Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.control.user

Required

true

Suppress Parameter Validation: Password of user with read-write access to the JMX agent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.control.user.passwd

Required

true

Suppress Parameter Validation: Name of User with read-only access to the JMX Agent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with read-only access to the JMX Agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.monitor.user

Required

true

Suppress Parameter Validation: Password of User with read-only Access to the JMX agent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with read-only Access to the JMX agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.monitor.user.passwd

Required

true

Suppress Parameter Validation: JMX Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_port

Required

true

Suppress Parameter Validation: Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_mirror_maker_role_env_safety_valve

Required

true

Suppress Parameter Validation: Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Kafka MirrorMaker Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Log Directory parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_log_dir`**Required**`true`**Suppress Parameter Validation: MirrorMaker Message Handler****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Message Handler parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_message.handler`**Required**`true`**Suppress Parameter Validation: MirrorMaker Message Handler Arguments****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Message Handler Arguments parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_message.handler.args`**Required**`true`**Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_mirror_maker_consumers.properties_role_safety_valve`**Required**`true`**Suppress Parameter Validation: Additional MirrorMaker Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional MirrorMaker Java Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mirror_maker_java_opts

Required

true

Suppress Parameter Validation: Java Heap Size of MirrorMaker**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of MirrorMaker parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mirror_maker_max_heap_size

Required

true

Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mirror_maker_producers.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Source Broker List**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Source Broker List parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_source.bootstrap.servers

Required

true

Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server JKS Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Parameter Validation: Topic Whitelist****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Topic Whitelist parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_whitelist`**Required**`true`**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_kafka_kafka_mirror_maker_audit_health`**Required**`true`**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_kafka_kafka_mirror_maker_file_descriptor`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_kafka_kafka_mirror_maker_swap_memory_usage`**Required**`true`**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_kafka_kafka_mirror_maker_unexpected_exits`**Required**`true`**Service-Wide****Advanced****Kafka Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**`KAFKA_service_env_safety_valve`**Required**`false`**System Group****Description**

The group that this service's processes should run as.

Related Name**Default Value**`kafka`**API Name**`process_groupname`**Required**`true`

System User

Description

The user that this service's processes should run as.

Related Name

Default Value

kafka

API Name

process_username

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Healthy Kafka Broker Monitoring Thresholds

Description

The health test thresholds of the overall Kafka Broker health. The check returns "Concerning" health if the percentage of "Healthy" Kafka Brokers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Kafka Brokers falls below the critical threshold.

Related Name

Default Value

Warning: 94.99 %, Critical: 49.99 %

API Name

KAFKA_KAFKA_BROKER_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other

Topic Auto Creation

Description

Enables auto creation of topics on the server. If set to true, it attempts to produce, consume, or fetch metadata for a non-existent topic automatically create the topic with the default replication factor and number of partitions.

Related Name

auto.create.topics.enable

Default Value

true

API Name

auto.create.topics.enable

Required

false

Enable Automatic Leader Rebalancing

Description

If automatic leader rebalancing is enabled, the controller tries to balance leadership for partitions among the brokers by periodically returning leadership for each partition to the preferred replica, if that replica is available.

Related Name

auto.leader.rebalance.enable

Default Value

true

API Name

auto.leader.rebalance.enable

Required

false

Enable Controlled Shutdown

Description

Enables controlled shutdown of the broker. If enabled, the broker moves all leaders on it to other brokers before shutting itself down. This reduces the unavailability window during shutdown.

Related Name

controlled.shutdown.enable

Default Value

true

API Name

controlled.shutdown.enable

Required

false

Controlled Shutdown Maximum Attempts

Description

Number of unsuccessful controlled shutdown attempts before executing an unclean shutdown. For example, the default value of 3 means that the system will attempt a controlled shutdown 3 times before executing an unclean shutdown.

Related Name`controlled.shutdown.max.retries`**Default Value**`3`**API Name**`controlled.shutdown.max.retries`**Required**`false`**Default Replication Factor****Description**

The default replication factor for automatically created topics.

Related Name`default.replication.factor`**Default Value**`1`**API Name**`default.replication.factor`**Required**`false`**Enable Delegation Tokens****Description**

Enables authentication with delegation tokens for this Kafka service. When enabled, a secure password is automatically generated and used as the "delegation.token.master.key" property for Kafka Brokers. Only allowed if Kerberos authentication is enabled.

Related Name`delegation.token.enable`**Default Value**`true`**API Name**`delegation.token.enable`**Required**`false`**Delegation Token Expiry Time****Description**

The expiry time of a delegation token. A delegation token can be renewed before its expiry time to extend its validity up to its maximum lifetime. If it is not renewed, it will expire even if it has time remaining from its maximum lifetime.

Related Name`delegation.token.expiry.time.ms`**Default Value**`1 day(s)`**API Name**

delegation.token.expiry.time.ms

Required

false

Delegation Token Maximum Lifetime**Description**

The maximum amount of time that a delegation token can be valid for.

Related Name

delegation.token.max.lifetime.ms

Default Value

7 day(s)

API Name

delegation.token.max.lifetime.ms

Required

false

Enable Delete Topic**Description**

Enables topic deletion using admin tools. When delete topic is disabled, deleting topics through the admin tools has no effect.

Related Name

delete.topic.enable

Default Value

true

API Name

delete.topic.enable

Required

false

Consumer Group Maximum Session Timeout**Description**

The minimum allowed session timeout for registered consumers. Shorter timeouts result in quicker failure detection at the cost of more frequent consumer heartbeating, which can overwhelm broker resources.

Related Name

group.max.session.timeout.ms

Default Value

30 minute(s)

API Name

group.max.session.timeout.ms

Required

false

Consumer Group Minimum Session Timeout**Description**

The minimum allowed session timeout for registered consumers. Shorter timeouts result in quicker failure detection at the cost of more frequent consumer heartbeating, which can overwhelm broker resources.

Related Name

group.min.session.timeout.ms

Default Value

6 second(s)

API Name

group.min.session.timeout.ms

Required

false

HDFS Service**Description**

Name of the HDFS service that this Kafka service instance depends on

Related Name**Default Value****API Name**

hdfs_service

Required

false

List of Metric Reporters**Description**

List of metric reporter class names. HTTP reporter is included by default.

Related Name

kafka.metrics.reporters

Default Value

nl.techop.kafka.KafkaHttpMetricsReporter

API Name

kafka.metrics.reporters

Required

false

Enable Kerberos Authentication**Description**

Enables Kerberos authentication for this Kafka service.

Related Name

kerberos.auth.enable

Default Value

false

API Name

kerberos.auth.enable

Required

false

LDAP URL

Description

The URL of LDAP for authenticating Kafka clients.

Related Name

ldap.auth.url

Default Value**API Name**

ldap.auth.url

Required

false

LDAP User DN Template

Description

The LDAP user DN template for authenticating Kafka clients.

Related Name

ldap.auth.user.dn.template

Default Value**API Name**

ldap.auth.user.dn.template

Required

false

Leader Imbalance Check Interval

Description

Defines the frequency of leader imbalance checks.

Related Name

leader.imbalance.check.interval.seconds

Default Value

5 minute(s)

API Name

leader.imbalance.check.interval.seconds

Required

false

Leader Imbalance Allowed Per Broker

Description

The percentage of leader imbalance allowed per broker. The controller rebalances leadership if the leader imbalance ratio goes above the configured value per broker.

Related Name

leader.imbalance.per.broker.percentage

Default Value

10 %

API Name`leader.imbalance.per.broker.percentage`**Required**`false`**Log Cleaner Deduplication Buffer Size****Description**

The total memory used for log deduplication across all cleaner threads. This memory is statically allocated and will not cause GC problems.

Related Name`log.cleaner.dedupe.buffer.size`**Default Value**`128 MiB`**API Name**`log.cleaner.dedupe.buffer.size`**Required**`false`**Log Compaction Delete Record Retention Time****Description**

The amount of time to retain delete messages for log compacted topics. Once a consumer has seen an original message, it has to be ensured that it also sees the delete message. If the delete message is removed too quickly, this might not happen. The configurable delete retention time helps to circumvent this issue.

Related Name`log.cleaner.delete.retention.ms`**Default Value**`7 day(s)`**API Name**`log.cleaner.delete.retention.ms`**Required**`false`**Enable Log Compaction****Description**

Enables the log cleaner to compact topics with `cleanup.policy=compact` on this cluster.

Related Name`log.cleaner.enable`**Default Value**`true`**API Name**`log.cleaner.enable`**Required**`false`

Log Cleaner Clean Ratio

Description

Controls how frequently the log cleaner will attempt to clean the log. This ratio restricts the maximum space wasted by duplicates in the log. For example, if set to 0.5, then at most 50% of the log can be populated by duplicates. A higher ratio results in fewer, more efficient cleaning processes, but more wasted space in the log.

Related Name

log.cleaner.min.cleanable.ratio

Default Value

0.5

API Name

log.cleaner.min.cleanable.ratio

Required

false

Number of Log Cleaner Threads

Description

The number of background threads used for log cleaning.

Related Name

log.cleaner.threads

Default Value

1

API Name

log.cleaner.threads

Required

false

Log Flush Message Interval

Description

The number of messages written to a log partition before triggering an fsync on the log. Setting this property to a low value results in more frequent data to disk synchronization, but also has major impact on performance. For durability, Cloudera recommends the use of replication rather than depending on a single-server fsync. However, this setting can be used as an extra safety measure. If used in conjunction with log.flush.interval.ms, the log is flushed when either criteria is met.

Related Name

log.flush.interval.messages

Default Value**API Name**

log.flush.interval.messages

Required

false

Log Flush Time Interval

Description

The maximum time between fsync calls on the log. If used in conjunction with log.flush.interval.messages, the log is flushed when either criteria is met.

Related Name

log.flush.interval.ms

Default Value**API Name**

log.flush.interval.ms

Required

false

Log Flush Scheduler Interval**Description**

The frequency, in milliseconds, with which the log flusher checks whether any log is eligible to be flushed to disk.

Related Name

log.flush.scheduler.interval.ms

Default Value**API Name**

log.flush.scheduler.interval.ms

Required

false

Maximum Message Size**Description**

The maximum size of a message that the server can receive. This property has to be in sync with the maximum fetch size the consumers use. Otherwise, an unruly producer could publish messages that are too large for consumption.

Related Name

message.max.bytes

Default Value

1000000 B

API Name

message.max.bytes

Required

false

Minimum Number of Replicas in ISR**Description**

The minimum number of replicas in the in-sync replica needed to satisfy a produce request where required.acks=-1 (that is, all).

Related Name

min.insync.replicas

Default Value

1

API Name

min.insync.replicas

Required

false

Enable Kafka Monitoring

Description

Enables Kafka monitoring.

Related Name

monitoring.enabled

Default Value

true

API Name

monitoring.enabled

Required

false

Default Number of Partitions

Description

The default number of partitions for automatically created topics.

Related Name

num.partitions

Default Value

1

API Name

num.partitions

Required

false

Number of Replica Fetchers

Description

Number of threads used to replicate messages from leaders. Increasing this value increases the degree of I/O parallelism in the follower broker.

Related Name

num.replica.fetchers

Default Value

4

API Name

num.replica.fetchers

Required

false

Offset Retention Time

Description

After a consumer group loses all its consumers (i.e. becomes empty) its offsets will be kept for this retention period before getting discarded. For standalone consumers (using manual assignment), offsets will be expired after the time of last commit plus this retention period.

Related Name

offsets.retention.minutes

Default Value

7 day(s)

API Name

offsets.retention.minutes

Required

false

Offset Commit Topic Number of Partitions**Description**

The number of partitions for the offset commit topic. Changing this value after deployment is currently unsupported, therefore, Cloudera recommends using a higher number of partitions (for example, 100-200) for production.

Related Name

offsets.topic.num.partitions

Default Value

50

API Name

offsets.topic.num.partitions

Required

false

Offset Commit Topic Replication Factor**Description**

The replication factor for the offset commit topic. A higher setting (for example, 3 or 4) is recommended in order to ensure higher availability. If the offsets topic is created when there are fewer brokers than the replication factor, then the offsets topic is created with fewer replicas.

Related Name

offsets.topic.replication.factor

Default Value

3

API Name

offsets.topic.replication.factor

Required

false

PAM Service**Description**

The PAM service name for authenticating Kafka clients. This corresponds to the service name in the PAM configuration.

Related Name

pam.auth.service

Default Value

login

API Name

pam.auth.service

Required

false

Enable Producer Metrics**Description**

Enables producer metrics

Related Name

producer.metrics.enable

Default Value

true

API Name

producer.metrics.enable

Required

false

Default Consumer Quota**Description**

Any consumer distinguished by clientId/consumer group will get throttled if it fetches more bytes than this value per-second.

Related Name

quota.consumer.default

Default Value**API Name**

quota.consumer.default

Required

false

Default Producer Quota**Description**

Any producer distinguished by clientId will get throttled if it produces more bytes than this value per-second.

Related Name

quota.producer.default

Default Value**API Name**

quota.producer.default

Required

false

Ranger Kafka Plugin Hdfs Audit Directory**Description**

The DFS path on which Ranger audits are written.

Related Name

ranger_kafka_plugin_hdfs_audit_directory

Default Value`$ranger_base_audit_url/kafka`**API Name**`ranger_kafka_plugin_hdfs_audit_directory`**Required**`false`**'Ranger service' name for this Kafka service****Description**

Name of the 'Ranger service', that is used for authorization by this Kafka service. If this parameter is set to the placeholder value '{ {GENERATED_RANGER_SERVICE_NAME} }', a generated service name will be used, and if necessary, created. The generated service name will refer to the name of the cluster and the name of this Kafka service. The name can consist of alphanumeric and '_' characters.

Related Name`ranger.plugin.kafka.service.name`**Default Value**`cm_kafka`**API Name**`ranger_plugin_kafka_service_name`**Required**`false`**RANGER Service****Description**

Name of the RANGER service that this Kafka service instance depends on

Related Name**Default Value****API Name**`ranger_service`**Required**`false`**Replica Maximum Fetch Size****Description**

The maximum number of bytes to fetch for each partition in fetch requests that replicas send to the leader. This value should be larger than `message.max.bytes`.

Related Name`replica.fetch.max.bytes`**Default Value**`1 MiB`**API Name**`replica.fetch.max.bytes`**Required**`false`

Allowed Replica Time Lag

Description

If a follower has not sent any fetch requests, nor has it consumed up to the leader's log end offset during this time, the leader removes the follower from the ISR set.

Related Name

replica.lag.time.max.ms

Default Value

10 second(s)

API Name

replica.lag.time.max.ms

Required

false

SASL/PLAIN Authentication

Description

Authentication method that the SASL/PLAIN mechanism uses to authenticate clients.

Related Name

sasl.plain.auth

Default Value

none

API Name

sasl.plain.auth

Required

false

Minimum Number of Replicas in ISR for Transaction State Log

Description

Overridden min.insync.replicas config for the transaction topic.

Related Name

transaction.state.log.min.isr

Default Value

2

API Name

transaction.state.log.min.isr

Required

false

Transaction State Log Replication Factor

Description

The replication factor for the transaction topic (set higher to ensure availability). Internal topic creation will fail until the cluster size meets this replication factor requirement.

Related Name

transaction.state.log.replication.factor

Default Value

3

API Name

transaction.state.log.replication.factor

Required

false

Enable Unclean Leader Election**Description**

Enables replicas not in the ISR set to be elected as leader as a last resort, even though doing so might result in data loss.

Related Name

unclean.leader.election.enable

Default Value

false

API Name

unclean.leader.election.enable

Required

false

ZooKeeper Root**Description**

The znode in ZooKeeper used as a root for this Kafka cluster.

Related Name

zookeeper.chroot

Default Value

/kafka

API Name

zookeeper.chroot

Required

false

Enable Secure Connection to ZooKeeper**Description**

Enables SSL/TLS connection to ZooKeeper for this Kafka service if dependent ZooKeeper service's `zookeeper_tls_enabled` configuration is enabled.

Related Name

zookeeper.secure.connection.enable

Default Value

true

API Name

zookeeper.secure.connection.enable

Required

false

ZooKeeper Session Timeout**Description**

If the server fails to send a heartbeat to ZooKeeper within this period of time, it is considered dead. If set to a too low value, ZooKeeper might falsely consider a server dead. If set to a too high value, ZooKeeper might take too long to recognize a dead server.

Related Name

zookeeper.session.timeout.ms

Default Value

6 second(s)

API Name

zookeeper.session.timeout.ms

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Kafka service instance depends on

Related Name**Default Value****API Name**

zookeeper_service

Required

true

Suppressions

Suppress Configuration Validator: Advertised Host

Description

Whether to suppress configuration warnings produced by the Advertised Host configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_advertised.host.name

Required

true

Suppress Configuration Validator: Advertised Port

Description

Whether to suppress configuration warnings produced by the Advertised Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_advertised.port

Required

true

Suppress Configuration Validator: Destination Broker List**Description**

Whether to suppress configuration warnings produced by the Destination Broker List configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_bootstrap.servers

Required

true

Suppress Configuration Validator: Broker ID**Description**

Whether to suppress configuration warnings produced by the Broker ID configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_broker.id

Required

true

Suppress Configuration Validator: Additional Broker Java Options**Description**

Whether to suppress configuration warnings produced by the Additional Broker Java Options configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_broker_java_opts

Required

true

Suppress Configuration Validator: Java Heap Size of Broker**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Broker configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_broker_max_heap_size

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: config.storage.replication.factor**Description**

Whether to suppress configuration warnings produced by the config.storage.replication.factor configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_config.storage.replication.factor

Required

true

Suppress Configuration Validator: config.storage.topic**Description**

Whether to suppress configuration warnings produced by the config.storage.topic configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_config.storage.topic

Required

true

Suppress Configuration Validator: Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

Description

Whether to suppress configuration warnings produced by the Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_connect-distributed.properties_role_safety_valve

Required

true

Suppress Configuration Validator: connect.log4j.connector.context

Description

Whether to suppress configuration warnings produced by the connect.log4j.connector.context configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_connector.context

Required

true

Suppress Configuration Validator: MirrorMaker Consumer Rebalance Listener

Description

Whether to suppress configuration warnings produced by the MirrorMaker Consumer Rebalance Listener configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_consumer.rebalance.listener

Required

true

Suppress Configuration Validator: MirrorMaker Consumer Rebalance Listener Arguments**Description**

Whether to suppress configuration warnings produced by the MirrorMaker Consumer Rebalance Listener Arguments configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_consumer.rebalance.listener.args

Required

true

Suppress Configuration Validator: Consumer Group ID**Description**

Whether to suppress configuration warnings produced by the Consumer Group ID configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_group.id

Required

true

Suppress Configuration Validator: Name of User with Read-Write Access to the JMX Agent**Description**

Whether to suppress configuration warnings produced by the Name of User with Read-Write Access to the JMX Agent configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.control.user

Required

true

Suppress Configuration Validator: Password of user with read-write access to the JMX agent**Description**

Whether to suppress configuration warnings produced by the Password of user with read-write access to the JMX agent configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.control.user.passwd

Required

true

Suppress Configuration Validator: Name of User with read-only access to the JMX Agent**Description**

Whether to suppress configuration warnings produced by the Name of User with read-only access to the JMX Agent configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.monitor.user

Required

true

Suppress Configuration Validator: Password of User with read-only Access to the JMX agent**Description**

Whether to suppress configuration warnings produced by the Password of User with read-only Access to the JMX agent configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.monitor.user.passwd

Required

true

Suppress Configuration Validator: JMX Port**Description**

Whether to suppress configuration warnings produced by the JMX Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_port

Required

true

Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf**Description**

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka-conf/kafka-client.conf_client_config_safety_valve

Required

true

Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-cluster-configs.properties

Description

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-cluster-configs.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka-conf/kafka-cluster-configs.properties_client_config_safety_valve

Required

true

Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties

Description

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka-conf/kafka-ranger-repo.properties_client_config_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka-monitoring.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Configuration Directory**Description**

Whether to suppress configuration warnings produced by the Kafka Connect Configuration Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.conf.directory

Required

true

Suppress Configuration Validator: Java Home Path Override**Description**

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.jdk.home

Required

true

Suppress Configuration Validator: HTTP Metric Report Host**Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report Host configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.http.metrics.host

Required

true

Suppress Configuration Validator: HTTP Metric Report Port**Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.http.metrics.port

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_broker_role_env_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Kafka Connect Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_connect_role_env_safety_valve

Required

true

Suppress Configuration Validator: KAFKA_HEAP_OPTS**Description**

Whether to suppress configuration warnings produced by the KAFKA_HEAP_OPTS configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_heap_opts

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_mirror_maker_role_env_safety_valve

Required

true

Suppress Configuration Validator: key.converter**Description**

Whether to suppress configuration warnings produced by the key.converter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_key.converter

Required

true

Suppress Configuration Validator: Data Directories**Description**

Whether to suppress configuration warnings produced by the Data Directories configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log.dirs

Required

true

Suppress Configuration Validator: Segment File Size**Description**

Whether to suppress configuration warnings produced by the Segment File Size configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log.segment.bytes

Required

true

Suppress Configuration Validator: Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Log Directory**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: MirrorMaker Message Handler**Description**

Whether to suppress configuration warnings produced by the MirrorMaker Message Handler configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_message.handler

Required

true

Suppress Configuration Validator: MirrorMaker Message Handler Arguments**Description**

Whether to suppress configuration warnings produced by the MirrorMaker Message Handler Arguments configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_message.handler.args

Required

true

Suppress Configuration Validator: metrics.jetty.server.port**Description**

Whether to suppress configuration warnings produced by the metrics.jetty.server.port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.jetty.server.port

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties**Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_mirror_maker_consumers.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Additional MirrorMaker Java Options

Description

Whether to suppress configuration warnings produced by the Additional MirrorMaker Java Options configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_mirror_maker_java_opts

Required

true

Suppress Configuration Validator: Java Heap Size of MirrorMaker

Description

Whether to suppress configuration warnings produced by the Java Heap Size of MirrorMaker configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_mirror_maker_max_heap_size

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_mirror_maker_producers.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Number of I/O Threads

Description

Whether to suppress configuration warnings produced by the Number of I/O Threads configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_num.io.threads

Required

true

Suppress Configuration Validator: Number of Network Threads**Description**

Whether to suppress configuration warnings produced by the Number of Network Threads configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_num.network.threads

Required

true

Suppress Configuration Validator: Number of Recovery Threads per data directory**Description**

Whether to suppress configuration warnings produced by the Number of Recovery Threads per data directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_num.recovery.threads.per.data.dir

Required

true

Suppress Configuration Validator: Number of Alter Log Dir Threads**Description**

Whether to suppress configuration warnings produced by the Number of Alter Log Dir Threads configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_num.replica.alter.log.dirs.threads

Required

true

Suppress Configuration Validator: offset.storage.replication.factor**Description**

Whether to suppress configuration warnings produced by the `offset.storage.replication.factor` configuration validator.

Related Name**Default Value**

false

API Name

`role_config_suppression_offset.storage.replication.factor`

Required

true

Suppress Configuration Validator: `offset.storage.topic`**Description**

Whether to suppress configuration warnings produced by the `offset.storage.topic` configuration validator.

Related Name**Default Value**

false

API Name

`role_config_suppression_offset.storage.topic`

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

`role_config_suppression_oom_heap_dump_dir`

Required

true

Suppress Configuration Validator: `plugin.path`**Description**

Whether to suppress configuration warnings produced by the `plugin.path` configuration validator.

Related Name**Default Value**

false

API Name

`role_config_suppression_plugin.path`

Required

true

Suppress Configuration Validator: TCP Port**Description**

Whether to suppress configuration warnings produced by the TCP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_port

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger-kafka-audit.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger-kafka-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_ranger-kafka-security.xml_role_safety_valve`**Required**`true`**Suppress Configuration Validator: Ranger Kafka Plugin Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Conf Path configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger_kafka_plugin_conf_path`**Required**`true`**Suppress Configuration Validator: Ranger Kafka Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Audit Hdfs Spool Directory Path configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger_kafka_plugin_hdfs_audit_spool_directory`**Required**`true`**Suppress Configuration Validator: Ranger Kafka Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Policy Cache Directory Path configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger_kafka_plugin_policy_cache_directory`**Required**`true`**Suppress Configuration Validator: Ranger Kafka Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Audit Solr Spool Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_kafka_plugin_solr_audit_spool_directory

Required

true

Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address**Description**

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Configuration Validator: rest.extension.classes**Description**

Whether to suppress configuration warnings produced by the rest.extension.classes configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rest.extension.classes

Required

true

Suppress Configuration Validator: kafka.connect.rest.port**Description**

Whether to suppress configuration warnings produced by the kafka.connect.rest.port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rest.port

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: kafka.connect.secure.rest.port**Description**

Whether to suppress configuration warnings produced by the kafka.connect.secure.rest.port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_secure.rest.port

Required

true

Suppress Configuration Validator: Source Broker List**Description**

Whether to suppress configuration warnings produced by the Source Broker List configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_source.bootstrap.servers

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties**Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: TLS/SSL Port**Description**

Whether to suppress configuration warnings produced by the TLS/SSL Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_port

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties**Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server JKS Keystore Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: status.storage.replication.factor**Description**

Whether to suppress configuration warnings produced by the status.storage.replication.factor configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_status.storage.replication.factor

Required

true

Suppress Configuration Validator: status.storage.topic**Description**

Whether to suppress configuration warnings produced by the status.storage.topic configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_status.storage.topic

Required

true

Suppress Configuration Validator: value.converter**Description**

Whether to suppress configuration warnings produced by the value.converter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_value.converter

Required

true

Suppress Configuration Validator: Topic Whitelist**Description**

Whether to suppress configuration warnings produced by the Topic Whitelist configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_whitelist

Required

true

Suppress Parameter Validation: Controlled Shutdown Maximum Attempts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Controlled Shutdown Maximum Attempts parameter.

