataNode Max Log Size**Description**

The maximum size, in megabytes, per log file for DataNode logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**DataNode Block Count Thresholds****Description**

The health test thresholds of the number of blocks on a DataNode

Related Name**Default Value**

Warning: 1000000.0, Critical: Never

API Name

datanode_block_count_thresholds

Required

false

DataNode Connectivity Health Test**Description**

Enables the health test that verifies the DataNode is connected to the NameNode

Related Name**Default Value**

true

API Name

datanode_connectivity_health_enabled

Required

false

DataNode Connectivity Tolerance at Startup

Description

The amount of time to wait for the DataNode to fully start up and connect to the NameNode before enforcing the connectivity check.

Related Name**Default Value**

3 minute(s)

API Name

datanode_connectivity_tolerance

Required

false

DataNode Data Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's DataNode Data Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

datanode_data_directories_free_space_absolute_thresholds

Required

false

DataNode Data Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's DataNode Data Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a DataNode Data Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

datanode_data_directories_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

datanode_fd_thresholds

Required

false

DataNode Free Space Monitoring Thresholds**Description**

The health test thresholds of free space in a DataNode. Specified as a percentage of the capacity on the DataNode.

Related Name**Default Value**

Warning: 20.0 %, Critical: 10.0 %

API Name

datanode_free_space_thresholds

Required

false

DataNode Host Health Test**Description**

When computing the overall DataNode health, consider the host's health.

Related Name**Default Value**

true

API Name

datanode_host_health_enabled

Required

false

Pause Duration Thresholds**Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

datanode_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name

Default Value

5 minute(s)

API Name

datanode_pause_duration_window

Required

false

DataNode Process Health Test**Description**

Enables the health test that the DataNode's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

datanode_scm_health_enabled

Required

false

DataNode Transceivers Usage Thresholds**Description**

The health test thresholds of transceivers usage in a DataNode. Specified as a percentage of the total configured number of transceivers.

Related Name**Default Value**

Warning: 75.0 %, Critical: 95.0 %

API Name

datanode_transceivers_usage_thresholds

Required

false

DataNode Volume Failures Thresholds**Description**

The health test thresholds of failed volumes in a DataNode.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

datanode_volume_failures_thresholds

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

datanode_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

datanode_web_metric_collection_thresholds

Required

false

Enable Health Alerts for this Role**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

false

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

```
version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .* , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 0, exceptiontype: java.io.IOException , alert: false, rate: 0, exceptiontype: java.net.SocketException , alert: false, rate: 0, exceptiontype: java.net.SocketClosedException , alert: false, rate: 0, exceptiontype: java.io.EOFException , alert: false, rate: 0, exceptiontype: java.nio.channels.CancelledKeyException , alert: false, rate: 1, periodminutes: 5, content: Datanode registration failed , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 0, threshold: WARN, content: Got a command from standby NN - ignoring command:.* , alert: false, rate: 0, threshold: WARN, content: Unknown job [^ ]+ being deleted.* , alert: false, rate: 0, threshold: WARN, content: Error executing shell command . + No such process.+ , alert: false, rate: 0, threshold: WARN, content: .*attempt to override final parameter.+ , alert: false, rate: 0, threshold: WARN, content: [^ ]+ is a deprecated filesystem name. Use .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]
```

API Name

log_event_whitelist

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name`mgmt.navigator.failure.thresholds`**Default Value**

Warning: Never, Critical: Any

API Name`mgmt_navigator_failure_thresholds`**Required**

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name`mgmt.navigator.failure.window`**Default Value**

20 minute(s)

API Name`mgmt_navigator_failure_window`**Required**

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name`mgmt.navigator.status.check.enabled`**Default Value**

true

API Name`mgmt_navigator_status_check_enabled`**Required**

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.
- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`role_triggers`

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other

DataNode Data Directory

Description

Comma-delimited list of directories on the local file system where the DataNode stores HDFS block data. Typical values are /data/N/dfs/dn for N = 1, 2, 3.... In CDH 5.7 and higher, these directories can be optionally tagged with their storage types, for example, [SSD]/data/1/dns/dn. HDFS supports the following storage types: [DISK], [SSD], [ARCHIVE], [RAM_DISK]. The default storage type of a directory will be [DISK] if it does not have a storage type tagged explicitly. These directories should be mounted using the noatime option, and the disks should be configured using JBOD.

RAID is not recommended. Warning: Be very careful when modifying this property. Removing or changing entries can result in data loss. To hot swap drives in CDH 5.4 and higher, override the value of this property for the specific DataNode role instance that has the drive to be hot-swapped; do not modify the property value in the role group. See [Configuring Hot Swap for DataNodes](#) for more information.

false

Performance

DataNode Balancing Bandwidth

Description

Maximum amount of bandwidth that each DataNode can use for balancing. Specified in bytes per second.

Related Name

dfs.datanode.balance.bandwidthPerSec

Default Value

10 MiB

API Name

dfs_balance_bandwidthPerSec

Required

false

Enable purging cache after reads

Description

In some workloads, the data read from HDFS is known to be significantly large enough that it is unlikely to be useful to cache it in the operating system buffer cache. In this case, the DataNode may be configured to automatically purge all data from the buffer cache after it is delivered to the client. This may improve performance for some workloads by freeing buffer cache spare usage for more cacheable data. This behavior will always be disabled for workloads that read only short sections of a block (e.g HBase random-IO workloads). This property is supported in CDH3u3 or later deployments.

Related Name

dfs.datanode.drop.cache.behind.reads

Default Value

false

API Name

dfs_datanode_drop_cache_behind_reads

Required

false

Enable purging cache after writes

Description

In some workloads, the data written to HDFS is known to be significantly large enough that it is unlikely to be useful to cache it in the operating system buffer cache. In this case, the DataNode may be configured to automatically purge all data from the buffer cache after it is written to disk. This may improve performance for some workloads by freeing buffer cache spare usage for more cacheable data. This property is supported in CDH3u3 or later deployments.

Related Name

dfs.datanode.drop.cache.behind.writes

Default Value

false

API Name

dfs_datanode_drop_cache_behind_writes

Required

false

Handler Count

Description

The number of server threads for the DataNode.

Related Name

dfs.datanode.handler.count

Default Value

3

API Name

dfs_datanode_handler_count

Required

false

Maximum Number of Transfer Threads

Description

Specifies the maximum number of threads to use for transferring data in and out of the DataNode.

Related Name

dfs.datanode.max.transfer.threads

Default Value

4096

API Name

dfs_datanode_max_xcievers

Required

false

Number of read ahead bytes

Description

While reading block files, the DataNode can use the posix_fadvise system call to explicitly page data into the operating system buffer cache ahead of the current reader's position. This can improve performance especially when disks are highly contended. This configuration specifies the number of bytes ahead of the current read position which the DataNode will attempt to read ahead. A value of 0 disables this feature. This property is supported in CDH3u3 or later deployments.

Related Name

dfs.datanode.readahead.bytes

Default Value

4 MiB

API Name

dfs_datanode_readahead_bytes

Required

false

Enable immediate enqueueing of data to disk after writes

Description

If this configuration is enabled, the DataNode will instruct the operating system to enqueue all written data to the disk immediately after it is written. This differs from the usual OS policy which may wait for up to 30 seconds before triggering writeback. This may improve performance for

some workloads by smoothing the IO profile for data written to disk. This property is supported in CDH3u3 or later deployments.

Related Name

dfs.datanode.sync.behind.writes

Default Value

false

API Name

dfs_datanode_sync_behind_writes

Required

false

HDFS Thrift Server Max Threadcount**Description**

Maximum number of running threads for the HDFS Thrift server running on each DataNode

Related Name

dfs.thrift.threads.max

Default Value

20

API Name

dfs_thrift_threads_max

Required

false

HDFS Thrift Server Min Threadcount**Description**

Minimum number of running threads for the HDFS Thrift server running on each DataNode

Related Name

dfs.thrift.threads.min

Default Value

10

API Name

dfs_thrift_threads_min

Required

false

HDFS Thrift Server Timeout**Description**

Timeout in seconds for the HDFS Thrift server running on each DataNode

Related Name

dfs.thrift.timeout

Default Value

60

API Name

dfs_thrift_timeout

Required

false

Maximum Process File Descriptors**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Bind DataNode to Wildcard Address****Description**

If enabled, the DataNode binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name**Default Value**

false

API Name

dfs_datanode_bind_wildcard

Required

false

DataNode HTTP Web UI Port**Description**

Port for the DataNode HTTP web UI. Combined with the DataNode's hostname to build its HTTP address.

Related Name

dfs.datanode.http.address

Default Value

9864

API Name

dfs_datanode_http_port

Required

false

Secure DataNode Web UI Port (TLS/SSL)**Description**

The base port where the secure DataNode web UI listens. Combined with the DataNode's hostname to build its secure web UI address.

Related Name

dfs.datanode.https.address

Default Value

9865

API Name

dfs_datanode_https_port

Required

false

DataNode Protocol Port**Description**

Port for the various DataNode Protocols. Combined with the DataNode's hostname to build its IPC port address.

Related Name

dfs.datanode.ipc.address

Default Value

9867

API Name

dfs_datanode_ipc_port

Required

false

DataNode Transceiver Port**Description**

Port for DataNode's Xceiver Protocol. Combined with the DataNode's hostname to build its address.

Related Name

dfs.datanode.address

Default Value

9866

API Name

dfs_datanode_port

Required

false

Use DataNode Hostname**Description**

Whether DataNodes should use DataNode hostnames when connecting to DataNodes for data transfer. This property is supported in CDH3u4 or later deployments.

Related Name

dfs.datanode.use.datanode.hostname

Default Value

false

API Name

dfs_datanode_use_datanode_hostname

Required

false

Resource Management

Java Heap Size of DataNode in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

4 GiB

API Name

datanode_java_heapsize

Required

false

Maximum Memory Used for Caching

Description

The maximum amount of memory a DataNode may use to cache data blocks in memory. Setting it to zero will disable caching.

Related Name

dfs.datanode.max.locked.memory

Default Value

4 GiB

API Name

dfs_datanode_max_locked_memory

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when

the process starts. Use the same format as used for arguments to the `cgexec` command:
 resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
 These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page

cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

DataNode Data Directory Permissions

Description

Permissions for the directories on the local file system where the DataNode stores its blocks. The permissions must be octal. 755 and 700 are typical values.

Related Name

dfs.datanode.data.dir.perm

Default Value

700

API Name

dfs_datanode_data_dir_perm

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user

with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: DataNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DataNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_config_safety_valve

Required

true

Suppress Configuration Validator: DataNode Failed Volumes Tolerated Validator**Description**

Whether to suppress configuration warnings produced by the DataNode Failed Volumes Tolerated Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_failed_volumes_validator

Required

true

Suppress Parameter Validation: Java Heap Size of DataNode in Bytes**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of DataNode in Bytes parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_java_heapsize

Required

true

Suppress Parameter Validation: Java Configuration Options for DataNode

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for DataNode parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_java_opts

Required

true

Suppress Parameter Validation: DataNode Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the DataNode Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_log_dir

Required

true

Suppress Configuration Validator: DataNode Reserved Space Validator

Description

Whether to suppress configuration warnings produced by the DataNode Reserved Space Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_reserved_space_validator

Required

true

Suppress Parameter Validation: DataNode Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the DataNode Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_role_env_safety_valve

Required

true

Suppress Parameter Validation: DataNode Data Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the DataNode Data Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_data_dir_list

Required

true

Suppress Parameter Validation: DataNode Data Directory Permissions

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the DataNode Data Directory Permissions parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_datanode_data_dir_perm

Required

true

Suppress Parameter Validation: DataNode HTTP Web UI Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the DataNode HTTP Web UI Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_datanode_http_port

Required

true

Suppress Parameter Validation: Secure DataNode Web UI Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure DataNode Web UI Port (TLS/SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_datanode_https_port

Required

true

Suppress Parameter Validation: DataNode Protocol Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DataNode Protocol Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_datanode_ipc_port

Required

true

Suppress Parameter Validation: DataNode Transceiver Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DataNode Transceiver Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_datanode_port

Required

true

Suppress Parameter Validation: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_metrics2_safety_valve

Required

true

Suppress Parameter Validation: DataNode Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DataNode Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_data_node_audit_health

Required

true

Suppress Health Test: Block Count**Description**

Whether to suppress the results of the Block Count health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_block_count

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_file_descriptor

Required

true

Suppress Health Test: Free Space**Description**

Whether to suppress the results of the Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_free_space_remaining

Required

true

Suppress Health Test: NameNode Connectivity

Description

Whether to suppress the results of the NameNode Connectivity health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_ha_connectivity

Required

true

Suppress Health Test: Heap Dump Directory Free Space

Description

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_data_node_log_directory_free_space

Required

true

Suppress Health Test: Pause Duration**Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_pause_duration

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_swap_memory_usage

Required

true

Suppress Health Test: Transceiver Usage

Description

Whether to suppress the results of the Transceiver Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_transceivers_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_unexpected_exits

Required

true

Suppress Health Test: Data Directory Status

Description

Whether to suppress the results of the Data Directory Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_data_node_volume_failures

Required

true

Suppress Health Test: Web Server Status

Description

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_data_node_web_metric_collection

Required

true

Suppress Health Test: DataNode Data Directory Free Space**Description**

Whether to suppress the results of the DataNode Data Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_datanode_data_directories_free_space

Required

true

Failover Controller**Advanced****Java Configuration Options for Failover Controller****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

failover_controller_java_opts

Required

false

Failover Controller Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

FAILOVERCONTROLLER_role_env_safety_valve

Required

false

Failover Controller Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

For advanced use only. A string to be inserted into hdfs-site.xml for this role only.

Related Name**Default Value****API Name**

fc_config_safety_valve

Required

false

HA Health Monitor RPC Timeout**Description**

The RPC timeout for the HA health monitor.

Related Name

ha.health-monitor.rpc-timeout.ms

Default Value

45 second(s)

API Name

ha_health_monitor_rpc_timeout_ms

Required

false

Failover Controller Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value`/tmp`**API Name**`oom_heap_dump_dir`**Required**`false`**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_heap_dump_enabled`**Required**`true`**Kill When Out of Memory****Description**

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_sigkill_enabled`**Required**`true`**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**`false`**API Name**`process_auto_restart`**Required**`true`**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Failover Controller Log Directory

Description

Directory where Failover Controller will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hadoop-hdfs

API Name

failover_controller_log_dir

Required

false

Failover Controller Logging Threshold**Description**

The minimum log level for Failover Controller logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Failover Controller Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Failover Controller logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Failover Controller Max Log Size**Description**

The maximum size, in megabytes, per log file for Failover Controller logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

failovercontroller_fd_thresholds

Required

false

Failover Controller Host Health Test

Description

When computing the overall Failover Controller health, consider the host's health.

Related Name**Default Value**

true

API Name

failovercontroller_host_health_enabled

Required

false

Failover Controller Process Health Test

Description

Enables the health test that the Failover Controller's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

failovercontroller_scm_health_enabled

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

```
version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1,
periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]
```

API Name

log_event_whitelist

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

`false`

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

`false`

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a `DataNode` fires if the `DataNode` has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`role_triggers`

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management

Java Heap Size of Failover Controller in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

256 MiB

API Name

failover_controller_java_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command:

resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'

These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not

managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

HttpFS Log Directory

Description

Directory where HttpFS will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hadoop-httpfs

API Name

httpfs_log_dir

Required

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

httpfs_fd_thresholds

Required

false

HttpFS Host Health Test**Description**

When computing the overall HttpFS health, consider the host's health.

Related Name**Default Value**

true

API Name

httpfs_host_health_enabled

Required

false

HttpFS Process Health Test

Description

Enables the health test that the HttpFS's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

httpfs_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds

Description

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigators.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigators.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**HttpFS Load Balancer****Description**

Address of the load balancer used for HttpFS roles. Should be specified in host:port format. Note: Changing this property will regenerate Kerberos keytabs for all HttpFS roles.

Related Name**Default Value****API Name**

httpfs_load_balancer

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Administration Port

Description

The port for the administration interface.

Related Name

hdfs.httpfs.admin.port

Default Value

14001

API Name

hdfs_httpfs_admin_port

Required

false

REST Port

Description

The port where the REST interface to HDFS is available. The REST interface is served over HTTPS if TLS/SSL is enabled for HttpFS, or over HTTP otherwise.

Related Name

hdfs.httpfs.http.port

Default Value

14000

API Name

hdfs_httpfs_http_port

Required

false

Resource Management

Java Heap Size of HttpFS in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

256 MiB

API Name

httpsfs_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Signature Secret****Description**

The secret to use for signing client authentication tokens.

Related Name

hdfs.httpfs.signature.secret

Default Value

API Name

hdfs_https_signature_secret

Required

true

HttpFS TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when HttpFS is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name**Default Value****API Name**

https_https_keystore_file

Required

false

HttpFS TLS/SSL Server Keystore File Password**Description**

The password for the HttpFS keystore file.

Related Name**Default Value****API Name**

https_https_keystore_password

Required

false

HttpFS TLS/SSL Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HttpFS might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**

https_https_truststore_file

Required

false

HttpFS TLS/SSL Trust Store Password**Description**

The password for the HttpFS TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

Default Value**API Name**`https_https_truststore_password`**Required**`false`**Enable TLS/SSL for HttpFS****Description**

Encrypt communication between clients and HttpFS using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name**Default Value**`false`**API Name**`https_use_ssl`**Required**`false`**Role-Specific Kerberos Principal****Description**

Kerberos principal used by the HttpFS roles.

Related Name**Default Value**`https`**API Name**`kerberos_role_princ_name`**Required**`true`**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name`stacks_collection_data_retention`**Default Value**`100 MiB`**API Name**`stacks_collection_data_retention`**Required**`false`

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Administration Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Administration Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdfs_httpfs_admin_port

Required

true

Suppress Parameter Validation: REST Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the REST Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdfs_httpfs_http_port

Required

true

Suppress Parameter Validation: Signature Secret**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Signature Secret parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdfs_httpfs_signature_secret

Required

true

Suppress Parameter Validation: HttpFS Advanced Configuration Snippet (Safety Valve) for https-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Advanced Configuration Snippet (Safety Valve) for https-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_config_safety_valve

Required

true

Suppress Parameter Validation: HttpFS Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_core_site_safety_valve

Required

true

Suppress Parameter Validation: HttpFS Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_hdfs_site_safety_valve

Required

true

Suppress Parameter Validation: HttpFS TLS/SSL Server Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS TLS/SSL Server Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_https_keystore_file

Required

true

Suppress Parameter Validation: HttpFS TLS/SSL Server Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS TLS/SSL Server Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_https_keystore_password

Required

false

API Name

role_config_suppression_httpfs_log_dir

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_process_username

Required

true

Suppress Parameter Validation: HttpFS Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_role_env_safety_valve

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: HttpFS Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_httpfs_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_httpfs_file_descriptor

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_httpfs_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_httpfs_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_httpfs_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_httpfs_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_httpfs_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_httpfs_unexpected_exits

Required

true

JournalNode

Advanced

Enable JournalNode Syncer

Description

When enabled, a JournalNode will periodically sync edit logs with other JournalNodes.

Related Name

dfs.journalnode.enable.sync

Default Value

true

API Name

dfs_journalnode_enable_sync

Required

false

JournalNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

For advanced use only. A string to be inserted into hdfs-site.xml for this role only.

Related Name**Default Value****API Name**

jn_config_safety_valve

Required

false

Java Configuration Options for JournalNode**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

journalNode_java_opts

Required

false

JournalNode Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

JOURNALNODE_role_env_safety_valve

Required

false

JournalNode Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

true

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**JournalNode Log Directory****Description**

Directory where JournalNode will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hadoop-hdfs

API Name

journalnode_log_dir

Required

false

JournalNode Logging Threshold**Description**

The minimum log level for JournalNode logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

JournalNode Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for JournalNode logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

JournalNode Max Log Size

Description

The maximum size, in megabytes, per log file for JournalNode logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

JournalNode Edits Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's JournalNode Edits Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

journalnode_edits_directory_free_space_absolute_thresholds

Required

false

JournalNode Edits Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's JournalNode Edits Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a JournalNode Edits Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

journalnode_edits_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

journalnode_fd_thresholds

Required

false

JournalNode Fsync Latency Thresholds

Description

The health test thresholds for JournalNode fsync latency.

Related Name**Default Value**

Warning: 1 second(s), Critical: 3 second(s)

API Name

journalnode_fsync_latency_thresholds

Required

false

Garbage Collection Duration Thresholds

Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

journalnode_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period

Description

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

journalnode_gc_duration_window

Required

false

JournalNode Host Health Test

Description

When computing the overall JournalNode health, consider the host's health.

Related Name**Default Value**

true

API Name

journalnode_host_health_enabled

Required

false

JournalNode Process Health Test

Description

Enables the health test that the JournalNode's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

journalnode_scm_health_enabled

Required

false

Active NameNode Sync Status Health Check

Description

Enables the health check that verifies the active NameNode's sync status to the JournalNode

Related Name**Default Value**

true

API Name

journalnode_sync_status_enabled

Required

false

Active NameNode Sync Status Startup Tolerance

Description

The amount of time at JournalNode startup allowed for the active NameNode to get in sync with the JournalNode.

Related Name**Default Value**

3 minute(s)

API Name

journalnode_sync_status_startup_tolerance

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

journalnode_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

journalnode_web_metric_collection_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- alert - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- rate (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- periodminutes - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- threshold - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- content - match only those messages for which contents match this regular expression.
- exceptiontype - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following

configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]] See the trigger rules documentation for more

details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**JournalNode Edits Directory****Description**

Directory on the local file system where NameNode edits are written.

Related Name

dfs.journalnode.edits.dir

Default Value**API Name**

dfs_journalnode_edits_dir

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

JournalNode HTTP Port

Description

Port for the JournalNode HTTP web UI. Combined with the JournalNode hostname to build its HTTP address.

Related Name

dfs.journalnode.http-address

Default Value

8480

API Name

dfs_journalnode_http_port

Required

false

Secure JournalNode Web UI Port (TLS/SSL)

Description

The base port where the secure JournalNode web UI listens. Combined with the JournalNode's hostname to build its secure web UI address.

Related Name

dfs.journalnode.https-address

Default Value

8481

API Name

dfs_journalnode_https_port

Required

false

JournalNode RPC Port

Description

Port for the JournalNode's RPC. Combined with the JournalNode's hostname to build its RPC address.

Related Name

dfs.journalnode.rpc-address

Default Value

8485

API Name

dfs_journalnode_rpc_port

Required

false

Bind JournalNode to Wildcard Address**Description**

If enabled, the JournalNode binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name**Default Value**

false

API Name

journalnode_bind_wildcard

Required

false

Resource Management**Java Heap Size of JournalNode in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

512 MiB

API Name

journalNode_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

Suppress Health Test: GC Duration**Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_journal_node_gc_duration

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_journal_node_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_journal_node_host_health`**Required**`true`**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_journal_node_log_directory_free_space`**Required**`true`**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_journal_node_scm_health`**Required**`true`**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_journal_node_swap_memory_usage`**Required**`true`

Suppress Health Test: Sync Status

Description

Whether to suppress the results of the Sync Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_journal_node_sync_status

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_journal_node_unexpected_exits

Required

true

Suppress Health Test: Web Server Status

Description

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_journal_node_web_metric_collection

Required

true

NameNode

Advanced

Enable Automatic Failover

Description

Enable Automatic Failover to maintain High Availability. Requires a ZooKeeper service and a High Availability NameNode partner.

Related Name

dfs.ha.automatic-failover.enabled

Default Value

false

API Name

autofailover_enabled

Required

false

NameNode Nameservice**Description**

Nameservice of this NameNode. The Nameservice represents the interface to this NameNode and its High Availability partner. The Nameservice also represents the namespace associated with a federated NameNode.

Related Name**Default Value****API Name**

dfs_federation_namenode_nameservice

Required

false

Enable Async Audit Log**Description**

When enabled, HDFS NameNode will append audit log asynchronously when using HDFS default audit logger. Enabling this should improve NameNode throughput under heavy load.

Related Name

dfs.namenode.audit.log.async

Default Value

true

API Name

dfs_namenode_audit_log_async

Required

false

Avoid Reading Stale DataNode**Description**

Indicate whether or not to avoid reading from stale DataNodes for which heartbeat messages have not been received by the NameNode for more than Stale DataNode Time Interval. Stale DataNodes are moved to the end of the node list returned for reading. See dfs.namenode.avoid.write.stale.datanode for a similar setting for writes.

Related Name

dfs.namenode.avoid.read.stale.datanode

Default Value

true

API Name

dfs_namenode_avoid_read_stale_datanode

Required

false

Avoid Writing Stale DataNode**Description**

Indicate whether or not to avoid writing to stale DataNodes for which heartbeat messages have not been received by the NameNode for more than Stale DataNode Time Interval. Writes avoid using stale DataNodes unless more than a configured ratio (dfs.namenode.write.stale.datanode.ratio) of DataNodes are marked as stale. See dfs.namenode.avoid.read.stale.datanode for a similar setting for reads.

Related Name

dfs.namenode.avoid.write.stale.datanode

Default Value

true

API Name

dfs_namenode_avoid_write_stale_datanode

Required

false

Invalidate Work Percentage Per Iteration**Description**

This determines the percentage amount of block invalidations (deletes) to do over a single DataNode heartbeat deletion command. The final deletion count is determined by applying this percentage to the number of live nodes in the system. The resultant number is the number of blocks from the deletion list chosen for proper invalidation over a single heartbeat of a single DataNode.

Related Name

dfs.namenode.invalidate.work.pct.per.iteration

Default Value

0.32

API Name

dfs_namenode_invalidate_work_pct_per_iteration

Required

false

Quorum-based Storage Journal name**Description**

Name of the journal located on each JournalNode filesystem.

Related Name**Default Value****API Name**

dfs_namenode_quorum_journal_name

Required

false

Maximum Number of Replication Threads on a DataNode**Description**

The maximum number of outgoing replication threads a node can have at one time. This limit is waived for the highest priority replications. Configure `dfs.namenode.replication.max-streams-hard-limit` to set the absolute limit, including the highest-priority replications.

Related Name

`dfs.namenode.replication.max-streams`

Default Value

20

API Name

`dfs_namenode_replication_max_streams`

Required

false

Hard Limit on the Number of Replication Threads on a Datanode**Description**

The absolute maximum number of outgoing replication threads a given node can have at one time. The regular limit (`dfs.namenode.replication.max-streams`) is waived for highest-priority block replications. Highest replication priority is for blocks that are at a very high risk of loss if the disk or server on which they remain fails. These are usually blocks with only one copy, or blocks with zero live copies but a copy in a node being decommissioned. `dfs.namenode.replication.max-streams-hard-limit` provides a limit on the total number of outgoing replication threads, including threads of all priorities.

Related Name

`dfs.namenode.replication.max-streams-hard-limit`

Default Value

40

API Name

`dfs_namenode_replication_max_streams_hard_limit`

Required

false

Replication Work Multiplier Per Iteration**Description**

This determines the total amount of block transfers to begin in parallel at a DataNode for replication, when such a command list is being sent over a DataNode heartbeat by the NameNode. The actual number is obtained by multiplying this value by the total number of live nodes in the cluster. The result number is the number of blocks to transfer immediately, per DataNode heartbeat.

Related Name

`dfs.namenode.replication.work.multiplier.per.iteration`

Default Value

10

API Name

`dfs_namenode_replication_work_multiplier_per_iteration`

Required

false

Enable Immutable Snapshots

Description

When enabled, HDFS snapshots will capture point-in-time copies of open files.

Related Name

dfs.namenode.snapshot.capture.openfiles

Default Value

true

API Name

dfs_namenode_snapshot_capture_openfiles

Required

false

Stale DataNode Time Interval

Description

Default time interval for marking a DataNode as "stale". If the NameNode has not received heartbeat messages from a DataNode for more than this time interval, the DataNode is marked and treated as "stale" by default.

Related Name

dfs.namenode.stale.datanode.interval

Default Value

30 second(s)

API Name

dfs_namenode_stale_datanode_interval

Required

false

Write Stale DataNode Ratio

Description

When the ratio of number stale DataNodes to total DataNodes marked is greater than this ratio, permit writing to stale nodes to prevent causing hotspots.

Related Name

dfs.namenode.write.stale.datanode.ratio

Default Value

0.5

API Name

dfs_namenode_write_stale_datanode_ratio

Required

false

JournalNode Accept Recovery Timeout

Description

Timeout when accepting recovery of an edit segment from JournalNodes. This only applies when NameNode high availability is enabled.

Related Name

dfs.qjournal.accept-recovery.timeout.ms

Default Value

2 minute(s)

API Name

dfs_qjournal_accept_recovery_timeout_ms

Required

false

JournalNode Finalize Segment Timeout

Description

Timeout when finalizing current edit segment with JournalNodes. This only applies when NameNode high availability is enabled.

Related Name

dfs.qjournal.finalize-segment.timeout.ms

Default Value

2 minute(s)

API Name

dfs_qjournal_finalize_segment_timeout_ms

Required

false

JournalNode Get State Timeout

Description

Timeout when getting current states from JournalNodes. This only applies when NameNode high availability is enabled.

Related Name

dfs.qjournal.get-journal-state.timeout.ms

Default Value

2 minute(s)

API Name

dfs_qjournal_get_journal_state_timeout_ms

Required

false

JournalNode New Epoch Timeout

Description

Timeout when creating new epoch number with JournalNodes. This only applies when NameNode high availability is enabled.

Related Name

dfs.qjournal.new-epoch.timeout.ms

Default Value

2 minute(s)

API Name

dfs_qjournal_new_epoch_timeout_ms

Required

false

JournalNode Prepare Recovery Timeout

Description

Timeout when preparing recovery of an edit segment with JournalNodes. This only applies when NameNode high availability is enabled.

Related Name

dfs.qjournal.prepare-recovery.timeout.ms

Default Value

2 minute(s)

API Name

dfs_qjournal_prepare_recovery_timeout_ms

Required

false

JournalNode Select Input Streams Timeout

Description

Timeout when selecting input streams on JournalNodes. This only applies when NameNode high availability is enabled.

Related Name

dfs.qjournal.select-input-streams.timeout.ms

Default Value

20 second(s)

API Name

dfs_qjournal_select_input_streams_timeout_ms

Required

false

JournalNode Start Segment Timeout

Description

Timeout when starting a new edit segment with JournalNodes. This only applies when NameNode high availability is enabled.

Related Name

dfs.qjournal.start-segment.timeout.ms

Default Value

20 second(s)

API Name

dfs_qjournal_start_segment_timeout_ms

Required

false

JournalNode Write Transactions Timeout

Description

Timeout when writing edits to a JournalNode. This only applies when NameNode high availability is enabled.

Related Name

dfs.qjournal.write-txns.timeout.ms

Default Value

20 second(s)

API Name

dfs_qjournal_write_txns_timeout_ms

Required

false

Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)**Description**

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into hadoop-metrics2.properties.

Related Name**Default Value****API Name**

hadoop_metrics2_safety_valve

Required

false

NameNode Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

NameNode Advanced Configuration Snippet (Safety Valve) for dfs_all_hosts.txt**Description**

For advanced use only. A string to be inserted into dfs_all_hosts.txt for this role only.

Related Name**Default Value****API Name**

namenode_all_hosts_safety_valve

Required

false

NameNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

For advanced use only. A string to be inserted into hdfs-site.xml for this role only.

Related Name

Default Value**API Name**

namenode_config_safety_valve

Required

false

NameNode Advanced Configuration Snippet (Safety Valve) for dfs_hosts_allow.txt**Description**

For advanced use only. A string to be inserted into dfs_hosts_allow.txt for this role only.

Related Name**Default Value****API Name**

namenode_hosts_allow_safety_valve

Required

false

NameNode Advanced Configuration Snippet (Safety Valve) for dfs_hosts_exclude.txt**Description**

For advanced use only. A string to be inserted into dfs_hosts_exclude.txt for this role only.

Related Name**Default Value****API Name**

namenode_hosts_exclude_safety_valve

Required

false

Java Configuration Options for NameNode**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

namenode_java_opts

Required

false

NameNode Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

NAMENODE_role_env_safety_valve

Required

false

Mount Points**Description**

Mount points that are mapped to this NameNode's nameservice.

Related Name**Default Value**

/

API Name

nameservice_mountpoints

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

NameNode Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-security.xml**Description**

For advanced use only. A string to be inserted into ranger-hdfs-security.xml for this role only.

Related Name**Default Value****API Name**

ranger_security_role_safety_valve

Required

false

Checkpointing**Filesystem Checkpoint Period****Description**

The time between two periodic file system checkpoints.

Related Name

dfs.namenode.checkpoint.period

Default Value

1 hour(s)

API Name

fs_checkpoint_period

Required

false

Filesystem Checkpoint Transaction Threshold

Description

The number of transactions after which the NameNode or SecondaryNameNode will create a checkpoint of the namespace, regardless of whether the checkpoint period has expired.

Related Name

dfs.namenode.checkpoint.txns

Default Value

1000000

API Name

fs_checkpoint_txns

Required

false

Erasure Coding

Fallback Erasure Coding Policy

Description

The fallback Erasure Coding policy that HDFS uses if no policy is specified when you run the `-setPolicy` command.

Related Name

dfs.namenode.ec.system.default.policy

Default Value

RS-6-3-1024k

API Name

erasure_coding_default_policy

Required

false

Logs

NameNode Logging Threshold

Description

The minimum log level for NameNode logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

NameNode Maximum Log File Backups

Description

The maximum number of rolled log files to keep for NameNode logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

NameNode Max Log Size**Description**

The maximum size, in megabytes, per log file for NameNode logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

NameNode Block State Change Logging Threshold**Description**

The minimum log level for NameNode block state change log messages. Setting this to WARN or higher greatly reduces the amount of log output related to block state changes.

Related Name

log4j.logger.BlockStateChange

Default Value

INFO

API Name

namenode_blockstatechange_log_threshold

Required

false

NameNode Log Directory**Description**

Directory where NameNode will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hadoop-hdfs

API Name

namenode_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

`enable_alerts`

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

`enable_config_alerts`

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

`heap_dump_directory_free_space_absolute_thresholds`

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.

- `exceptiontype` - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- `{"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"}` This rule sends events to Cloudera Manager for every `StringIndexOutOfBoundsException`, up to a maximum of 10 every minute.
- `{"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"}` In this example, an event generated may not be promoted to alert if an exception is in the `ERROR` log message, because the first rule with `alert = false` will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .* , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 0, exceptiontype: java.io.IOException , alert: false, rate: 0, exceptiontype: java.net.SocketException , alert: false, rate: 0, exceptiontype: java.net.SocketClosedException , alert: false, rate: 0, exceptiontype: java.io.EOFException , alert: false, rate: 0, exceptiontype: java.nio.channels.CancelledKeyException , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 0, threshold: WARN, content: Unknown job [^]+ being deleted.* , alert: false, rate: 0, threshold: WARN, content: Error executing shell command .+ No such process.+ , alert: false, rate: 0, threshold: WARN, content: .*attempt to override final parameter.+ , alert: false, rate: 0, threshold: WARN, content: [^]+ is a deprecated filesystem name. Use.* , alert: false, rate: 1, periodminutes: 1, threshold: WARN , alert: false, rate: 1, threshold: INFO, content: Triggering checkpoint.*]

API Name

`log_event_whitelist`

Required

false

Navigator Audit Failure Thresholds

Description

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures

Description

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Filesystem Checkpoint Age Monitoring Thresholds**Description**

The health test thresholds of the age of the HDFS namespace checkpoint. Specified as a percentage of the configured checkpoint interval.

Related Name**Default Value**

Warning: 200.0 %, Critical: 400.0 %

API Name

namenode_checkpoint_age_thresholds

Required

false

Filesystem Checkpoint Transactions Monitoring Thresholds**Description**

The health test thresholds of the number of transactions since the last HDFS namespace checkpoint. Specified as a percentage of the configured checkpointing transaction limit.

Related Name**Default Value**

Warning: 200.0 %, Critical: 400.0 %

API Name

namenode_checkpoint_transactions_thresholds

Required

false

NameNode Data Directories Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NameNode Data Directories.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

namenode_data_directories_free_space_absolute_thresholds

Required

false

NameNode Data Directories Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NameNode Data Directories. Specified as a percentage of the capacity on that filesystem. This setting is not used if a NameNode Data Directories Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

namenode_data_directories_free_space_percentage_thresholds

Required

false

NameNode Directory Failures Thresholds**Description**

The health test thresholds of failed status directories in a NameNode.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

namenode_directory_failures_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

namenode_fd_thresholds

Required

false

NameNode Host Health Test**Description**

When computing the overall NameNode health, consider the host's health.

Related Name**Default Value**

true

API Name

namenode_host_health_enabled

Required

false

NameNode Out-Of-Sync JournalNodes Thresholds**Description**

The health check thresholds for the number of out-of-sync JournalNodes for this NameNode.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

namenode_out_of_sync_journal_nodes_thresholds

Required

false

Pause Duration Thresholds

Description

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

namenode_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period

Description

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

namenode_pause_duration_window

Required

false

HDFS Rolling Metadata Upgrade Status Health Test

Description

Enables the health test of the rolling metadata upgrade status of the NameNode. This covers rolling metadata upgrades. Nonrolling metadata upgrades are covered in a separate health test.

Related Name**Default Value**

true

API Name

namenode_rolling_upgrade_status_enabled

Required

false

NameNode RPC Latency Thresholds

Description

The health check thresholds of the NameNode's RPC latency.

Related Name**Default Value**

Warning: 1 second(s), Critical: 5 second(s)

API Name

namenode_rpc_latency_thresholds

Required

false

NameNode RPC Latency Monitoring Window

Description

The period to review when computing the moving average of the NameNode's RPC latency.

Related Name**Default Value**

5 minute(s)

API Name

namenode_rpc_latency_window

Required

false

NameNode Safemode Health Test

Description

Enables the health test that the NameNode is not in safemode

Related Name**Default Value**

true

API Name

namenode_safe_mode_enabled

Required

false

NameNode Process Health Test

Description

Enables the health test that the NameNode's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

namenode_scm_health_enabled

Required

false

Health Test Startup Tolerance

Description

The amount of time allowed after this role is started that failures of health tests that rely on communication with this role will be tolerated.

Related Name**Default Value**

5 minute(s)

API Name

namenode_startup_tolerance

Required

false

HDFS Metadata Upgrade Status Health Test

Description

Enables the health test of the metadata upgrade status of the NameNode. This covers nonrolling metadata upgrades. Rolling metadata upgrades are covered in a separate health test.

Related Name**Default Value**

true

API Name

namenode_upgrade_status_enabled

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

namenode_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

namenode_web_metric_collection_thresholds

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other**Backup and Disaster Log Retention****Description**

Maximum age of log files related to backup and disaster recovery.

Related Name**Default Value**

90 day(s)

API Name

`bdr_log_expiration_days`

Required

false

Access Time Precision**Description**

The access time for HDFS file is precise upto this value. Setting the value of 0 disables access times for HDFS. When using the NFS Gateway role, make sure this property is enabled.

Note: You must configure both the `dfs.access.time.precision` and `dfs.namenode.accesstime.precision` parameters as Cloudera Manager still sends both the parameters to HDFS service configuration.

Related Name

`dfs.access.time.precision` and `dfs.namenode.accesstime.precision`

Default Value

1 hour(s) for `dfs.access.time.precision` and 0 hour(s) for `dfs.namenode.accesstime.precision`

API Name

dfs_access_time_precision and dfs.namenode.access.time.precision

Required

false

Decommissioning blocks per interval**Description**

The approximate number of blocks to process per decommission interval, as defined in dfs.namenode.decommission.interval.

Related Name

dfs.namenode.decommission.blocks.per.interval

Default Value

500000

API Name

dfs_decommission_blocks_per_interval

Required

false

Decommissioning max tracked nodes**Description**

The maximum number of decommission-in-progress datanodes nodes that will be tracked at one time by the namenode. Tracking a decommission-in-progress datanode consumes additional NN memory proportional to the number of blocks on the datanode. A value of 0 means no limit will be enforced.

Related Name

dfs.namenode.decommission.max.concurrent.tracked.nodes

Default Value

100

API Name

dfs_decommission_max_concurrent_tracked_nodes

Required

false

NameNode Data Directories**Description**

Determines where on the local file system the NameNode should store the name table (fsimage). For redundancy, enter a comma-delimited list of directories to replicate the name table in all of the directories. Typical values are /data/N/dfs/nn where N=1..3.

Related Name

dfs.namenode.name.dir

Default Value**API Name**

dfs_name_dir_list

Required

true

Restore NameNode Directories at Checkpoint Time

Description

If set to false and if one of the replicas of the NameNode storage fails, such as temporarily failure of NFS, this directory is not used until the NameNode restarts. If enabled, failed storage is re-checked on every checkpoint and, if it becomes valid, the NameNode will try to restore the edits and fsimage.

Related Name

dfs.namenode.name.dir.restore

Default Value

false

API Name

dfs_name_dir_restore

Required

false

NameNode Edits Directories

Description

Directories on the local file system to store the NameNode edits. If not set, the edits are stored in the NameNode's Data Directories. The value of this configuration is automatically generated to be the Quorum-based Storage URI if there are JournalNodes and this NameNode is not Highly Available.

Related Name

dfs.namenode.edits.dir

Default Value**API Name**

dfs_namenode_edits_dir

Required

false

Shared Edits Directory

Description

Directory on a shared storage device, such as a Quorum-based Storage URI or a local directory that is an NFS mount from a NAS, to store the NameNode edits. The value of this configuration is automatically generated to be the Quorum Journal URI if there are JournalNodes and this NameNode is Highly Available.

Related Name

dfs.namenode.shared.edits.dir

Default Value**API Name**

dfs_namenode_shared_edits_dir

Required

false

Safemode Extension

Description

Determines extension of safemode in milliseconds after the threshold level is reached.

Related Name

dfs.namenode.safemode.extension

Default Value

30 second(s)

API Name

dfs_safemode_extension

Required

false

Safemode Minimum DataNodes**Description**

Specifies the number of DataNodes that must be live before the name node exits safemode. Enter a value less than or equal to 0 to take the number of live DataNodes into account when deciding whether to remain in safemode during startup. Values greater than the number of DataNodes in the cluster will make safemode permanent.

Related Name

dfs.namenode.safemode.min.datanodes

Default Value

1

API Name

dfs_safemode_min_datanodes

Required

false

Filesystem Trash Checkpoint Interval**Description**

Number of minutes between trash checkpoints. After a .Trash directory checkpoint is created, the Filesystem Trash Interval will define the time until permanent deletion. If set to 0, the value will be considered equal to the Filesystem Trash Interval value, which can cause the permanent deletion of entries in Trash to take over twice as long. The value for this must not exceed the Filesystem Trash Interval value.

Related Name

fs.trash.checkpoint.interval

Default Value

1 hour(s)

API Name

fs_trash_checkpoint_interval

Required

false

Filesystem Trash Interval**Description**

Controls the number of minutes after which a trash checkpoint directory is deleted permanently. To disable the trash feature, enter 0. The checkpointing frequency of .Trash directory contents is separately controlled by Filesystem Trash Checkpoint Interval.

Related Name

fs.trash.interval

Default Value

1 day(s)

API Name

fs_trash_interval

Required

false

Topology Script File Name**Description**

Full path to a custom topology script on the host file system. The topology script is used to determine the rack location of nodes. If left blank, a topology script will be provided that uses your hosts' rack information, visible in the "Hosts" page.

Related Name

net.topology.script.file.name

Default Value**API Name**

topology_script_file_name

Required

false

Performance**NameNode Handler Count****Description**

The number of server threads for the NameNode.

Related Name

dfs.namenode.handler.count

Default Value

30

API Name

dfs_namenode_handler_count

Required

false

NameNode Service Handler Count**Description**

The number of server threads for the NameNode used for service calls. Only used when NameNode Service RPC Port is configured.

Related Name

dfs.namenode.service.handler.count

Default Value

30

API Name

dfs_namenode_service_handler_count

Required

false

HDFS Thrift Server Max Threadcount

Description

Maximum number of running threads for the HDFS Thrift server running on the NameNode

Related Name

dfs.thrift.threads.max

Default Value

20

API Name

dfs_thrift_threads_max

Required

false

HDFS Thrift Server Min Threadcount

Description

Minimum number of running threads for the HDFS Thrift server running on the NameNode

Related Name

dfs.thrift.threads.min

Default Value

10

API Name

dfs_thrift_threads_min

Required

false

HDFS Thrift Server Timeout

Description

Timeout in seconds for the HDFS Thrift server running on the NameNode

Related Name

dfs.thrift.timeout

Default Value

60

API Name

dfs_thrift_timeout

Required

false

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value**

API Name

rlimit_fds

Required

false

Ports and Addresses**NameNode Web UI Port****Description**

The base port where the DFS NameNode web UI listens. If the port number is 0, then the server starts on a free port. Combined with the NameNode's hostname to build its HTTP address.

Related Name

dfs.namenode.http-address

Default Value

9870

API Name

dfs_http_port

Required

false

Secure NameNode Web UI Port (TLS/SSL)**Description**

The base port where the secure NameNode web UI listens.

Related Name

dfs.https.port

Default Value

9871

API Name

dfs_https_port

Required

false

NameNode Service RPC Port**Description**

Optional port for the service-rpc address which can be used by HDFS daemons instead of sharing the RPC address used by the clients.

Related Name

dfs.namenode.servicerpc-address

Default Value**API Name**

dfs_namenode_servicerpc_address

Required

false

Bind NameNode to Wildcard Address**Description**

If enabled, the NameNode binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name**Default Value**

false

API Name

namenode_bind_wildcard

Required

false

NameNode Port**Description**

The port where the NameNode runs the HDFS protocol. Combined with the NameNode's hostname to build its address.

Related Name

fs.defaultFS

Default Value

8020

API Name

namenode_port

Required

false

Replication**Safemode Threshold Percentage****Description**

Specifies the percentage of blocks that should satisfy the minimal replication requirement defined by dfs.replication.min. Enter a value less than or equal to 0 to wait for any particular percentage of blocks before exiting safemode. Values greater than 1 will make safemode permanent.

Related Name

dfs.namenode.safemode.threshold-pct

Default Value

0.999

API Name

dfs_safemode_threshold_pct

Required

false

Resource Management**Java Heap Size of NameNode in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

4 GiB

API Name

namenode_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Include Caller Context in Audit Logs

Description

When enabled, additional fields are written into NameNode audit log records for auditing coarse granularity operations.

Related Name

hadoop.caller.context.enabled

Default Value

true

API Name

hadoop_caller_context_enabled

Required

false

HDFS NameNode TLS/SSL Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HDFS NameNode might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**

namenode_truststore_file

Required

false

HDFS NameNode TLS/SSL Trust Store Password**Description**

The password for the HDFS NameNode TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

namenode_truststore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack
API Name
stacks_collection_method
Required
false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description
Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name
Default Value
false
API Name
role_config_suppression_cdh_version_validator
Required
true

Suppress Parameter Validation: NameNode Nameservice

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Nameservice parameter.
Related Name
Default Value
false
API Name
role_config_suppression_dfs_federation_namenode_nameservice
Required
true

Suppress Parameter Validation: NameNode Web UI Port

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Web UI Port parameter.
Related Name
Default Value
false
API Name
role_config_suppression_dfs_http_port
Required
true

Suppress Parameter Validation: Secure NameNode Web UI Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure NameNode Web UI Port (TLS/SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_https_port

Required

true

Suppress Parameter Validation: NameNode Data Directories**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Data Directories parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_name_dir_list

Required

true

Suppress Parameter Validation: NameNode Edits Directories**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Edits Directories parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_namenode_edits_dir

Required

true

Suppress Configuration Validator: NameNode Handler Count Minimum Validator**Description**

Whether to suppress configuration warnings produced by the NameNode Handler Count Minimum Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_namenode_handler_count_minimum_validator

Required

true

Suppress Parameter Validation: Quorum-based Storage Journal name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Quorum-based Storage Journal name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_namenode_quorum_journal_name

Required

true

Suppress Configuration Validator: NameNode Service Handler Count Minimum Validator**Description**

Whether to suppress configuration warnings produced by the NameNode Service Handler Count Minimum Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_namenode_service_handler_count_minimum_validator

Required

true

Suppress Parameter Validation: NameNode Service RPC Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Service RPC Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_namenode_servicerpc_address

Required

true

Suppress Parameter Validation: Shared Edits Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Shared Edits Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_dfs_namenode_shared_edits_dir

Required

true

Suppress Configuration Validator: Filesystem Trash Interval On Validator**Description**

Whether to suppress configuration warnings produced by the Filesystem Trash Interval On Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_fs_trash_interval_minimum_validator

Required

true

Suppress Parameter Validation: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_metrics2_safety_valve

Required

true

Suppress Parameter Validation: NameNode Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: NameNode Advanced Configuration Snippet (Safety Valve) for dfs_all_hosts.txt**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Advanced Configuration Snippet (Safety Valve) for dfs_all_hosts.txt parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_all_hosts_safety_valve

Required

true

Suppress Parameter Validation: NameNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_config_safety_valve

Required

true

Suppress Parameter Validation: NameNode Advanced Configuration Snippet (Safety Valve) for dfs_hosts_allow.txt**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Advanced Configuration Snippet (Safety Valve) for dfs_hosts_allow.txt parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_hosts_allow_safety_valve

Required

true

Suppress Parameter Validation: NameNode Advanced Configuration Snippet (Safety Valve) for dfs_hosts_exclude.txt**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Advanced Configuration Snippet (Safety Valve) for dfs_hosts_exclude.txt parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_hosts_exclude_safety_valve

Required

true

Suppress Configuration Validator: Java Heap Size of NameNode in Bytes Minimum Validator**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of NameNode in Bytes Minimum Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_java_heapsize_minimum_validator

Required

true

Suppress Parameter Validation: Java Configuration Options for NameNode**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for NameNode parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_java_opts

Required

true

Suppress Parameter Validation: NameNode Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_log_dir

Required

true

Suppress Parameter Validation: NameNode Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_port

Required

true

Suppress Parameter Validation: NameNode Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_role_env_safety_valve

Required

true

Suppress Parameter Validation: HDFS NameNode TLS/SSL Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS NameNode TLS/SSL Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_truststore_file

Required

true

Suppress Parameter Validation: HDFS NameNode TLS/SSL Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS NameNode TLS/SSL Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_truststore_password

Required

true

Suppress Configuration Validator: Validates Nameservices do not conflict between base and compute clusters.**Description**

Whether to suppress configuration warnings produced by the Validates Nameservices do not conflict between base and compute clusters. configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nameservice_conflict_validator

Required

true

Suppress Parameter Validation: Mount Points**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Mount Points parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_nameservice_mountpoints

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: NameNode Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NameNode Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-security.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_security_role_safety_valve

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Topology Script File Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Topology Script File Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_topology_script_file_name

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_audit_health

Required

true

Suppress Health Test: NameNode Data Directories Free Space

Description

Whether to suppress the results of the NameNode Data Directories Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_name_node_data_directories_free_space`**Required**`true`**Suppress Health Test: Name Directory Status****Description**

Whether to suppress the results of the Name Directory Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_name_node_directory_failures`**Required**`true`**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_name_node_file_descriptor`**Required**`true`**Suppress Health Test: Checkpoint Status****Description**

Whether to suppress the results of the Checkpoint Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_name_node_ha_checkpoint_age`**Required**`true`

Suppress Health Test: Heap Dump Directory Free Space

Description

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_host_health

Required

true

Suppress Health Test: JournalNode Sync Status

Description

Whether to suppress the results of the JournalNode Sync Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_journal_node_sync_status

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_name_node_log_directory_free_space

Required

true

Suppress Health Test: Pause Duration**Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_pause_duration

Required

true

Suppress Health Test: Rolling Upgrade Status**Description**

Whether to suppress the results of the Rolling Upgrade Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_rolling_upgrade_status

Required

true

Suppress Health Test: RPC Latency**Description**

Whether to suppress the results of the RPC Latency health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_rpc_latency

Required

true

Suppress Health Test: Safe Mode Status

Description

Whether to suppress the results of the Safe Mode Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_safe_mode

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_name_node_unexpected_exits

Required

true

Suppress Health Test: Upgrade Status**Description**

Whether to suppress the results of the Upgrade Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_upgrade_status

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_name_node_web_metric_collection

Required

true

NFS Gateway**Advanced****NFS Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

NFS Gateway Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

For advanced use only. A string to be inserted into hdfs-site.xml for this role only.

Related Name**Default Value****API Name**

nfsgateway_config_safety_valve

Required

false

Java Configuration Options for NFS Gateway**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

nfsgateway_java_opts

Required

false

NFS Gateway Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

NFSGATEWAY_role_env_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

`oom_heap_dump_dir`**Default Value**`/tmp`**API Name**`oom_heap_dump_dir`**Required**`false`**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_heap_dump_enabled`**Required**`true`**Kill When Out of Memory****Description**

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_sigkill_enabled`**Required**`true`**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**`false`**API Name**`process_auto_restart`**Required**`true`

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

NFS Gateway Logging Threshold

Description

The minimum log level for NFS Gateway logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

NFS Gateway Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for NFS Gateway logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

NFS Gateway Max Log Size**Description**

The maximum size, in megabytes, per log file for NFS Gateway logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

NFS Gateway Log Directory**Description**

Directory where NFS Gateway will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hadoop-hdfs

API Name

nfsgateway_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

`enable_alerts`

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

`enable_config_alerts`

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

`heap_dump_directory_free_space_absolute_thresholds`

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.

- `exceptiontype` - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- `{"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"}` This rule sends events to Cloudera Manager for every `StringIndexOutOfBoundsException`, up to a maximum of 10 every minute.
- `{"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"}` In this example, an event generated may not be promoted to alert if an exception is in the `ERROR` log message, because the first rule with `alert = false` will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

`log_event_whitelist`

Required

false

Navigator Audit Failure Thresholds

Description

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures

Description

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

`mgmt_navigator_failure_window`

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Temporary Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Temporary Dump Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

nfsgateway_dump_directory_free_space_absolute_thresholds

Required

false

Temporary Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Temporary Dump Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Temporary Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

nfsgateway_dump_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

nfsgateway_fd_thresholds

Required

false

NFS Gateway Host Health Test**Description**

When computing the overall NFS Gateway health, consider the host's health.

Related Name**Default Value**

true

API Name

nfsgateway_host_health_enabled

Required

false

NFS Gateway Process Health Test

Description

Enables the health test that the NFS Gateway's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

nfsgateway_scm_health_enabled

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Temporary Dump Directory****Description**

NFS clients often reorder writes. As a result, sequential writes can arrive at the NFS Gateway in random order. This directory is used to temporarily save out-of-order writes before writing to HDFS. For each file, the out-of-order writes are dumped after they are accumulated to exceed certain threshold (e.g., 1MB) in memory. Please make sure this directory has enough space. For example, if the application uploads 10 files with each having 100MB, it is recommended that this directory have roughly 1GB of space in case write reorder happens (in the worst case) to every file.

Related Name

dfs.nfs3.dump.dir

Default Value

/tmp/.hdfs-nfs

API Name

dfs_nfs3_dump_dir

Required

false

Allowed Hosts and Privileges

Description

By default, NFS Gateway exported directories can be mounted by any client. For better access control, update this property with a list of host names and access privileges separated by whitespace characters. Host name format can be a single host, a Java regular expression, or an IPv4 address. The access privilege uses `rw` to specify readwrite and `ro` to specify readonly access. If the access privilege is not provided, the default is read-only. Examples of host name format and access privilege: `"192.168.0.0/22 rw"`, `"host.*.example.com"`, `"host1.test.org ro"`.

Related Name

`dfs.nfs.exports.allowed.hosts`

Default Value

`* rw`

API Name

`dfs_nfs_exports_allowed_hosts`

Required

`false`

NFS Gateway Export Point

Description

The NFS Gateway export point(s). Full path is required. In federated clusters, multiple export points can be configured, and at most 1 export point per federated nameservice is allowed.

Related Name

`nfs.export.point`

Default Value

API Name

`nfs_export_point`

Required

`false`

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

`rlimit_fds`

Required

`false`

Ports and Addresses

NFS Gateway Web UI Port

Description

The base port where the NFS Gateway server web UI listens. Combined with the NFS Gateway server hostname to build its HTTP address.

Related Name

nfs.http.port

Default Value

50079

API Name

nfs3_http_port

Required

false

Secure NFS Gateway Web UI Port (TLS/SSL)**Description**

The base port where the secure NFS Gateway server web UI listens. Combined with the NFS Gateway server's hostname to build its secure web UI address.

Related Name

nfs.https.port

Default Value

50579

API Name

nfs3_https_port

Required

false

NFS Gateway MountD Port**Description**

The port number of the mount daemon implemented inside the NFS Gateway server role.

Related Name

nfs3.mountd.port

Default Value

4242

API Name

nfs3_mountd_port

Required

false

Portmap (or Rpcbind) Port**Description**

The port number of the system portmap or rpcbind service. This configuration is used by Cloudera Manager to verify if the system portmap or rpcbind service is running before starting NFS Gateway role. Cloudera Manager does not manage the system portmap or rpcbind service.

Related Name**Default Value**

111

API Name

`nfs3_portmap_port`**Required**`false`**NFS Gateway Server Port****Description**

The NFS Gateway server port.

Related Name`nfs3.server.port`**Default Value**`2049`**API Name**`nfs3_server_port`**Required**`false`**Resource Management****Java Heap Size of NFS Gateway in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**`256 MiB`**API Name**`nfsgateway_java_heapsize`**Required**`false`**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name`cpu.shares`**Default Value**`1024`**API Name**`rm_cpu_shares`**Required**`true`**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgroupexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
 These settings override other cgroup settings.

Related Name

`custom.cgroups`

Default Value**API Name**

`rm_custom_resources`

Required

`false`

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

`blkio.weight`

Default Value

`500`

API Name

`rm_io_weight`

Required

`true`

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

`memory.limit_in_bytes`

Default Value

`-1 MiB`

API Name

`rm_memory_hard_limit`

Required

`true`

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_cdh_version_validator`**Required**`true`**Suppress Parameter Validation: Temporary Dump Directory****Description**

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

SecondaryNameNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

For advanced use only. A string to be inserted into hdfs-site.xml for this role only.

Related Name**Default Value****API Name**

secondarynamenode_config_safety_valve

Required

false

Java Configuration Options for Secondary NameNode**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

secondarynamenode_java_opts

Required

false

SecondaryNameNode Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment.
Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

SECONDARYNAMENODE_role_env_safety_valve

Required

false

Checkpointing

Filesystem Checkpoint Period

Description

The time between two periodic file system checkpoints.

Related Name

dfs.namenode.checkpoint.period

Default Value

1 hour(s)

API Name

fs_checkpoint_period

Required

false

Filesystem Checkpoint Transaction Threshold

Description

The number of transactions after which the NameNode or SecondaryNameNode will create a checkpoint of the namespace, regardless of whether the checkpoint period has expired.

Related Name

dfs.namenode.checkpoint.txns

Default Value

1000000

API Name

fs_checkpoint_txns

Required

false

Logs

SecondaryNameNode Logging Threshold

Description

The minimum log level for SecondaryNameNode logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

SecondaryNameNode Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for SecondaryNameNode logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

SecondaryNameNode Max Log Size**Description**

The maximum size, in megabytes, per log file for SecondaryNameNode logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

SecondaryNameNode Log Directory**Description**

Directory where SecondaryNameNode will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hadoop-hdfs

API Name

secondarynamenode_log_dir

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files

Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate (mandatory)** - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .* , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 0, exceptiontype: java.io.IOException , alert: false, rate: 0, exceptiontype: java.net.SocketException , alert: false, rate: 0, exceptiontype: java.net.SocketClosedException , alert: false, rate: 0, exceptiontype: java.io.EOFException , alert: false, rate: 0, exceptiontype: java.nio.channels.CancelledKeyException , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 0, threshold: WARN, content: Unknown job [^]+ being deleted.* , alert: false, rate: 0, threshold: WARN, content: Error executing shell command .+ No such process.+ , alert: false, rate: 0, threshold: WARN, content: .*attempt to override final parameter.+ , alert: false, rate: 0, threshold: WARN, content: [^]+ is a deprecated filesystem name. Use.* , alert: false, rate: 1, periodminutes: 1, threshold: WARN , alert: false, rate: 1, threshold: INFO, content: Triggering checkpoint.*]

API Name

log_event_whitelist

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

true

HDFS Checkpoint Directories Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's HDFS Checkpoint Directories.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

secondarynamenode_checkpoint_directories_free_space_absolute_thresholds

Required

false

HDFS Checkpoint Directories Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's HDFS Checkpoint Directories. Specified as a percentage of the capacity on that filesystem. This setting is not used if a HDFS Checkpoint Directories Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

secondarynamenode_checkpoint_directories_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

secondarynamenode_fd_thresholds

Required

false

Garbage Collection Duration Thresholds**Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

secondarynamenode_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period

Description

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

secondarynamenode_gc_duration_window

Required

false

SecondaryNameNode Host Health Test

Description

When computing the overall SecondaryNameNode health, consider the host's health.

Related Name**Default Value**

true

API Name

secondarynamenode_host_health_enabled

Required

false

SecondaryNameNode Process Health Test

Description

Enables the health test that the SecondaryNameNode's process state is consistent with the role configuration

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**SecondaryNameNode Web UI Port****Description**

The SecondaryNameNode HTTP port. If the port is 0, then the server starts on a free port. Combined with the SecondaryNameNode's hostname to build its HTTP address.

Related Name

dfs.namenode.secondary.http-address

Default Value

9868

API Name

dfs_secondary_http_port

Required

false

Secure SecondaryNameNode Web UI Port (TLS/SSL)**Description**

The base port where the secure SecondaryNameNode web UI listens.

Related Name

dfs.secondary.https.port

Default Value

9869

API Name

dfs_secondary_https_port

Required

false

Bind SecondaryNameNode to Wildcard Address**Description**

If enabled, the SecondaryNameNode binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name**Default Value**

false

API Name

secondary_namenode_bind_wildcard

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Java Heap Size of Secondary NameNode in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

4 GiB

API Name

secondary_namenode_java_heapsize

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_secondary_name_node_web_metric_collection

Required

true

Service-Wide**Advanced****Cluster-wide Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

For advanced use only, a string to be inserted into core-site.xml. Applies to all roles and client configurations in this HDFS service as well as all its dependent services. Any configs added here will be overridden by their default values in HDFS (which can be found in hdfs-default.xml).

Related Name**Default Value****API Name**

core_site_safety_valve

Required

false

Enable HDFS Block Metadata API**Description**

Enables DataNode support for the experimental DistributedFileSystem.getFileVBlockStorageLocations API. Applicable to CDH 4.1 and onwards.

Related Name

dfs.datanode.hdfs-blocks-metadata.enabled

Default Value

true

API Name

dfs_datanode_hdfs_blocks_metadata_enabled

Required

false

HDFS Service Advanced Configuration Snippet (Safety Valve) for hadoop-policy.xml**Description**

For advanced use only, a string to be inserted into hadoop-policy.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**`hadoop_policy_config_safety_valve`**Required**`false`**Block Replica Placement Policy****Description**

The policy the NameNode will use to place block replicas: The HDFS Default policy places one replica on the node where the client process writing the block resides, one on a randomly-chosen remote rack, and one on a randomly-chosen node in the same remote rack (assuming a replication factor of 3). The Upgrade Domains policy adds an additional layer of grouping based on Upgrade Domain, and must be selected in order to use Upgrade Domains for DataNode hosts.

Related Name`dfs.block.replicator.classname`**Default Value**`org.apache.hadoop.hdfs.server.blockmanagement.BlockPlacementPolicyDefault`**API Name**`hdfs_block_placement_policy`**Required**`true`**Shared Hadoop Group Name****Description**

The name of the system group shared by all the core Hadoop services.

Related Name**Default Value**`hadoop`**API Name**`hdfs_hadoop_group_name`**Required**`true`**HDFS Replication Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

For advanced use only, a string to be inserted into core-site.xml. Applies to all HDFS Replication jobs.

Related Name**Default Value****API Name**`hdfs_replication_core_site_safety_valve`**Required**`false`

HDFS Replication Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into the environment of HDFS replication jobs.

Related Name**Default Value****API Name**

hdfs_replication_env_safety_valve

Required

false

HDFS Replication Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh**Description**

For advanced use only. Key-value pairs (one on each line) to be inserted into the HDFS replication configuration for hadoop-env.sh.

Related Name**Default Value****API Name**

hdfs_replication_hadoop_env_sh_safety_valve

Required

false

HDFS Replication Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

For advanced use only, a string to be inserted into hdfs-site.xml. Applies to all HDFS Replication jobs.

Related Name**Default Value****API Name**

hdfs_replication_hdfs_site_safety_valve

Required

false

HDFS Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

For advanced use only, a string to be inserted into hdfs-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hdfs_service_config_safety_valve

Required

false

HDFS Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hdfs_service_env_safety_valve

Required

false

HDFS Snapshot Shell Command Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into the environment of HDFS snapshot shell command.

Related Name**Default Value****API Name**

hdfs_shell_cmd_env_safety_valve

Required

false

HDFS Advanced Configuration Snippet (Safety Valve) for ssl-client.xml**Description**

For advanced use only, a string to be inserted into ssl-client.xml. Applies cluster-wide, but can be overridden by individual services.

Related Name**Default Value****API Name**

hdfs_ssl_client_safety_valve

Required

false

HDFS Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml**Description**

For advanced use only, a string to be inserted into ssl-server.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hdfs_ssl_server_safety_valve

Required

false

System User's Home Directory

Description

The home directory of the system user on the local filesystem. This setting must reflect the system's configured value - only changing it here will not change the actual home directory.

Related Name**Default Value**

/var/lib/hadoop-hdfs

API Name

hdfs_user_home_dir

Required

true

HDFS Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties

Description

For advanced use only, a string to be inserted into the client configuration for navigator.client.properties.

Related Name**Default Value****API Name**

navigator_client_config_safety_valve

Required

false

System Group

Description

The group that this service's processes should run as (except the HttpFS server, which has its own group)

Related Name**Default Value**

hdfs

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as (except the HttpFS server, which has its own user)

Related Name**Default Value**

hdfs

API Name

process_username

Required

true

HDFS Service Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-audit.xml**Description**

For advanced use only, a string to be inserted into ranger-hdfs-audit.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_audit_safety_valve

Required

false

HDFS Service Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-policymgr-ssl.xml**Description**

For advanced use only, a string to be inserted into ranger-hdfs-policymgr-ssl.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_policymgr_ssl_safety_valve

Required

false

HDFS Service Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-security.xml**Description**

For advanced use only, a string to be inserted into ranger-hdfs-security.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_security_safety_valve

Required

false

Cloudera Navigator**Enable Audit Collection****Description**

Enable collection of audit events from the service's roles.

Related Name

navigator.audit.enabled

Default Value

true

API Name

navigator_audit_enabled

Required

false

Audit Event Filter**Description**

Event filters are defined in a JSON object like the following: { "defaultAction": ("accept", "discard"), "rules": [{ "action": ("accept", "discard"), "fields": [{ "name": "fieldName", "match": "regex" }] }] } A filter has a default action and a list of rules, in order of precedence. Each rule defines an action, and a list of fields to match against the audit event. A rule is "accepted" if all the listed field entries match the audit event. At that point, the action declared by the rule is taken. If no rules match the event, the default action is taken. Actions default to "accept" if not defined in the JSON object. The following is the list of fields that can be filtered for HDFS events:

- username: the user performing the action.
- ipAddress: the IP from where the request originated.
- command: the HDFS operation being performed.
- src: the source path for the operation.
- dest: the destination path for the operation.
- permissions: the permissions associated with the operation.

The default HDFS audit event filter accepts all denied access, delete and rename events, and discards events that affects files in any of the staging directories (Hive, Spark, Impala), events that affect files in /tmp directory, events that affect files in Cloudera Hive Canary directory, events generated by the internal Cloudera and Hadoop users (cloudera-scm, dr.who, hbase, hive, impala, mapred, solr, and spark), and 'ls' actions performed by the hdfs user.

Related Name

navigator.event.filter

Default Value

comment: [The default HDFS audit event filter accepts all denied access, delete , and rename events, and discards events that affects files in any of the , staging directories (Hive, Spark, Impala), events that affect files in /tmp , directory, events that affect files in Cloudera Hive Canary directory, , events generated by the internal Cloudera and Hadoop users (cloudera-scm, , dr.who, hbase, hive, impala, mapred, solr, and spark), and \u0027ls\u0027 actions , performed by the hdfs user.], defaultAction: accept, rules: [action: accept, fields: [name: allowed, match: (? :false)] , action: discard, fields: [name: src, match: (? :.*\\\.hive-staging(\$|.*)?|.*\\\.staging(\$|.*)?|.*\\\.sparkStaging(\$|.*)?|.*_impala_insert_staging(\$|.*)?|/user/history/done_intermediate(?:.*)?/user/spark/spark2ApplicationHistory(\$|.*)/user/spark/applicationHistory(\$|.*)/user/hue/\\\.cloudera_manager_hive_metastore_canary(?:.*)?/user/hue/\\\.Trash/Current/user/hue/\\\.cloudera_manager_hive_metastore_canary(?:.*)?/tmp(?:.*)?)] , action: accept, fields: [name: operation, match: delete|rename.*] , action: discard, fields: [name: username, match: (? :cloudera-scm|dr.who|hbase|hive|impala|mapred|solr|spark)(?:/.*)?] , action: discard, fields: [name: username, match: (? :hdfs)(?:/.*)? , name: operation, match: (? :listStatus|listCachePools|listCacheDirectives|getFileinfo)] , action: accept, fields: [name: operation, match: (? :getFileinfo)]]

API Name

navigator_audit_event_filter

Required

false

Audit Queue Policy**Description**

Action to take when the audit event queue is full. Drop the event or shutdown the affected process.

Related Name

navigator.batch.queue_policy

Default Value

DROP

API Name

navigator_audit_queue_policy

Required

false

Audit Event Tracker

Description

Configures the rules for event tracking and coalescing. This feature is used to define equivalency between different audit events. When events match, according to a set of configurable parameters, only one entry in the audit list is generated for all the matching events. Tracking works by keeping a reference to events when they first appear, and comparing other incoming events against the "tracked" events according to the rules defined here. Event trackers are defined in a JSON object like the following: { "timeToLive" : [integer], "fields" : [{ "type" : [string], "name" : [string] }] } Where:

- timeToLive: maximum amount of time an event will be tracked, in milliseconds. Must be provided. This defines how long, since it's first seen, an event will be tracked. A value of 0 disables tracking.
- fields: list of fields to compare when matching events against tracked events.

Each field has an evaluator type associated with it. The evaluator defines how the field data is to be compared. The following evaluators are available:

- value: uses the field value for comparison.
- username: treats the field value as a user name, and ignores any host-specific data. This is useful for environment using Kerberos, so that only the principal name and realm are compared.

The following is the list of fields that can be used to compare HDFS events:

- operation: the HDFS operation being performed.
- username: the user performing the action.
- ipAddress: the IP from where the request originated.
- allowed: whether the operation was allowed or denied.
- src: the source path for the operation.
- dest: the destination path for the operation.
- permissions: the permissions associated with the operation.

The default event tracker for HDFS services defines equality by comparing the username, operation, and source path of the events.

Related Name

navigator_event_tracker

Default Value

comment: [The default event tracker for HDFS services defines equality by , comparing the username, operation, and source path of the events.], timeToLive: 60000, fields: [type: value, name: src , type: value, name: operation , type: username, name: username]

API Name

navigator_event_tracker

Required

false

High Availability**Timeout for Cloudera Manager Fencing Strategy****Description**

The timeout, in milliseconds, to use with the Cloudera Manager agent-based fencer.

Related Name`dfs.ha.fencing.cloudera_manager.timeout_millis`**Default Value**

10000

API Name`dfs_ha_fencing_cloudera_manager_timeout_millis`**Required**

false

HDFS High Availability Fencing Methods**Description**

List of fencing methods to use for service fencing. Setting this to `shell(true)` enables the built-in HDFS fencing mechanism, which causes the NameNode to exit if it attempts a write operation when it is not active. In almost all cases, this is the best choice. The `sshfence` method uses SSH. If using custom fencers (that may communicate with shared store, power units, or network switches), use the `shell` to invoke them.

Related Name`dfs.ha.fencing.methods`**Default Value**`shell(true)`**API Name**`dfs_ha_fencing_methods`**Required**

false

Timeout for SSH Fencing Strategy**Description**

SSH connection timeout, in milliseconds, to use with the built-in `sshfence` fencer.

Related Name`dfs.ha.fencing.ssh.connect-timeout`**Default Value**

30 second(s)

API Name`dfs_ha_fencing_ssh_connect_timeout`**Required**

false

Private Keys for SSH Fencing Strategy

Description

The SSH private key files to use with the built-in sshfence fencer. These are to be accessible to the hdfs user on the machines running the NameNodes.

Related Name

dfs.ha.fencing.ssh.private-key-files

Default Value**API Name**

dfs_ha_fencing_ssh_private_key_files

Required

false

FailoverProxyProvider Class

Description

Enter a FailoverProxyProvider implementation to configure two URIs to connect to during fail-over. The first configured address is tried first, and on a fail-over event the other address is tried.

Related Name

dfs.client.failover.proxy.provider

Default Value

org.apache.hadoop.hdfs.server.namenode.ha.ConfiguredFailoverProxyProvider

API Name

dfs_ha_proxy_provider

Required

true

Logs

Audit Log Directory

Description

Path to the directory where audit logs will be written. The directory will be created if it doesn't exist.

Related Name

audit_event_log_dir

Default Value

/var/log/hadoop-hdfs/audit

API Name

audit_event_log_dir

Required

false

Maximum Audit Log File Size

Description

Maximum size of audit log file in MB before it is rolled over.

Related Name

navigator.audit_log_max_file_size

Default Value

100 MiB

API Name

navigator_audit_log_max_file_size

Required

false

Number of Audit Logs to Retain**Description**

Maximum number of rolled-over audit logs to retain. The logs are not deleted if they contain audit events that have not yet been propagated to the Audit Server.

Related Name

navigator.client.max_num_audit_log

Default Value

10

API Name

navigator_client_max_num_audit_log

Required

false

Monitoring**Enable Log Event Capture****Description**

When set, each role identifies important log events and forwards them to Cloudera Manager.

Related Name**Default Value**

true

API Name

catch_events

Required

false

Enable Service Level Health Alerts**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Failover Controllers Healthy

Description

Enables the health check that verifies that the failover controllers associated with this service are healthy and running.

Related Name**Default Value**

true

API Name

failover_controllers_healthy_enabled

Required

false

HDFS Health Canary Directory

Description

The service monitor will use this directory to create files to test if the hdfs service is healthy. The directory and files are created with permissions specified by 'HDFS Health Canary Directory Permissions'

Related Name**Default Value**

/tmp/.cloudera_health_monitoring_canary_files

API Name

firehose_hdfs_canary_directory

Required

false

HDFS Health Canary Directory Permissions

Description

The service monitor will use these permissions to create the directory and files to test if the hdfs service is healthy. Permissions are specified using the 10-character unix-symbolic format e.g. '-rwxr-xr-x'.

Related Name**Default Value**

-rwxrwxrwx

API Name

firehose_hdfs_canary_directory_permissions

Required

false

Active NameNode Detection Window

Description

The tolerance window that will be used in HDFS service tests that depend on detection of the active NameNode.

Related Name**Default Value**

3 minute(s)

API Name

hdfs_active_namenode_detection_window

Required

false

Blocks With Corrupt Replicas Monitoring Thresholds

Description

The health check thresholds of the number of blocks that have at least one corrupt replica. Specified as a percentage of the total number of blocks.

Related Name**Default Value**

Warning: 0.5 %, Critical: 1.0 %

API Name

hdfs_blocks_with_corrupt_replicas_thresholds

Required

false

HDFS Canary Health Check

Description

Enables the health check that a client can create, read, write, and delete files

Related Name**Default Value**

true

API Name

hdfs_canary_health_enabled

Required

false

Healthy DataNode Monitoring Thresholds

Description

The health test thresholds of the overall DataNode health. The check returns "Concerning" health if the percentage of "Healthy" DataNodes falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" DataNodes falls below the critical threshold.

Related Name

Default Value

Warning: 95.0 %, Critical: 90.0 %

API Name

hdfs_datanodes_healthy_thresholds

Required

false

HDFS Free Space Monitoring Thresholds**Description**

The health check thresholds of free space in HDFS. Specified as a percentage of total HDFS capacity.

Related Name**Default Value**

Warning: 20.0 %, Critical: 10.0 %

API Name

hdfs_free_space_thresholds

Required

false

Missing Block Monitoring Thresholds**Description**

The health check thresholds of the number of missing blocks. Specified as a percentage of the total number of blocks.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

hdfs_missing_blocks_thresholds

Required

false

NameNode Activation Startup Tolerance**Description**

The amount of time after NameNode(s) start that the lack of an active NameNode will be tolerated. This is intended to allow either the auto-failover daemon to make a NameNode active, or a specifically issued failover command to take effect. This is an advanced option that does not often need to be changed.

Related Name**Default Value**

3 minute(s)

API Name

hdfs_namenode_activation_startup_tolerance

Required

false

Active NameNode Role Health Check

Description

When computing the overall HDFS cluster health, consider the active NameNode's health

Related Name**Default Value**

true

API Name

hdfs_namenode_health_enabled

Required

false

Standby NameNode Health Check

Description

When computing the overall HDFS cluster health, consider the health of the standby NameNode.

Related Name**Default Value**

true

API Name

hdfs_standby_namenodes_health_enabled

Required

false

Under-replicated Block Monitoring Thresholds

Description

The health check thresholds of the number of under-replicated blocks. Specified as a percentage of the total number of blocks.

Related Name**Default Value**

Warning: 10.0 %, Critical: 40.0 %

API Name

hdfs_under_replicated_blocks_thresholds

Required

false

Erasure Coding Policy Verification Health Check

Description

Enables the health test for verifying if the cluster topology supports all the enabled erasure coding policies.

Related Name**Default Value**

false

API Name

hdfs_verify_ec_with_topology_enabled

Required

false

Log Event Retry Frequency

Description

The frequency in which the log4j event publication appender will retry sending undelivered log events to the Event server, in seconds

Related Name

Default Value

30

API Name

log_event_retry_frequency

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

service_triggers

Required

true

Service Monitor Client Config Overrides

Description

For advanced use only, a list of configuration properties that will be used by the Service Monitor instead of the current client configuration for the service.

Related Name**Default Value**

```
<property> <name>dfs.socket.timeout</name> <value>3000</value> </property> <property>
<name>dfs.datanode.socket.write.timeout</name> <value>3000</value> </property> <property>
<name>ipc.client.connect.max.retries</name> <value>1</value> </property> <property>
<name>fs.permissions.umask-mode</name> <value>000</value> </property>
```

API Name

smon_client_config_overrides

Required

false

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other**HDFS Block Size****Description**

The default block size in bytes for new HDFS files. Note that this value is also used as the HBase Region Server HLog block size.

Related Name

dfs.blocksize

Default Value

128 MiB

API Name

dfs_block_size

Required

false

Check HDFS Permissions**Description**

If false, permission checking is turned off for files in HDFS.

Related Name

dfs.permissions

Default Value

true

API Name

dfs_permissions

Required

false

Default Umask**Description**

Default umask for file and directory creation, specified in an octal value (with a leading 0)

Related Name

fs.permissions.umask-mode

Default Value

022

API Name

dfs_umaskmode

Required

false

Enable WebHDFS**Description**

Enable WebHDFS interface

Related Name

dfs.webhdfs.enabled

Default Value

true

API Name

dfs_webhdfs_enabled

Required

false

Serve logs over HTTP**Description**

Whether to serve logs over HTTP from HDFS web servers. This includes listing the logs directory at the /logs endpoint, which may be a security concern.

Related Name

hadoop.http.logs.enabled

Default Value

true

API Name

http_logs_enabled

Required

false

Compression Codecs**Description**

Comma-separated list of compression codecs that can be used in job or map compression.

Related Name

io.compression.codecs

Default Value

org.apache.hadoop.io.compress.DefaultCodec org.apache.hadoop.io.compress.GzipCodec
org.apache.hadoop.io.compress.BZip2Codec org.apache.hadoop.io.compress.DeflateCodec
org.apache.hadoop.io.compress.SnappyCodec org.apache.hadoop.io.compress.Lz4Codec

API Name

io_compression_codecs

Required

false

KMS Service

Description

The Key Management Server used by HDFS. This must be set to use encryption for data at rest.

Related Name

Default Value

API Name

kms_service

Required

false

Object Store Service

Description

Select an Object Store service to enable cloud storage support. Once enabled, the cloud storage can be used in Impala and Hue services, via fully-qualified URIs.

Related Name

Default Value

API Name

object_store_service

Required

false

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.hdfs.trusted.proxy.ipaddress

Default Value

API Name

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded for IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.hdfs.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Set Rules to Map Kerberos Principals to Lower Case Short Names

Description

Adds mapping rules to map Kerberos principals to lower case short names that will be inserted before the default rule. After changing this value and restarting the service, any services depending on this one must be restarted as well.

Related Name**Default Value**

false

API Name

set_auth_to_local_to_lowercase

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this HDFS service instance depends on

Related Name**Default Value****API Name**

zookeeper_service

Required

false

Performance

DataNode Local Path Access Users

Description

Comma separated list of users allowed to do short circuit read. A short circuit read allows a client co-located with the data to read HDFS file blocks directly from HDFS. If empty, will default to the DataNode process' user.

Related Name

dfs.block.local-path-access.user

Default Value**API Name**

`dfs_block_local_path_access_user`**Required**`false`**HDFS File Block Storage Location Timeout****Description**

Timeout in milliseconds for the parallel RPCs made in `DistributedFileSystem#getFileBlockStorageLocations()`. This value is only emitted for Impala.

Related Name`dfs.client.file-block-storage-locations.timeout.millis`**Default Value**`10 second(s)`**API Name**`dfs_client_file_block_storage_locations_timeout`**Required**`false`**Enable HDFS Short-Circuit Read****Description**

Enable HDFS short-circuit read. This allows a client colocated with the `DataNode` to read HDFS file blocks directly. This gives a performance boost to distributed clients that are aware of locality.

Related Name`dfs.client.read.shortcircuit`**Default Value**`true`**API Name**`dfs_datanode_read_shortcircuit`**Required**`false`**UNIX Domain Socket path****Description**

Path on the `DataNode`'s local file system to a UNIX domain socket used for communication between the `DataNode` and local HDFS clients. This socket is used for Short Circuit Reads. Only the HDFS System User and "root" should have write access to the parent directory and all of its ancestors. This property is supported in CDH 4.2 or later deployments.

Related Name`dfs.domain.socket.path`**Default Value**`/var/run/hdfs-sockets/dn`**API Name**`dfs_domain_socket_path`**Required**`false`

FsImage Transfer Bandwidth

Description

Maximum bandwidth used for image transfer in bytes per second. This can help keep normal NameNode operations responsive during checkpointing. A default value of 0 indicates that throttling is disabled.

Related Name

dfs.image.transfer.bandwidthPerSec

Default Value

0 B

API Name

dfs_image_transfer_bandwidthPerSec

Required

false

FsImage Transfer Socket Timeout

Description

Socket timeout for the HttpURLConnection instance used in the image transfer. This is measured in milliseconds. This timeout prevents client hangs if the connection is idle for this configured timeout, during image transfer.

Related Name

dfs.image.transfer.timeout

Default Value

1 minute(s)

API Name

dfs_image_transfer_timeout

Required

false

Ports and Addresses

Use DataNode Hostname

Description

Typically, HDFS clients and servers communicate by opening sockets via an IP address. In certain networking configurations, it is preferable to open sockets after doing a DNS lookup on the hostname. Enable this property to open sockets after doing a DNS lookup on the hostname. This property is supported in CDH3u4 or later deployments.

Related Name

dfs.client.use.datanode.hostname

Default Value

false

API Name

dfs_client_use_datanode_hostname

Required

false

Proxy

HDFS Proxy User Groups

Description

Comma-delimited list of groups to allow the HDFS user to impersonate. The default '*' allows all groups. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.hdfs.groups

Default Value

*

API Name

hdfs_proxy_user_groups_list

Required

false

HDFS Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the HDFS user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.proxyuser.hdfs.hosts

Default Value

*

API Name

hdfs_proxy_user_hosts_list

Required

Hive Proxy User Groups

Description

Comma-delimited list of groups that you want to allow the Hive user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.hive.groups

Default Value

*

API Name

hive_proxy_user_groups_list

Required

false

Hive Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the Hive user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.hive.hosts

Default Value

*

API Name

hive_proxy_user_hosts_list

Required

false

HTTP Proxy User Groups

Description

Comma-delimited list of groups that you want to allow the HTTP user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'. This is used by WebHCat.

Related Name

hadoop.proxyuser.HTTP.groups

Default Value

*

API Name

HTTP_proxy_user_groups_list

Required

false

HTTP Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'. This is used by WebHCat.

Related Name

hadoop.proxyuser.HTTP.hosts

Default Value

*

API Name

HTTP_proxy_user_hosts_list

Required

false

HttpFS Proxy User Groups

Description

Comma-delimited list of groups to allow the HttpFS user to impersonate. The default '*' allows all groups. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.httpfs.groups

Default Value

*

API Name

httpfs_proxy_user_groups_list

Required

false

HttpFS Proxy User Hosts**Description**

Comma-delimited list of hosts where you allow the HttpFS user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.httpfs.hosts

Default Value

*

API Name

httpfs_proxy_user_hosts_list

Required

false

Hue Proxy User Groups**Description**

Comma-delimited list of groups that you want to allow the Hue user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.hue.groups

Default Value

*

API Name

hue_proxy_user_groups_list

Required

false

Hue Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the Hue user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.hue.hosts

Default Value

*

API Name

hue_proxy_user_hosts_list

Required

false

Impala Proxy User Groups**Description**

Comma-delimited list of groups that you want to allow the Impala user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.impala.groups

Default Value

*

API Name

impala_proxy_user_groups_list

Required

false

Impala Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the Impala user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.proxyuser.impala.hosts

Default Value

*

API Name

impala_proxy_user_hosts_list

Required

false

Knox Proxy User Groups**Description**

Comma-delimited list of groups that you want to allow the Knox user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.knox.groups

Default Value

*

API Name

knox_proxy_user_groups_list

Required

false

Knox Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the Knox user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.knox.hosts

Default Value

*

API Name

knox_proxy_user_hosts_list

Required

false

Livy Proxy User Groups

Description

Comma-delimited list of groups that you want to allow the Livy user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.livy.groups

Default Value

*

API Name

livy_proxy_user_groups_list

Required

false

Livy Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the Livy user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.livy.hosts

Default Value

*

API Name

livy_proxy_user_hosts_list

Required

false

Oozie Proxy User Groups

Description

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.oozie.groups

Default Value

*

API Name

oozie_proxy_user_groups_list

Required

false

Oozie Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.proxyuser.oozie.hosts

Default Value

*

API Name

oozie_proxy_user_hosts_list

Required

false

Phoenix Proxy User Groups**Description**

Comma-delimited list of groups that you want to allow the Phoenix user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.phoenix.groups

Default Value

*

API Name

phoenix_proxy_user_groups_list

Required

false

Phoenix Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the Phoenix user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.proxyuser.phoenix.hosts

Default Value

*

API Name

phoenix_proxy_user_hosts_list

Required

false

Service Monitor Proxy User Groups

Description

Allows the Cloudera Service Monitor user to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. This property is used only if Service Monitor is using a different Kerberos principal than the Hue service. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.smon.groups

Default Value

*

API Name

smon_proxy_user_groups_list

Required

false

Service Monitor Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the Cloudera Service Monitor user to impersonate other users. The default '*' allows all hosts. This property is used only if Service Monitor is using a different Kerberos principal than the Hue service. To disable entirely, use a string that does not correspond to a host name, such as '_no_host_'.

Related Name

hadoop.proxyuser.smon.hosts

Default Value

*

API Name

smon_proxy_user_hosts_list

Required

false

Telemetry Publisher Proxy User Groups

Description

Allows the Cloudera Telemetry Publisher user to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. This property is used only if Telemetry Publisher is using a different Kerberos principal than the Hue service. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.telepub.groups

Default Value

*

API Name

telepub_proxy_user_groups_list

Required

false

Telemetry Publisher Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the Cloudera Telemetry Publisher user to impersonate other users. The default '*' allows all hosts. This property is used only if Telemetry Publisher is using a different Kerberos principal than the Hue service. To disable entirely, use a string that does not correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.telepub.hosts

Default Value

*

API Name

telepub_proxy_user_hosts_list

Required

false

YARN Proxy User Groups**Description**

Comma-delimited list of groups that you want to allow the YARN user to impersonate. The default '*' allows all groups. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.yarn.groups

Default Value

*

API Name

yarn_proxy_user_groups_list

Required

false

YARN Proxy User Hosts**Description**

Comma-delimited list of hosts that you want to allow the YARN user to impersonate. The default '*' allows all hosts. To disable entirely, use a string that does not correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.yarn.hosts

Default Value

*

API Name

yarn_proxy_user_hosts_list

Required

false

Replication**Maintenance State Minimal Block Replication****Description**

The minimum number of block replicas required to enter Maintenance State. If any block has less than the minimum number of block replicas, the DataNode cannot immediately enter Maintenance State.

Related Name

dfs.namenode.maintenance.replication.min

Default Value

1

API Name

dfs_maintenance_replication_min

Required

false

Replication Factor**Description**

Default block replication. The number of replications to make when the file is created. The default value is used if a replication number is not specified.

Related Name

dfs.replication

Default Value

3

API Name

dfs_replication

Required

false

Maximal Block Replication**Description**

The maximal block replication.

Related Name

dfs.replication.max

Default Value

512

API Name

dfs_replication_max

Required

false

Minimal Block Replication

Description

The minimal block replication.

Related Name

dfs.namenode.replication.min

Default Value

1

API Name

dfs_replication_min

Required

false

Security

DataNode Data Transfer Protection

Description

SASL protection mode for secured connections to the DataNodes when reading or writing data. Value is the type of SASL protection to be used for secured connections to the DataNode when reading or writing block data. Possible values are 'authentication', 'integrity' and 'privacy'. authentication means authentication only and no integrity or privacy; integrity implies that only authentication and integrity are enabled; and privacy implies all of authentication, integrity and privacy are enabled. If "Enable Data Transfer Encryption" is set to true, then it supersedes the setting for this parameter and enforces that all connections must use a specialized encrypted SASL handshake. This property is ignored for connections to a DataNode listening on a privileged port. In this case, it is assumed that the use of a privileged port establishes sufficient trust.

Related Name

dfs.data.transfer.protection

Default Value**API Name**

dfs_data_transfer_protection

Required

false

Enable Data Transfer Encryption

Description

Enable encryption of data transfer between DataNodes and clients, and among DataNodes. When enabled, block data that is read/written from/to HDFS will be encrypted on the wire. For effective data transfer protection, enable Kerberos authentication and pick privacy for "Hadoop RPC Protection".

Related Name

dfs.encrypt.data.transfer

Default Value

false

API Name

dfs_encrypt_data_transfer

Required

false

Data Transfer Encryption Algorithm

Description

Algorithm to encrypt data transfer between DataNodes and clients, and among DataNodes. If 3des or rc4 are chosen, the entire communication is encrypted with that algorithm. In CDH 5.4 and higher, if AES/CTR/NoPadding is chosen, 3des is used for the initial key exchange, and then AES/CTR/NoPadding is used for the transfer of data. This is the most secure option, and is recommended for clusters running CDH 5.4 or higher. It also requires that the "openssl-devel" package be installed on all machines in the cluster. When this parameter is changed, a full, nonrolling restart of the cluster must be performed.

Related Name

dfs.encrypt.data.transfer.algorithm

Default Value

rc4

API Name

dfs_encrypt_data_transfer_algorithm

Required

false

Data Transfer Cipher Suite Key Strength

Description

If AES/CTR/NoPadding is chosen for the Data Transfer Encryption Algorithm, this specifies the length (in bits) of the AES key. When this parameter is changed, a full, non-rolling restart of the cluster must be performed.

Related Name

dfs.encrypt.data.transfer.cipher.key.bitlength

Default Value

256

API Name

dfs_encrypt_data_transfer_cipher_keybits

Required

false

Enable Access Control Lists

Description

ACLs (Access Control Lists) enhance the existing HDFS permission model to support controlling file access for arbitrary combinations of users and groups instead of a single owner, single group, and all other users. When ACLs are disabled, the NameNode rejects all attempts to set an ACL.

Related Name

dfs.namenode.acls.enabled

Default Value

true

API Name

dfs_namenode_acls_enabled

Required

false

Superuser Group

Description

The name of the group of superusers.

Related Name

dfs.permissions.superusergroup

Default Value

supergroup

API Name

dfs_permissions_supergroup

Required

false

Enable Ranger Authorization

Description

Enable fine-grained security using Ranger. There should be only one Ranger service installed in the same cluster as HDFS: this Ranger service should have the DFS dependency set to this HDFS service.

Related Name**Default Value**

false

API Name

enable_ranger_authorization

Required

false

Additional Rules to Map Kerberos Principals to Short Names

Description

Additional mapping rules that will be inserted before rules generated from the list of trusted realms and before the default rule. After changing this value and restarting the service, any services depending on this one must be restarted as well. The `hadoop.security.auth_to_local` property is configured using this information. Default rules are generated by Cloudera Manager and substituted in place of the literal `{DEFAULT_RULES}` if it is specified in this value.

Related Name**Default Value**

DEFAULT_RULES

API Name

extra_auth_to_local_rules

Required

false

Authorized Admin Groups

Description

Comma-separated list of groups authorized to perform admin operations on Hadoop. This is emitted only if authorization is enabled.

Related Name

Default Value**API Name**

hadoop_authorized_admin_groups

Required

false

Authorized Admin Users**Description**

Comma-separated list of users authorized to perform admin operations on Hadoop. This is emitted only if authorization is enabled.

Related Name**Default Value**

*

API Name

hadoop_authorized_admin_users

Required

false

Authorized Groups**Description**

Comma-separated list of groups authorized to use Hadoop. This is emitted only if authorization is enabled.

Related Name**Default Value****API Name**

hadoop_authorized_groups

Required

false

Authorized Users**Description**

Comma-separated list of users authorized to use Hadoop. This is emitted only if authorization is enabled.

Related Name**Default Value**

*

API Name

hadoop_authorized_users

Required

false

Hadoop User Group Mapping Search Base**Description**

The search base for the LDAP connection. This is a distinguished name, and will typically be the root of the LDAP directory.

Related Name

hadoop.security.group.mapping.ldap.base

Default Value**API Name**

hadoop_group_mapping_ldap_base

Required

false

Hadoop User Group Mapping LDAP Bind User Password**Description**

The password of the bind user.

Related Name

hadoop.security.group.mapping.ldap.bind.password

Default Value**API Name**

hadoop_group_mapping_ldap_bind_passwd

Required

false

Hadoop User Group Mapping LDAP Bind User Distinguished Name**Description**

Distinguished name of the user to bind to AD as for user authentication search/bind and group lookup for role authorization. For openLDAP based directories this should be a DN string, for Active Directory this can be just a username, combined with the "Active Directory Domain" value for login. For example username in the field and example.com in the active directory domain will result in the User Principal Name value of username@example.com being used to bind. If you put a UPM value here, do not over-configure the "active directory domain" field otherwise you will end up presenting username@example.com@example.com for binds. AD will accept a UPN value or the DN value as a valid Bind DN; An example of a Distinguished Name (DN): CN=cdh admin,OU=svcaccount,DC=example,DC=com An example of a UPN value: cdhadmin@example.com

Related Name

hadoop.security.group.mapping.ldap.bind.user

Default Value**API Name**

hadoop_group_mapping_ldap_bind_user

Required

false

Hadoop User Group Mapping LDAP Group Search Filter**Description**

An additional filter to use when searching for groups.

Related Name

hadoop.security.group.mapping.ldap.search.filter.group

Default Value

(objectClass=group)

API Name

hadoop_group_mapping_ldap_group_filter

Required

false

Hadoop User Group Mapping LDAP Group Name Attribute**Description**

The attribute of the group object that identifies the group name. The default will usually be appropriate for all LDAP systems.

Related Name

hadoop.security.group.mapping.ldap.search.attr.group.name

Default Value

cn

API Name

hadoop_group_mapping_ldap_group_name_attr

Required

false

Hadoop User Group Mapping LDAP TLS/SSL Truststore**Description**

File path to a jks-format truststore containing the TLS/SSL certificate used sign the LDAP server's certificate. Note that in previous releases this was erroneously referred to as a "keystore".

Related Name

hadoop.security.group.mapping.ldap.ssl.keystore

Default Value**API Name**

hadoop_group_mapping_ldap_keystore

Required

false

Hadoop User Group Mapping LDAP TLS/SSL Truststore Password**Description**

The password for the TLS/SSL truststore.

Related Name

hadoop.security.group.mapping.ldap.ssl.keystore.password

Default Value**API Name**

hadoop_group_mapping_ldap_keystore_passwd

Required

false

Hadoop User Group Mapping LDAP Group Membership Attribute**Description**

The attribute of the group object that identifies the users that are members of the group. The default will usually be appropriate for any LDAP installation.

Related Name

hadoop.security.group.mapping.ldap.search.attr.member

Default Value

member

API Name

hadoop_group_mapping_ldap_member_attr

Required

false

Hadoop User Group Mapping LDAP URL

Description

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name

hadoop.security.group.mapping.ldap.url

Default Value**API Name**

hadoop_group_mapping_ldap_url

Required

false

Hadoop User Group Mapping LDAP TLS/SSL Enabled

Description

Whether or not to use TLS/SSL when connecting to the LDAP server.

Related Name

hadoop.security.group.mapping.ldap.use.ssl

Default Value

false

API Name

hadoop_group_mapping_ldap_use_ssl

Required

false

Hadoop User Group Mapping LDAP User Search Filter

Description

An additional filter to use when searching for LDAP users. The default will usually be appropriate for Active Directory installations. If connecting to a generic LDAP server, "sAMAccountName" will likely be replaced with "uid". {0} is a special string used to denote where the username fits into the filter.

Related Name

hadoop.security.group.mapping.ldap.search.filter.user

Default Value

(&(objectClass=user)(sAMAccountName=0))

API Name

hadoop_group_mapping_ldap_user_filter

Required

false

Hadoop HTTP Authentication Cookie Domain

Description

The domain to use for the HTTP cookie that stores the authentication token. In order for authentication to work correctly across all Hadoop nodes' web-consoles the domain must be correctly set. Important: when using IP addresses, browsers ignore cookies with domain settings. For this setting to work properly all nodes in the cluster must be configured to generate URLs with hostname.domain names on it.

Related Name

Default Value

API Name

hadoop_http_auth_cookie_domain

Required

false

Hadoop RPC Protection

Description

Quality of protection for secured RPC connections between NameNode and HDFS clients. For effective RPC protection, enable Kerberos authentication.

Related Name

hadoop.rpc.protection

Default Value

authentication

API Name

hadoop_rpc_protection

Required

false

Enable Kerberos Authentication for HTTP Web-Consoles

Description

Enables Kerberos authentication for Hadoop HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled for the HDFS service.

Related Name

Default Value

false

API Name

hadoop_secure_web_ui

Required

false

Hadoop Secure Authentication

Description

Choose the authentication mechanism used by Hadoop

Related Name

hadoop.security.authentication

Default Value

simple

API Name

hadoop_security_authentication

Required

false

Hadoop Secure Authorization

Description

Enable authorization

Related Name

hadoop.security.authorization

Default Value

API Name

hadoop_security_authorization

Required

false

Hadoop User Group Mapping Implementation

Description

Class for user to group mapping (get groups for a given user).

Related Name

hadoop.security.group.mapping

Default Value

org.apache.hadoop.security.ShellBasedUnixGroupsMapping

API Name

hadoop_security_group_mapping

Required

false

Encryption Key Default Length

Description

The length (bits) of keys we want the KeyProvider to produce. Key length defines the upper-bound on an algorithm's security, ideally, it would coincide with the lower-bound on an algorithm's security.

Related Name

hadoop.security.key.default.bitlength

Default Value

128

API Name

hdfs_encryption_key_length

Required

false

Hadoop TLS/SSL Enabled**Description**

Enable TLS/SSL encryption for HDFS, MapReduce, and YARN web UIs, as well as encrypted shuffle for MapReduce and YARN.

Related Name

hadoop.ssl.enabled

Default Value

false

API Name

hdfs_hadoop_ssl_enabled

Required

false

HDFS User to Impersonate**Description**

The user the management services impersonates when connecting to HDFS. If no value is specified, the HDFS superuser is used.

Related Name**Default Value****API Name**

hdfs_user_to_impersonate

Required

false

Hue's Kerberos Principal Short Name**Description**

The short name of the Hue Kerberos principal. Normally, you do not need to specify this configuration. Cloudera Manager auto-configures this property so that Hue and Cloudera Manamgent Service work properly.

Related Name

hue.kerberos.principal.shortname

Default Value**API Name**

hue_kerberos_principal_shortname

Required

false

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

hdfs

API Name

kerberos_princ_name

Required

true

Ranger DFS Audit Path

Description

The DFS path on which Ranger audits are written. The special placeholder `'${ranger_base_audit_url}'` should be used as the prefix, in order to use the centralized location defined in the Ranger service.

Related Name

xasecure.audit.destination.hdfs.dir

Default Value

`${ranger_base_audit_url}/hdfs`

API Name

ranger_audit_hdfs_dir

Required

false

Ranger Audit DFS Spool Dir

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

`/var/log/hdfs/audit/hdfs/spool`

API Name

ranger_audit_hdfs_spool_dir

Required

false

Ranger Audit Solr Spool Dir

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

`/var/log/hdfs/audit/solr/spool`

API Name

ranger_audit_solr_spool_dir

Required

false

Ranger Policy Cache Directory

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.hdfs.policy.cache.dir

Default Value

/var/lib/ranger/hdfs/policy-cache

API Name

ranger_policy_cache_dir

Required

false

Note: Mounting /var/lib/ as a filesystem with the noexec option is sometimes done as an enhanced security measure to prevent the execution of files stored there. However, this causes multiple problems with various parts of Cloudera Manager and CDH. Therefore, Cloudera does not support mounting /var/lib/ with the noexec option.

Log and Query Redaction Policy

Description

Note: Do not edit this property in the classic layout. Switch to the new layout to use preconfigured redaction rules and test your rules inline. Use this property to define a list of rules to be followed for redacting sensitive information from log files and query strings. Click + to add a new redaction rule. You can choose one of the preconfigured rules or add a custom rule. When specifying a custom rule, the Search field should contain a regular expression that will be matched against the data. If a match is found, it is replaced by the contents of the Replace field. Trigger is an optional field. It can be used to specify a simple string to be searched in the data. If the string is found, the redactor attempts to find a match for the Search regex. If no trigger is specified, redaction occurs by matching the Search regular expression. Use the Trigger field to enhance performance: simple string matching is faster than regular expression matching. Test your rules by entering sample text into the Test Redaction Rules text box and clicking Test Redaction. If no rules match, the text you entered is returned unchanged.

Related Name

redaction_policy

Default Value

version: 1, rules: [description: Redact passwords from json files, trigger: password, search: \\password\\[]*:[]*\\^[^\\]+\\, caseSensitive: false, replace: \\password\\: \\LOG-REDACTED\\, description: Redact password\\u003d and password:, trigger: password, search: password[:\\u003d][^\\\\\\\\]+, caseSensitive: false, replace: password\\u003dLOG-REDACTED, description: Redact passwd\\u003d and passwd:, trigger: passwd, search: passwd[:\\u003d][^\\\\\\\\]+, caseSensitive: false, replace: passwd\\u003dLOG-REDACTED, description: Redact pass\\u003d and pass:, trigger: pass, search: pass[:\\u003d][^\\\\\\\\]+, caseSensitive: false, replace: pass\\u003dLOG-REDACTED, description: Redact PASSWORD, , trigger: PASSWORD, , search: PASSWORD, [^\\\\\\\\]+, caseSensitive: false, replace: PASSWORD, LOG-REDACTED, description: Redact secret\\u003d and secret:, trigger: secret, search: secret[:\\u003d][^\\\\\\\\]+, caseSensitive: false, replace: secret\\u003dLOG-REDACTED, description: Credit Card numbers (with separator), search: \\d4[\\^\\w:]\\d4[\\^\\w:]\\d4[\\^\\w:]\\d4, caseSensitive: true, replace: XXXX-XXXX-XXXX-XXXX, description:

Social Security numbers (with separator), search: \\d3[^\\w:]\\d2[^\\w:]\\d4, caseSensitive: true, replace: XXX-XX-XXXX]

API Name

redaction_policy

Required

false

Required

false

Cluster-Wide Default TLS/SSL Client Truststore Location**Description**

Path to the TLS/SSL client truststore file. Defines a cluster-wide default that can be overridden by individual services. This truststore must be in JKS format. The truststore contains certificates of trusted servers, or of Certificate Authorities trusted to identify servers. The contents of the truststore can be modified without restarting any roles. By default, changes to its contents are picked up within ten seconds. If not set, the default Java truststore is used to verify certificates.

Related Name

ssl.client.truststore.location

Default Value**API Name**

Hadoop TLS/SSL Server Keystore File Location

Description

Path to the keystore file containing the server certificate and private key used for encrypted shuffle and encrypted web UIs. Applies to configurations of all daemon roles of this service.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Hadoop TLS/SSL Server Keystore File Password

Description

Password for the server keystore file used for encrypted shuffle and encrypted web UIs. Applies to configurations of all daemon roles of this service.

Related Name

ssl.server.keystore.password

Default Value**API Name**

`ssl_server_keystore_password`**Required**`false`**SSL/TLS Cipher Suite****Description**

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

Related Name`ssl.server.exclude.cipher.list`**Default Value**`modern2018`**API Name**`tls_ciphers`**Required**`false`**Trusted Kerberos Realms****Description**

List of Kerberos realms that Hadoop services should trust. If empty, defaults to the `default_realm` property configured in the `krb5.conf` file. After changing this value and restarting the service, all services depending on this service must also be restarted. Adds mapping rules for each domain to the `hadoop.security.auth_to_local` property in `core-site.xml`.

Related Name**Default Value****API Name**`trusted_realms`**Required**`false`**Suppressions****Suppress Configuration Validator: Balancer Advanced Configuration Snippet (Safety Valve) for `hdfs-site.xml`****Description**

Whether to suppress configuration warnings produced by the Balancer Advanced Configuration Snippet (Safety Valve) for `hdfs-site.xml` configuration validator.

Related Name**Default Value**`false`**API Name**

role_config_suppression_balancer_config_safety_valve

Required

true

Suppress Configuration Validator: Java Configuration Options for Balancer**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Balancer configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_balancer_java_opts

Required

true

Suppress Configuration Validator: Balancer Log Directory**Description**

Whether to suppress configuration warnings produced by the Balancer Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_balancer_log_dir

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: DataNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the DataNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_config_safety_valve

Required

true

Suppress Configuration Validator: DataNode Failed Volumes Tolerated Validator**Description**

Whether to suppress configuration warnings produced by the DataNode Failed Volumes Tolerated Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_failed_volumes_validator

Required

true

Suppress Configuration Validator: Java Heap Size of DataNode in Bytes**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of DataNode in Bytes configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_java_heapsize

Required

true

Suppress Configuration Validator: Java Configuration Options for DataNode**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for DataNode configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_java_opts

Required

true

Suppress Configuration Validator: DataNode Log Directory**Description**

Whether to suppress configuration warnings produced by the DataNode Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_log_dir

Required

true

Suppress Configuration Validator: DataNode Reserved Space Validator**Description**

Whether to suppress configuration warnings produced by the DataNode Reserved Space Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_reserved_space_validator

Required

true

Suppress Configuration Validator: DataNode Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the DataNode Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_datanode_role_env_safety_valve

Required

true

Suppress Configuration Validator: DataNode Data Directory**Description**

Whether to suppress configuration warnings produced by the DataNode Data Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_data_dir_list

Required

true

Suppress Configuration Validator: DataNode Data Directory Permissions**Description**

Whether to suppress configuration warnings produced by the DataNode Data Directory Permissions configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_datanode_data_dir_perm

Required

true

Suppress Configuration Validator: DataNode HTTP Web UI Port**Description**

Whether to suppress configuration warnings produced by the DataNode HTTP Web UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_datanode_http_port

Required

true

Suppress Configuration Validator: Secure DataNode Web UI Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the Secure DataNode Web UI Port (TLS/SSL) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_dfs_datanode_https_port

Required

true

Suppress Configuration Validator: DataNode Protocol Port**Description**

Whether to suppress configuration warnings produced by the DataNode Protocol Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_datanode_ipc_port

Required

true

Suppress Configuration Validator: DataNode Transceiver Port**Description**

Whether to suppress configuration warnings produced by the DataNode Transceiver Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_datanode_port

Required

true

Suppress Configuration Validator: NameNode Nameservice**Description**

Whether to suppress configuration warnings produced by the NameNode Nameservice configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_federation_namenode_nameservice

Required

true

Suppress Configuration Validator: NameNode Web UI Port**Description**

Whether to suppress configuration warnings produced by the NameNode Web UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_http_port

Required

true

Suppress Configuration Validator: Secure NameNode Web UI Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the Secure NameNode Web UI Port (TLS/SSL) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_https_port

Required

true

Suppress Configuration Validator: JournalNode Edits Directory**Description**

Whether to suppress configuration warnings produced by the JournalNode Edits Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_journalnode_edits_dir

Required

true

Suppress Configuration Validator: JournalNode HTTP Port**Description**

Whether to suppress configuration warnings produced by the JournalNode HTTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_journalnode_http_port

Required

true

Suppress Configuration Validator: Secure JournalNode Web UI Port (TLS/SSL)

Description

Whether to suppress configuration warnings produced by the Secure JournalNode Web UI Port (TLS/SSL) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_journalnode_https_port

Required

true

Suppress Configuration Validator: JournalNode RPC Port

Description

Whether to suppress configuration warnings produced by the JournalNode RPC Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_journalnode_rpc_port

Required

true

Suppress Configuration Validator: NameNode Data Directories

Description

Whether to suppress configuration warnings produced by the NameNode Data Directories configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_name_dir_list

Required

true

Suppress Configuration Validator: NameNode Edits Directories

Description

Whether to suppress configuration warnings produced by the NameNode Edits Directories configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_dfs_namenode_edits_dir`**Required**`true`**Suppress Configuration Validator: NameNode Handler Count Minimum Validator****Description**

Whether to suppress configuration warnings produced by the NameNode Handler Count Minimum Validator configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_dfs_namenode_handler_count_minimum_validator`**Required**`true`**Suppress Configuration Validator: Quorum-based Storage Journal name****Description**

Whether to suppress configuration warnings produced by the Quorum-based Storage Journal name configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_dfs_namenode_quorum_journal_name`**Required**`true`**Suppress Configuration Validator: NameNode Service Handler Count Minimum Validator****Description**

Whether to suppress configuration warnings produced by the NameNode Service Handler Count Minimum Validator configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_dfs_namenode_service_handler_count_minimum_validator`**Required**`true`**Suppress Configuration Validator: NameNode Service RPC Port****Description**

Whether to suppress configuration warnings produced by the NameNode Service RPC Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_namenode_servicerpc_address

Required

true

Suppress Configuration Validator: Shared Edits Directory**Description**

Whether to suppress configuration warnings produced by the Shared Edits Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_namenode_shared_edits_dir

Required

true

Suppress Configuration Validator: Temporary Dump Directory**Description**

Whether to suppress configuration warnings produced by the Temporary Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_nfs3_dump_dir

Required

true

Suppress Configuration Validator: Allowed Hosts and Privileges**Description**

Whether to suppress configuration warnings produced by the Allowed Hosts and Privileges configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_nfs_exports_allowed_hosts

Required

true

Suppress Configuration Validator: SecondaryNameNode Web UI Port**Description**

Whether to suppress configuration warnings produced by the SecondaryNameNode Web UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_secondary_http_port

Required

true

Suppress Configuration Validator: Secure SecondaryNameNode Web UI Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the Secure SecondaryNameNode Web UI Port (TLS/SSL) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_secondary_https_port

Required

true

Suppress Configuration Validator: SecondaryNameNode Nameservice**Description**

Whether to suppress configuration warnings produced by the SecondaryNameNode Nameservice configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs_secondarynamenode_nameservice

Required

true

Suppress Configuration Validator: Java Configuration Options for Failover Controller**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Failover Controller configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_failover_controller_java_opts

Required

true

Suppress Configuration Validator: Failover Controller Log Directory**Description**

Whether to suppress configuration warnings produced by the Failover Controller Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_failover_controller_log_dir

Required

true

Suppress Configuration Validator: Failover Controller Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Failover Controller Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_failovercontroller_role_env_safety_valve

Required

true

Suppress Configuration Validator: Failover Controller Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the Failover Controller Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_fc_config_safety_valve

Required

true

Suppress Configuration Validator: HDFS Checkpoint Directories**Description**

Whether to suppress configuration warnings produced by the HDFS Checkpoint Directories configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_fs_checkpoint_dir_list

Required

true

Suppress Configuration Validator: Filesystem Trash Interval On Validator**Description**

Whether to suppress configuration warnings produced by the Filesystem Trash Interval On Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_fs_trash_interval_minimum_validator

Required

true

Suppress Configuration Validator: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_metrics2_safety_valve

Required

true

Suppress Configuration Validator: HDFS Client Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the HDFS Client Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdfs_client_config_safety_valve

Required

true

Suppress Configuration Validator: HDFS Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh**Description**

Whether to suppress configuration warnings produced by the HDFS Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdfs_client_env_safety_valve

Required

true

Suppress Configuration Validator: Client Java Configuration Options**Description**

Whether to suppress configuration warnings produced by the Client Java Configuration Options configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdfs_client_java_opts

Required

true

Suppress Configuration Validator: Administration Port**Description**

Whether to suppress configuration warnings produced by the Administration Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdfs_httpfs_admin_port

Required

true

Suppress Configuration Validator: REST Port**Description**

Whether to suppress configuration warnings produced by the REST Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdfs_httpfs_http_port

Required

true

Suppress Configuration Validator: Signature Secret**Description**

Whether to suppress configuration warnings produced by the Signature Secret configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdfs_httpfs_signature_secret

Required

true

Suppress Configuration Validator: HDFS Trash Enabled Validator**Description**

Whether to suppress configuration warnings produced by the HDFS Trash Enabled Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdfs_trash_disabled_validator

Required

true

Suppress Configuration Validator: HttpFS Advanced Configuration Snippet (Safety Valve) for https-site.xml**Description**

Whether to suppress configuration warnings produced by the HttpFS Advanced Configuration Snippet (Safety Valve) for https-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_config_safety_valve

Required

true

Suppress Configuration Validator: HttpFS Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the HttpFS Advanced Configuration Snippet (Safety Valve) for core-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_core_site_safety_valve

Required

true

Suppress Configuration Validator: HttpFS Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the HttpFS Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_hdfs_site_safety_valve

Required

true

Suppress Configuration Validator: HttpFS TLS/SSL Server Keystore File Location**Description**

Whether to suppress configuration warnings produced by the HttpFS TLS/SSL Server Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_https_keystore_file

Required

true

Suppress Configuration Validator: HttpFS TLS/SSL Server Keystore File Password**Description**

Whether to suppress configuration warnings produced by the HttpFS TLS/SSL Server Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_httpfs_https_keystore_password`**Required**`true`**Suppress Configuration Validator: HttpFS TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the HttpFS TLS/SSL Trust Store File configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_httpfs_https_truststore_file`**Required**`true`**Suppress Configuration Validator: HttpFS TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the HttpFS TLS/SSL Trust Store Password configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_httpfs_https_truststore_password`**Required**`true`**Suppress Configuration Validator: Java Configuration Options for HttpFS****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for HttpFS configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_httpfs_java_opts`**Required**`true`**Suppress Configuration Validator: HttpFS Load Balancer****Description**