Related Name

Default Value

false

API Name

service_config_suppression_controlled.shutdown.max.retries

Required

true

Suppress Parameter Validation: Default Replication Factor**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Replication Factor parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_default.replication.factor

Required

true

Suppress Configuration Validator: Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: List of Metric Reporters**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the List of Metric Reporters parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kafka.metrics.reporters

Required

true

Suppress Configuration Validator: Kafka Broker Count Validator**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_kafka_broker_count_validator

Required

true

Suppress Configuration Validator: Kafka Connect Count Validator**Description**

Whether to suppress configuration warnings produced by the Kafka Connect Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_kafka_connect_count_validator

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Count Validator**Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_kafka_mirror_maker_count_validator

Required

true

Suppress Parameter Validation: Kafka Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kafka_service_env_safety_valve

Required

true

Suppress Parameter Validation: LDAP URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap.auth.url

Required

true

Suppress Parameter Validation: LDAP User DN Template**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User DN Template parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap.auth.user.dn.template

Required

true

Suppress Parameter Validation: Leader Imbalance Check Interval**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Leader Imbalance Check Interval parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_leader.imbalance.check.interval.seconds

Required

true

Suppress Parameter Validation: Leader Imbalance Allowed Per Broker**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Leader Imbalance Allowed Per Broker parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_leader.imbalance.per.broker.percentage

Required

true

Suppress Parameter Validation: Maximum Message Size**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Message Size parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_message.max.bytes

Required

true

Suppress Parameter Validation: Minimum Number of Replicas in ISR**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Minimum Number of Replicas in ISR parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_min.insync.replicas

Required

true

Suppress Parameter Validation: Default Number of Partitions**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Number of Partitions parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_num.partitions

Required

true

Suppress Parameter Validation: Number of Replica Fetchers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Replica Fetchers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_num.replica.fetchers

Required

true

Suppress Parameter Validation: Offset Commit Topic Number of Partitions**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Commit Topic Number of Partitions parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_offsets.topic.num.partitions

Required

true

Suppress Parameter Validation: Offset Commit Topic Replication Factor**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Commit Topic Replication Factor parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_offsets.topic.replication.factor

Required

true

Suppress Parameter Validation: PAM Service**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the PAM Service parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_pam.auth.service

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Kafka Plugin Hdfs Audit Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Hdfs Audit Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kafka_plugin_hdfs_audit_directory

Required

true

Suppress Parameter Validation: 'Ranger service' name for this Kafka service

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the 'Ranger service' name for this Kafka service parameter.

Related Name

Default Value

false

API Name`service_config_suppression_ranger_plugin_kafka_service_name`**Required**`true`**Suppress Parameter Validation: Replica Maximum Fetch Size****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replica Maximum Fetch Size parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_replica.fetch.max.bytes`**Required**`true`**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_service_triggers`**Required**`true`**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_smon_derived_configs_safety_valve`**Required**`true`**Suppress Parameter Validation: Transaction State Log Replication Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Transaction State Log Replication Factor parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_transaction.state.log.replication.factor

Required

true

Suppress Parameter Validation: ZooKeeper Root**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Root parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper.chroot

Required

true

Suppress Parameter Validation: ZooKeeper Session Timeout**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Session Timeout parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper.session.timeout.ms

Required

true

Suppress Health Test: Kafka Broker Health**Description**

Whether to suppress the results of the Kafka Broker Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_kafka_kafka_broker_healthy

Required

true

Key Trustee KMS Properties in Cloudera Runtime 7.1

Role groups:

Key Management Server Proxy

Advanced

Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value****API Name**

core-site.xml_role_safety_valve

Required

false

Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-acls.xml

Description

For advanced use only. A string to be inserted into kms-acls.xml for this role only.

Related Name**Default Value****API Name**

kms-acls.xml_role_safety_valve

Required

false

Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-site.xml

Description

For advanced use only. A string to be inserted into kms-site.xml for this role only.

Related Name**Default Value****API Name**

kms-site.xml_role_safety_valve

Required

false

Key Management Server Proxy Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KMS_KEYTRUSTEE_role_env_safety_valve

Required

false

Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kts-site.xml**Description**

For advanced use only. A string to be inserted into kts-site.xml for this role only.

Related Name**Default Value****API Name**

kts-site.xml_role_safety_valve

Required

false

Key Management Server Proxy Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for ssl-server.xml**Description**

For advanced use only. A string to be inserted into ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ssl-server.xml_role_safety_valve

Required

false

Logs

Key Management Server Proxy Log Directory

Description

The log directory for log files of the role Key Management Server Proxy.

Related Name

log.dir

Default Value

/var/log/kms-keytrustee

API Name

log_dir

Required

false

Key Management Server Proxy Logging Threshold

Description

The minimum log level for Key Management Server Proxy logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Key Management Server Proxy Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Key Management Server Proxy logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Key Management Server Proxy Max Log Size

Description

The maximum size, in megabytes, per log file for Key Management Server Proxy logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

kms_keytrustee_fd_thresholds

Required

false

Key Management Server Proxy Host Health Test**Description**

When computing the overall Key Management Server Proxy health, consider the host's health.

Related Name**Default Value**

true

API Name

kms_keytrustee_host_health_enabled

Required

false

Key Management Server Proxy Process Health Test**Description**

Enables the health test that the Key Management Server Proxy's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

kms_keytrustee_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.
- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.

- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a `DataNode` fires if the `DataNode` has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`role_triggers`

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

API Name`hadoop_kms_proxyuser_hue_hosts`**Required**`false`**Mapred Proxy User Groups****Description**

Allows the mapred superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name`hadoop.kms.proxyuser.mapred.groups`**Default Value**`*`**API Name**`hadoop_kms_proxyuser_mapred_groups`**Required**`false`**Mapred Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the mapred user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name`hadoop.kms.proxyuser.mapred.hosts`**Default Value**`*`**API Name**`hadoop_kms_proxyuser_mapred_hosts`**Required**`false`**Oozie Proxy User Groups****Description**

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name`hadoop.kms.proxyuser.oozie.groups`**Default Value**`*`**API Name**`hadoop_kms_proxyuser_oozie_groups`**Required**`false`

Oozie Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.oozie.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_oozie_hosts

Required

false

YARN Proxy User Groups

Description

Allows the yarn superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.yarn.groups

Default Value

*

API Name

hadoop_kms_proxyuser_yarn_groups

Required

false

YARN Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the yarn user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.yarn.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_yarn_hosts

Required

false

Key Trustee KeyStoreProvider Directory

Description

Directory to the keystore file used by Key Trustee KeyStoreProvider that backs the KMS.

Related Name

hadoop.kms.key.provider.uri

Default Value

/var/lib/kms-keytrustee

API Name

hadoop_security_key_provider_dir

Required

true

Key Trustee KeyStoreProvider Configuration Directory

Description

Directory to store configuration of keystore file used by Key Trustee KeyStoreProvider that backs the KMS.

Related Name

keytrustee.kms.key.provider.conf.uri

Default Value

/var/lib/kms-keytrustee/keytrustee

API Name

keytrustee_security_key_provider_conf_dir

Required

true

KMS Accept Count

Description

The maximum queue length for incoming connection requests when all possible request processing threads are in use. Any requests received when the queue is full will be refused. This configuration is only supported in CDH 5.11 and up.

Related Name

hadoop.http.accept.queue.size

Default Value

500

API Name

kms_accept_count

Required

false

KMS Blacklist Users

Description

A comma-separated list of users (no spaces) for whom to disallow access to key material. These users can still fetch key metadata and create encrypted encryption keys, but are unable to do any other KMS operations. Typically, HDFS superusers will be specified here.

Related Name

kms_blacklist_users

Default Value

API Name

kms_blacklist_users

Required

false

KMS Heap Size**Description**

Maximum heap size of the KMS.

Related Name

kms_heap_size

Default Value

1 GiB

API Name

kms_heap_size

Required

true

Additional Java Configuration Options for KMS**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name

kms_java_opts

Default Value**API Name**

kms_java_opts

Required

false

KMS Max Threads**Description**

Maximum number of threads used to handle KMS requests.

Related Name

hadoop.http.max.threads

Default Value

250

API Name

kms_max_threads

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value**API Name**

rlimit_fds

Required

false

Ports and Addresses**KMS HTTP Port****Description**

Port used by clients to interact with the KMS.

Related Name

hadoop.kms.http.port

Default Value

16000

API Name

kms_http_port

Required

true

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Key Management Server Proxy TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Key Management Server Proxy might connect to. This is used when Key Management Server Proxy is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Key Management Server Proxy TLS/SSL Client Trust Store Password**Description**

The password for the Key Management Server Proxy TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Key Management Server Proxy**Description**

Encrypt communication between clients and Key Management Server Proxy using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hadoop.kms.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Key Management Server Proxy TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Key Management Server Proxy is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Key Management Server Proxy TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Key Management Server Proxy is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Key Management Server Proxy TLS/SSL Server JKS Keystore File Password**Description**

The password for the Key Management Server Proxy JKS keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value**

API Name	smon_derived_configs_safety_valve
Required	false

Other

ZooKeeper Authentication Type for Secret Signer

Description	ZooKeeper Authentication for Secret Signer. Can be either "none" or "sasl"
Related Name	hadoop.kms.authentication.signer.secret.provider.zookeeper.auth.type
Default Value	none
API Name	hadoop_kms_authentication_signer_secret_provider_zookeeper_auth_type
Required	true

Authentication Secret Signer ZooKeeper Path

Description	Authentication Secret Signer ZooKeeper path. Is required to be set for KMS High Availability deployments
Related Name	hadoop.kms.authentication.signer.secret.provider.zookeeper.path
Default Value	/kmsZKRoot
API Name	hadoop_kms_authentication_signer_secret_provider_zookeeper_path
Required	true

Authentication Type

Description	Authentication type for the KMS. Can either be "simple" or "kerberos".
Related Name	hadoop.kms.authentication.type
Default Value	simple
API Name	hadoop_kms_authentication_type
Required	true

KMS Load Balancer

Description

Key Management Store Load Balancer, used with multiple KMS roles (KMS high availability). In CDH 5.4 and higher, this Key Trustee KMS service typically has the ZooKeeper dependency set, and this property is left blank. In this case, the ZooKeeper-based high availability URL is automatically generated for clients. To use an external load balancer, specify the URL to that load balancer. When using the ZooKeeper-based load balancer, all KMS roles must listen on the same port.

Related Name

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for ssl-server.xml**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for ssl-server.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl-server.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Key Management Server Proxy TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Key Management Server Proxy TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Key Management Server Proxy TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy TLS/SSL Server JKS Keystore Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: Key Management Server Proxy TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Key Management Server Proxy TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Authentication Secret Signer ZooKeeper Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Authentication Secret Signer ZooKeeper Path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_kms_authentication_signer_secret_provider_zookeeper_path

Required

Key Trustee Server Properties in Cloudera Runtime 7.1

Role groups:

Active Database

Advanced

Active Database Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

DB_ACTIVE_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Monitoring**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

db_active_fd_thresholds

Required

false

Active Database Host Health Test**Description**

When computing the overall Active Database health, consider the host's health.

Related Name**Default Value**

true

API Name

db_active_host_health_enabled

Required

false

Active Database Process Health Test**Description**

Enables the health test that the Active Database's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

db_active_scm_health_enabled

Required

false

Enable Health Alerts for this Role**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

API Name

`role_triggers`

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Database Storage Directory****Description**

Directory (local file system) where the Key Trustee Server database will be stored. Changing this value after the service has been started will have no effect.

Related Name

db_root

Default Value

/var/lib/keytrustee/db

API Name

db_root

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Key Trustee Server Database Port****Description**

The Key Trustee Server database server port. Changing this value after the service has been started will have no effect.

Related Name

db_port

Default Value

11381

API Name

db_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Active Database Environment Advanced Configuration Snippet (Safety Valve)**Description**

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name`rm_custom_resources`**Required**`false`**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**`500`**API Name**`rm_io_weight`**Required**`true`**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)****Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Active Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name

ssl.cacert.location

Default Value**API Name**

ssl_server_ca_certificate_location

Required

false

Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format)**Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Active Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

ssl.cert.location

Default Value

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee.pem

API Name

ssl_server_certificate_location

Required

false

Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format)**Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Active Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

ssl.privatekey.location

Default Value

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee-pk.pem

API Name

ssl_server_privatekey_location

Required

false

Active Key Trustee Server TLS/SSL Private Key Password**Description**

The password for the private key in the Active Key Trustee Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

ssl.privatekey.password

Default Value**API Name**

ssl_server_privatekey_password

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_keytrustee_active_server_role_env_safety_valve

Required

true

Suppress Parameter Validation: Key Trustee Server Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_keytrustee_port

Required

true

Suppress Parameter Validation: Active Key Trustee Server XML Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server XML Override parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_ca_certificate_location

Required

true

Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_certificate_location

Required

true

Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_privatekey_location

Required

true

Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Private Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Private Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_privatekey_password

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_unexpected_exits

Required

true

Passive Database**Advanced****Passive Database Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

DB_PASSIVE_role_env_safety_valve

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Monitoring

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

db_passive_fd_thresholds

Required

false

Passive Database Host Health Test**Description**

When computing the overall Passive Database health, consider the host's health.

Related Name**Default Value**

true

API Name

db_passive_host_health_enabled

Required

false

Passive Database Process Health Test**Description**

Enables the health test that the Passive Database's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

db_passive_scm_health_enabled

Required

false

Enable Health Alerts for this Role**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Database Storage Directory

Description

Directory (local file system) where the Key Trustee Server database will be stored. Changing this value after the service has been started will have no effect.

Related Name

db_root

Default Value

/var/lib/keytrustee/db

API Name

db_root

Required

false

Retry Attempts

Description

Number of times a connection attempt will be made before giving up.

Related Name

retry_attempts

Default Value

30

API Name

retry_attempts

Required

true

Retry Timeout

Description

Number of seconds to wait between retries.

Related Name

retry_timeout

Default Value

1 second(s)

API Name

retry_timeout

Required

true

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Key Trustee Server Database Port****Description**

The Key Trustee Server database server port. Changing this value after the service has been started will have no effect.

Related Name

db_port

Default Value

11381

API Name

db_port

Required

true

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.
- **streamThreshold (optional)** - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled (optional)** - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`role_triggers`

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value**API Name**

rlimit_fds

Required

false

Ports and Addresses**Key Trustee Server Port****Description**

The Key Trustee Server port number.

Related Name

keytrustee_port

Default Value

11371

API Name

keytrustee_port

Required

true

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name`rm_custom_resources`**Required**`false`**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**`500`**API Name**`rm_io_weight`**Required**`true`**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Passive Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)****Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name

ssl.cacert.location

Default Value**API Name**

ssl_server_ca_certificate_location

Required

false

Passive Key Trustee Server TLS/SSL Server Certificate File (PEM Format)**Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

ssl.cert.location

Default Value

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee.pem

API Name

ssl_server_certificate_location

Required

false

Passive Key Trustee Server TLS/SSL Server Private Key File (PEM Format)**Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

ssl.privatekey.location

Default Value

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee-pk.pem

API Name

ssl_server_privatekey_location

Required

false

Passive Key Trustee Server TLS/SSL Private Key Password**Description**

The password for the private key in the Passive Key Trustee Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

ssl.privatekey.password

Default Value**API Name**

ssl_server_privatekey_password

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Default Value

1 minute(s)

API Name

hbase_indexer_zk_session_timeout

Required

false

Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

`oom_heap_dump_dir`

Default Value

`/tmp`

API Name

`oom_heap_dump_dir`

Required

`false`

Dump Heap When Out of Memory

Description

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

`true`

API Name

`oom_heap_dump_enabled`

Required

`true`

Kill When Out of Memory

Description

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

`true`

API Name

`oom_sigkill_enabled`

Required

`true`

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

HBase Indexer Log Directory

Description

Directory where HBase Indexer will place its log files.

Related Name**Default Value**

/var/log/hbase-solr

API Name

hbase_indexer_log_dir

Required

true

Lily HBase Indexer Logging Threshold

Description

The minimum log level for Lily HBase Indexer logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Lily HBase Indexer Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Lily HBase Indexer logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Lily HBase Indexer Max Log Size

Description

The maximum size, in megabytes, per log file for Lily HBase Indexer logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name	max_log_size
Required	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

File Descriptor Monitoring Thresholds

Description	The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.
Related Name	
Default Value	Warning: 50.0 %, Critical: 70.0 %
API Name	hbase_indexer_fd_thresholds
Required	false

Lily HBase Indexer Host Health Test

Description	When computing the overall Lily HBase Indexer health, consider the host's health.
--------------------	---

Related Name**Default Value**

true

API Name

hbase_indexer_host_health_enabled

Required

false

Lily HBase Indexer Process Health Test**Description**

Enables the health test that the Lily HBase Indexer's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

hbase_indexer_scm_health_enabled

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

HBase Indexer HTTP Port

Description

HTTP port used by HBase Indexer.

Related Name

hbaseindexer.http.port

Default Value

11060

API Name

hbase_indexer_http_port

Required

true

Resource Management**Java Heap Size of Lily HBase Indexer in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

hbase_indexer_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit
Required
true

Security

Role-Specific Kerberos Principal

Description
Kerberos principal used by the Lily HBase Indexer roles.
Related Name
Default Value
hbase
API Name
kerberos_role_princ_name
Required
true

Stacks Collection

Stacks Collection Data Retention

Description
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name
stacks_collection_data_retention
Default Value
100 MiB
API Name
stacks_collection_data_retention
Required
false

Stacks Collection Directory

Description
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.
Related Name
stacks_collection_directory
Default Value
API Name
stacks_collection_directory
Required
false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml

Healthy Lily HBase Indexer Monitoring Thresholds

Description

The health test thresholds of the overall Lily HBase Indexer health. The check returns "Concerning" health if the percentage of "Healthy" Lily HBase Indexers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Lily HBase Indexers falls below the critical threshold.

Related Name

Default Value

Warning: 95.0 %, Critical: 90.0 %

API Name

ks_indexer_indexers_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

API Name

hbase_indexer_security_authentication

Required

false

HBase Indexer TLS/SSL Client Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HBase Indexer might connect to. This is used when HBase Indexer is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**

keystore_indexer_truststore_file

Required

false

HBase Indexer TLS/SSL Client Trust Store Password**Description**

The password for the HBase Indexer TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

conf/ranger-knox-audit.xml_role_safety_valve

Required

false

Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-knox-policymgr-ssl.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-knox-policymgr-ssl.xml_role_safety_valve

Required

false

Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-knox-security.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-knox-security.xml_role_safety_valve

Required

false

Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KNOX_GATEWAY_role_env_safety_valve

Required

false

Knox Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Knox Gateway Log Directory

Description

The log directory for log files of the role Knox Gateway.

Related Name

log_dir

Default Value

/var/log/knox/gateway

API Name

log_dir

Required

false

Knox Gateway Logging Threshold

Description

The minimum log level for Knox Gateway logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Knox Gateway Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Knox Gateway logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Knox Gateway Max Log Size

Description

The maximum size, in megabytes, per log file for Knox Gateway logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

knox_gateway_fd_thresholds

Required

false

Knox Gateway Host Health Test

Description

When computing the overall Knox Gateway health, consider the host's health.

Related Name**Default Value**

true

API Name

knox_gateway_host_health_enabled

Required

false

Knox Gateway Process Health Test

Description

Enables the health test that the Knox Gateway's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

knox_gateway_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.
- **streamThreshold (optional)** - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled (optional)** - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`role_triggers`

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other**Knox Gateway Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Knox Simplified Topology Management - API Authentication Provider**Description**

Authentication provider declaration used by pre-deinfed topologies such as admin, metadata or cdp-proxy-api.

Related Name

gateway_api_authentication_provider

Default Value

Enable Auto Discovery (cdp-proxy-api) - Hive Server

Description

Enables Knox auto-discovery for the Hive Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.hive

Default Value

true

API Name`gateway_auto_discovery_cdp_proxy_api_enabled_hive`**Required**`false`**Enable Auto Discovery (cdp-proxy-api) - Impala Catalog Server****Description**

Enables Knox auto-discovery for the Impala Catalog Server in the cdp-proxy-api topology.

Related Name`gateway.auto.discovery.cdp-proxy-api.enabled.impala`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_api_enabled_impala`**Required**`false`**Enable Auto Discovery (cdp-proxy-api) - Livy Server API****Description**

Enables Knox auto-discovery for the Livy Server API in the cdp-proxy-api topology.

Related Name`gateway.auto.discovery.cdp-proxy-api.enabled.livyserver`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_api_enabled_livyserver`**Required**`false`**Enable Auto Discovery (cdp-proxy-api) - NameNode****Description**

Enables Knox auto-discovery for the NameNode in the cdp-proxy-api topology.

Related Name`gateway.auto.discovery.cdp-proxy-api.enabled.namenode`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_api_enabled_namenode`**Required**`false`**Enable Auto Discovery (cdp-proxy-api) - NiFi****Description**

Enables Knox auto-discovery for the NiFi in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.nifi

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_nifi

Required

false

Enable Auto Discovery (cdp-proxy-api) - NiFi Registry**Description**

Enables Knox auto-discovery for the NiFi Registry in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.nifi-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_nifi_registry

Required

false

Enable Auto Discovery (cdp-proxy-api) - Oozie Server**Description**

Enables Knox auto-discovery for the Oozie Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.oozie

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_oozie

Required

false

Enable Auto Discovery (cdp-proxy-api) - Profiler Admin API**Description**

Enables Knox auto-discovery for the Profiler Admin API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-admin-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_profiler_admin_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Profiler Metrics API**Description**

Enables Knox auto-discovery for the Profiler Metrics API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-metrics-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_profiler_metrics_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Profiler Scheduler API**Description**

Enables Knox auto-discovery for the Profiler Scheduler API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-scheduler-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_profiler_scheduler_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Ranger Admin**Description**

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.ranger

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_ranger

Required

false

Enable Auto Discovery (cdp-proxy-api) - ResourceManager**Description**

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.resourcemanager

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_resourcemanager

Required

false

Enable Auto Discovery (cdp-proxy-api) - Schema Registry API**Description**

Enables Knox auto-discovery for the Schema Registry API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.schema-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_schema_registry

Required

false

Enable Auto Discovery (cdp-proxy-api) - Stream Messaging Manager API**Description**

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.smm-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_smm

Required

false

Enable Auto Discovery (cdp-proxy-api) - Solr Server**Description**

Enables Knox auto-discovery for the Solr Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.solr

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_solr

Required

false

Enable Auto Discovery (cdp-proxy-api) - HBase Master API**Description**

Enables Knox auto-discovery for the HBase Master API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.webhbase

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_webhbase

Required

false

Enable Auto Discovery (cdp-proxy-api) - WebHDFS API**Description**

Enables Knox auto-discovery for the WebHDFS API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.webhdfs

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_webhdfs

Required

false

Enable Auto Discovery (cdp-proxy) - Atlas API**Description**

Enables Knox auto-discovery for the Atlas API in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.atlas-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_atlas

Required

false

Enable Auto Discovery (cdp-proxy) - Atlas Web UI**Description**

Enables Knox auto-discovery for the Atlas Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.atlas

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_atlas_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Cloudera Manager API**Description**

Enables Knox auto-discovery for the Cloudera Manager API in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.cm-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_cm_api

Required

false

Enable Auto Discovery (cdp-proxy) - Cloudera Manager Admin Console**Description**

Enables Knox auto-discovery for the Cloudera Manager Admin Console in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.cm-ui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_cm_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Data Analytics Studio**Description**

Enables Knox auto-discovery for the Data Analytics Studio in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.das

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_das

Required

false

Enable Auto Discovery (cdp-proxy) - HBase Web UI**Description**

Enables Knox auto-discovery for the HBase Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.hbaseui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_hbase_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Namenode Web UI**Description**

Enables Knox auto-discovery for the Namenode Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.hdfsui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_hdfs_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Hue Server**Description**

Enables Knox auto-discovery for the Hue Server in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.hue

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_hue

Required

false

Enable Auto Discovery (cdp-proxy) - Impala Catalog Server Web UI**Description**

Enables Knox auto-discovery for the Impala Catalog Server Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.impalaui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_impala_ui

Required

false

Enable Auto Discovery (cdp-proxy) - HistoryServer Web UI**Description**

Enables Knox auto-discovery for the HistoryServer Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.jobhistoryui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_jobhistory_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Kudu Master Web UI**Description**

Enables Knox auto-discovery for the Kudu Master Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.kuduui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_kudu_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Livy Server Web UI**Description**

Enables Knox auto-discovery for the Livy Server Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.livyserver

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_livyserver

Required

false

Enable Auto Discovery (cdp-proxy) - NameNode**Description**

Enables Knox auto-discovery for the NameNode in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.namenode

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_namenode

Required

false

Enable Auto Discovery (cdp-proxy) - NiFi**Description**

Enables Knox auto-discovery for the NiFi in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.nifi

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_nifi

Required

false

Enable Auto Discovery (cdp-proxy) - NiFi Registry**Description**

Enables Knox auto-discovery for the NiFi Registry in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.nifi-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_nifi_registry

Required

false

Enable Auto Discovery (cdp-proxy) - Oozie Server**Description**

Enables Knox auto-discovery for the Oozie Server in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.oozie

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_oozie

Required

false

Enable Auto Discovery (cdp-proxy) - Oozie Web UI**Description**

Enables Knox auto-discovery for the Oozie Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.oozieui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_oozie_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Ranger Admin

Description

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.ranger

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_ranger

Required

false

Enable Auto Discovery (cdp-proxy) - Ranger Admin Web UI

Description

Enables Knox auto-discovery for the Ranger Admin Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.rangerui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_ranger_ui

Required

false

Enable Auto Discovery (cdp-proxy) - ResourceManager

Description

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.resourcemanager

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_resourcemanager

Required

false

Enable Auto Discovery (cdp-proxy) - Stream Messaging Manager API

Description

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.smm-api

Default Value

true

API Name`gateway_auto_discovery_cdp_proxy_enabled_smm`**Required**`false`**Enable Auto Discovery (cdp-proxy) - Stream Messaging Manager Web UI****Description**

Enables Knox auto-discovery for the Stream Messaging Manager Web UI in the cdp-proxy topology.

Related Name`gateway.auto.discovery.cdp-proxy.enabled.smm-ui`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_smm_ui`**Required**`false`**Enable Auto Discovery (cdp-proxy) - Solr Server****Description**

Enables Knox auto-discovery for the Solr Server in the cdp-proxy topology.

Related Name`gateway.auto.discovery.cdp-proxy.enabled.solr`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_solr`**Required**`false`**Enable Auto Discovery (cdp-proxy) - Spark 3 History Server Web UI****Description**

Enables Knox auto-discovery for the Spark 3 History Server Web UI in the cdp-proxy topology.

Related Name`gateway.auto.discovery.cdp-proxy.enabled.spark3historyui`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_spark3history_ui`**Required**`false`**Enable Auto Discovery (cdp-proxy) - Spark History Server Web UI****Description**

Enables Knox auto-discovery for the Spark History Server Web UI in the cdp-proxy topology.

Related Name`gateway.auto.discovery.cdp-proxy.enabled.sparkhistoryui`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_sparkhistory_ui`**Required**`false`**Enable Auto Discovery (cdp-proxy) - ResourceManager Web UI****Description**

Enables Knox auto-discovery for the ResourceManager Web UI in the cdp-proxy topology.

Related Name`gateway.auto.discovery.cdp-proxy.enabled.yarnui`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_yarn_ui`**Required**`false`**Enable Auto Discovery (cdp-proxy) - ResourceManager Web UI V2****Description**

Enables Knox auto-discovery for the ResourceManager Web UI V2 in the cdp-proxy topology.

Related Name`gateway.auto.discovery.cdp-proxy.enabled.yarnuiv2`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_yarn_ui_v2`**Required**`false`**Enable Auto Discovery (cdp-proxy) - Zeppelin Server Web UI****Description**

Enables Knox auto-discovery for the Zeppelin Server Web UI in the cdp-proxy topology.

Related Name`gateway.auto.discovery.cdp-proxy.enabled.zeppelinui`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_zeppelin_ui`**Required**`false`

Enable Auto Discovery (cdp-proxy) - Zeppelin Server

Description

Enables Knox auto-discovery for the Zeppelin Server in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.zeppelinws

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_zeppelin_ws

Required

false

Enable/Disable Service Auto-Discovery

Description

Whether Knox's service auto-discovery feature is enabled

Related Name

gateway.auto.discovery.enabled

Default Value

true

API Name

gateway_auto_discovery_enabled

Required

false

Knox Simplified Topology Management - Monitoring Interval

Description

Defines the frequency of Cloudera Manager resources (descriptors and shared providers) file (cdp-resources.xml) monitoring.

Related Name

gateway.cloudera.manager.descriptors.monitor.interval

Default Value

10 second(s)

API Name

gateway_cloudera_manager_descriptors_monitor_interval

Required

false

Auto Discovery - Cluster Configuration Monitoring Interval

Description

Defines the frequency of cluster configuration monitoring.

Related Name

gateway.cluster.config.monitor.cm.interval

Default Value

1 minute(s)

API Name

gateway_cluster_configuration_monitor_interval

Required

false

Knox Gateway Configuration Directory**Description**

Contains configuration files that apply to the gateway globally (i.e. not cluster specific).

Related Name

gateway_conf_dir

Default Value

/var/lib/knox/gateway/conf

API Name

gateway_conf_dir

Required

false

Knox Gateway Data Directory**Description**

Contains security and topology specific artifacts as well as important applications for admin-ui

Related Name

gateway_data_dir

Default Value

/var/lib/knox/gateway/data

API Name

gateway_data_dir

Required

false

Gateway - Default App Topology Name**Description**

When a topology file is deployed with a file name that matches the configured default topology name, a specialized mapping for URLs is installed for that particular topology. This allows the URLs that are expected by the existing Hadoop CLIs for WebHDFS to be used in interacting with the specific Hadoop cluster that is represented by the default topology file.

Related Name

default.app.topology.name

Default Value

cdp-proxy

API Name

gateway_default_topology_name

Required

false

Knox Simplified Topology Management - cdp-proxy**Description**

Knox descriptor block for 'cdp-proxy' topology. 'providerConfigRef' indicates the name of shared-provider the given descriptor would like to use. The rest of the entries hold service information. The structure of an service information entry is: \$SERVICE_NAME[:\$PARAMETER_NAME=\$PARAMETER_VALUE]. The 'url' and 'version' parameter names are preserved keywords to set the given service's URL and version. For instance: HIVE:url=http://localhost:123, HIVE:version:3.0.0, HIVE:test.pramameter.name=test.parameter.value

Related Name

cdp-proxy

Default Value

providerConfigRef=sso CM-API:httpclient.connectionTimeout=5m CM-API:httpclient.socketTimeout=5m HUE:httpclient.connectionTimeout=5m HUE:httpclient.socketTimeout=5m IMPALA:httpclient.connectionTimeout=5m IMPALA:httpclient.socketTimeout=5m NIFI:useTwoWaySsl=true NIFI-REGISTRY:useTwoWaySsl=true RANGER:replayBufferSize=65

API Name

gateway_descriptor_cdp_proxy

Required

false

Knox Simplified Topology Management - cdp-proxy-api**Description**

providerConfigRef=pam CM-API:httpclient.connectionTimeout=5m CM-API:httpclient.socketTimeout=5m HIVE:httpclient.connectionTimeout=5m HIVE:httpclient.socketTimeout=5m IMPALA:httpclient.connectionTimeout=5m IMPALA:httpclient.socketTimeout=5m NIFI:useTwoWaySsl=true NIFI-REGISTRY:useTwoWaySsl=true RANGER:replayBufferSize=65

API Name

gateway_descriptor_cdp_proxy_api

Required

false

Knox Gateway Dispatch Whitelist**Description**

The whitelist to be applied for dispatches associated with the service roles specified by gateway.dispatch.whitelist.services. By default this is replaced with DEFAULT or HTTPS_ONLY based on if TLS is enabled.

Related Name

gateway.dispatch.whitelist

Default Value

WHITELIST_CONFIG_REPLACEME**API Name**

gateway_dispatch_whitelist

Required

false

Knox Gateway Dispatch Whitelist Services**Description**

The comma-delimited list of service roles for which the 'gateway.dispatch.whitelist' should be applied

Related Name

gateway.dispatch.whitelist.services

Default Value

DATANODE, HBASEUI, HDFSUI, IMPALAUUI, JOBHISTORYUI, KUDUUI, NODEUI, YARNUI, YARNUIV2, knoxauth

API Name

gateway_dispatch_whitelist_services

Required

false

Gateway Config Directory**Description**

The directory within 'gateway_data_dir' that contains gateway topology files and deployments.

Related Name

gateway.gateway.conf.dir

Default Value

deployments

API Name

gateway_gateway_conf_dir

Required

false

Knox Gateway Initial/Max Heapsize**Description**

Initial/Maximum size for the Java Process heap. Passed to Java -Xmx/-Xms. Measured in megabytes.

Related Name

gateway_heap_size

Default Value

1 GiB

API Name

gateway_heap_size

Required

true

Additional Gateway Java Options

Description

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here. -Xmx/-Xms should not be specified here: to set the heapsize use the 'Knox Gateway Initial/Max Heapsize' parameter

Related Name

gateway_java_opts

Default Value**API Name**

gateway_java_opts

Required

false

Admin Groups

Description

Admin groups for Knox

Related Name

gateway.knox.admin.groups

Default Value**API Name**

gateway_knox_admin_groups

Required

false

Knox Gateway Log Level

Description

The logging level of Knox Gateway

Related Name

gateway_log_level

Default Value

ERROR

API Name

gateway_log_level

Required

false

Knox Master Secret

Description

The master secret is used to access secured artifacts by the gateway instance. Keystore, trust stores and credential stores are all protected with the master secret. NOTE: changing the master secret will require you to change passwords protecting the keystores for the gateway, identity keystores and all credential stores

Related Name

gateway_master_secret

Default Value

API Name

gateway_master_secret

Required

true

Gateway Path**Description**

The default context path for the gateway.

Related Name

gateway.path

Default Value

gateway

API Name

gateway_path

Required

true

Ranger Knox Plugin Conf Path**Description**

Staging directory for Ranger Knox Plugin Configuration. This should generally not be changed.

Related Name

gateway_ranger_knox_plugin_conf_path

Default Value

/var/lib/knox/ranger-knox-plugin

API Name

gateway_ranger_knox_plugin_conf_path

Required

true

Ranger Knox Plugin Audit Hdfs Spool Directory Path**Description**

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/knox/gateway/audit/hdfs/spool

API Name

gateway_ranger_knox_plugin_hdfs_audit_spool_directory

Required

true

Ranger Knox Plugin Policy Cache Directory Path**Description**

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.knox.policy.cache.dir

Default Value

/var/lib/ranger/knox/gateway/policy-cache

API Name

gateway_ranger_knox_plugin_policy_cache_directory

Required

true

Ranger Knox Plugin Audit Solr Spool Directory Path**Description**

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/knox/gateway/audit/solr/spool

API Name

gateway_ranger_knox_plugin_solr_audit_spool_directory

Required

true

Ranger Plugin Trusted Proxy IP Address**Description**

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.knox.trusted.proxy.ipaddress

Default Value**API Name**

gateway_ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address**Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.knox.use.x-forwarded-for.ipaddress

Default Value

false

API Name

gateway_ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Cookie Scoping Enabled

Description

Enable/Disable cookie scoping feature.

Related Name

gateway.scope.cookies.feature.enabled

Default Value

false

API Name

gateway_scope_cookies_feature_enabled

Required

false

Security - Signing Key Alias

Description

The alias for the signing keypair within the keystore specified via gateway_signing_keystore_name

Related Name

gateway.signing.key.alias

Default Value**API Name**

gateway_signing_key_alias

Required

false

Security - Signing Keystore Name

Description

The filename of keystore file that contains the signing keypair

Related Name

gateway.signing.keystore.name

Default Value**API Name**

gateway_signing_keystore_name

Required

false

Security - Signing Keystore Type

Description

The type of the keystore file where the signing keypair is stored. See gateway_signing_keystore_name

Related Name

gateway.signing.keystore.type

Default Value**API Name**

gateway_signing_keystore_type

Required

false

Knox Simplified Topology Management - SSO Authentication Provider**Description**

Authentication provider declaration used by the UIs using the Knox SSO capabilities such as the Admin and Home Page UIs.

Related Name

gateway_sso_authentication_provider

Default Value

role=authentication authentication.name=ShiroProvider authentication.param.sessionTimeout=30
authentication.param.redirectToUrl=/\$GATEWAY_PATH/knoxssso/knoxauth/
login.html authentication.param.restrictedCookies=rememberme, WWW-Authenticate
authentication.param.main.pamRealm=org.apache.knox.gateway.shirorealm.KnoxPamRealm
authentication.param.main.pamRealm.service=login authentication.param.urls./**=authcBasic

API Name

gateway_sso_authentication_provider

Required

false

Security - TLS Certificate Alias (Optional)**Description**

The alias for the Gateway's TLS certificate and keypair within the default keystore or the keystore specified via gateway.tls.keystore.path

Related Name

gateway_tls_certificate_alias

Default Value**API Name**

gateway_tls_certificate_alias

Required

false

Security - TLS Certificate Path (Optional)**Description**

The path for the TLS certificate which Knox will import in the CM generated/distributed keystore in case SSL is enabled (if any).

Related Name

gateway_tls_certificate_path

Default Value**API Name**

gateway_tls_certificate_path

Required

false

Websockets Enabled**Description**

Enable/Disable websocket feature.

Related Name`gateway.websocket.feature.enabled`**Default Value**`true`**API Name**`gateway_websocket_feature_enabled`**Required**`false`**X-Forwarded Header Context Service Name****Description**

The service name to be added in x-forward-context header.

Related Name`gateway.xforwarded.header.context.append.servicename`**Default Value**`LIVYSERVER`**API Name**`gateway_xforwarded_header_context_append_servicename`**Required**`false`**Admin Group Mapping - Class Name****Description**

The class name used for Hadoop admin group mapping

Related Name`gateway.group.config.hadoop.security.group.mapping`**Default Value**`org.apache.hadoop.security.ShellBasedUnixGroupsMapping`**API Name**`hadoop_security_group_mapping_class`**Required**`false`**Hadoop Group Mapping - Negative Cache Expiration****Description**

The Hadoop group mapping negative cache expiration in seconds

Related Name`gateway.group.config.hadoop.security.groups.negative-cache.secs`**Default Value**`5 second(s)`**API Name**`hadoop_security_group_negative_cache_expiration_seconds`**Required**`false`

Hadoop Group Mapping - Positive Cache Expiration

Description

The Hadoop group mapping positive cache expiration in seconds

Related Name

gateway.group.config.hadoop.security.groups.cache.secs

Default Value

10 second(s)

API Name

hadoop_security_group_positive_cache_expiration_seconds

Required

false

krb5.conf Location

Description

Absolute path to krb5.conf file

Related Name

java.security.krb5.conf

Default Value

/etc/krb5.conf

API Name

java_security_krb5_conf

Required

false

KRB5 Debug

Description

Boolean flag indicating whether to enable debug messages for krb5 authentication

Related Name

sun.security.krb5.debug

Default Value

false

API Name

sun_security_krb5_debug

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Gateway HTTP Port****Description**

The HTTP port for the Gateway.

Related Name

gateway.port

Default Value

8443

API Name

gateway_port

Required

true

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

`rm_memory_soft_limit`**Required**`true`**Security****Knox Gateway TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Knox Gateway might connect to. This is used when Knox Gateway is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`gateway.httpclient.truststore.path`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Knox Gateway TLS/SSL Client Trust Store Password****Description**

The password for the Knox Gateway TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**`ssl_client_truststore_password`**Required**`false`**Enable TLS/SSL for Knox Gateway****Description**

Encrypt communication between clients and Knox Gateway using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name`knox.enableTLS`**Default Value**`false`**API Name**`ssl_enabled`**Required**`false`

Knox Gateway TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Knox Gateway is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

gateway.tls.keystore.path

Default Value**API Name**

ssl_server_keystore_location

Required

false

Knox Gateway TLS/SSL Server JKS Keystore File Password

Description

The password for the Knox Gateway JKS keystore file.

Related Name**Default Value****API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

Suppress Parameter Validation: Ranger Knox Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Audit Solr Spool Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_solr_audit_spool_directory

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Security - Signing Key Alias

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Key Alias parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_gateway_signing_key_alias`**Required**`true`**Suppress Parameter Validation: Security - Signing Keystore Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Name parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_gateway_signing_keystore_name`**Required**`true`**Suppress Parameter Validation: Security - Signing Keystore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Type parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_gateway_signing_keystore_type`**Required**`true`**Suppress Parameter Validation: Knox Simplified Topology Management - SSO Authentication Provider****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - SSO Authentication Provider parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_gateway_sso_authentication_provider`**Required**`true`**Suppress Parameter Validation: Security - TLS Certificate Alias (Optional)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - TLS Certificate Alias (Optional) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_tls_certificate_alias

Required

true

Suppress Parameter Validation: Security - TLS Certificate Path (Optional)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - TLS Certificate Path (Optional) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_tls_certificate_path

Required

true

Suppress Parameter Validation: X-Forwarded Header Context Service Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the X-Forwarded Header Context Service Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_xforwarded_header_context_append_servicename

Required

true

Suppress Parameter Validation: Admin Group Mapping - Class Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Group Mapping - Class Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_security_group_mapping_class

Required

true

Suppress Parameter Validation: krb5.conf Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the krb5.conf Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_java_security_krb5_conf

Required

true

Suppress Parameter Validation: Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_knox_gateway_role_env_safety_valve

Required

Suppress Parameter Validation: Knox Gateway TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_knox_knox_gateway_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_knox_knox_gateway_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_knox_knox_gateway_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_knox_gateway_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_knox_gateway_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_knox_gateway_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_knox_gateway_unexpected_exits

Required

true

Knox IDBroker

Advanced

Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml

Description

For advanced use only. A string to be inserted into conf/gateway-reloadable.xml for this role only.

Related Name**Default Value****API Name**

conf/gateway-reloadable.xml_role_safety_valve

Required

false

Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

Description

For advanced use only. A string to be inserted into conf/gateway-site.xml for this role only.

Related Name**Default Value****API Name**

conf/gateway-site.xml_role_safety_valve

Required

false

Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

IDBROKER_role_env_safety_valve

Required

false

Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Knox IDBroker Log Directory****Description**

The log directory for log files of the role Knox IDBroker.

Related Name

log_dir

Default Value

/var/log/knox/idbroker

API Name

log_dir

Required

false

Knox IDBroker Logging Threshold**Description**

The minimum log level for Knox IDBroker logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Knox IDBroker Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Knox IDBroker logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Knox IDBroker Max Log Size**Description**

The maximum size, in megabytes, per log file for Knox IDBroker logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

idbroker_fd_thresholds

Required

false

Knox IDBroker Host Health Test

Description

When computing the overall Knox IDBroker health, consider the host's health.

Related Name**Default Value**

true

API Name

idbroker_host_health_enabled

Required

false

Knox IDBroker Process Health Test

Description

Enables the health test that the Knox IDBroker's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

idbroker_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Knox IDBroker Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name**Default Value**

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Knox IDBroker AWS Credentials Key**Description**

The AWS credentials key

Related Name

idbroker_aws_credentials_key

Default Value**API Name**

idbroker_aws_credentials_key

Required

false

Knox IDBroker AWS Credentials Secret**Description**

The AWS credentials secret

Related Name

idbroker_aws_credentials_secret

Default Value**API Name**

idbroker_aws_credentials_secret

Required

false

Knox IDBroker AWS Group Mapping**Description**

The list of AWS group-role mappings in 'group=role[:group=role]...[:group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=arn:aws:iam:XYZ:role/s3full;audit=arn:aws:iam:XYZ:role/s3Read

Related Name

idbroker.aws.group.role.mapping

Default Value**API Name**

idbroker_aws_group_mapping

Required

false

Knox IDBroker AWS User Default Group Mapping**Description**

The list of AWS user default group mappings in 'user=group[:user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

Related Name

idbroker.aws.user.default.group.mapping

Default Value**API Name**

idbroker_aws_user_default_group_mapping

Required

false

Knox IDBroker AWS User Mapping**Description**

The list of AWS user-role mappings in 'user=role[:user=role]...[:user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=arn:aws:iam:XYZ:role/s3full;guest=arn:aws:iam:XYZ:role/s3Read

Related Name

idbroker.aws.user.role.mapping

Default Value**API Name**

idbroker_aws_user_mapping

Required

false

Knox IDBroker AZURE ADLS2 Tenant Name

Description

The name of the AZURE AD tenant. A tenant is a representation of an organization. It's a dedicated instance of Azure AD that an organization or application developer receives when the organization or application developer creates a relationship with Microsoft

Related Name

idbroker_azure_adls2_tenant_name

Default Value

API Name

idbroker_azure_adls2_tenant_name

Required

false

Knox IDBroker AZURE 'blob-contributor' ClientID

Description

The client ID credential for 'blob-contributor' role

Related Name

idbroker_azure_blob_contributor_clientid

Default Value

API Name

idbroker_azure_blob_contributor_clientid

Required

false

Knox IDBroker AZURE 'blob-contributor' Secret

Description

The secret credential for 'blob-contributor' role

Related Name

idbroker_azure_blob_contributor_secret

Default Value

API Name

idbroker_azure_blob_contributor_secret

Required

false

Knox IDBroker AZURE 'blob-reader' ClientID

Description

The client ID credential for 'blob-reader' role

Related Name

idbroker_azure_blob_reader_clientid

Default Value

API Name

idbroker_azure_blob_reader_clientid

Required

false

Knox IDBroker AZURE 'blob-reader' Secret**Description**

The secret credential for 'blob-reader' role

Related Name

idbroker_azure_blob_reader_secret

Default Value**API Name**

idbroker_azure_blob_reader_secret

Required

false

Knox IDBroker AZURE Group Mapping**Description**

The list of AZURE group-role mappings in 'group=role[;group=role]...[;group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=blob-contributor

Related Name

idbroker.adls2.group.role.mapping

Default Value**API Name**

idbroker_azure_group_mapping

Required

false

Knox IDBroker AZURE User Default Group Mapping**Description**

The list of AZURE user default group mappings in 'user=group[user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

Related Name

idbroker.azure.user.default.group.mapping

Default Value**API Name**

idbroker_azure_user_default_group_mapping

Required

false

Knox IDBroker AZURE User Mapping**Description**

The list of AZURE user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=blob-contributor

Related Name

idbroker.adls2.user.role.mapping

Default Value**API Name**

idbroker_azure_user_mapping

Required

false

Knox IDBroker AZURE VM Assumer Identity**Description**

A user assigned managed identity that has Virtual Machine Contributor and Managed Identity Operator roles scoped at the resource group where IDBroker Virtual Machine is running.

Related Name

idbroker_azure_vm_assumer_identity

Default Value**API Name**

idbroker_azure_vm_assumer_identity

Required

false

Knox IDBroker Configuration Directory**Description**

Contains configuration files that apply to the gateway globally (i.e. not cluster specific).

Related Name

idbroker_conf_dir

Default Value

/var/lib/knox/idbroker/conf

API Name

idbroker_conf_dir

Required

false

Knox IDBroker Data Directory**Description**

Contains security and topology specific artifacts as well as important applications for admin-ui

Related Name

idbroker_data_dir

Default Value

/var/lib/knox/idbroker/data

API Name

idbroker_data_dir

Required

false

Gateway - Default App Topology Name**Description**

When a topology file is deployed with a file name that matches the configured default topology name, a specialized mapping for URLs is installed for that particular topology. This allows the URLs that are expected by the existing Hadoop CLIs for WebHDFS to be used in interacting with the specific Hadoop cluster that is represented by the default topology file.

Related Name

default.app.topology.name

Default Value**API Name**

idbroker_default_topology_name

Required

false

Gateway Config Directory**Description**

The directory within 'idbroker_data_dir' that contains gateway topology files and deployments.

Related Name

gateway.gateway.conf.dir

Default Value

deployments

API Name

idbroker_gateway_gateway_conf_dir

Required

false

Admin Groups**Description**

Admin groups for Knox

Related Name

gateway.knox.admin.groups

Default Value**API Name**

idbroker_gateway_knox_admin_groups

Required

false

Gateway Path**Description**

The default context path for the gateway.

Related Name

gateway.path

Default Value

gateway

API Name

idbroker_gateway_path

Required

true

Cookie Scoping Enabled**Description**

Enable/Disable cookie scoping feature.