Whether to suppress configuration warnings produced by the HttpFS Load Balancer configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_load_balancer

Required

true

Suppress Configuration Validator: HttpFS Log Directory**Description**

Whether to suppress configuration warnings produced by the HttpFS Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_log_dir

Required

true

Suppress Configuration Validator: System Group**Description**

Whether to suppress configuration warnings produced by the System Group configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_process_groupname

Required

true

Suppress Configuration Validator: System User**Description**

Whether to suppress configuration warnings produced by the System User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_process_username

Required

true

Suppress Configuration Validator: HttpFS Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the HttpFS Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_role_env_safety_valve

Required

true

Suppress Configuration Validator: JournalNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the JournalNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jn_config_safety_valve

Required

true

Suppress Configuration Validator: Java Configuration Options for JournalNode**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for JournalNode configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_journalnode_java_opts

Required

true

Suppress Configuration Validator: JournalNode Log Directory**Description**

Whether to suppress configuration warnings produced by the JournalNode Log Directory configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_journalnode_log_dir`**Required**`true`**Suppress Configuration Validator: JournalNode Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the JournalNode Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_journalnode_role_env_safety_valve`**Required**`true`**Suppress Configuration Validator: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_kerberos_role_princ_name`**Required**`true`**Suppress Configuration Validator: DataNode Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the DataNode Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_log4j_safety_valve`**Required**`true`**Suppress Configuration Validator: Rules to Extract Events from Log Files****Description**

Whether to suppress configuration warnings produced by the Rules to Extract Events from Log Files configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Configuration Validator: NameNode Advanced Configuration Snippet (Safety Valve) for dfs_all_hosts.txt

Description

Whether to suppress configuration warnings produced by the NameNode Advanced Configuration Snippet (Safety Valve) for dfs_all_hosts.txt configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_all_hosts_safety_valve

Required

true

Suppress Configuration Validator: NameNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml

Description

Whether to suppress configuration warnings produced by the NameNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_config_safety_valve

Required

true

Suppress Configuration Validator: NameNode Advanced Configuration Snippet (Safety Valve) for dfs_hosts_allow.txt

Description

Whether to suppress configuration warnings produced by the NameNode Advanced Configuration Snippet (Safety Valve) for dfs_hosts_allow.txt configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_hosts_allow_safety_valve

Required

true

Suppress Configuration Validator: NameNode Advanced Configuration Snippet (Safety Valve) for dfs_hosts_exclude.txt

Description

Whether to suppress configuration warnings produced by the NameNode Advanced Configuration Snippet (Safety Valve) for dfs_hosts_exclude.txt configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_hosts_exclude_safety_valve

Required

true

Suppress Configuration Validator: Java Heap Size of NameNode in Bytes Minimum Validator

Description

Whether to suppress configuration warnings produced by the Java Heap Size of NameNode in Bytes Minimum Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_java_heapsize_minimum_validator

Required

true

Suppress Configuration Validator: Java Configuration Options for NameNode

Description

Whether to suppress configuration warnings produced by the Java Configuration Options for NameNode configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_java_opts

Required

true

Suppress Configuration Validator: NameNode Log Directory

Description

Whether to suppress configuration warnings produced by the NameNode Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_log_dir

Required

true

Suppress Configuration Validator: NameNode Port**Description**

Whether to suppress configuration warnings produced by the NameNode Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_port

Required

true

Suppress Configuration Validator: NameNode Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the NameNode Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_role_env_safety_valve

Required

true

Suppress Configuration Validator: HDFS NameNode TLS/SSL Trust Store File**Description**

Whether to suppress configuration warnings produced by the HDFS NameNode TLS/SSL Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_truststore_file

Required

true

Suppress Configuration Validator: HDFS NameNode TLS/SSL Trust Store Password**Description**

Whether to suppress configuration warnings produced by the HDFS NameNode TLS/SSL Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_namenode_truststore_password

Required

true

Suppress Configuration Validator: Validates Nameservices do not conflict between base and compute clusters.**Description**

Whether to suppress configuration warnings produced by the Validates Nameservices do not conflict between base and compute clusters. configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nameservice_conflict_validator

Required

true

Suppress Configuration Validator: Mount Points**Description**

Whether to suppress configuration warnings produced by the Mount Points configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nameservice_mountpoints

Required

true

Suppress Configuration Validator: NFS Gateway Web UI Port**Description**

Whether to suppress configuration warnings produced by the NFS Gateway Web UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nfs3_http_port

Required

true

Suppress Configuration Validator: Secure NFS Gateway Web UI Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the Secure NFS Gateway Web UI Port (TLS/SSL) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nfs3_https_port

Required

true

Suppress Configuration Validator: NFS Gateway MountD Port**Description**

Whether to suppress configuration warnings produced by the NFS Gateway MountD Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nfs3_mountd_port

Required

true

Suppress Configuration Validator: Portmap (or Rpcbind) Port**Description**

Whether to suppress configuration warnings produced by the Portmap (or Rpcbind) Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nfs3_portmap_port

Required

true

Suppress Configuration Validator: NFS Gateway Server Port**Description**

Whether to suppress configuration warnings produced by the NFS Gateway Server Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_nfs3_server_port

Required

true

Suppress Configuration Validator: NFS Gateway Export Point**Description**

Whether to suppress configuration warnings produced by the NFS Gateway Export Point configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nfs_export_point

Required

true

Suppress Configuration Validator: NFS Gateway Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the NFS Gateway Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nfsgateway_config_safety_valve

Required

true

Suppress Configuration Validator: Java Configuration Options for NFS Gateway**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for NFS Gateway configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nfsgateway_java_opts

Required

true

Suppress Configuration Validator: NFS Gateway Log Directory**Description**

Whether to suppress configuration warnings produced by the NFS Gateway Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nfsgateway_log_dir

Required

true

Suppress Configuration Validator: NFS Gateway Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the NFS Gateway Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nfsgateway_role_env_safety_valve

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: NameNode Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-security.xml**Description**

Whether to suppress configuration warnings produced by the NameNode Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-security.xml configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_ranger_security_role_safety_valve`**Required**`true`**Suppress Configuration Validator: Excluded Hosts****Description**

Whether to suppress configuration warnings produced by the Excluded Hosts configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_rebalancer_exclude_hosts`**Required**`true`**Suppress Configuration Validator: Included Hosts****Description**

Whether to suppress configuration warnings produced by the Included Hosts configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_rebalancer_include_hosts`**Required**`true`**Suppress Configuration Validator: Source Hosts****Description**

Whether to suppress configuration warnings produced by the Source Hosts configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_rebalancer_source_hosts`**Required**`true`**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: SecondaryNameNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the SecondaryNameNode Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_secondarynamenode_config_safety_valve

Required

true

Suppress Configuration Validator: Java Configuration Options for Secondary NameNode**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Secondary NameNode configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_secondarynamenode_java_opts

Required

true

Suppress Configuration Validator: SecondaryNameNode Log Directory**Description**

Whether to suppress configuration warnings produced by the SecondaryNameNode Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_secondarynamenode_log_dir

Required

true

Suppress Configuration Validator: SecondaryNameNode Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the SecondaryNameNode Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_secondarynamenode_role_env_safety_valve

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Topology Script File Name**Description**

Whether to suppress configuration warnings produced by the Topology Script File Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_topology_script_file_name

Required

true

Suppress Parameter Validation: Audit Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Log Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_audit_event_log_dir

Required

true

Suppress Configuration Validator: Auto Failover Validator**Description**

Whether to suppress configuration warnings produced by the Auto Failover Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_auto_failover_validator

Required

true

Suppress Configuration Validator: Balancer Count Validator**Description**

Whether to suppress configuration warnings produced by the Balancer Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_balancer_count_validator

Required

true

Suppress Parameter Validation: Cluster-wide Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cluster-wide Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_core_site_safety_valve

Required

true

Suppress Configuration Validator: DataNode Count Validator**Description**

Whether to suppress configuration warnings produced by the DataNode Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_datanode_count_validator

Required

true

Suppress Parameter Validation: DataNode Local Path Access Users**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DataNode Local Path Access Users parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_dfs_block_local_path_access_user

Required

true

Suppress Parameter Validation: UNIX Domain Socket path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the UNIX Domain Socket path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_dfs_domain_socket_path

Required

true

Suppress Parameter Validation: HDFS High Availability Fencing Methods

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS High Availability Fencing Methods parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_dfs_ha_fencing_methods

Required

true

Suppress Parameter Validation: Private Keys for SSH Fencing Strategy

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Private Keys for SSH Fencing Strategy parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_dfs_ha_fencing_ssh_private_key_files

Required

true

Suppress Parameter Validation: FailoverProxyProvider Class

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the FailoverProxyProvider Class parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_dfs_ha_proxy_provider

Required

true

Suppress Parameter Validation: Superuser Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Superuser Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_dfs_permissions_supergroup

Required

true

Suppress Parameter Validation: Replication Factor**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replication Factor parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_dfs_replication

Required

true

Suppress Parameter Validation: Additional Rules to Map Kerberos Principals to Short Names**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Rules to Map Kerberos Principals to Short Names parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_extra_auth_to_local_rules

Required

true

Suppress Configuration Validator: Failover Controller Count Validator**Description**

Whether to suppress configuration warnings produced by the Failover Controller Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_failovercontroller_count_validator

Required

true

Suppress Parameter Validation: HDFS Health Canary Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Health Canary Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_firehose_hdfs_canary_directory

Required

true

Suppress Parameter Validation: HDFS Health Canary Directory Permissions**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Health Canary Directory Permissions parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_firehose_hdfs_canary_directory_permissions

Required

true

Suppress Configuration Validator: Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Authorized Admin Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Authorized Admin Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_authorized_admin_groups

Required

true

Suppress Parameter Validation: Authorized Admin Users**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Authorized Admin Users parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_authorized_admin_users

Required

true

Suppress Parameter Validation: Authorized Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Authorized Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_authorized_groups

Required

true

Suppress Parameter Validation: Authorized Users**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Authorized Users parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_authorized_users

Required

true

Suppress Parameter Validation: Hadoop User Group Mapping Search Base**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop User Group Mapping Search Base parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_group_mapping_ldap_base

Required

true

Suppress Parameter Validation: Hadoop User Group Mapping LDAP Bind User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop User Group Mapping LDAP Bind User Password parameter.

Related Name

Default Value

false

API Name

service_config_suppression_hadoop_group_mapping_ldap_bind_passwd

Required

true

Suppress Parameter Validation: Hadoop User Group Mapping LDAP Bind User Distinguished Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop User Group Mapping LDAP Bind User Distinguished Name parameter.

Related Name

Default Value

false

API Name

service_config_suppression_hadoop_group_mapping_ldap_bind_user

Required

true

Suppress Parameter Validation: Hadoop User Group Mapping LDAP Group Search Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop User Group Mapping LDAP Group Search Filter parameter.

Related Name

Default Value

false

API Name

service_config_suppression_hadoop_group_mapping_ldap_group_filter

Required

true

Suppress Parameter Validation: Hadoop User Group Mapping LDAP Group Name Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop User Group Mapping LDAP Group Name Attribute parameter.

Related Name

Default Value

false

API Name`service_config_suppression_hadoop_group_mapping_ldap_group_name_attr`**Required**`true`**Suppress Parameter Validation: Hadoop User Group Mapping LDAP TLS/SSL Truststore****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop User Group Mapping LDAP TLS/SSL Truststore parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hadoop_group_mapping_ldap_keystore`**Required**`true`**Suppress Parameter Validation: Hadoop User Group Mapping LDAP TLS/SSL Truststore Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop User Group Mapping LDAP TLS/SSL Truststore Password parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hadoop_group_mapping_ldap_keystore_passwd`**Required**`true`**Suppress Parameter Validation: Hadoop User Group Mapping LDAP Group Membership Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop User Group Mapping LDAP Group Membership Attribute parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hadoop_group_mapping_ldap_member_attr`**Required**`true`**Suppress Parameter Validation: Hadoop User Group Mapping LDAP URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop User Group Mapping LDAP URL parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_group_mapping_ldap_url

Required

true

Suppress Parameter Validation: Hadoop User Group Mapping LDAP User Search Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop User Group Mapping LDAP User Search Filter parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_group_mapping_ldap_user_filter

Required

true

Suppress Parameter Validation: Hadoop HTTP Authentication Cookie Domain**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop HTTP Authentication Cookie Domain parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_http_auth_cookie_domain

Required

true

Suppress Parameter Validation: HDFS Service Advanced Configuration Snippet (Safety Valve) for hadoop-policy.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Service Advanced Configuration Snippet (Safety Valve) for hadoop-policy.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_policy_config_safety_valve

Required

true

Suppress Configuration Validator: Secure Web UI Validator**Description**

Whether to suppress configuration warnings produced by the Secure Web UI Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_secure_web_ui

Required

true

Suppress Configuration Validator: Hadoop TLS/SSL Validator**Description**

Whether to suppress configuration warnings produced by the Hadoop TLS/SSL Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_ssl_validator

Required

true

Suppress Configuration Validator: HDFS Authentication And Authorization Validation**Description**

Whether to suppress configuration warnings produced by the HDFS Authentication And Authorization Validation configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_authentication_and_authorization_validator

Required

true

Suppress Configuration Validator: Data Transfer Encryption Algorithm Validator**Description**

Whether to suppress configuration warnings produced by the Data Transfer Encryption Algorithm Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_encrypt_data_transfer_algorithm_validator

Required

true

Suppress Configuration Validator: HDFS Encryption Validator**Description**

Whether to suppress configuration warnings produced by the HDFS Encryption Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_encryption_validator

Required

true

Suppress Parameter Validation: Shared Hadoop Group Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Shared Hadoop Group Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_hadoop_group_name

Required

true

Suppress Configuration Validator: Check HDFS Permissions Validator**Description**

Whether to suppress configuration warnings produced by the Check HDFS Permissions Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_permissions_validator

Required

true

Suppress Parameter Validation: HDFS Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Proxy User Groups parameter.

Related Name

Default Value

false

API Name

service_config_suppression_hdfs_proxy_user_groups_list

Required

true

Suppress Parameter Validation: HDFS Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_proxy_user_hosts_list

Required

true

Suppress Parameter Validation: HDFS Replication Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Replication Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_replication_core_site_safety_valve

Required

true

Suppress Parameter Validation: HDFS Replication Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Replication Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_replication_env_safety_valve

Required

true

Suppress Parameter Validation: HDFS Replication Environment Advanced Configuration Snippet (Safety Valve) for `hadoop-env.sh`**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Replication Environment Advanced Configuration Snippet (Safety Valve) for `hadoop-env.sh` parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_replication_hadoop_env_sh_safety_valve

Required

true

Suppress Parameter Validation: HDFS Replication Advanced Configuration Snippet (Safety Valve) for `hdfs-site.xml`**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Replication Advanced Configuration Snippet (Safety Valve) for `hdfs-site.xml` parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_replication_hdfs_site_safety_valve

Required

true

Suppress Parameter Validation: HDFS Service Advanced Configuration Snippet (Safety Valve) for `hdfs-site.xml`**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Service Advanced Configuration Snippet (Safety Valve) for `hdfs-site.xml` parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_service_config_safety_valve

Required

true

Suppress Parameter Validation: HDFS Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_hdfs_service_env_safety_valve

Required

true

Suppress Parameter Validation: HDFS Snapshot Shell Command Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Snapshot Shell Command Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_shell_cmd_env_safety_valve

Required

true

Suppress Parameter Validation: HDFS Advanced Configuration Snippet (Safety Valve) for ssl-client.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Advanced Configuration Snippet (Safety Valve) for ssl-client.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_ssl_client_safety_valve

Required

true

Suppress Parameter Validation: HDFS Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_ssl_server_safety_valve

Required

true

Suppress Configuration Validator: HDFS Unassigned Upgrade Domains Validator

Description

Whether to suppress configuration warnings produced by the HDFS Unassigned Upgrade Domains Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_upgrade_domains_unassigned_validator

Required

true

Suppress Configuration Validator: HDFS Unique Upgrade Domains Validator

Description

Whether to suppress configuration warnings produced by the HDFS Unique Upgrade Domains Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_upgrade_domains_unique_validator

Required

true

Suppress Parameter Validation: System User's Home Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User's Home Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_user_home_dir

Required

true

Suppress Parameter Validation: HDFS User to Impersonate

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS User to Impersonate parameter.

Related Name**Default Value**

false

API Name`service_config_suppression_hdfs_user_to_impersonate`**Required**`true`**Suppress Parameter Validation: Hive Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Groups parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hive_proxy_user_groups_list`**Required**`true`**Suppress Parameter Validation: Hive Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Hosts parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hive_proxy_user_hosts_list`**Required**`true`**Suppress Parameter Validation: HTTP Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy User Groups parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_http_proxy_user_groups_list`**Required**`true`**Suppress Parameter Validation: HTTP Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_http_proxy_user_hosts_list

Required

true

Suppress Configuration Validator: HttpFS Count Validator**Description**

Whether to suppress configuration warnings produced by the HttpFS Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_httpfs_count_validator

Required

true

Suppress Parameter Validation: HttpFS Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_httpfs_proxy_user_groups_list

Required

true

Suppress Parameter Validation: HttpFS Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_httpfs_proxy_user_hosts_list

Required

true

Suppress Parameter Validation: Hue's Kerberos Principal Short Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue's Kerberos Principal Short Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_kerberos_principal_shortcode

Required

true

Suppress Parameter Validation: Hue Proxy User Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_proxy_user_groups_list

Required

true

Suppress Parameter Validation: Hue Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_proxy_user_hosts_list

Required

true

Suppress Parameter Validation: Impala Proxy User Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_impala_proxy_user_groups_list

Required

true

Suppress Parameter Validation: Impala Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_impala_proxy_user_hosts_list

Required

true

Suppress Parameter Validation: Compression Codecs**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Compression Codecs parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_io_compression_codecs

Required

true

Suppress Configuration Validator: JournalNode Count Validator**Description**

Whether to suppress configuration warnings produced by the JournalNode Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_journalnode_count_validator

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Knox Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knox_proxy_user_groups_list

Required

true

Suppress Parameter Validation: Knox Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knox_proxy_user_hosts_list

Required

true

Suppress Parameter Validation: Livy Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_livy_proxy_user_groups_list

Required

true

Suppress Parameter Validation: Livy Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_livy_proxy_user_hosts_list

Required

true

Suppress Configuration Validator: NameNode Count Validator**Description**

Whether to suppress configuration warnings produced by the NameNode Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_namenode_count_validator

Required

true

Suppress Configuration Validator: Nameservice Checkpoint Configuration Validator**Description**

Whether to suppress configuration warnings produced by the Nameservice Checkpoint Configuration Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_nameservice_checkpoint_configuration_validator

Required

true

Suppress Configuration Validator: Nameservice Mountpoints Validator**Description**

Whether to suppress configuration warnings produced by the Nameservice Mountpoints Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_nameservice_mountpoints_validator

Required

true

Suppress Configuration Validator: Nameservice Heap Size Validator

Description

Whether to suppress configuration warnings produced by the Nameservice Heap Size Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_nameservice_namenodes_heap_size_validator

Required

true

Suppress Parameter Validation: Audit Event Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Filter parameter.

Related Name

Default Value

false

API Name

service_config_suppression_navigator_audit_event_filter

Required

true

Suppress Parameter Validation: HDFS Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties parameter.

Related Name

Default Value

false

API Name

service_config_suppression_navigator_client_config_safety_valve

Required

true

Suppress Parameter Validation: Audit Event Tracker

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Tracker parameter.

Related Name

Default Value

false

API Name

service_config_suppression_navigator_event_tracker

Required

true

Suppress Configuration Validator: NFS High Availability Validator**Description**

Whether to suppress configuration warnings produced by the NFS High Availability Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_nfs_ha_validator

Required

true

Suppress Configuration Validator: NFS Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the NFS Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_nfsgateway_count_validator

Required

true

Suppress Parameter Validation: Oozie Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_proxy_user_groups_list

Required

true

Suppress Parameter Validation: Oozie Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_proxy_user_hosts_list

Required

true

Suppress Parameter Validation: Phoenix Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Phoenix Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_phoenix_proxy_user_groups_list

Required

true

Suppress Parameter Validation: Phoenix Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Phoenix Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_phoenix_proxy_user_hosts_list

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger DFS Audit Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_audit_hdfs_dir

Required

true

Suppress Parameter Validation: Ranger Audit DFS Spool Dir

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Parameter Validation: HDFS Service Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-audit.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Service Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-audit.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_audit_safety_valve

Required

true

Suppress Parameter Validation: Ranger Audit Solr Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Ranger Policy Cache Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_policy_cache_dir

Required

true

Suppress Parameter Validation: HDFS Service Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-policymgr-ssl.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Service Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-policymgr-ssl.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_policymgr_ssl_safety_valve

Required

true

Suppress Parameter Validation: HDFS Service Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Service Advanced Configuration Snippet (Safety Valve) for ranger-hdfs-security.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_security_safety_valve

Required

true

Suppress Parameter Validation: Log and Query Redaction Policy**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Log and Query Redaction Policy parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_redaction_policy

Required

true

Suppress Configuration Validator: Redaction Policy Validator**Description**

Whether to suppress configuration warnings produced by the Redaction Policy Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_redaction_policy_validator

Required

true

Suppress Configuration Validator: SecondaryNameNode Count Validator**Description**

Whether to suppress configuration warnings produced by the SecondaryNameNode Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_secondarynamenode_count_validator

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Configuration Validator: Short-Circuit Read Enabled Validator**Description**

Whether to suppress configuration warnings produced by the Short-Circuit Read Enabled Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_short_circuit_read_validator

Required

true

Suppress Parameter Validation: Service Monitor Client Config Overrides**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Client Config Overrides parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_client_config_overrides

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Service Monitor Proxy User Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_proxy_user_groups_list

Required

true

Suppress Parameter Validation: Service Monitor Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_proxy_user_hosts_list

Required

true

Suppress Parameter Validation: Cluster-Wide Default TLS/SSL Client Truststore Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cluster-Wide Default TLS/SSL Client Truststore Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Cluster-Wide Default TLS/SSL Client Truststore Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cluster-Wide Default TLS/SSL Client Truststore Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Hadoop TLS/SSL Server Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop TLS/SSL Server Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Hadoop TLS/SSL Server Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop TLS/SSL Server Keystore File Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Hadoop TLS/SSL Server Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop TLS/SSL Server Keystore File Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Telemetry Publisher Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_telepub_proxy_user_groups_list

Required

true

Suppress Parameter Validation: Telemetry Publisher Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_telepub_proxy_user_hosts_list

Required

true

Suppress Parameter Validation: Trusted Kerberos Realms**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Trusted Kerberos Realms parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_trusted_realms

Required

true

Suppress Parameter Validation: YARN Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_proxy_user_groups_list

Required

true

Suppress Parameter Validation: YARN Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_proxy_user_hosts_list

Required

true

Suppress Health Test: Corrupt Blocks**Description**

Whether to suppress the results of the Corrupt Blocks health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hdfs_blocks_with_corrupt_replicas

Required

true

Suppress Health Test: HDFS Canary**Description**

Whether to suppress the results of the HDFS Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hdfs_canary_health

Required

true

Suppress Health Test: DataNode Health**Description**

Whether to suppress the results of the DataNode Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hdfs_data_nodes_healthy

Required

true

Suppress Health Test: Failover Controllers Health**Description**

Whether to suppress the results of the Failover Controllers Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hdfs_failover_controllers_healthy

Required

true

Suppress Health Test: Free Space**Description**

Whether to suppress the results of the Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hdfs_free_space_remaining

Required

true

Suppress Health Test: NameNode Health**Description**

Whether to suppress the results of the NameNode Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hdfs_ha_namenode_health

Required

true

Suppress Health Test: Missing Blocks**Description**

Whether to suppress the results of the Missing Blocks health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hdfs_missing_blocks

Required

true

Suppress Health Test: Under-Replicated Blocks**Description**

Whether to suppress the results of the Under-Replicated Blocks health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hdfs_under_replicated_blocks

Required

true

Suppress Health Test: Erasure Coding Policy Verification Test**Description**

Whether to suppress the results of the Erasure Coding Policy Verification Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hdfs_verify_ec_with_topology

Required

true

Hive Properties in Cloudera Runtime 7.1

Role groups:

Gateway

Advanced

Deploy Directory**Description**

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/hive

API Name

client_config_root_dir

Required

true

Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only, a string to be inserted into the client configuration for hive-site.xml.

Related Name**Default Value****API Name**

hive_client_config_safety_valve

Required

false

Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into the client configuration for hive-env.sh

Related Name**Default Value****API Name**

hive_client_env_safety_valve

Required

false

Client Java Configuration Options**Description**

These are Java command-line arguments. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name**Default Value**

-Djava.net.preferIPv4Stack=true

API Name

hive_client_java_opts

Required

false

Hive Metastore Connection Timeout**Description**

Timeout for requests to the Hive Metastore Server. Consider increasing this if you have tables with a lot of metadata and see timeout errors. Used by most Hive Metastore clients such as Hive CLI and HiveServer2, but not by Impala. Impala has a separately configured timeout.

Related Name

hive.metastore.client.socket.timeout

Default Value

5 minute(s)

API Name

hive_metastore_timeout

Required

false

Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value**

API Name

log4j_safety_valve

Required

false

Logs**Gateway Logging Threshold****Description**

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts.
Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

90

API Name

client_config_priority

Required

true

Resource Management

Client Java Heap Size in Bytes

Description

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

2 GiB

API Name

hive_client_java_heapsize

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_hive_client_config_safety_valve`**Required**`true`**Suppress Parameter Validation: Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hive_client_env_safety_valve`**Required**`true`**Suppress Parameter Validation: Client Java Configuration Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Client Java Configuration Options parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hive_client_java_opts`**Required**`true`**Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_log4j_safety_valve`**Required**`true`**Hive Metastore Server**

Advanced**Number of Threads Used by Compactor****Description**

Number of compactor worker threads to run on this metastore instance. Can be different values on different Metastore instances.

Related Name

hive.compactor.worker.threads

Default Value

5

API Name

hive_compactor_worker_threads

Required

true

Hive Metastore Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only. A string to be inserted into hive-site.xml for this role only.

Related Name**Default Value****API Name**

hive_metastore_config_safety_valve

Required

false

Hive Metastore Delegation Token Store**Description**

The delegation token store implementation class. Use DBTokenStore for Highly Available Metastore Configuration.

Related Name

hive.cluster.delegation.token.store.class

Default Value

org.apache.hadoop.hive.thrift.MemoryTokenStore

API Name

hive_metastore_delegation_token_store

Required

false

Hive Metastore Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value**

API Name

hive_metastore_env_safety_valve

Required

false

Java Configuration Options for Hive Metastore Server**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

hive_metastore_java_opts

Required

false

Max Hive Metastore Server Threads**Description**

Maximum number of worker threads in the Hive Metastore Server's thread pool

Related Name

hive.metastore.server.max.threads

Default Value

100000

API Name

hive_metastore_max_threads

Required

true

Min Hive Metastore Server Threads**Description**

Minimum number of worker threads in the Hive Metastore Server's thread pool

Related Name

hive.metastore.server.min.threads

Default Value

200

API Name

hive_metastore_min_threads

Required

true

Max Message Size for Hive MetaStore**Description**

Maximum message size Hive MetaStore accepts.

Related Name

hive.metastore.server.max.message.size

Default Value

100 MiB

API Name

hive_metastore_server_max_message_size

Required

false

Enable Metrics Subsystem

Description

Controls whether the Hive metrics subsystem is enabled for the role.

Related Name

hive.metastore.metrics.enabled

Default Value

true

API Name

hive_metrics_enabled

Required

false

Metrics Sample File Location

Description

The full path to a file with a sample of metrics exposed by the role. The sample is updated at the frequency configured by Metrics Sample File Logging Frequency. By default, the sample file is logged to a directory under the role log directory, e.g., /var/log/hive/metrics-hivemetastore/metrics.log. The setting only has an effect if "Enable Metrics Subsystem" is set to true.

Related Name

hive.service.metrics.file.location

Default Value**API Name**

hive_metrics_sample_file_location

Required

false

Metrics Sample File Logging Frequency

Description

The frequency at which the metrics are logged to the sample file. The setting only has an effect if "Enable Metrics Subsystem" is set to true.

Related Name

hive.service.metrics.file.frequency

Default Value

30 second(s)

API Name

hive_metrics_sample_logging_frequency

Required

false

Hive Metastore Server Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value****API Name**

hms_core_site_safety_valve

Required

false

Hive Metastore Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Hive Metastore Server Log Directory

Description

Directory where Hive Metastore Server will place its log files.

Related Name**Default Value**

/var/log/hive

API Name

hive_log_dir

Required

false

Hive Metastore Server Logging Threshold

Description

The minimum log level for Hive Metastore Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Hive Metastore Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Hive Metastore Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Hive Metastore Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Hive Metastore Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

hivemetastore_fd_thresholds

Required

false

Hive Metastore Server Host Health Test

Description

When computing the overall Hive Metastore Server health, consider the host's health.

Related Name**Default Value**

true

API Name

hivemetastore_host_health_enabled

Required

false

Pause Duration Thresholds

Description

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

hivemetastore_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period

Description

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

hivemetastore_pause_duration_window

Required

false

Hive Metastore Server Process Health Test

Description

Enables the health test that the Hive Metastore Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

hivemetastore_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Hive Metastore Canary Health Test**Description**

Enables the health test that checks that basic Hive Metastore operations succeed

Related Name**Default Value**

true

API Name

metastore_canary_health_enabled

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures

Description

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

`mgmt_navigator_failure_window`

Required

false

Navigator Audit Pipeline Health Check

Description

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

`mgmt.navigator.status.check.enabled`

Default Value

true

API Name

`mgmt_navigator_status_check_enabled`

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.
- **streamThreshold (optional)** - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled (optional)** - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Enable Stored Notifications in Database****Description**

Enable stored notifications of metadata changes. When enabled, each metadata change will be stored in `NOTIFICATION_LOG`.

Related Name

Default Value

true

API Name

hive_enable_db_notification

Required

false

Time-to-live for Database Notifications**Description**

Time-to-live in seconds for notifications present in NOTIFICATION_LOG. Only used when Enable Stored Notifications in Database is enabled.

Related Name

hive.metastore.event.db.listener.timetolive

Default Value

2 day(s)

API Name

hive_metastore_event_db_listener_timetolive

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Hive Metastore Server Port****Description**

Port on which Hive Metastore Server will listen for connections.

Related Name

hive.metastore.port

Default Value

9083

API Name

hive_metastore_port

Required

false

Resource Management

Java Heap Size of Hive Metastore Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

8 GiB

API Name

hive_metastore_java_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Hive Metastore Max Message Size Validator**Description**

Whether to suppress configuration warnings produced by the Hive Metastore Max Message Size Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_hms_max_message_size_validator

Required

true

Suppress Parameter Validation: Hive Metastore Server Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_log_dir

Required

true

Suppress Parameter Validation: Hive Metastore Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_metastore_config_safety_valve

Required

true

Suppress Parameter Validation: Hive Metastore Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_metastore_env_safety_valve

Required

true

Suppress Parameter Validation: Java Configuration Options for Hive Metastore Server**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Hive Metastore Server parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_hive_metastore_java_opts`**Required**`true`**Suppress Parameter Validation: Hive Metastore Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore Server Port parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hive_metastore_port`**Required**`true`**Suppress Parameter Validation: Metrics Sample File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Sample File Location parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hive_metrics_sample_file_location`**Required**`true`**Suppress Parameter Validation: Hive Metastore Server Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore Server Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hms_core_site_safety_valve`**Required**`true`**Suppress Parameter Validation: Hive Metastore Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hivemetastore_audit_health

Required

true

Suppress Health Test: Hive Metastore Canary

Description

Whether to suppress the results of the Hive Metastore Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hivemetastore_canary_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hivemetastore_file_descriptor

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hivemetastore_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hivemetastore_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hivemetastore_log_directory_free_space

Required

true

Suppress Health Test: Pause Duration

Description

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hivemetastore_pause_duration

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hivemetastore_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hivemetastore_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hivemetastore_unexpected_exits

Required

true

HiveServer2

Advanced

HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

For advanced use only. A string to be inserted into hive-site.xml for this role only.

Related Name**Default Value****API Name**

hive_hs2_config_safety_valve

Required

false

HiveServer2 Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

hive_hs2_env_safety_valve

Required

false

Hive Metastore Connection Retries Count

Description

Number of retries while opening a connection to the Hive Metastore Server

Related Name

hive.metastore.connect.retries

Default Value

10

API Name

hive_metastore_connection_retries

Required

false

Enable Metrics Subsystem

Description

Controls whether the Hive metrics subsystem is enabled for the role.

Related Name

hive.server2.metrics.enabled

Default Value

true

API Name

hive_metrics_enabled

Required

false

Metrics Sample File Location

Description

The full path to a file with a sample of metrics exposed by the role. The sample is updated at the frequency configured by Metrics Sample File Logging Frequency. By default, the sample file is logged to a directory under the role log directory, e.g., /var/log/hive/metrics-hivemetastore/metrics.log. The setting only has an effect if "Enable Metrics Subsystem" is set to true.

Related Name

hive.service.metrics.file.location

Default Value**API Name**

hive_metrics_sample_file_location

Required

false

Metrics Sample File Logging Frequency

Description

The frequency at which the metrics are logged to the sample file. The setting only has an effect if "Enable Metrics Subsystem" is set to true.

Related Name

hive.service.metrics.file.frequency

Default Value

30 second(s)

API Name

hive_metrics_sample_logging_frequency

Required

false

Hive Downloaded Resources Directory

Description

Local directory where Hive stores jars downloaded for remote file systems (HDFS). If not specified, Hive uses a default location.

Related Name

hive.downloaded.resources.dir

Default Value**API Name**

hiveserver2_downloaded_resources_dir

Required

false

Enable Explain Logging**Description**

When enabled, HiveServer2 logs EXPLAIN EXTENDED output for every query at INFO log4j level.

Related Name

hive.log.explain.output

Default Value

false

API Name

hiveserver2_enable_explain_output

Required

false

Hive Local Scratch Directory**Description**

Local Directory where Hive stores jars and data when performing a MapJoin optimization. If not specified, Hive uses a default location.

Related Name

hive.exec.local.scratchdir

Default Value**API Name**

hiveserver2_exec_local_scratchdir

Required

false

Hive HDFS Scratch Directory**Description**

Directory in HDFS where Hive writes intermediate data between MapReduce jobs. If not specified, Hive uses a default location.

Related Name

hive.exec.scratchdir

Default Value**API Name**

hiveserver2_exec_scratchdir

Required

false

Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)**Description**

An XML string that will be inserted verbatim into the Fair Scheduler allocations file. This configuration only has effect in CDH 5.8 or later.

Related Name**Default Value****API Name**

hiveserver2_fair_scheduler_safety_valve

Required

false

Idle Operation Timeout**Description**

Operation will be closed when not accessed for this duration of time, in milliseconds; disable by setting to zero. For a positive value, checked for operations in terminal state only (FINISHED, CANCELED, CLOSED, ERROR). For a negative value, checked for all of the operations regardless of state.

Related Name

hive.server2.idle.operation.timeout

Default Value

6 hour(s)

API Name

hiveserver2_idle_operation_timeout

Required

false

Idle Session Timeout**Description**

Session will be closed when not accessed for this duration of time, in milliseconds; disable by setting to zero or a negative value.

Related Name

hive.server2.idle.session.timeout

Default Value

1 day(s)

API Name

hiveserver2_idle_session_timeout

Required

false

Exclude Live Operations From Session Idle Time**Description**

Session will be considered to be idle only if there is no activity, and there is no pending operation. This setting takes effect only if session idle timeout (hive.server2.idle.session.timeout) and checking (hive.server2.session.check.interval) are enabled.

Related Name

hive.server2.idle.session.check.operation

Default Value

true

API Name

hiveserver2_idle_session_timeout_check_operation

Required

false

Java Configuration Options for HiveServer2**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

hiveserver2_java_opts

Required

false

Maximum Query String Length for Show Locks**Description**

The maximum length allowed for the query string when the SHOW LOCKS EXTENDED command is executed. Important: The query string is truncated at the length set for this property. Setting this property to a large value puts pressure on ZooKeeper and might cause out-of-memory issues.

Related Name

hive.lock.query.string.max.length

Default Value

10000

API Name

hiveserver2_lock_query_string_max_length

Required

false

Max HiveServer2 Threads**Description**

Maximum number of worker threads in HiveServer2's thread pool

Related Name

hive.server2.thrift.max.worker.threads

Default Value

500

API Name

hiveserver2_max_threads

Required

true

Min HiveServer2 Threads

Description

Minimum number of worker threads in HiveServer2's thread pool

Related Name

hive.server2.thrift.min.worker.threads

Default Value

5

API Name

hiveserver2_min_threads

Required

true

Session Check Interval

Description

The check interval for session/operation timeout, in milliseconds, which can be disabled by setting to zero or a negative value.

Related Name

hive.server2.session.check.interval

Default Value

15 minute(s)

API Name

hiveserver2_session_check_interval

Required

false

HiveServer2 WebUI Max Threads

Description

The max threads for the HiveServer2 WebUI.

Related Name

hive.server2.webui.max.threads

Default Value

50

API Name

hiveserver2_webui_max_threads

Required

false

HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value**

API Name

hs2_core_site_safety_valve

Required

false

HiveServer2 Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**HiveServer2 Log Directory****Description**

Directory where HiveServer2 will place its log files.

Related Name**Default Value**

/var/log/hive

API Name

hive_log_dir

Required

false

Enable HiveServer2 Operations Logging**Description**

When enabled, HiveServer2 will temporarily save logs associated with ongoing operations. This enables clients like beeline and Hue to request and display logs for a particular ongoing operation. Logs are removed upon completion of operation.

Related Name

hive.server2.logging.operation.enabled

Default Value

true

API Name

hive_server2_logging_operation_enabled

Required

false

HiveServer2 Operations Log Directory**Description**

Top level directory where operation logs are temporarily stored if Enable HiveServer2 Operations Logging is true. Logs are stored in session and operation level subdirectories under this location and are removed on completion of operation.

Related Name

hive.server2.logging.operation.log.location

Default Value

/var/log/hive/operation_logs

API Name

hive_server2_logging_operation_log_location

Required

false

HiveServer2 Logging Threshold

Description

The minimum log level for HiveServer2 logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

HiveServer2 Maximum Log File Backups

Description

The maximum number of rolled log files to keep for HiveServer2 logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

HiveServer2 Max Log Size

Description

The maximum size, in megabytes, per log file for HiveServer2 logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Hive Downloaded Resources Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Downloaded Resources Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

hiveserver2_downloaded_resources_directory_free_space_absolute_thresholds

Required

false

Hive Downloaded Resources Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Downloaded Resources Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Hive Downloaded Resources Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

hiveserver2_downloaded_resources_directory_free_space_percentage_thresholds

Required

false

Hive Local Scratch Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Local Scratch Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

hiveserver2_exec_local_scratch_directory_free_space_absolute_thresholds

Required

false

Hive Local Scratch Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Local Scratch Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Hive Local Scratch Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

hiveserver2_exec_local_scratch_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

hiveserver2_fd_thresholds

Required

false

HiveServer2 Host Health Test

Description

When computing the overall HiveServer2 health, consider the host's health.

Related Name**Default Value**

true

API Name

hiveserver2_host_health_enabled

Required

false

Pause Duration Thresholds

Description

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

hiveserver2_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

hiveserver2_pause_duration_window

Required

false

HiveServer2 Process Health Test**Description**

Enables the health test that the HiveServer2's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

hiveserver2_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

`mgmt_navigator_failure_window`

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

`mgmt.navigator.status.check.enabled`

Default Value

true

API Name

`mgmt_navigator_status_check_enabled`

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

`false`

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

`false`

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a `DataNode` fires if the `DataNode` has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`role_triggers`

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other

Restrict Cross Joins (Cartesian Products)

Description

Whether to allow queries with cross joins. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.cartesian.product

Default Value

false

API Name

hive_restrict_cross_joins

Required

false

Restrict LOAD Queries Against Bucketed Tables

Description

Whether to allow LOAD queries against bucketed tables. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.bucketing

Default Value

true

API Name

hive_restrict_load_bucketed_table

Required

false

Restrict Queries with ORDER BY but no LIMIT clause

Description

Whether to allow queries with an ORDER BY clause, but no LIMIT clause. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.orderby.no.limit

Default Value

false

API Name

hive_restrict_orderby_with_no_limit

Required

false

Restrict Partitioned Table Scans with no Partitioned Column Filter

Description

Whether to allow queries that scan a partitioned table but don't filter on the partition column. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.no.partition.filter

Default Value

false

API Name

hive_restrict_partitioned_scans_no_filter

Required

false

Restrict Unsafe Data Type Comparisons

Description

Whether to allow queries that compare bigints to strings or doubles. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.type.safety

Default Value

true

API Name

hive_restrict_unsafe_comparison

Required

false

HiveServer2 Enable Impersonation

Description

HiveServer2 will impersonate the beeline client user when talking to other services such as MapReduce and HDFS.

Related Name

hive.server2.enable.doAs

Default Value

true

API Name

hiveserver2_enable_impersonation

Required

false

HiveServer2 Load Balancer

Description

Address of the load balancer used for HiveServer2 roles, specified in host:port format. If port is not specified, the port used by HiveServer2 is used. Note: Changing this property regenerates Kerberos keytabs for all HiveServer2 roles.

Related Name**Default Value****API Name**

hiveserver2_load_balancer

Required

false

Performance

Hive Auto Convert Join Noconditional Size

Description

If Hive auto convert join is on, and the sum of the size for n-1 of the tables/partitions for a n-way join is smaller than the specified size, the join is directly converted to a MapJoin (there is no conditional task).

Related Name

hive.auto.convert.join.noconditionaltask.size

Default Value

50 MiB

API Name

hiveserver2_auto_convert_join_noconditionaltask_size

Required

false

Store Intermediate Data on Blobstore

Description

When writing data to a table on a blobstore (such as S3), whether or not the blobstore should be used to store intermediate data during Hive query execution. Setting this to true can degrade performance for queries that spawn multiple MR / Spark jobs, but is useful for queries whose intermediate data cannot fit in the allocated HDFS cluster.

Related Name

hive.blobstore.use.blobstore.as.scratchdir

Default Value

false

API Name

hiveserver2_blobstore_use_blobstore_as_scratchdir

Required

false

Enable Stats Optimization

Description

Enable optimization that checks if a query can be answered using statistics. If so, answers the query using only statistics stored in metastore.

Related Name

hive.compute.query.using.stats

Default Value

true

API Name

hiveserver2_compute_query_using_stats

Required

false

Enable Cost-Based Optimizer for Hive

Description

Enabled the Calcite-based Cost-Based Optimizer for HiveServer2.

Related Name

hive.cbo.enable

Default Value

true

API Name

hiveserver2_enable_cbo

Required

false

Enable MapJoin Optimization

Description

Enable optimization that converts common join into MapJoin based on input file size.

Related Name

hive.auto.convert.join

Default Value

true

API Name

hiveserver2_enable_mapjoin

Required

false

Fetch Task Query Conversion

Description

Some select queries can be converted to a single FETCH task instead of a MapReduce task, minimizing latency. A value of none disables all conversion, minimal converts simple queries such as SELECT * and filter on partition columns, and more converts SELECT queries including FILTERS.

Related Name

hive.fetch.task.conversion

Default Value

more

API Name

hiveserver2_fetch_task_conversion

Required

false

Fetch Task Query Conversion Threshold

Description

Above this size, queries are converted to fetch tasks.

Related Name

hive.fetch.task.conversion.threshold

Default Value

1 GiB

API Name

hiveserver2_fetch_task_conversion_threshold

Required

false

Input Listing Max Threads**Description**

Maximum number of threads that Hive uses to list input files. Increasing this value can improve performance when there are a lot of partitions being read, or when running on blobstores.

Related Name

hive.exec.input.listing.max.threads

Default Value

15

API Name

hiveserver2_input_listing_max_threads

Required

false

Maximum ReduceSink Top-K Memory Usage**Description**

The maximum percentage of heap to be used for hash in ReduceSink operator for Top-K selection. 0 means the optimization is disabled. Accepted values are between 0 and 1.

Related Name

hive.limit.pushdown.memory.usage

Default Value

0.04

API Name

hiveserver2_limit_pushdown_memory_usage

Required

false

Load Dynamic Partitions Thread Count**Description**

Number of threads used to load dynamically generated partitions. Loading requires renaming the file its final location, and updating some metadata about the new partition. Increasing this can improve performance when there are a lot of partitions dynamically generated.

Related Name

hive.load.dynamic.partitions.thread

Default Value

15

API Name

hiveserver2_load_dynamic_partitions_thread_count

Required

false

Enable Map-Side Aggregation**Description**

Enable map-side partial aggregation, which cause the mapper to generate fewer rows. This reduces the data to be sorted and distributed to reducers.

Related Name

hive.map.aggr

Default Value

true

API Name

hiveserver2_map_aggr

Required

false

Ratio of Memory Usage for Map-Side Aggregation

Description

Portion of total memory used in map-side partial aggregation. When exceeded, the partially aggregated results will be flushed from the map task to the reducers.

Related Name

hive.map.aggr.hash.percentmemory

Default Value

0.5

API Name

hiveserver2_map_aggr_hash_memory_ratio

Required

false

Enable Merging Small Files - Map-Only Job

Description

Merge small files at the end of a map-only job. When enabled, a map-only job is created to merge the files in the destination table/partitions.

Related Name

hive.merge.mapfiles

Default Value

true

API Name

hiveserver2_merge_mapfiles

Required

false

Enable Merging Small Files - Map-Reduce Job

Description

Merge small files at the end of a map-reduce job. When enabled, a map-only job is created to merge the files in the destination table/partitions.

Related Name

hive.merge.mapredfiles

Default Value

false

API Name

hiveserver2_merge_mapredfiles

Required

false

Desired File Size After Merging**Description**

The desired file size after merging. This should be larger than hive.merge.smallfiles.avgsize.

Related Name

hive.merge.size.per.task

Default Value

256 MiB

API Name

hiveserver2_merge_size_per_task

Required

false

Small File Average Size Merge Threshold**Description**

When the average output file size of a job is less than the value of this property, Hive will start an additional map-only job to merge the output files into bigger files. This is only done for map-only jobs if hive.merge.mapfiles is true, for map-reduce jobs if hive.merge.mapredfiles is true, and for Spark jobs if hive.merge.sparkfiles is true.

Related Name

hive.merge.smallfiles.avgsize

Default Value

16 MiB

API Name

hiveserver2_merge_smallfiles_avgsize

Required

false

MSCK Repair Batch Size**Description**

Batch size for the msck repair command (recover partitions command). If the value is greater than zero, new partition information will be sent from HiveServer2 to the Metastore in batches, which can potentially improve memory usage in the Metastore and avoid client read timeout exceptions. If this value is 0, all partition information will be sent in a single Thrift call.

Related Name

hive.msck.repair.batch.size

Default Value

0

API Name

hiveserver2_msck_repair_batch_size

Required

false

Move Files Thread Count

Description

The number of threads used by HiveServer2 to move data from the staging directory to another location (typically to the final table location). A separate thread pool of workers of this size is used for each query, which means this configuration can be set on a per-query basis too.

Related Name

hive.mv.files.thread

Default Value

15

API Name

hiveserver2_mv_files_thread

Required

false

Hive Optimize Sorted Merge Bucket Join

Description

Whether to try sorted merge bucket (SMB) join.

Related Name

hive.optimize.bucketmapjoin.sortedmerge

Default Value

true

API Name

hiveserver2_optimize_bucketmapjoin_sortedmerge

Required

false

Enable Automatic Use of Indexes

Description

Whether to use the indexing optimization for all queries.

Related Name

hive.optimize.index.filter

Default Value

true

API Name

hiveserver2_optimize_index_filter

Required

false

Enable ReduceDeDuplication Optimization

Description

Remove extra map-reduce jobs if the data is already clustered by the same key, eliminating the need to repartition the dataset again.

Related Name

hive.optimize.reducededuplication

Default Value

true

API Name

hiveserver2_optimize_reducededuplication

Required

false

Minimum Reducers for ReduceDeDuplication Optimization**Description**

When the number of ReduceSink operators after merging is less than this number, the ReduceDeDuplication optimization will be disabled.

Related Name

hive.optimize.reducededuplication.min.reducer

Default Value

4

API Name

hiveserver2_optimize_reducededuplication_min_reducer

Required

false

Enable Sorted Dynamic Partition Optimizer**Description**

When dynamic partition is enabled, reducers keep only one record writer at all times, which lowers the memory pressure on reducers.

Related Name

hive.optimize.sort.dynamic.partition

Default Value

false

API Name

hiveserver2_optimize_sort_dynamic_partition

Required

false

Enable Parallel Compilation of Queries**Description**

When activated, individual sessions can compile queries simultaneously. Within each session, queries compile one at a time.

Related Name

hive.driver.parallel.compilation

Default Value

true

API Name

hiveserver2_parallel_compilation_enabled

Required

false

Query Compilation Degree of Parallelism

Description

Determines the maximum number of queries that can compile in parallel on a HiveServer2 instance. Use negative values or zero to set unlimited parallelism. Use a positive value to set the number of queries that can compile simultaneously. This setting can be fine-tuned based on the current cluster load. Monitor cluster load using the 'waiting_compile_ops' metric and the 'Waiting Compile Operations' graph in the HiveServer2 graph library.

Related Name

hive.driver.parallel.compilation.global.limit

Default Value

3

API Name

hiveserver2_parallel_compilation_global_limit

Required

false

Hive SMB Join Cache Rows

Description

The number of rows with the same key value to be cached in memory per SMB-joined table.

Related Name

hive.smbjoin.cache.rows

Default Value

10000

API Name

hiveserver2_smbjoin_cache_rows

Required

false

Load Column Statistics

Description

Whether column stats for a table are fetched during explain.

Related Name

hive.stats.fetch.column.stats

Default Value

true

API Name

hiveserver2_stats_fetch_column_stats

Required

false

Vectorized Adaptor Usage Mode

Description

Vectorized Adaptor Usage Mode specifies the extent to which the vectorization engine tries to vectorize UDFs that do not have native vectorized versions available. Selecting the "none" option specifies that only queries using native vectorized UDFs are vectorized. Selecting the "chosen" option specifies that Hive chooses to vectorize a subset of the UDFs based on performance benefits.

using the Vectorized Adaptor. Selecting the "all" option specifies that the Vectorized Adaptor be used for all UDFs even when native vectorized versions are not available.

Related Name

hive.vectorized.adaptor.usage.mode

Default Value

chosen

API Name

hiveserver2_vectorized_adaptor_usage_mode

Required

false

Enable Vectorization Optimization

Description

Enable optimization that vectorizes query execution by streamlining operations by processing a block of 1024 rows at a time.

Related Name

hive.vectorized.execution.enabled

Default Value

true

API Name

hiveserver2_vectorized_enabled

Required

false

Vectorized GroupBy Check Interval

Description

In vectorized group-by, the number of row entries added to the hash table before re-checking average variable size for memory usage estimation.

Related Name

hive.vectorized.groupby.checkinterval

Default Value

4096

API Name

hiveserver2_vectorized_groupby_checkinterval

Required

false

Vectorized GroupBy Flush Ratio

Description

Ratio between 0.0 and 1.0 of entries in the vectorized group-by aggregation hash that is flushed when the memory threshold is exceeded.

Related Name

hive.vectorized.groupby.flush.percent

Default Value

0.1

API Name

hiveserver2_vectorized_groupby_flush_ratio

Required

false

Enable Vectorized Input Format**Description**

If enabled, Hive uses the native vectorized input format for vectorized query execution when it is available.

Related Name

hive.vectorized.use.vectorized.input.format

Default Value

true

API Name

hiveserver2_vectorized_input_format_enabled

Required

false

Exclude Vectorized Input Formats**Description**

Specifies a list of file input format classnames to exclude from vectorized query execution using the vectorized input format. Note that vectorized execution can still occur for an excluded input format based on whether row SerDes or vector SerDes are enabled.

Related Name

hive.vectorized.input.format.excludes

Default Value**API Name**

hiveserver2_vectorized_input_format_excludes

Required

false

Enable Reduce-Side Vectorization**Description**

Whether to vectorize the reduce side of query execution.

Related Name

hive.vectorized.execution.reduce.enabled

Default Value

true

API Name

hiveserver2_vectorized_reduce_enabled

Required

false

Enable Overflow-checked Vector Expressions**Description**

To enhance performance, vectorized expressions operate using wide data types like long and double. When wide data types are used, numeric overflows can occur during expression evaluation in a different manner for vectorized expressions than they do for non-vectorized expressions. Consequently, different query results can be returned for vectorized expressions compared to results returned for non-vectorized expressions. When this configuration is enabled, Hive uses vectorized expressions that handle numeric overflows in the same way as non-vectorized expressions are handled.

Related Name

hive.vectorized.use.checked.expressions

Default Value

true

API Name

hiveserver2_vectorized_use_checked_expressions

Required

false

Vectorize Using Vector SerDes

Description

If enabled, Hive uses built-in vector SerDes to process text and sequencefile tables for vectorized query execution.

Related Name

hive.vectorized.use.vector.serde.deserialize

Default Value

false

API Name

hiveserver2_vectorized_use_vector_serde_deserialize

Required

false

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Bind HiveServer2 to Wildcard Address

Description

If enabled, the HiveServer2 binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name

hive.server2.webui.host

Default Value

true

API Name

hiveserver2_webui_bind_wildcard

Required

false

HiveServer2 WebUI Port

Description

The port the HiveServer2 WebUI will listen on. This can be set to 0 to disable the WebUI.

Related Name

hive.server2.webui.port

Default Value

10002

API Name

hiveserver2_webui_port

Required

false

HiveServer2 Port

Description

Port on which HiveServer2 will listen for connections.

Related Name

hive.server2.thrift.port

Default Value

10000

API Name

hs2_thrift_address_port

Required

false

Resource Management

Java Heap Size of HiveServer2 in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

4 GiB

API Name

hiveserver2_java_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Enable TLS/SSL for HiveServer2 WebUI****Description**

Encrypt communication between clients and HiveServer2 WebUI using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hive.server2.webui.use.ssl

Default Value

false

API Name

ssl_enabled

Required

false

HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when HiveServer2 WebUI is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

hive.server2.webui.keystore.path

Default Value**API Name**

ssl_server_keystore_location

Required

false

HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password

Description

The password for the HiveServer2 WebUI JKS keystore file.

Related Name

hive.server2.webui.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_hs2_config_safety_valve

Required

true

Suppress Parameter Validation: HiveServer2 Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_hs2_env_safety_valve

Required

true

Suppress Parameter Validation: HiveServer2 Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hive_log_dir

Required

true

Suppress Parameter Validation: Metrics Sample File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Sample File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_metrics_sample_file_location

Required

true

Suppress Configuration Validator: Restrict Load Bucketed Table Validator**Description**

Whether to suppress configuration warnings produced by the Restrict Load Bucketed Table Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_restrict_load_bucketed_table_validator

Required

true

Suppress Configuration Validator: Restrict Unsafe Comparison Validator**Description**

Whether to suppress configuration warnings produced by the Restrict Unsafe Comparison Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_restrict_unsafe_comparison_validator

Required

true

Suppress Parameter Validation: HiveServer2 Operations Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Operations Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_server2_logging_operation_log_location

Required

true

Suppress Parameter Validation: Hive Downloaded Resources Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Downloaded Resources Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_downloaded_resources_dir

Required

true

Suppress Parameter Validation: Hive Local Scratch Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Local Scratch Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_exec_local_scratchdir

Required

true

Suppress Parameter Validation: Hive HDFS Scratch Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive HDFS Scratch Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_exec_scratchdir

Required

true

Suppress Parameter Validation: Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Fair Scheduler XML Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_fair_scheduler_safety_valve

Required

true

Suppress Parameter Validation: Java Configuration Options for HiveServer2

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for HiveServer2 parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_java_opts

Required

true

Suppress Parameter Validation: HiveServer2 Load Balancer

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Load Balancer parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_load_balancer

Required

true

Suppress Parameter Validation: Exclude Vectorized Input Formats

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Vectorized Input Formats parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_vectorized_input_format_excludes

Required

true

Suppress Parameter Validation: HiveServer2 WebUI Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 WebUI Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_webui_port

Required

true

Suppress Parameter Validation: HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_core_site_safety_valve

Required

true

Suppress Parameter Validation: HiveServer2 Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_thrift_address_port

Required

true

Suppress Parameter Validation: HiveServer2 Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hiveserver2_audit_health

Required

true

Suppress Health Test: Hive Downloaded Resources Directory Free Space**Description**

Whether to suppress the results of the Hive Downloaded Resources Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hiveserver2_downloaded_resources_directory_free_space

Required

true

Suppress Health Test: Hive Local Scratch Directory Free Space**Description**

Whether to suppress the results of the Hive Local Scratch Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hiveserver2_exec_local_scratch_directory_free_space

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hiveserver2_file_descriptor

Required

true

Suppress Health Test: Heap Dump Directory Free Space

Description

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hiveserver2_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hiveserver2_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hiveserver2_log_directory_free_space

Required

true

Suppress Health Test: Pause Duration

Description

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hiveserver2_pause_duration

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hiveserver2_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hiveserver2_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hiveserver2_unexpected_exits

Required

true

Service-Wide

Advanced

Hive Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties

Description

For advanced use only, a string to be inserted into atlas-application.properties. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

application_properties_safety_valve

Required

false

Hive Auxiliary JARs Directory

Description

Directory containing auxiliary JARs used by Hive. This should be a directory location and not a classpath containing one or more JARs. This directory must be created and managed manually on hosts that run the Hive Metastore Server, HiveServer2, or the Hive CLI. The directory location is set in the environment as HIVE_AUX_JARS_PATH and will generally override the hive.aux.jars.path property set in XML files, even if hive.aux.jars.path is set in an advanced configuration snippet.

Related Name

Default Value

API Name

hive_aux_jars_path_dir

Required

false

Bypass Hive Metastore Server

Description

Instead of talking to Hive Metastore Server for Metastore information, Hive clients will talk directly to the Metastore database.