Related Name

gateway.scope.cookies.feature.enabled

Default Value

false

API Name

idbroker_gateway_scope_cookies_feature_enabled

Required

false

Security - Signing Key Alias**Description**The alias for the signing keypair within the keystore specified via
idbroker_gateway_signing_keystore_name**Related Name**

gateway.signing.key.alias

Default Value**API Name**

idbroker_gateway_signing_key_alias

Required

false

Security - Signing Keystore Name**Description**

The filename of keystore file that contains the signing keypair

Related Name

gateway.signing.keystore.name

Default Value**API Name**

idbroker_gateway_signing_keystore_name

Required

false

Security - Signing Keystore Type**Description**

The type of the keystore file where the signing keypair is stored. See `idbroker_gateway_signing_keystore_name`

Related Name

`gateway.signing.keystore.type`

Default Value**API Name**

`idbroker_gateway_signing_keystore_type`

Required

`false`

Knox IDBroker GCP Credential Key**Description**

The GCP Credential Key

Related Name

`idbroker_gcp_credential_key`

Default Value**API Name**

`idbroker_gcp_credential_key`

Required

`false`

Knox IDBroker GCP Credential Secret**Description**

The GCP Credential Secret

Related Name

`idbroker_gcp_credential_secret`

Default Value**API Name**

`idbroker_gcp_credential_secret`

Required

`false`

Knox IDBroker GCP Group Mapping**Description**

The list of GCP group-role mappings in 'group=role[:group=role]...[:group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: `admin=storage-admin@XYZ.iam.gserviceaccount.com;audit=storage-read-only@XYZ.iam.gserviceaccount.com`

Related Name

`idbroker.gcp.group.role.mapping`

Default Value**API Name**

`idbroker_gcp_group_mapping`

Required

false

Knox IDBroker GCP User Default Group Mapping**Description**

The list of GCP user default group mappings in 'user=group[;user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

Related Name

idbroker.gcp.user.default.group.mapping

Default Value**API Name**

idbroker_gcp_user_default_group_mapping

Required

false

Knox IDBroker GCP User Mapping**Description**

The list of GCP user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=storage-admin@XYZ.iam.gserviceaccount.com;guest=storage-read-only@XYZ.iam.gserviceaccount.com

Related Name

idbroker.gcp.user.role.mapping

Default Value**API Name**

idbroker_gcp_user_mapping

Required

false

Admin Group Mapping - Class Name**Description**

The class name used for Hadoop admin group mapping

Related Name

gateway.group.config.hadoop.security.group.mapping

Default Value

org.apache.hadoop.security.ShellBasedUnixGroupsMapping

API Name

idbroker_hadoop_security_group_mapping_class

Required

false

IDBroker Initial/Max Heapsize**Description**

Initial/Maximum size for the Java Process heap. Passed to Java -Xmx/-Xms. Measured in megabytes.

Related Name

idbroker_heap_size

Default Value

1 GiB

API Name

idbroker_heap_size

Required

true

Additional IDBroker Java Options**Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here. -Xmx/-Xms should not be specified here: to set the heapsize use the 'Knox Gateway Initial/Max Heapsize' parameter

Related Name

idbroker_java_opts

Default Value**API Name**

idbroker_java_opts

Required

false

krb5.conf Location**Description**

Absolute path to krb5.conf file

Related Name

java.security.krb5.conf

Default Value

/etc/krb5.conf

API Name

idbroker_java_security_krb5_conf

Required

false

Kerberos Proxyuser Block**Description**

Proxyuser configuration used in Knox's 'dt' topology in case Kerberos is enabled. Must conform a valid JSON key-value format!

Related Name

idbroker_kerberos_dt_proxyuser_block

Default Value

```
hadoop.proxyuser.livy.hosts: * hadoop.proxyuser.livy.groups: * hadoop.proxyuser.hive.hosts: *
hadoop.proxyuser.hive.groups: * hadoop.proxyuser.httpfs.hosts: * hadoop.proxyuser.httpfs.groups:
* hadoop.proxyuser.hue.hosts: * hadoop.proxyuser.hue.groups: * hadoop.proxyuser.oozie.hosts:
* hadoop.proxyuser.oozie.groups: * hadoop.proxyuser.impala.hosts: *
hadoop.proxyuser.impala.groups: *
```

API Name

idbroker_kerberos_dt_proxyuser_block

Required

false

IDBroker Knox Token TTL**Description**

This indicates the lifespan of the token. Once it expires a new token must be acquired from KnoxToken service. This is in milliseconds.

Related Name

idbroker_knox_token_ttl_ms

Default Value

1 hour(s)

API Name

idbroker_knox_token_ttl_ms

Required

false

Knox IDBroker Log Directory**Description**

The folder where Knox IDBroker puts it's logs

Related Name

idbroker_log_dir

Default Value

/var/log/knox/idbroker

API Name

idbroker_log_dir

Required

false

IDBroker Log Level**Description**

The logging level of IDBroker

Related Name

idbroker_log_level

Default Value

ERROR

API Name

idbroker_log_level

Required

false

IDBroker Master Secret**Description**

The master secret is used to access secured artifacts by the gateway instance. Keystore, trust stores and credential stores are all protected with the master secret. NOTE: changing the master secret will require you to change passwords protecting the keystores for the gateway, identity keystores and all credential stores

Related Name

idbroker_master_secret

Default Value**API Name**

idbroker_master_secret

Required

true

Gateway Config Refresh Interval

Description

Defines the frequency of gateway configuration refresh.

Related Name

gateway.config.refresh.interval

Default Value

10 second(s)

API Name

idbroker_relaodable_refresh_interval_ms

Required

false

KRB5 Debug

Description

Boolean flag indicating whether to enable debug messages for krb5 authentication

Related Name

sun.security.krb5.debug

Default Value

false

API Name

idbroker_sun_security_krb5_debug

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Gateway HTTP Port****Description**

The HTTP port for the Gateway.

Related Name

gateway.port

Default Value

8444

API Name

idbroker_gateway_port

Required

true

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

`rm_memory_soft_limit`**Required**`true`**Security****Knox IDBroker TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Knox IDBroker might connect to. This is used when Knox IDBroker is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`gateway.httpclient.truststore.path`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Knox IDBroker TLS/SSL Client Trust Store Password****Description**

The password for the Knox IDBroker TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**`ssl_client_truststore_password`**Required**`false`**Enable TLS/SSL for Knox IDBroker****Description**

Encrypt communication between clients and Knox IDBroker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name`knox.enableTLS`**Default Value**`false`**API Name**`ssl_enabled`**Required**`false`

Knox IDBroker TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Knox IDBroker is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

gateway.tls.keystore.path

Default Value**API Name**

ssl_server_keystore_location

Required

false

Knox IDBroker TLS/SSL Server JKS Keystore File Password

Description

The password for the Knox IDBroker JKS keystore file.

Related Name**Default Value****API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml**Description**

role_config_suppression_idbroker_gateway_gateway_conf_dir

Required

true

Suppress Parameter Validation: Admin Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Groups parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gateway_knox_admin_groups

Required

true

Suppress Parameter Validation: Gateway Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gateway_path

Required

true

Suppress Parameter Validation: Gateway HTTP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway HTTP Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gateway_port

Required

true

Suppress Parameter Validation: Security - Signing Key Alias**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Key Alias parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gateway_signing_key_alias

Required

true

Suppress Parameter Validation: Security - Signing Keystore Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gateway_signing_keystore_name

Required

true

Suppress Parameter Validation: Security - Signing Keystore Type**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gateway_signing_keystore_type

Required

true

Suppress Parameter Validation: Knox IDBroker GCP Credential Key**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP Credential Key parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gcp_credential_key

Required

true

Suppress Parameter Validation: Knox IDBroker GCP Credential Secret**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP Credential Secret parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gcp_credential_secret

Required

true

Suppress Parameter Validation: Knox IDBroker GCP Group Mapping**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP Group Mapping parameter.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_gcp_group_mapping

Required

true

Suppress Parameter Validation: Knox IDBroker GCP User Default Group Mapping**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP User Default Group Mapping parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gcp_user_default_group_mapping

Required

true

Suppress Parameter Validation: Knox IDBroker GCP User Mapping**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP User Mapping parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gcp_user_mapping

Required

true

Suppress Parameter Validation: Admin Group Mapping - Class Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Group Mapping - Class Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_hadoop_security_group_mapping_class

Required

true

Suppress Parameter Validation: IDBroker Initial/Max Heapsize**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the IDBroker Initial/Max Heapsize parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_heap_size

Required

true

Suppress Parameter Validation: Additional IDBroker Java Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional IDBroker Java Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_java_opts

Required

true

Suppress Parameter Validation: krb5.conf Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the krb5.conf Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_java_security_krb5_conf

Required

true

Suppress Parameter Validation: Kerberos Proxyuser Block**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Proxyuser Block parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_kerberos_dt_proxyuser_block

Required

true

Suppress Parameter Validation: Knox IDBroker Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_log_dir

Required

true

Suppress Parameter Validation: IDBroker Master Secret

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the IDBroker Master Secret parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_master_secret

Required

true

Suppress Parameter Validation: Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_role_env_safety_valve

Required

true

Suppress Parameter Validation: Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Knox IDBroker Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Knox IDBroker TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Knox IDBroker TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Knox IDBroker TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Knox IDBroker TLS/SSL Server JKS Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Server JKS Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_knox_idbroker_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_knox_idbroker_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_idbroker_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_idbroker_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_idbroker_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_idbroker_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_idbroker_unexpected_exits

Required

true

Service-Wide

Advanced

Knox Service Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

Description

For advanced use only, a string to be inserted into conf/gateway-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

conf/gateway-site.xml_service_safety_valve

Required

false

Knox Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

KNOX_service_env_safety_valve

Required

false

System Group

Description

The group that this service's processes should run as.

Related Name

Default Value

knox

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name

Default Value

knox

API Name

process_username

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Healthy Knox IDBroker Monitoring Thresholds

Description

The health test thresholds of the overall Knox IDBroker health. The check returns "Concerning" health if the percentage of "Healthy" Knox IDBrokers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Knox IDBrokers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 49.0 %

API Name

KNOX_IDBROKER_healthy_thresholds

Required

false

Healthy Knox Gateway Monitoring Thresholds

Description

The health test thresholds of the overall Knox Gateway health. The check returns "Concerning" health if the percentage of "Healthy" Knox Gateways falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Knox Gateways falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 49.0 %

API Name

KNOX_KNOX_GATEWAY_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`service_triggers`

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

`smon_derived_configs_safety_valve`

Required

false

Other**Automatic Restart on Stop****Description**

Automatically restart the service when a stop is issued.

Related Name

`autorestart_on_stop`

Default Value

false

API Name

`autorestart_on_stop`

Required

false

HDFS Service

Description

Name of the HDFS service that this Knox service instance depends on

Related Name**Default Value****API Name**

hdfs_service

Required

false

Enable Kerberos Authentication

Description

Boolean flag indicating whether the Hadoop cluster protected by Gateway is secured with Kerberos

Related Name

gateway.hadoop.kerberos.secured

Default Value

false

API Name

kerberos.auth.enabled

Required

false

Knox PAM Realm - Service Name

Description

Using KnoxPamRealm requires a PAM service name. This is the name of the file under '/etc/pam.d' that is used to initialize and configure the PAM subsystem. Normally, this file reflects the application using it. For example 'login', 'sshd', 'su', etc...

Related Name

knox_pam_realm_service

Default Value

login

API Name

knox_pam_realm_service

Required

false

Ranger Knox Plugin Hdfs Audit Directory

Description

The HDFS path on which Ranger audits are written.

Related Name

ranger_knox_plugin_hdfs_audit_directory

Default Value

\$ranger_base_audit_url/knox

API Name

ranger_knox_plugin_hdfs_audit_directory
Required
false

RANGER Service

Description
Name of the RANGER service that this Knox service instance depends on
Related Name
Default Value
API Name
ranger_service
Required
false

Save Alias Command Input

Description
This parameter serves as the input for the 'Save Alias' command. The input must follow the following format: topology_name_1[:topology_name_2:...:topology_name_N].alias_name=password
Related Name
save_alias_command_input_password
Default Value
API Name
save_alias_command_input_password
Required
false

Security

Kerberos Principal

Description
Kerberos principal short name used by all roles of this service.
Related Name
Default Value
knox
API Name
kerberos_princ_name
Required
true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description
Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties_role_safety_valve

API Name

role_config_suppression_gateway_data_dir

Required

true

Suppress Configuration Validator: Gateway - Default App Topology Name**Description**

Whether to suppress configuration warnings produced by the Gateway - Default App Topology Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_default_topology_name

Required

true

Suppress Configuration Validator: Knox Simplified Topology Management - cdp-proxy**Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - cdp-proxy configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_descriptor_cdp_proxy

Required

true

Suppress Configuration Validator: Knox Simplified Topology Management - cdp-proxy-api**Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - cdp-proxy-api configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_descriptor_cdp_proxy_api

Required

true

Suppress Configuration Validator: Knox Gateway Dispatch Whitelist**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Dispatch Whitelist configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_dispatch_whitelist

Required

true

Suppress Configuration Validator: Knox Gateway Dispatch Whitelist Services**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Dispatch Whitelist Services configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_dispatch_whitelist_services

Required

true

Suppress Configuration Validator: Gateway Config Directory

Description

Whether to suppress configuration warnings produced by the Gateway Config Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_gateway_conf_dir

Required

true

Suppress Configuration Validator: Knox Gateway Initial/Max Heapsize

Description

Whether to suppress configuration warnings produced by the Knox Gateway Initial/Max Heapsize configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_heap_size

Required

true

Suppress Configuration Validator: Additional Gateway Java Options

Description

Whether to suppress configuration warnings produced by the Additional Gateway Java Options configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_java_opts

Required

true

Suppress Configuration Validator: Admin Groups

Description

Whether to suppress configuration warnings produced by the Admin Groups configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_gateway_knox_admin_groups`**Required**`true`**Suppress Configuration Validator: Knox Master Secret****Description**

Whether to suppress configuration warnings produced by the Knox Master Secret configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_gateway_master_secret`**Required**`true`**Suppress Configuration Validator: Gateway Path****Description**

Whether to suppress configuration warnings produced by the Gateway Path configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_gateway_path`**Required**`true`**Suppress Configuration Validator: Gateway HTTP Port****Description**

Whether to suppress configuration warnings produced by the Gateway HTTP Port configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_gateway_port`**Required**`true`**Suppress Configuration Validator: Ranger Knox Plugin Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Conf Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_conf_path

Required

true

Suppress Configuration Validator: Ranger Knox Plugin Audit Hdfs Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Audit Hdfs Spool Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_hdfs_audit_spool_directory

Required

Suppress Configuration Validator: Ranger Knox Plugin Policy Cache Directory Path**Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Policy Cache Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_policy_cache_directory

Required

true

Suppress Configuration Validator: Ranger Knox Plugin Audit Solr Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Audit Solr Spool Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_solr_audit_spool_directory

Required

true

Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address**Description**

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Configuration Validator: Security - Signing Key Alias**Description**

Whether to suppress configuration warnings produced by the Security - Signing Key Alias configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_signing_key_alias

Required

true

Suppress Configuration Validator: Security - Signing Keystore Name**Description**

Whether to suppress configuration warnings produced by the Security - Signing Keystore Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_signing_keystore_name

Required

true

Suppress Configuration Validator: Security - Signing Keystore Type**Description**

Whether to suppress configuration warnings produced by the Security - Signing Keystore Type configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_signing_keystore_type

Required

true

Suppress Configuration Validator: Knox Simplified Topology Management - SSO Authentication Provider**Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - SSO Authentication Provider configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_sso_authentication_provider

Required

true

Suppress Configuration Validator: Security - TLS Certificate Alias (Optional)**Description**

Whether to suppress configuration warnings produced by the Security - TLS Certificate Alias (Optional) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_tls_certificate_alias

Required

true

Suppress Configuration Validator: Security - TLS Certificate Path (Optional)**Description**

Whether to suppress configuration warnings produced by the Security - TLS Certificate Path (Optional) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_tls_certificate_path

Required

true

Suppress Configuration Validator: X-Forwarded Header Context Service Name**Description**

Whether to suppress configuration warnings produced by the X-Forwarded Header Context Service Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_xforwarded_header_context_append_servicename

Required

true

Suppress Configuration Validator: Admin Group Mapping - Class Name**Description**

Whether to suppress configuration warnings produced by the Admin Group Mapping - Class Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_security_group_mapping_class

Required

true

Suppress Configuration Validator: Knox IDBroker AWS Credentials Key**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Credentials Key configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_aws_credentials_key

Required

true

Suppress Configuration Validator: Knox IDBroker AWS Credentials Secret**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Credentials Secret configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_aws_credentials_secret

Required

true

Suppress Configuration Validator: Knox IDBroker AWS Group Mapping**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Group Mapping configuration validator.

Related Name**Default Value**

false

role_config_suppression_idbroker_aws_user_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE ADLS2 Tenant Name**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE ADLS2 Tenant Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_adls2_tenant_name

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE 'blob-contributor' ClientID**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-contributor' ClientID configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_blob_contributor_clientid

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE 'blob-contributor' Secret**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-contributor' Secret configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_blob_contributor_secret

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE 'blob-reader' ClientID**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-reader' ClientID configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_blob_reader_clientid

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE 'blob-reader' Secret**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-reader' Secret configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_azure_blob_reader_secret

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE Group Mapping**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE Group Mapping configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_group_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE User Default Group Mapping**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE User Default Group Mapping configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_user_default_group_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE User Mapping**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE User Mapping configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_user_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE VM Assumer Identity**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE VM Assumer Identity configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_vm_assumer_identity

Required

true

Suppress Configuration Validator: Knox IDBroker Configuration Directory**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Configuration Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_conf_dir

Required

true

Suppress Configuration Validator: Knox IDBroker Data Directory**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Data Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_data_dir

Required

true

Suppress Configuration Validator: Gateway - Default App Topology Name**Description**

Whether to suppress configuration warnings produced by the Gateway - Default App Topology Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_default_topology_name

Required

true

Suppress Configuration Validator: Gateway Config Directory

Description

Whether to suppress configuration warnings produced by the Gateway Config Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_gateway_gateway_conf_dir

Required

true

Suppress Configuration Validator: Admin Groups

Description

Whether to suppress configuration warnings produced by the Admin Groups configuration validator.

Suppress Parameter Validation: Save Alias Command Input**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Save Alias Command Input parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_save_alias_command_input_password

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Knox IDBroker Health

Description

Whether to suppress the results of the Knox IDBroker Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_knox_idbroker_healthy

Required

true

Suppress Health Test: Knox Gateway Health

Description

Whether to suppress the results of the Knox Gateway Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_knox_knox_gateway_healthy

Required

true

Kudu Properties in Cloudera Runtime 7.1

Role groups:

Master

Advanced

Master Advanced Configuration Snippet (Safety Valve) for gflagfile

Description

For advanced use only. A string to be inserted into gflagfile for this role only.

Related Name**Default Value****API Name**

gflagfile_role_safety_valve

Required

false

Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties

Description

For advanced use only. A string to be inserted into kudu-monitoring.properties for this role only.

Related Name**Default Value****API Name**

kudu-monitoring.properties_role_safety_valve

Required

false

Master Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KUDU_MASTER_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

Master Maximum Log Level to Buffer

Description

Log messages logged at this level or lower are buffered in memory.

Related Name

logbuflevel

Default Value

0

API Name

glog_logbuflevel

Required

false

Master Maximum Log Size**Description**

Approximate maximum log file size in megabytes before rolling to a new log file.

Related Name

max_log_size

Default Value

1800 MiB

API Name

glog_maxlogsize

Required

false

Master Minimum Log Level**Description**

Messages logged via LOG() at a lower level than this are not logged anywhere.

Related Name

minloglevel

Default Value

0

API Name

glog_minloglevel

Required

false

Master Minimum Log Verbosity**Description**

Messages logged via VLOG() at a lower verbosity than this are not logged anywhere.

Related Name

v

Default Value

0

API Name

glog_verbose

Required

false

Master Log Directory

Description

The log directory for log files of the role Master.

Related Name

log_dir

Default Value

/var/log/kudu

API Name

log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

kudu_master_fd_thresholds

Required

false

Master Host Health Test**Description**

When computing the overall Master health, consider the host's health.

Related Name**Default Value**

true

API Name

kudu_master_host_health_enabled

Required

false

Master Process Health Test**Description**

Enables the health test that the Master's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

kudu_master_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Master Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

1 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Default Number of Replicas

Description

Default number of replicas for each tablet.

Related Name

Required

true

Kudu Master Data Directories

Description

Directories where Kudu masters will store data blocks.

Related Name

fs_data_dirs

Default Value

API Name

fs_data_dirs

Required

true

Kudu Master WAL Directory

Description

Directory where Kudu masters will store write-ahead logs. It can be the same as one of the data directories, but not a sub-directory of a data directory. Master and tablet servers must use different directories when co-located on the same machine.

Related Name

fs_wal_dir

Default Value**API Name**

fs_wal_dir

Required

true

Kudu Master WAL Fsyncs All Entries

Description

If true, the Master will use the fsync system call to ensure that all modifications to the catalog table are durably written to disk. **WARNING:** In this release, enabling this option can cause serious issues.

Related Name

log_force_fsync_all

Default Value

false

API Name

log_force_fsync_all

Required

true

Master Address

Description

Configuration that's automatically set by Cloudera Manager to propagate the Master's address to the Tablet Servers.

Related Name

server.address

Default Value**API Name**

master_address

Required

false

Kudu Master Core Dump Directory

Description

If Enable Core Dump is set, Kudu masters will dump cores to this location.

Related Name

master_core_dump_directory

Default Value

/var/log/kudu

API Name

master_core_dump_directory

Required

true

Kudu Metrics URL Parameters**Description**

The URL query parameters to append to the `/metrics` URL when collecting Kudu metrics.

Related Name

metrics_url_parameters

Default Value

compact=1&level=info

API Name

metrics_url_parameters

Required

true

Kudu Master Web UI Interface**Description**

The interface of the Kudu Master Web UI. If blank, binds to 0.0.0.0.

Related Name

webserver_interface

Default Value**API Name**

webserver_interface

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Kudu Master Web UI Port

Description

The port of the Kudu Master Web UI.

Related Name

webserver_port

Default Value

8051

API Name

webserver_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Enable TLS/SSL for Master

Description

Encrypt communication between clients and Master using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Master TLS/SSL Server CA Certificate (PEM Format)

Description

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name**Default Value****API Name**

ssl_server_ca_certificate_location

Required

false

Master TLS/SSL Server Certificate File (PEM Format)

Description

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_certificate_file

Default Value**API Name**

ssl_server_certificate_location

Required

false

Master TLS/SSL Server Private Key File (PEM Format)

Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_private_key_file

Default Value

API Name

ssl_server_privatekey_location

Required

false

Master TLS/SSL Private Key Password**Description**

The password for the private key in the Master TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

webserver_private_key_password_cmd

Default Value**API Name**

ssl_server_privatekey_password

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Default Number of Replicas**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Number of Replicas parameter.

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other**Enable Core Dump****Description**

Used to generate a core dump to get more information about a Kudu crash. Unless otherwise configured systemwide using `/proc/sys/kernel/core_pattern`, the dump is generated in the configured core dump directory. The core file can be very large.

Related Name

enable_core_dump

Default Value

false

API Name

enable_core_dump

Required

true

Enable Secure Authentication, Encryption, And Web UI**Description**

Enable secure authentication and encryption between all Kudu clients and servers as well as between individual servers. Also enables secure authentication in every Kudu server's web UI. Kerberos must be configured.

Related Name

enable_security

Default Value

false

API Name

enable_security

Required

true

Maximum Number of Per-tablet-server Replica Moves

Description

Maximum number of replica moves to perform concurrently on one tablet server: moves of replicas to the server and moves of replicas off of the server count against this limit.

Related Name

rb_max_moves_per_server

Default Value

5

API Name

rb_max_moves_per_server

Required

false

Maximum Allowed Runtime of the Rebalancing Tool

Description

Maximum time to run the rebalancing, in seconds. Specifying 0 means not imposing any limit on the rebalancing run time.

Related Name

rb_max_run_time_sec

Default Value

0

API Name

rb_max_run_time_sec

Required

false

Maximum Allowed Duration Without Rebalancer Progress

Description

Maximum duration of the 'staleness' interval where the rebalance can not make progress. If this period elapses without the rebalancer making progress, it will exit indicating failure. This may happen in case of a persistent problem with the cluster or when some unexpected concurrent activity is present (such as automatic recovery of failed replicas, etc.)

Related Name

rb_max_staleness_interval_sec

Default Value

300

API Name

rb_max_staleness_interval_sec

Required

false

Maximum Allowed Runtime to Rolling Restart a Batch of Servers

Description

Maximum time to allow for the restart of a batch of servers during a rolling restart. If this period elapses without the cluster becoming healthy, the rolling restart will exit indicating failure. This may happen if there is a persistent problem with the cluster.