Related Name

Default Value

false

API Name

hive_bypass_metastore_server

Required

false

Hive Service Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only, a string to be inserted into core-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hive_core_site_safety_valve

Required

false

Hive Copy Large File Size**Description**

Smaller than this size, Hive uses a single-threaded copy; larger than this size, Hive uses DistCp.

Related Name

hive.exec.copyfile.maxsize

Default Value

32 MiB

API Name

hive_exec_copyfile_maxsize

Required

false

Hive Replication Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into the environment of Hive replication jobs.

Related Name**Default Value****API Name**

hive_replication_env_safety_valve

Required

false

Hive Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml**Description**

For advanced use only, a string to be inserted into sentry-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hive_server2_sentry_safety_valve

Required

false

Hive Service Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only, a string to be inserted into hive-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hive_service_config_safety_valve

Required

false

Hive Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hive_service_env_safety_valve

Required

false

Hive Replication Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only, a string to be inserted into hive-site.xml. Applies to all Hive Replication jobs.

Related Name**Default Value****API Name**

hive_service_replication_config_safety_valve

Required

false

Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties**Description**

For advanced use only, a string to be inserted into the client configuration for navigator.client.properties.

Related Name**Default Value****API Name**

navigator_client_config_safety_valve

Required

false

Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties**Description**

For advanced use only, a string to be inserted into the client configuration for navigator.lineage.client.properties.

Related Name**Default Value****API Name**

navigator_lineage_client_config_safety_valve

Required

false

System Group**Description**

The group that this service's processes should run as.

Related Name**Default Value**

hive

API Name

process_groupname

Required

true

System User**Description**

The user that this service's processes should run as.

Related Name**Default Value**

hive

API Name

process_username

Required

true

Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-audit.xml**Description**

For advanced use only, a string to be inserted into ranger-hive-audit.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_audit_safety_valve

Required

false

Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-security.xml

Description

For advanced use only, a string to be inserted into ranger-hive-security.xml. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

ranger_security_safety_valve

Required

false

Cloudera Navigator

Enable Audit Collection

Description

Enable collection of audit events from the service's roles.

Related Name

navigator.audit.enabled

Default Value

true

API Name

navigator_audit_enabled

Required

false

Audit Event Filter

Description

Event filters are defined in a JSON object like the following: { "defaultAction": ("accept", "discard"), "rules": [{ "action": ("accept", "discard"), "fields": [{ "name": "fieldName", "match": "regex" }] }] } A filter has a default action and a list of rules, in order of precedence. Each rule defines an action, and a list of fields to match against the audit event. A rule is "accepted" if all the listed field entries match the audit event. At that point, the action declared by the rule is taken. If no rules match the event, the default action is taken. Actions default to "accept" if not defined in the JSON object. The following is the list of fields that can be filtered for Hive events:

- userName: the user performing the action.
- ipAddress: the IP from where the request originated.
- operation: the Hive operation being performed.
- databaseName: the databaseName for the operation.
- tableName: the tableName for the operation.

The default Hive audit event filter discards HDFS directory events generated by Hive jobs that reference the /tmp directory.

Related Name

navigator.event.filter

Default Value

comment: [The default Hive audit event filter discards HDFS directory events , generated by Hive jobs that reference the /tmp directory.], defaultAction: accept, rules: [action: discard, fields:

```
[ name: operation, match: QUERY , name: objectType, match: DFS_DIR , name: resourcePath,
match: /tmp/hive-(?:.+)?/hive_(?:.+)?/-mr-.* ] ]
```

API Name

navigator_audit_event_filter

Required

false

Audit Queue Policy**Description**

Action to take when the audit event queue is full. Drop the event or shutdown the affected process.

Related Name

navigator.batch.queue_policy

Default Value

DROP

API Name

navigator_audit_queue_policy

Required

false

Audit Event Tracker**Description**

Configures the rules for event tracking and coalescing. This feature is used to define equivalency between different audit events. When events match, according to a set of configurable parameters, only one entry in the audit list is generated for all the matching events. Tracking works by keeping a reference to events when they first appear, and comparing other incoming events against the "tracked" events according to the rules defined here. Event trackers are defined in a JSON object like the following: { "timeToLive" : [integer], "fields" : [{ "type" : [string], "name" : [string] }] } Where:

- timeToLive: maximum amount of time an event will be tracked, in milliseconds. Must be provided. This defines how long, since it's first seen, an event will be tracked. A value of 0 disables tracking.
- fields: list of fields to compare when matching events against tracked events.

Each field has an evaluator type associated with it. The evaluator defines how the field data is to be compared. The following evaluators are available:

- value: uses the field value for comparison.
- userName: treats the field value as a userName, and ignores any host-specific data. This is useful for environment using Kerberos, so that only the principal name and realm are compared.

The following is the list of fields that can be used to compare Hive events:

- operation: the Hive operation being performed.
- username: the user performing the action.
- ipAddress: the IP from where the request originated.
- allowed: whether the operation was allowed or denied.
- databaseName: the database affected by the operation.
- tableName: the table or view affected by the operation.
- objectType: the type of object affected by the operation.
- resourcePath: the path of the resource affected by the operation.

Related Name

navigator_event_tracker

Default Value**API Name**

navigator_event_tracker

Required

false

Enable Lineage Collection**Description**

Enable collection of lineage from the service's roles.

Related Name**Default Value**

true

API Name

navigator_lineage_enabled

Required

false

Database**Auto Create and Upgrade Hive Metastore Database Schema****Description**

Automatically create or upgrade tables in the Hive Metastore database when needed. Consider setting this to false and managing the schema manually.

Related Name

datanucleus.schema.autoCreateAll

Default Value

false

API Name

hive_metastore_database_auto_create_schema

Required

false

Hive Metastore Database DataNucleus Metadata Validation**Description**

Perform DataNucleus validation of metadata during startup. Note: when enabled, Hive will log DataNucleus warnings even though Hive will function normally.

Related Name

datanucleus.metadata.xml.validate

Default Value

false

API Name

hive_metastore_database_datanucleus_metadata_validation

Required

false

Enable Direct SQL

Description

Whether Hive Metastore should try to use direct SQL queries instead of DataNucleus for certain read paths. This can improve metastore performance by orders of magnitude when fetching many partitions. In case of failure, execution will fall back to DataNucleus.

Related Name

hive.metastore.try.direct.sql

Default Value

true

API Name

hive_metastore_database_datanucleus_try_direct_sql

Required

false

Hive Metastore Database Host

Description

Host name of Hive Metastore database

Related Name**Default Value**

localhost

API Name

hive_metastore_database_host

Required

false

Hive Metastore Database Name

Description

Name of Hive Metastore database

Related Name**Default Value**

API Name

hive_metastore_database_user

Required

false

Hive Metastore Derby Path**Description**

Directory name where Hive Metastore's database is stored (only for Derby)

Related Name**Default Value**

/var/lib/hive/cloudera_manager/derby/metastore_db

API Name

hive_metastore_derby_path

Required

false

Strict Hive Metastore Schema Validation**Description**

Prevent Metastore operations in the event of schema version incompatibility. Consider setting this to true to reduce probability of schema corruption during Metastore operations. Note that setting this property to true will also set `datanucleus.autoCreateSchema` property to false and `datanucleus.fixedDatastore` property to true. Any values set in Cloudera Manager for these properties will be overridden.

Related Name

hive.metastore.schema.verification

Default Value

true

API Name

hive_metastore_schema_verification

Required

false

Hive Metastore Database JDBC URL Override**Description**

Custom JDBC URL to use when connecting to the Hive Metastore Database. This connection string will override all other values used to construct the JDBC URL, including Hive Metastore Database Host, Hive Metastore Database Name, and Hive Metastore Database Port.

Related Name

javax.jdo.option.ConnectionURL

Default Value**API Name**

jdbc_url_override

Required

false

Hive Metastore TLS/SSL Client Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Hive Metastore might connect to. This is used when Hive Metastore is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

hive.metastore.dbaccess.ssl.truststore.path

Default Value**API Name**

ssl_client_truststore_location

Required

false

Hive Metastore TLS/SSL Client Trust Store Password**Description**

The password for the Hive Metastore TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

hive.metastore.dbaccess.ssl.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL to the Hive Metastore Database**Description**

Encrypt communication between Hive Metastore and the database using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)). If this is enabled, then the optionally provided Hive Metastore TLS/SSL Client Trust Store properties will be used.

Related Name

hive.metastore.dbaccess.ssl.use.SSL

Default Value

false

API Name

ssl_enabled_database

Required

false

Logs**Audit Log Directory****Description**

Path to the directory where audit logs will be written. The directory will be created if it doesn't exist.

Related Name

audit_event_log_dir

Default Value

/var/log/hive/audit

API Name

audit_event_log_dir

Required

false

Hive Lineage Log Directory

Description

The directory in which Hive lineage log files are written.

Related Name

lineage_event_log_dir

Default Value

/var/log/hive/lineage

API Name

lineage_event_log_dir

Required

true

Hive Maximum Lineage Log File Size

Description

The maximum size, in megabytes, per log file for Hive lineage logs. Typically used by log4j or logback.

Related Name

max_lineage_log_file_size

Default Value

100 MiB

API Name

max_lineage_log_file_size

Required

false

Maximum Audit Log File Size

Description

Maximum size of audit log file in MB before it is rolled over.

Related Name

navigator.audit_log_max_file_size

Default Value

100 MiB

API Name

navigator_audit_log_max_file_size

Required

false

Number of Audit Logs to Retain

Description

Maximum number of rolled-over audit logs to retain. The logs are not deleted if they contain audit events that have not yet been propagated to the Audit Server.

Related Name

navigator.client.max_num_audit_log

Default Value

10

API Name

navigator_client_max_num_audit_log

Required

false

Monitoring**Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Healthy Hive Metastore Server Monitoring Thresholds**Description**

The health test thresholds of the overall Hive Metastore Server health. The check returns "Concerning" health if the percentage of "Healthy" Hive Metastore Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Hive Metastore Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

hive_hivemetastores_healthy_thresholds

Required

false

Healthy HiveServer2 Monitoring Thresholds**Description**

The health test thresholds of the overall HiveServer2 health. The check returns "Concerning" health if the percentage of "Healthy" HiveServer2s falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" HiveServer2s falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

hive_hiveserver2s_healthy_thresholds

Required

false

Healthy WebHCat Server Monitoring Thresholds**Description**

The health test thresholds of the overall WebHCat Server health. The check returns "Concerning" health if the percentage of "Healthy" WebHCat Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" WebHCat Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

hive_webhcats_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

service_triggers

Required

true

Service Monitor Client Config Overrides**Description**

For advanced use only, a list of configuration properties that will be used by the Service Monitor instead of the current client configuration for the service.

Related Name**Default Value**

```
<property> <name>hive.metastore.client.socket.timeout</name> <value>60</value> </property>
```

API Name

smon_client_config_overrides

Required

false

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other**Atlas Service****Description**

Name of the Atlas service that this Hive service instance depends on

Related Name**Default Value****API Name**

atlas_service

Required

false

Generate HADOOP_CREDSTORE_PASSWORD**Description**

Flag to enable or disable the generation of HADOOP_CREDSTORE_PASSWORD.

Related Name`generate_jceks_password`**Default Value**`true`**API Name**`generate_jceks_password`**Required**`false`**HBase Service****Description**

Name of the HBase service that this Hive service instance depends on.

Related Name**Default Value****API Name**`hbase_service`**Required**`false`**HDFS Service****Description**

Name of the HDFS service that this Hive service instance depends on

Related Name**Default Value****API Name**`hdfs_service`**Required**`true`**Hive Bytes Per Reducer****Description**

Size per reducer. If the input size is 10GiB and this is set to 1GiB, Hive will use 10 reducers.

Related Name`hive.exec.reducers.bytes.per.reducer`**Default Value**`64 MiB`**API Name**`hive_bytes_per_reducer`**Required**`false`**Enable Metastore Notifications for DML Operations****Description**

When set to true, DML queries from Hive (and SparkSQL for limited use-cases) which insert data into tables will fire listener notifications in the metastore.

Related Name

hive.metastore.dml.events

Default Value

true

API Name

hive_fire_events_for_dml

Required

false

Hive Max Reducers

Description

Max number of reducers to use. If the configuration parameter Hive Reduce Tasks is negative, Hive will limit the number of reducers to the value of this parameter.

Related Name

hive.exec.reducers.max

Default Value

1009

API Name

hive_max_reducers

Required

false

Hive Reduce Tasks

Description

Default number of reduce tasks per job. Usually set to a prime number close to the number of available hosts. Ignored when mapred.job.tracker is "local". Hadoop sets this to 1 by default, while Hive uses -1 as the default. When set to -1, Hive will automatically determine an appropriate number of reducers for each job.

Related Name

mapred.reduce.tasks

Default Value

-1

API Name

hive_reduce_tasks

Required

false

Support Dynamic Service Discovery

Description

Whether HiveServer2 supports dynamic service discovery for its clients. To support this, each instance of HiveServer2 currently uses ZooKeeper to register itself, when it is brought up. JDBC/ODBC clients should use the ZooKeeper ensemble: hive.zookeeper.quorum in their connection string.

Related Name

hive.server2.support.dynamic.service.discovery

Default Value

true

API Name

hive_server2_support_dynamic_service_discovery

Required

false

Set User and Group Information

Description

In unsecure mode, setting this property to true will cause the Metastore Server to execute DFS operations using the client's reported user and group permissions. Cloudera Manager will set this for all clients and servers.

Related Name

hive.metastore.execute.setugi

Default Value

true

API Name

hive_set_ugi

Required

true

Hive Warehouse Directory

Description

Hive warehouse directory is the location in HDFS where Hive's tables are stored. Note that Hive's default value for its warehouse directory is '/user/hive/warehouse'.

Related Name

hive.metastore.warehouse.dir

Default Value

/warehouse/tablespace/managed/hive

API Name

hive_warehouse_directory

Required

false

Hive External Warehouse Directory

Description

Hive external warehouse directory is the location in HDFS where Hive's tables are stored. Note that Hive's default value for its warehouse directory is '/user/hive/warehouse'.

Related Name

hive.metastore.warehouse.external.dir

Default Value

/warehouse/tablespace/external/hive

API Name

hive_warehouse_external_directory

Required

false

MapReduce Service**Description**

MapReduce jobs are run against this service.

Related Name**Default Value****API Name**

mapreduce_yarn_service

Required

false

Ranger Plugin Trusted Proxy IP Address**Description**

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.hive.trusted.proxy.ipaddress

Default Value**API Name**

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded for IP Address**Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.hive.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

false

ZooKeeper Service**Description**

Name of the ZooKeeper service that this Hive service instance depends on.

Related Name**Default Value****API Name**

zookeeper_service

Required

false

Performance**Metastore Bulk Partitions Thread Count****Description**

The number of threads the metastore uses when bulk adding partitions to the metastore.. Each thread performs some metadata operations for each partition added, such as collecting statistics for the partition or checking if the partition directory exists. This config is also used to control the size of the threadpool used when scanning the filesystem to look for directories that could correspond to partitions, each thread performs a list status on each possible partition directory.

Related Name

hive.metastore.fshandler.threads

Default Value

15

API Name

hive_metastore_fshandler_threads

Required

false

Policy File Based Sentry**Sentry User to Group Mapping Class****Description**

The class to use in Sentry authorization for user to group mapping. Sentry authorization may be configured to use either Hadoop user to group mapping or local groups defined in the policy file. Hadoop user to group mapping may be configured in the Cloudera Manager HDFS service configuration page under the Security section.

Related Name

hive.sentry.provider

Default Value

org.apache.sentry.provider.file.HadoopGroupResourceAuthorizationProvider

API Name

hive_sentry_provider

Required

false

Sentry Global Policy File

Description

HDFS path to the global policy file for Sentry authorization. This should be a relative path (and not a full HDFS URL). The global policy file must be in Sentry policy file format.

Related Name

hive.sentry.provider.resource

Default Value

/user/hive/sentry/sentry-provider.ini

API Name

hive_sentry_provider_resource

Required

false

Allow URIs in Database Policy File

Description

Allows URIs when defining privileges in per-database policy files. Warning: Typically, this configuration should be disabled. Enabling it would allow database policy file owner (which is generally not Hive admin user) to grant load privileges to any directory with read access to Hive admin user, including databases controlled by other database policy files.

Related Name

sentry.allow.uri.db.policyfile

Default Value

false

API Name

sentry_allow_uri_db_policyfile

Required

false

Proxy

Hive Metastore Access Control and Proxy User Groups Override

Description

This configuration overrides the value set for Hive Proxy User Groups configuration in HDFS service for use by Hive Metastore Server. Specify a comma-delimited list of groups that you want to allow access to Hive Metastore metadata and allow the Hive user to impersonate. A value of '*' allows all groups. The default value of empty inherits the value set for Hive Proxy User Groups configuration in the HDFS service.

Related Name

hadoop.proxyuser.hive.groups

Default Value**API Name**

hive_proxy_user_groups_list

Required

false

Replication

Replica functions root directory

Description

Root directory on the replica warehouse where the repl sub-system will store jars from the primary warehouse

Related Name

hive.repl.replica.functions.root.dir

Default Value**API Name**

hive_repl_replica_functions_root_dir

Required

false

Security

Enable LDAP Authentication for Hive Metastore

Description

When checked, LDAP-based authentication for users is enabled.

Related Name**Default Value**

false

API Name

hive_metastore_enable_ldap_auth

Required

false

LDAP BaseDN

Description

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,*this parameter*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

Related Name

hive.metastore.authentication.ldap.baseDN

Default Value**API Name**

hive_metastore_ldap_basedn

Required

false

Active Directory Domain

Description

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name

hive.metastore.authentication.ldap.Domain

Default Value**API Name**

hive_metastore_ldap_domain

Required

false

LDAP URL**Description**

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name

hive.metastore.authentication.ldap.url

Default Value**API Name**

hive_metastore_ldap_uri

Required

false

Enable LDAP Authentication for HiveServer2**Description**

When checked, LDAP-based authentication for users is enabled.

Related Name**Default Value**

false

API Name

hiveserver2_enable_ldap_auth

Required

false

Enable TLS/SSL for HiveServer2**Description**

Encrypt communication between clients and HiveServer2 using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hive.server2.use.SSL

Default Value

false

API Name

hiveserver2_enable_ssl

Required

false

HiveServer2 TLS/SSL Server JKS Keystore File Password**Description**

The password for the HiveServer2 JKS keystore file.

Related Name

hive.server2.keystore.password

Default Value**API Name**

hiveserver2_keystore_password

Required

false

HiveServer2 TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when HiveServer2 is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

hive.server2.keystore.path

Default Value**API Name**

hiveserver2_keystore_path

Required

false

LDAP BaseDN**Description**

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like `uid=username,this parameter`. For example, if this parameter is set to `"ou=People,dc=cloudera,dc=com"`, and the username passed in is `"mike"`, the resulting authentication passed to the LDAP server look like `"uid=mike,ou=People,dc=cloudera,dc=com"`. This parameter is mutually exclusive with Active Directory Domain.

Related Name

hive.server2.authentication.ldap.baseDN

Default Value**API Name**

hiveserver2_ldap_basedn

Required

false

Active Directory Domain

Description

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name

hive.server2.authentication.ldap.Domain

Default Value

API Name

hiveserver2_ldap_domain

Required

false

LDAP URL

Description

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name

hive.server2.authentication.ldap.url

Default Value

API Name

hiveserver2_ldap_uri

Required

false

HiveServer2 TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HiveServer2 might connect to. This is used when HiveServer2 is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

Default Value

API Name

hiveserver2_truststore_file

Required

false

HiveServer2 TLS/SSL Client Trust Store Password

Description

The password for the HiveServer2 TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

hiveserver2_truststore_password

Required

false

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

hive

API Name

kerberos_princ_name

Required

true

Ranger DFS Audit Path

Description

The DFS path on which Ranger audits are written. The special placeholder '{ranger_base_audit_url}' should be used as the prefix, in order to use the centralized location defined in the Ranger service.

Related Name

xasecure.audit.destination.hdfs.dir

Default Value

\${ranger_base_audit_url}/hive

API Name

ranger_audit_hdfs_dir

Required

false

Ranger Audit DFS Spool Dir

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/hive/audit/hdfs/spool

API Name`ranger_audit_hdfs_spool_dir`**Required**`false`**Ranger Audit Solr Spool Dir****Description**

Spool directory for Ranger audits being written to Solr.

Related Name`xasecure.audit.destination.solr.batch.filespool.dir`**Default Value**`/var/log/hive/audit/solr/spool`**API Name**`ranger_audit_solr_spool_dir`**Required**`false`**Ranger Policy Cache Directory****Description**

The directory where Ranger security policies are cached locally.

Related Name`ranger.plugin.hive.policy.cache.dir`**Default Value**`/var/lib/ranger/hive/policy-cache`**API Name**`ranger_policy_cache_dir`**Required**`false`**Bypass Sentry Authorization Users****Description**

List of users that are allowed to bypass Sentry Authorization in the Hive metastore. These are usually service users that already ensure that all activity has been authorized, such as hive and impala. Only applies when Hive is using Sentry Service.

Related Name`sentry.metastore.service.users`**Default Value**`hive impala hue hdfs`**API Name**`sentry_metastore_service_users`**Required**`false`**Sentry HDFS Sync Cache**

Abort on Initialization Failure

Description

If set to true, the Hive metastore will treat a problem with cache initialization as a fatal error.

Related Name

sentry.hdfs.sync.metastore.cache.fail.on.partial.update

Default Value

true

API Name

sentry_hdfs_sync_metastore_cache_fail_on_partial_update

Required

false

Number of Threads on Initialization

Description

The number of threads used during Hive Metastore Sentry HDFS Sync Cache Initialization.

Related Name

sentry.hdfs.sync.metastore.cache.init.threads

Default Value

10

API Name

sentry_hdfs_sync_metastore_cache_init_threads

Required

false

Number of Partitions per RPC on Initialization

Description

The number of partitions per RPC retrieved during Hive Metastore Sentry HDFS Sync Cache Initialization.

Related Name

sentry.hdfs.sync.metastore.cache.max-partitions-per-rpc

Default Value

100

API Name

sentry_hdfs_sync_metastore_cache_partitions_per_rpc

Required

false

Max Number of Retries on Initialization

Description

The maximum number of retries allowed during Hive Metastore Sentry HDFS Sync cache initialization.

Related Name

sentry.hdfs.sync.metastore.cache.retry.max.num

Default Value

1

API Name

sentry_hdfs_sync_metastore_cache_retry_max_num

Required

false

Retry Wait Time on Initialization**Description**

Wait duration in milliseconds for each retry during Hive Metastore Sentry HDFS Sync Cache Initialization.

Related Name

sentry.hdfs.sync.metastore.cache.retry.wait.duration.millis

Default Value

1 second(s)

API Name

sentry_hdfs_sync_metastore_cache_retry_wait_duration_millis

Required

false

Number of Tables per RPC on Initialization**Description**

The number of tables per RPC retrieved during Hive Metastore Sentry HDFS Sync Cache Initialization.

Related Name

sentry.hdfs.sync.metastore.cache.max-tables-per-rpc

Default Value

100

API Name

sentry_hdfs_sync_metastore_cache_tables_per_rpc

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

Required

true

Suppress Parameter Validation: LDAP BaseDN

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_metastore_ldap_basedn

Required

true

Suppress Parameter Validation: Active Directory Domain

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

Related Name**Default Value**

false

API Name`service_config_suppression_hive_metastore_ldap_domain`**Required**`true`**Suppress Parameter Validation: LDAP URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hive_metastore_ldap_uri`**Required**`true`**Suppress Configuration Validator: Hive Proxy Groups Validator****Description**

Whether to suppress configuration warnings produced by the Hive Proxy Groups Validator configuration validator.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hive_proxy_groups_validator`**Required**`true`**Suppress Parameter Validation: Hive Metastore Access Control and Proxy User Groups Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore Access Control and Proxy User Groups Override parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hive_proxy_user_groups_list`**Required**`true`**Suppress Configuration Validator: Hive Ranger Validator****Description**

Whether to suppress configuration warnings produced by the Hive Ranger Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_ranger_validator

Required

true

Suppress Parameter Validation: Replica functions root directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replica functions root directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_repl_replica_functions_root_dir

Required

true

Suppress Parameter Validation: Hive Replication Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Replication Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_replication_env_safety_valve

Required

true

Suppress Parameter Validation: Sentry Global Policy File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Sentry Global Policy File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_sentry_provider_resource

Required

true

Suppress Configuration Validator: Hive Sentry Validator**Description**

Whether to suppress configuration warnings produced by the Hive Sentry Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_sentry_validator

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_server2_sentry_safety_valve

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_service_config_safety_valve

Required

true

Suppress Parameter Validation: Hive Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_service_env_safety_valve

Required

true

Suppress Parameter Validation: Hive Replication Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Replication Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_service_replication_config_safety_valve

Required

true

Suppress Parameter Validation: Hive Warehouse Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Warehouse Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_warehouse_directory

Required

true

Suppress Parameter Validation: Hive External Warehouse Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive External Warehouse Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_warehouse_external_directory

Required

true

Suppress Configuration Validator: Hive Metastore Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Hive Metastore Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hivemetastore_count_validator

Required

true

Suppress Configuration Validator: HiveServer2 Count Validator**Description**

Whether to suppress configuration warnings produced by the HiveServer2 Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_count_validator

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_keystore_password

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_keystore_path

Required

true

Suppress Parameter Validation: LDAP BaseDN

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_ldap_basedn

Required

true

Suppress Parameter Validation: Active Directory Domain

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_ldap_domain

Required

true

Suppress Parameter Validation: LDAP URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_ldap_uri

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Client Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name`service_config_suppression_hiveserver2_truststore_file`**Required**`true`**Suppress Parameter Validation: HiveServer2 TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hiveserver2_truststore_password`**Required**`true`**Suppress Parameter Validation: Hive Metastore Database JDBC URL Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore Database JDBC URL Override parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_jdbc_url_override`**Required**`true`**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_kerberos_princ_name`**Required**`true`**Suppress Parameter Validation: Hive Lineage Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Lineage Log Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_lineage_event_log_dir

Required

true

Suppress Parameter Validation: Audit Event Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Filter parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_audit_event_filter

Required

true

Suppress Parameter Validation: Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_client_config_safety_valve

Required

true

Suppress Parameter Validation: Audit Event Tracker**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Tracker parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_event_tracker

Required

true

Suppress Parameter Validation: Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_lineage_client_config_safety_valve

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger DFS Audit Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_audit_hdfs_dir

Required

true

Suppress Parameter Validation: Ranger Audit DFS Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-audit.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-audit.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_safety_valve

Required

true

Suppress Parameter Validation: Ranger Audit Solr Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Ranger Policy Cache Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_policy_cache_dir

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-security.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_security_safety_valve

Required

true

Suppress Parameter Validation: Bypass Sentry Authorization Users**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Bypass Sentry Authorization Users parameter.

Related Name**Default Value**

false

API Name`service_config_suppression_sentry_metastore_service_users`**Required**`true`**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_service_triggers`**Required**`true`**Suppress Parameter Validation: Service Monitor Client Config Overrides****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Client Config Overrides parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_smon_client_config_overrides`**Required**`true`**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_smon_derived_configs_safety_valve`**Required**`true`**Suppress Parameter Validation: Hive Metastore TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Hive Metastore TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: WebHCat Server Count Validator**Description**

Whether to suppress configuration warnings produced by the WebHCat Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_webhcat_count_validator

Required

true

Suppress Health Test: Hive Metastore Server Health**Description**

Whether to suppress the results of the Hive Metastore Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hive_hivemetastores_healthy

Required

true

Suppress Health Test: HiveServer2 Health**Description**

Whether to suppress the results of the HiveServer2 Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hive_hiveserver2s_healthy

Required

true

Suppress Health Test: WebHCat Server Health**Description**

Whether to suppress the results of the WebHCat Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hive_webhcats_healthy

Required

true

WebHCat Server**Advanced****WebHCat Server Advanced Configuration Snippet (Safety Valve) for webhcat-site.xml****Description**

For advanced use only. A string to be inserted into webhcat-site.xml for this role only.

Related Name**Default Value****API Name**

hive_webhcat_config_safety_valve

Required

false

WebHCat Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

hive_webhcat_env_safety_valve

Required

false

WebHCat Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only. A string to be inserted into hive-site.xml for this role only.

Related Name**Default Value****API Name**

hive_webhcat_hive_config_safety_valve

Required

false

Java Configuration Options for WebHCat Server**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

hive_webhcat_java_opts

Required

false

WebHCat Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

`oom_heap_dump_dir`

Default Value

`/tmp`

API Name

`oom_heap_dump_dir`

Required

`false`

Dump Heap When Out of Memory

Description

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

`true`

API Name

`oom_heap_dump_enabled`

Required

`true`

Kill When Out of Memory

Description

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

`true`

API Name

`oom_sigkill_enabled`

Required

`true`

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

WebHCat Server Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value****API Name**

webhcat_core_site_safety_valve

Required

false

Logs

WebHCat Server Log Directory

Description

Directory where WebHCat Server will place its log files.

Related Name**Default Value**

/var/log/hcatalog

API Name

hcatalog_log_dir

Required

false

WebHCat Server Logging Threshold

Description

The minimum log level for WebHCat Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

WebHCat Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for WebHCat Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

WebHCat Server Max Log Size**Description**

The maximum size, in megabytes, per log file for WebHCat Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

`mgmt_navigator_failure_window`

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

`mgmt.navigator.status.check.enabled`

Default Value

true

API Name

`mgmt_navigator_status_check_enabled`

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

`false`

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

webhcat_fd_thresholds

Required

false

WebHCat Server Host Health Test

Description

When computing the overall WebHCat Server health, consider the host's health.

Related Name**Default Value**

true

API Name

webhcat_host_health_enabled

Required

false

WebHCat Server Process Health Test

Description

Enables the health test that the WebHCat Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

webhcat_scm_health_enabled

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

WebHCat Server Port

Description

Port on which WebHCat Server will listen for connections.

Related Name

templeton.port

Default Value

50111

API Name

hive_webhcat_address_port

Required

false

Resource Management

Java Heap Size of WebHCat Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name
Default Value

256 MiB

API Name

hive_webhcat_java_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
 These settings override other cgroup settings.

Related Name

`custom.cgroups`

Default Value**API Name**

`rm_custom_resources`

Required

`false`

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

`blkio.weight`

Default Value

`500`

API Name

`rm_io_weight`

Required

`true`

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

`memory.limit_in_bytes`

Default Value

`-1 MiB`

API Name

`rm_memory_hard_limit`

Required

`true`

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: WebHCat Server Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the WebHCat Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hcatalog_log_dir

Required

true

Suppress Parameter Validation: WebHCat Server Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the WebHCat Server Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_webhcat_address_port

Required

true

Suppress Parameter Validation: WebHCat Server Advanced Configuration Snippet (Safety Valve) for webhcat-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the WebHCat Server Advanced Configuration Snippet (Safety Valve) for webhcat-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_webhcat_config_safety_valve

Required

true

Suppress Parameter Validation: WebHCat Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the WebHCat Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_webhcat_env_safety_valve

Required

true

Suppress Parameter Validation: WebHCat Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the WebHCat Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_webhcat_hive_config_safety_valve

Required

true

Suppress Parameter Validation: Java Configuration Options for WebHCat Server

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for WebHCat Server parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_webhcat_java_opts

Required

true

Suppress Parameter Validation: WebHCat Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the WebHCat Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: WebHCat Server Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the WebHCat Server Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webhcat_core_site_safety_valve

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_webhcat_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_webhcat_file_descriptor

Required

true

Suppress Health Test: Heap Dump Directory Free Space

Description

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_webhcat_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_webhcat_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_webhcat_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_webhcat_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_webhcat_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_webhcat_unexpected_exits

Required

true

Hive LLAP Properties in Cloudera Runtime 7.1

Role groups:

Gateway

Advanced**Deploy Directory****Description**

The directory where the client configs will be deployed

Related Name

Default Value

/etc/hive

API Name

client_config_root_dir

Required

true

Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only, a string to be inserted into the client configuration for hive-site.xml.

Related Name**Default Value****API Name**

hive_client_config_safety_valve

Required

false

Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into the client configuration for hive-env.sh

Related Name**Default Value****API Name**

hive_client_env_safety_valve

Required

false

Client Java Configuration Options**Description**

These are Java command-line arguments. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name**Default Value**

-Djava.net.preferIPv4Stack=true

API Name

hive_client_java_opts

Required

false

Hive Metastore Connection Timeout**Description**

Timeout for requests to the Hive Metastore Server. Consider increasing this if you have tables with a lot of metadata and see timeout errors. Used by most Hive Metastore clients such as Hive CLI and HiveServer2, but not by Impala. Impala has a separately configured timeout.

Related Name

hive.metastore.client.socket.timeout

Default Value

5 minute(s)

API Name

hive_metastore_timeout

Required

false

Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Logs**Gateway Logging Threshold****Description**

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

91

API Name

client_config_priority

Required

true

Resource Management**Client Java Heap Size in Bytes****Description**

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

2 GiB

API Name

hive_client_java_heapsize

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_config_safety_valve

Required

true

Suppress Parameter Validation: Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_env_safety_valve

Required

true

Suppress Parameter Validation: Client Java Configuration Options

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Client Java Configuration Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_java_opts

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

HiveServer2**Advanced****HiveServer2 Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

hive_hs2_env_safety_valve

Required

false

Hive Metastore Connection Retries Count**Description**

Number of retries while opening a connection to the Hive Metastore Server

Related Name

hive.metastore.connect.retries

Default Value

10

API Name

hive_metastore_connection_retries

Required

false

Enable Metrics Subsystem**Description**

Controls whether the Hive metrics subsystem is enabled for the role.

Related Name

hive.server2.metrics.enabled

Default Value

true

API Name

hive_metrics_enabled

Required

false

Metrics Sample File Location

Description

The full path to a file with a sample of metrics exposed by the role. The sample is updated at the frequency configured by Metrics Sample File Logging Frequency. By default, the sample file is logged to a directory under the role log directory, e.g., /var/log/hive/metrics-hivemetastore/metrics.log. The setting only has an effect if "Enable Metrics Subsystem" is set to true.

Related Name

hive.service.metrics.file.location

Default Value**API Name**

hive_metrics_sample_file_location

Required

false

Metrics Sample File Logging Frequency

Description

The frequency at which the metrics are logged to the sample file. The setting only has an effect if "Enable Metrics Subsystem" is set to true.

Related Name

hive.service.metrics.file.frequency

Default Value

30 second(s)

API Name

hive_metrics_sample_logging_frequency

Required

false

Allow User Substitution

Description

Allow alternate user to be specified as part of HiveServer2 open connection request.

Related Name

hive.server2.allow.user.substitution

Default Value

true

API Name

hive_server2_allow_user_substitution

Required

false

HiveServer2 Transport Mode**Description**

The server transport mode.

Related Name

hive.server2.transport.mode

Default Value

binary

API Name

hive_server2_transport_mode

Required

false

HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only. A string to be inserted into hive-site.xml for this role only.

Related Name**Default Value****API Name**

hivellap_hs2_config_safety_valve

Required

false

Hive Downloaded Resources Directory**Description**

Local directory where Hive stores jars downloaded for remote file systems (HDFS). If not specified, Hive uses a default location.

Related Name

hive.downloaded.resources.dir

Default Value**API Name**

hiveserver2_downloaded_resources_dir

Required

false

Enable Explain Logging**Description**

When enabled, HiveServer2 logs EXPLAIN EXTENDED output for every query at INFO log4j level.

Related Name

hive.log.explain.output

Default Value

false

API Name

hiveserver2_enable_explain_output

Required

false

Hive Local Scratch Directory**Description**

Local Directory where Hive stores jars and data when performing a MapJoin optimization. If not specified, Hive uses a default location.

Related Name

hive.exec.local.scratchdir

Default Value**API Name**

hiveserver2_exec_local_scratchdir

Required

false

Hive HDFS Scratch Directory**Description**

Directory in HDFS where Hive writes intermediate data between MapReduce jobs. If not specified, Hive uses a default location.

Related Name

hive.exec.scratchdir

Default Value**API Name**

hiveserver2_exec_scratchdir

Required

false

Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)**Description**

An XML string that will be inserted verbatim into the Fair Scheduler allocations file. This configuration only has effect in CDH 5.8 or later.

Related Name**Default Value****API Name**

hiveserver2_fair_scheduler_safety_valve

Required

false

Idle Operation Timeout**Description**

Operation will be closed when not accessed for this duration of time, in milliseconds; disable by setting to zero. For a positive value, checked for operations in terminal state only (FINISHED, CANCELED, CLOSED, ERROR). For a negative value, checked for all of the operations regardless of state.

Related Name

hive.server2.idle.operation.timeout

Default Value

6 hour(s)

API Name

hiveserver2_idle_operation_timeout

Required

false

Idle Session Timeout**Description**

Session will be closed when not accessed for this duration of time, in milliseconds; disable by setting to zero or a negative value.

Related Name

hive.server2.idle.session.timeout

Default Value

1 day(s)

API Name

hiveserver2_idle_session_timeout

Required

false

Exclude Live Operations From Session Idle Time**Description**

Session will be considered to be idle only if there is no activity, and there is no pending operation. This setting takes effect only if session idle timeout (hive.server2.idle.session.timeout) and checking (hive.server2.session.check.interval) are enabled.

Related Name

hive.server2.idle.session.check.operation

Default Value

true

API Name

hiveserver2_idle_session_timeout_check_operation

Required

false

Java Configuration Options for HiveServer2**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

hiveserver2_java_opts

Required

false

Maximum Query String Length for Show Locks**Description**

The maximum length allowed for the query string when the SHOW LOCKS EXTENDED command is executed. Important: The query string is truncated at the length set for this property. Setting this property to a large value puts pressure on ZooKeeper and might cause out-of-memory issues.

Related Name

hive.lock.query.string.max.length

Default Value

10000

API Name

hiveserver2_lock_query_string_max_length

Required

false

Max HiveServer2 Threads**Description**

Maximum number of worker threads in HiveServer2's thread pool

Related Name

hive.server2.thrift.max.worker.threads

Default Value

500

API Name

hiveserver2_max_threads

Required

true

Min HiveServer2 Threads**Description**

Minimum number of worker threads in HiveServer2's thread pool

Related Name

hive.server2.thrift.min.worker.threads

Default Value

5

API Name

hiveserver2_min_threads

Required

true

Session Check Interval

Description

The check interval for session/operation timeout, in milliseconds, which can be disabled by setting to zero or a negative value.

Related Name

hive.server2.session.check.interval

Default Value

15 minute(s)

API Name

hiveserver2_session_check_interval

Required

false

HiveServer2 WebUI Max Threads

Description

The max threads for the HiveServer2 WebUI.

Related Name

hive.server2.webui.max.threads

Default Value

50

API Name

hiveserver2_webui_max_threads

Required

false

HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value****API Name**

hs2_core_site_safety_valve

Required

false

HiveServer2 Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**HiveServer2 Log Directory****Description**

Directory where HiveServer2 will place its log files.

Related Name**Default Value**

/var/log/hive

API Name

hive_log_dir

Required

false

Enable HiveServer2 Operations Logging**Description**

When enabled, HiveServer2 will temporarily save logs associated with ongoing operations. This enables clients like beeline and Hue to request and display logs for a particular ongoing operation. Logs are removed upon completion of operation.

Related Name

hive.server2.logging.operation.enabled

Default Value

true

API Name

hive_server2_logging_operation_enabled

Required

false

HiveServer2 Operations Log Directory**Description**

Top level directory where operation logs are temporarily stored if Enable HiveServer2 Operations Logging is true. Logs are stored in session and operation level subdirectories under this location and are removed on completion of operation.

Related Name

hive.server2.logging.operation.log.location

Default Value

/var/log/hive/operation_logs

API Name

hive_server2_logging_operation_log_location

Required

false

HiveServer2 Logging Threshold

Description

The minimum log level for HiveServer2 logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

HiveServer2 Maximum Log File Backups

Description

The maximum number of rolled log files to keep for HiveServer2 logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

HiveServer2 Max Log Size

Description

The maximum size, in megabytes, per log file for HiveServer2 logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Hive Downloaded Resources Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Downloaded Resources Directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

hive_llap_hs2_downloaded_resources_directory_free_space_absolute_thresholds

Required

false

Hive Downloaded Resources Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Downloaded Resources Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Hive Downloaded Resources Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

hive_llap_hs2_downloaded_resources_directory_free_space_percentage_thresholds

Required

false

Hive Local Scratch Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Local Scratch Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

hive_llap_hs2_exec_local_scratch_directory_free_space_absolute_thresholds

Required

false

Hive Local Scratch Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Local Scratch Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Hive Local Scratch Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

hive_llap_hs2_exec_local_scratch_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

hiveserver2_fd_thresholds

Required

false

HiveServer2 Host Health Test

Description

When computing the overall HiveServer2 health, consider the host's health.

Related Name**Default Value**

true

API Name

hiveserver2_host_health_enabled

Required

false

Pause Duration Thresholds

Description

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

hiveserver2_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period

Description

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

hiveserver2_pause_duration_window

Required

false

HiveServer2 Process Health Test**Description**

Enables the health test that the HiveServer2's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

hiveserver2_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

`mgmt_navigator_failure_window`

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

`mgmt.navigator.status.check.enabled`

Default Value

true

API Name

`mgmt_navigator_status_check_enabled`

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.
- **streamThreshold (optional)** - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled (optional)** - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Restrict Cross Joins (Cartesian Products)****Description**

Whether to allow queries with cross joins. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.cartesian.product

Default Value

false

API Name

hive_restrict_cross_joins

Required

false

Restrict LOAD Queries Against Bucketed Tables**Description**

Whether to allow LOAD queries against bucketed tables. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.bucketing

Default Value

true

API Name

hive_restrict_load_bucketed_table

Required

false

Restrict Queries with ORDER BY but no LIMIT clause**Description**

Whether to allow queries with an ORDER BY clause, but no LIMIT clause. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.orderby.no.limit

Default Value

false

API Name

hive_restrict_orderby_with_no_limit

Required

false

Restrict Partitioned Table Scans with no Partitioned Column Filter**Description**

Whether to allow queries that scan a partitioned table but don't filter on the partition column. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.no.partition.filter

Default Value

false

API Name

hive_restrict_partitioned_scans_no_filter

Required

false

Restrict Unsafe Data Type Comparisons**Description**

Whether to allow queries that compare bigints to strings or doubles. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.type.safety

Default Value

true

API Name

hive_restrict_unsafe_comparison

Required

false

Support Dynamic Service Discovery**Description**

Whether HiveServer2 supports dynamic service discovery for its clients. To support this, each instance of HiveServer2 currently uses ZooKeeper to register itself, when it is brought up. JDBC/ODBC clients should use the ZooKeeper ensemble: hive.zookeeper.quorum in their connection string.

Related Name

hive.server2.support.dynamic.service.discovery

Default Value

true

API Name

hive_server2_support_dynamic_service_discovery

Required

false

Hive Server Zookeeper Namespace**Description**

The parent node in ZooKeeper used by HiveServer2 when supporting dynamic service discovery.

Related Name

hive.server2.zookeeper.namespace

Default Value

hiveserver2-interactive

API Name

hive_server2_zookeeper_namespace

Required

false

Default query queues**Description**

A list of comma separated values corresponding to YARN queues of the same name. When HiveServer2 is launched in Tez mode, this configuration needs to be set for multiple Tez sessions to run in parallel on the cluster.

Related Name

hive.server2.tez.default.queues

Default Value

llap

API Name

hivellap_default_query_queues

Required

false

hive.prewarm.enabled**Description**

Enables container prewarm for Tez

Related Name

hive.prewarm.enabled

Default Value

false

API Name

hivellap_prewarm_enabled

Required

false

Number of Containers Held**Description**

Controls the number of containers to prewarm for Tez

Related Name

hive.prewarm.numcontainers

Default Value

2

API Name

hivellap_prewarm_numcontainers

Required

false

Start Tez session at Initialization**Description**

This flag is used in HiveServer2 to enable a user to use HiveServer2 without turning on Tez for HiveServer2. The user could potentially want to run queries over Tez without the pool of sessions.

Related Name

hive.server2.tez.initialize.default.sessions

Default Value

true

API Name

hivellap_tez_initialize_default_sessions

Required

false

Allow custom queues**Description**

Whether to allow the users of this HS2 to specify custom queues - yes, no (fail if specified), ignore (use the default queues even if a custom one is specified)

Related Name

hive.server2.tez.sessions.custom.queue.allowed

Default Value

ignore

API Name

hivellap_tez_sessions_custom_queue_allowed

Required

false

HiveServer2 Enable Impersonation**Description**

HiveServer2 will impersonate the beeline client user when talking to other services such as MapReduce and HDFS.

Related Name

hive.server2.enable.doAs

Default Value

true

API Name

hiveserver2_enable_impersonation

Required

false

HiveServer2 Load Balancer**Description**

Address of the load balancer used for HiveServer2 roles, specified in host:port format. If port is not specified, the port used by HiveServer2 is used. Note: Changing this property regenerates Kerberos keytabs for all HiveServer2 roles.

Related Name**Default Value****API Name**

hiveserver2_load_balancer

Required

false

Performance**Enable Dynamic Partitions****Description**

Whether or not to allow dynamic partitions in DML/DDL.

Related Name

hive.exec.dynamic.partition

Default Value

true

API Name

hive_exec_dynamic_partition

Required

false

Hive Auto Convert Join Noconditional Size

Description

If Hive auto convert join is on, and the sum of the size for n-1 of the tables/partitions for a n-way join is smaller than the specified size, the join is directly converted to a MapJoin (there is no conditional task).

Related Name

hive.auto.convert.join.noconditionaltask.size

Default Value

50 MiB

API Name

hiveserver2_auto_convert_join_noconditionaltask_size

Required

false

Store Intermediate Data on Blobstore

Description

When writing data to a table on a blobstore (such as S3), whether or not the blobstore should be used to store intermediate data during Hive query execution. Setting this to true can degrade performance for queries that spawn multiple MR / Spark jobs, but is useful for queries whose intermediate data cannot fit in the allocated HDFS cluster.

Related Name

hive.blobstore.use.blobstore.as.scratchdir

Default Value

false

API Name

hiveserver2_blobstore_use_blobstore_as_scratchdir

Required

false

Enable Stats Optimization

Description

Enable optimization that checks if a query can be answered using statistics. If so, answers the query using only statistics stored in metastore.

Related Name

hive.compute.query.using.stats

Default Value

true

API Name

hiveserver2_compute_query_using_stats

Required

false

Enable Cost-Based Optimizer for Hive**Description**

Enabled the Calcite-based Cost-Based Optimizer for HiveServer2.

Related Name

hive.cbo.enable

Default Value

true

API Name

hiveserver2_enable_cbo

Required

false

Enable MapJoin Optimization**Description**

Enable optimization that converts common join into MapJoin based on input file size.

Related Name

hive.auto.convert.join

Default Value

true

API Name

hiveserver2_enable_mapjoin

Required

false

Fetch Task Query Conversion**Description**

Some select queries can be converted to a single FETCH task instead of a MapReduce task, minimizing latency. A value of none disables all conversion, minimal converts simple queries such as SELECT * and filter on partition columns, and more converts SELECT queries including FILTERS.

Related Name

hive.fetch.task.conversion

Default Value

more

API Name

hiveserver2_fetch_task_conversion

Required

false

Fetch Task Query Conversion Threshold

Description

Above this size, queries are converted to fetch tasks.

Related Name

hive.fetch.task.conversion.threshold

Default Value

1 GiB

API Name

hiveserver2_fetch_task_conversion_threshold

Required

false

Input Listing Max Threads

Description

Maximum number of threads that Hive uses to list input files. Increasing this value can improve performance when there are a lot of partitions being read, or when running on blobstores.

Related Name

hive.exec.input.listing.max.threads

Default Value

15

API Name

hiveserver2_input_listing_max_threads

Required

false

Maximum ReduceSink Top-K Memory Usage

Description

The maximum percentage of heap to be used for hash in ReduceSink operator for Top-K selection. 0 means the optimization is disabled. Accepted values are between 0 and 1.

Related Name

hive.limit.pushdown.memory.usage

Default Value

0.04

API Name

hiveserver2_limit_pushdown_memory_usage

Required

false

Load Dynamic Partitions Thread Count

Description

Number of threads used to load dynamically generated partitions. Loading requires renaming the file its final location, and updating some metadata about the new partition. Increasing this can improve performance when there are a lot of partitions dynamically generated.

Related Name

hive.load.dynamic.partitions.thread

Default Value

15

API Name

hiveserver2_load_dynamic_partitions_thread_count

Required

false

Enable Map-Side Aggregation**Description**

Enable map-side partial aggregation, which cause the mapper to generate fewer rows. This reduces the data to be sorted and distributed to reducers.

Related Name

hive.map.aggr

Default Value

true

API Name

hiveserver2_map_aggr

Required

false

Ratio of Memory Usage for Map-Side Aggregation**Description**

Portion of total memory used in map-side partial aggregation. When exceeded, the partially aggregated results will be flushed from the map task to the reducers.

Related Name

hive.map.aggr.hash.percentmemory

Default Value

0.5

API Name

hiveserver2_map_aggr_hash_memory_ratio

Required

false

Enable Merging Small Files - Map-Only Job**Description**

Merge small files at the end of a map-only job. When enabled, a map-only job is created to merge the files in the destination table/partitions.

Related Name

hive.merge.mapfiles

Default Value

true

API Name

hiveserver2_merge_mapfiles

Required

false

Enable Merging Small Files - Map-Reduce Job

Description

Merge small files at the end of a map-reduce job. When enabled, a map-only job is created to merge the files in the destination table/partitions.

Related Name

hive.merge.mapredfiles

Default Value

false

API Name

hiveserver2_merge_mapredfiles

Required

false

Desired File Size After Merging

Description

The desired file size after merging. This should be larger than hive.merge.smallfiles.avgsize.

Related Name

hive.merge.size.per.task

Default Value

256 MiB

API Name

hiveserver2_merge_size_per_task

Required

false

Small File Average Size Merge Threshold

Description

When the average output file size of a job is less than the value of this property, Hive will start an additional map-only job to merge the output files into bigger files. This is only done for map-only jobs if hive.merge.mapfiles is true, for map-reduce jobs if hive.merge.mapredfiles is true, and for Spark jobs if hive.merge.sparkfiles is true.

Related Name

hive.merge.smallfiles.avgsize

Default Value

16 MiB

API Name

hiveserver2_merge_smallfiles_avgsize

Required

false

MSCK Repair Batch Size

Description

Batch size for the msck repair command (recover partitions command). If the value is greater than zero, new partition information will be sent from HiveServer2 to the Metastore in batches, which can potentially improve memory usage in the Metastore and avoid client read timeout exceptions. If this value is 0, all partition information will sent in a single Thrift call.

Related Name

hive.msck.repair.batch.size

Default Value

0

API Name

hiveserver2_msck_repair_batch_size

Required

false

Move Files Thread Count**Description**

The number of threads used by HiveServer2 to move data from the staging directory to another location (typically to the final table location). A separate thread pool of workers of this size is used for each query, which means this configuration can be set on a per-query basis too.

Related Name

hive.mv.files.thread

Default Value

15

API Name

hiveserver2_mv_files_thread

Required

false

Hive Optimize Sorted Merge Bucket Join**Description**

Whether to try sorted merge bucket (SMB) join.

Related Name

hive.optimize.bucketmapjoin.sortedmerge

Default Value

true

API Name

hiveserver2_optimize_bucketmapjoin_sortedmerge

Required

false

Enable Automatic Use of Indexes**Description**

Whether to use the indexing optimization for all queries.

Related Name

hive.optimize.index.filter

Default Value

true

API Name

hiveserver2_optimize_index_filter

Required

false

Enable ReduceDeDuplication Optimization**Description**

Remove extra map-reduce jobs if the data is already clustered by the same key, eliminating the need to repartition the dataset again.

Related Name

hive.optimize.reducededuplication

Default Value

true

API Name

hiveserver2_optimize_reducededuplication

Required

false

Minimum Reducers for ReduceDeDuplication Optimization**Description**

When the number of ReduceSink operators after merging is less than this number, the ReduceDeDuplication optimization will be disabled.

Related Name

hive.optimize.reducededuplication.min.reducer

Default Value

4

API Name

hiveserver2_optimize_reducededuplication_min_reducer

Required

false

Enable Sorted Dynamic Partition Optimizer**Description**

When dynamic partition is enabled, reducers keep only one record writer at all times, which lowers the memory pressure on reducers.

Related Name

hive.optimize.sort.dynamic.partition

Default Value

false

API Name

hiveserver2_optimize_sort_dynamic_partition

Required

false

Enable Parallel Compilation of Queries**Description**

When activated, individual sessions can compile queries simultaneously. Within each session, queries compile one at a time.

Related Name

hive.driver.parallel.compilation

Default Value

true

API Name

hiveserver2_parallel_compilation_enabled

Required

false

Query Compilation Degree of Parallelism

Description

Determines the maximum number of queries that can compile in parallel on a HiveServer2 instance. Use negative values or zero to set unlimited parallelism. Use a positive value to set the number of queries that can compile simultaneously. This setting can be fine-tuned based on the current cluster load. Monitor cluster load using the 'waiting_compile_ops' metric and the 'Waiting Compile Operations' graph in the HiveServer2 graph library.

Related Name

hive.driver.parallel.compilation.global.limit

Default Value

3

API Name

hiveserver2_parallel_compilation_global_limit

Required

false

Hive SMB Join Cache Rows

Description

The number of rows with the same key value to be cached in memory per SMB-joined table.

Related Name

hive.smbjoin.cache.rows

Default Value

10000

API Name

hiveserver2_smbjoin_cache_rows

Required

false

Load Column Statistics

Description

Whether column stats for a table are fetched during explain.

Related Name

hive.stats.fetch.column.stats

Default Value

true

API Name

hiveserver2_stats_fetch_column_stats

Required

false

Vectorized Adaptor Usage Mode**Description**

Vectorized Adaptor Usage Mode specifies the extent to which the vectorization engine tries to vectorize UDFs that do not have native vectorized versions available. Selecting the "none" option specifies that only queries using native vectorized UDFs are vectorized. Selecting the "chosen" option specifies that Hive chooses to vectorize a subset of the UDFs based on performance benefits using the Vectorized Adaptor. Selecting the "all" option specifies that the Vectorized Adaptor be used for all UDFs even when native vectorized versions are not available.

Related Name

hive.vectorized.adaptor.usage.mode

Default Value

chosen

API Name

hiveserver2_vectorized_adaptor_usage_mode

Required

false

Enable Vectorization Optimization**Description**

Enable optimization that vectorizes query execution by streamlining operations by processing a block of 1024 rows at a time.

Related Name

hive.vectorized.execution.enabled

Default Value

true

API Name

hiveserver2_vectorized_enabled

Required

false

Vectorized GroupBy Check Interval**Description**

In vectorized group-by, the number of row entries added to the hash table before re-checking average variable size for memory usage estimation.

Related Name

hive.vectorized.groupby.checkinterval

Default Value

4096

API Name

hiveserver2_vectorized_groupby_checkinterval

Required

false

Vectorized GroupBy Flush Ratio

Description

Ratio between 0.0 and 1.0 of entries in the vectorized group-by aggregation hash that is flushed when the memory threshold is exceeded.

Related Name

hive.vectorized.groupby.flush.percent

Default Value

0.1

API Name

hiveserver2_vectorized_groupby_flush_ratio

Required

false

Enable Vectorized Input Format

Description

If enabled, Hive uses the native vectorized input format for vectorized query execution when it is available.

Related Name

hive.vectorized.use.vectorized.input.format

Default Value

true

API Name

hiveserver2_vectorized_input_format_enabled

Required

false

Exclude Vectorized Input Formats

Description

Specifies a list of file input format classnames to exclude from vectorized query execution using the vectorized input format. Note that vectorized execution can still occur for an excluded input format based on whether row SerDes or vector SerDes are enabled.

Related Name

hive.vectorized.input.format.excludes

Default Value**API Name**

hiveserver2_vectorized_input_format_excludes

Required

false

Enable Reduce-Side Vectorization

Description

Whether to vectorize the reduce side of query execution.

Related Name

hive.vectorized.execution.reduce.enabled

Default Value

true

API Name

hiveserver2_vectorized_reduce_enabled

Required

false

Enable Overflow-checked Vector Expressions

Description

To enhance performance, vectorized expressions operate using wide data types like long and double. When wide data types are used, numeric overflows can occur during expression evaluation in a different manner for vectorized expressions than they do for non-vectorized expressions. Consequently, different query results can be returned for vectorized expressions compared to results returned for non-vectorized expressions. When this configuration is enabled, Hive uses vectorized expressions that handle numeric overflows in the same way as non-vectorized expressions are handled.

Related Name

hive.vectorized.use.checked.expressions

Default Value

true

API Name

hiveserver2_vectorized_use_checked_expressions

Required

false

Vectorize Using Vector SerDes

Description

If enabled, Hive uses built-in vector SerDes to process text and sequencefile tables for vectorized query execution.

Related Name

hive.vectorized.use.vector.serde.deserialize

Default Value

false

API Name

hiveserver2_vectorized_use_vector_serde_deserialize

Required

false

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Thrift port****Description**

TCP port number to listen on.

Related Name

hive.server2.thrift.http.port

Default Value

10501

API Name

hive_server2_thrift_http_port

Required

false

Bind HiveServer2 to Wildcard Address**Description**

If enabled, the HiveServer2 binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name

hive.server2.webui.host

Default Value

true

API Name

hiveserver2_webui_bind_wildcard

Required

false

HiveServer2 WebUI Port**Description**

The port the HiveServer2 WebUI will listen on. This can be set to 0 to disable the WebUI.

Related Name

hive.server2.webui.port

Default Value

10502

API Name

hiveserver2_webui_port

Required

false

HiveServer2 Port**Description**

Port on which HiveServer2 will listen for connections.

Related Name

hive.server2.thrift.port

Default Value

10500

API Name

hs2_thrift_address_port

Required

false

Resource Management**Java Heap Size of HiveServer2 in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

4 GiB

API Name

hiveserver2_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

`rm_custom_resources`**Required**`false`**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**`500`**API Name**`rm_io_weight`**Required**`true`**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`

API Name

rm_memory_soft_limit

Required

true

Security**Enable TLS/SSL for HiveServer2 WebUI****Description**

Encrypt communication between clients and HiveServer2 WebUI using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hive.server2.webui.use.ssl

Default Value

false

API Name

ssl_enabled

Required

false

HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when HiveServer2 WebUI is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

hive.server2.webui.keystore.path

Default Value**API Name**

ssl_server_keystore_location

Required

false

HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password**Description**

The password for the HiveServer2 WebUI JKS keystore file.

Related Name

hive.server2.webui.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: HiveServer2 Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_hs2_env_safety_valve

Required

true

Suppress Parameter Validation: HiveServer2 Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_log_dir

Required

true

Suppress Parameter Validation: Metrics Sample File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Sample File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_metrics_sample_file_location

Required

true

Suppress Configuration Validator: Restrict Load Bucketed Table Validator**Description**

Whether to suppress configuration warnings produced by the Restrict Load Bucketed Table Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_restrict_load_bucketed_table_validator

Required

true

Suppress Configuration Validator: Restrict Unsafe Comparison Validator**Description**

Whether to suppress configuration warnings produced by the Restrict Unsafe Comparison Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_restrict_unsafe_comparison_validator

Required

true

Suppress Parameter Validation: HiveServer2 Operations Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Operations Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_server2_logging_operation_log_location

Required

true

Suppress Parameter Validation: Thrift port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Thrift port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_server2_thrift_http_port

Required

true

Suppress Parameter Validation: Hive Server Zookeeper Namespace**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Server Zookeeper Namespace parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_server2_zookeeper_namespace

Required

true

Suppress Parameter Validation: Default query queues**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default query queues parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hivellap_default_query_queues

Required

true

Suppress Parameter Validation: HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hivellap_hs2_config_safety_valve

Required

true

Suppress Parameter Validation: Allow custom queues**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allow custom queues parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hivellap_tez_sessions_custom_queue_allowed

Required

true

Suppress Parameter Validation: Hive Downloaded Resources Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Downloaded Resources Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_downloaded_resources_dir

Required

true

Suppress Parameter Validation: Hive Local Scratch Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Local Scratch Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_exec_local_scratchdir

Required

true

Suppress Parameter Validation: Hive HDFS Scratch Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive HDFS Scratch Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_exec_scratchdir

Required

true

Suppress Parameter Validation: Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Fair Scheduler XML Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_fair_scheduler_safety_valve

Required

true

Suppress Parameter Validation: Java Configuration Options for HiveServer2**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for HiveServer2 parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_java_opts

Required

true

Suppress Parameter Validation: HiveServer2 Load Balancer**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Load Balancer parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_load_balancer

Required

true

Suppress Parameter Validation: Exclude Vectorized Input Formats**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Vectorized Input Formats parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_vectorized_input_format_excludes

Required

true

Suppress Parameter Validation: HiveServer2 WebUI Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 WebUI Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_webui_port

Required

true

Suppress Parameter Validation: HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_core_site_safety_valve

Required

true

Suppress Parameter Validation: HiveServer2 Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_thrift_address_port

Required

true

Suppress Parameter Validation: HiveServer2 Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: tez.history.logging.taskattempt-filters**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the tez.history.logging.taskattempt-filters parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_tez_interactive_history_logging_taskattempt_filters

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_hiveserver2_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_hiveserver2_file_descriptor

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_hiveserver2_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_hiveserver2_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_hive_llap_hiveserver2_log_directory_free_space`**Required**`true`**Suppress Health Test: Pause Duration****Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_hive_llap_hiveserver2_pause_duration`**Required**`true`**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_hive_llap_hiveserver2_scm_health`**Required**`true`**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_hive_llap_hiveserver2_swap_memory_usage`**Required**`true`

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_hiveserver2_unexpected_exits

Required

true

Suppress Health Test: Hive Downloaded Resources Directory Free Space**Description**

Whether to suppress the results of the Hive Downloaded Resources Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_hs2_downloaded_resources_directory_free_space

Required

true

Suppress Health Test: Hive Local Scratch Directory Free Space**Description**

Whether to suppress the results of the Hive Local Scratch Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_hs2_exec_local_scratch_directory_free_space

Required

true

Tez interactive**tez.am.am-rm.heartbeat.interval-ms.max****Description**

The heartbeat interval between the tez AM and YARN RM

Related Name

tez.am.am-rm.heartbeat.interval-ms.max

Default Value

10 second(s)

API Name

tez_interactive_am_am_rm_heartbeat_interval_ms_max

Required

false

tez.am.client.heartbeat.poll.interval.millis**Description**

The interval at which the AM checks for a client heartbeat timeout

Related Name

tez.am.client.heartbeat.poll.interval.millis

Default Value

6 second(s)

API Name

tez_interactive_am_client_heartbeat_poll_interval_millis

Required

false

tez.am.client.heartbeat.timeout.secs**Description**

The time interval, after which an AM will kill itself, if it does not receive a heartbeat from the client.

Related Name

tez.am.client.heartbeat.timeout.secs

Default Value

1 minute(s), 30 second(s)

API Name

tez_interactive_am_client_heartbeat_timeout_secs

Required

false

tez.am.node-blacklisting.enabled**Description**

Whether to enable blacklisting in Tez AMs. Disable for LLAP

Related Name

tez.am.node-blacklisting.enabled

Default Value

false

API Name

tez_interactive_am_node_blacklisting_enabled

Required

false

tez.am.resource.memory.mb**Description**

The amount of memory to be used by the AppMaster

Related Name

tez.am.resource.memory.mb

Default Value

1 GiB

API Name

tez_interactive_am_resource_memory_mb

Required

false

tez.am.task.listener.thread-count**Description**

Number of IPC server thread for Tez task listener. Should be minimized for LLAP

Related Name

tez.am.task.listener.thread-count

Default Value

1

API Name

tez_interactive_am_task_listener_thread_count

Required

false

tez.am.task.reschedule.higher.priority**Description**

Whether rescheduled tasks should be treated at higher priority

Related Name

tez.am.task.reschedule.higher.priority

Default Value

false

API Name

tez_interactive_am_task_reschedule_higher_priority

Required

false

tez.container.max.java.heap.fraction**Description**

Setting this to -1 so that Tez can auto determine different Xmx for different container size

Related Name

tez.container.max.java.heap.fraction

Default Value

-1.0

API Name

tez_interactive_container_max_java_heap_fraction

Required

false

tez.dag.recovery.enabled**Description**

tez.dag.recovery.enabled

Related Name

tez.dag.recovery.enabled

Default Value

false

API Name

tez_interactive_dag_recovery_enabled

Required

false

tez.grouping.node.local.only**Description**

tez.grouping.node.local.only

Related Name

tez.grouping.node.local.only

Default Value

true

API Name

tez_interactive_grouping_node_local_only

Required

false

tez.history.logging.log.level**Description**

Set the log level to TASK_ATTEMPT.

Related Name

tez.history.logging.log.level

Default Value

TASK_ATTEMPT

API Name

tez_interactive_history_logging_log_level

Required

false

tez.history.logging.taskattempt-filters**Description**

TASK_ATTEMPT events to be ignored.

Related Name

tez.history.logging.taskattempt-filters

Default Value

SERVICE_BUSY, EXTERNAL_PREEMPTION

API Name

tez_interactive_history_logging_taskattempt_filters

Required

false

tez.history.logging.timeline.num-dags-per-group**Description**

Maximum number of dags per group.

Related Name

tez.history.logging.timeline.num-dags-per-group

Default Value

5

API Name

tez_interactive_history_logging_timeline_num_dags_per_group

Required

false

tez.runtime.enable.final-merge.in.output**Description**

Whether to enable a map side merge of outputs

Related Name

tez.runtime.enable.final-merge.in.output

Default Value

false

API Name

tez_interactive_runtime_enable_final_merge_in_output

Required

false

tez.runtime.io.sort.mb**Description**

The size of the sort buffer when output needs to be sorted

Related Name

tez.runtime.io.sort.mb

Default Value

512 MiB

API Name

tez_interactive_runtime_io_sort_mb

Required

false

tez.runtime.pipelined-shuffle.enabled**Description**

tez.runtime.pipelined-shuffle.enabled

Related Name

tez.runtime.pipelined-shuffle.enabled

Default Value

false

API Name

tez_interactive_runtime_pipelined_shuffle_enabled

Required

false

tez.runtime.pipelined.sorter.lazy-allocate.memory**Description**

tez.runtime.pipelined.sorter.lazy-allocate.memory

Related Name

tez.runtime.pipelined.sorter.lazy-allocate.memory

Default Value

true

API Name

tez_interactive_runtime_pipelined_sorter_lazy_allocate_memory

Required

false

tez.runtime.report.partition.stats**Description**

tez.runtime.report.partition.stats

Related Name

tez.runtime.report.partition.stats

Default Value

true

API Name

tez_interactive_runtime_report_partition_stats

Required

false

tez.runtime.shuffle.connect.timeout**Description**

Shuffle connect timeouts (ms)

Related Name

tez.runtime.shuffle.connect.timeout

Default Value

30 second(s)

API Name

tez_interactive_runtime_shuffle_connect_timeout

Required

false

tez.runtime.shuffle.fetch.buffer.percent

Description

Fraction (0-1) of the available memory which can be used to retain shuffled data

Related Name

tez.runtime.shuffle.fetch.buffer.percent

Default Value

0.6

API Name

tez_interactive_runtime_shuffle_fetch_buffer_percent

Required

false

tez.runtime.shuffle.fetch.verify-disk-checksum

Description

tez.runtime.shuffle.fetch.verify-disk-checksum

Related Name

tez.runtime.shuffle.fetch.verify-disk-checksum

Default Value

false

API Name

tez_interactive_runtime_shuffle_fetch_verify_disk_checksum

Required

false

tez.runtime.shuffle.keep-alive.enabled

Description

Connection keep-alive for shuffle

Related Name

tez.runtime.shuffle.keep-alive.enabled

Default Value

true

API Name

tez_interactive_runtime_shuffle_keep_alive_enabled

Required

false

tez.runtime.shuffle.memory.limit.percent

Description

This property determines the maximum size of a shuffle segment which can be fetched to memory. Fraction (0-1) of shuffle memory (after applying tez.runtime.shuffle.fetch.buffer.percent)

Related Name

tez.runtime.shuffle.memory.limit.percent

Default Value

0.25

API Name

tez_interactive_runtime_shuffle_memory_limit_percent

Required

false

tez.runtime.shuffle.parallel.copies**Description**

tez.runtime.shuffle.parallel.copies

Related Name

tez.runtime.shuffle.parallel.copies

Default Value

8

API Name

tez_interactive_runtime_shuffle_parallel_copies

Required

false

tez.runtime.shuffle.read.timeout**Description**

Shuffle read timeout (ms)

Related Name

tez.runtime.shuffle.read.timeout

Default Value

30 second(s)

API Name

tez_interactive_runtime_shuffle_read_timeout

Required

false

tez.runtime.shuffle.ssl.enable**Description**

tez.runtime.shuffle.ssl.enable

Related Name

tez.runtime.shuffle.ssl.enable

Default Value

false

API Name

tez_interactive_runtime_shuffle_ssl_enable

Required

false

tez.runtime.unordered.output.buffer.size-mb**Description**

The size of the buffer when output does not require to be sorted

Related Name`tez.runtime.unordered.output.buffer.size-mb`**Default Value**`100 MiB`**API Name**`tez_interactive_runtime_unordered_output_buffer_size_mb`**Required**`false`**tez.runtime.unordered.output.max-per-buffer.size-bytes****Description**`tez.runtime.unordered.output.max-per-buffer.size-bytes`**Related Name**`tez.runtime.unordered.output.max-per-buffer.size-bytes`**Default Value**`128 MiB`**API Name**`tez_interactive_runtime_unordered_output_max_per_buffer_size_bytes`**Required**`false`**tez.session.am.dag.submit.timeout.secs****Description**

The amount of time an AM will wait, before killing itself, if not DAG is submitted.

Related Name`tez.session.am.dag.submit.timeout.secs`**Default Value**`14 day(s)`**API Name**`tez_interactive_session_am_dag_submit_timeout_secs`**Required**`false`**tez.task.heartbeat.timeout.check-ms****Description**

The time interval, in milliseconds, at which the AM will check for timed out tasks

Related Name`tez.task.heartbeat.timeout.check-ms`**Default Value**`15 second(s)`**API Name**`tez_interactive_task_heartbeat_timeout_check_ms`**Required**`false`

tez.task.timeout-ms**Description**

mount of time the Tez AM waits before marking a task which has not sent in a heartbeat, as timed out

Related Name

tez.task.timeout-ms

Default Value

1 minute(s), 30 second(s)

API Name

tez_interactive_task_timeout_ms

Required

false

LLAP Proxy**Advanced****Metrics Sample File Location****Description**

The full path to a file with a sample of metrics exposed by the role. The sample is updated at the frequency configured by Metrics Sample File Logging Frequency. By default, the sample file is logged to a directory under the role log directory, e.g., /var/log/hive/metrics-hivemetastore/metrics.log. The setting only has an effect if "Enable Metrics Subsystem" is set to true.

Related Name

hive.service.metrics.file.location

Default Value**API Name**

hive_metrics_sample_file_location

Required

false

LLAP Daemon Java Options**Description**

Extra Java options that will be applied on the JVM processes of LLAP Daemons.

Related Name**Default Value****API Name**

hivellap_daemon_opts

Required

false

LLAP Proxy Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only. A string to be inserted into hive-site.xml for this role only.

Related Name

Default Value**API Name**`hivellap_llapproxy_config_safety_valve`**Required**`false`**LLAP Proxy Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**`LLAPPROXY_role_env_safety_valve`**Required**`false`**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name`oom_heap_dump_dir`**Default Value**`/tmp`**API Name**`oom_heap_dump_dir`**Required**`false`**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_heap_dump_enabled`**Required**`true`

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**LLAP Proxy Log Directory****Description**

Directory where LLAP Proxy will place its log files.

Related Name**Default Value**

/var/log/hive

API Name

hive_log_dir

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Hive LLAP Daemons Ready Status Startup Tolerance

Description

Bad health state will be shown if, after this amount of time (after starting LLAP proxy role), 0 LLAP daemons are running.

Related Name**Default Value**

5 minute(s)

API Name

llapd_ready_status_check_daemon_startup_tolerance

Required

false

Hive LLAP Proxy Role Ready Status Startup Tolerance**Description**

Startup Tolerance time of the LLAP proxy role in which no health test is run. This is recommended to be kept minimal.

Related Name**Default Value**

1 second(s)

API Name

llapd_ready_status_check_role_startup_tolerance

Required

false

Hive LLAP Daemons Ready Status Thresholds**Description**

The health test thresholds for monitoring the number of active LLAP daemons.

Related Name**Default Value**

Warning: 75.0, Critical: 25.0

API Name

llapd_ready_status_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

llaproxy_fd_thresholds

Required

false

LLAP Proxy Host Health Test**Description**

When computing the overall LLAP Proxy health, consider the host's health.

Related Name**Default Value**

true

API Name

llaproxy_host_health_enabled

Required

false

Pause Duration Thresholds**Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

llaproxy_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

llaproxy_pause_duration_window

Required

false

LLAP Proxy Process Health Test**Description**

Enables the health test that the LLAP Proxy's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

llaproxy_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**hive.llap.auto.allow.uber****Description**

Whether or not to allow the planner to run vertices in the AM

Related Name

hive.llap.auto.allow.uber

Default Value

false

API Name

hivellap_auto_allow_uber

Required

false

In-Memory Cache per Daemon**Description**

The amount of memory reserved for Hive's optimized in-memory cache.

Related Name

hive.llap.io.memory.size

Default Value

512 MiB

API Name

hivellap_cache_per_llap_daemon

Required

false

hive.llap.client.consistent.splits**Description**

Whether to setup split locations to match nodes on which llap daemons are running, instead of using the locations provided by the split itself.

Related Name

hive.llap.client.consistent.splits

Default Value

true

API Name

hivellap_client_consistent_splits

Required

false

hive.llap.daemon.am.liveness.heartbeat.interval.ms**Description**

Tez AM-LLAP heartbeat interval. This should be below the task timeout.

Related Name

hive.llap.daemon.am.liveness.heartbeat.interval.ms

Default Value

10 second(s)

API Name

hivellap_daemon_am_heartbeat_interval

Required

false

Number of nodes used by Hive's LLAP**Description**

Number of nodes used by Hive's LLAP, which includes LLAP nodes running. Yarn native service container and Tez App Master(s) are not part of this.

Related Name

num_llap_nodes

Default Value

1

API Name

hivellap_daemon_count

Required

false

hive.llap.daemon.logger**Description**

Logger to be used by LLAP. (query-routing, RFA)

Related Name

hive.llap.daemon.logger

Default Value

llap

API Name

hivellap_daemon_logger

Required

false

hive.llap.daemon.rpc.port**Description**

The LLAP daemon RPC port.

Related Name

hive.llap.daemon.rpc.port

Default Value

0

API Name

hivellap_daemon_rpc_port

Required

false

hive.llap.daemon.task.scheduler.enable.preemption**Description**

hive.llap.daemon.task.scheduler.enable.preemption

Related Name

hive.llap.daemon.task.scheduler.enable.preemption

Default Value

true

API Name

hivellap_daemon_task_scheduler_enable_preemption

Required

false

hive.llap.daemon.vcpus.per.instance**Description**

The total number of vcpus to use for the executors inside LLAP.

Related Name

hive.llap.daemon.vcpus.per.instance

Default Value

0

API Name

hivellap_daemon_vcpus_per_instance

Required

false

hive.llap.daemon.yarn.shuffle.port**Description**

YARN shuffle port for LLAP-daemon-hosted shuffle.

Related Name

hive.llap.daemon.yarn.shuffle.port

Default Value

15551

API Name

hivellap_daemon_yarn_shuffle_port

Required

false

dfs.client.mmap.enabled**Description**

Disable HDFS caching fo LLAP

Related Name

dfs.client.mmap.enabled

Default Value

false

API Name

hivellap_dfs_client_mmap_enabled

Required

false

dfs.short.circuit.shared.memory.watcher.interrupt.check.ms**Description**

Disable HDFS caching fo LLAP

Related Name

dfs.short.circuit.shared.memory.watcher.interrupt.check.ms

Default Value

0 second(s)

API Name

hivellap_dfs_shared_mem_watcher_interrupt

Required

false

hive.llap.enable.grace.join.in.llap**Description**

Override if grace join should be allowed to run in llap for regular map joins. Dynamic partitioned joins will honor the hive.mapjoin.hybridgrace.hashtable property in LLAP

Related Name

hive.llap.enable.grace.join.in.llap

Default Value

false

API Name

hivellap_enable_grace_join_in_llap

Required

false

hive.execution.mode**Description**

Chooses whether query fragments will run in container or in llap

Related Name

hive.execution.mode

Default Value

llap

API Name

hivellap_execution_mode

Required

false

Number of executors per LLAP Daemon**Description**

The number of fragments that a single LLAP daemon will run concurrently. Usually, this will be the same as the number of available CPUs

Related Name

hive.llap.daemon.num.executors

Default Value

2

API Name

hivellap_executors_per_llap_daemon

Required

false

LLAP Daemon Heap Size in MB.**Description**

LLAP Daemon Heap Size in MB.

Related Name

llap_heap_size

Default Value

1280 MiB

API Name

hivellap_heap_per_llap_daemon

Required

false

hive.llap.io.enabled**Description**

Whether the LLAP IO layer is enabled.

Related Name

hive.llap.io.enabled

Default Value

true

API Name

hivellap_io_enabled

Required

false

hive.llap.io.memory.mode**Description**

LLAP IO memory usage; 'cache' (the default) uses data and metadata cache with a custom off-heap allocator, 'allocator' uses the custom allocator without the caches, 'none' doesn't use either (this mode may result in significant performance degradation)

Related Name

hive.llap.io.memory.mode

Default Value

cache

API Name

hivellap_io_memory_mode

Required

false

hive.llap.io.threadpool.size**Description**

Specify the number of threads to use for low-level IO thread pool.

Related Name

hive.llap.io.threadpool.size

Default Value

2

API Name

hivellap_io_threadpool_size

Required

false

hive.llap.io.use.lrfu**Description**

Whether ORC low-level cache should use LRFU cache policy instead of default (FIFO).

Related Name

hive.llap.io.use.lrfu

Default Value

true

API Name

hivellap_io_use_lrfu

Required

false

hive.llap.execution.mode**Description**

Chooses which fragments of a query will run in llap

Related Name

hive.llap.execution.mode

Default Value

only

API Name

hivellap_llap_execution_mode

Required

false

hive.llap.management.rpc.port**Description**

RPC port for LLAP daemon management service.

Related Name

hive.llap.management.rpc.port

Default Value

15004

API Name

hivellap_management_rpc_port

Required

false

hive.llap.mapjoin.memory.oversubscribe.factor**Description**

hive.llap.mapjoin.memory.oversubscribe.factor

Related Name

hive.llap.mapjoin.memory.oversubscribe.factor

Default Value

0.3

API Name

hivellap_mapjoin_memory_oversubscribe_factor

Required

false

Maximum Total Concurrent Queries**Description**

The maximum number of queries the Hive Interactive cluster will be able to handle concurrently.

Related Name

hive.server2.tez.sessions.per.default.queue

Default Value

1

API Name

hivellap_max_total_concurrent_queries

Required

false

Memory per Daemon

Description

Total memory used by individual LLAP daemons (YARN Container size). This includes memory for the cache as well as for the query execution. Should be larger than the sum of the Daemon cache size and the daemon heap size, and should leave some headroom after this (In most cases: cache size + heap size + headroom = Memory Per Daemon).

Related Name

hive.llap.daemon.yarn.container.mb

Default Value

2 GiB

API Name

hivellap_memory_per_llap_daemon

Required

false

hive.llap.object.cache.enabled

Description

Cache objects (plans, hashtables, etc) in llap.

Related Name

hive.llap.object.cache.enabled

Default Value

true

API Name

hivellap_object_cache_enabled

Required

false

Interactive Query Queue

Description

Choose the YARN queue in this cluster that is dedicated to interactive query.

Related Name

hive.llap.daemon.queue.name

Default Value

llap

API Name

hivellap_queue_name

Required

false

llap.shuffle.connection-keep-alive.enable

Description

llap.shuffle.connection-keep-alive.enable

Related Name

llap.shuffle.connection-keep-alive.enable

Default Value

true

API Name

hivellap_shuffle_connection_keep_alive_enable

Required

false

llap.shuffle.connection-keep-alive.timeout**Description**

llap.shuffle.connection-keep-alive.timeout

Related Name

llap.shuffle.connection-keep-alive.timeout

Default Value

1 minute(s)

API Name

hivellap_shuffle_connection_keep_alive_timeout

Required

false

Turn SSD Cache On?**Description**

Turn SSD Cache On?

Related Name

hive.llap.io allocator.mmap

Default Value

false

API Name

hivellap_ssd_cache_on

Required

false

hive.llap.task.scheduler.locality.delay**Description**

Amount of time to wait before allocating a request which contains location information, to a location other than the ones requested. Set to -1 for an infinite delay, 0 for no delay.

Related Name

hive.llap.task.scheduler.locality.delay

Default Value

1

API Name

hivellap_task_scheduler_locality_delay

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: LLAP Proxy Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LLAP Proxy Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_log_dir

Required

true

Suppress Parameter Validation: Metrics Sample File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Sample File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_metrics_sample_file_location

Required

true

Suppress Parameter Validation: hive.llap.daemon.logger**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the hive.llap.daemon.logger parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hivellap_daemon_logger

Required

true

Suppress Parameter Validation: LLAP Daemon Java Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LLAP Daemon Java Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hivellap_daemon_opts

Required

true

Suppress Parameter Validation: hive.execution.mode**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the hive.execution.mode parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hivellap_execution_mode

Required

true

Suppress Parameter Validation: hive.llap.io.memory.mode**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the hive.llap.io.memory.mode parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hivellap_io_memory_mode

Required

true

Suppress Parameter Validation: hive.llap.execution.mode**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the hive.llap.execution.mode parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hivellap_llap_execution_mode

Required

true

Suppress Parameter Validation: LLAP Proxy Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LLAP Proxy Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hivellap_llaproxy_config_safety_valve

Required

true

Suppress Parameter Validation: Interactive Query Queue**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Interactive Query Queue parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hivellap_queue_name

Required

true

Suppress Parameter Validation: LLAP Proxy Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LLAP Proxy Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_llaproxy_role_env_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_llapproxy_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_hive_llap_llapprox_file_descriptor`**Required**`true`**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_hive_llap_llapprox_heap_dump_directory_free_space`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_hive_llap_llapprox_host_health`**Required**`true`**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_hive_llap_llapprox_log_directory_free_space`**Required**`true`

Suppress Health Test: Pause Duration**Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_llapproxy_pause_duration

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_llapproxy_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_llap_llapproxy_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hive_llap_llapproxy_unexpected_exits

Required

true

Suppress Health Test: LLAP Daemons Ready Check**Description**

Whether to suppress the results of the LLAP Daemons Ready Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_llapd_ready_status

Required

true

Service-Wide**Advanced****Hive Auxiliary JARs Directory****Description**

Directory containing auxiliary JARs used by Hive. This should be a directory location and not a classpath containing one or more JARs. This directory must be created and managed manually on hosts that run the Hive Metastore Server, HiveServer2, or the Hive CLI. The directory location is set in the environment as HIVE_AUX_JARS_PATH and will generally override the hive.aux.jars.path property set in XML files, even if hive.aux.jars.path is set in an advanced configuration snippet.

Related Name**Default Value****API Name**

hive_aux_jars_path_dir

Required

false

Bypass Hive Metastore Server**Description**

Instead of talking to Hive Metastore Server for Metastore information, Hive clients will talk directly to the Metastore database.

Related Name**Default Value**

false

API Name

hive_bypass_metastore_server

Required

false

Aborted Transaction Threshold**Description**

Number of aborted transactions involving a particular table or partition before major compaction is initiated.

Related Name

hive.compactor.abortedtxn.threshold

Default Value

1000

API Name

hive_compactor_abortedtxn_threshold

Required

true

Number of Threads Used by Compactor**Description**

Number of compactor worker threads to run on this metastore instance. Can be different values on different Metastore instances.

Related Name

hive.compactor.worker.threads

Default Value

5

API Name

hive_compactor_worker_threads

Required

true

Hive Service Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

For advanced use only, a string to be inserted into core-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hive_core_site_safety_valve

Required

false

Create Tables as Full ACID**Description**

Whether the eligible tables should be created as full ACID by default. Does not apply to external tables, the ones using storage handlers, etc.

Related Name

hive.create.as.acid

Default Value

true

API Name

hive_create_as_acid

Required

false

Create Tables as ACID Insert Only**Description**

Whether the eligible tables should be created as ACID insert-only by default. Does not apply to external tables, the ones using storage handlers, etc.

Related Name

hive.create.as.insert.only

Default Value

true

API Name

hive_create_as_insert_only

Required

false

Hive Copy Large File Size**Description**

Smaller than this size, Hive uses a single-threaded copy; larger than this size, Hive uses DistCp.

Related Name

hive.exec.copyfile.maxsize

Default Value

32 MiB

API Name

hive_exec_copyfile_maxsize

Required

false

Base Directory for Hive Proto Hook**Description**

The directory where hive proto hooks should write the events, should generally be location of query_data table under sys.db database.

Related Name

hive.hook.proto.base-directory

Default Value

/warehouse/tablespace/managed/hive/sys.db/query_data/

API Name

hive_hook_proto_base_directory

Required

false

Hive LLAP Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

HIVE_LLAP_service_env_safety_valve

Required

false

Metastore Transactional Listener List**Description**

A comma separated list of Java classes that implement the org.apache.hadoop.hive.metastore.MetaStoreEventListener interface. Both the metastore event and corresponding listener method will be invoked in the same JDO transaction.

Related Name

hive.metastore.transactional.event.listeners

Default Value

org.apache.hive.hcatalog.listener.DbNotificationListener

API Name

hive_metastore_transactional_event_listeners

Required

false

Hive Replication Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into the environment of Hive replication jobs.

Related Name**Default Value****API Name**

hive_replication_env_safety_valve

Required

false

Hive Service Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only, a string to be inserted into hive-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value**

API Name`hive_service_config_safety_valve`**Required**`false`**Hive Replication Advanced Configuration Snippet (Safety Valve) for hive-site.xml****Description**

For advanced use only, a string to be inserted into hive-site.xml. Applies to all Hive Replication jobs.

Related Name**Default Value****API Name**`hive_service_replication_config_safety_valve`**Required**`false`**Use Locking****Description**

Support concurrency and use locks, needed for Transactions. Requires Zookeeper.

Related Name`hive.support.concurrency`**Default Value**`true`**API Name**`hive_support_concurrency`**Required**`false`**Transaction Manager****Description**

HiveTxnManager implementation used for managing transactions.

Related Name`hive.txn.manager`**Default Value**`org.apache.hadoop.hive.ql.lockmgr.DbTxnManager`**API Name**`hive_txn_manager`**Required**`true`**Transaction Maximum Open Batch****Description**

Maximum number of transactions that can be fetched in one call to `open_txns()`. Increasing this will decrease the number of delta files created when streaming data into Hive. But it will also increase the number of open transactions at any given time, possibly impacting read performance.

Related Name

hive.txn.max.open.batch

Default Value

1000

API Name

hive_txn_max_open_batch

Required

true

Transaction Strict Locking Mode**Description**

In strict locking non-ACID resources use standard R/W lock semantics.

Related Name

hive.txn.strict.locking.mode

Default Value

false

API Name

hive_txn_strict_locking_mode

Required

false

Transaction Timeout**Description**

Time after which transactions are declared aborted if the client has not sent a heartbeat.

Related Name

hive.txn.timeout

Default Value

5 minute(s)

API Name

hive_txn_timeout

Required

true

Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties**Description**

For advanced use only, a string to be inserted into the client configuration for navigator.client.properties.

Related Name**Default Value****API Name**

navigator_client_config_safety_valve

Required

false

Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties**Description**

For advanced use only, a string to be inserted into the client configuration for navigator.lineage.client.properties.

Related Name**Default Value****API Name**

navigator_lineage_client_config_safety_valve

Required

false

System Group**Description**

The group that this service's processes should run as.

Related Name**Default Value**

hive

API Name

process_groupname

Required

true

System User**Description**

The user that this service's processes should run as.

Related Name**Default Value**

hive

API Name

process_username

Required

true

Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-audit.xml**Description**

For advanced use only, a string to be inserted into ranger-hive-audit.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_audit_safety_valve

Required

false

Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-security.xml

Description

For advanced use only, a string to be inserted into ranger-hive-security.xml. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

ranger_security_safety_valve

Required

false

Cloudera Navigator

Enable Audit Collection

Description

Enable collection of audit events from the service's roles.

Related Name

navigator.audit.enabled

Default Value

true

API Name

navigator_audit_enabled

Required

false

Audit Event Filter

Description

Event filters are defined in a JSON object like the following: { "defaultAction": ("accept", "discard"), "rules": [{ "action": ("accept", "discard"), "fields": [{ "name": "fieldName", "match": "regex" }] }] } A filter has a default action and a list of rules, in order of precedence. Each rule defines an action, and a list of fields to match against the audit event. A rule is "accepted" if all the listed field entries match the audit event. At that point, the action declared by the rule is taken. If no rules match the event, the default action is taken. Actions default to "accept" if not defined in the JSON object. The following is the list of fields that can be filtered for Hive events:

- userName: the user performing the action.
- ipAddress: the IP from where the request originated.
- operation: the Hive operation being performed.
- databaseName: the databaseName for the operation.
- tableName: the tableName for the operation.

The default Hive audit event filter discards HDFS directory events generated by Hive jobs that reference the /tmp directory.

Related Name

navigator.event.filter

Default Value

comment: [The default Hive audit event filter discards HDFS directory events , generated by Hive jobs that reference the /tmp directory.], defaultAction: accept, rules: [action: discard, fields:

```
[ name: operation, match: QUERY , name: objectType, match: DFS_DIR , name: resourcePath,
match: /tmp/hive-(?:.+)?/hive_(?:.+)?/-mr-.* ] ]
```

API Name

navigator_audit_event_filter

Required

false

Audit Queue Policy**Description**

Action to take when the audit event queue is full. Drop the event or shutdown the affected process.

Related Name

navigator.batch.queue_policy

Default Value

DROP

API Name

navigator_audit_queue_policy

Required

false

Audit Event Tracker**Description**

Configures the rules for event tracking and coalescing. This feature is used to define equivalency between different audit events. When events match, according to a set of configurable parameters, only one entry in the audit list is generated for all the matching events. Tracking works by keeping a reference to events when they first appear, and comparing other incoming events against the "tracked" events according to the rules defined here. Event trackers are defined in a JSON object like the following: { "timeToLive" : [integer], "fields" : [{ "type" : [string], "name" : [string] }] } Where:

- timeToLive: maximum amount of time an event will be tracked, in milliseconds. Must be provided. This defines how long, since it's first seen, an event will be tracked. A value of 0 disables tracking.
- fields: list of fields to compare when matching events against tracked events.

Each field has an evaluator type associated with it. The evaluator defines how the field data is to be compared. The following evaluators are available:

- value: uses the field value for comparison.
- userName: treats the field value as a userName, and ignores any host-specific data. This is useful for environment using Kerberos, so that only the principal name and realm are compared.

The following is the list of fields that can be used to compare Hive events:

- operation: the Hive operation being performed.
- username: the user performing the action.
- ipAddress: the IP from where the request originated.
- allowed: whether the operation was allowed or denied.
- databaseName: the database affected by the operation.
- tableName: the table or view affected by the operation.
- objectType: the type of object affected by the operation.
- resourcePath: the path of the resource affected by the operation.

Related Name

navigator_event_tracker
Default Value
API Name
navigator_event_tracker
Required
false

Enable Lineage Collection

Description
Enable collection of lineage from the service's roles.
Related Name
Default Value
true
API Name
navigator_lineage_enabled
Required
false

Logs

Audit Log Directory

Description
Path to the directory where audit logs will be written. The directory will be created if it doesn't exist.
Related Name
audit_event_log_dir
Default Value
/var/log/hive/audit
API Name
audit_event_log_dir
Required
false

Hive Lineage Log Directory

Description
The directory in which Hive lineage log files are written.
Related Name
lineage_event_log_dir
Default Value
/var/log/hive/lineage
API Name
lineage_event_log_dir
Required
true

Hive Maximum Lineage Log File Size

Description

The maximum size, in megabytes, per log file for Hive lineage logs. Typically used by log4j or logback.

Related Name

max_lineage_log_file_size

Default Value

100 MiB

API Name

max_lineage_log_file_size

Required

false

Maximum Audit Log File Size

Description

Maximum size of audit log file in MB before it is rolled over.

Related Name

navigator.audit_log_max_file_size

Default Value

100 MiB

API Name

navigator_audit_log_max_file_size

Required

false

Number of Audit Logs to Retain

Description

Maximum number of rolled-over audit logs to retain. The logs are not deleted if they contain audit events that have not yet been propagated to the Audit Server.

Related Name

navigator.client.max_num_audit_log

Default Value

10

API Name

navigator_client_max_num_audit_log

Required

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Healthy HiveServer2 Monitoring Thresholds**Description**

The health test thresholds of the overall HiveServer2 health. The check returns "Concerning" health if the percentage of "Healthy" HiveServer2s falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" HiveServer2s falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

hive_llap_hiveserver2s_healthy_thresholds

Required

false

LLAP Proxy Role Health Test**Description**

When computing the overall HIVE_LLAP health, consider LLAP Proxy's health

Related Name**Default Value**

true

API Name

hive_llap_llapproxy_health_enabled

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`service_triggers`

Required

true

Service Monitor Client Config Overrides**Description**

For advanced use only, a list of configuration properties that will be used by the Service Monitor instead of the current client configuration for the service.

Related Name**Default Value**

`<property> <name>hive.metastore.client.socket.timeout</name> <value>60</value> </property>`

API Name

`smon_client_config_overrides`

Required

false

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other

HBase Service

Description

Name of the HBase service that this Hive service instance depends on.

Related Name

Default Value

API Name

hbase_service

Required

false

HDFS Service

Description

Name of the HDFS service that this Hive service instance depends on

Hive Bytes Per Reducer

Description

Size per reducer. If the input size is 10GiB and this is set to 1GiB, Hive will use 10 reducers.

Related Name

hive.exec.reducers.bytes.per.reducer

Default Value

64 MiB

API Name

hive_bytes_per_reducer

Required

false

Default File Format

Description

Default file format for CREATE TABLE statement.

Related Name

hive.default.fileformat

Default Value

TextFile

API Name

hive_default_fileformat

Required

true

Default File Format for Managed Tables**Description**

Default file format for CREATE TABLE statement applied to managed tables only. External tables will be created with default file format. Leaving this null will result in using the default file format for all tables.

Related Name

hive.default.fileformat.managed

Default Value

ORC

API Name

hive_default_fileformat_managed

Required

false

Hive Max Reducers**Description**

Max number of reducers to use. If the configuration parameter Hive Reduce Tasks is negative, Hive will limit the number of reducers to the value of this parameter.

Related Name

hive.exec.reducers.max

Default Value

1009

API Name

hive_max_reducers

Required

false

Hive Reduce Tasks**Description**

Default number of reduce tasks per job. Usually set to a prime number close to the number of available hosts. Ignored when mapred.job.tracker is "local". Hadoop sets this to 1 by default, while Hive uses -1 as the default. When set to -1, Hive will automatically determine an appropriate number of reducers for each job.

Related Name

mapred.reduce.tasks

Default Value

-1

API Name

hive_reduce_tasks

Required

false

Set User and Group Information**Description**

In unsecure mode, setting this property to true will cause the Metastore Server to execute DFS operations using the client's reported user and group permissions. Cloudera Manager will set this for all clients and servers.

Related Name

hive.metastore.execute.setugi

Default Value

true

API Name

hive_set_ugi

Required

true

ZooKeeper Service**Description**

Name of the ZooKeeper service that this Hive service instance depends on.

Related Name**Default Value****API Name**

zookeeper_service

Required

false

Proxy**Hive Metastore Access Control and Proxy User Groups Override****Description**

This configuration overrides the value set for Hive Proxy User Groups configuration in HDFS service for use by Hive Metastore Server. Specify a comma-delimited list of groups that you want to allow access to Hive Metastore metadata and allow the Hive user to impersonate. A value of '*' allows all groups. The default value of empty inherits the value set for Hive Proxy User Groups configuration in the HDFS service.

Related Name

hadoop.proxyuser.hive.groups

Default Value**API Name**

hive_proxy_user_groups_list

Required

false

Replication

Replica functions root directory

Description

Root directory on the replica warehouse where the repl sub-system will store jars from the primary warehouse

Related Name

hive.repl.replica.functions.root.dir

Default Value**API Name**

hive_repl_replica_functions_root_dir

Required

false

Security

Enable LDAP Authentication for HiveServer2

Description

When checked, LDAP-based authentication for users is enabled.

Related Name**Default Value**

false

API Name

hiveserver2_enable_ldap_auth

Required

false

Enable TLS/SSL for HiveServer2

Description

Encrypt communication between clients and HiveServer2 using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hive.server2.use.SSL

Default Value

false

API Name

hiveserver2_enable_ssl

Required

false

HiveServer2 TLS/SSL Server JKS Keystore File Password

Description

The password for the HiveServer2 JKS keystore file.

Related Name

hive.server2.keystore.password

Default Value**API Name**

hiveserver2_keystore_password

Required

false

HiveServer2 TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when HiveServer2 is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

hive.server2.keystore.path

Default Value**API Name**

hiveserver2_keystore_path

Required

false

LDAP BaseDN**Description**

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,*this parameter*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

Related Name

hive.server2.authentication.ldap.baseDN

Default Value**API Name**

hiveserver2_ldap_basedn

Required

false

Active Directory Domain**Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name

hive.server2.authentication.ldap.Domain

Default Value**API Name**

hiveserver2_ldap_domain

Required

false

LDAP URL

Description

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name

hive.server2.authentication.ldap.url

Default Value**API Name**

hiveserver2_ldap_uri

Required

false

HiveServer2 TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HiveServer2 might connect to. This is used when HiveServer2 is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**

hiveserver2_truststore_file

Required

false

HiveServer2 TLS/SSL Client Trust Store Password

Description

The password for the HiveServer2 TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

hiveserver2_truststore_password

Required

false

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

hive

API Name

kerberos_princ_name

Required

true

Ranger DFS Audit Path**Description**

The DFS path on which Ranger audits are written. The special placeholder `'${ranger_base_audit_url}'` should be used as the prefix, in order to use the centralized location defined in the Ranger service.

Related Name

xasecure.audit.destination.hdfs.dir

Default Value`$ranger_base_audit_url/hive`**API Name**

ranger_audit_hdfs_dir

Required

false

Ranger Audit DFS Spool Dir**Description**

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value`/var/log/hive/audit/hdfs/spool`**API Name**

ranger_audit_hdfs_spool_dir

Required

false

Ranger Audit Solr Spool Dir**Description**

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

API Name

role_config_suppression_hiveserver2_load_balancer

Required

true

Suppress Configuration Validator: Exclude Vectorized Input Formats**Description**

Whether to suppress configuration warnings produced by the Exclude Vectorized Input Formats configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_vectorized_input_format_excludes

Required

true

Suppress Configuration Validator: HiveServer2 WebUI Port**Description**

Whether to suppress configuration warnings produced by the HiveServer2 WebUI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_webui_port

Required

true

Suppress Configuration Validator: HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_core_site_safety_valve

Required

true

Suppress Configuration Validator: HiveServer2 Port**Description**

Whether to suppress configuration warnings produced by the HiveServer2 Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_thrift_address_port

Required

true

Suppress Configuration Validator: LLAP Proxy Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the LLAP Proxy Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_llapproxy_role_env_safety_valve

Required

true

Suppress Configuration Validator: HiveServer2 Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the HiveServer2 Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: tez.history.logging.taskattempt-filters**Description**

Whether to suppress configuration warnings produced by the tez.history.logging.taskattempt-filters configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_tez_interactive_history_logging_taskattempt_filters

Required

true

Suppress Parameter Validation: Audit Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Log Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_audit_event_log_dir

Required

true

Suppress Configuration Validator: Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Hive Auxiliary JARs Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Auxiliary JARs Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_aux_jars_path_dir

Required

true

Suppress Configuration Validator: Client TLS/SSL In Use With LDAP Authentication Validator**Description**

Whether to suppress configuration warnings produced by the Client TLS/SSL In Use With LDAP Authentication Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_client_ssl_recommended_with_ldap_auth_validator

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_core_site_safety_valve

Required

true

Suppress Parameter Validation: Default File Format for Managed Tables**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default File Format for Managed Tables parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_default_fileformat_managed

Required

true

Suppress Parameter Validation: Base Directory for Hive Proto Hook**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Base Directory for Hive Proto Hook parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_hook_proto_base_directory

Required

true

Suppress Parameter Validation: Hive LLAP Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive LLAP Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_llap_service_env_safety_valve

Required

true

Suppress Parameter Validation: Metastore Transactional Listener List**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metastore Transactional Listener List parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_metastore_transactional_event_listeners

Required

true

Suppress Configuration Validator: Hive Proxy Groups Validator**Description**

Whether to suppress configuration warnings produced by the Hive Proxy Groups Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_proxy_groups_validator

Required

true

Suppress Parameter Validation: Hive Metastore Access Control and Proxy User Groups Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore Access Control and Proxy User Groups Override parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_proxy_user_groups_list

Required

true

Suppress Configuration Validator: Hive Ranger Validator**Description**

Whether to suppress configuration warnings produced by the Hive Ranger Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_ranger_validator

Required

true

Suppress Parameter Validation: Replica functions root directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replica functions root directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_repl_replica_functions_root_dir

Required

true

Suppress Parameter Validation: Hive Replication Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Replication Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_replication_env_safety_valve

Required

true

Suppress Configuration Validator: Hive Sentry Validator**Description**

Whether to suppress configuration warnings produced by the Hive Sentry Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_sentry_validator

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_service_config_safety_valve

Required

true

Suppress Parameter Validation: Hive Replication Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Replication Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_service_replication_config_safety_valve

Required

true

Suppress Parameter Validation: LLAP app name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LLAP app name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hivellap_app_name

Required

true

Suppress Parameter Validation: hive.llap.daemon.service.hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the hive.llap.daemon.service.hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hivellap_daemon_service_hosts

Required

true

Suppress Configuration Validator: HiveServer2 Count Validator**Description**

Whether to suppress configuration warnings produced by the HiveServer2 Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_count_validator

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_keystore_password

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_keystore_path

Required

true

Suppress Parameter Validation: LDAP BaseDN**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_ldap_basedn

Required

true

Suppress Parameter Validation: Active Directory Domain**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_ldap_domain

Required

true

Suppress Parameter Validation: LDAP URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_ldap_uri

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_truststore_file

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_truststore_password

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Hive Lineage Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Lineage Log Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_lineage_event_log_dir

Required

true

Suppress Configuration Validator: LLAP Proxy Count Validator**Description**

Whether to suppress configuration warnings produced by the LLAP Proxy Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_llaproxy_count_validator

Required

true

Suppress Parameter Validation: Audit Event Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Filter parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_audit_event_filter

Required

true

Suppress Parameter Validation: Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_client_config_safety_valve

Required

true

Suppress Parameter Validation: Audit Event Tracker

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Tracker parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_event_tracker

Required

true

Suppress Parameter Validation: Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_lineage_client_config_safety_valve

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger DFS Audit Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_dir

Required

true

Suppress Parameter Validation: Ranger Audit DFS Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-audit.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-audit.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_safety_valve

Required

true

Suppress Parameter Validation: Ranger Audit Solr Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Ranger Policy Cache Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_policy_cache_dir

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-security.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_security_safety_valve

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Client Config Overrides**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Client Config Overrides parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_client_config_overrides

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: LLAP Proxy Health

Description

Whether to suppress the results of the LLAP Proxy Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hive_llap_hive_llap_llaproxy_health

Required

true

Suppress Health Test: HiveServer2 Health

Description

Whether to suppress the results of the HiveServer2 Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

```
service_health_suppression_hive_llap_hiveserver2s_healthy
```

Required

```
true
```

Hive on Tez Properties in Cloudera Runtime 7.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name**Default Value**

```
/etc/hive
```

API Name

```
client_config_root_dir
```

Required

```
true
```

Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

For advanced use only, a string to be inserted into the client configuration for hive-site.xml.

Related Name**Default Value****API Name**

```
hive_client_config_safety_valve
```

Required

```
false
```

Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh

Description

For advanced use only, key-value pairs (one on each line) to be inserted into the client configuration for hive-env.sh

Related Name**Default Value****API Name**

```
hive_client_env_safety_valve
```

Required

```
false
```

Client Java Configuration Options

Description

These are Java command-line arguments. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name**Default Value**

-Djava.net.preferIPv4Stack=true

API Name

hive_client_java_opts

Required

false

Hive Metastore Connection Timeout

Description

Timeout for requests to the Hive Metastore Server. Consider increasing this if you have tables with a lot of metadata and see timeout errors. Used by most Hive Metastore clients such as Hive CLI and HiveServer2, but not by Impala. Impala has a separately configured timeout.

Related Name

hive.metastore.client.socket.timeout

Default Value

5 minute(s)

API Name

hive_metastore_timeout

Required

false

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Logs

Gateway Logging Threshold

Description

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

92

API Name

client_config_priority

Required

true

Resource Management**Client Java Heap Size in Bytes****Description**

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

2 GiB

API Name

hive_client_java_heapsize

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_config_safety_valve

Required

true

Suppress Parameter Validation: Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_env_safety_valve

Required

true

Suppress Parameter Validation: Client Java Configuration Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Client Java Configuration Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_java_opts

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

HiveServer2**Advanced****HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml****Description**

For advanced use only. A string to be inserted into hive-site.xml for this role only.

Related Name**Default Value****API Name**

hive_hs2_config_safety_valve

Required

false

HiveServer2 Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

hive_hs2_env_safety_valve

Required

false

Hive Metastore Connection Retries Count

Description

Number of retries while opening a connection to the Hive Metastore Server

Related Name

hive.metastore.connect.retries

Default Value

10

API Name

hive_metastore_connection_retries

Required

false

Enable Metrics Subsystem

Description

Controls whether the Hive metrics subsystem is enabled for the role.

Related Name

hive.server2.metrics.enabled

Default Value

true

API Name

hive_metrics_enabled

Required

false

Metrics Sample File Location

Description

The full path to a file with a sample of metrics exposed by the role. The sample is updated at the frequency configured by Metrics Sample File Logging Frequency. By default, the sample file is logged to a directory under the role log directory, e.g., /var/log/hive/metrics-hivemetastore/metrics.log. The setting only has an effect if "Enable Metrics Subsystem" is set to true.

Related Name

hive.service.metrics.file.location

Default Value**API Name**

hive_metrics_sample_file_location

Required

false

Metrics Sample File Logging Frequency**Description**

The frequency at which the metrics are logged to the sample file. The setting only has an effect if "Enable Metrics Subsystem" is set to true.

Related Name

hive.service.metrics.file.frequency

Default Value

30 second(s)

API Name

hive_metrics_sample_logging_frequency

Required

false

Allow User Substitution**Description**

Allow alternate user to be specified as part of HiveServer2 open connection request.

Related Name

hive.server2.allow.user.substitution

Default Value

true

API Name

hive_server2_allow_user_substitution

Required

false

HiveServer2 Transport Mode**Description**

The server transport mode.

Related Name

hive.server2.transport.mode

Default Value

binary

API Name

hive_server2_transport_mode

Required

false

Hive Downloaded Resources Directory**Description**

Local directory where Hive stores jars downloaded for remote file systems (HDFS). If not specified, Hive uses a default location.

Related Name

hive.downloaded.resources.dir

Default Value**API Name**

hiveserver2_downloaded_resources_dir

Required

false

Enable Explain Logging**Description**

When enabled, HiveServer2 logs EXPLAIN EXTENDED output for every query at INFO log4j level.

Related Name

hive.log.explain.output

Default Value

false

API Name

hiveserver2_enable_explain_output

Required

false

Hive Local Scratch Directory**Description**

Local Directory where Hive stores jars and data when performing a MapJoin optimization. If not specified, Hive uses a default location.

Related Name

hive.exec.local.scratchdir

Default Value**API Name**

hiveserver2_exec_local_scratchdir

Required

false

Hive HDFS Scratch Directory**Description**

Directory in HDFS where Hive writes intermediate data between MapReduce jobs. If not specified, Hive uses a default location.

Related Name

hive.exec.scratchdir

Default Value**API Name**

hiveserver2_exec_scratchdir

Required

false

Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)

Description

An XML string that will be inserted verbatim into the Fair Scheduler allocations file. This configuration only has effect in CDH 5.8 or later.

Related Name**Default Value****API Name**

hiveserver2_fair_scheduler_safety_valve

Required

false

Idle Operation Timeout

Description

Operation will be closed when not accessed for this duration of time, in milliseconds; disable by setting to zero. For a positive value, checked for operations in terminal state only (FINISHED, CANCELED, CLOSED, ERROR). For a negative value, checked for all of the operations regardless of state.

Related Name

hive.server2.idle.operation.timeout

Default Value

6 hour(s)

API Name

hiveserver2_idle_operation_timeout

Required

false

Idle Session Timeout

Description

Session will be closed when not accessed for this duration of time, in milliseconds; disable by setting to zero or a negative value.

Related Name

hive.server2.idle.session.timeout

Default Value

1 day(s)

API Name

hiveserver2_idle_session_timeout

Required

false

Exclude Live Operations From Session Idle Time

Description

Session will be considered to be idle only if there is no activity, and there is no pending operation. This setting takes effect only if session idle timeout (hive.server2.idle.session.timeout) and checking (hive.server2.session.check.interval) are enabled.

Related Name

hive.server2.idle.session.check.operation

Default Value

true

API Name

hiveserver2_idle_session_timeout_check_operation

Required

false

Java Configuration Options for HiveServer2**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

hiveserver2_java_opts

Required

false

Maximum Query String Length for Show Locks**Description**

The maximum length allowed for the query string when the SHOW LOCKS EXTENDED command is executed. Important: The query string is truncated at the length set for this property. Setting this property to a large value puts pressure on ZooKeeper and might cause out-of-memory issues.

Related Name

hive.lock.query.string.max.length

Default Value

10000

API Name

hiveserver2_lock_query_string_max_length

Required

false

Max HiveServer2 Threads**Description**

Maximum number of worker threads in HiveServer2's thread pool

Related Name

hive.server2.thrift.max.worker.threads

Default Value

500

API Name

hiveserver2_max_threads

Required

true

Min HiveServer2 Threads**Description**

Minimum number of worker threads in HiveServer2's thread pool

Related Name

hive.server2.thrift.min.worker.threads

Default Value

5

API Name

hiveserver2_min_threads

Required

true

Session Check Interval**Description**

The check interval for session/operation timeout, in milliseconds, which can be disabled by setting to zero or a negative value.

Related Name

hive.server2.session.check.interval

Default Value

15 minute(s)

API Name

hiveserver2_session_check_interval

Required

false

HiveServer2 WebUI Max Threads**Description**

The max threads for the HiveServer2 WebUI.

Related Name

hive.server2.webui.max.threads

Default Value

50

API Name

hiveserver2_webui_max_threads

Required

false

HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value**

API Name

hs2_core_site_safety_valve

Required

false

HiveServer2 Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**HiveServer2 Log Directory****Description**

Directory where HiveServer2 will place its log files.

Related Name**Default Value**

/var/log/hive

API Name

hive_log_dir

Required

false

Enable HiveServer2 Operations Logging**Description**

When enabled, HiveServer2 will temporarily save logs associated with ongoing operations. This enables clients like beeline and Hue to request and display logs for a particular ongoing operation. Logs are removed upon completion of operation.

Related Name

hive.server2.logging.operation.enabled

Default Value

true

API Name

hive_server2_logging_operation_enabled

Required

false

HiveServer2 Operations Log Directory**Description**

Top level directory where operation logs are temporarily stored if Enable HiveServer2 Operations Logging is true. Logs are stored in session and operation level subdirectories under this location and are removed on completion of operation.

Related Name

hive.server2.logging.operation.log.location

Default Value

/var/log/hive/operation_logs

API Name

hive_server2_logging_operation_log_location

Required

false

HiveServer2 Logging Threshold

Description

The minimum log level for HiveServer2 logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

HiveServer2 Maximum Log File Backups

Description

The maximum number of rolled log files to keep for HiveServer2 logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

HiveServer2 Max Log Size

Description

The maximum size, in megabytes, per log file for HiveServer2 logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Hive Downloaded Resources Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Downloaded Resources Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

hive_on_tez_hs2_downloaded_resources_directory_free_space_absolute_thresholds

Required

false

Hive Downloaded Resources Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Downloaded Resources Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Hive Downloaded Resources Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

hive_on_tez_hs2_downloaded_resources_directory_free_space_percentage_thresholds

Required

false

Hive Local Scratch Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Local Scratch Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

hive_on_tez_hs2_exec_local_scratch_directory_free_space_absolute_thresholds

Required

false

Hive Local Scratch Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Hive Local Scratch Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Hive Local Scratch Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

hive_on_tez_hs2_exec_local_scratch_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

hiveserver2_fd_thresholds

Required

false

HiveServer2 Host Health Test

Description

When computing the overall HiveServer2 health, consider the host's health.

Related Name**Default Value**

true

API Name

hiveserver2_host_health_enabled

Required

false

Pause Duration Thresholds

Description

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

hiveserver2_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

hiveserver2_pause_duration_window

Required

false

HiveServer2 Process Health Test**Description**

Enables the health test that the HiveServer2's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

hiveserver2_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Restrict Cross Joins (Cartesian Products)****Description**

Whether to allow queries with cross joins. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.cartesian.product

Default Value

false

API Name

hive_restrict_cross_joins

Required

false

Restrict LOAD Queries Against Bucketed Tables**Description**

Whether to allow LOAD queries against bucketed tables. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.bucketing

Default Value

true

API Name

hive_restrict_load_bucketed_table

Required

false

Restrict Queries with ORDER BY but no LIMIT clause**Description**

Whether to allow queries with an ORDER BY clause, but no LIMIT clause. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.orderby.no.limit

Default Value

false

API Name

hive_restrict_orderby_with_no_limit

Required

false

Restrict Partitioned Table Scans with no Partitioned Column Filter**Description**

Whether to allow queries that scan a partitioned table but don't filter on the partition column. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.no.partition.filter

Default Value

false

API Name

hive_restrict_partitioned_scans_no_filter

Required

false

Restrict Unsafe Data Type Comparisons**Description**

Whether to allow queries that compare bigints to strings or doubles. If set to true, queries that contain this pattern throw a compile-time error.

Related Name

hive.strict.checks.type.safety

Default Value

true

API Name

hive_restrict_unsafe_comparison

Required

false

HiveServer2 Load Balancer**Description**

Address of the load balancer used for HiveServer2 roles, specified in host:port format. If port is not specified, the port used by HiveServer2 is used. Note: Changing this property regenerates Kerberos keytabs for all HiveServer2 roles.

Related Name**Default Value****API Name**

hiveserver2_load_balancer

Required

false

Performance**Enable Dynamic Partitions****Description**

Whether or not to allow dynamic partitions in DML/DDDL.

Related Name`hive.exec.dynamic.partition`**Default Value**`true`**API Name**`hive_exec_dynamic_partition`**Required**`false`**Hive Auto Convert Join Noconditional Size****Description**

If Hive auto convert join is on, and the sum of the size for n-1 of the tables/partitions for a n-way join is smaller than the specified size, the join is directly converted to a MapJoin (there is no conditional task).