Related Name

rr_batch_time_limit_sec

Default Value

1800

API Name

rr_batch_time_limit_sec

Required

false

Rolling Restart Health Check Interval**Description**

Interval in seconds with which to check the health of a cluster in waiting for a server or batch of servers to come back online, before moving onto the next server or batch of servers during a rolling restart.

Related Name

rr_health_check_interval_sec

Default Value

60

API Name

rr_health_check_interval_sec

Required

false

Sentry Service**Description**

Name of the Sentry service that this Kudu service instance depends on

Related Name**Default Value****API Name**

sentry_service

Required

false

Superuser Access Control List**Description**

The list of usernames to allow as super users, comma-separated. A '*' entry indicates that all authenticated users are allowed. If this is left unset or blank, the default behavior is that the identity of the daemon itself determines the superuser. If the daemon is logged in from a Keytab, then the local username from the Kerberos principal is used; otherwise, the local Unix username is used.

Related Name

Tablet Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KUDU_TSERVER_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Tablet Server Maximum Log Level to Buffer****Description**

Log messages logged at this level or lower are buffered in memory.

Related Name

logbuflevel

Default Value

0

API Name

glog_logbuflevel

Required

false

Tablet Server Maximum Log Size**Description**

Approximate maximum log file size in megabytes before rolling to a new log file.

Related Name

max_log_size

Default Value

1800 MiB

API Name

glog_maxlogsize

Required

false

Tablet Server Minimum Log Level

Description

Messages logged via LOG() at a lower level than this are not logged anywhere.

Related Name

minloglevel

Default Value

0

API Name

glog_minloglevel

Required

false

Tablet Server Minimum Log Verbosity

Description

Messages logged via VLOG() at a lower verbosity than this are not logged anywhere.

Related Name

v

Default Value

0

API Name

glog_verbose

Required

false

Tablet Server Log Directory

Description

The log directory for log files of the role Tablet Server.

Related Name

log_dir

Default Value

/var/log/kudu

API Name

log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

kudu_tserver_fd_thresholds

Required

false

Tablet Server Host Health Test**Description**

When computing the overall Tablet Server health, consider the host's health.

Related Name**Default Value**

true

API Name

kudu_tserver_host_health_enabled

Required

false

Tablet Server Process Health Test**Description**

Enables the health test that the Tablet Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

kudu_tserver_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Kudu Tablet Server Block Cache Capacity****Description**

Maximum amount of memory allocated to the Kudu Tablet Server's block cache.

Related Name

block_cache_capacity_mb

Default Value

512 MiB

API Name

block_cache_capacity_mb

Required

true

Tablet Server Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name**Default Value**

1 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Kudu Tablet Server Data Directories

Description

Directories where Kudu tablet servers will store data blocks.

Related Name

fs_data_dirs

Default Value**API Name**

fs_data_dirs

Required

true

Kudu Tablet Server WAL Directory

Description

Directory where Kudu tablet servers will store write-ahead logs. It can be the same as one of the data directories, but not a sub-directory of a data directory. Master and tablet servers must use different directories when co-located on the same machine.

Related Name

fs_wal_dir

Default Value**API Name**

fs_wal_dir

Required

true

Kudu Tablet Server WAL Fsyncs All Entries

Description

If true, the Tablet Server will use the fsync system call to ensure that all writes are durably written to the write-ahead log (WAL) before responding. If false, edits will be written to the Linux buffer cache on a majority of replicas before responding.

Related Name

log_force_fsync_all

Default Value

false

API Name

log_force_fsync_all

Required

true

Kudu Tablet Server Maintenance Threads**Description**

The number of threads devoted to background maintenance operations such as flushes and compactions. If the tablet server appears to be falling behind on write operations (inserts, updates, and deletes) but CPU and disk resources are not saturated, increasing this thread count will devote more resources to these background operations.

Related Name

maintenance_manager_num_threads

Default Value

1

API Name

maintenance_manager_num_threads

Required

true

Kudu Tablet Server Hard Memory Limit**Description**

Maximum amount of memory that the Kudu Tablet Server will use before it starts rejecting all incoming writes.

Related Name

memory_limit_hard_bytes

Default Value

4 GiB

API Name

memory_limit_hard_bytes

Required

true

Kudu Metrics URL Parameters**Description**

The URL query parameters to append to the `/metrics` URL when collecting Kudu metrics.

Related Name

metrics_url_parameters

Default Value

compact=1&level=info

API Name

metrics_url_parameters

Required

true

Tablet History Max Age**Description**

The maximum amount of time, in seconds, to preserve tablet data history, including history required to perform diff scans and incremental backups. The duration defined by this parameter is also the maximum amount of time it is possible to wait after a full or incremental backup before performing the next incremental backup. Setting the value to -1 disables history removal.

Related Name

tablet_history_max_age_sec

Default Value

7 day(s)

API Name

tablet_history_max_age_sec

Required

true

Tablet Server Quiescing Interval**Description**

Interval in seconds with which to check whether a Tablet Server has fully quiesced

Related Name

ts_quiescing_retry_interval_sec

Default Value

30

API Name

ts_quiescing_retry_interval_sec

Required

false

Maximum Allowed Runtime to Quiesce a Tablet Server**Description**

Maximum time to wait for a Tablet Server to fully quiesce, relinquishing leadership of all Tablets and completion of all active scans.

Related Name

ts_quiescing_time_limit_sec

Default Value

1800

API Name

ts_quiescing_time_limit_sec

Required

false

Kudu Tablet Server Core Dump Directory**Description**

If Enable Core Dump is set, Kudu Tablet Servers will dump cores to this location.

Related Name

tserver_core_dump_directory

Default Value

/var/log/kudu

API Name

tserver_core_dump_directory

Required

true

Kudu Tablet Server Web UI Interface**Description**

The interface of the Kudu Tablet Server Web UI. If blank, binds to 0.0.0.0.

Related Name

webserver_interface

Default Value**API Name**

webserver_interface

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Kudu Tablet Server Web UI Port****Description**

The port of the Kudu Tablet Server Web UI.

Related Name

webserver_port

Default Value

8050

API Name

webserver_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Enable TLS/SSL for Tablet Server****Description**

Encrypt communication between clients and Tablet Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Tablet Server TLS/SSL Server CA Certificate (PEM Format)**Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name**Default Value****API Name**

ssl_server_ca_certificate_location

Required

false

Tablet Server TLS/SSL Server Certificate File (PEM Format)**Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_certificate_file

Default Value**API Name**

ssl_server_certificate_location

Required

false

Tablet Server TLS/SSL Server Private Key File (PEM Format)**Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_private_key_file

Default Value**API Name**

ssl_server_privatekey_location

Required

false

Tablet Server TLS/SSL Private Key Password**Description**

The password for the private key in the Tablet Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

webserver_private_key_password_cmd

Default Value**API Name**

ssl_server_privatekey_password

Required

false

Suppressions**Suppress Parameter Validation: Kudu Tablet Server Block Cache Capacity****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Block Cache Capacity parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_block_cache_capacity_mb

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Kudu Tablet Server Data Directories**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Data Directories parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_fs_data_dirs

Required

true

Suppress Parameter Validation: Kudu Tablet Server WAL Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server WAL Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_fs_wal_dir

Required

true

Suppress Parameter Validation: Tablet Server Advanced Configuration Snippet (Safety Valve) for gflagfile**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Advanced Configuration Snippet (Safety Valve) for gflagfile parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gflagfile_role_safety_valve

Required

true

Suppress Parameter Validation: Tablet Server Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kudu-monitoring.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Tablet Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kudu_tserver_role_env_safety_valve

Required

true

Suppress Parameter Validation: Tablet Server Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Kudu Tablet Server Maintenance Threads**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Maintenance Threads parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_maintenance_manager_num_threads

Required

true

Suppress Parameter Validation: Kudu Tablet Server Hard Memory Limit**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Hard Memory Limit parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_memory_limit_hard_bytes

Required

true

Suppress Parameter Validation: Kudu Metrics URL Parameters**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Metrics URL Parameters parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics_url_parameters

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Tablet Server TLS/SSL Server CA Certificate (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Server CA Certificate (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_ca_certificate_location

Required

Suppress Parameter Validation: Tablet Server TLS/SSL Server Certificate File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Server Certificate File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_certificate_location

Required

true

Suppress Parameter Validation: Tablet Server TLS/SSL Server Private Key File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_privatekey_location

Required

true

Suppress Parameter Validation: Tablet Server TLS/SSL Private Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Private Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_privatekey_password

Required

true

Suppress Parameter Validation: Kudu Tablet Server Core Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Core Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_tserver_core_dump_directory

Required

true

Suppress Parameter Validation: Kudu Tablet Server Web UI Interface

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Web UI Interface parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_interface

Required

true

Suppress Parameter Validation: Kudu Tablet Server Web UI Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Web UI Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_port

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kudu_kudu_tserver_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kudu_kudu_tserver_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kudu_kudu_tserver_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kudu_kudu_tserver_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kudu_kudu_tserver_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kudu_kudu_tserver_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kudu_kudu_tserver_unexpected_exits

Required

true

Livy Properties in Cloudera Runtime 7.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/livy

API Name

client_config_root_dir

Required

true

Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf**Description**

For advanced use only, a string to be inserted into the client configuration for livy-conf/livy-client.conf.

Related Name**Default Value****API Name**

livy-conf/livy-client.conf_client_config_safety_valve

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

50

API Name

client_config_priority

Required

true

Security**Gateway TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This is used when Gateway is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

livy.truststore

Default Value**API Name**

ssl_client_truststore_location

Required

false

Gateway TLS/SSL Client Trust Store Password**Description**

The password for the Gateway TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

livy.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Suppress Parameter Validation: Gateway TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Gateway TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Livy Server**Advanced**

Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf**Description**

For advanced use only. A string to be inserted into livy-conf/livy.conf for this role only.

Related Name**Default Value****API Name**

livy-conf/livy.conf_role_safety_valve

Required

false

Livy Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

LIVY_SERVER_role_env_safety_valve

Required

false

Livy Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

`oom_heap_dump_dir`**Required**`false`**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_heap_dump_enabled`**Required**`true`**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_sigkill_enabled`**Required**`true`**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**`false`**API Name**`process_auto_restart`**Required**`true`**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Livy Server Log Directory****Description**

The log directory for log files of the role Livy Server.

Related Name

log_dir

Default Value

/var/log/livy

API Name

log_dir

Required

false

Livy Server Logging Threshold**Description**

The minimum log level for Livy Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Livy Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Livy Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Livy Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Livy Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

livy_server_fd_thresholds

Required

false

Livy Server Host Health Test**Description**

When computing the overall Livy Server health, consider the host's health.

Related Name**Default Value**

true

API Name

livy_server_host_health_enabled

Required

false

Livy Server Process Health Test**Description**

Enables the health test that the Livy Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

livy_server_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

`false`

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO`

health:bad", "streamThreshold": 0, "enabled": "true"}}]See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Enable Access Control****Description**

Perform access control when processing user requests.

Related Name

livy.server.access-control.enabled

Default Value

true

API Name

livy_access_control_enabled

Required

false

Admin Users**Description**

List of users with admin permissions (can view and modify any session).

Related Name

livy.superusers

Default Value

knox zeppelin

API Name

livy_admin_users

Required

false

Extra JVM Options**Description**

Command line options to add to the Livy Server JVM. May be used also to override options automatically added by CM.

Related Name

livy_extra_java_opts

Default Value**API Name**

livy_extra_java_opts

Required

false

Enable User Impersonation**Description**

Start applications as the requesting user, instead of using the Livy account.

Related Name

livy.impersonation.enabled

Default Value

true

API Name

livy_impersonation_enabled

Required

false

Max Header Size**Description**

Maximum size of a header field accepted by the Livy server. May need to be increased in certain environments where SPNEGO is enabled.

Related Name

livy.server.request-header.size

Default Value

128 KiB

API Name

livy_max_header_size

Required

false

Java Heap Size of Livy Server**Description**

Maximum size for the Java process heap memory.

Related Name

livy_max_heapsize

Default Value

512 MiB

API Name

livy_max_heapsize

Required

false

Enable RPC Encryption**Description**

Enable encryption of communication between the Livy session and managed Spark sessions.

Related Name

livy_rpc_encryption_enabled

Default Value

true

API Name

livy_rpc_encryption_enabled

Required

false

Enable Livy Thrift Server**Description**

Enables the Livy Thrift server

Related Name

livy.server.thrift.enabled

Default Value

false

API Name

livy_server_thrift_enabled

Required

false

Livy Thrift Server Transport Mode**Description**

Transport mode used by the Livy Thrift server

Related Name

livy.server.thrift.transport.mode

Default Value

binary

API Name

livy_server_thrift_transport_mode

Required

false

Enable Session Recovery

Description

Enable recovery of live sessions when the Livy server restarts. Uses HDFS to store recovery information.

Related Name

livy_session_recovery_enabled

Default Value

true

API Name

livy_session_recovery_enabled

Required

false

Enable User Authentication

Description

Enables user authentication using SPNEGO when Kerberos is enabled.

Related Name

livy_spnego_enabled

Default Value

true

API Name

livy_spnego_enabled

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Livy Server Port****Description**

The port of the Livy server

Related Name

livy.server.port

Default Value

8998

API Name

livy_server_port

Required

false

Livy Thrift Server Port**Description**

The port of the Livy Thrift server

Related Name

livy.server.thrift.port

Default Value

10090

API Name

livy_server_thrift_port

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Enable TLS/SSL for Livy Server

Description

Encrypt communication between clients and Livy Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

livy.tls.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Livy Server TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Livy Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

livy.keystore

Default Value**API Name**

ssl_server_keystore_location

Required

false

Livy Server TLS/SSL Server JKS Keystore File Password

Description

The password for the Livy Server JKS keystore file.

Related Name

livy.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

role_config_suppression_livy_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Livy Thrift Server Port**Description**

Whether to suppress configuration warnings produced by the Livy Thrift Server Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_livy_server_thrift_port

Required

true

Suppress Configuration Validator: Livy Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Livy Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Livy Server Log Directory**Description**

Whether to suppress configuration warnings produced by the Livy Server Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Gateway TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the Gateway TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Gateway TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the Gateway TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Livy Server TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the Livy Server TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Livy Server TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the Livy Server TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Recovery Directory (HDFS)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recovery Directory (HDFS) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_livy_recovery_dir

Required

true

Suppress Configuration Validator: Livy Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Livy Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_livy_server_count_validator

Required

true

Suppress Parameter Validation: Livy Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_livy_service_env_safety_valve

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_smon_derived_configs_safety_valve
Required	true

Suppress Health Test: Livy Server Health

Description	Whether to suppress the results of the Livy Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	false
API Name	service_health_suppression_livy_livy_livy_server_health
Required	true

Oozie Properties in Cloudera Runtime 7.1

Role groups:

Oozie Server

Advanced

Oozie Server Logging Advanced Configuration Snippet (Safety Valve)

Description	For advanced use only, a string to be inserted into log4j.properties for this role only.
Related Name	
Default Value	
API Name	log4j_safety_valve
Required	false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml

Description

For advanced use only. A string to be inserted into action-conf/default.xml for this role only.

Related Name**Default Value**

API Name

oozie_action_config_default_safety_valve

Required

false

Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml**Description**

For advanced use only. A string to be inserted into oozie-site.xml for this role only.

Related Name**Default Value****API Name**

oozie_config_safety_valve

Required

false

Oozie ActionService Executor Extension Classes**Description**

Comma-separated list of ActionService executor extension classes. Only action types with associated executors can be used in workflows. For CDH 5.4 and higher, this parameter is used only to specify additional classes for workflows. All executor extension classes included in that release will be added automatically and do not need to be specified.

Related Name

oozie.service.ActionService.executor.ext.classes

Default Value**API Name**

oozie_executor_extension_classes

Required

false

Java Configuration Options for Oozie Server**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

-XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC

API Name

oozie_java_opts

Required

false

Directory For JSP Temp Files

Description

Directory to use to for temporary JSP file storage.

Related Name

oozie.jsp.tmp.dir

Default Value

/tmp

API Name

oozie_jsp_tmp_dir

Required

false

Default Launcher Max Attempts

Description

The default YARN maximal attempt count of the Launcher ApplicationMaster.

Related Name

oozie.launcher.default.max.attempts

Default Value

2

API Name

oozie_launcher_default_max_attempts

Required

false

Default Launcher Memory

Description

The default amount of memory in MiB that is allocated for the Launcher ApplicationMasters.

Related Name

oozie.launcher.default.memory.mb

Default Value

2 GiB

API Name

oozie_launcher_default_memory

Required

false

Default Launcher Queue

Description

The default YARN pool where the Launcher ApplicationMaster is placed.

Related Name

oozie.launcher.default.queue

Default Value

default

API Name

oozie_launcher_default_queue

Required

false

Oozie Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

OOZIE_SERVER_role_env_safety_valve

Required

false

Oozie HTTP Request Header Size**Description**

Controls the size of the HTTP request header.

Related Name

oozie.http.request.header.size

Default Value

64 KiB

API Name

oozie_service_http_request_header_size

Required

false

Oozie HTTP Response Header Size**Description**

Controls the size of the HTTP response header.

Related Name

oozie.http.response.header.size

Default Value

64 KiB

API Name

oozie_service_http_response_header_size

Required

false

Oozie SchemaService Workflow Extension Schemas**Description**

Comma-separated list of SchemaService workflow extension schemas for additional action types. From CDH 5.4 and higher, this parameter is used only to specify additional schemas for workflows. All schemas included in that release will be added automatically and do not need to be specified.

Related Name

oozie.service.SchemaService.wf.ext.schemas

Default Value**API Name**

oozie_workflow_extension_schemas

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Database

Oozie Server Data Directory

Description

Directory where the Oozie Server places its data. Only applicable when using Derby as the database type.

Related Name**Default Value**

/var/lib/oozie/data

API Name

oozie_data_dir

Required

false

Oozie Server Database Host

Description

Hostname of the database used by Oozie Server. If the port is non-default for your database type, use host:port notation. Does not apply if you are using Derby as the database type.

Related Name**Default Value**

localhost

API Name

oozie_database_host

Required

false

Oozie Server Database Name

Description

Name of the database used by Oozie Server.

Related Name**Default Value**

oozie

API Name	oozie_database_name
Required	false

Oozie Server Database Password

Description	Password for connecting to the database used by Oozie Server. Does not apply if you are using Derby as the database type.
Related Name	oozie.service.JPAService.jdbc.password
Default Value	
API Name	oozie_database_password
Required	false

Oozie Server Database Type

Description	Type of the database used by Oozie Server.
Related Name	
Default Value	derby
API Name	oozie_database_type
Required	false

Oozie Server Database User

Description	Username for connecting to the database used by Oozie Server. Does not apply if you are using Derby as the database type.
Related Name	oozie.service.JPAService.jdbc.username
Default Value	sa
API Name	oozie_database_user
Required	false

Logs

Oozie Server Logging Threshold

Description

The minimum log level for Oozie Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Oozie Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Oozie Server logs. Typically used by log4j or logback.

Related Name**Default Value**

720

API Name

max_log_backup_index

Required

false

Oozie Server Log Directory

Description

Directory where Oozie Server will place its log files.

Related Name**Default Value**

/var/log/oozie

API Name

oozie_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name`log_directory_free_space_absolute_thresholds`**Required**`false`**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**`Warning: Never, Critical: Never`**API Name**`log_directory_free_space_percentage_thresholds`**Required**`false`**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**`monitoring_metric_filter`**Required**`false`

Workflow Status Metrics Collection Interval

Description

Workflow Status metrics collection interval.

Related Name

oozie.service.DBLiteWorkflowStoreService.status.metrics.collection.interval

Default Value

1 minute(s)

API Name

oozie_job_metric_collection_interval

Required

false

Oozie Server Callable Queue Monitoring Threshold

Description

The health test thresholds of the weighted average size of the Oozie Server callable queue over a recent period. See also Oozie Server Callable Queue Monitoring Period.

Related Name**Default Value**

Warning: 80.0 %, Critical: 95.0 %

API Name

oozie_server_callable_queue_threshold

Required

false

Oozie Server Callable Queue Monitoring Period

Description

The period over which to compute the moving average of the callable queue size.

Related Name**Default Value**

5 minute(s)

API Name

oozie_server_callable_queue_window

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

oozie_server_fd_thresholds

Required

false

Oozie Server Host Health Test**Description**

When computing the overall Oozie Server health, consider the host's health.

Related Name**Default Value**

true

API Name

oozie_server_host_health_enabled

Required

false

Pause Duration Thresholds**Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

oozie_server_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

oozie_server_pause_duration_window

Required

false

Oozie Server Process Health Test**Description**

Enables the health test that the Oozie Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

oozie_server_scm_health_enabled

Required

false

Enable Oozie Server Shared Libraries Version Check**Description**

If true, enables version check for Oozie Server and installed shared libraries.

Related Name**Default Value**

true

API Name

oozie_server_shared_lib_version_check_enabled

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

oozie_server_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

oozie_server_web_metric_collection_thresholds

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Oozie Email Action From Address

Description

The from address to be used for mailing all emails for Oozie email action

Related Name

oozie.email.from.address

Default Value

oozie@localhost

API Name

oozie_email_from_address

Required

false

Oozie Email Action SMTP Authentication Enabled

Description

Enable SMTP authentication for Oozie email action

Related Name

oozie.email.smtp.auth

Default Value

false

API Name

oozie_email_smtp_auth

Required

false

Oozie Email Action SMTP Host

Description

The SMTP server host to use for Oozie email action

Related Name

oozie.email.smtp.host

Default Value

localhost

API Name

oozie_email_smtp_host

Required

false

Oozie Email Action SMTP Authentication Password**Description**

SMTP password for Oozie email action

Related Name

oozie.email.smtp.password

Default Value**API Name**

oozie_email_smtp_password

Required

false

Oozie Email Action SMTP Authentication Username**Description**

SMTP username for Oozie email action

Related Name

oozie.email.smtp.username

Default Value**API Name**

oozie_email_smtp_username

Required

false

Oozie Server Plugins**Description**

Comma-separated list of Oozie plug-ins to be activated. If one plugin cannot be loaded, all the plugins are ignored.

Related Name

oozie.services.ext

Default Value**API Name**

oozie_plugins_list

Required

false

Maximum concurrency for a given callable type**Description**

Maximum concurrency for a given callable type.. Each command is a callable type: submit, start, run, etc.. Each action type is a callable type: MapReduce, SSH, sub-workflow, etc. All commands that use action executors (action-start, action-end. etc.) use the action type as the callable type.

Related Name

oozie.service.CallableQueueService.callable.concurrency

Default Value

10

API Name

oozie_service_callablequeueservice_callable_concurrency

Required

false

Maximum Callable Queue Size**Description**

Maximum callable queue size

Related Name

oozie.service.CallableQueueService.queue.size

Default Value

10000

API Name

oozie_service_callablequeueservice_queue_size

Required

false

Number Threads For Executing Callables**Description**

Number of threads used for executing callables

Related Name

oozie.service.CallableQueueService.threads

Default Value

50

API Name

oozie_service_callablequeueservice_threads

Required

false

Enable The Metrics Instrumentation Service**Description**

Whether to use the Codehale-based metrics for instrumentation. Enabling this disables the 'instrumentation' REST endpoint and enables the 'metrics' REST endpoint (*hostname:port/v2/admin/metrics*).

Related Name**Default Value**

true

API Name

oozie_use_metric_instrumentation

Required

false

Enable Oozie Server Web Console

Description

If true, enables the Oozie Server web console. ExtJS 2.2 zip archive must be extracted to /var/lib/oozie on the same host as the Oozie Server.

Related Name**Default Value**

false

API Name

oozie_web_console

Required

false

Days to Keep Completed Bundle Jobs

Description

Completed bundle jobs older than this value, in days, will be purged by the PurgeService.

Related Name

oozie.service.PurgeService.bundle.older.than

Default Value

7 day(s)

API Name

purgeservice_bundle_older_than

Required

false

Days to Keep Completed Coordinator Jobs

Description

Completed coordinator jobs older than this value, in days, will be purged by the PurgeService.

Related Name

oozie.service.PurgeService.coord.older.than

Default Value

7 day(s)

API Name

purgeservice_coord_older_than

Required

false

Days to Keep Completed Workflow Jobs

Description

Completed workflow jobs older than this value, in days, will be purged by the PurgeService.

Related Name

oozie.service.PurgeService.older.than

Default Value

30 day(s)

API Name

purgeservice_older_than

Required

false

Enable Purge for Long-Running Coordinator Jobs**Description**

Whether to purge completed workflows and their corresponding coordinator actions of long-running coordinator jobs if the completed workflow jobs are older than the value specified in `oozie.service.PurgeService.older.than`.

Related Name

`oozie.service.PurgeService.purge.old.coord.action`

Default Value

true

API Name

`purgeservice_purge_old_coord_action`

Required

false

Performance**Default Launcher Virtual CPU Cores****Description**

The default number of Virtual CPU Cores that are allocated for the Launcher ApplicationMasters.