Related Name`hive.auto.convert.join.noconditionaltask.size`**Default Value**`50 MiB`**API Name**`hiveserver2_auto_convert_join_noconditionaltask_size`**Required**`false`**Store Intermediate Data on Blobstore****Description**

When writing data to a table on a blobstore (such as S3), whether or not the blobstore should be used to store intermediate data during Hive query execution. Setting this to true can degrade performance for queries that spawn multiple MR / Spark jobs, but is useful for queries whose intermediate data cannot fit in the allocated HDFS cluster.

Related Name`hive.blobstore.use.blobstore.as.scratchdir`**Default Value**`false`**API Name**`hiveserver2_blobstore_use_blobstore_as_scratchdir`**Required**`false`**Enable Stats Optimization****Description**

Enable optimization that checks if a query can be answered using statistics. If so, answers the query using only statistics stored in metastore.

Related Name`hive.compute.query.using.stats`**Default Value**`true`

API Name

hiveserver2_compute_query_using_stats

Required

false

Enable Cost-Based Optimizer for Hive**Description**

Enabled the Calcite-based Cost-Based Optimizer for HiveServer2.

Related Name

hive.cbo.enable

Default Value

true

API Name

hiveserver2_enable_cbo

Required

false

Enable MapJoin Optimization**Description**

Enable optimization that converts common join into MapJoin based on input file size.

Related Name

hive.auto.convert.join

Default Value

true

API Name

hiveserver2_enable_mapjoin

Required

false

Fetch Task Query Conversion**Description**

Some select queries can be converted to a single FETCH task instead of a MapReduce task, minimizing latency. A value of none disables all conversion, minimal converts simple queries such as SELECT * and filter on partition columns, and more converts SELECT queries including FILTERS.

Related Name

hive.fetch.task.conversion

Default Value

more

API Name

hiveserver2_fetch_task_conversion

Required

false

Fetch Task Query Conversion Threshold

Description

Above this size, queries are converted to fetch tasks.

Related Name

hive.fetch.task.conversion.threshold

Default Value

1 GiB

API Name

hiveserver2_fetch_task_conversion_threshold

Required

false

Input Listing Max Threads

Description

Maximum number of threads that Hive uses to list input files. Increasing this value can improve performance when there are a lot of partitions being read, or when running on blobstores.

Related Name

hive.exec.input.listing.max.threads

Default Value

15

API Name

hiveserver2_input_listing_max_threads

Required

false

Maximum ReduceSink Top-K Memory Usage

Description

The maximum percentage of heap to be used for hash in ReduceSink operator for Top-K selection. 0 means the optimization is disabled. Accepted values are between 0 and 1.

Related Name

hive.limit.pushdown.memory.usage

Default Value

0.04

API Name

hiveserver2_limit_pushdown_memory_usage

Required

false

Load Dynamic Partitions Thread Count

Description

Number of threads used to load dynamically generated partitions. Loading requires renaming the file its final location, and updating some metadata about the new partition. Increasing this can improve performance when there are a lot of partitions dynamically generated.

Related Name

hive.load.dynamic.partitions.thread

Default Value

15

API Name

hiveserver2_load_dynamic_partitions_thread_count

Required

false

Enable Map-Side Aggregation**Description**

Enable map-side partial aggregation, which cause the mapper to generate fewer rows. This reduces the data to be sorted and distributed to reducers.

Related Name

hive.map.aggr

Default Value

true

API Name

hiveserver2_map_aggr

Required

false

Ratio of Memory Usage for Map-Side Aggregation**Description**

Portion of total memory used in map-side partial aggregation. When exceeded, the partially aggregated results will be flushed from the map task to the reducers.

Related Name

hive.map.aggr.hash.percentmemory

Default Value

0.5

API Name

hiveserver2_map_aggr_hash_memory_ratio

Required

false

Enable Merging Small Files - Map-Only Job**Description**

Merge small files at the end of a map-only job. When enabled, a map-only job is created to merge the files in the destination table/partitions.

Related Name

hive.merge.mapfiles

Default Value

true

API Name

hiveserver2_merge_mapfiles

Required

false

Enable Merging Small Files - Map-Reduce Job

Description

Merge small files at the end of a map-reduce job. When enabled, a map-only job is created to merge the files in the destination table/partitions.

Related Name

hive.merge.mapredfiles

Default Value

false

API Name

hiveserver2_merge_mapredfiles

Required

false

Desired File Size After Merging

Description

The desired file size after merging. This should be larger than hive.merge.smallfiles.avgsize.

Related Name

hive.merge.size.per.task

Default Value

256 MiB

API Name

hiveserver2_merge_size_per_task

Required

false

Small File Average Size Merge Threshold

Description

When the average output file size of a job is less than the value of this property, Hive will start an additional map-only job to merge the output files into bigger files. This is only done for map-only jobs if hive.merge.mapfiles is true, for map-reduce jobs if hive.merge.mapredfiles is true, and for Spark jobs if hive.merge.sparkfiles is true.

Related Name

hive.merge.smallfiles.avgsize

Default Value

16 MiB

API Name

hiveserver2_merge_smallfiles_avgsize

Required

false

MSCK Repair Batch Size

Description

Batch size for the msck repair command (recover partitions command). If the value is greater than zero, new partition information will be sent from HiveServer2 to the Metastore in batches, which can potentially improve memory usage in the Metastore and avoid client read timeout exceptions. If this value is 0, all partition information will be sent in a single Thrift call.

Related Name

hive.msck.repair.batch.size

Default Value

0

API Name

hiveserver2_msck_repair_batch_size

Required

false

Move Files Thread Count**Description**

The number of threads used by HiveServer2 to move data from the staging directory to another location (typically to the final table location). A separate thread pool of workers of this size is used for each query, which means this configuration can be set on a per-query basis too.

Related Name

hive.mv.files.thread

Default Value

15

API Name

hiveserver2_mv_files_thread

Required

false

Hive Optimize Sorted Merge Bucket Join**Description**

Whether to try sorted merge bucket (SMB) join.

Related Name

hive.optimize.bucketmapjoin.sortedmerge

Default Value

true

API Name

hiveserver2_optimize_bucketmapjoin_sortedmerge

Required

false

Enable Automatic Use of Indexes**Description**

Whether to use the indexing optimization for all queries.

Related Name

hive.optimize.index.filter

Default Value

true

API Name

hiveserver2_optimize_index_filter

Required

false

Enable ReduceDeDuplication Optimization

Description

Remove extra map-reduce jobs if the data is already clustered by the same key, eliminating the need to repartition the dataset again.

Related Name

hive.optimize.reducededuplication

Default Value

true

API Name

hiveserver2_optimize_reducededuplication

Required

false

Minimum Reducers for ReduceDeDuplication Optimization

Description

When the number of ReduceSink operators after merging is less than this number, the ReduceDeDuplication optimization will be disabled.

Related Name

hive.optimize.reducededuplication.min.reducer

Default Value

4

API Name

hiveserver2_optimize_reducededuplication_min_reducer

Required

false

Enable Sorted Dynamic Partition Optimizer

Description

When dynamic partition is enabled, reducers keep only one record writer at all times, which lowers the memory pressure on reducers.

Related Name

hive.optimize.sort.dynamic.partition

Default Value

false

API Name

hiveserver2_optimize_sort_dynamic_partition

Required

false

Enable Parallel Compilation of Queries

Description

When activated, individual sessions can compile queries simultaneously. Within each session, queries compile one at a time.

Related Name

hive.driver.parallel.compilation

Default Value

true

API Name

hiveserver2_parallel_compilation_enabled

Required

false

Query Compilation Degree of Parallelism**Description**

Determines the maximum number of queries that can compile in parallel on a HiveServer2 instance. Use negative values or zero to set unlimited parallelism. Use a positive value to set the number of queries that can compile simultaneously. This setting can be fine-tuned based on the current cluster load. Monitor cluster load using the 'waiting_compile_ops' metric and the 'Waiting Compile Operations' graph in the HiveServer2 graph library.

Related Name

hive.driver.parallel.compilation.global.limit

Default Value

3

API Name

hiveserver2_parallel_compilation_global_limit

Required

false

Hive SMB Join Cache Rows**Description**

The number of rows with the same key value to be cached in memory per SMB-joined table.

Related Name

hive.smbjoin.cache.rows

Default Value

10000

API Name

hiveserver2_smbjoin_cache_rows

Required

false

Load Column Statistics**Description**

Whether column stats for a table are fetched during explain.

Related Name

hive.stats.fetch.column.stats

Default Value

true

API Name

hiveserver2_stats_fetch_column_stats

Required

false

Vectorized Adaptor Usage Mode**Description**

Vectorized Adaptor Usage Mode specifies the extent to which the vectorization engine tries to vectorize UDFs that do not have native vectorized versions available. Selecting the "none" option specifies that only queries using native vectorized UDFs are vectorized. Selecting the "chosen" option specifies that Hive chooses to vectorize a subset of the UDFs based on performance benefits using the Vectorized Adaptor. Selecting the "all" option specifies that the Vectorized Adaptor be used for all UDFs even when native vectorized versions are not available.

Related Name

hive.vectorized.adaptor.usage.mode

Default Value

chosen

API Name

hiveserver2_vectorized_adaptor_usage_mode

Required

false

Enable Vectorization Optimization**Description**

Enable optimization that vectorizes query execution by streamlining operations by processing a block of 1024 rows at a time.

Related Name

hive.vectorized.execution.enabled

Default Value

true

API Name

hiveserver2_vectorized_enabled

Required

false

Vectorized GroupBy Check Interval**Description**

In vectorized group-by, the number of row entries added to the hash table before re-checking average variable size for memory usage estimation.

Related Name

hive.vectorized.groupby.checkinterval

Default Value

4096

API Name

hiveserver2_vectorized_groupby_checkinterval

Required

false

Vectorized GroupBy Flush Ratio

Description

Ratio between 0.0 and 1.0 of entries in the vectorized group-by aggregation hash that is flushed when the memory threshold is exceeded.

Related Name

hive.vectorized.groupby.flush.percent

Default Value

0.1

API Name

hiveserver2_vectorized_groupby_flush_ratio

Required

false

Enable Vectorized Input Format

Description

If enabled, Hive uses the native vectorized input format for vectorized query execution when it is available.

Related Name

hive.vectorized.use.vectorized.input.format

Default Value

true

API Name

hiveserver2_vectorized_input_format_enabled

Required

false

Exclude Vectorized Input Formats

Description

Specifies a list of file input format classnames to exclude from vectorized query execution using the vectorized input format. Note that vectorized execution can still occur for an excluded input format based on whether row SerDes or vector SerDes are enabled.

Related Name

hive.vectorized.input.format.excludes

Default Value**API Name**

hiveserver2_vectorized_input_format_excludes

Required

false

Enable Reduce-Side Vectorization

Description

Whether to vectorize the reduce side of query execution.

Related Name

hive.vectorized.execution.reduce.enabled

Default Value

true

API Name

hiveserver2_vectorized_reduce_enabled

Required

false

Enable Overflow-checked Vector Expressions

Description

To enhance performance, vectorized expressions operate using wide data types like long and double. When wide data types are used, numeric overflows can occur during expression evaluation in a different manner for vectorized expressions than they do for non-vectorized expressions. Consequently, different query results can be returned for vectorized expressions compared to results returned for non-vectorized expressions. When this configuration is enabled, Hive uses vectorized expressions that handle numeric overflows in the same way as non-vectorized expressions are handled.

Related Name

hive.vectorized.use.checked.expressions

Default Value

true

API Name

hiveserver2_vectorized_use_checked_expressions

Required

false

Vectorize Using Vector SerDes

Description

If enabled, Hive uses built-in vector SerDes to process text and sequencefile tables for vectorized query execution.

Related Name

hive.vectorized.use.vector.serde.deserialize

Default Value

false

API Name

hiveserver2_vectorized_use_vector_serde_deserialize

Required

false

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Thrift port****Description**

TCP port number to listen on.

Related Name

hive.server2.thrift.http.port

Default Value

10001

API Name

hive_server2_thrift_http_port

Required

false

Bind HiveServer2 to Wildcard Address**Description**

If enabled, the HiveServer2 binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name

hive.server2.webui.host

Default Value

true

API Name

hiveserver2_webui_bind_wildcard

Required

false

HiveServer2 WebUI Port**Description**

The port the HiveServer2 WebUI will listen on. This can be set to 0 to disable the WebUI.

Related Name

hive.server2.webui.port

Default Value

10002

API Name

hiveserver2_webui_port

Required

false

HiveServer2 Port**Description**

Port on which HiveServer2 will listen for connections.

Related Name

hive.server2.thrift.port

Default Value

10000

API Name

hs2_thrift_address_port

Required

false

Resource Management**Java Heap Size of HiveServer2 in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

2 GiB

API Name

hiveserver2_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

`rm_custom_resources`**Required**`false`**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**`500`**API Name**`rm_io_weight`**Required**`true`**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`

API Name

rm_memory_soft_limit

Required

true

Security**Enable TLS/SSL for HiveServer2 WebUI****Description**

Encrypt communication between clients and HiveServer2 WebUI using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hive.server2.webui.use.ssl

Default Value

false

API Name

ssl_enabled

Required

false

HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when HiveServer2 WebUI is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

hive.server2.webui.keystore.path

Default Value**API Name**

ssl_server_keystore_location

Required

false

HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password**Description**

The password for the HiveServer2 WebUI JKS keystore file.

Related Name

hive.server2.webui.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_hs2_config_safety_valve

Required

true

Suppress Parameter Validation: HiveServer2 Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_hs2_env_safety_valve

Required

true

Suppress Parameter Validation: HiveServer2 Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_log_dir

Required

true

Suppress Parameter Validation: Metrics Sample File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Sample File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_metrics_sample_file_location

Required

true

Suppress Configuration Validator: Restrict Load Bucketed Table Validator**Description**

Whether to suppress configuration warnings produced by the Restrict Load Bucketed Table Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_restrict_load_bucketed_table_validator

Required

true

Suppress Configuration Validator: Restrict Unsafe Comparison Validator**Description**

Whether to suppress configuration warnings produced by the Restrict Unsafe Comparison Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_restrict_unsafe_comparison_validator

Required

true

Suppress Parameter Validation: HiveServer2 Operations Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Operations Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_server2_logging_operation_log_location

Required

true

Suppress Parameter Validation: Thrift port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Thrift port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_server2_thrift_http_port

Required

true

Suppress Parameter Validation: Hive Downloaded Resources Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Downloaded Resources Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hiveserver2_downloaded_resources_dir

Required

true

Suppress Parameter Validation: Hive Local Scratch Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Local Scratch Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_exec_local_scratchdir

Required

true

Suppress Parameter Validation: Hive HDFS Scratch Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive HDFS Scratch Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_exec_scratchdir

Required

true

Suppress Parameter Validation: Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Fair Scheduler XML Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_fair_scheduler_safety_valve

Required

true

Suppress Parameter Validation: Java Configuration Options for HiveServer2

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for HiveServer2 parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_java_opts

Required

true

Suppress Parameter Validation: HiveServer2 Load Balancer

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Load Balancer parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_load_balancer

Required

true

Suppress Parameter Validation: Exclude Vectorized Input Formats

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Vectorized Input Formats parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_vectorized_input_format_excludes

Required

true

Suppress Parameter Validation: HiveServer2 WebUI Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 WebUI Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_webui_port

Required

true

Suppress Parameter Validation: HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_core_site_safety_valve

Required

true

Suppress Parameter Validation: HiveServer2 Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_thrift_address_port

Required

true

Suppress Parameter Validation: HiveServer2 Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_on_tez_hiveserver2_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hive_on_tez_hiveserver2_file_descriptor

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_on_tez_hiveserver2_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_on_tez_hiveserver2_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_on_tez_hiveserver2_log_directory_free_space

Required

true

Suppress Health Test: Pause Duration

Description

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_on_tez_hiveserver2_pause_duration

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_on_tez_hiveserver2_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_on_tez_hiveserver2_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hive_on_tez_hiveserver2_unexpected_exits

Required

true

Suppress Health Test: Hive Downloaded Resources Directory Free Space**Description**

Whether to suppress the results of the Hive Downloaded Resources Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_on_tez_hs2_downloaded_resources_directory_free_space

Required

true

Suppress Health Test: Hive Local Scratch Directory Free Space**Description**

Whether to suppress the results of the Hive Local Scratch Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive_on_tez_hs2_exec_local_scratch_directory_free_space

Required

true

Service-Wide**Advanced****Hive Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties****Description**

For advanced use only, a string to be inserted into atlas-application.properties. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

application_properties_safety_valve

Required

false

Hive Auxiliary JARs Directory**Description**

Directory containing auxiliary JARs used by Hive. This should be a directory location and not a classpath containing one or more JARs. This directory must be created and managed manually on hosts that run the Hive Metastore Server, HiveServer2, or the Hive CLI. The directory location is set in the environment as HIVE_AUX_JARS_PATH and will generally override the hive.aux.jars.path property set in XML files, even if hive.aux.jars.path is set in an advanced configuration snippet.

Related Name**Default Value****API Name**

hive_aux_jars_path_dir

Required

false

Bypass Hive Metastore Server**Description**

Instead of talking to Hive Metastore Server for Metastore information, Hive clients will talk directly to the Metastore database.

Related Name**Default Value**

false

API Name

hive_bypass_metastore_server

Required

false

Aborted Transaction Threshold**Description**

Number of aborted transactions involving a particular table or partition before major compaction is initiated.

Related Name

hive_compactor_abortedtxn_threshold

Default Value

1000

API Name

hive_compactor_abortedtxn_threshold

Required

true

Number of Threads Used by Compactor**Description**

Number of compactor worker threads to run on this metastore instance. Can be different values on different Metastore instances.

Related Name`hive.compactor.worker.threads`**Default Value**`5`**API Name**`hive_compactor_worker_threads`**Required**`true`**Hive Service Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

For advanced use only, a string to be inserted into core-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**`hive_core_site_safety_valve`**Required**`false`**Create Tables as Full ACID****Description**

Whether the eligible tables should be created as full ACID by default. Does not apply to external tables, the ones using storage handlers, etc.

Related Name`hive.create.as.acid`**Default Value**`true`**API Name**`hive_create_as_acid`**Required**`false`**Create Tables as ACID Insert Only****Description**

Whether the eligible tables should be created as ACID insert-only by default. Does not apply to external tables, the ones using storage handlers, etc.

Related Name`hive.create.as.insert.only`**Default Value**`true`**API Name**`hive_create_as_insert_only`**Required**

false

Hive Copy Large File Size**Description**

Smaller than this size, Hive uses a single-threaded copy; larger than this size, Hive uses DistCp.

Related Name

hive.exec.copyfile.maxsize

Default Value

32 MiB

API Name

hive_exec_copyfile_maxsize

Required

false

Base Directory for Hive Proto Hook**Description**

The directory where hive proto hooks should write the events, should generally be location of query_data table under sys.db database.

Related Name

hive.hook.proto.base-directory

Default Value

/warehouse/tablespace/managed/hive/sys.db/query_data/

API Name

hive_hook_proto_base_directory

Required

false

Metastore Transactional Listener List**Description**

A comma separated list of Java classes that implement the org.apache.hadoop.hive.metastore.MetaStoreEventListener interface. Both the metastore event and corresponding listener method will be invoked in the same JDO transaction.

Related Name

hive.metastore.transactional.event.listeners

Default Value

org.apache.hive.hcatalog.listener.DbNotificationListener

API Name

hive_metastore_transactional_event_listeners

Required

false

Hive on Tez Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value**API Name**

HIVE_ON_TEZ_service_env_safety_valve

Required

false

Hive Replication Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into the environment of Hive replication jobs.

Related Name**Default Value****API Name**

hive_replication_env_safety_valve

Required

false

Hive Service Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only, a string to be inserted into hive-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

hive_service_config_safety_valve

Required

false

Hive Replication Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

For advanced use only, a string to be inserted into hive-site.xml. Applies to all Hive Replication jobs.

Related Name**Default Value****API Name**

hive_service_replication_config_safety_valve

Required

false

Use Locking**Description**

Support concurrency and use locks, needed for Transactions. Requires Zookeeper.

Related Name

hive.support.concurrency

Default Value

true

API Name

hive_support_concurrency

Required

false

Transaction Manager

Description

HiveTxnManager implementation used for managing transactions.

Related Name

hive.txn.manager

Default Value

org.apache.hadoop.hive.ql.lockmgr.DbTxnManager

API Name

hive_txn_manager

Required

true

Transaction Maximum Open Batch

Description

Maximum number of transactions that can be fetched in one call to open_txns(). Increasing this will decrease the number of delta files created when streaming data into Hive. But it will also increase the number of open transactions at any given time, possibly impacting read performance.

Related Name

hive.txn.max.open.batch

Default Value

1000

API Name

hive_txn_max_open_batch

Required

true

Transaction Strict Locking Mode

Description

In strict locking non-ACID resources use standard R/W lock semantics.

Related Name

hive.txn.strict.locking.mode

Default Value

false

API Name

hive_txn_strict_locking_mode

Required

false

Transaction Timeout

Description

Time after which transactions are declared aborted if the client has not sent a heartbeat.

Related Name

hive.txn.timeout

Default Value

5 minute(s)

API Name

hive_txn_timeout

Required

true

System Group

Description

The group that this service's processes should run as.

Related Name**Default Value**

hive

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name**Default Value**

hive

API Name

process_username

Required

true

Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-audit.xml

Description

For advanced use only, a string to be inserted into ranger-hive-audit.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_audit_safety_valve

Required

false

Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-security.xml

Description

For advanced use only, a string to be inserted into ranger-hive-security.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_security_safety_valve

Required

false

Logs

Audit Log Directory

Description

Path to the directory where audit logs will be written. The directory will be created if it doesn't exist.

Related Name

audit_event_log_dir

Default Value

/var/log/hive/audit

API Name

audit_event_log_dir

Required

false

Hive Lineage Log Directory

Description

The directory in which Hive lineage log files are written.

Related Name

lineage_event_log_dir

Default Value

/var/log/hive/lineage

API Name

lineage_event_log_dir

Required

true

Hive Maximum Lineage Log File Size

Description

The maximum size, in megabytes, per log file for Hive lineage logs. Typically used by log4j or logback.

Related Name

max_lineage_log_file_size

Default Value

100 MiB

API Name

max_lineage_log_file_size

Required

false

Maximum Audit Log File Size**Description**

Maximum size of audit log file in MB before it is rolled over.

Related Name

navigator.audit_log_max_file_size

Default Value

100 MiB

API Name

navigator_audit_log_max_file_size

Required

false

Number of Audit Logs to Retain**Description**

Maximum number of rolled-over audit logs to retain. The logs are not deleted if they contain audit events that have not yet been propagated to the Audit Server.

Related Name

navigator.client.max_num_audit_log

Default Value

10

API Name

navigator_client_max_num_audit_log

Required

false

Monitoring**Enable Service Level Health Alerts****Description**When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`**Related Name****Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Healthy HiveServer2 Monitoring Thresholds**Description**

The health test thresholds of the overall HiveServer2 health. The check returns "Concerning" health if the percentage of "Healthy" HiveServer2s falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" HiveServer2s falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

hive_on_tez_hiveserver2s_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Client Config Overrides**Description**

For advanced use only, a list of configuration properties that will be used by the Service Monitor instead of the current client configuration for the service.

Related Name**Default Value**

```
<property> <name>hive.metastore.client.socket.timeout</name> <value>60</value> </property>
```

API Name

smon_client_config_overrides

Required

false

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other**Atlas Service****Description**

Name of the Atlas service that this Hive service instance depends on

Related Name**Default Value****API Name**

atlas_service

Required

false

Generate HADOOP_CREDSTORE_PASSWORD**Description**

Flag to enable or disable the generation of HADOOP_CREDSTORE_PASSWORD.

Related Name

generate_jceks_password

Default Value

true

API Name

generate_jceks_password

Required

false

HBase Service**Description**

Name of the HBase service that this Hive service instance depends on.

Related Name**Default Value****API Name**

hbase_service

Required

false

HDFS Service**Description**

Name of the HDFS service that this Hive service instance depends on

Related Name**Default Value****API Name**

hdfs_service

Required

true

Hive Bytes Per Reducer**Description**

Size per reducer. If the input size is 10GiB and this is set to 1GiB, Hive will use 10 reducers.

Related Name

hive.exec.reducers.bytes.per.reducer

Default Value

64 MiB

API Name

hive_bytes_per_reducer

Required

false

Default File Format**Description**

Default file format for CREATE TABLE statement.

Related Name

hive.default.fileformat

Default Value

TextFile

API Name

hive_default_fileformat

Required

true

Default File Format for Managed Tables**Description**

Default file format for CREATE TABLE statement applied to managed tables only. External tables will be created with default file format. Leaving this null will result in using the default file format for all tables.

Related Name

hive.default.fileformat.managed

Default Value

ORC

API Name

hive_default_fileformat_managed

Required

false

Hive Max Reducers**Description**

Max number of reducers to use. If the configuration parameter Hive Reduce Tasks is negative, Hive will limit the number of reducers to the value of this parameter.

Related Name

hive.exec.reducers.max

Default Value

1009

API Name

hive_max_reducers

Required

false

Hive Reduce Tasks**Description**

Default number of reduce tasks per job. Usually set to a prime number close to the number of available hosts. Ignored when mapred.job.tracker is "local". Hadoop sets this to 1 by default, while Hive uses -1 as the default. When set to -1, Hive will automatically determine an appropriate number of reducers for each job.

Related Name

mapred.reduce.tasks

Default Value

-1

API Name

hive_reduce_tasks

Required

false

Support Dynamic Service Discovery**Description**

Whether HiveServer2 supports dynamic service discovery for its clients. To support this, each instance of HiveServer2 currently uses ZooKeeper to register itself, when it is brought up. JDBC/ODBC clients should use the ZooKeeper ensemble: `hive.zookeeper.quorum` in their connection string.

Related Name`hive.server2.support.dynamic.service.discovery`**Default Value**

true

API Name`hive_server2_support_dynamic_service_discovery`**Required**

false

Hive Server Zookeeper Namespace**Description**

The parent node in ZooKeeper used by HiveServer2 when supporting dynamic service discovery.

Related Name`hive.server2.zookeeper.namespace`**Default Value**`hiveserver2`**API Name**`hive_server2_zookeeper_namespace`**Required**

false

Set User and Group Information**Description**

In unsecure mode, setting this property to true will cause the Metastore Server to execute DFS operations using the client's reported user and group permissions. Cloudera Manager will set this for all clients and servers.

Related Name`hive.metastore.execute.setugi`**Default Value**

true

API Name`hive_set_ugi`**Required**

true

HiveServer2 Enable Impersonation**Description**

HiveServer2 will impersonate the beeline client user when talking to other services such as MapReduce and HDFS.

Related Name

hive.server2.enable.doAs

Default Value

false

API Name

hiveserver2_enable_impersonation

Required

false

Hive Metastore Connector

Description

Name of the Hive Metastore Connector from the data context that this service instance depends on.

Related Name**Default Value****API Name**

hms_connector

Required

true

MapReduce Service

Description

MapReduce jobs are run against this service.

Related Name**Default Value****API Name**

mapreduce_yarn_service

Required

false

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.hive.trusted.proxy.ipaddress

Default Value**API Name**

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded for IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.hive.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Ranger Service**Description**

Name of the Ranger service that this Hive service instance depends on

Related Name**Default Value****API Name**

ranger_service

Required

false

Enable Dynamic Numbers of Reducers**Description**

Turn on Tez' auto reducer parallelism feature. When enabled, Hive will still estimate data sizes and set parallelism estimates. Tez will sample source vertices' output sizes and adjust the estimates at runtime as necessary.

Related Name

hive.tez.auto.reducer.parallelism

Default Value

true

API Name

tez_auto_reducer_parallelism

Required

false

Tez Bucket Pruning**Description**

When pruning is enabled, filters on bucket columns will be processed by filtering the splits against a bitset of included buckets. This needs predicates produced by hive.optimize.ppd and hive.optimize.index.filters.

Related Name

hive.tez.bucket.pruning

Default Value

true

API Name

tez_bucket_pruning

Required

false

Tez Cartesian-product Enabled**Description**

Use Tez cartesian product edge for Hive cartesian product

Related Name

hive.tez.cartesian-product.enabled

Default Value

true

API Name

tez_cartesian_product_enabled

Required

false

Tez Container Size**Description**

By default, Tez uses the java options from map tasks. Use this property to override that value.

Related Name

hive.tez.container.size

Default Value

4096

API Name

tez_container_size

Required

false

Tez CPU vCores**Description**

By default Tez will ask for however many cpus map-reduce is configured to use per container. This can be used to overwrite.

Related Name

hive.tez.cpu.vcores

Default Value

-1

API Name

tez_cpu_vcores

Required

false

Tez Dynamic Partition Pruning Max Event Size**Description**

Maximum size of events sent by processors in dynamic pruning. If this size is crossed no pruning will take place.

Related Name`hive.tez.dynamic.partition.pruning.max.event.size`**Default Value**`1048576`**API Name**`tez_dynamic_partition_max_event_size`**Required**`false`**Enable Dynamic Partition Pruning****Description**

When dynamic pruning is enabled, joins on partition keys will be processed by sending events from the processing vertices to the tez application master. These events will be used to prune unnecessary partitions.

Related Name`hive.tez.dynamic.partition.pruning`**Default Value**`true`**API Name**`tez_dynamic_partition_pruning`**Required**`false`**Tez Dynamic Partition Pruning Max Data Size****Description**

Maximum total data size of events in dynamic pruning.

Related Name`hive.tez.dynamic.partition.pruning.max.data.size`**Default Value**`104857600`**API Name**`tez_dynamic_partition_pruning_max_data_size`**Required**`false`**Tez Exec Print Summary****Description**

Display breakdown of execution steps, for every query executed by the shell.

Related Name`hive.tez.exec.print.summary`**Default Value**`true`**API Name**`tez_exec_print_summary`**Required**

false

Tez Input Format

Description

The default input format for Tez. Tez groups splits in the Application Master.

Related Name

hive.tez.input.format

Default Value

org.apache.hadoop.hive ql.io.HiveInputFormat

API Name

tez_input_format

Required

false

Tez Input Generate Consistent Splits

Description

Whether to generate consistent split locations when generating splits in the AM

Related Name

hive.tez.input.generate.consistent.splits

Default Value

true

API Name

tez_input_generate_consistent_splits

Required

false

tez.runtime.shuffle.ssl.enable

Description

tez.runtime.shuffle.ssl.enable

Related Name

tez.runtime.shuffle.ssl.enable

Default Value

false

API Name

tez_interactive_runtime_shuffle_ssl_enable

Required

false

Tez Java Options

Description

Java command line options for Tez.

Related Name

hive.tez.java.opts

Default Value

```
-server -Djava.net.preferIPv4Stack=true -XX:NewRatio=8 -XX:+UseNUMA -XX:+UseG1GC -  
XX:+ResizeTLAB -XX:+PrintGCDetails -verbose:gc
```

API Name

tez_java_opts

Required

false

Tez Log Level**Description**

The log level to use for tasks executing as part of the DAG. Used only if hive.tez.java.opts is used to configure Java options.

Related Name

hive.tez.log.level

Default Value

INFO

API Name

tez_log_level

Required

false

Tez Max Partition Factor**Description**

When auto reducer parallelism is enabled this factor will be used to over-partition data in shuffle edges.

Related Name

hive.tez.max.partition.factor

Default Value

2.0

API Name

tez_max_partition_factor

Required

false

Tez Min Partition Factor**Description**

When auto reducer parallelism is enabled this factor will be used to put a lower limit to the number of reducers that tez specifies.

Related Name

hive.tez.min.partition.factor

Default Value

0.25

API Name

tez_min_partition_factor

Required

false

Tez Service

Description

Tez Service that the Hive on Tez uses for execution

Related Name**Default Value****API Name**

tez_service

Required

true

Tez SMB Number of Waves

Description

The number of waves in which to run the SMB join. Account for cluster being occupied. Ideally should be 1 wave.

Related Name

hive.tez.smb.number.waves

Default Value

0.5

API Name

tez_smb_number_waves

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Hive service instance depends on.

Related Name**Default Value****API Name**

zookeeper_service

Required

false

Proxy

Hive Metastore Access Control and Proxy User Groups Override

Description

This configuration overrides the value set for Hive Proxy User Groups configuration in HDFS service for use by Hive Metastore Server. Specify a comma-delimited list of groups that you want to allow access to Hive Metastore metadata and allow the Hive user to impersonate. A value of '*' allows all groups. The default value of empty inherits the value set for Hive Proxy User Groups configuration in the HDFS service.

Related Name

hadoop.proxyuser.hive.groups

Default Value

API Name

hive_proxy_user_groups_list

Required

false

Replication**Replica functions root directory****Description**

Root directory on the replica warehouse where the repl sub-system will store jars from the primary warehouse

Related Name

hive.repl.replica.functions.root.dir

Default Value**API Name**

hive_repl_replica_functions_root_dir

Required

false

Security**Enable LDAP Authentication for HiveServer2****Description**

When checked, LDAP-based authentication for users is enabled.

Related Name**Default Value**

false

API Name

hiveserver2_enable_ldap_auth

Required

false

Enable TLS/SSL for HiveServer2**Description**

Encrypt communication between clients and HiveServer2 using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hive.server2.use.SSL

Default Value

false

API Name

hiveserver2_enable_ssl

Required

false

HiveServer2 TLS/SSL Server JKS Keystore File Password

Description

The password for the HiveServer2 JKS keystore file.

Related Name

hive.server2.keystore.password

Default Value**API Name**

hiveserver2_keystore_password

Required

false

HiveServer2 TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when HiveServer2 is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

hive.server2.keystore.path

Default Value**API Name**

hiveserver2_keystore_path

Required

false

LDAP BaseDN

Description

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,*this parameter*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

Related Name

hive.server2.authentication.ldap.baseDN

Default Value**API Name**

hiveserver2_ldap_basedn

Required

false

Active Directory Domain

Description

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name

hive.server2.authentication.ldap.Domain

Default Value**API Name**

hiveserver2_ldap_domain

Required

false

LDAP URL**Description**

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name

hive.server2.authentication.ldap.url

Default Value**API Name**

hiveserver2_ldap_uri

Required

false

HiveServer2 TLS/SSL Client Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HiveServer2 might connect to. This is used when HiveServer2 is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**

hiveserver2_truststore_file

Required

false

HiveServer2 TLS/SSL Client Trust Store Password**Description**

The password for the HiveServer2 TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value**

API Name

hiveserver2_truststore_password

Required

false

Kerberos Principal**Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

hive

API Name

kerberos_princ_name

Required

true

Ranger DFS Audit Path**Description**

The DFS path on which Ranger audits are written. The special placeholder '{ranger_base_audit_url}' should be used as the prefix, in order to use the centralized location defined in the Ranger service.

Related Name

xasecure.audit.destination.hdfs.dir

Default Value

{ranger_base_audit_url}/hive

API Name

ranger_audit_hdfs_dir

Required

false

Ranger Audit DFS Spool Dir**Description**

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/hive/audit/hdfs/spool

API Name

ranger_audit_hdfs_spool_dir

Required

false

Ranger Audit Solr Spool Dir**Description**

Spool directory for Ranger audits being written to Solr.

Related Name`xasecure.audit.destination.solr.batch.filespool.dir`**Default Value**`/var/log/hive/audit/solr/spool`**API Name**`ranger_audit_solr_spool_dir`**Required**`false`**Ranger Policy Cache Directory****Description**

The directory where Ranger security policies are cached locally.

Related Name`ranger.plugin.hive.policy.cache.dir`**Default Value**`/var/lib/ranger/hive/policy-cache`**API Name**`ranger_policy_cache_dir`**Required**`false`**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_cdh_version_validator`**Required**`true`**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_client_config_root_dir`**Required**

true

Suppress Configuration Validator: Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

Whether to suppress configuration warnings produced by the Hive Client Advanced Configuration Snippet (Safety Valve) for hive-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_config_safety_valve

Required

true

Suppress Configuration Validator: Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh

Description

Whether to suppress configuration warnings produced by the Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hive-env.sh configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_env_safety_valve

Required

true

Suppress Configuration Validator: Client Java Configuration Options

Description

Whether to suppress configuration warnings produced by the Client Java Configuration Options configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_client_java_opts

Required

true

Suppress Configuration Validator: HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

Whether to suppress configuration warnings produced by the HiveServer2 Advanced Configuration Snippet (Safety Valve) for hive-site.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hive_hs2_config_safety_valve

Required

true

Suppress Configuration Validator: HiveServer2 Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the HiveServer2 Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_hs2_env_safety_valve

Required

true

Suppress Configuration Validator: HiveServer2 Log Directory**Description**

Whether to suppress configuration warnings produced by the HiveServer2 Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_log_dir

Required

true

Suppress Configuration Validator: Metrics Sample File Location**Description**

Whether to suppress configuration warnings produced by the Metrics Sample File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_metrics_sample_file_location

Required

true

Suppress Configuration Validator: Restrict Load Bucketed Table Validator**Description**

Whether to suppress configuration warnings produced by the Restrict Load Bucketed Table Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_restrict_load_bucketed_table_validator

Required

true

Suppress Configuration Validator: Restrict Unsafe Comparison Validator**Description**

Whether to suppress configuration warnings produced by the Restrict Unsafe Comparison Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_restrict_unsafe_comparison_validator

Required

true

Suppress Configuration Validator: HiveServer2 Operations Log Directory**Description**

Whether to suppress configuration warnings produced by the HiveServer2 Operations Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_server2_logging_operation_log_location

Required

true

Suppress Configuration Validator: Thrift port**Description**

Whether to suppress configuration warnings produced by the Thrift port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hive_server2_thrift_http_port

Required

true

Suppress Configuration Validator: Hive Downloaded Resources Directory**Description**

Whether to suppress configuration warnings produced by the Hive Downloaded Resources Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_downloaded_resources_dir

Required

true

Suppress Configuration Validator: Hive Local Scratch Directory**Description**

Whether to suppress configuration warnings produced by the Hive Local Scratch Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_exec_local_scratchdir

Required

true

Suppress Configuration Validator: Hive HDFS Scratch Directory**Description**

Whether to suppress configuration warnings produced by the Hive HDFS Scratch Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_exec_scratchdir

Required

true

Suppress Configuration Validator: Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Fair Scheduler XML Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hiveserver2_fair_scheduler_safety_valve

Required

true

Suppress Configuration Validator: Java Configuration Options for HiveServer2**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for HiveServer2 configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_java_opts

Required

true

Suppress Configuration Validator: HiveServer2 Load Balancer**Description**

Whether to suppress configuration warnings produced by the HiveServer2 Load Balancer configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_load_balancer

Required

true

Suppress Configuration Validator: Exclude Vectorized Input Formats**Description**

Whether to suppress configuration warnings produced by the Exclude Vectorized Input Formats configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_vectorized_input_format_excludes

Required

true

Suppress Configuration Validator: HiveServer2 WebUI Port**Description**

Whether to suppress configuration warnings produced by the HiveServer2 WebUI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hiveserver2_webui_port

Required

true

Suppress Configuration Validator: HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

Whether to suppress configuration warnings produced by the HiveServer2 Advanced Configuration Snippet (Safety Valve) for core-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_core_site_safety_valve

Required

true

Suppress Configuration Validator: HiveServer2 Port

Description

Whether to suppress configuration warnings produced by the HiveServer2 Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_thrift_address_port

Required

true

Suppress Configuration Validator: Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Gateway Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the HiveServer2 WebUI TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the HiveServer2 WebUI TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_application_properties_safety_valve

Required

true

Suppress Parameter Validation: Audit Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Log Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_audit_event_log_dir

Required

true

Suppress Configuration Validator: Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Hive Auxiliary JARs Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Auxiliary JARs Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_aux_jars_path_dir

Required

true

Suppress Configuration Validator: Client TLS/SSL In Use With LDAP Authentication Validator**Description**

Whether to suppress configuration warnings produced by the Client TLS/SSL In Use With LDAP Authentication Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_client_ssl_recommended_with_ldap_auth_validator

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_core_site_safety_valve

Required

true

Suppress Parameter Validation: Default File Format for Managed Tables**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default File Format for Managed Tables parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_default_fileformat_managed

Required

true

Suppress Parameter Validation: Base Directory for Hive Proto Hook**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Base Directory for Hive Proto Hook parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_hook_proto_base_directory

Required

true

Suppress Parameter Validation: Metastore Transactional Listener List**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metastore Transactional Listener List parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_metastore_transactional_event_listeners

Required

true

Suppress Parameter Validation: Hive on Tez Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive on Tez Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_on_tez_service_env_safety_valve

Required

true

Suppress Configuration Validator: Hive Proxy Groups Validator**Description**

Whether to suppress configuration warnings produced by the Hive Proxy Groups Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_proxy_groups_validator

Required

true

Suppress Parameter Validation: Hive Metastore Access Control and Proxy User Groups Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Metastore Access Control and Proxy User Groups Override parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_proxy_user_groups_list

Required

true

Suppress Configuration Validator: Hive Ranger Validator**Description**

Whether to suppress configuration warnings produced by the Hive Ranger Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_ranger_validator

Required

true

Suppress Parameter Validation: Replica functions root directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replica functions root directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_repl_replica_functions_root_dir

Required

true

Suppress Parameter Validation: Hive Replication Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Replication Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_replication_env_safety_valve

Required

true

Suppress Configuration Validator: Hive Sentry Validator**Description**

Whether to suppress configuration warnings produced by the Hive Sentry Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_sentry_validator

Required

true

Suppress Parameter Validation: Hive Server Zookeeper Namespace**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Server Zookeeper Namespace parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_server2_zookeeper_namespace

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_service_config_safety_valve

Required

true

Suppress Parameter Validation: Hive Replication Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Replication Advanced Configuration Snippet (Safety Valve) for hive-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hive_service_replication_config_safety_valve

Required

true

Suppress Configuration Validator: HiveServer2 Count Validator**Description**

Whether to suppress configuration warnings produced by the HiveServer2 Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_count_validator

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_keystore_password

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_keystore_path

Required

true

Suppress Parameter Validation: LDAP BaseDN**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_ldap_basedn

Required

true

Suppress Parameter Validation: Active Directory Domain

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_ldap_domain

Required

true

Suppress Parameter Validation: LDAP URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_ldap_uri

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Client Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hiveserver2_truststore_file

Required

true

Suppress Parameter Validation: HiveServer2 TLS/SSL Client Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HiveServer2 TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name`service_config_suppression_hiveserver2_truststore_password`**Required**`true`**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_kerberos_princ_name`**Required**`true`**Suppress Parameter Validation: Hive Lineage Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Lineage Log Directory parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_lineage_event_log_dir`**Required**`true`**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_process_groupname`**Required**`true`**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger DFS Audit Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_dir

Required

true

Suppress Parameter Validation: Ranger Audit DFS Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-audit.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-audit.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_safety_valve

Required

true

Suppress Parameter Validation: Ranger Audit Solr Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Ranger Policy Cache Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_policy_cache_dir

Required

true

Suppress Parameter Validation: Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Service Advanced Configuration Snippet (Safety Valve) for ranger-hive-security.xml parameter.

Related Name**Default Value**

false

API Name`service_config_suppression_ranger_security_safety_valve`**Required**`true`**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_service_triggers`**Required**`true`**Suppress Parameter Validation: Service Monitor Client Config Overrides****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Client Config Overrides parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_smon_client_config_overrides`**Required**`true`**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_smon_derived_configs_safety_valve`**Required**`true`**Suppress Parameter Validation: Tez Input Format****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Input Format parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez_input_format

Required

true

Suppress Parameter Validation: Tez Java Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Java Options parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez_java_opts

Required

true

Suppress Parameter Validation: Tez Log Level**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Log Level parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez_log_level

Required

true

Suppress Health Test: HiveServer2 Health**Description**

Whether to suppress the results of the HiveServer2 Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hive_on_tez_hiveserver2s_healthy

Required

true

Hue Properties in Cloudera Runtime 7.1

Role groups:

Hue Server

Advanced

Top Banner Custom HTML

Description

An optional, custom one-line HTML code to display as a banner on top of all Hue Server web pages. Useful in displaying cluster identity of the Hue Server.

Related Name

banner_top_html

Default Value**API Name**

banner_html

Required

false

Hue Server Advanced Configuration Snippet (Safety Valve) for `impalad_flags`

Description

For advanced use only, key-value pairs (one on each line) to be added (verbatim) to `impalad_flags` for this role only. Key names should begin with a hyphen(-). For example: `-log_filename=foo.log`

Related Name**Default Value****API Name**

hue_impalad_flags_safety_valve

Required

false

Metrics Sample File Location

Description

The full path to a file with a sample of metrics exposed by the role. The sample is updated at the frequency configured by Metrics Sample File Logging Frequency. By default, the sample file is logged to a directory under the role log directory, e.g., `/var/log/hue/metrics-hue_server/metrics.log`.

Related Name

location

Default Value**API Name**

hue_metrics_sample_file_location

Required

false

Metrics Sample File Logging Frequency

Description

The frequency at which the metrics are logged to the sample file.

Related Name

collection_interval

Default Value

30 second(s)

API Name

hue_metrics_sample_logging_frequency

Required

false

Hue Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

For advanced use only. A string to be inserted into hive-site.xml for this role only.

Related Name**Default Value****API Name**

hue_server_hive_safety_valve

Required

false

Hue Server Advanced Configuration Snippet (Safety Valve) for hue_safety_valve_server.ini

Description

For advanced use only. A string to be inserted into hue_safety_valve_server.ini for this role only.

Related Name**Default Value****API Name**

hue_server_hue_safety_valve

Required

false

Hue Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

HUE_SERVER_role_env_safety_valve

Required

false

Hue Server Advanced Configuration Snippet (Safety Valve) for sqoop.properties

Description

For advanced use only, key-value pairs (one on each line) to be added (verbatim) to sqoop.properties for this role only. Used in the Sqoop App for connecting to the Sqoop Service.

Related Name**Default Value****API Name**

hue_sqoop2_properties_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Hue Server Log Directory****Description**

Directory where Hue Server will place its log files.

Related Name**Default Value**

/var/log/hue

API Name

hue_server_log_dir

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

hue_server_fd_thresholds

Required

false

Hue Server Host Health Test**Description**

When computing the overall Hue Server health, consider the host's health.

Related Name**Default Value**

true

API Name

hue_server_host_health_enabled

Required

false

Hue Server Process Health Test**Description**

Enables the health test that the Hue Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

hue_server_scm_health_enabled

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

hue_server_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

hue_server_web_metric_collection_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures

Description

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check

Description

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other

HiveServer2 and Impala Thrift Connection Timeout

Description

Timeout in seconds for Thrift calls to HiveServer2 and Impala.

Related Name

`server_conn_timeout`

Default Value

2 minute(s)

API Name

`hs2_conn_timeout`

Required

false

Jobsub Examples and Templates Directory

Description

Location on HDFS where the jobsub examples and templates are stored.

Related Name

`remote_data_dir`

Default Value

/user/hue/jobsub

API Name

hue_server_remote_data_dir

Required

true

Secret Key**Description**

Random string used for secure hashing in the session store.

Related Name

secret_key

Default Value**API Name**

secret_key

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Hue HTTP Port****Description**

Port to use to connect to the Hue server.

Related Name

http_port

Default Value

8888

API Name

hue_http_port

Required

false

Bind Hue Server to Wildcard Address

Description

If enabled, the Hue server binds to the wildcard address ("0.0.0.0") for its ports.

Related Name**Default Value**

false

API Name

hue_server_bind_wildcard

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Hue TLS/SSL Server CA Certificate (PEM Format)

Description

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Hue is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name

ssl_cacerts

Default Value**API Name**

ssl_cacerts

Required

false

Hue TLS/SSL Server Certificate File (PEM Format)

Description

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Hue is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

ssl_certificate

Default Value**API Name**

ssl_certificate

Required

false

Enable TLS/SSL for Hue

Description

Encrypt communication between clients and Hue using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name**Default Value**

false

API Name

ssl_enable

Required

false

Hue TLS/SSL Server Private Key File (PEM Format)

Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Hue is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

ssl_private_key

Default Value

API Name

ssl_private_key

Required

false

Hue TLS/SSL Private Key Password**Description**

The password for the private key in the Hue TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

ssl_password

Default Value**API Name**

ssl_private_key_password

Required

false

Suppressions**Suppress Parameter Validation: Top Banner Custom HTML****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Top Banner Custom HTML parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_banner_html

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Hue HTTP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue HTTP Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_http_port

Required

true

Suppress Parameter Validation: Hue Server Advanced Configuration Snippet (Safety Valve) for `impalad_flags`

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Server Advanced Configuration Snippet (Safety Valve) for `impalad_flags` parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_impalad_flags_safety_valve

Required

true

Suppress Parameter Validation: Metrics Sample File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Sample File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_metrics_sample_file_location

Required

true

Suppress Parameter Validation: Hue Server Advanced Configuration Snippet (Safety Valve) for `hive-site.xml`

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Server Advanced Configuration Snippet (Safety Valve) for `hive-site.xml` parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_hive_safety_valve

false

API Name

role_config_suppression_ssl_certificate

Required

true

Suppress Parameter Validation: Hue TLS/SSL Server Private Key File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_private_key

Required

true

Suppress Parameter Validation: Hue TLS/SSL Private Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue TLS/SSL Private Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_private_key_password

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hue_server_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hue_server_file_descriptor

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hue_server_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hue_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hue_server_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hue_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_hue_server_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hue_server_unexpected_exits

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hue_server_web_metric_collection

Required

true

Kerberos Ticket Renewer**Advanced****Kerberos Ticket Renewer Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KT_RENEWER_role_env_safety_valve

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Kerberos Ticket Renewer Log Directory

Description

Directory where Kerberos Ticket Renewer will place its log files.

Related Name**Default Value**

/var/log/hue

API Name

kt_renewer_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

kt_renewer_fd_thresholds

Required

false

Kerberos Ticket Renewer Host Health Test

Description

When computing the overall Kerberos Ticket Renewer health, consider the host's health.

Related Name**Default Value**

true

API Name

kt_renewer_host_health_enabled

Required

false

Kerberos Ticket Renewer Process Health Test

Description

Enables the health test that the Kerberos Ticket Renewer's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

kt_renewer_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures

Description

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check

Description

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other

Hue Keytab Renewal Interval

Description

Interval in seconds with which Hue's Kerberos ticket will get renewed.

Related Name

`reinit_frequency`

Default Value

1 hour(s)

API Name

`keytab_reinit_frequency`

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value**API Name**

rlimit_fds

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Kerberos Ticket Renewer Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Ticket Renewer Log Directory parameter.

Related Name**Default Value**

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Hue Load Balancer Port****Description**

Port to use to connect to the Hue through the Load Balancer.

Related Name

listen

Default Value

8889

API Name

listen

Required

true

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

ZooKeeper Service**Description**

Name of the ZooKeeper service that this Hue service instance depends on

Related Name

Default Value**API Name**

zookeeper_service

Required

false

Security**Authentication Backend****Description**

Mode of authenticating login credentials. Select `desktop.auth.backend.LdapBackend` to use LDAP to authenticate login credentials. LDAP requires you to also set the LDAP URL, Active Directory Domain, and optionally LDAP certificate if you are using secure LDAP. Select `desktop.auth.backend.PamBackend` to use PAM to authenticate login credentials.

Related Name

backend

Default Value`desktop.auth.backend.AllowFirstUserDjangoBackend`**API Name**

auth_backend

Required

false

LDAP Search Base**Description**

The distinguished name to use as a search base for finding users and groups. This should be similar to `'dc=hadoop,dc=mycompany,dc=com'`.

Related Name

base_dn

Default Value**API Name**

base_dn

Required

false

LDAP Bind User Distinguished Name**Description**

Distinguished name of the user to bind to AD as for user authentication search/bind and group lookup for role authorization. For openLDAP based directories this should be a DN string, for Active Directory this can be just a username, combined with the "Active Directory Domain" value for login. For example username in the field and example.com in the active directory domain will result in the User Principal Name value of `username@example.com` being used to bind. If you put a UPM value here, do not over-configure the "active directory domain" field otherwise you will end up presenting `username@example.com@example.com` for binds. AD will accept a UPN value or the DN value as a valid Bind DN; An example of a Distinguished Name (DN): `CN=cdh admin,OU=svcaccount,DC=example,DC=com` An example of a UPN value: `cdhadmin@example.com`

Related Name

bind_dn
Default Value
API Name
bind_dn
Required
false

LDAP Bind Password

Description
The password of the bind user.
Related Name
bind_password
Default Value
API Name
bind_password
Required
false

Create LDAP users on login

Description
Create users in Hue when they try to login with their LDAP credentials. For use when using LdapBackend for Hue authentication.
Related Name
create_users_on_login
Default Value
true
API Name
create_users_on_login
Required
false

LDAP Group Filter

Description
Base filter for searching for groups. For Active Directory, this is typically '(objectClass=group)'.
Related Name
group_filter
Default Value
API Name
group_filter
Required
false

LDAP Group Membership Attribute

Description

The attribute of the group object that identifies the members of the group. For Active Directory, this is typically 'member'.

Related Name

group_member_attr

Default Value**API Name**

group_member_attr

Required

false

LDAP Group Name Attribute**Description**

The group name attribute in the LDAP schema. For Active Directory, this is typically 'cn'.

Related Name

group_name_attr

Default Value**API Name**

group_name_attr

Required

false

Auto Logout Timeout**Description**

Auto logout/idle session timeout in seconds, -1 second is equivalent to no automatic logout.

Related Name

idle_session_timeout

Default Value

-1 second(s)

API Name

idle_session_timeout

Required

false

Kerberos Principal**Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

hue

API Name

kerberos_princ_name

Required

true

LDAP Server CA Certificate

Description

The location on disk of the certificate, in .pem format, used to confirm the authenticity of the LDAP server certificate. This is the Certificate Authority (CA) certificate, and it was used to sign the LDAP server certificate. If not set, all certificates are trusted, which means that an attacker could potentially intercept otherwise encrypted usernames and passwords.

Related Name

ldap_cert

Default Value**API Name**

ldap_cert

Required

false

LDAP URL

Description

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name

ldap_url

Default Value**API Name**

ldap_url

Required

false

LDAP Username Pattern

Description

LDAP Username Pattern for use with non-Active Directory LDAP implementations. Must contain the special '*username*' string for replacement during authentication.

Related Name

ldap_username_pattern

Default Value**API Name**

ldap_username_pattern

Required

false

Active Directory Domain

Description

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name

nt_domain

Default Value**API Name**

nt_domain

Required

false

PAM Backend Service Name**Description**

The PAM service name to use when authenticating over desktop.auth.backend.PamBackend. This is typically the name of a file under /etc/pam.d/ on the Hue host.

Related Name

pam_service

Default Value

login

API Name

pam_auth_service

Required

false

Use Search Bind Authentication**Description**

Search Bind Authentication connects to the LDAP server using credentials provided in the 'bind_dn' and 'bind_password' configurations. If these configurations are not set, then an anonymous search is performed.

Related Name

search_bind_authentication

Default Value

false

API Name

search_bind_authentication

Required

false

LDAP Group Name for Test LDAP Configuration**Description**

An optional group name for validating LDAP group configurations. If a test group name is provided, Hue's LDAP library uses it as a search parameter when running the command, Test Hue LDAP Configuration (under Hue > Actions). For example, (&(objectClass=*)(sAMAccountName=test_ldap_group)). If test group name is not provided then Hue LDAP Configuration action will check only LDAP server connectivity.

Related Name

`test_ldap_group`**Default Value****API Name**`test_ldap_group`**Required**`false`**LDAP Username for Test LDAP Configuration****Description**

An optional user name for validating LDAP user configurations. If a test user name is provided, Hue's LDAP library uses it as a search parameter when running the command, Test Hue LDAP Configuration (under Hue > Actions). For example, (&(objectClass=*)(sAMAccountName=test_ldap_user)). If "*" is provided, then all user attributes are returned. If test user name is not provided then Test Hue LDAP Configuration action will check only LDAP server connectivity.

Related Name`test_ldap_user`**Default Value****API Name**`test_ldap_user`**Required**`false`**Enable LDAP TLS****Description**

If true, attempts to establish a TLS (Transport Layer Security) connection with an LDAP server that was specified with ldap://. Not required when using an LDAP URL with prefix ldaps://, because that already specifies TLS. This option is also known as "Use StartTLS".

Related Name`use_start_tls`**Default Value**`true`**API Name**`use_start_tls`**Required**`false`**LDAP User Filter****Description**

The base filter for searching for users. For Active Directory, this is typically '(objectClass=user)'.

Related Name`user_filter`**Default Value****API Name**`user_filter`

Required

false

LDAP Username Attribute**Description**

The username attribute in the LDAP schema. For Active Directory, this is typically 'sAMAccountName'.

Related Name

user_name_attr

Default Value**API Name**

user_name_attr

Required

false

Suppressions**Suppress Configuration Validator: Top Banner Custom HTML****Description**

Whether to suppress configuration warnings produced by the Top Banner Custom HTML configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_banner_html

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Hue HTTP Port**Description**

Whether to suppress configuration warnings produced by the Hue HTTP Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hue_http_port

Required

true

Suppress Configuration Validator: Hue Server Advanced Configuration Snippet (Safety Valve) for impalad_flags**Description**

Whether to suppress configuration warnings produced by the Hue Server Advanced Configuration Snippet (Safety Valve) for impalad_flags configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_impalad_flags_safety_valve

Required

true

Suppress Configuration Validator: Hue Load Balancer Log Directory**Description**

Whether to suppress configuration warnings produced by the Hue Load Balancer Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_load_balancer_log_dir

Required

true

Suppress Configuration Validator: Load Balancer Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Load Balancer Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_load_balancer_role_env_safety_valve

Required

true

Suppress Configuration Validator: Load Balancer Advanced Configuration Snippet (Safety Valve) for httpd.conf**Description**

Whether to suppress configuration warnings produced by the Load Balancer Advanced Configuration Snippet (Safety Valve) for httpd.conf configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_load_balancer_safety_valve

Required

true

Suppress Configuration Validator: Metrics Sample File Location**Description**

Whether to suppress configuration warnings produced by the Metrics Sample File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_metrics_sample_file_location

Required

true

Suppress Configuration Validator: Hue Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml**Description**

Whether to suppress configuration warnings produced by the Hue Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_hive_safety_valve

Required

true

Suppress Configuration Validator: Hue Server Advanced Configuration Snippet (Safety Valve) for hue_safety_valve_server.ini**Description**

Whether to suppress configuration warnings produced by the Hue Server Advanced Configuration Snippet (Safety Valve) for hue_safety_valve_server.ini configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_hue_safety_valve

Required

true

Suppress Configuration Validator: Hue Server Log Directory**Description**

Whether to suppress configuration warnings produced by the Hue Server Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_log_dir

Required

true

Suppress Configuration Validator: Jobsub Examples and Templates Directory**Description**

Whether to suppress configuration warnings produced by the Jobsub Examples and Templates Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_remote_data_dir

Required

true

Suppress Configuration Validator: Hue Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Hue Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Hue Server Safety Valve Format Validator**Description**

Whether to suppress configuration warnings produced by the Hue Server Safety Valve Format Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_safety_valve_format_validator

Required

true

Suppress Configuration Validator: Hue Server Advanced Configuration Snippet (Safety Valve) for sqoop.properties

Description

Whether to suppress configuration warnings produced by the Hue Server Advanced Configuration Snippet (Safety Valve) for sqoop.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_sqoop2_properties_safety_valve

Required

true

Suppress Configuration Validator: Hue TLS/SSL Validator

Description

Whether to suppress configuration warnings produced by the Hue TLS/SSL Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_ssl_validator

Required

true

Suppress Configuration Validator: Kerberos Ticket Renewer Log Directory

Description

Whether to suppress configuration warnings produced by the Kerberos Ticket Renewer Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kt_renewer_log_dir

Required

true

Suppress Configuration Validator: Kerberos Ticket Renewer Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Kerberos Ticket Renewer Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kt_renewer_role_env_safety_valve

Required

true

Suppress Configuration Validator: Hue Load Balancer Port**Description**

Whether to suppress configuration warnings produced by the Hue Load Balancer Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_listen

Required

true

Suppress Configuration Validator: Hue Load Balancer TLS/SSL Server SSLPassPhraseDialog**Description**

Whether to suppress configuration warnings produced by the Hue Load Balancer TLS/SSL Server SSLPassPhraseDialog configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_passphrasefile_location

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Secret Key**Description**

Whether to suppress configuration warnings produced by the Secret Key configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_secret_key

Required

true

Suppress Configuration Validator: Hue TLS/SSL Server CA Certificate (PEM Format)**Description**

Whether to suppress configuration warnings produced by the Hue TLS/SSL Server CA Certificate (PEM Format) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_cacerts

Required

true

Suppress Configuration Validator: Hue TLS/SSL Server Certificate File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the Hue TLS/SSL Server Certificate File (PEM Format) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_certificate

Required

true

Suppress Configuration Validator: Hue Load Balancer TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the Hue Load Balancer TLS/SSL Server Private Key File (PEM Format) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_certificate_key

Required

true

Suppress Configuration Validator: SSLCipherSuite

Description

Whether to suppress configuration warnings produced by the SSLCipherSuite configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_cipher_suite

Required

true

Suppress Configuration Validator: Hue TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the Hue TLS/SSL Server Private Key File (PEM Format) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_private_key

Required

true

Suppress Configuration Validator: Hue TLS/SSL Private Key Password**Description**

Whether to suppress configuration warnings produced by the Hue TLS/SSL Private Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_private_key_password

Required

true

Suppress Configuration Validator: SSLProtocol**Description**

Whether to suppress configuration warnings produced by the SSLProtocol configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_protocol

Required

true

Suppress Parameter Validation: LDAP Search Base**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Search Base parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_base_dn

Required

true

Suppress Parameter Validation: LDAP Bind User Distinguished Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind User Distinguished Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_bind_dn

Required

true

Suppress Parameter Validation: LDAP Bind Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_bind_password

Required

true

Suppress Parameter Validation: Blacklist**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Blacklist parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_blacklist

Required

true

Suppress Parameter Validation: Hue Database Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_dir

Required

true

Suppress Parameter Validation: Database Dump File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Dump File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_dump_file

Required

true

Suppress Parameter Validation: Hue Database Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Hostname parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_host

Required

true

Suppress Parameter Validation: Hue Database Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_name

Required

true

Suppress Parameter Validation: Hue Database Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_password

Required

true

Suppress Parameter Validation: Hue Database Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_port

Required

true

Suppress Parameter Validation: Hue Database Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Username parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_user

Required

true

Suppress Parameter Validation: Default Site Encoding

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Site Encoding parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_default_site_encoding

Required

true

Suppress Parameter Validation: Default User Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default User Group parameter.

Related Name**Default Value**

false

API Name`service_config_suppression_default_user_group`**Required**`true`**Suppress Parameter Validation: LDAP Group Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Filter parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_group_filter`**Required**`true`**Suppress Parameter Validation: LDAP Group Membership Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Membership Attribute parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_group_member_attr`**Required**`true`**Suppress Parameter Validation: LDAP Group Name Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Name Attribute parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_group_name_attr`**Required**`true`**Suppress Configuration Validator: HDFS HTTPFS Usage Validator****Description**

Whether to suppress configuration warnings produced by the HDFS HTTPFS Usage Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_httpfs_present_validator

Required

true

Suppress Parameter Validation: HDFS Temporary Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Temporary Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_tmp_dir

Required

true

Suppress Parameter Validation: Hue Kerberos Credentials Cache Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Kerberos Credentials Cache Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_ccache_path

Required

true

Suppress Configuration Validator: HBase Thrift Usage Validator**Description**

Whether to suppress configuration warnings produced by the HBase Thrift Usage Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_hbase_thrift_server_validator

Required

true

Suppress Configuration Validator: Knox Proxy Hosts validator for Hue**Description**

Whether to suppress configuration warnings produced by the Knox Proxy Hosts validator for Hue configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_knox_proxyhosts_validator

Required

true

Suppress Configuration Validator: Load Balancer Count Validator**Description**

Whether to suppress configuration warnings produced by the Load Balancer Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_load_balancer_count_validator

Required

true

Suppress Configuration Validator: Hue Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Hue Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_server_count_validator

Required

true

Suppress Configuration Validator: Hue Service Config Safety Valve Format Validator**Description**

Whether to suppress configuration warnings produced by the Hue Service Config Safety Valve Format Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_service_config_safety_valve_format_validator

Required

true

Suppress Parameter Validation: Hue Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_service_env_safety_valve

Required

true

Suppress Parameter Validation: Hue Service Advanced Configuration Snippet (Safety Valve) for hue_safety_valve.ini

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Service Advanced Configuration Snippet (Safety Valve) for hue_safety_valve.ini parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_service_safety_valve

Required

true

Suppress Parameter Validation: HDFS Web Interface Role

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Web Interface Role parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_webhdfs

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Knox Proxy Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knox_proxyhosts

Required

true

Suppress Configuration Validator: Kerberos Ticket Renewer Count Validator**Description**

Whether to suppress configuration warnings produced by the Kerberos Ticket Renewer Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_kt_renewer_count_validator

Required

true

Suppress Parameter Validation: LDAP Server CA Certificate**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Server CA Certificate parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap_cert

Required

true

Suppress Parameter Validation: LDAP URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ldap_url

Required

true

Suppress Parameter Validation: LDAP Username Pattern

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Username Pattern parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ldap_username_pattern

Required

true

Suppress Parameter Validation: Active Directory Domain

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

Related Name

Default Value

false

API Name

service_config_suppression_nt_domain

Required

true

Suppress Parameter Validation: PAM Backend Service Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the PAM Backend Service Name parameter.

Related Name

Default Value

false

API Name`service_config_suppression_pam_auth_service`**Required**`true`**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_process_groupname`**Required**`true`**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_process_username`**Required**`true`**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_service_triggers`**Required**`true`**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: LDAP Group Name for Test LDAP Configuration**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Name for Test LDAP Configuration parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_test_ldap_group

Required

true

Suppress Parameter Validation: LDAP Username for Test LDAP Configuration**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Username for Test LDAP Configuration parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_test_ldap_user

Required

true

Suppress Parameter Validation: Time Zone**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Time Zone parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_time_zone

Required

true

Suppress Parameter Validation: User Augmentor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the User Augmentor parameter.

Related Name

Default Value

false

API Name

service_config_suppression_user_augmentor

Required

true

Suppress Parameter Validation: LDAP User Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User Filter parameter.

Related Name

Default Value

false

API Name

service_config_suppression_user_filter

Required

true

Suppress Parameter Validation: LDAP Username Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Username Attribute parameter.

Related Name

Default Value

false

API Name

service_config_suppression_user_name_attr

Required

true

Suppress Parameter Validation: Whitelist

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Whitelist parameter.

Related Name

Default Value

false

API Name

service_config_suppression_whitelist

Required

true

Suppress Health Test: Hue Server Health**Description**

Whether to suppress the results of the Hue Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hue_hue_servers_healthy

Required

true

Suppress Health Test: Kerberos Ticket Renewer Health**Description**

Whether to suppress the results of the Kerberos Ticket Renewer Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hue_kt_renewers_healthy

Required

true

Suppress Health Test: Load Balancer Health**Description**

Whether to suppress the results of the Load Balancer Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hue_load_balancer_healthy

Required

true

Impala Properties in Cloudera Runtime 7.1

Role groups:

Impala Catalog Server

Advanced

Catalog Server Command Line Argument Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be added (verbatim) to Catalog Server command line flags. Key names should begin with a hyphen(-). For example: -log_filename=foo.log

Related Name**Default Value****API Name**

catalogd_cmd_args_safety_valve

Required

false

Impala Catalog Server Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value****API Name**

catalogd_core_site_safety_valve

Required

false

Catalog Server HBase Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into hbase-site.xml for this role only.

Related Name**Default Value****API Name**

catalogd_hbase_conf_safety_valve

Required

false

Catalog Server HDFS Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into hdfs-site.xml for this role only.

Related Name

Default Value**API Name**`catalogd_hdfs_site_conf_safety_valve`**Required**`false`**Catalog Server Hive Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into hive-site.xml for this role only.

Related Name**Default Value****API Name**`catalogd_hive_conf_safety_valve`**Required**`false`**Java Configuration Options for Catalog Server****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**`catalogd_java_opts`**Required**`false`**Impala Catalog Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**`CATALOGSERVER_role_env_safety_valve`**Required**`false`**Catalog Server Core Dump Directory****Description**

Directory where the Catalog Server core dump is placed.

Related Name

core_dump_dir
Default Value
/var/log/catalogd
API Name
core_dump_dir
Required
false

Catalog Server Hive Metastore Connection Retries

Description
Number of retry attempts the Catalog Server will make when connecting to the Hive Metastore Server. By default, the Catalog Server waits one second between retries.
Related Name
hive.metastore.connect.retries
Default Value
5
API Name
hive_metastore_connect_retries
Required
false

Catalog Server Hive Metastore Connection Timeout

Description
Timeout for requests to the Hive Metastore Server from Catalog Server. Consider increasing this if you have tables with a lot of metadata and see timeout errors.
Related Name
hive.metastore.client.socket.timeout
Default Value
1 hour(s)
API Name
hive_metastore_timeout
Required
false

Metastore Notification Polling Interval

Description
The value of this configuration determines the interval with which the Catalog Server fetches new notifications from Hive Metastore. The feature is disabled when it is set to 0.
Related Name
hms_event_polling_interval_s
Default Value
2 second(s)
API Name
hms_event_polling_interval_s
Required

false

Load Catalog in Background**Description**

If true, loads catalog metadata in the background. If false, metadata is loaded lazily (on access). Only effective in CDH 5 and Impala 1.2.4 and higher.

Related Name

load_catalog_in_background

Default Value

false

API Name

load_catalog_in_background

Required

false

Catalog Server Max Breakpad Dump Files**Description**

Maximum number of Breakpad dump files stored by Catalog Server Role.

Related Name

max_minidumps

Default Value

9

API Name

max_minidumps

Required

false

Catalog Server Breakpad Dump Directory**Description**

Directory for storing Catalog Server Breakpad dumps.

Related Name

minidump_path

Default Value

/var/log/impala-minidumps

API Name

minidump_path

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are

owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

Catalog Server Log Directory

Description

Directory where Catalog Server will place its log files.

Related Name

log_dir

Default Value

/var/log/catalogd

API Name

log_dir

Required

false

Impala Catalog Server Logging Threshold

Description

The minimum log level for Impala Catalog Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Catalog Server Verbose Log Level

Description

Verbose logging level for the GLog logger. These messages are always logged at 'INFO' log level, so this setting has no effect if Logging Threshold is set to 'WARN' or above.

Related Name

GLOG_v

Default Value

1

API Name

log_verbose_level

Required

false

Catalog Server Log Buffer Level

Description

Buffer log messages logged at this level or lower (-1 means don't buffer; 0 means buffer INFO only; 1 means buffer WARNING only, ...)

Related Name

logbuflevel

Default Value

0

API Name

logbuflevel

Required

false

Catalog Server Maximum Log Files**Description**

The number of log files that are kept for each severity level before all older log files are removed. The number has to be greater than 1 to keep at least the current log file open. If set to 0, all log files are retained and log rotation is effectively disabled.

Related Name

max_log_files

Default Value

10

API Name

max_log_files

Required

false

Impala Catalog Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Impala Catalog Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Catalog Server Connectivity Health Test****Description**

Enables the health test that verifies the Catalog Server is connected to the StateStore

Related Name**Default Value**

true

API Name

catalogserver_connectivity_health_enabled

Required

false

Catalog Server Connectivity Tolerance at Startup**Description**

The amount of time to wait for the Catalog Server to fully start up and connect to the StateStore before enforcing the connectivity check.

Related Name**Default Value**

3 minute(s)

API Name

catalogserver_connectivity_tolerance

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

catalogserver_fd_thresholds

Required

false

Impala Catalog Server Host Health Test**Description**

When computing the overall Impala Catalog Server health, consider the host's health.

Related Name**Default Value**

true

API Name

catalogserver_host_health_enabled

Required

false

Impala Catalog Server Process Health Test**Description**

Enables the health test that the Impala Catalog Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

catalogserver_scm_health_enabled

Required

false

Health Test Startup Tolerance

Description

The amount of time allowed after this role is started that failures of health tests that rely on communication with this role will be tolerated.

Related Name**Default Value**

5 minute(s)

API Name

catalogserver_startup_tolerance

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

catalogserver_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

catalogserver_web_metric_collection_thresholds

Required

false

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds

Description

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures

Description

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check

Description

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Resident Set Size Thresholds

Description

The health test thresholds on the resident size of the process.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_resident_set_size_thresholds

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Enable Catalog Server Web Server

Description

Enable/Disable Catalog Server web server. This web server contains useful information about Catalog Server daemon.

Related Name

enable_webserver

Default Value

true

API Name

catalogd_enable_webserver

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value**

API Name

rlimit_fds

Required

false

Ports and Addresses**Catalog Server Service Port****Description**

Port where Catalog Server is exported.

Related Name

catalog_service_port

Default Value

26000

API Name

catalog_service_port

Required

false

Catalog Server HTTP Server Port**Description**

Port where Catalog Server debug web server runs.

Related Name

webserver_port

Default Value

25020

API Name

catalogserver_webserver_port

Required

false

Resource Management**Java Heap Size of Catalog Server in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

4 GiB

API Name

catalogd_embedded_jvm_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Catalog Server Webserver TLS/SSL Server Certificate File (PEM Format)****Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Catalog Server Webserver is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_certificate_file

Default Value**API Name**

webserver_certificate_file

Required

false

Catalog Server Web Server User Password

Description

Password for Catalog Server web server authentication.

Related Name

webserver_htpassword_password

Default Value**API Name**

webserver_htpassword_password

Required

false

Catalog Server Web Server Username

Description

Username for Catalog Server web server authentication.

Related Name

webserver_htpassword_user

Default Value**API Name**

webserver_htpassword_user

Required

false

Catalog Server Webserver TLS/SSL Server Private Key File (PEM Format)

Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Catalog Server Webserver is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_private_key_file

Default Value**API Name**

webserver_private_key_file

Required

false

Catalog Server Webserver TLS/SSL Private Key Password

Description

The password for the private key in the Catalog Server Webserver TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

webserver_private_key_password_cmd

Default Value**API Name**

webserver_private_key_password_cmd

Required

false

Stacks Collection

Stacks Collection Data Retention

Description	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name	stacks_collection_data_retention
Default Value	100 MiB
API Name	stacks_collection_data_retention
Required	false

Stacks Collection Directory

Description	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.
Related Name	stacks_collection_directory
Default Value	
API Name	stacks_collection_directory
Required	false

Stacks Collection Enabled

Description	Whether or not periodic stacks collection is enabled.
Related Name	stacks_collection_enabled
Default Value	false
API Name	stacks_collection_enabled
Required	true

Stacks Collection Frequency

Description	The frequency with which stacks are collected.
Related Name	stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Parameter Validation: Catalog Server Service Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Service Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalog_service_port

Required

true

Suppress Parameter Validation: Catalog Server Command Line Argument Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Command Line Argument Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogd_cmd_args_safety_valve

Required

true

Suppress Parameter Validation: Impala Catalog Server Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Catalog Server Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogd_core_site_safety_valve

Required

true

Suppress Parameter Validation: Catalog Server HBase Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server HBase Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogd_hbase_conf_safety_valve

Required

true

Suppress Parameter Validation: Catalog Server HDFS Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server HDFS Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogd_hdfs_site_conf_safety_valve

Required

true

Suppress Parameter Validation: Catalog Server Hive Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Hive Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogd_hive_conf_safety_valve

Required

true

Suppress Parameter Validation: Java Configuration Options for Catalog Server**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Catalog Server parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogd_java_opts

Required

true

Suppress Parameter Validation: Impala Catalog Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Catalog Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogserver_role_env_safety_valve

Required

true

Suppress Parameter Validation: Catalog Server HTTP Server Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server HTTP Server Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogserver_webserver_port

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Catalog Server Core Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Core Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_core_dump_dir

Required

true

Suppress Parameter Validation: Catalog Server Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Catalog Server Breakpad Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Breakpad Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_minidump_path

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Catalog Server Webserver TLS/SSL Server Certificate File (PEM Format)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Webserver TLS/SSL Server Certificate File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_certificate_file

Required

true

Suppress Parameter Validation: Catalog Server Web Server User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Web Server User Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_htpassword_password

Required

true

Suppress Parameter Validation: Catalog Server Web Server Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Web Server Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_htpassword_user

Required

true

Suppress Parameter Validation: Catalog Server Webserver TLS/SSL Server Private Key File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Webserver TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_private_key_file

Required

true

Suppress Parameter Validation: Catalog Server Webserver TLS/SSL Private Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Webserver TLS/SSL Private Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_private_key_password_cmd

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_audit_health

Required

true

Suppress Health Test: StateStore Connectivity**Description**

Whether to suppress the results of the StateStore Connectivity health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_connectivity

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_file_descriptor

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_catalogserver_log_directory_free_space

Required

true

Suppress Health Test: Resident Set Size

Description

Whether to suppress the results of the Resident Set Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_catalogserver_memory_rss_health

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_catalogserver_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_unexpected_exits

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_web_metric_collection

Required

true

Impala Daemon**Advanced****Abort on Config Error****Description**

Abort Impala startup if there are improper configs or running on unsupported hardware.

Related Name

abort_on_config_error

Default Value

true

API Name

abort_on_config_error

Required

false

Impala Daemon Core Dump Directory**Description**

Directory where an Impala Daemon core dump is placed.

Related Name

core_dump_dir

Default Value

/var/log/impalad

API Name

core_dump_dir

Required

false

Impala Daemon Max Client Connections**Description**

Maximum number of concurrent client connections allowed. This determines how many queries can run simultaneously. When more clients try to connect to Impala than the value of this setting, the later arriving clients have to wait until previous clients disconnect. Setting this value too high could negatively impact query latency.

Related Name

fe_service_threads

Default Value

64

API Name

fe_service_threads

Required

false

Impala Daemon Hive Metastore Connection Retries**Description**

Number of retry attempts the Impala Daemon will make when connecting to the Hive Metastore Server. By default, the Impala Daemon waits one second between retries.

Related Name

hive.metastore.connect.retries

Default Value

5

API Name

hive_metastore_connect_retries

Required

false

Impala Daemon Hive Metastore Connection Timeout**Description**

Timeout for requests to the Hive Metastore Server from Impala. Consider increasing this if you have tables with a lot of metadata and see timeout errors.

Related Name

hive.metastore.client.socket.timeout

Default Value

1 hour(s)

API Name

hive_metastore_timeout

Required

false

Impala Daemon HDFS Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into hdfs-site.xml for this role only.

Related Name**Default Value****API Name**

impala_hdfs_site_conf_safety_valve

Required

false

Impala Daemon Hive Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into hive-site.xml for this role only.

Related Name**Default Value****API Name**

impala_hive_conf_safety_valve

Required

false

Impala Daemon Llama Site Advanced Configuration Snippet (Safety Valve)**Description**

An XML snippet to append to llama-site.xml for Impala Daemons. This configuration only has effect on Impala versions 1.3 or greater.

Related Name**Default Value****API Name**

impala_llama_site_conf_safety_valve

Required

false

Impala Daemon Command Line Argument Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be added (verbatim) to Impala Daemon command-line flags. Key names should begin with a hyphen(-). For example: -log_filename=foo.log

Related Name**Default Value****API Name**

impalad_cmd_args_safety_valve

Required

false

Impala Daemon Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value****API Name**

impalad_core_site_safety_valve

Required

false

Java Configuration Options for Impala Daemon

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name

Impala Daemon Java Options

Default Value**API Name**

impalad_embedded_java_opts

Required

false

Impala Daemon Fair Scheduler Advanced Configuration Snippet (Safety Valve)

Description

An XML string to use verbatim for the contents of fair-scheduler.xml for Impala Daemons. This configuration only has effect on Impala versions 1.3 or greater.

Related Name**Default Value****API Name**

impalad_fair_scheduler_safety_valve

Required

false

Impala Daemon HBase Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into hbase-site.xml for this role only.

Related Name**Default Value****API Name**

impalad_hbase_conf_safety_valve

Required

false

Result Cache Maximum Size**Description**

Maximum number of query results a client may request to be cached on a per-query basis to support restarting fetches. This option guards against unreasonably large result caches requested by clients. Requests exceeding this maximum will be rejected.

Related Name

max_result_cache_size

Default Value

100000

API Name

impalad_result_cache_max_size

Required

false

Impala Daemon Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

IMPALAD_role_env_safety_valve

Required

false

Llama Maximum Request Attempts**Description**

Maximum number of times a request to reserve, expand, or release resources is attempted until the request is cancelled.

Related Name

llama_max_request_attempts

Default Value

5

API Name

llama_max_request_attempts

Required

false

Llama Registration Timeout Seconds**Description**

Maximum number of seconds that Impala attempts to register or re-register with Llama. If registration is unsuccessful, Impala cancels the action with an error, which could result in an impalad startup failure or a cancelled query. A setting of -1 seconds means try indefinitely.

Related Name

llama_registration_timeout_secs

Default Value

30 second(s)

API Name

llama_registration_timeout_secs

Required

false

Llama Registration Wait Seconds**Description**

Number of seconds to wait between attempts during Llama registration.

Related Name

llama_registration_wait_secs

Default Value

3 second(s)

API Name

llama_registration_wait_secs

Required

false

Impala Daemon Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Impala Daemon Max Breakpad Dump Files**Description**

Maximum number of Breakpad dump files stored by Impala Daemon Role.

Related Name

max_minidumps

Default Value

9

API Name

max_minidumps

Required

false

Impala Daemon Breakpad Dump Directory**Description**

Directory for storing Impala Daemon Breakpad dumps.

Related Name

minidump_path

Default Value

/var/log/impala-minidumps

API Name

minidump_path

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

`oom_heap_dump_enabled`**Required**`true`**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_sigkill_enabled`**Required**`true`**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**`true`**API Name**`process_auto_restart`**Required**`true`**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**`true`**API Name**`process_should_monitor`**Required**`true`**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Impala Daemon Audit Log Directory****Description**

The directory in which Impala daemon audit event log files are written. If "Impala Audit Event Generation" property is enabled, Impala will generate its audit logs in this directory.

Related Name

audit_event_log_dir

Default Value

/var/log/impalad/audit

API Name

audit_event_log_dir

Required

true

Enable Impala Audit Event Generation**Description**

Enables audit event generation by Impala daemons. The audit log file will be placed in the directory specified by 'Impala Daemon Audit Log Directory' parameter.

Related Name

enable_audit_event_log

Default Value

	false
API Name	
	enable_audit_event_log
Required	
	false

Enable Impala Lineage Generation

Description	Enables lineage generation by Impala daemons. The lineage log file is placed in the directory specified by the 'Impala Daemon Lineage Log Directory' parameter.
Related Name	
	enable_lineage_log
Default Value	
	true
API Name	
	enable_lineage_log
Required	
	false

Impala Daemon Lineage Log Directory

Description	The directory in which Impala daemon lineage log files are written. If "Impala Lineage Generation" property is enabled, Impala generates its lineage logs in this directory.
Related Name	
	lineage_event_log_dir
Default Value	
	/var/log/impalad/lineage
API Name	
	lineage_event_log_dir
Required	
	true

Impala Daemon Log Directory

Description	Directory where Impala Daemon will place its log files.
Related Name	
	log_dir
Default Value	
	/var/log/impalad
API Name	
	log_dir
Required	
	false

Impala Daemon Logging Threshold

Description

The minimum log level for Impala Daemon logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Impala Daemon Verbose Log Level

Description

Verbose logging level for the GLog logger. These messages are always logged at 'INFO' log level, so this setting has no effect if Logging Threshold is set to 'WARN' or above.

Related Name

GLOG_v

Default Value

1

API Name

log_verbose_level

Required

false

Impala Daemon Log Buffer Level

Description

Buffer log messages logged at this level or lower (-1 means don't buffer; 0 means buffer INFO only; 1 means buffer WARNING only, ...)

Related Name

logbuflevel

Default Value

0

API Name

logbuflevel

Required

false

Impala Daemon Maximum Audit Log File Size

Description

The maximum size (in queries) of the Impala Daemon audit event log file before a new one is created.

Related Name

max_audit_event_log_file_size

Default Value

5000 line(s)

API Name`max_audit_event_log_file_size`**Required**`false`**Impala Daemon Maximum Lineage Log File Size****Description**

The maximum size (in entries) of the Impala daemon lineage log file before a new one is created.

Related Name`max_lineage_log_file_size`**Default Value**`5000 line(s)`**API Name**`max_lineage_log_file_size`**Required**`false`**Impala Maximum Log Files****Description**

The number of log files that are kept for each severity level before all older log files are removed. The number has to be greater than 1 to keep at least the current log file open. If set to 0, all log files are retained and log rotation is effectively disabled.

Related Name`max_log_files`**Default Value**`10`**API Name**`max_log_files`**Required**`false`**Impala Daemon Max Log Size****Description**

The maximum size, in megabytes, per log file for Impala Daemon logs. Typically used by log4j or logback.

Related Name**Default Value**`200 MiB`**API Name**`max_log_size`**Required**`false`**Monitoring**

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

`enable_alerts`

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

`enable_config_alerts`

Required

false

Query Monitoring Timeout

Description

The timeout used by the Cloudera Manager Agent's query monitor when communicating with the Impala Daemon web server, specified in seconds.

Related Name**Default Value**

5.0 second(s)

API Name

`executing_queries_timeout_seconds`

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

`heap_dump_directory_free_space_absolute_thresholds`

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Query Monitoring Failures Thresholds**Description**

The health test thresholds for failures encountered when monitoring queries within a recent period specified by the `impala_query_monitoring_failure_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

impala_query_monitoring_failure_thresholds

Required

false

Monitoring Period For Query Monitoring Failures**Description**

The period to review when computing query monitoring failures.

Related Name**Default Value**

5 minute(s)

API Name

impala_query_monitoring_failure_window

Required

false

Impala Daemon Query Collection Status Health Check**Description**

Enables the health check that determines if query collection for the Impala Daemon is successful.

Related Name**Default Value**

true

API Name

impala_query_monitoring_status_check_enabled

Required

false

Impala Daemon Connectivity Health Test**Description**

Enables the health test that verifies the Impala Daemon is connected to the StateStore.

Related Name**Default Value**

true

API Name

impalad_connectivity_health_enabled

Required

false

Impala Daemon Connectivity Tolerance at Startup**Description**

The amount of time to wait for the Impala Daemon to fully start up and connect to the StateStore before enforcing the connectivity check.

Related Name**Default Value**

3 minute(s)

API Name

impalad_connectivity_tolerance

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

impalad_fd_thresholds

Required

false

Impala Daemon Concurrent Client Connections Monitoring Percentage Thresholds**Description**

The health check thresholds for monitoring of the number of concurrent client connections to Impala Daemon. Specified as a percentage of the maximum client connections parameter.

Related Name**Default Value**

Warning: 80.0 %, Critical: 95.0 %

API Name

impalad_frontend_connections_thresholds

Required

false

Impala Daemon Host Health Test**Description**

When computing the overall Impala Daemon health, consider the host's health.

Related Name**Default Value**

true

API Name

impalad_host_health_enabled

Required

false

Pause Duration Thresholds**Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

impalad_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

impalad_pause_duration_window

Required

false

Impala Daemon Ready Status Health Check

Description

Enables the health check that determines if the Impala daemon is ready to process queries.

Related Name**Default Value**

true

API Name

impalad_ready_status_check_enabled

Required

false

Impala Daemon Ready Status Startup Tolerance

Description

The amount of time at Impala Daemon startup allowed for the Impala Daemon to start accepting new queries for processing.

Related Name**Default Value**

3 minute(s)

API Name

impalad_ready_status_check_startup_tolerance

Required

false

Impala Daemon Process Health Test

Description

Enables the health test that the Impala Daemon's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

impalad_scm_health_enabled

Required

false

Impala Daemon Scratch Directories Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Impala Daemon Scratch Directories.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

impalad_scratch_directories_free_space_absolute_thresholds

Required

false

Impala Daemon Scratch Directories Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Impala Daemon Scratch Directories. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Impala Daemon Scratch Directories Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

impalad_scratch_directories_free_space_percentage_thresholds

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

impalad_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

impalad_web_metric_collection_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check

Description

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Resident Set Size Thresholds

Description

The health test thresholds on the resident size of the process.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_resident_set_size_thresholds

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: Any, Critical: Any

API Name

process_swap_memory_thresholds

Required

false

Query Monitoring Full Sync Period**Description**

The full sync period of the Impala query monitor in the Cloudera Manager Agent, specified in minutes. When a full sync is happening, all query profiles are sent over regardless of having been updated or not. If set to zero, a full sync is performed at each polling period.

Related Name**Default Value**

2.0 minute(s)

API Name

query_monitoring_full_sync_period_minutes

Required

false

Query Monitoring Period**Description**

The polling period of the Impala query monitor in the Cloudera Manager Agent, specified in seconds. If set to zero, query monitoring is disabled.

Related Name**Default Value**

1.0 second(s)

API Name

query_monitoring_period_seconds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

`role_triggers`

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Impala Daemon Data Cache Per Directory Capacity****Description**

Maximum amount of local disk space Impala will use per daemon in each of the configured directories for caching of remote read data.

Related Name**Default Value****API Name**

datacache_capacity

Required

false

Impala Daemon Data Cache Directories**Description**

Directories Impala Daemon will use for caching of remote read data.

Related Name**Default Value****API Name**

datacache_dirs

Required

false

Enable Local Data Cache**Description**

Enable the local Impala Daemon data cache for caching of remote reads.

Related Name**Default Value**

false

API Name

datacache_enabled

Required

false

Impala Daemon Query Options Advanced Configuration Snippet (Safety Valve)**Description**

A list of key-value pairs of additional query options to pass to the Impala Daemon command line, separated by ','.

Related Name

default_query_options

Default Value

default_file_format=parquet default_transactional_type=insert_only

API Name

default_query_options

Required

false

Impala Graceful Shutdown Deadline**Description**

Deadline (in seconds) for the graceful shutdown process of Impala Daemons. Once this deadline is reached, the daemon shuts down regardless of any running queries. A value of 0 means immediate shutdown.

Related Name**Default Value**

5 minute(s)

API Name

impala_graceful_shutdown_deadline

Required

false

Impala Daemons Load Balancer**Description**

Address of the load balancer used for Impala daemons. Should be specified in host:port format. If this is specified and Kerberos is enabled, Cloudera Manager adds a principal for 'impala/load_balancer_host@realm' to the keytab for all Impala daemons.

Related Name**Default Value****API Name**

impalad_load_balancer

Required

false

Maximum Cached File Handles**Description**

Maximum number of cached HDFS file handles. Caching HDFS file handles reduces the number of new file handles opened and thus reduces the load on the HDFS NameNode.. Each cached file handle consumes a small amount of memory on the Impala Daemon. If set to zero, the file handle caching is disabled.

Related Name

max_cached_file_handles

Default Value

20000

API Name

impalad_max_cached_file_handles

Required

false

Impala Daemon Specialization

Description

Configures Impala daemons to only execute queries or perform query coordination. When this setting is in use, daemons specializing in both tasks must exist.

Related Name

Default Value

NO_SPECIALIZATION

API Name

impalad_specialization

Required

false

Unused Cached File Handle Timeout

Description

Maximum time, in seconds, that an unused HDFS file handle will remain in the HDFS file handle cache. When the underlying file for a cached file handle is deleted, the disk space may not be freed until the cached file handle is removed from the cache. Specifying this timeout allows the disk space of deleted files to be freed in a predictable period of time. If set to zero, unused cached HDFS file handles do not time out.

Related Name

unused_file_handle_timeout_sec

Default Value

21600

API Name

impalad_unused_file_handle_timeout_sec

Required

false

Local UDF Library Dir

Description

User-defined function (UDF) libraries are copied from HDFS into this local directory.

Related Name

local_library_dir

Default Value

/var/lib/impala/udfs

API Name

local_library_dir

Required

false

Impala Daemon Scratch Directories

Description

Directories where Impala Daemon will write data such as spilling information to disk to free up memory. This can potentially be large amounts of data.

Related Name

scratch_dirs

Default Value

API Name

scratch_dirs

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Impala Daemon Backend Port

Description

Port on which thrift-based ImpalaInternalService is exported.

Related Name

be_port

Default Value

22000

API Name

be_port

Required

false

Impala Daemon Beeswax Port

Description

Port on which Beeswax client requests are served by Impala Daemons.

Related Name

Default Value

21000

API Name

beeswax_port

Required

false

Impala Daemon HiveServer2 HTTP Port

Description

Port on which HiveServer2 client requests are served by Impala Daemons via HTTP.

Related Name

hs2_http_port

Default Value

28000

API Name

hs2_http_port

Required

false

Impala Daemon HiveServer2 Port

Description

Port on which HiveServer2 client requests are served by Impala Daemons via the thrift binary protocol.

Related Name

hs2_port

Default Value

21050

API Name

hs2_port

Required

false

Enable Impala Daemon Web Server

Description

Enable or disable the Impala Daemon web server. This web server contains useful information about Impala Daemon.

Related Name

enable_webserver

Default Value

true

API Name

impalad_enable_webserver

Required

false

Impala Daemon HTTP Server Port

Description

Port where Impala debug web server runs.

Related Name

webserver_port

Default Value	25000
API Name	impalad_webserver_port
Required	false

Impala Daemon KRPC Port

Description	Port on which KRPC-based ImpalaInternalService is exported.
Related Name	krpc_port
Default Value	27000
API Name	krpc_port
Required	false

Llama Callback Port

Description	Port where Llama notification callback should be started
Related Name	llama_callback_port
Default Value	0
API Name	llama_callback_port
Required	false

StateStoreSubscriber Service Port

Description	Port where StateStoreSubscriberService is running.
Related Name	state_store_subscriber_port
Default Value	23000
API Name	state_store_subscriber_port
Required	false

Resource Management

Java Heap Size of Impala Daemon in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Impala Daemon JVM Heap

Default Value

4 GiB

API Name

impalad_embedded_jvm_heapsize

Required

false

Idle Query Timeout

Description

The time that a query may be idle (i.e. no processing work is done and no updates are received from the client) before it is cancelled. If 0, idle queries are never expired.

Related Name

idle_query_timeout

Default Value

0 second(s)

API Name

impalad_idle_query_timeout

Required

false

Idle Session Timeout

Description

The time that a session may be idle before it is closed (and all running queries cancelled) by Impala. If 0, idle sessions are never expired.

Related Name

idle_session_timeout

Default Value

0 second(s)

API Name

impalad_idle_session_timeout

Required

false

Impala Daemon Memory Limit

Description

Memory limit for Impala Daemon, enforced by the daemon itself. This limit does not include memory consumed by the daemon's embedded JVM. The Impala Daemon uses up to this amount of memory for query processing, cached data, network buffers, background operations, etc. If exceeded, queries running on the Impala Daemon will be killed until the Impala Daemon is under the memory limit.

Related Name

mem_limit

Default Value

API Name

impalad_memory_limit

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Disk Spill Encryption****Description**

Encrypt and verify the integrity of all data spilled to disk as part of a query. This feature is only supported for Impala 2.0 and higher and CDH 5.2 and higher (which includes Impala 2.0).

Related Name

disk_spill_encryption

Default Value

false

API Name

disk_spill_encryption

Required

false

LDAP Server CA Certificate**Description**

The location on disk of the certificate, in .pem format, used to confirm the authenticity of the LDAP server certificate. This is the Certificate Authority (CA) certificate, and it was used to sign the LDAP server certificate. If not set, all certificates are trusted, which means that an attacker could potentially intercept otherwise encrypted usernames and passwords.

Related Name

ldap_ca_certificate

Default Value**API Name**

impalad_ldap_ca_certificate

Required

false

Impala Daemon Webserver TLS/SSL Server Certificate File (PEM Format)**Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Impala Daemon Webserver is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_certificate_file

Default Value**API Name**

webserver_certificate_file

Required

false

Impala Daemon Web Server User Password**Description**

Password for Impala Daemon webserver authentication.

Related Name

webserver_htpassword_password

Default Value**API Name**

webserver_htpassword_password

Required

false

Impala Daemon Web Server Username

Description

Username for Impala Daemon webserver authentication.

Related Name

webserver_htpassword_user

Default Value**API Name**

webserver_htpassword_user

Required

false

Impala Daemon Webserver TLS/SSL Server Private Key File (PEM Format)

Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Impala Daemon Webserver is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_private_key_file

Default Value**API Name**

webserver_private_key_file

Required

false

Impala Daemon Webserver TLS/SSL Private Key Password

Description

The password for the private key in the Impala Daemon Webserver TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

webserver_private_key_password_cmd

Default Value**API Name**

webserver_private_key_password_cmd

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that

have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Parameter Validation: Impala Daemon Audit Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Audit Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_audit_event_log_dir

Required

true

Suppress Parameter Validation: Impala Daemon Backend Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Backend Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_be_port

Required

true

Suppress Parameter Validation: Impala Daemon Beeswax Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Beeswax Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_beeswax_port

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Impala Daemon Core Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Core Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_core_dump_dir

Required

true

Suppress Parameter Validation: Impala Daemon Data Cache Directories**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Data Cache Directories parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_datacache_dirs

Required

true

Suppress Configuration Validator: Impala Daemon Default Memory Limit Validator**Description**

Whether to suppress configuration warnings produced by the Impala Daemon Default Memory Limit Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_default_impalad_memory_limit_validator

Required

true

Suppress Parameter Validation: Impala Daemon Query Options Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Query Options Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_default_query_options

Required

true

Suppress Parameter Validation: Impala Daemon HiveServer2 HTTP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon HiveServer2 HTTP Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_http_port

Required

true

Suppress Parameter Validation: Impala Daemon HiveServer2 Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon HiveServer2 Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_port

Required

true

Suppress Configuration Validator: Impala Audit Enabled Validator**Description**

Whether to suppress configuration warnings produced by the Impala Audit Enabled Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_impala_audit_enabled_validator

Required

true

Suppress Parameter Validation: Impala Daemon HDFS Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon HDFS Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_impala_hdfs_site_conf_safety_valve

Required

Suppress Parameter Validation: Impala Daemon HTTP Server Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon HTTP Server Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_impalad_webserver_port

Required

true

Suppress Parameter Validation: Impala Daemon KRPC Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon KRPC Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_krpc_port

Required

true

Suppress Parameter Validation: Impala Daemon Lineage Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Lineage Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_lineage_event_log_dir

Required

true

Suppress Parameter Validation: Llama Callback Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Llama Callback Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_llama_callback_port

Required

true

Suppress Parameter Validation: Local UDF Library Dir

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Local UDF Library Dir parameter.

Related Name

Default Value

false

API Name

role_config_suppression_local_library_dir

Required

true

Suppress Parameter Validation: Impala Daemon Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Impala Daemon Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Impala Daemon Breakpad Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Breakpad Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_minidump_path

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Impala Daemon Scratch Directories**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Scratch Directories parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_scratch_dirs

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: StateStoreSubscriber Service Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the StateStoreSubscriber Service Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_state_store_subscriber_port

Required

true

Suppress Configuration Validator: Impala Daemon Unlimited Memory Limit Validator**Description**

Whether to suppress configuration warnings produced by the Impala Daemon Unlimited Memory Limit Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_unlimited_impalad_memory_limit_validator

Required

true

Suppress Parameter Validation: Impala Daemon Webserver TLS/SSL Server Certificate File (PEM Format)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Webserver TLS/SSL Server Certificate File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_certificate_file

Required

true

Suppress Parameter Validation: Impala Daemon Web Server User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Web Server User Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_htpassword_password

Required

true

Suppress Parameter Validation: Impala Daemon Web Server Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Web Server Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_htpassword_user

Required

true

Suppress Parameter Validation: Impala Daemon Webserver TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Webserver TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_webserver_private_key_file

Required

true

Suppress Parameter Validation: Impala Daemon Webserver TLS/SSL Private Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Webserver TLS/SSL Private Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_private_key_password_cmd

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_audit_health

Required

true

Suppress Health Test: StateStore Connectivity**Description**

Whether to suppress the results of the StateStore Connectivity health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_connectivity

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_file_descriptor

Required

true

Suppress Health Test: Impala Concurrent Client Connections

Description

Whether to suppress the results of the Impala Concurrent Client Connections health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_frontend_connections

Required

true

Suppress Health Test: Heap Dump Directory Free Space

Description

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_impalad_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_log_directory_free_space

Required

true

Suppress Health Test: Resident Set Size**Description**

Whether to suppress the results of the Resident Set Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_memory_rss_health

Required

true

Suppress Health Test: Pause Duration**Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_pause_duration

Required

true

Suppress Health Test: Query Monitoring Status Check**Description**

Whether to suppress the results of the Query Monitoring Status Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_query_monitoring_status

Required

true

Suppress Health Test: Impala Daemon Ready Check**Description**

Whether to suppress the results of the Impala Daemon Ready Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_ready_status

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_scm_health

Required

true

Suppress Health Test: Impala Daemon Scratch Directories Free Space**Description**

Whether to suppress the results of the Impala Daemon Scratch Directories Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_impalad_scratch_directories_free_space

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_unexpected_exits

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_web_metric_collection

Required

Impala StateStore

Advanced

StateStore Core Dump Directory

Description

Directory where a StateStore core dump is placed.

Related Name

core_dump_dir

Default Value

/var/log/statestore

API Name

core_dump_dir

Required

false

Statestore Max Breakpad Dump Files

Description

Maximum number of Breakpad dump files stored by Statestore Role.

Related Name

max_minidumps

Default Value

9

API Name

max_minidumps

Required

false

Statestore Breakpad Dump Directory

Description

Directory for storing Statestore Breakpad dumps.

Related Name

minidump_path

Default Value

/var/log/impala-minidumps

API Name

minidump_path

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

true

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Statestore Command Line Argument Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be added (verbatim) to StateStore command line flags.

Related Name**Default Value****API Name**

statestore_cmd_args_safety_valve

Required

false

Impala StateStore Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

STATESTORE_role_env_safety_valve

Required

false

Logs**StateStore Log Directory****Description**

Directory where StateStore will place its log files.

Related Name

log_dir

Default Value

/var/log/statestore

API Name

log_dir

Required

false

Impala StateStore Logging Threshold**Description**

The minimum log level for Impala StateStore logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

StateStore Verbose Log Level**Description**

Verbose logging level for the GLog logger. These messages are always logged at 'INFO' log level, so this setting has no effect if Logging Threshold is set to 'WARN' or above.

Related Name

GLOG_v

Default Value

1

API Name

log_verbose_level

Required

false

StateStore Log Buffer Level**Description**

Buffer log messages logged at this level or lower (-1 means don't buffer; 0 means buffer INFO only; 1 means buffer WARNING only, ...)

Related Name

logbuflevel

Default Value

0

API Name

logbuflevel

Required

false

StateStore Maximum Log Files**Description**

The number of log files that are kept for each severity level before all older log files are removed. The number has to be greater than 1 to keep at least the current log file open. If set to 0, all log files are retained and log rotation is effectively disabled.

Related Name

max_log_files

Default Value

10

API Name

max_log_files

Required

false

Impala StateStore Max Log Size

Description

The maximum size, in megabytes, per log file for Impala StateStore logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

`mgmt_navigator_failure_window`

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

`mgmt.navigator.status.check.enabled`

Default Value

true

API Name

`mgmt_navigator_status_check_enabled`

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Resident Set Size Thresholds**Description**

The health test thresholds on the resident size of the process.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

`process_resident_set_size_thresholds`

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

`role_triggers`

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

`statestore_fd_thresholds`

Required

false

Impala StateStore Host Health Test

Description

When computing the overall Impala StateStore health, consider the host's health.

Related Name

Default Value

true

API Name

statestore_host_health_enabled

Required

false

Impala StateStore Process Health Test**Description**

Enables the health test that the Impala StateStore's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

statestore_scm_health_enabled

Required

false

Health Test Startup Tolerance**Description**

The amount of time allowed after this role is started that failures of health tests that rely on communication with this role will be tolerated.

Related Name**Default Value**

5 minute(s)

API Name

statestore_startup_tolerance

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

statestore_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name

Default Value

Warning: 10 second(s), Critical: Never

API Name

statestore_web_metric_collection_thresholds

Required

false

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Enable StateStore Web Server****Description**

Enable/Disable StateStore web server. This web server contains useful information about StateStore daemon.

Related Name

enable_webserver

Default Value

true

API Name

statestore_enable_webserver

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

StateStore Worker Threads

Description

Number of worker threads for the thread manager underlying the StateStore Thrift server.

Related Name

state_store_num_server_worker_threads

Default Value

4

API Name

state_store_num_server_worker_threads

Required

false

Maximum StateStore Pending Tasks

Description

Maximum number of tasks allowed to be pending at the thread manager underlying the StateStore Thrift server (0 allows infinitely many pending tasks)

Related Name

state_store_pending_task_count_max

Default Value

0

API Name

state_store_pending_task_count_max

Required

false

Ports and Addresses

StateStore Service Port

Description

Port where StateStoreService is exported.

Related Name

state_store_port

Default Value

24000

API Name

state_store_port

Required

false

StateStore HTTP Server Port**Description**

Port where StateStore debug web server runs.

Related Name

webserver_port

Default Value

25010

API Name

statestore_webserver_port

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

`rm_custom_resources`**Required**`false`**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**`500`**API Name**`rm_io_weight`**Required**`true`**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`

API Name

rm_memory_soft_limit

Required

true

Security**StateStore Webserver TLS/SSL Server Certificate File (PEM Format)****Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when StateStore Webserver is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_certificate_file

Default Value**API Name**

webserver_certificate_file

Required

false

Statestore Web Server User Password**Description**

Password for Statestore webserver authentication.

Related Name

webserver_htpassword_password

Default Value**API Name**

webserver_htpassword_password

Required

false

Statestore Web Server Username**Description**

Username for Statestore webserver authentication.

Related Name

webserver_htpassword_user

Default Value**API Name**

webserver_htpassword_user

Required

false

StateStore Webserver TLS/SSL Server Private Key File (PEM Format)**Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when StateStore Webserver is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_private_key_file

Default Value**API Name**

webserver_private_key_file

Required

false

StateStore Webserver TLS/SSL Private Key Password**Description**

The password for the private key in the StateStore Webserver TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

webserver_private_key_password_cmd

Default Value**API Name**

webserver_private_key_password_cmd

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: StateStore Core Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the StateStore Core Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_core_dump_dir

Required

true

Suppress Parameter Validation: StateStore Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the StateStore Log Directory parameter.

Service-Wide**Admission Control****Enable Dynamic Resource Pools****Description**

Use Dynamic Resource Pools to configure Impala admission control or RM for this Impala service. These features are only supported in Impala 1.3 or higher deployments.

Related Name**Default Value**

true

API Name

admission_control_enabled

Required

false

Admission Control Queue Timeout**Description**

Maximum amount of time (in milliseconds) that a request waits to be admitted before timing out. Must be a positive integer.

Related Name

queue_wait_timeout_ms

Default Value

1 minute(s)

API Name

admission_control_queue_timeout

Required

false

Single Pool Max Queued Queries**Description**

Configures the maximum number of queued queries for admission control when using a single pool. -1 or 0 disables queuing, i.e. incoming requests are rejected if they can not be executed immediately. Ignored when Dynamic Resource Pools for Admission Control is enabled.

Related Name

default_pool_max_queued

Default Value

200

API Name

admission_control_single_pool_max_queued

Required

false

Single Pool Max Running Queries**Description**

Configures the maximum number of concurrently running queries for admission control when using a single pool. -1 indicates no limit and 0 indicates all incoming requests will be rejected. Ignored when Dynamic Resource Pools for Admission Control is enabled.

Related Name

default_pool_max_requests

Default Value

200

API Name

admission_control_single_pool_max_requests

Required

false

Single Pool Mem Limit**Description**

Configures the max memory of running queries for admission control when using a single pool. -1 or 0 indicates no limit. Ignored when Dynamic Resource Pools for Admission Control is enabled.

Related Name

default_pool_mem_limit

Default Value

-1 B

API Name

admission_control_single_pool_mem_limit

Required

false

Enable Impala Admission Control

Description

Use Impala Admission Control to throttle Impala requests. Unless 'Enable Dynamic Resource Pools' is enabled, Impala uses a single, default pool that is configured using the Single Pool configurations below. These features are only supported in Impala 1.3 or higher deployments.

Related Name**Default Value**

true

API Name

all_admission_control_enabled

Required

false

Advanced

Impala Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties

Description

For advanced use only, a string to be inserted into atlas-application.properties. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

application_properties_safety_valve

Required

false

Enable Core Dump

Description

Used to generate a core dump to get more information about an Impala crash. Unless otherwise configured systemwide using /proc/sys/kernel/core_pattern, the dump is generated in the 'current directory' of the Impala process (usually a subdirectory of the /var/run/cloudera-scm-agent/process directory). The core file can be very large.

Related Name**Default Value**

false

API Name

enable_core_dump

Required

false

Maximum HBase Client Retries

Description

Maximum number of HBase client retries for Impala. Used as a maximum for all operations such as fetching of the root region from the root RegionServer, getting a cell's value, and starting a row update. Overrides configuration in the HBase service.

Related Name

hbase.client.retries.number

Default Value

3

API Name

hbase_client_retries_number

Required

false

HBase RPC Timeout**Description**

Timeout in milliseconds for all HBase RPCs made by Impala. Overrides configuration in HBase service.

Related Name

hbase.rpc.timeout

Default Value

3 second(s)

API Name

hbase_rpc_timeout

Required

false

Impala Command Line Argument Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be added (verbatim) to Impala Daemon command-line flags. Applies to all roles in this service. Key names should begin with a hyphen(-). For example: -log_filename=foo.log

Related Name**Default Value****API Name**

impala_cmd_args_safety_valve

Required

false

Fair Scheduler Configuration Rules (Deployed)**Description**

A list specifying the rules to run to determine which Fair Scheduler configuration to use. The value specified here is deployed to all hosts. This configuration has effect only on Impala versions 1.3 or greater.

Related Name**Default Value**

[]

API Name

impala_schedule_rules

Required

false

Fair Scheduler Configuration Rules (Staged)

Description

A list specifying the rules to run to determine which Fair Scheduler configuration to use. Typically edited using the Rules configuration UI. This configuration only has effect on Impala versions 1.3 or greater.

Related Name**Default Value****API Name**

impala_schedule_rules_draft

Required

false

Fair Scheduler Allocations (Deployed)

Description

JSON representation of all the configurations that the Fair Scheduler can take across all schedules. This configuration has effect only on Impala versions 1.3 or greater.

Related Name**Default Value**

```
queues: [ name: root, queues: [ name: default, queues: [], schedulablePropertiesList:
[ scheduleName: default ] ], schedulablePropertiesList: [ scheduleName: default ] ], users: []
```

API Name

impala_scheduled_allocations

Required

false

Fair Scheduler Allocations (Staged)

Description

JSON representation of all the configurations that the Fair Scheduler can take across all schedules. Typically edited using the Pools configuration UI. This configuration only has effect on Impala versions 1.3 or greater.

Related Name**Default Value****API Name**

impala_scheduled_allocations_draft

Required

false

Impala Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

impala_service_env_safety_valve

Required

false

Impala Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml**Description**

For advanced use only, a string to be inserted into sentry-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

impalad_sentry_safety_valve

Required

false

Use HDFS Rules to Map Kerberos Principals to Short Names**Description**

If checked and Impala is using Kerberos, Impala will use the `hadoop.security.auth_to_local` rules from HDFS configuration. The relevant HDFS configuration is derived from Additional Rules to Map Kerberos Principals to Short Names.

Related Name

load_auth_to_local_rules

Default Value

false

API Name

load_hdfs_auth_to_local_rules

Required

false

Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties**Description**

For advanced use only, a string to be inserted into the client configuration for `navigator.client.properties`.

Related Name**Default Value****API Name**

navigator_client_config_safety_valve

Required

false

Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties**Description**

For advanced use only, a string to be inserted into the client configuration for `navigator.lineage.client.properties`.

Related Name

Default Value**API Name**

navigator_lineage_client_config_safety_valve

Required

false

Impala System Group (except Llama)**Description**

The group that this Impala's processes should run as (except Llama, which has its own group).

Related Name**Default Value**

impala

API Name

process_groupname

Required

true

Impala System User (except Llama)**Description**

The user that this Impala's processes should run as (except Llama, which has its own user).

Related Name**Default Value**

impala

API Name

process_username

Required

true

Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-audit.xml**Description**

For advanced use only, a string to be inserted into ranger-impala-audit.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_audit_safety_valve

Required

false

Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-security.xml**Description**

For advanced use only, a string to be inserted into ranger-impala-security.xml. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value**API Name**

ranger_security_safety_valve

Required

false

Use Debug Build**Description**

Use debug build of Impala binaries when starting roles. Useful when performing diagnostic activities to get more information in the stacktrace or core dump.

Related Name**Default Value**

false

API Name

use_debug_build

Required

false

Cloudera Navigator**Enable Audit Collection****Description**

Enable collection of audit events from the service's roles.

Related Name

navigator.audit.enabled

Default Value

true

API Name

navigator_audit_enabled

Required

false

Audit Event Filter**Description**

Event filters are defined in a JSON object like the following: { "defaultAction": ("accept", "discard"), "rules": [{ "action": ("accept", "discard"), "fields": [{ "name": "fieldName", "match": "regex" }] }] } A filter has a default action and a list of rules, in order of precedence. Each rule defines an action, and a list of fields to match against the audit event. A rule is "accepted" if all the listed field entries match the audit event. At that point, the action declared by the rule is taken. If no rules match the event, the default action is taken. Actions default to "accept" if not defined in the JSON object. The following is the list of fields that can be filtered for Impala events:

- userName: the user performing the action.
- ipAddress: the IP from where the request originated.
- operation: the Impala operation being performed.
- dbName: the dbName for the operation.
- tableName: the tableName for the operation.

Related Name

navigator.event.filter

Default Value**API Name**

navigator_audit_event_filter

Required

false

Audit Queue Policy**Description**

Action to take when the audit event queue is full. Drop the event or shutdown the affected process.

Related Name

navigator.batch.queue_policy

Default Value

DROP

API Name

navigator_audit_queue_policy

Required

false

Audit Event Tracker**Description**

Configures the rules for event tracking and coalescing. This feature is used to define equivalency between different audit events. When events match, according to a set of configurable parameters, only one entry in the audit list is generated for all the matching events. Tracking works by keeping a reference to events when they first appear, and comparing other incoming events against the "tracked" events according to the rules defined here. Event trackers are defined in a JSON object like the following: { "timeToLive" : [integer], "fields" : [{ "type" : [string], "name" : [string] }] } Where:

- timeToLive: maximum amount of time an event will be tracked, in milliseconds. Must be provided. This defines how long, since it's first seen, an event will be tracked. A value of 0 disables tracking.
- fields: list of fields to compare when matching events against tracked events.

Each field has an evaluator type associated with it. The evaluator defines how the field data is to be compared. The following evaluators are available:

- value: uses the field value for comparison.
- userName: treats the field value as a userName, and ignores any host-specific data. This is useful for environment using Kerberos, so that only the principal name and realm are compared.

The following is the list of fields that can be used to compare Impala events:

- operation: the Impala operation being performed.
- username: the user performing the action.
- ipAddress: the IP from where the request originated.
- allowed: whether the operation was allowed or denied.
- databaseName: the database affected by the operation.
- tableName: the table affected by the operation.
- objectType: the type of object affected by the operation.
- privilege: the privilege associated with the operation.

Healthy Impala Llama ApplicationMaster Monitoring Thresholds

Description

The health test thresholds of the overall Impala Llama ApplicationMaster health. The check returns "Concerning" health if the percentage of "Healthy" Impala Llama ApplicationMasters falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Impala Llama ApplicationMasters falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

impala_llamas_healthy_thresholds

Required

false

Impala Query Aggregates**Description**

Controls the aggregate metrics generated for Impala queries. The structure is a JSON list of the attributes to aggregate and the entities to aggregate to. For example, if the attributeName is 'hdfs_bytes_read' and the aggregationTargets is ['USER'] then the Service Monitor will create the metric 'impala_query_hdfs_bytes_read_rate' and, every ten minutes, will record the total hdfs bytes read for each user across all their Impala queries. By default it will also record the number of queries issues ('num_impala_queries_rate') for both users and pool. For a full list of the supported attributes see the Impala search page. Note that the valid aggregation targets are USER, YARN_POOL, and IMPALA (the service), and that these aggregate metrics can be viewed on both the reports and charts search pages.