Related Name

`oozie.launcher.default.vcores`

Default Value

1

API Name

`oozie_launcher_default_vcores`

Required

false

Oozie Server Threadpool Size**Description**

Controls the threadpool size for the Oozie Server (both Jetty and Tomcat).

Related Name

`oozie.server.threadpool.max.threads`

Default Value

150

API Name

`oozie_service_threadpool_max_threads`

Required

false

Maximum Process File Descriptors**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Oozie Email Action SMTP Port

Description

The SMTP server port to use for Oozie email action

Related Name

oozie.email.smtp.port

Default Value

25

API Name

oozie_email_smtp_prt

Required

false

Oozie HTTP Port

Description

Port of Oozie Server

Related Name**Default Value**

11000

API Name

oozie_http_port

Required

false

Oozie HTTPS Port

Description

Port of the Oozie Server when using TLS/SSL.

Related Name

oozie.https.port

Default Value

11443

API Name

oozie_https_port

Required

false

Resource Management

Java Heap Size of Oozie Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

1 GiB

API Name

oozie_java_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Excluded Cipher Suites

Description

List of cipher suite names that should be excluded.

Related Name

oozie.https.exclude.cipher.suites

Default Value

TLS_ECDHE_RSA_WITH_RC4_128_SHA
SSL_DHE_RSA_EXPORT_WITH_DES40_CBC_SHA SSL_RSA_WITH_DES_CBC_SHA
SSL_DHE_RSA_WITH_DES_CBC_SHA SSL_RSA_EXPORT_WITH_RC4_40_MD5
SSL_RSA_EXPORT_WITH_DES40_CBC_SHA SSL_RSA_WITH_RC4_128_MD5

API Name

oozie_https_exclude_cipher_suites

Required

false

Enabled TLS Protocols

Description

TLS protocols accepted by the Oozie Server.

Related Name

oozie.https.include.protocols

Default Value

SSLv2Hello, TLSv1, TLSv1.1, TLSv1.2

API Name

oozie_https_include_protocols

Required

false

Oozie TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Oozie is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

oozie.https.keystore.file

Default Value

/var/lib/oozie/.keystore

API Name

oozie_https_keystore_file

Required

false

Oozie TLS/SSL Server JKS Keystore File Password

Description

The password for the Oozie JKS keystore file.

Related Name

oozie.https.keystore.pass

Default Value**API Name**

oozie_https_keystore_password

Required

false

Oozie TLS/SSL Client Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Oozie might connect to. This is used when Oozie is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

oozie.https.truststore.file

Default Value**API Name**

oozie_https_truststore_file

Required

false

Oozie TLS/SSL Client Trust Store Password**Description**

The password for the Oozie TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

oozie.https.truststore.pass

Default Value**API Name**

oozie_https_truststore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_oozie_server_swap_memory_usage`**Required**`true`**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_oozie_server_unexpected_exits`**Required**`true`**Suppress Health Test: Web Server Status****Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_oozie_server_web_metric_collection`**Required**`true`**Service-Wide****Advanced****Oozie Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**`oozie_env_safety_valve`**Required**`false`

System Group

Description

The group that this service's processes should run as.

Related Name**Default Value**

oozie

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name**Default Value**

oozie

API Name

process_username

Required

true

Database

Database Dump File

Description

File where the database gets dumped to or loaded from.

Related Name**Default Value**

/tmp/oozie_database_dump.zip

API Name

database_dump_file

Required

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Healthy Oozie Server Monitoring Thresholds**Description**

The health test thresholds of the overall Oozie Server health. The check returns "Concerning" health if the percentage of "Healthy" Oozie Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Oozie Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

oozie_servers_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "

streamThreshold": 10, "enabled": "true"}}See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other**Hive Service****Description**

Name of the Hive service that this Oozie service instance depends on. This is used to configure Oozie HCat integration.

Related Name**Default Value****API Name**

hive_service

Required

false

MapReduce Service**Description**

Service to run MapReduce jobs against

Related Name**Default Value****API Name**

mapreduce_yarn_service

Required

true

Oozie Event Listeners

Description

List of event listeners used by the Oozie service. Listeners needed for JMS or SLA integration are automatically emitted if they are enabled.

Related Name

oozie.service.EventHandlerService.event.listeners

Default Value**API Name**

oozie_event_listeners

Required

false

JMS Broker

Description

URL of the JMS Broker used by the Oozie service in JMS integration is enabled.

Related Name

oozie.jms.producer.connection.properties

Default Value

tcp://localhost:61616

API Name

oozie_jms_broker

Required

false

Oozie Load Balancer Hostname

Description

Hostname of the load balancer used if Oozie HA is enabled.

Related Name**Default Value****API Name**

oozie_load_balancer

Required

false

Coordinator Job Lookup Interval

Description

Coordinator Job Lookup trigger command is scheduled at this interval (in seconds).

Related Name

oozie.service.CoordMaterializeTriggerService.lookup.interval

Default Value

5 minute(s)

API Name

oozie_service_coord_lookup_interval

Required

false

Coordinator Action Input Check Default Timeout

Description

Default timeout for a Coordinator Action input check (in minutes) for a Coordinator Job.

Related Name

oozie.service.coord.normal.default.timeout

Default Value

2 hour(s)

API Name

oozie_service_coord_normal_default_timeout

Required

false

ShareLib Root Directory

Description

Root of the directory in HDFS where the Oozie ShareLibs are stored. The libraries are stored in the share/lib subdirectory under the specified root directory.

Related Name

oozie.service.WorkflowAppService.system.libpath

Default Value

/user/oozie

API Name

oozie_sharelib_rootdir

Required

true

Oozie Upload ShareLib Command Timeout

Description

The timeout in seconds used for the Oozie Upload ShareLib command. When the value is zero, there is no timeout for the command.

Related Name

Default Value

270

API Name

oozie_upload_sharelib_cmd_timeout

Required

false

Oozie Upload ShareLib Command Concurrency Level

Description

The number of threads that Oozie will use for the Upload ShareLib command.

Related Name

Default Value

8

API Name

oozie_upload_sharelib_concurrency

Required

false

Enable JMS Integration**Description**

Whether to configure Oozie properties needed for JMS integration

Related Name**Default Value**

false

API Name

oozie_use_jms

Required

false

Enable SLA Integration**Description**

Whether to configure Oozie properties needed for SLA integration

Related Name**Default Value**

false

API Name

oozie_use_sla

Required

false

Use ACLs on Znode**Description**

Use ACLs on Znode while a secure ZooKeeper is used for Oozie High Availability. Note: This config is not emitted if ZooKeeper is not secure.

Related Name

oozie.zookeeper.secure

Default Value

true

API Name

oozie_zk_secure

Required

false

ZooKeeper Namespace**Description**

Namespace used by this Oozie service in ZooKeeper when High Availability is enabled.

Related Name

oozie.zookeeper.namespace
Default Value
oozie
API Name
oozie_zookeeper_namespace
Required
false

Spark on Yarn Service

Description
Name of the Spark on Yarn service that this Oozie service instance depends on
Related Name
Default Value
API Name
spark_on_yarn_service
Required
false

ZooKeeper Service

Description
Name of the ZooKeeper service that this Oozie service instance depends on
Related Name
Default Value
API Name
zookeeper_service
Required
false

Ports and Addresses

Oozie Load Balancer HTTP Port

Description
HTTP port of the load balancer used if Oozie HA is enabled and SSL is disabled.
Related Name
Default Value
API Name
oozie_load_balancer_http_port
Required
false

Oozie Load Balancer HTTPS Port

Description
HTTPS port of the load balancer used if Oozie HA is enabled and SSL is enabled.
Related Name

Default Value**API Name**`oozie_load_balancer_https_port`**Required**`false`**Security****Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**`oozie`**API Name**`kerberos_princ_name`**Required**`true`**Oozie Credential Classes****Description**

A list of credential class mappings for CredentialsProvider.

Related Name`oozie.credentials.credentialclasses`**Default Value**

```
hcat=org.apache.oozie.action.hadoop.HCatCredentials
hbase=org.apache.oozie.action.hadoop.HbaseCredentials
hive2=org.apache.oozie.action.hadoop.Hive2Credentials
```

API Name`oozie_credential_classes`**Required**`false`**Enable TLS/SSL for Oozie****Description**

Encrypt communication between clients and Oozie using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name`oozie.https.enabled`**Default Value**`false`**API Name**`oozie_use_ssl`**Required**`false`

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Oozie Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Oozie Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml

Description

Whether to suppress configuration warnings produced by the Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_action_config_default_safety_valve

Required

true

Suppress Configuration Validator: Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml**Description**

Whether to suppress configuration warnings produced by the Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_config_safety_valve

Required

true

Suppress Configuration Validator: Oozie Server Data Directory**Description**

Whether to suppress configuration warnings produced by the Oozie Server Data Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_data_dir

Required

true

Suppress Configuration Validator: Oozie Server Database Host**Description**

Whether to suppress configuration warnings produced by the Oozie Server Database Host configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_database_host

Required

true

Suppress Configuration Validator: Oozie Server Database Name**Description**

Whether to suppress configuration warnings produced by the Oozie Server Database Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_database_name

Required

true

Suppress Configuration Validator: Oozie Server Database Password**Description**

Whether to suppress configuration warnings produced by the Oozie Server Database Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_database_password

Required

true

Suppress Configuration Validator: Oozie Server Database User**Description**

Whether to suppress configuration warnings produced by the Oozie Server Database User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_database_user

Required

true

Suppress Configuration Validator: Oozie Email Action From Address**Description**

Whether to suppress configuration warnings produced by the Oozie Email Action From Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_email_from_address

Required

true

Suppress Configuration Validator: Oozie Email Action SMTP Host**Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Host configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_email_smtp_host

Required

true

Suppress Configuration Validator: Oozie Email Action SMTP Authentication Password**Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Authentication Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_email_smtp_password

Required

true

Suppress Configuration Validator: Oozie Email Action SMTP Port**Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_email_smtp_prt

Required

true

Suppress Configuration Validator: Oozie Email Action SMTP Authentication Username**Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Authentication Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_email_smtp_username

Required

true

Suppress Configuration Validator: Oozie ActionService Executor Extension Classes**Description**

Whether to suppress configuration warnings produced by the Oozie ActionService Executor Extension Classes configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_executor_extension_classes

Required

true

Suppress Configuration Validator: Oozie HTTP Port**Description**

Whether to suppress configuration warnings produced by the Oozie HTTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_http_port

Required

true

Suppress Configuration Validator: Excluded Cipher Suites**Description**

Whether to suppress configuration warnings produced by the Excluded Cipher Suites configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_exclude_cipher_suites

Required

true

Suppress Configuration Validator: Oozie TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_keystore_file

Required

true

Suppress Configuration Validator: Oozie TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_keystore_password

Required

true

Suppress Configuration Validator: Oozie HTTPS Port**Description**

Whether to suppress configuration warnings produced by the Oozie HTTPS Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_port

Required

true

Suppress Configuration Validator: Oozie TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_truststore_file

Required

true

Suppress Configuration Validator: Oozie TLS/SSL Client Trust Store Password

Description

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_truststore_password

Required

true

Suppress Configuration Validator: Java Configuration Options for Oozie Server

Description

Whether to suppress configuration warnings produced by the Java Configuration Options for Oozie Server configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_java_opts

Required

true

Suppress Configuration Validator: Directory For JSP Temp Files

Description

Whether to suppress configuration warnings produced by the Directory For JSP Temp Files configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_jsp_tmp_dir

Required

true

Suppress Configuration Validator: Default Launcher Queue

Description

Whether to suppress configuration warnings produced by the Default Launcher Queue configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_oozie_launcher_default_queue`**Required**`true`**Suppress Configuration Validator: Oozie Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Oozie Server Log Directory configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_oozie_log_dir`**Required**`true`**Suppress Configuration Validator: Oozie Server Plugins****Description**

Whether to suppress configuration warnings produced by the Oozie Server Plugins configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_oozie_plugins_list`**Required**`true`**Suppress Configuration Validator: Oozie Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Oozie Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_oozie_server_role_env_safety_valve`**Required**`true`**Suppress Configuration Validator: Oozie SchemaService Workflow Extension Schemas****Description**

Whether to suppress configuration warnings produced by the Oozie SchemaService Workflow Extension Schemas configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_workflow_extension_schemas

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Database Dump File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Dump File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_dump_file

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Oozie Credential Classes**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Credential Classes parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_credential_classes

Required

true

Suppress Parameter Validation: Oozie Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_env_safety_valve

Required

true

Suppress Parameter Validation: Oozie Event Listeners**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Event Listeners parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_event_listeners

Required

true

Suppress Parameter Validation: JMS Broker**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMS Broker parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_jms_broker

Required

true

Suppress Parameter Validation: Oozie Load Balancer Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer Hostname parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_load_balancer

Required

true

Suppress Parameter Validation: Oozie Load Balancer HTTP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer HTTP Port parameter.

Related Name

Default Value

false

API Name

service_config_suppression_oozie_load_balancer_http_port

Required

true

Suppress Parameter Validation: Oozie Load Balancer HTTPS Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer HTTPS Port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_load_balancer_https_port

Required

true

Suppress Configuration Validator: Oozie Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Oozie Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_server_count_validator

Required

true

Suppress Parameter Validation: ShareLib Root Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ShareLib Root Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_sharelib_rootdir

Required

true

Suppress Parameter Validation: ZooKeeper Namespace**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Namespace parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_zookeeper_namespace

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_smon_derived_configs_safety_valve
Required	true

Suppress Health Test: Oozie Server Health

Description	Whether to suppress the results of the Oozie Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	false
API Name	service_health_suppression_oozie_oozie_servers_healthy
Required	true

Ozone Properties in Cloudera Runtime 7.1

Role groups:

Gateway

Advanced

Deploy Directory

Description	The directory where the client configs will be deployed
Related Name	
Default Value	/etc/ozone
API Name	client_config_root_dir
Required	

true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only, a string to be inserted into the client configuration for ozone-conf/ozone-site.xml.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_client_config_safety_valve

Required

false

Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only, a string to be inserted into the client configuration for ozone-conf/ssl-client.xml.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_client_config_safety_valve

Required

false

Logs

Gateway Logging Threshold

Description

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

50

API Name

client_config_priority

Required

true

Security**Gateway TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This is used when Gateway is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Gateway TLS/SSL Client Trust Store Password

Description

The password for the Gateway TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ozone-site.xml_client_config_safety_valve

Required

true

Suppress Parameter Validation: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-client.xml_client_config_safety_valve

Required

true

Suppress Parameter Validation: Gateway TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Gateway TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Ozone DataNode**Advanced****Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties

Description

For advanced use only. A string to be inserted into ozone-conf/dn-audit-log4j2.properties for this role only.

Related Name**Default Value****API Name**

ozone-conf/dn-audit-log4j2.properties_role_safety_valve

Required

false

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

OZONE_DATANODE_role_env_safety_valve

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Ozone DataNode Log Directory

Description

The log directory for log files of the role Ozone DataNode.

Related Name

log.dir
Default Value
/var/log/hadoop-ozone
API Name
log_dir
Required
false

Ozone DataNode Logging Threshold

Description
The minimum log level for Ozone DataNode logs
Related Name
Default Value
INFO
API Name
log_threshold
Required
false

Ozone DataNode Maximum Log File Backups

Description
The maximum number of rolled log files to keep for Ozone DataNode logs. Typically used by log4j or logback.
Related Name
Default Value
10
API Name
max_log_backup_index
Required
false

Ozone DataNode Max Log Size

Description
The maximum size, in megabytes, per log file for Ozone DataNode logs. Typically used by log4j or logback.
Related Name
Default Value
200 MiB
API Name
max_log_size
Required
false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

`enable_alerts`

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

`enable_config_alerts`

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

`log_directory_free_space_absolute_thresholds`

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

ozone_datanode_fd_thresholds

Required

false

Ozone DataNode Host Health Test

Description

When computing the overall Ozone DataNode health, consider the host's health.

Related Name**Default Value**

true

API Name

ozone_datanode_host_health_enabled

Required

false

Ozone DataNode Process Health Test

Description

Enables the health test that the Ozone DataNode's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ozone_datanode_scm_health_enabled

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Datanode Ratis Metadata Directory

Description

This directory is used for storing Datanode Ratis metadata. Ideally, this should be mapped to a fast disk like an SSD.

Related Name

dfs.container.ratis.datanode.storage.dir

Default Value

/var/lib/hadoop-ozone/datanode/ratis/data

API Name

dfs.container.ratis.datanode.storage.dir

Required

true

Datanode Data Directory

Description

Determines where on the local filesystem HDDS data will be stored.

Related Name

hdds.datanode.dir

Default Value

/var/lib/hadoop-ozone/datanode/data

API Name

hdds.datanode.dir

Required

true

Ozone Log Directory

Description

Directory where Ozone DataNode logs will be written to

Related Name

ozone.log.dir

Default Value

/var/log/hadoop-ozone

API Name

ozone.log.dir

Required

false

Datanode Metadata Directory

Description

Determines where on the local filesystem datanode security certificates will be stored.

Related Name

ozone.metadata.dirs

Default Value

/var/lib/hadoop-ozone/datanode/ozone-metadata

API Name

ozone.metadata.dirs
Required
true

Datanode ID Directory

Description
Ozone Datanode ID Directory
Related Name
ozone.scm.datanode.id.dir
Default Value
/var/lib/hadoop-ozone/datanode
API Name
ozone.scm.datanode.id.dir
Required
true

Java Heap Size of DataNode

Description
Maximum size for the Java process heap memory.
Related Name
ozone_datanode_heap_size
Default Value
4 GiB
API Name
ozone_datanode_heap_size
Required
false

Performance

Maximum Process File Descriptors

Description
If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
Related Name
Default Value
API Name
rlimit_fds
Required
false

Ports and Addresses

Ozone Datanode HTTP Web UI Port

Description

The base port that the Ozone Datanode web user interface listens on. The host name is combined with this port to form the 'hdds.datanode.http-address'.

Related Name

ozone.datanode.http-port

Default Value

9882

API Name

ozone.datanode.http-port

Required

true

Ozone Datanode Port (TLS/SSL)**Description**

The base port that the Ozone Datanode web user interface listens on when using HTTPS. The host name is combined with this port to form the 'hdds.datanode.https-address'.

Related Name

ozone.datanode.https-port

Default Value

9883

API Name

ozone.datanode.https-port

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgroup command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Ozone DataNode TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone DataNode might connect to. This is used when Ozone DataNode is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ozone DataNode TLS/SSL Client Trust Store Password**Description**

The password for the Ozone DataNode TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ozone DataNode**Description**

Encrypt communication between clients and Ozone DataNode using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ozone DataNode TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Ozone DataNode is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Ozone DataNode TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone DataNode is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ozone DataNode TLS/SSL Server JKS Keystore File Password**Description**

The password for the Ozone DataNode JKS keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Datanode Ratis Metadata Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis Metadata Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs.container.ratis.datanode.storage.dir

Required

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Ozone DataNode TLS/SSL Server JKS Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_ssl_server_keystore_password`**Required**`true`**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_ozone_ozone_datanode_audit_health`**Required**`true`**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_ozone_ozone_datanode_file_descriptor`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_datanode_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_datanode_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_datanode_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_ozone_ozone_datanode_swap_memory_usage`**Required**`true`**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_ozone_ozone_datanode_unexpected_exits`**Required**`true`

Ozone Manager

Advanced**Ozone Manager Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**`log4j_safety_valve`**Required**`false`**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name`oom_heap_dump_dir`**Default Value**`/tmp`**API Name**`oom_heap_dump_dir`

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties**Description**

For advanced use only. A string to be inserted into ozone-conf/om-audit-log4j2.properties for this role only.

Related Name**Default Value****API Name**

ozone-conf/om-audit-log4j2.properties_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-audit.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ranger-ozone-audit.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-policymgr-ssl.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ranger-ozone-policymgr-ssl.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-security.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ranger-ozone-security.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name

Default Value**API Name**`ozone-conf/ssl-client.xml_role_safety_valve`**Required**`false`**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name**Default Value****API Name**`ozone-conf/ssl-server.xml_role_safety_valve`**Required**`false`**Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**`OZONE_MANAGER_role_env_safety_valve`**Required**`false`**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**`false`**API Name**`process_auto_restart`**Required**`true`**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Ozone Manager Log Directory

Description

The log directory for log files of the role Ozone Manager.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name
log_dir
Required
false

Ozone Manager Logging Threshold

Description
The minimum log level for Ozone Manager logs
Related Name
Default Value
INFO
API Name
log_threshold
Required
false

Ozone Manager Maximum Log File Backups

Description
The maximum number of rolled log files to keep for Ozone Manager logs. Typically used by log4j or logback.
Related Name
Default Value
10
API Name
max_log_backup_index
Required
false

Ozone Manager Max Log Size

Description
The maximum size, in megabytes, per log file for Ozone Manager logs. Typically used by log4j or logback.
Related Name
Default Value
200 MiB
API Name
max_log_size
Required
false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

`enable_alerts`

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

`enable_config_alerts`

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

`log_directory_free_space_absolute_thresholds`

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

`log_directory_free_space_percentage_thresholds`

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**`monitoring_metric_filter`**Required**

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name`ozone_manager_fd_thresholds`**Required**

false

Ozone Manager Host Health Test**Description**

When computing the overall Ozone Manager health, consider the host's health.

Related Name**Default Value**

true

API Name

ozone_manager_host_health_enabled

Required

false

Ozone Manager Process Health Test**Description**

Enables the health test that the Ozone Manager's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ozone_manager_scm_health_enabled

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`role_triggers`

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other**Java Heap Size of Ozone Manager****Description**

Maximum size for the Java process heap memory.

Related Name

`om_max_heap_size`

Default Value

4 GiB

API Name

om_max_heap_size

Required

false

Ozone Log Directory**Description**

Directory where Ozone Manager logs will be written to

Related Name

ozone.log.dir

Default Value

/var/log/hadoop-ozone

API Name

ozone.log.dir

Required

false

Ozone Manager Metadata Directory**Description**

Determines where on the local filesystem Ozone Manager security certificates will be stored.

Related Name

ozone.metadata.dirs

Default Value

/var/lib/hadoop-ozone/om/ozone-metadata

API Name

ozone.metadata.dirs

Required

true

Ozone Manager Data Directory**Description**

Directory where the OzoneManager stores its metadata.

Related Name

ozone.om.db.dirs

Default Value

/var/lib/hadoop-ozone/om/data

API Name

ozone.om.db.dirs

Required

true

Ozone Manager HTTP Bind Hostname**Description**

The actual address the OM web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.om.http-address'.

Related Name

ozone.om.http-bind-host

Default Value

0.0.0.0

API Name

ozone.om.http-bind-host

Required

false

Secure Ozone Manager HTTPS Bind Hostname**Description**

The actual address the OM web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.om.https-address'.

Related Name

ozone.om.https-bind-host

Default Value

0.0.0.0

API Name

ozone.om.https-bind-host

Required

false

Ozone Manager Ratis Storage Directory**Description**

This directory is used for storing Ozone Manager's Ratis metadata like logs. Ideally, this should be mapped to a fast disk like an SSD.

Related Name

ozone.om.ratis.storage.dir

Default Value

/var/lib/hadoop-ozone/om/ratis

API Name

ozone.om.ratis.storage.dir

Required

true

Ranger Ozone Plugin Conf Path**Description**

Staging directory for Ranger Ozone Plugin Configuration. This should generally not be changed.

Related Name

ranger_ozone_plugin_conf_path

Default Value

/etc/ranger/ozone-plugin

API Name

ranger_ozone_plugin_conf_path
Required
true

Ranger Ozone Plugin Policy Cache Directory Path

Description
The directory where Ranger security policies are cached locally.
Related Name
ranger.plugin.ozone.policy.cache.dir
Default Value
/var/lib/ranger/ozone/policy-cache
API Name
ranger_ozone_plugin_policy_cache_directory
Required
true

Ranger Ozone Plugin Audit Solr Spool Directory Path

Description
Spool directory for Ranger audits being written to Solr.
Related Name
xasecure.audit.destination.solr.batch.filespool.dir
Default Value
/var/log/hadoop-ozone/ranger-audit/solr/spool
API Name
ranger_ozone_plugin_solr_audit_spool_directory
Required
true

Performance

Maximum Process File Descriptors

Description
If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
Related Name
Default Value
API Name
rlimit_fds
Required
false

Ports and Addresses

Ozone Manager HTTP Web UI Port

Description

The base port that the Ozone Manager HTTP web user interface listens on. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.http-address'.

Related Name

ozone.om.http-port

Default Value

9874

API Name

ozone.om.http-port

Required

true

Secure Ozone Manager Web UI Port (TLS/SSL)**Description**

The base port that the Ozone Manager HTTP web user interface listens on when using HTTPS. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.https-address'.

Related Name

ozone.om.https-port

Default Value

9875

API Name

ozone.om.https-port

Required

false

Ozone Manager Ratis port**Description**

The base port that Ozone Manager's Ratis Server listens on if multiple Ozone Manager's are configured.

Related Name

ozone.om.ratis-port

Default Value

9872

API Name

ozone.om.ratis-port

Required

false

Ozone Manager RPC port**Description**

The base port that Ozone Manager listens on when serving RPCs. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.address'.

Related Name

ozone.om.rpc-port

Default Value

9862

API Name

ozone.om.rpc-port

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Ozone Manager TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone Manager might connect to. This is used when Ozone Manager is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ozone Manager TLS/SSL Client Trust Store Password**Description**

The password for the Ozone Manager TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ozone Manager**Description**

Encrypt communication between clients and Ozone Manager using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ozone Manager TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Ozone Manager is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Ozone Manager TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone Manager is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ozone Manager TLS/SSL Server JKS Keystore File Password

Description

The password for the Ozone Manager JKS keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Ozone Manager Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Java Heap Size of Ozone Manager

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Ozone Manager parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_om_max_heap_size

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/om-audit-log4j2.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ozone-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ranger-ozone-audit.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ranger-ozone-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ranger-ozone-security.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-client.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-server.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.log.dir

Required

true

Suppress Parameter Validation: Ozone Manager Metadata Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Metadata Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.metadata.dirs

Required

true

Suppress Parameter Validation: Ozone Manager Data Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Data Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.db.dirs

Required

true

Suppress Parameter Validation: Ozone Manager HTTP Bind Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager HTTP Bind Hostname parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.http-bind-host

Required

true

Suppress Parameter Validation: Ozone Manager HTTP Web UI Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager HTTP Web UI Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.http-port

Required

true

Suppress Parameter Validation: Secure Ozone Manager HTTPS Bind Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone Manager HTTPS Bind Hostname parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.https-bind-host

Required

true

Suppress Parameter Validation: Secure Ozone Manager Web UI Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone Manager Web UI Port (TLS/SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.https-port

Required

true

Suppress Parameter Validation: Ozone Manager Ratis port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Ratis port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.ratis-port

Required

true

Suppress Parameter Validation: Ozone Manager Ratis Storage Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Ratis Storage Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.ratis.storage.dir

Required

true

Suppress Parameter Validation: Ozone Manager RPC port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager RPC port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.rpc-port

Required

true

Suppress Parameter Validation: Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone_manager_role_env_safety_valve

Required

true

Suppress Parameter Validation: Ranger Ozone Plugin Conf Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Conf Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ozone_plugin_conf_path

Required

true

Suppress Parameter Validation: Ranger Ozone Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Policy Cache Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ozone_plugin_policy_cache_directory

Required

true

Suppress Parameter Validation: Ranger Ozone Plugin Audit Solr Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Audit Solr Spool Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ozone_plugin_solr_audit_spool_directory

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Ozone Manager TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Ozone Manager TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Ozone Manager TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server JKS Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Ozone Manager TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Ozone Manager TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_manager_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_manager_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_manager_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_manager_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_manager_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_manager_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_manager_unexpected_exits

Required

true

Ozone Prometheus**Advanced****Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozon-prometheus.yml****Description**

For advanced use only. A string to be inserted into ozone-conf/ozon-prometheus.yml for this role only.

Related Name**Default Value****API Name**

ozon-conf/ozon-prometheus.yml_role_safety_valve

Required

false

Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value**API Name**

OZONE_PROMETHEUS_role_env_safety_valve

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

`ozone_prometheus_fd_thresholds`

Required

false

Ozone Prometheus Host Health Test**Description**

When computing the overall Ozone Prometheus health, consider the host's health.

Related Name**Default Value**

true

API Name

`ozone_prometheus_host_health_enabled`

Required

false

Ozone Prometheus Process Health Test

Description

Enables the health test that the Ozone Prometheus's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ozone_prometheus_scm_health_enabled

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Ozone Log Directory****Description**

Directory where Prometheus logs will be written to

Related Name

ozone.log.dir

Default Value

/var/log/hadoop-ozone

API Name

ozone.log.dir

Required

false

Prometheus Data Retention time.**Description**

How long to retain samples in storage. Units Supported: y, w, d, h, m, s, ms.

Related Name

ozone.prometheus.data.retention.time

Default Value

15d

API Name

ozone.prometheus.data.retention.time

Required

false

Prometheus Data Directory**Description**

Directory where the Prometheus Server stores its metadata.

Related Name

ozone.prometheus.db.dir

Default Value

/var/lib/hadoop-ozone/prometheus/data

API Name

ozone.prometheus.db.dir

Required

true

Prometheus server extra flags.**Description**

Extra command line flags that can be used while starting up the server. For example, '--query.timeout=2m --query.max-samples=5000'

Related Name

ozone.prometheus.extra.flags

Default Value**API Name**

ozone.prometheus.extra.flags

Required

false

Prometheus server log level.**Description**

Only log messages with the given severity or above. One of: [debug, info, warn, error]

Related Name

ozone.prometheus.log.level

Default Value

info

API Name

ozone.prometheus.log.level

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Prometheus HTTP Port

Description

The base port that the prometheus web user interface listens on.

Related Name

ozone.prometheus.http-port

Default Value

9090

API Name

ozone.prometheus.http-port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgroupexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
 These settings override other cgroup settings.

Related Name

`custom.cgroups`

Default Value**API Name**

`rm_custom_resources`

Required

`false`

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

`blkio.weight`

Default Value

`500`

API Name

`rm_io_weight`

Required

`true`

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

`memory.limit_in_bytes`

Default Value

`-1 MiB`

API Name

`rm_memory_hard_limit`

Required

`true`

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Required

true

Ozone Recon

Advanced

Ozone Recon Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Ozone Recon Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

OZONE_RECON_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Ozone Recon Log Directory****Description**

The log directory for log files of the role Ozone Recon.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

Ozone Recon Logging Threshold**Description**

The minimum log level for Ozone Recon logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Ozone Recon Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Ozone Recon logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Ozone Recon Max Log Size

Description

The maximum size, in megabytes, per log file for Ozone Recon logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

ozone_recon_fd_thresholds

Required

false

Ozone Recon Host Health Test**Description**

When computing the overall Ozone Recon health, consider the host's health.

Related Name**Default Value**

true

API Name

ozone_recon_host_health_enabled

Required

false

Ozone Recon Process Health Test**Description**

Enables the health test that the Ozone Recon's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ozone_recon_scm_health_enabled

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

rm_memory_soft_limit

Required

true

Security**Ozone Recon TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone Recon might connect to. This is used when Ozone Recon is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ozone Recon TLS/SSL Client Trust Store Password**Description**

The password for the Ozone Recon TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ozone Recon**Description**

Encrypt communication between clients and Ozone Recon using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ozone Recon TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Ozone Recon is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Ozone Recon TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone Recon is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ozone Recon TLS/SSL Server JKS Keystore File Password**Description**

The password for the Ozone Recon JKS keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Ozone Recon Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Ozone Recon Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ozone-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-client.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-server.xml_role_safety_valve

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_recon_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_recon_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_recon_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_recon_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_recon_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_recon_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ozone_ozone_recon_unexpected_exits

Required

true

S3 Gateway

Advanced

S3 Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

S3_GATEWAY_role_env_safety_valve

Required

false

Logs

S3 Gateway Log Directory

Description

The log directory for log files of the role S3 Gateway.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

S3 Gateway Logging Threshold

Description

The minimum log level for S3 Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

S3 Gateway Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for S3 Gateway logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

S3 Gateway Max Log Size**Description**

The maximum size, in megabytes, per log file for S3 Gateway logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following

configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more

details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

s3_gateway_fd_thresholds

Required

false

S3 Gateway Host Health Test

Description

When computing the overall S3 Gateway health, consider the host's health.

Related Name**Default Value**

true

API Name

s3_gateway_host_health_enabled

Required

false

S3 Gateway Process Health Test

Description

Enables the health test that the S3 Gateway's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

s3_gateway_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other

Ozone S3 Gateway HTTP Bind Hostname

Description

The actual address the S3 Gateway web server will bind to. If this optional address is set, it overrides only the hostname portion of `'ozone.s3g.http-address'`.

Related Name

`ozone.s3g.http-bind-host`

Default Value

0.0.0.0

API Name

`ozone.s3g.http-bind-host`

Required

false

Secure Ozone S3 Gateway HTTPS Bind Hostname

Description

The actual address the S3 Gateway web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of `'ozone.s3g.https-address'`.

Related Name

`ozone.s3g.https-bind-host`

Default Value

0.0.0.0

API Name

ozone.s3g.https-bind-host

Required

false

Java Heap Size of S3 Gateway**Description**

Maximum size for the Java process heap memory.

Related Name

ozone_S3_gateway_max_heap_size

Default Value

1 GiB

API Name

ozone_S3_gateway_max_heap_size

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Ozone S3 Gateway HTTP Web UI Port****Description**

The base port that the S3 Gateway web user interface listens on. The host name of the S3 Gateway is combined with this port to form the 'ozone.s3g.http-address'.

Related Name

ozone.s3g.http-port

Default Value

9878

API Name

ozone.s3g.http-port

Required

true

Secure Ozone S3 Gateway Web UI Port (TLS/SSL)**Description**

The base port that the S3 Gateway web user interface listens on when using HTTPS. The host name of the S3 Gateway is combined with this port to form the 'ozone.s3g.https-address'.

Related Name

ozone.s3g.https-port

Default Value

9879

API Name

ozone.s3g.https-port

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

S3 Gateway TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that S3 Gateway might connect to. This is used when S3 Gateway is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

S3 Gateway TLS/SSL Client Trust Store Password

Description

The password for the S3 Gateway TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for S3 Gateway

Description

Encrypt communication between clients and S3 Gateway using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

S3 Gateway TLS/SSL Server JKS Keystore Key Password

Description

The password that protects the private key contained in the JKS keystore used when S3 Gateway is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

S3 Gateway TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when S3 Gateway is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

S3 Gateway TLS/SSL Server JKS Keystore File Password**Description**

The password for the S3 Gateway JKS keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack
API Name
stacks_collection_method
Required
false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description
Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name
Default Value
false
API Name
role_config_suppression_cdh_version_validator
Required
true

Suppress Parameter Validation: S3 Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.
Related Name
Default Value
false
API Name
role_config_suppression_log4j_safety_valve
Required
true

Suppress Parameter Validation: S3 Gateway Log Directory

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Log Directory parameter.
Related Name
Default Value
false
API Name
role_config_suppression_log_dir
Required
true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ozone-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-client.xml_role_safety_valve

Required

true

Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-server.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone S3 Gateway HTTP Bind Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone S3 Gateway HTTP Bind Hostname parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.s3g.http-bind-host

Required

true

Suppress Parameter Validation: Ozone S3 Gateway HTTP Web UI Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone S3 Gateway HTTP Web UI Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.s3g.http-port

Required

true

Suppress Parameter Validation: Secure Ozone S3 Gateway HTTPS Bind Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone S3 Gateway HTTPS Bind Hostname parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.s3g.https-bind-host

Required

true

Suppress Parameter Validation: Secure Ozone S3 Gateway Web UI Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone S3 Gateway Web UI Port (TLS/SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.s3g.https-port

Required

true

Suppress Parameter Validation: Java Heap Size of S3 Gateway**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of S3 Gateway parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone_s3_gateway_max_heap_size

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_s3_gateway_role_env_safety_valve

Required

true

Suppress Parameter Validation: S3 Gateway TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: S3 Gateway TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: S3 Gateway TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server JKS Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: S3 Gateway TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: S3 Gateway TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ozone_s3_gateway_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_unexpected_exits

Required

true

Service-Wide

Advanced

Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only, a string to be inserted into ozone-conf/ozone-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_service_safety_valve

Required

false

Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only, a string to be inserted into ozone-conf/ssl-client.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_service_safety_valve

Required

false

Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only, a string to be inserted into ozone-conf/ssl-server.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_service_safety_valve

Required

false

Ozone Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

OZONE_service_env_safety_valve
Required
false

System Group

Description
The group that this service's processes should run as.
Related Name
Default Value
hdfs
API Name
process_groupname
Required
true

System User

Description
The user that this service's processes should run as.
Related Name
Default Value
hdfs
API Name
process_username
Required
true

Monitoring

Enable Service Level Health Alerts

Description
When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name
Default Value
true
API Name
enable_alerts
Required
false

Enable Configuration Change Alerts

Description
When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other

HDFS Service

Description

Name of the HDFS service that this Ozone service instance depends on

Related Name**Default Value****API Name**

hdfs_service

Required

false

Ozone Replication Factor

Description

Default replication factor value for keys stored in Ozone. The actual number of replications can be specified when writing the key. The default is used if replication value is not specified. Supported values: 1 and 3.

Related Name

ozone.replication

Default Value

3

API Name

ozone.replication

Required

true

Enable Kerberos Authentication

Description

Enables Kerberos authentication for Ozone.

Related Name

ozone.security.enabled

Default Value

false

API Name

ozone.security.enabled

Required

false

Enable Kerberos Authentication for HTTP web consoles

Description

Enables Kerberos authentication for Ozone HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled for the Ozone service.

Related Name

ozone.security.http.kerberos.enabled

Default Value

false

API Name

ozone.security.http.kerberos.enabled

Required

false

Ozone Service ID**Description**

A logical name for this Ozone service. Note: No special characters.

Related Name

ozone.service.id

Default Value**API Name**

ozone.service.id

Required

true

Ozone Java Options**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags would be passed here.

Related Name

ozone_java_opts

Default Value

java_args

API Name

ozone_java_opts

Required

false

Ranger Ozone Plugin Hdfs Audit Directory**Description**

The DFS path on which Ranger audits are written.

Related Name

ranger_ozone_plugin_hdfs_audit_directory

Default Value

\$ranger_base_audit_url/ozone

API Name

ranger_ozone_plugin_hdfs_audit_directory

Required

false

RANGER Service**Description**

Name of the RANGER service that this Ozone service instance depends on

Related Name**Default Value****API Name**

ranger_service

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

Suppress Configuration Validator: Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ozone-conf/ozone-site.xml_service_safety_valve

Required

true

Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ozone-conf/ssl-client.xml_service_safety_valve

Required

true

Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ozone-conf/ssl-server.xml_service_safety_valve

Required

true

Suppress Parameter Validation: Ozone Service ID

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service ID parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ozone.service.id

Required

true

Suppress Configuration Validator: Ozone DataNode Count Validator

Description

Whether to suppress configuration warnings produced by the Ozone DataNode Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_ozone_datanode_count_validator

Required

true

Suppress Parameter Validation: Ozone Java Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Java Options parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ozone_java_opts

Required

true

Suppress Configuration Validator: Ozone Manager Count Validator**Description**

Whether to suppress configuration warnings produced by the Ozone Manager Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_ozone_manager_count_validator

Required

true

Suppress Configuration Validator: Ozone Prometheus Count Validator**Description**

Whether to suppress configuration warnings produced by the Ozone Prometheus Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_ozone_prometheus_count_validator

Required

true

Suppress Configuration Validator: Ozone Recon Count Validator**Description**

Whether to suppress configuration warnings produced by the Ozone Recon Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_ozone_recon_count_validator

Required

true

Suppress Parameter Validation: Ozone Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ozone_service_env_safety_valve

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Ozone Plugin Hdfs Audit Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Hdfs Audit Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_ozone_plugin_hdfs_audit_directory

Required

true

Suppress Configuration Validator: S3 Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the S3 Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_s3_gateway_count_validator

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Configuration Validator: Storage Container Manager Count Validator**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_storage_container_manager_count_validator

Required

true

Storage Container Manager

Advanced**Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties**Description**

For advanced use only. A string to be inserted into ozone-conf/scm-audit-log4j2.properties for this role only.

Related Name**Default Value****API Name**

ozone-conf/scm-audit-log4j2.properties_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

STORAGE_CONTAINER_MANAGER_role_env_safety_valve

Required

false

Logs

Storage Container Manager Log Directory

Description

The log directory for log files of the role Storage Container Manager.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

Storage Container Manager Logging Threshold

Description

The minimum log level for Storage Container Manager logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Storage Container Manager Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Storage Container Manager logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Storage Container Manager Max Log Size

Description

The maximum size, in megabytes, per log file for Storage Container Manager logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

storage_container_manager_fd_thresholds

Required

false

Storage Container Manager Host Health Test**Description**

When computing the overall Storage Container Manager health, consider the host's health.

Related Name**Default Value**

true

API Name

storage_container_manager_host_health_enabled

Required

false

Storage Container Manager Process Health Test**Description**

Enables the health test that the Storage Container Manager's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

storage_container_manager_scm_health_enabled

Required

false

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Topology Script File Name****Description**

Full path to a custom topology script on the host file system. The topology script is used to determine the rack location of nodes. If left with "{{DEFAULT_TOPOLOGY_SCRIPT}}", a topology script will be provided that uses your hosts' rack information, visible in the "Hosts" page.

Related Name

net.topology.script.file.name

Default Value

DEFAULT_TOPOLOGY_SCRIPT

API Name

net.topology.script.file.name

Required

false

Ozone Log Directory**Description**

Directory where Storage Container Manager logs will be written to

Related Name

ozone.log.dir

Default Value

/var/log/hadoop-ozone

API Name

ozone.log.dir

Required

false

Storage Container Manager Metadata Directory**Description**

Determines where on the local filesystem SCM security certificates will be stored.

Related Name

ozone.metadata.dirs

Default Value

/var/lib/hadoop-ozone/scm/ozone-metadata

API Name

ozone.metadata.dirs

Required

true

Storage Container Manager Data Directory

Description

Directory where the StorageContainerManager stores its metadata

Related Name

ozone.scm.db.dirs

Default Value

/var/lib/hadoop-ozone/scm/data

API Name

ozone.scm.db.dirs

Required

true

Storage Container Manager HTTP Bind Hostname

Description

The actual address the SCM web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.scm.http-address'.

Related Name

ozone.scm.http-bind-host

Default Value

0.0.0.0

API Name

ozone.scm.http-bind-host

Required

false

Secure Storage Container Manager HTTPS Bind Hostname

Description

The actual address the SCM web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.scm.https-address'.

Related Name

ozone.scm.https-bind-host

Default Value

0.0.0.0

API Name

ozone.scm.https-bind-host

Required

false

Java Heap Size of Storage Container Manager

Description

Maximum size for the Java process heap memory.

Related Name

scm_max_heap_size

Default Value

4 GiB

API Name

scm_max_heap_size

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Storage Container Manager HTTP Web UI Port****Description**

The base port that the Storage Container Manager web user interface listens on. The host name of the Storage Container Manager is combined with this port to form the 'ozone.scm.http-address'.

Related Name

ozone.scm.http-port

Default Value

9876

API Name

ozone.scm.http-port

Required

true

Secure Storage Container Manager Web UI Port (TLS/SSL)**Description**

The base port that the Storage Container Manager web user interface listens on when using HTTPS. The host name of the Storage Container Manager is combined with this port to form the 'ozone.scm.https-address'.

Related Name

ozone.scm.https-port

Default Value

9877

API Name

ozone.scm.https-port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Storage Container Manager TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Storage Container Manager might connect to. This is used when Storage Container Manager is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Storage Container Manager TLS/SSL Client Trust Store Password**Description**

The password for the Storage Container Manager TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Storage Container Manager**Description**

Encrypt communication between clients and Storage Container Manager using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Storage Container Manager TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Storage Container Manager is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Storage Container Manager TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Storage Container Manager is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Storage Container Manager TLS/SSL Server JKS Keystore File Password**Description**

The password for the Storage Container Manager JKS keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_storage_container_manager_unexpected_exits

Required

true

Phoenix Properties in Cloudera Runtime 7.1

Role groups:

Query Server**Advanced****Query Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml**Description**

For advanced use only. A string to be inserted into phoenix-site.xml for this role only.

Related Name**Default Value****API Name**

phoenix-site.xml_role_safety_valve

Required

false

Query Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

PHOENIX_QUERY_SERVER_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Query Server Log Directory****Description**

The log directory for log files of the role Query Server.

Related Name

log_dir

Default Value

/var/log/phoenix

API Name

log_dir

Required

false

Query Server Logging Threshold**Description**

The minimum log level for Query Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Query Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Query Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Query Server Max Log Size

Description

The maximum size, in megabytes, per log file for Query Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

phoenix_query_server_fd_thresholds

Required

false

Query Server Host Health Test

Description

When computing the overall Query Server health, consider the host's health.

Related Name**Default Value**

true

API Name

phoenix_query_server_host_health_enabled

Required

false

Query Server Process Health Test

Description

Enables the health test that the Query Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

phoenix_query_server_scm_health_enabled

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a `DataNode` fires if the `DataNode` has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Enable Remote User Extractor****Description**

Boolean which controls if a remote user to impersonate should be extracted from the HTTP request parameter made by that user instead of the HTTP-authenticated user name (which is the default). Required for accessing Phoenix Query Server via Knox.

Related Name

phoenix.queryserver.withRemoteUserExtractor

Default Value

true

API Name

phoenix_query_server_with_remote_user_extractor

Required

false

Additional Phoenix Query Server Options**Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

Related Name

phoenix_queryserver_java_opts

Default Value**API Name**

phoenix_queryserver_java_opts

Required

false

Phoenix Query Server Max Heapsize**Description**

Maximum size for the Phoenix Query Server Java Process heap. Passed to Java -Xmx.

Related Name

phoenix_queryserver_max_heap_size

Default Value

2 GiB

API Name

phoenix_queryserver_max_heap_size

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Phoenix Query Server Port

Description

The port Phoenix Query Server will listen on

Related Name

phoenix.queryserver.http.port

Default Value

8765

API Name

phoenix_query_server_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgroupexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
 These settings override other cgroup settings.

Related Name

`custom.cgroups`

Default Value**API Name**

`rm_custom_resources`

Required

`false`

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

`blkio.weight`

Default Value

`500`

API Name

`rm_io_weight`

Required

`true`

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

`memory.limit_in_bytes`

Default Value

`-1 MiB`

API Name

`rm_memory_hard_limit`

Required

`true`

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

Healthy Query Server Monitoring Thresholds

Description

The health test thresholds of the overall Query Server health. The check returns "Concerning" health if the percentage of "Healthy" Query Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Query Servers falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 90.0 %

API Name

PHOENIX_PHOENIX_QUERY_SERVER_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Ranger Properties in Cloudera Runtime 7.1

Role groups:

Ranger Admin

Advanced

Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml

Description

For advanced use only. A string to be inserted into conf/ranger-admin-site.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-admin-site.xml_role_safety_valve

Required

false

Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group**Description**

The group that this role's processes should run as.

Related Name**Default Value**

ranger

API Name

process_groupname

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User**Description**

The user that this role's processes should run as.

INFO

API Name

log_threshold

Required

false

Ranger Admin Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Ranger Admin logs. Typically used by log4j or logback.

Related Name

Default Value	10
API Name	max_log_backup_index
Required	false

Ranger Admin Max Log Size

Description	The maximum size, in megabytes, per log file for Ranger Admin logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	max_log_size
Required	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**`monitoring_metric_filter`**Required**`false`**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**`Warning: 200 B, Critical: Never`**API Name**`process_swap_memory_thresholds`**Required**`false`**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**`Warning: 50.0 %, Critical: 70.0 %`**API Name**`ranger_admin_fd_thresholds`**Required**`false`**Ranger Admin Host Health Test****Description**

When computing the overall Ranger Admin health, consider the host's health.

Related Name**Default Value**`true`**API Name**`ranger_admin_host_health_enabled`**Required**`false`**Ranger Admin Process Health Test****Description**

Enables the health test that the Ranger Admin's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ranger_admin_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Enable Knox Trusted Proxy Support**Description**

Determine if the Ranger service should allow authentication using Knox trusted proxy.

Related Name

ranger.authentication.allow.trustedproxy

Default Value

true

API Name

ranger.authentication.allow.trustedproxy

Required

false

Default Policy Groups**Description**

Single or comma separated list of groups that are required in default policies for Ranger plugin services. The groups will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

Related Name

ranger.default.policy.groups

Default Value**API Name**

ranger.default.policy.groups

Required

false

Default Policy Users**Description**

Single or comma separated list of users that are required in default policies for Ranger plugin services. The users will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

Related Name

ranger.default.policy.users

Default Value**API Name**

ranger.default.policy.users

Required

false

Admin AD Auth Base DN**Description**

This parameter is only used if Authentication method is AD. The Distinguished Name (DN) of the starting point for directory server searches.

Related Name

ranger.ldap.ad.base.dn

Default Value**API Name**

ranger.ldap.ad.base.dn

Required

false

Admin AD Auth Bind DN**Description**

Full distinguished name (DN), including common name (CN), of an AD user account that has privileges to search for users. Only used if Authentication method is AD

Related Name

ranger.ldap.ad.bind.dn

Default Value**API Name**

ranger.ldap.ad.bind.dn

Required

false

Admin AD Auth Domain Name**Description**

AD domain. Only used if Authentication method is AD.