Related Name**Default Value**

```
[ {attributeName: hdfs_bytes_read, aggregationTargets: [USER, IMPALA_POOL_USER,
IMPALA_POOL, IMPALA, CLUSTER] }, {attributeName: hdfs_bytes_written, aggregationTargets:
[USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] }, {attributeName:
thread_cpu_time, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL,
IMPALA, CLUSTER] }, {attributeName: bytes_streamed, aggregationTargets: [USER,
IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] }, {attributeName:
cm_cpu_milliseconds, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL,
IMPALA, CLUSTER] }, {attributeName: query_duration, aggregationTargets: [USER,
IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] }, {attributeName:
admission_wait, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL,
IMPALA, CLUSTER] }, {attributeName: memory_accrual, aggregationTargets: [USER,
IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] }, {attributeName:
thread_cpu_time, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL,
IMPALA, CLUSTER] }, {attributeName: memory_spilled, aggregationTargets: [USER,

Impala StateStore Role Health Test**Description**

When computing the overall IMPALA health, consider Impala StateStore's health

Related Name**Default Value**

true

API Name

impala_statestore_health_enabled

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Name of YARN service to use for resource management integration between Impala and YARN. This service dependency and the existence of a Llama role is required for using said integration.
Related Name
Default Value
API Name
yarn_service
Required
false

ZooKeeper Service for Llama HA

Description
Name of the ZooKeeper service to use for leader election and fencing when Llama is configured for high availability. This service dependency is required when more than one Llama role is present.
Related Name
Default Value

API Name

zookeeper_service

Required

false

Performance**Enable HDFS Short-Circuit Read****Description**

Enable HDFS short-circuit read. This allows a client colocated with the DataNode to read HDFS file blocks directly. This gives a performance boost to distributed clients that are aware of locality.

Related Name

dfs.client.read.shortcircuit

Default Value

true

API Name

dfs_client_read_shortcircuit

Required

false

StateStoreSubscriber Timeout**Description**

Time in seconds before Impala Daemon or Catalog Server times out with the StateStore.

Related Name

statestore_subscriber_timeout_seconds

Default Value

30 second(s)

API Name

statestore_subscriber_timeout

Required

false

Security**Enable TLS/SSL for Impala****Description**

Encrypt communication between clients and Impala using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

client_services_ssl_enabled

Default Value

false

API Name

client_services_ssl_enabled

Required

false

Enable LDAP Authentication

Description

When checked, LDAP-based authentication for users is enabled.

Related Name

enable_ldap_auth

Default Value

false

API Name

enable_ldap_auth

Required

false

Enable LDAP TLS

Description

If true, attempts to establish a TLS (Transport Layer Security) connection with an LDAP server that was specified with ldap://. Not required when using an LDAP URL with prefix ldaps://, because that already specifies TLS. This option is also known as "Use StartTLS".

Related Name

ldap_tls

Default Value

false

API Name

enable_ldap_tls

Required

false

Enable Kerberos Authentication for HTTP Web-Consoles

Description

Enables Kerberos authentication for Hadoop HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled for the HDFS service.

Related Name**Default Value**

false

API Name

hadoop_secure_web_ui

Required

false

Proxy Group Configuration

Description

Specifies the set of authorized proxy groups (users who can impersonate other users belonging to the specified groups during authorization) and whom they are allowed to impersonate. Input is a semicolon-separated list of key=value pairs of authorized proxy users to the group(s) they can impersonate. These groups are specified as a comma separated list of groups, or '*' to indicate all groups. For example: joe=group1,group2;hue=*;admin=*. Only valid when Sentry is enabled.

Related Name

authorized_proxy_group_config

Default Value**API Name**

impala_authorized_proxy_group_config

Required

false

Proxy User Configuration**Description**

Specifies the set of authorized proxy users (users who can impersonate other users during authorization) and whom they are allowed to impersonate. Input is a semicolon-separated list of key=value pairs of authorized proxy users to the user(s) they can impersonate. These users are specified as a comma separated list of short usernames, or '*' to indicate all users. For example: joe=alice,bob;hue=*;admin=*. Only valid when Sentry is enabled.

Related Name

authorized_proxy_user_config

Default Value

hue=*;knox=*

API Name

impala_authorized_proxy_user_config

Required

false

LDAP URL**Description**

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps://. The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name

ldap_uri

Default Value**API Name**

impala_ldap_uri

Required

false

impala TLS/SSL Client Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that impala might connect to. This is used when impala is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

Default Value**API Name**

impala_truststore_file

Required

false

impala TLS/SSL Client Trust Store Password**Description**

The password for the impala TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

impala_truststore_password

Required

false

Kerberos Principal**Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

impala

API Name

kerberos_princ_name

Required

true

Kerberos Re-init Interval**Description**

Number of minutes between reestablishing our ticket with the Kerberos server.

Related Name

kerberos_reinit_interval

Default Value

1 hour(s)

API Name

kerberos_reinit_interval

Required

false

LDAP BaseDN**Description**

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,*this parameter*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

Related Name

ldap_baseDN

Default Value**API Name**

ldap_baseDN

Required

false

LDAP Pattern**Description**

When set, this parameter allows arbitrary mapping from usernames into a Distinguished Name (DN). The string specified must have a placeholder named "#UID" inside it, and that #UID is replaced with the username. For example, you could mimic the behavior of LDAP BaseDN by specifying "uid=#UID,ou=People,dc=cloudera,dc=com". When the username of "mike" comes in, it replaces the #UID and the result is "uid=mike,ou=People,dc=cloudera,dc=com". This option should be used when more control over the DN is needed. This parameter is mutually exclusive with LDAP Domain and LDAP BaseDN.

Related Name

ldap_bind_pattern

Default Value**API Name**

ldap_bind_pattern

Required

false

Active Directory Domain**Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name

ldap_domain

Default Value**API Name**

Suppress Parameter Validation: Ranger Audit DFS Spool Dir

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

Related Name**Default Value**

false

API Name`service_config_suppression_ranger_audit_hdfs_spool_dir`**Required**`true`**Suppress Parameter Validation: Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-audit.xml parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_ranger_audit_safety_valve`**Required**`true`**Suppress Parameter Validation: Ranger Audit Solr Spool Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_ranger_audit_solr_spool_dir`**Required**`true`**Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_ranger_plugin_trusted_proxy_ipaddress`**Required**`true`**Suppress Parameter Validation: Ranger Policy Cache Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_policy_cache_dir

Required

true

Suppress Parameter Validation: Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-security.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-security.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_security_safety_valve

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Configuration Validator: Short-Circuit Read Enabled Validator

Description

Whether to suppress configuration warnings produced by the Short-Circuit Read Enabled Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_short_circuit_read_validator

Required

true

Suppress Configuration Validator: Short-Circuit Read Permissions Validator**Description**

Whether to suppress configuration warnings produced by the Short-Circuit Read Permissions Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_short_circuit_reads_data_directory_permissions_validator

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Impala TLS/SSL CA Certificate**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL CA Certificate parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_client_ca_certificate

Required

true

Suppress Parameter Validation: Impala TLS/SSL Server Private Key File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ssl_private_key

Required

true

Suppress Parameter Validation: Impala TLS/SSL Private Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL Private Key Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_private_key_password

Required

true

Suppress Parameter Validation: Impala TLS/SSL Server Certificate File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL Server Certificate File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_server_certificate

Required

Suppress Configuration Validator: Impala StateStore Count Validator**Description**

Whether to suppress configuration warnings produced by the Impala StateStore Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_statestore_count_validator

Required

true

Suppress Health Test: Impala Catalog Server Health**Description**

Whether to suppress the results of the Impala Catalog Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_impala_catalogserver_health

Required

true

Suppress Health Test: Impala Daemon Health**Description**

Whether to suppress the results of the Impala Daemon Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_impala_impalads_healthy

Required

true

Suppress Health Test: Impala Llama ApplicationMaster Health**Description**

Whether to suppress the results of the Impala Llama ApplicationMaster Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_impala_llamas_healthy

Required

true

Suppress Health Test: Impala StateStore Health**Description**

Whether to suppress the results of the Impala StateStore Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_impala_statestore_health

Required

true

Java KeyStore KMS Properties in Cloudera Runtime 7.1

Role groups:

Key Management Server

Advanced

Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value****API Name**

core-site.xml_role_safety_valve

Required

false

Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-acls.xml

Description

For advanced use only. A string to be inserted into kms-acls.xml for this role only.

Related Name**Default Value****API Name**

kms-acls.xml_role_safety_valve

Required

false

Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-site.xml

Description

For advanced use only. A string to be inserted into kms-site.xml for this role only.

Related Name**Default Value****API Name**

kms-site.xml_role_safety_valve

Required

false

Key Management Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KMS_role_env_safety_valve

Required

false

Key Management Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

`oom_heap_dump_enabled`**Required**`true`**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_sigkill_enabled`**Required**`true`**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**`false`**API Name**`process_auto_restart`**Required**`true`**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**`true`**API Name**`process_should_monitor`**Required**`true`**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Key Management Server Advanced Configuration Snippet (Safety Valve) for ssl-server.xml

Description

For advanced use only. A string to be inserted into ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ssl-server.xml_role_safety_valve

Required

false

Logs

Key Management Server Log Directory

Description

The log directory for log files of the role Key Management Server.

Related Name

log.dir

Default Value

/var/log/hadoop-kms

API Name

log_dir

Required
false

Key Management Server Logging Threshold

Description
The minimum log level for Key Management Server logs
Related Name
Default Value
INFO
API Name
log_threshold
Required
false

Key Management Server Maximum Log File Backups

Description
The maximum number of rolled log files to keep for Key Management Server logs. Typically used by log4j or logback.
Related Name
Default Value
10
API Name
max_log_backup_index
Required
false

Key Management Server Max Log Size

Description
The maximum size, in megabytes, per log file for Key Management Server logs. Typically used by log4j or logback.
Related Name
Default Value
200 MiB
API Name
max_log_size
Required
false

Monitoring

Enable Health Alerts for this Role

Description
When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name

Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

File Descriptor Monitoring Thresholds

Description	The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.
Related Name	
Default Value	Warning: 50.0 %, Critical: 70.0 %
API Name	kms_fd_thresholds
Required	false

Key Management Server Host Health Test

Description	When computing the overall Key Management Server health, consider the host's health.
Related Name	
Default Value	true
API Name	kms_host_health_enabled
Required	false

Key Management Server Process Health Test

Description	
--------------------	--

Enables the health test that the Key Management Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

kms_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.

- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking **View as JSON**. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

`false`

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Flume Proxy User Groups****Description**

Allows the flume superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.flume.groups

Default Value

*

API Name

hadoop_kms_proxyuser_flume_groups

Required

false

Flume Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the flume user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.flume.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_flume_hosts

Required

false

HDFS Proxy User Groups**Description**

Allows the hdfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hdfs.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hdfs_groups

Required

false

HDFS Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the hdfs user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hdfs.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hdfs_hosts

Required

false

Hive Proxy User Groups**Description**

Allows the hive superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hive.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hive_groups

Required

false

Hive Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the hive user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.kms.proxyuser.hive.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hive_hosts

Required

false

HTTP Proxy User Groups**Description**

Allows the HTTP superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.HTTP.groups

Default Value

*

API Name

hadoop_kms_proxyuser_HTTP_groups

Required

false

HTTP Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.HTTP.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_HTTP_hosts

Required

false

HttpFS Proxy User Groups

Description

Allows the httpfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.httpfs.groups

Default Value

*

API Name

hadoop_kms_proxyuser_httpfs_groups

Required

false

HttpFS Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the httpfs user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.httpfs.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_httpfs_hosts

Required

false

Hue Proxy User Groups

Description

Allows the hue superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hue.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hue_groups

Required

false

Hue Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hue user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hue.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hue_hosts

Required

false

Mapred Proxy User Groups

Description

Allows the mapred superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.mapred.groups

Default Value

*

API Name

hadoop_kms_proxyuser_mapred_groups

Required

false

Mapred Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the mapred user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.mapred.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_mapred_hosts

Required

false

Oozie Proxy User Groups

Description

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.oozie.groups

Default Value

*

API Name

hadoop_kms_proxyuser_oozie_groups

Required

false

Oozie Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.kms.proxyuser.oozie.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_oozie_hosts

Required

false

YARN Proxy User Groups

Description

Allows the yarn superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.yarn.groups

Default Value

*

API Name`hadoop_kms_proxyuser_yarn_groups`**Required**`false`**YARN Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the yarn user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name`hadoop.kms.proxyuser.yarn.hosts`**Default Value**`*`**API Name**`hadoop_kms_proxyuser_yarn_hosts`**Required**`false`**JavaKeyStoreProvider Directory****Description**

Directory of the keystore file `kms.keystore` used by `JavaKeyStoreProvider` that backs the KMS.

Related Name`hadoop.kms.key.provider.uri`**Default Value**`/var/lib/kms`**API Name**`hadoop_security_key_provider_dir`**Required**`true`**KMS Accept Count****Description**

The maximum queue length for incoming connection requests when all possible request processing threads are in use. Any requests received when the queue is full will be refused. This configuration is only supported in CDH 5.11 and up.

Related Name`hadoop.http.accept.queue.size`**Default Value**`500`**API Name**`kms_accept_count`**Required**`false`

KMS Blacklist Users

Description

A comma-separated list of users (no spaces) for whom to disallow access to key material. These users can still fetch key metadata and create encrypted encryption keys, but are unable to do any other KMS operations. Typically, HDFS superusers will be specified here.

Related Name

kms_blacklist_users

Default Value**API Name**

kms_blacklist_users

Required

false

KMS Heap Size

Description

Maximum heap size of the KMS.

Related Name

kms_heap_size

Default Value

1 GiB

API Name

kms_heap_size

Required

true

Additional Java Configuration Options for KMS

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name

kms_java_opts

Default Value**API Name**

kms_java_opts

Required

false

KMS Max Threads

Description

Maximum number of threads used to handle KMS requests.

Related Name

hadoop.http.max.threads

Default Value

250

API Name

`kms_max_threads`**Required**`false`**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**`rlimit_fds`**Required**`false`**Ports and Addresses****KMS HTTP Port****Description**

Port used by clients to interact with the KMS.

Related Name`hadoop.kms.http.port`**Default Value**`16000`**API Name**`kms_http_port`**Required**`true`**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name`cpu.shares`**Default Value**`1024`**API Name**`rm_cpu_shares`**Required**`true`

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Key Management Server TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Key Management Server might connect to. This is used when Key Management Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.server.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Key Management Server TLS/SSL Client Trust Store Password

Description

The password for the Key Management Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.server.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Key Management Server

Description

Encrypt communication between clients and Key Management Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hadoop.kms.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Key Management Server TLS/SSL Server JKS Keystore Key Password

Description

The password that protects the private key contained in the JKS keystore used when Key Management Server is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Key Management Server TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Key Management Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Key Management Server TLS/SSL Server JKS Keystore File Password

Description

The password for the Key Management Server JKS keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

	false
API Name	
	role_config_suppression_core-site.xml_role_safety_valve

false

API Name

role_health_suppression_kms_kms_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kms_kms_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kms_kms_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kms_kms_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_kms_kms_swap_memory_usage`**Required**`true`**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_kms_kms_unexpected_exits`**Required**`true`**Service-Wide****Advanced****Java KeyStore KMS Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**`KMS_service_env_safety_valve`**Required**`false`**System Group****Description**

The group that this service's processes should run as.

Related Name**Default Value**`kms`**API Name**`process_groupname`**Required**`true`

System User

Description

The user that this service's processes should run as.

Related Name**Default Value**

kms

API Name

process_username

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`service_triggers`

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

`smon_derived_configs_safety_valve`

Required

false

Other**Authentication Type****Description**

Authentication type for the KMS. Can either be "simple" or "kerberos".

Related Name

`hadoop.kms.authentication.type`

Default Value

simple

API Name

`hadoop_kms_authentication_type`

Required

true

Suppressions

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_core-site.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Flume Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the Flume Proxy User Groups configuration validator.

false

API Name

role_config_suppression_hadoop_kms_proxyuser_http_hosts

Required

true

Suppress Configuration Validator: HttpFS Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the HttpFS Proxy User Groups configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_kms_proxyuser_httpfs_groups

Required

true

Suppress Configuration Validator: HttpFS Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the HttpFS Proxy User Hosts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_kms_proxyuser_httpfs_hosts

Required

true

Suppress Configuration Validator: Hue Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Hue Proxy User Groups configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_kms_proxyuser_hue_groups

Required

true

Suppress Configuration Validator: Hue Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Hue Proxy User Hosts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_kms_proxyuser_hue_hosts

Required

true

Suppress Configuration Validator: Mapred Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Mapred Proxy User Groups configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_kms_proxyuser_mapred_groups

Required

true

Suppress Configuration Validator: Mapred Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Mapred Proxy User Hosts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_kms_proxyuser_mapred_hosts

Required

true

Suppress Configuration Validator: Oozie Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Oozie Proxy User Groups configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_kms_proxyuser_oozie_groups

Required

true

Suppress Configuration Validator: Oozie Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Oozie Proxy User Hosts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_kms_proxyuser_oozie_hosts

Required

true

Suppress Configuration Validator: YARN Proxy User Groups

Description

Whether to suppress configuration warnings produced by the YARN Proxy User Groups configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_hadoop_kms_proxyuser_yarn_groups`**Required**`true`**Suppress Configuration Validator: YARN Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the YARN Proxy User Hosts configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_yarn_hosts`**Required**`true`**Suppress Configuration Validator: JavaKeyStoreProvider Directory****Description**

Whether to suppress configuration warnings produced by the JavaKeyStoreProvider Directory configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_hadoop_security_key_provider_dir`**Required**`true`**Suppress Configuration Validator: Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-acls.xml****Description**

Whether to suppress configuration warnings produced by the Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-acls.xml configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_kms-acls.xml_role_safety_valve`**Required**`true`**Suppress Configuration Validator: Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-site.xml****Description**

Whether to suppress configuration warnings produced by the Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kms-site.xml_role_safety_valve

Required

true

Suppress Configuration Validator: KMS Blacklist Users**Description**

Whether to suppress configuration warnings produced by the KMS Blacklist Users configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kms_blacklist_users

Required

true

Suppress Configuration Validator: KMS HTTP Port**Description**

Whether to suppress configuration warnings produced by the KMS HTTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kms_http_port

Required

true

Suppress Configuration Validator: Additional Java Configuration Options for KMS**Description**

Whether to suppress configuration warnings produced by the Additional Java Configuration Options for KMS configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kms_java_opts

Required

true

Suppress Configuration Validator: Key Management Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Key Management Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kms_role_env_safety_valve

Required

true

Suppress Configuration Validator: Key Management Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Key Management Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Key Management Server Log Directory

Description

Whether to suppress configuration warnings produced by the Key Management Server Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Key Management Server Advanced Configuration Snippet (Safety Valve) for ssl-server.xml**Description**

Whether to suppress configuration warnings produced by the Key Management Server Advanced Configuration Snippet (Safety Valve) for ssl-server.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl-server.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Key Management Server TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the Key Management Server TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Key Management Server TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the Key Management Server TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Key Management Server TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the Key Management Server TLS/SSL Server JKS Keystore Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: Key Management Server TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the Key Management Server TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Key Management Server TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the Key Management Server TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Key Management Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Key Management Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_kms_count_validator

Required

true

Suppress Parameter Validation: Java KeyStore KMS Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java KeyStore KMS Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kms_service_env_safety_valve

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Kafka Properties in Cloudera Runtime 7.1

Role groups:

Gateway

Advanced

Deploy Directory**Description**

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/kafka

API Name

client_config_root_dir

Required

true

Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf**Description**

For advanced use only, a string to be inserted into the client configuration for kafka-conf/kafka-client.conf.

Related Name**Default Value****API Name**

kafka-conf/kafka-client.conf_client_config_safety_valve

Required

false

Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-cluster-configs.properties**Description**

For advanced use only, a string to be inserted into the client configuration for kafka-conf/kafka-cluster-configs.properties.

Related Name**Default Value****API Name**

kafka-conf/kafka-cluster-configs.properties_client_config_safety_valve

Required

false

Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties**Description**

For advanced use only, a string to be inserted into the client configuration for kafka-conf/kafka-ranger-repo.properties.

Related Name**Default Value****API Name**

kafka-conf/kafka-ranger-repo.properties_client_config_safety_valve

Required

false

Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Logs**Gateway Logging Threshold****Description**

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

50

API Name

client_config_priority

Required

true

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka-conf/kafka-client.conf_client_config_safety_valve

Required

true

Suppress Parameter Validation: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-cluster-configs.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-cluster-configs.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka-conf/kafka-cluster-configs.properties_client_config_safety_valve

Required

true

Suppress Parameter Validation: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka-conf/kafka-ranger-repo.properties_client_config_safety_valve

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Kafka Broker**Advanced****Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties****Description**

For advanced use only. A string to be inserted into kafka-monitoring.properties for this role only.

Related Name**Default Value****API Name**

kafka-monitoring.properties_role_safety_valve

Required

false

Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties**Description**

For advanced use only. A string to be inserted into kafka.properties for this role only.

Related Name**Default Value****API Name**

kafka.properties_role_safety_valve

Required

false

Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KAFKA_BROKER_role_env_safety_valve

Required

false

Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml**Description**

For advanced use only. A string to be inserted into ranger-kafka-audit.xml for this role only.

Related Name**Default Value****API Name**

ranger-kafka-audit.xml_role_safety_valve

Required

false

Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml**Description**

For advanced use only. A string to be inserted into ranger-kafka-policymgr-ssl.xml for this role only.

Related Name**Default Value****API Name**

ranger-kafka-policymgr-ssl.xml_role_safety_valve

Required

false

Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml**Description**

For advanced use only. A string to be inserted into ranger-kafka-security.xml for this role only.

Related Name**Default Value****API Name**

ranger-kafka-security.xml_role_safety_valve

Required

false

Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties**Description**

For advanced use only. A string to be inserted into ssl.properties for this role only.

Related Name**Default Value****API Name**

ssl.properties_role_safety_valve

Required

false

Logs**Kafka Broker Log Directory****Description**

The log directory for log files of the role Kafka Broker.

Related Name

kafka.log4j.dir

Default Value

/var/log/kafka

API Name

log_dir

Required

false

Kafka Broker Logging Threshold**Description**

The minimum log level for Kafka Broker logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Kafka Broker Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Kafka Broker logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Kafka Broker Max Log Size

Description

The maximum size, in megabytes, per log file for Kafka Broker logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable Lagging Replicas Test**Description**

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name**Default Value**

true

API Name

KAFKA-KAFKA_BROKER-7.1.0-LAGGING_REPLICAS_test_enable

Required

false

Enable Offline Directory Test**Description**

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name**Default Value**

true

API Name

KAFKA-KAFKA_BROKER-7.1.0-OFFLINE_DIRECTORIES_test_enable

Required

false

Enable Offline Partitions Test**Description**

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name**Default Value**

true

API Name

KAFKA-KAFKA_BROKER-7.1.0-OFFLINE_PARTITIONS_test_enable

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

kafka_broker_fd_thresholds

Required

false

Kafka Broker Host Health Test**Description**

When computing the overall Kafka Broker health, consider the host's health.

Related Name**Default Value**

true

API Name

kafka_broker_host_health_enabled

Required

false

Kafka Broker Process Health Test**Description**

Enables the health test that the Kafka Broker's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

kafka_broker_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Advertised Host

Description

If set, this is the hostname given out to producers, consumers, and other brokers to use in establishing connections. Never set this property at the group level; it should always be overridden on instance level.

Related Name

advertised.host.name

Default Value**API Name**

advertised.host.name

Required

false

Authenticate Zookeeper Connection

Description

Enables authentication of SASL connections with zookeeper, if Kerberos authentication is enabled. It also allows a broker to set SASL ACL on zookeeper nodes, which locks these nodes down so that only a Kafka broker can modify it.

Related Name

authenticate.zookeeper.connection

Default Value

true

API Name

authenticate.zookeeper.connection

Required

false

Broker ID

Description

ID uniquely identifying each broker. Never set this property at the group level; it should always be overridden on instance level.

Related Name

broker.id

Default Value**API Name**

broker.id

Required

false

Additional Broker Java Options**Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

Related Name

broker_java_opts

Default Value

-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35
-XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -
XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC -Djava.awt.headless=true -
Djava.net.preferIPv4Stack=true -Dcom.sun.management.jmxremote.host=127.0.0.1 -
Dcom.sun.management.jmxremote.local.only=true -Djava.rmi.server.hostname=127.0.0.1

API Name

broker_java_opts

Required

false

Java Heap Size of Broker**Description**

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in megabytes. Kafka does not generally require setting large heap sizes. It is better to let the file system cache utilize the available memory.

Related Name

broker_max_heap_size

Default Value

1 GiB

API Name

broker_max_heap_size

Required

false

Kafka Broker Diagnostics Collection Timeout**Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name**Default Value**

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Graceful Shutdown Timeout**Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name**Default Value**

2 minute(s)

API Name

graceful_stop_timeout

Required

false

Enable Authenticated Communication with the JMX Agent**Description**

Enables Authenticated Communication with the JMX Agent.

Related Name

jmx.auth.enabled

Default Value

false

API Name

jmx.auth.enabled

Required

false

Name of User with Read-Write Access to the JMX Agent**Description**

Specifies the name of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.control.user

Default Value

controlRole

API Name

jmx.control.user

Required

false

Password of user with read-write access to the JMX agent**Description**

Specifies the password of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.control.user.passwd

Default Value**API Name**`jmx.control.user.passwd`**Required**`false`**Name of User with read-only access to the JMX Agent****Description**

Specifies the name of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name`jmx.monitor.user`**Default Value**`monitorRole`**API Name**`jmx.monitor.user`**Required**`false`**Password of User with read-only Access to the JMX agent****Description**

Specifies the password of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name`jmx.monitor.user.passwd`**Default Value****API Name**`jmx.monitor.user.passwd`**Required**`false`**Enable TLS client authentication for JMX port****Description**

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the Kafka JMX TLS/SSL Server Trust Store file or the global trust store.

Related Name`jmx.ssl.client.auth.enabled`**Default Value**`false`**API Name**`jmx.ssl.client.auth.enabled`**Required**`false`

Enable TLS/SSL for Kafka JMX

Description

Encrypt communication between clients and Kafka JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

jmx.ssl.enabled

Default Value

false

API Name

jmx.ssl.enabled

Required

false

HTTP Metric Report Host

Description

The host that the HTTP metric reporter binds to.

Related Name

kafka.http.metrics.host

Default Value

0.0.0.0

API Name

kafka.http.metrics.host

Required

false

Data Directories

Description

A list of one or more directories in which Kafka data is stored.. Each new partition created is placed in the directory that currently has the least amount of partitions.. Each directory should be on its own separate drive.

Related Name

log.dirs

Default Value

/var/local/kafka/data

API Name

log.dirs

Required

true

Data Retention Size

Description

The amount of data to retain in the log for each topic-partition. This is the limit per partition. Multiply it by the number of partitions to get the total amount of data retained for the topic. This property can take -1 as a value, which is interpreted as unlimited. If both log.retention.ms and log.retention.bytes are set, a segment is deleted when either limit is exceeded.

Related Name

log.retention.bytes

Default Value

-1 B

API Name

log.retention.bytes

Required

false

Data Retention Check Interval**Description**

The frequency, in milliseconds, that the log cleaner checks whether any log segment is eligible for deletion, per retention policies.

Related Name

log.retention.check.interval.ms

Default Value

5 minute(s)

API Name

log.retention.check.interval.ms

Required

false

Data Retention Time**Description**

The maximum time before a new log segment is rolled out. If both log.retention.ms and log.retention.bytes are set, a segment is deleted when either limit is exceeded. This property can take -1 as a value, which is interpreted as unlimited.

Related Name

log.retention.ms

Default Value

7 day(s)

API Name

log.retention.ms

Required

true

Data Log Roll Time**Description**

The maximum time before a new log segment is rolled out.

Related Name

log.roll.ms

Default Value**API Name**

log.roll.ms

Required

false

Segment File Size

Description

The log for a topic partition is stored as a directory of segment files. This setting controls the size to which a segment file can grow before a new segment is rolled over in the log. This value has to be larger than message.max.bytes.

Related Name

log.segment.bytes

Default Value

1 GiB

API Name

log.segment.bytes

Required

false

Maximum Connections per IP Address

Description

Maximum number of connections allowed from each IP address.

Related Name

max.connections.per.ip

Default Value**API Name**

max.connections.per.ip

Required

false

Number of I/O Threads

Description

The number of I/O threads that the server uses for executing requests. You should have at least as many threads as you have disks.

Related Name

num.io.threads

Default Value

8

API Name

num.io.threads

Required

false

Number of Network Threads

Description

Number of threads that the server uses to handle incoming requests and outgoing responses.

Related Name

num.network.threads

Default Value

8

API Name

num.network.threads

Required

false

Number of Recovery Threads per data directory**Description**

Number of threads per data directory that the server uses for log recovery during startup and log flushing during shutdown. Increasing this value may improve broker startup performance if you have a high number of segments. The total number of recovery threads (number of threads per data dir * number of data dirs) should not exceed the number of CPU cores. The default value is 1.

Related Name

num.recovery.threads.per.data.dir

Default Value

1

API Name

num.recovery.threads.per.data.dir

Required

false

Number of Alter Log Dir Threads**Description**

Number of threads that the server uses to move data between log directories. The default value of this property is the same as the number of log directories.

Related Name

num.replica.alter.log.dirs.threads

Default Value**API Name**

num.replica.alter.log.dirs.threads

Required

false

Ranger Kafka Plugin Conf Path**Description**

Staging directory for Ranger Kafka Plugin Configuration. This should generally not be changed.

Related Name

ranger_kafka_plugin_conf_path

Default Value

/etc/ranger/kafka-plugin

API Name

ranger_kafka_plugin_conf_path

Required

true

Ranger Kafka Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/kafka/audit/hdfs/spool

API Name

ranger_kafka_plugin_hdfs_audit_spool_directory

Required

true

Ranger Kafka Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.kafka.policy.cache.dir

Default Value

/var/lib/ranger/kafka/policy-cache

API Name

ranger_kafka_plugin_policy_cache_directory

Required

true

Ranger Kafka Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/kafka/audit/solr/spool

API Name

ranger_kafka_plugin_solr_audit_spool_directory

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.kafka.trusted.proxy.ipaddress

Default Value**API Name**

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address**Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.kafka.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Inter Broker Protocol**Description**

Protocol to be used for inter-broker communication. INFERRED uses the same protocol that is configured for external clients.

Related Name

security.inter.broker.protocol

Default Value

INFERRED

API Name

security.inter.broker.protocol

Required

false

Socket receive buffer size.**Description**

The SO_RCVBUF buffer of the socket server sockets. If the value is -1, the OS default will be used.

Related Name

socket.receive.buffer.bytes

Default Value

100 KiB

API Name

socket.receive.buffer.bytes

Required

false

Socket receive buffer size.**Description**

The maximum number of bytes in a socket request

Related Name

`socket.request.max.bytes`**Default Value**

100 MiB

API Name`socket.request.max.bytes`**Required**

false

Socket send buffer size.**Description**

The SO_SNDBUF buffer of the socket server sockets. If the value is -1, the OS default will be used.

Related Name`socket.send.buffer.bytes`**Default Value**

100 KiB

API Name`socket.send.buffer.bytes`**Required**

false

SSL Client Authentication**Description**

Client authentication mode for SSL connections. This configuration has three valid values, "required", "requested" and "none". If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

Related Name`ssl.client.auth`**Default Value**

none

API Name`ssl.client.auth`**Required**

false

Enable Zookeeper ACL**Description**

Enables brokers to set SASL ACL on zookeeper nodes if `authenticate.zookeeper.connection` is enabled.

Related Name`zookeeper.set.acl`**Default Value**

true

API Name`zookeeper.set.acl`

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Advertised Port****Description**

The port to give out to producers, consumers, and other brokers to use in establishing connections. This only needs to be set if this port is different from the port the server should bind to.

Related Name

advertised.port

Default Value**API Name**

advertised.port

Required

false

JMX Port**Description**

Port for JMX.

Related Name

jmx_port

Default Value

9393

API Name

jmx_port

Required

false

HTTP Metric Report Port**Description**

The port that the HTTP metric reporter listens on.

Related Name

kafka.http.metrics.port

Default Value

24042

API Name

kafka.http.metrics.port

Required

false

TCP Port**Description**

Kafka broker port.

Related Name

port

Default Value

9092

API Name

port

Required

false

TLS/SSL Port**Description**

Kafka broker secure port.

Related Name

ssl_port

Default Value

9093

API Name

ssl_port

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Kafka Broker TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka Broker might connect to. This is used when Kafka Broker is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Kafka Broker TLS/SSL Client Trust Store Password**Description**

The password for the Kafka Broker TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Kafka Broker**Description**

Encrypt communication between clients and Kafka Broker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Kafka Broker TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Kafka Broker is acting as a TLS/SSL server.

Related Name

ssl.key.password.generator

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Kafka Broker TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka Broker is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Kafka Broker TLS/SSL Server JKS Keystore File Password**Description**

The password for the Kafka Broker JKS keystore file.

Related Name

ssl.keystore.password.generator

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Parameter Validation: Advertised Host

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advertised Host parameter.

Related Name**Default Value**

false

Suppress Parameter Validation: Java Heap Size of Broker**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Broker parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_broker_max_heap_size

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.control.user

Required

true

Suppress Parameter Validation: Password of user with read-write access to the JMX agent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.control.user.passwd

Required

true

Suppress Parameter Validation: Name of User with read-only access to the JMX Agent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with read-only access to the JMX Agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.monitor.user

Required

true

Suppress Parameter Validation: Password of User with read-only Access to the JMX agent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with read-only Access to the JMX agent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.monitor.user.passwd

Required

true

Suppress Parameter Validation: JMX Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_port

Required

true

Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka-monitoring.properties_role_safety_valve

Required

Suppress Parameter Validation: Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_broker_role_env_safety_valve

Required

true

Suppress Parameter Validation: Data Directories

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Data Directories parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log.dirs

Required

true

Suppress Parameter Validation: Segment File Size

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Segment File Size parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log.segment.bytes

Required

true

Suppress Parameter Validation: Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Kafka Broker Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Number of I/O Threads**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of I/O Threads parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_num.io.threads

Required

true

Suppress Parameter Validation: Number of Network Threads**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Network Threads parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_num.network.threads

Required

true

Suppress Parameter Validation: Number of Recovery Threads per data directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Recovery Threads per data directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_num.recovery.threads.per.data.dir

Required

true

Suppress Parameter Validation: Number of Alter Log Dir Threads**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Alter Log Dir Threads parameter.

Related Name

Default Value

false

API Name

role_config_suppression_num.replica.alter.log.dirs.threads

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: TCP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TCP Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_port

Required

true

Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger-kafka-audit.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger-kafka-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger-kafka-security.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ranger Kafka Plugin Conf Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Conf Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_kafka_plugin_conf_path

Required

true

Suppress Parameter Validation: Ranger Kafka Plugin Audit Hdfs Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Audit Hdfs Spool Directory Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kafka_plugin_hdfs_audit_spool_directory

Required

true

Suppress Parameter Validation: Ranger Kafka Plugin Policy Cache Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Policy Cache Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_kafka_plugin_policy_cache_directory

Required

true

Suppress Parameter Validation: Ranger Kafka Plugin Audit Solr Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Audit Solr Spool Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_kafka_plugin_solr_audit_spool_directory

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Kafka Broker TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Kafka Broker TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: TLS/SSL Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_port

Required

true

Suppress Parameter Validation: Kafka Broker TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Server JKS Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Kafka Broker TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Kafka Broker TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Lagging Replicas Test**Description**

Whether to suppress the results of the Lagging Replicas Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka-kafka_broker-7.1.0-lagging_replicas

Required

true

Suppress Health Test: Offline Directory Test**Description**

Whether to suppress the results of the Offline Directory Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka-kafka_broker-7.1.0-offline_directories

Required

true

Suppress Health Test: Offline Partitions Test**Description**

Whether to suppress the results of the Offline Partitions Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka-kafka_broker-7.1.0-offline_partitions

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_broker_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_kafka_kafka_broker_file_descriptor`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_kafka_kafka_broker_host_health`**Required**`true`**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_kafka_kafka_broker_log_directory_free_space`**Required**`true`**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_kafka_kafka_broker_scm_health`**Required**`true`

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_broker_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_broker_unexpected_exits

Required

true

Kafka Connect

Advanced

Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

Description

For advanced use only. A string to be inserted into connect-distributed.properties for this role only.

Related Name**Default Value****API Name**

connect-distributed.properties_role_safety_valve

Required

false

Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value**API Name**

KAFKA_CONNECT_role_env_safety_valve

Required

false

Kafka Connect Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

	3
API Name	
	process_start_retries
Required	
	false

Process Start Wait Timeout

Description	The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.
Related Name	
Default Value	20
API Name	
	process_start_secs
Required	
	false

Logs

Kafka Connect Log Directory

Description	The log directory for log files of the role Kafka Connect.
Related Name	
	kafka_connect.log4j.dir
Default Value	/var/log/kafka
API Name	
	log_dir
Required	
	false

Kafka Connect Logging Threshold

Description	The minimum log level for Kafka Connect logs
Related Name	
Default Value	INFO
API Name	
	log_threshold
Required	
	false

Kafka Connect Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Kafka Connect logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Kafka Connect Max Log Size

Description

The maximum size, in megabytes, per log file for Kafka Connect logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

kafka_connect_fd_thresholds

Required

false

Kafka Connect Host Health Test**Description**

When computing the overall Kafka Connect health, consider the host's health.

Related Name**Default Value**

true

API Name

kafka_connect_host_health_enabled

Required

false

Kafka Connect Process Health Test**Description**

Enables the health test that the Kafka Connect's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

kafka_connect_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Broker List for Kafka Connect****Description**

Comma-separated list of IP:port (or hostname:port) pairs of brokers on source cluster for Kafka Connect to connect. This should be more than one, for high availability.

Related Name

bootstrap.servers

Default Value**API Name**

bootstrap.servers

Required

true

config.storage.replication.factor**Description**

Default replication factor of Kafka Connect's config storage topic

Related Name

config.storage.replication.factor

Default Value

1

API Name

config.storage.replication.factor

Required

true

config.storage.topic**Description**

Topic to use for storing connector and task configurations; This should be a single partition, highly replicated and compacted topic. Kafka Connect will attempt to create the topic automatically when needed before starting Kafka Connect.

Related Name

config.storage.topic

Default Value

connect-configs

API Name

config.storage.topic

Required

true

connect.log4j.connector.context**Description**

The ``%X{connector.context}`` parameter in the layout includes connector-specific and task-specific information in the log message, where appropriate. This makes it easier to identify those log messages that apply to a specific connector

Related Name

connector.context

Default Value**API Name**

connector.context

Required

false

group.id**Description**

Unique name for the cluster, used in forming the Connect cluster group. Note that this must not conflict with consumer group IDs.

Related Name

group.id

Default Value

connect-cluster

API Name

group.id

Required

true

Kafka Connect Configuration Directory**Description**

Directory with all configurations for Kafka Connect daemons

Related Name`kafka.connect.conf.directory`**Default Value**`$CONF_DIR`**API Name**`kafka.connect.conf.directory`**Required**`true`**Java Home Path Override****Description**

Java Home Path Override for Kafka Connect

Related Name`kafka.connect.jdk.home`**Default Value****API Name**`kafka.connect.jdk.home`**Required**`false`**KAFKA_HEAP_OPTS****Description**

Memory heap params while using Kafka Connect.

Related Name`KAFKA_HEAP_OPTS`**Default Value**`-Xms256M -Xmx2G`**API Name**`KAFKA_HEAP_OPTS`**Required**`false`**key.converter****Description**

The converters specify the format of data in Kafka and how to translate it into Connect data. Every Connect user will need to configure these based on the format they want their data in when loaded from or stored into Kafka

Related Name`key.converter`**Default Value**`org.apache.kafka.connect.json.JsonConverter`**API Name**`key.converter`**Required**

true

key.converter.schemas.enable

Description

Converter-specific settings can be passed in by prefixing the Converter's setting with the converter we want to apply it to

Related Name

key.converter.schemas.enable

Default Value

true

API Name

key.converter.schemas.enable

Required

true

metrics.jetty.server.port

Description

Jetty Metrics port to expose JMX Jsn

Related Name

metrics.jetty.server.port

Default Value

38084

API Name

metrics.jetty.server.port

Required

true

offset.flush.interval.ms

Description

Offset flush interval in ms.

Related Name

offset.flush.interval.ms

Default Value

1 minute(s)

API Name

offset.flush.interval.ms

Required

true

offset.storage.replication.factor

Description

Default replication factor of Kafka Connect's offset storage topic

Related Name

offset.storage.replication.factor

Default Value

1

API Name

offset.storage.replication.factor

Required

true

offset.storage.topic**Description**

Topic to use for storing offsets. Kafka Connect will attempt to create the topic automatically when needed, but you can always manually create before starting Kafka Connect.

Related Name

offset.storage.topic

Default Value

connect-offsets

API Name

offset.storage.topic

Required

true

plugin.path**Description**

Path to directories immediately containing jars with plugins and their dependencies, uber-jars with plugins and their dependencies and classes of plugins and their dependencies

Related Name

plugin.path

Default Value

/var/lib/kafka

API Name

plugin.path

Required

false

rest.extension.classes**Description**

JMS Json Rest Extension class

Related Name

rest.extension.classes

Default Value

com.cloudera.dim.kafka.metrics.JmxJsonMetricsRestExtension

API Name

rest.extension.classes

Required

true

kafka.connect.rest.port**Description**

Kafka Connect rest port

Related Name

rest.port

Default Value

38083

API Name

rest.port

Required

true

kafka.connect.secure.rest.port**Description**

Kafka Connect secure rest port

Related Name

secure.rest.port

Default Value

38085

API Name

secure.rest.port

Required

true

SSL Client Authentication**Description**

Client authentication mode for SSL connections. If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

Related Name

ssl.client.auth

Default Value

none

API Name

ssl.client.auth

Required

false

status.storage.replication.factor**Description**

Default replication factor of Kafka Connect's status storage topic

Related Name

status.storage.replication.factor

Default Value

1

API Name`status.storage.replication.factor`**Required**`true`**status.storage.topic****Description**

Topic to use for storing statuses. Kafka Connect will attempt to create the topic automatically when needed, but you can always manually create before starting Kafka Connect.

Related Name`status.storage.topic`**Default Value**`connect-status`**API Name**`status.storage.topic`**Required**`true`**value.converter****Description**

The converters specify the format of data in Kafka and how to translate it into Connect data. Every Connect user will need to configure these based on the format they want their data in when loaded from or stored into Kafka

Related Name`value.converter`**Default Value**`org.apache.kafka.connect.json.JsonConverter`**API Name**`value.converter`**Required**`true`**value.converter.schemas.enable****Description**

Converter-specific settings can be passed in by prefixing the Converter's setting with the converter we want to apply it to

Related Name`value.converter.schemas.enable`**Default Value**`true`**API Name**`value.converter.schemas.enable`**Required**`true`**Performance**

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Kafka Connect TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka Connect might connect to. This is used when Kafka Connect is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Kafka Connect TLS/SSL Client Trust Store Password

Description

The password for the Kafka Connect TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Kafka Connect

Description

Encrypt communication between clients and Kafka Connect using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Kafka Connect TLS/SSL Server JKS Keystore Key Password

Description

The password that protects the private key contained in the JKS keystore used when Kafka Connect is acting as a TLS/SSL server.

Related Name

ssl.key.password.generator

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Kafka Connect TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka Connect is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Kafka Connect TLS/SSL Server JKS Keystore File Password**Description**

The password for the Kafka Connect JKS keystore file.

Related Name

ssl.keystore.password.generator

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

	stacks_collection_method
Default Value	jstack
API Name	stacks_collection_method
Required	false

Suppressions

Suppress Parameter Validation: Broker List for Kafka Connect

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Broker List for Kafka Connect parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_bootstrap.servers
Required	true

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: config.storage.replication.factor

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the config.storage.replication.factor parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_config.storage.replication.factor
Required	true

Suppress Parameter Validation: config.storage.topic**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the config.storage.topic parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_config.storage.topic

Required

true

Suppress Parameter Validation: Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_connect-distributed.properties_role_safety_valve

Required

true

Suppress Parameter Validation: connect.log4j.connector.context**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the connect.log4j.connector.context parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_connector.context

Required

true

Suppress Parameter Validation: group.id**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the group.id parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_group.id`**Required**`true`**Suppress Parameter Validation: Kafka Connect Configuration Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Configuration Directory parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_kafka.connect.conf.directory`**Required**`true`**Suppress Parameter Validation: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_kafka.connect.jdk.home`**Required**`true`**Suppress Parameter Validation: Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_kafka_connect_role_env_safety_valve`**Required**`true`**Suppress Parameter Validation: KAFKA_HEAP_OPTS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KAFKA_HEAP_OPTS parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_heap_opts

Required

true

Suppress Parameter Validation: key.converter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the key.converter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_key.converter

Required

true

Suppress Parameter Validation: Kafka Connect Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Kafka Connect Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: metrics.jetty.server.port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the metrics.jetty.server.port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.jetty.server.port

Required

true

Suppress Parameter Validation: offset.storage.replication.factor**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the offset.storage.replication.factor parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_offset.storage.replication.factor

Required

true

Suppress Parameter Validation: offset.storage.topic**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the offset.storage.topic parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_offset.storage.topic

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: plugin.path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the plugin.path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_plugin.path

Required

true

Suppress Parameter Validation: rest.extension.classes**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the rest.extension.classes parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rest.extension.classes

Required

true

Suppress Parameter Validation: kafka.connect.rest.port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the kafka.connect.rest.port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rest.port

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: kafka.connect.secure.rest.port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the kafka.connect.secure.rest.port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_secure.rest.port

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Client Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Client Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Server JKS Keystore Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server JKS Keystore Key Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Server JKS Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server JKS Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Server JKS Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server JKS Keystore File Password parameter.

Related Name

Default Value

false

API Name`role_config_suppression_ssl_server_keystore_password`**Required**`true`**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Parameter Validation: status.storage.replication.factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the status.storage.replication.factor parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_status.storage.replication.factor`**Required**`true`**Suppress Parameter Validation: status.storage.topic****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the status.storage.topic parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_status.storage.topic`**Required**`true`**Suppress Parameter Validation: value.converter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the value.converter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_value.converter

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_connect_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_connect_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_connect_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_connect_unexpected_exits

Required

true

Kafka MirrorMaker

Advanced

Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KAFKA_MIRROR_MAKER_role_env_safety_valve

Required

false

Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties

Description

For advanced use only. A string to be inserted into mirror_maker_consumers.properties for this role only.

Related Name**Default Value****API Name**

mirror_maker_consumers.properties_role_safety_valve

Required

false

Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties

Description

For advanced use only. A string to be inserted into mirror_maker_producers.properties for this role only.

Related Name**Default Value****API Name**

mirror_maker_producers.properties_role_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties

Description

For advanced use only. A string to be inserted into ssl_client.properties for this role only.

Related Name**Default Value****API Name**

ssl_client.properties_role_safety_valve

Required

false

Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties

Description

For advanced use only. A string to be inserted into ssl_server.properties for this role only.

Related Name**Default Value****API Name**

ssl_server.properties_role_safety_valve

Required

false

Logs

Kafka MirrorMaker Log Directory

Description

The log directory for log files of the role Kafka MirrorMaker.

Related Name

kafka_mirrormaker.log4j.dir

Default Value

/var/log/kafka

API Name

log_dir

Required

false

Kafka MirrorMaker Logging Threshold**Description**

The minimum log level for Kafka MirrorMaker logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Kafka MirrorMaker Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Kafka MirrorMaker logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Kafka MirrorMaker Max Log Size**Description**

The maximum size, in megabytes, per log file for Kafka MirrorMaker logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

kafka_mirror_maker_fd_thresholds

Required

false

Kafka MirrorMaker Host Health Test**Description**

When computing the overall Kafka MirrorMaker health, consider the host's health.

Related Name**Default Value**

true

API Name

kafka_mirror_maker_host_health_enabled

Required

false

Kafka MirrorMaker Process Health Test**Description**

Enables the health test that the Kafka MirrorMaker's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

kafka_mirror_maker_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.

- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking **View as JSON**. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

`false`

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Abort on Send Failure****Description**

Stop the entire mirror maker when a send failure occurs.

Related Name

abort.on.send.failure

Default Value

true

API Name

abort.on.send.failure

Required

false

Producer Batch Size**Description**

This configuration controls the batch size in bytes. The producer will attempt to batch records together into fewer requests whenever multiple records are being sent to the same partition. This helps performance on both the client and the server.

Related Name

batch.size

Default Value

16 KiB

API Name

batch.size

Required

false

Destination Broker List**Description**

Comma-separated list of IP:port (or hostname:port) pairs of brokers on destination cluster. This should be more than one, for high availability, but there's no need to list all brokers.

Related Name

bootstrap.servers

Default Value**API Name**

bootstrap.servers

Required

true

Producer Buffer Memory**Description**

The total bytes of memory the producer can use to buffer records waiting to be sent to the server.

Related Name

buffer.memory

Default Value

32 MiB

API Name

buffer.memory

Required

false

Producer Compression Type

Description

The compression type for all data generated by the producer.

Related Name

compression.type

Default Value

none

API Name

compression.type

Required

false

MirrorMaker Consumer Rebalance Listener

Description

A consumer rebalance listener of the ConsumerRebalanceListener type. Invoked when MirrorMaker's consumer rebalances.

Related Name

consumer.rebalance.listener

Default Value**API Name**

consumer.rebalance.listener

Required

false

MirrorMaker Consumer Rebalance Listener Arguments

Description

Arguments used by MirrorMaker consumer rebalance listener.

Related Name

consumer.rebalance.listener.args

Default Value**API Name**

consumer.rebalance.listener.args

Required

false

Consumer Request Timeout

Description

The maximum amount of time the consumer will wait for the response of a request. If the response is not received before the timeout elapses, the consumer will resend the request if necessary or fail the request if retries are exhausted.

Related Name

consumer.request.timeout.ms

Default Value

40 second(s)

API Name

consumer.request.timeout.ms

Required

false

Destination Kafka Cluster's Security Protocol**Description**

Protocol used for communication with destination Kafka cluster.

Related Name

destination.security.protocol

Default Value

PLAINTEXT

API Name

destination.security.protocol

Required

false

Destination Kafka Cluster's Client Auth**Description**

Only required if destination Kafka cluster requires client authentication.

Related Name

destination.ssl.client.auth

Default Value

false

API Name

destination.ssl.client.auth

Required

false

Consumer Minimum Fetch Size**Description**

The minimum amount of data the server should return for a fetch request. If insufficient data is available, the request will wait for that much data to accumulate before answering the request. Setting this property to something greater than 1 will cause the server to wait for larger amounts of data to accumulate which can improve server throughput a bit at the cost of some additional latency.

Related Name

fetch.min.bytes

Default Value

1 B

API Name

fetch.min.bytes

Required

false

Consumer Group ID**Description**

Name of the consumer group used by MirrorMaker. When multiple role instances are configured with the same topics and same group ID, the role instances load-balance replication for the topics. When multiple role instances are configured with the same topics but different group ID, each role instance replicates all the events for those topics - this can be used to replicate the source cluster into multiple destination clusters.

Related Name

group.id

Default Value

cloudera_mirrormaker

API Name

group.id

Required

false

Enable Authenticated Communication with the JMX Agent**Description**

Enables Authenticated Communication with the JMX Agent.

Related Name

jmx.auth.enabled

Default Value

false

API Name

jmx.auth.enabled

Required

false

Name of User with Read-Write Access to the JMX Agent**Description**

Specifies the name of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.control.user

Default Value

controlRole

API Name

jmx.control.user

Required

false

Password of user with read-write access to the JMX agent**Description**

Specifies the password of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.control.user.passwd

Default Value**API Name**`jmx.control.user.passwd`**Required**`false`**Name of User with read-only access to the JMX Agent****Description**

Specifies the name of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name`jmx.monitor.user`**Default Value**`monitorRole`**API Name**`jmx.monitor.user`**Required**`false`**Password of User with read-only Access to the JMX agent****Description**

Specifies the password of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name`jmx.monitor.user.passwd`**Default Value****API Name**`jmx.monitor.user.passwd`**Required**`false`**Enable TLS client authentication for JMX port****Description**

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the ZooKeeper JMX TLS/SSL Server Trust Store file or the global trust store.

Related Name`jmx.ssl.client.auth.enabled`**Default Value**`false`**API Name**`jmx.ssl.client.auth.enabled`**Required**`false`

Enable TLS/SSL for Kafka JMX

Description

Encrypt communication between clients and Kafka JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

jmx.ssl.enabled

Default Value

false

API Name

jmx.ssl.enabled

Required

false

Producer Linger Time

Description

The upper bound on the delay for batching. Once the producer gets a batch.size worth of records for a partition it will be sent immediately regardless of this setting. However, if fewer than this many bytes accumulated for this partition the producer will 'linger' for the specified time waiting for more records to show up.

Related Name

linger.ms

Default Value

0 second(s)

API Name

linger.ms

Required

false

MirrorMaker Message Handler

Description

A MirrorMaker message handler of the MirrorMakerMessageHandler type that will process every record in-between producer and consumer.

Related Name

message.handler

Default Value**API Name**

message.handler

Required

false

MirrorMaker Message Handler Arguments

Description

Arguments used by MirrorMaker message handler.

Related Name

message.handler.args

Default Value**API Name**

message.handler.args

Required

false

Additional MirrorMaker Java Options**Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

Related Name

mirror_maker_java_opts

Default Value

-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35
 -XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -
 XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC -Djava.awt.headless=true -
 Djava.net.preferIPv4Stack=true -Dcom.sun.management.jmxremote.host=127.0.0.1 -
 Dcom.sun.management.jmxremote.local.only=true -Djava.rmi.server.hostname=127.0.0.1

API Name

mirror_maker_java_opts

Required

false

Java Heap Size of MirrorMaker**Description**

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in megabytes.

Related Name

mirror_maker_max_heap_size

Default Value

1 GiB

API Name

mirror_maker_max_heap_size

Required

false

Number of Consumer Threads**Description**

Number of consumer threads.

Related Name

num.streams

Default Value

1

API Name

num.streams

Required

false

Offset Commit Interval

Description

Offset commit interval in milliseconds.

Related Name

offset.commit.interval.ms

Default Value

60000

API Name

offset.commit.interval.ms

Required

false

Producer Request Timeout

Description

The maximum amount of time the producer will wait for the response of a request. If the response is not received before the timeout elapses, the producer will resend the request if necessary or fail the request if retries are exhausted.

Related Name

producer.request.timeout.ms

Default Value

30 second(s)

API Name

producer.request.timeout.ms

Required

false

Consumer Session Timeout

Description

The timeout used to detect failures when using the group management facilities of Kafka. When the heartbeat of a consumer is not received within the session timeout, the broker will mark the consumer as failed and rebalance the group. Note that the value must be in the allowable range as configured in the broker by `group.min.session.timeout.ms` and `group.max.session.timeout.ms`.

Related Name

session.timeout.ms

Default Value

30 second(s)

API Name

session.timeout.ms

Required

false

Source Broker List

Description

Comma-separated list of IP:port (or hostname:port) pairs of brokers on source cluster. This should be more than one, for high availability, but there's no need to list all brokers.

Related Name

source.bootstrap.servers

Default Value**API Name**

source.bootstrap.servers

Required

true

Source Kafka Cluster's Security Protocol**Description**

Protocol used for communication with source Kafka cluster.

Related Name

source.security.protocol

Default Value

PLAINTEXT

API Name

source.security.protocol

Required

false

Source Kafka Cluster's Client Auth**Description**

Only required if the source Kafka cluster requires client authentication.

Related Name

source.ssl.client.auth

Default Value

false

API Name

source.ssl.client.auth

Required

false

Topic Whitelist**Description**

Regular expression that represents a set of topics to mirror.

Related Name

whitelist

Default Value**API Name**

whitelist

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

JMX Port

Description

Port for JMX.

Related Name

jmx_port

Default Value

9394

API Name

jmx_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
 These settings override other cgroup settings.

Related Name

`custom.cgroups`

Default Value**API Name**

`rm_custom_resources`

Required

`false`

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

`blkio.weight`

Default Value

`500`

API Name

`rm_io_weight`

Required

`true`

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

`memory.limit_in_bytes`

Default Value

`-1 MiB`

API Name

`rm_memory_hard_limit`

Required

`true`

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Kafka MirrorMaker TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka MirrorMaker might connect to. This is used when Kafka MirrorMaker is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Kafka MirrorMaker TLS/SSL Client Trust Store Password

Description

The password for the Kafka MirrorMaker TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Kafka MirrorMaker**Description**

Encrypt communication between clients and Kafka MirrorMaker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Kafka MirrorMaker TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Kafka MirrorMaker is acting as a TLS/SSL server.

Related Name

ssl.key.password.generator

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Kafka MirrorMaker TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka MirrorMaker is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Kafka MirrorMaker TLS/SSL Server JKS Keystore File Password**Description**

The password for the Kafka MirrorMaker JKS keystore file.

Related Name

ssl.keystore.password.generator

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Parameter Validation: Destination Broker List****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Destination Broker List parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_bootstrap.servers

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_cdh_version_validator`**Required**`true`**Suppress Parameter Validation: MirrorMaker Consumer Rebalance Listener****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Consumer Rebalance Listener parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_consumer.rebalance.listener`**Required**`true`**Suppress Parameter Validation: MirrorMaker Consumer Rebalance Listener Arguments****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Consumer Rebalance Listener Arguments parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_consumer.rebalance.listener.args`**Required**`true`**Suppress Parameter Validation: Consumer Group ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Consumer Group ID parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_group.id`**Required**`true`**Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent****Description**