Related Name

ranger.ldap.ad.domain

Default Value**API Name**

ranger.ldap.ad.domain

Required

false

Admin AD Auth Referral

Description

This parameter is only used if Authentication method is AD. Set to follow if multiple AD servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed.

Related Name

ranger.ldap.ad.referral

Default Value

ignore

API Name

ranger.ldap.ad.referral

Required

false

Admin AD Auth URL

Description

AD URL. Only used if Authentication method is AD

Related Name

ranger.ldap.ad.url

Default Value**API Name**

ranger.ldap.ad.url

Required

false

Admin AD Auth User Search Filter

Description

AD user search filter. Only used if Authentication method is AD.

Related Name

ranger.ldap.ad.user.searchfilter

Default Value**API Name**

ranger.ldap.ad.user.searchfilter

Required

false

Admin LDAP Auth Base DN

Description

The Distinguished Name (DN) of the starting point for directory server searches. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.base.dn

Default Value**API Name**

ranger.ldap.base.dn

Required

false

Admin LDAP Auth Bind User**Description**

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search for users. This user is used for searching the users. This could be read-only LDAP user. Example: cn=admin,dc=example,dc=com

Related Name

ranger.ldap.bind.dn

Default Value**API Name**

ranger.ldap.bind.dn

Required

false

Admin LDAP Auth Group Role Attribute**Description**

LDAP group role attribute. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.group.roleattribute

Default Value**API Name**

ranger.ldap.group.roleattribute

Required

false

Admin LDAP Auth Group Search Base**Description**

LDAP group searchbase. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.group.searchbase

Default Value**API Name**

ranger.ldap.group.searchbase

Required

false

Admin LDAP Auth Group Search Filter**Description**

LDAP group search filter. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.group.searchfilter

Default Value**API Name**

ranger.ldap.group.searchfilter

Required

false

Admin LDAP Auth Referral**Description**

This parameter is only used if Authentication method is LDAP. Set to follow if multiple LDAP servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

Related Name

ranger.ldap.referral

Default Value

ignore

API Name

ranger.ldap.referral

Required

false

Admin LDAP Auth URL**Description**

LDAP server URL. Example: value = ldap://localhost:389 or ldaps://localhost:636

Related Name

ranger.ldap.url

Default Value**API Name**

ranger.ldap.url

Required

false

Admin LDAP Auth User DN Pattern**Description**

LDAP user DN. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.user.dnpattern

Default Value**API Name**

ranger.ldap.user.dnpattern

Required

false

Admin LDAP Auth User Search Filter**Description**

LDAP user search filter. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.user.searchfilter

Default Value**API Name**

ranger.ldap.user.searchfilter

Required

false

SSO Browser Useragent

Description

Comma seperated values of browser agent

Related Name

ranger.sso.browser.useragent

Default Value

Mozilla, chrome

API Name

ranger.sso.browser.useragent

Required

false

Enable Ranger SSO

Description

Determine if Ranger is Knox SSO enabled or not ?

Related Name

ranger.sso.enabled

Default Value

false

API Name

ranger.sso.enabled

Required

false

SSO Provider Url

Description

SSO provider url Example: https://KNOX_HOST:KNOX_PORT/gateway/
KNOXSSO_TOPOLOGY_NAME/api/v1/webssso

Related Name

ranger.sso.providerurl

Default Value**API Name**

ranger.sso.providerurl

Required

false

SSO Public Key

Description

Public key for SSO cookie verification

Related Name

ranger.sso.publicKey

Default Value**API Name**

ranger.sso.publicKey

Required

false

Enable Auto Create Tag Service

Description

Whether to create tag service in Ranger Admin.

Related Name

ranger.tagservice.auto.create

Default Value

true

API Name

ranger.tagservice.auto.create

Required

false

Enable Tag Service Auto Link

Description

Whether to link the Tag service set in "Tag Service Name" parameter to all available services in Ranger Admin.

Related Name

ranger.tagservice.auto.link

Default Value

true

API Name

ranger.tagservice.auto.link

Required

false

Tag Service Name

Description

Name of the tag service that will be created in Ranger Admin when "Enable Auto Create Tag Service" parameter is enabled.

Related Name

ranger.tagservice.auto.name

Default Value

cm_tag

API Name

ranger.tagservice.auto.name

Required

false

Admin UNIX Auth Remote Login**Description**

Whether remote login is enabled. Only used if Authentication method is UNIX.

Related Name

ranger.unixauth.remote.login.enabled

Default Value

true

API Name

ranger.unixauth.remote.login.enabled

Required

false

Admin UNIX Auth Service Hostname**Description**

Host where unix authentication service is running. Only used if Authentication method is UNIX. {{RANGER_USERSYNC_HOST}} is a placeholder value which will be replaced with the host where Ranger Usersync will be installed in the current cluster.

Related Name

ranger.unixauth.service.hostname

Default Value

RANGER_USERSYNC_HOST

API Name

ranger.unixauth.service.hostname

Required

false

Ranger Admin Conf Path**Description**

Staging directory for Ranger Admin Configuration. This should generally not be changed.

Related Name

ranger_admin_conf_path

Default Value

/etc/ranger/admin

API Name

ranger_admin_conf_path

Required

true

Ranger Admin Max Heapsize**Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_admin_max_heap_size

Default Value

1 GiB

API Name

ranger_admin_max_heap_size

Required

true

Admin Authentication Method**Description**

Authentication Method for login to Ranger Admin.

Related Name

ranger.authentication.method

Default Value

PAM

API Name

ranger_authentication_method

Required

false

Admin AD Auth Bind Password**Description**

Password for the account that can search for users. Only used if Authentication method is AD

Related Name

ranger.ldap.ad.bind.password

Default Value**API Name**

ranger_ldap_ad_bind_password

Required

false

Admin LDAP Auth Bind User Password**Description**

Password for the account that can search for users.

Related Name

ranger.ldap.bind.password

Default Value**API Name**

ranger_ldap_bind_password

Required

false

Knox Proxy User Groups

Description

Accepts a list of group names. The Knox user can impersonate only the users that belong to the groups specified in the list. The wildcard value * may be used to allow impersonation of any user belonging to any group.

Related Name

ranger.proxyuser.knox.groups

Default Value

*

API Name

ranger_proxyuser_knox_groups

Required

false

Knox Proxy User Hosts

Description

Accepts a list of IP addresses, IP address ranges in CIDR format and/or host names. The Knox user can impersonate only the requests coming from hosts specified in the list. The wildcard value * may be used to allow impersonation from any host.

Related Name

ranger.proxyuser.knox.hosts

Default Value

*

API Name

ranger_proxyuser_knox_hosts

Required

false

Knox Proxy User Users

Description

Accepts a list of usernames. The Knox user can impersonate only the users specified in the list. The wildcard value * may be used to allow impersonation of any user.

Related Name

ranger.proxyuser.knox.users

Default Value

*

API Name

ranger_proxyuser_knox_users

Required

false

Ranger Tomcat Work Dir

Description

Tomcat work directory for Ranger Admin. This should generally not be changed.

Related Name

ranger_tomcat_work_dir

Default Value`/var/lib/ranger/admin`**API Name**`ranger_tomcat_work_dir`**Required**`true`**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**`rlimit_fds`**Required**`false`**Ports and Addresses****Admin Unix Auth Service Port****Description**

Port for unix authentication service. Only used if Authentication method is UNIX.

Related Name`ranger.unixauth.service.port`**Default Value**`5151`**API Name**`ranger.unixauth.service.port`**Required**`false`**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name`cpu.shares`**Default Value**`1024`**API Name**

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Ranger Admin roles.

Related Name**Default Value**

rangeradmin

API Name

kerberos_role_princ_name

Required

true

Ranger Admin TLS/SSL Client Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Admin might connect to. This is used when Ranger Admin is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ranger.truststore.file

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ranger Admin TLS/SSL Client Trust Store Password

Description

The password for the Ranger Admin TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ranger.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger Admin

Description

Encrypt communication between clients and Ranger Admin using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger Admin TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Admin is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ranger.https.attrib.keystore.file

Default Value

API Name

ssl_server_keystore_location

Required

false

Ranger Admin TLS/SSL Server JKS Keystore File Password

Description

The password for the Ranger Admin JKS keystore file.

Related Name

ranger.service.https.attrib.keystore.pass

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_conf/ranger-admin-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Ranger Admin Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Role Specific System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: Role Specific System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_process_username

Required

true

Suppress Parameter Validation: Exclude Users from Audit Access Tab**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Users from Audit Access Tab parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.accesslogs.exclude.users.list

Required

true

Suppress Parameter Validation: Kerberos Cookie Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Cookie Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.admin.kerberos.cookie.path

Required

true

Suppress Parameter Validation: Default Policy Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Policy Groups parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.default.policy.groups

Required

true

Suppress Parameter Validation: Default Policy Users**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Policy Users parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.default.policy.users

Required

true

Suppress Parameter Validation: Admin AD Auth Base DN**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Base DN parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.base.dn

Required

true

Suppress Parameter Validation: Admin AD Auth Bind DN**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Bind DN parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.bind.dn

Required

true

Suppress Parameter Validation: Admin AD Auth Domain Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Domain Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.domain

Required

true

Suppress Parameter Validation: Admin AD Auth URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.url

Required

true

Suppress Parameter Validation: Admin AD Auth User Search Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth User Search Filter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.user.searchfilter

Required

true

Suppress Parameter Validation: Admin LDAP Auth Base DN

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Base DN parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.base.dn

Required

true

Suppress Parameter Validation: Admin LDAP Auth Bind User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Bind User parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.bind.dn

Required

true

Suppress Parameter Validation: Admin LDAP Auth Group Role Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Role Attribute parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_ranger.ldap.group.roleattribute`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth Group Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Search Base parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.group.searchbase`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth Group Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Search Filter parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.group.searchfilter`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth URL parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.url`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth User DN Pattern****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth User DN Pattern parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.user.dnpattern

Required

true

Suppress Parameter Validation: Admin LDAP Auth User Search Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth User Search Filter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.user.searchfilter

Required

true

Suppress Parameter Validation: SSO Browser Useragent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Browser Useragent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.sso.browser.useragent

Required

true

Suppress Parameter Validation: SSO Provider Url**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Provider Url parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.sso.providerurl

Required

true

Suppress Parameter Validation: SSO Public Key**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Public Key parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.sso.publickey

Required

true

Suppress Parameter Validation: Tag Service Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tag Service Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.tagservice.auto.name

Required

true

Suppress Parameter Validation: Admin UNIX Auth Service Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin UNIX Auth Service Hostname parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.unixauth.service.hostname

Required

true

Suppress Parameter Validation: Admin Unix Auth Service Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Unix Auth Service Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.unixauth.service.port

Required

true

Suppress Parameter Validation: Ranger Admin Conf Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Conf Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_admin_conf_path

Required

true

Suppress Parameter Validation: Ranger Admin Max Heapsize**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Max Heapsize parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_admin_max_heap_size

Required

true

Suppress Parameter Validation: Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_admin_role_env_safety_valve

Required

true

Suppress Parameter Validation: Admin AD Auth Bind Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Bind Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ldap_ad_bind_password

Required

true

Suppress Parameter Validation: Admin LDAP Auth Bind User Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Bind User Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ldap_bind_password

Required

true

Suppress Parameter Validation: Knox Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_proxyuser_knox_groups

Required

true

Suppress Parameter Validation: Knox Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_proxyuser_knox_hosts

Required

true

Suppress Parameter Validation: Knox Proxy User Users**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Users parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_proxyuser_knox_users

Required

true

Suppress Parameter Validation: Ranger Tomcat Work Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tomcat Work Dir parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_tomcat_work_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Ranger Admin TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Ranger Admin TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Ranger Admin TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Ranger Admin TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Server JKS Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-tagsync-site.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-tagsync-site.xml_role_safety_valve

Required

false

Ranger Tagsync Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group**Description**

The group that this role's processes should run as.

Related Name**Default Value**

ranger

API Name

process_groupname

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name**Default Value**

ranger

API Name

process_username

Required

true

Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

RANGER_TAGSYNC_role_env_safety_valve

Required

false

Logs**Ranger Tagsync Log Directory****Description**

The log directory for log files of the role Ranger Tagsync.

Related Name

ranger.tagsync.logdir

Default Value

/var/log/ranger/tagsync

API Name

log_dir

Required

false

Ranger Tagsync Logging Threshold**Description**

The minimum log level for Ranger Tagsync logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Ranger Tagsync Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Ranger Tagsync logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Ranger Tagsync Max Log Size**Description**

The maximum size, in megabytes, per log file for Ranger Tagsync logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value**API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_tagsync_fd_thresholds

Required

false

Ranger Tagsync Host Health Test**Description**

When computing the overall Ranger Tagsync health, consider the host's health.

Related Name**Default Value**

true

API Name

ranger_tagsync_host_health_enabled

Required

false

Ranger Tagsync Process Health Test**Description**

Enables the health test that the Ranger Tagsync's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ranger_tagsync_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Atlas Source: Kafka Consumer Group****Description**

Kafka consumer group.

Related Name

atlas.kafka.entities.group.id

Default Value

ranger_entities_consumer

API Name

atlas.kafka.entities.group.id

Required

false

Capture Cluster name**Description**

Capture cluster name.

Related Name

ranger.tagsync.atlas.default.cluster.name

Default Value**API Name**

ranger.tagsync.atlas.default.cluster.name

Required

false

Enable Ranger Tagsync Cookie Authentication**Description**

Enable cookie-based authentication for requests going from Ranger Tagsync to Ranger Admin.

Related Name

	ranger.tagsync.cookie.enabled
Default Value	true
API Name	ranger.tagsync.cookie.enabled
Required	false

Ranger Tagsync Username

Description	Ranger Tagsync username in Ranger Admin.
Related Name	ranger.tagsync.dest.ranger.username
Default Value	rangertagsync
API Name	ranger.tagsync.dest.ranger.username
Required	false

Enable File Tag Source

Description	Whether to sync tags from file.
Related Name	ranger.tagsync.source.file
Default Value	false
API Name	ranger.tagsync.source.file
Required	false

File Source: File Update Polling Interval

Description	Sync Interval for updating tags from file.
Related Name	ranger.tagsync.source.file.check.interval.millis
Default Value	1 minute(s)
API Name	ranger.tagsync.source.file.check.interval.millis
Required	false

File Source: Filename**Description**

Filename containing tags.

Related Name

ranger.tagsync.source.file.filename

Default Value**API Name**

ranger.tagsync.source.file.filename

Required

false

Ranger Tagsync Conf Path**Description**

Staging directory for Ranger Tagsync Configuration. This should generally not be changed.

Related Name

ranger_tagsync_conf_path

Default Value

/etc/ranger/tagsync

API Name

ranger_tagsync_conf_path

Required

true

Ranger Tagsync Max Heapsize**Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_tagsync_max_heap_size

Default Value

1 GiB

API Name

ranger_tagsync_max_heap_size

Required

true

Enable Ranger Tagsync Metrics**Description**

Controls whether the Ranger Tagsync metrics are enabled.

Related Name

ranger.tagsync.metrics.enabled

Default Value

true

API Name

ranger_tagsync_metrics_enabled

Required

false

Ranger Tagsync Metrics File Name**Description**

File name for the metrics exposed by Ranger Tagsync. The file is updated at the frequency configured by Ranger Tagsync Metrics Frequency.

Related Name

ranger.tagsync.metrics.filename

Default Value

metrics.json

API Name

ranger_tagsync_metrics_filename

Required

false

Ranger Tagsync Metrics File Path**Description**

The location at which the metrics exposed by Ranger Tagsync will be written.

Related Name

ranger.tagsync.metrics.filepath

Default Value

/var/log/ranger/metrics-tagsync

API Name

ranger_tagsync_metrics_filepath

Required

false

Ranger Tagsync Metrics Frequency**Description**

The frequency at which the metrics are logged at Ranger Tagsync Metrics File Path.

Related Name

ranger.tagsync.metrics.frequencytimeinmillis

Default Value

1 minute(s)

API Name

ranger_tagsync_metrics_frequency

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**`rlimit_fds`**Required**`false`**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name`cpu.shares`**Default Value**`1024`**API Name**`rm_cpu_shares`**Required**`true`**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
These settings override other cgroup settings.

Related Name`custom.cgroups`**Default Value****API Name**`rm_custom_resources`**Required**`false`**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Ranger Tagsync roles.

Related Name**Default Value**

rangertagsync

API Name

kerberos_role_princ_name

Required

true

Ranger Tagsync TLS/SSL Client Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Tagsync might connect to. This is used when Ranger Tagsync is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

xasecure.policymgr.clientssl.truststore

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ranger Tagsync TLS/SSL Client Trust Store Password**Description**

The password for the Ranger Tagsync TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

xasecure.policymgr.clientssl.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger Tagsync**Description**

Encrypt communication between clients and Ranger Tagsync using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name**Default Value**

false

API Name

ssl_enabled

Required

false

Ranger Tagsync TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Tagsync is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

xasecure.policymgr.clientssl.keystore

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ranger Tagsync TLS/SSL Server JKS Keystore File Password**Description**

The password for the Ranger Tagsync JKS keystore file.

Related Name

xasecure.policymgr.clientssl.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Parameter Validation: Atlas Source: Kafka Consumer Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Source: Kafka Consumer Group parameter.

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Ranger Tagsync TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Ranger Tagsync TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_tagsync_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_tagsync_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_tagsync_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_tagsync_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_tagsync_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ranger_ranger_tagsync_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_tagsync_unexpected_exits

Required

true

Ranger Usersync

Advanced

Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml

Description

For advanced use only. A string to be inserted into conf/ranger-ugsync-site.xml for this role only.

Related Name**Default Value****API Name**

conf/ranger-ugsync-site.xml_role_safety_valve

Required

false

Ranger Usersync Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group**Description**

The group that this role's processes should run as.

Related Name**Default Value**

ranger

API Name

process_groupname

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name**Default Value**

ranger

API Name

process_username

Required

true

Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

RANGER_USERSYNC_role_env_safety_valve

Required

false

Logs

Ranger Usersync Log Directory

Description

The log directory for log files of the role Ranger Usersync.

Related Name

ranger.usersync.logdir

Default Value

/var/log/ranger/usersync

API Name

log_dir

Required

false

Ranger Usersync Logging Threshold

Description

The minimum log level for Ranger Usersync logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Ranger Usersync Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Ranger Usersync logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Ranger Usersync Max Log Size**Description**

The maximum size, in megabytes, per log file for Ranger Usersync logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following

configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

`ranger_usersync_fd_thresholds`

Required

false

Ranger Usersync Host Health Test**Description**

When computing the overall Ranger Usersync health, consider the host's health.

Related Name**Default Value**

true

API Name

ranger_usersync_host_health_enabled

Required

false

Ranger Usersync Process Health Test**Description**

Enables the health test that the Ranger Usersync's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ranger_usersync_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Enable Ranger Usersync Cookie Authentication

Description

Enable cookie-based authentication for requests going from Ranger Usersync to Ranger Admin.

Related Name

ranger.usersync.cookie.enabled

Default Value

true

API Name

ranger.usersync.cookie.enabled

Required

false

Enable User Sync

Description

Should users and groups be synchronized to Ranger Database? Required to setup Ranger policies.

Related Name

ranger.usersync.enabled

Default Value

true

API Name

ranger.usersync.enabled

Required

false

Usersync Filesource File Name**Description**

Path to the file with the users and groups information. Only used when Usersync Sync Source is set to "org.apache.ranger.unixusersync.process.FileSourceUserGroupBuilder". Example: /tmp/usergroup.json or /tmp/usergroup.csv or /tmp/usergroup.txt

Related Name

ranger.usersync.filesource.file

Default Value**API Name**

ranger.usersync.filesource.file

Required

false

Usersync Filesource Delimiter**Description**

Delimiter used in file, if File based user sync is used

Related Name

ranger.usersync.filesource.text.delimiter

Default Value

,

API Name

ranger.usersync.filesource.text.delimiter

Required

false

Ranger Usersync Group Based Role Assignment Rules**Description**

The parameter is used to assign roles to users and groups synced in Ranger Admin. Based on the given values specified in the above delimiter parameters, Ranger Usersync will parse the value specified in this parameter and sync users and groups along with roles given.

Related Name

ranger.usersync.group.based.role.assignment.rules

Default Value**API Name**

ranger.usersync.group.based.role.assignment.rules

Required

false

Usersync Group Member Attribute**Description**

LDAP group member attribute name. Example: member

Related Name

ranger.usersync.group.memberattributename

Default Value**API Name**

ranger.usersync.group.memberattributename

Required

false

Usersync Group Name Attribute**Description**

LDAP group name attribute. Example: cn

Related Name

ranger.usersync.group.nameattribute

Default Value**API Name**

ranger.usersync.group.nameattribute

Required

false

Usersync Group Object Class**Description**

LDAP Group object class. Example: group

Related Name

ranger.usersync.group.objectclass

Default Value**API Name**

ranger.usersync.group.objectclass

Required

false

Usersync Enable Group Search First**Description**

Enable Group Search First.

Related Name

ranger.usersync.group.search.first.enabled

Default Value

false

API Name

ranger.usersync.group.search.first.enabled

Required

false

Usersync Group Search Base**Description**

Search base for groups. Sample value would be ou=groups,dc=hadoop,dc=apache,dc=org. The parameter overrides value specified in ranger.usersync.ldap.searchBase, ranger.usersync.ldap.user.searchbase. If a value is not specified, takes the value of ranger.usersync.ldap.searchBase. If ranger.usersync.ldap.searchBase is also not specified, takes the value of ranger.usersync.ldap.user.searchbase. Multiple Ous can be configured with ; (semicolon) separated eg: ou=groups,DC=example,DC=com;ou=group1,ou=group2

Related Name

ranger.usersync.group.searchbase

Default Value**API Name**

ranger.usersync.group.searchbase

Required

false

Usersync Enable Group Sync

Description

Whether Usersync should use ldapsearch to find groups instead of relying on user entry attributes.

Related Name

ranger.usersync.group.searchenabled

Default Value

true

API Name

ranger.usersync.group.searchenabled

Required

false

Usersync Group Search Filter

Description

Optional additional filter constraining the groups selected for syncing. A sample value would be (dept=eng)

Related Name

ranger.usersync.group.searchfilter

Default Value**API Name**

ranger.usersync.group.searchfilter

Required

false

Usersync Group Search Scope

Description

Search scope for the groups. Value "base" indicates that only the entry specified as the search base in ranger.usersync.group.searchbase should be considered. One "indicates" that only the immediate children of the entry specified as the search base in ranger.usersync.group.searchbase should be considered. "Sub" indicates that the entry specified as the search base in ranger.usersync.group.searchbase, and all of its subordinates to any depth, should be considered.

Related Name

ranger.usersync.group.searchscope

Default Value

sub

API Name

ranger.usersync.group.searchscope

Required

false

Usersync Group Usermap Sync

Description

Whether to sync all groups for a user.

Related Name

ranger.usersync.group.usermapsyncenabled

Default Value

true

API Name

ranger.usersync.group.usermapsyncenabled

Required

false

Usersync Bind User

Description

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search for users. This user is used for searching the users. This could be read-only LDAP user. Example: cn=admin,dc=example,dc=com

Related Name

ranger.usersync.ldap.binddn

Default Value**API Name**

ranger.usersync.ldap.binddn

Required

false

Usersync Incremental Sync

Description

Enable Incremental Sync.

Related Name

ranger.usersync.ldap.deltasync

Default Value

true

API Name

ranger.usersync.ldap.deltasync

Required

false

Usersync Group Hierarchy Levels

Description

Levels of LDAP directory tree where the groups need to be searched.

Related Name

ranger.usersync.ldap.grouphierarchylevels

Default Value

0

API Name

ranger.usersync.ldap.grouphierarchylevels

Required

false

Usersync Groupname Case Conversion

Description

Used for converting syncing groups to the selected case conversion.

Related Name

ranger.usersync.ldap.groupname.caseconversion

Default Value

none

API Name

ranger.usersync.ldap.groupname.caseconversion

Required

false

Usersync Referral

Description

Set to follow if multiple LDAP/AD servers are configured to return continuation references for results. Set to ignore if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

Related Name

ranger.usersync.ldap.referral

Default Value

ignore

API Name

ranger.usersync.ldap.referral

Required

false

Usersync Search Base

Description

Search base for users and groups. Sample value would be dc=hadoop,dc=apache,dc=org. Multiple Ous can be configured with ; (semicolon) separated.

Related Name

ranger.usersync.ldap.searchBase

Default Value

API Name

ranger.usersync.ldap.searchBase

Required

false

Usersync Enable STARTTLS**Description**

Enable LDAP STARTTLS.

Related Name

ranger.usersync.ldap.starttls

Default Value

false

API Name

ranger.usersync.ldap.starttls

Required

false

Usersync LDAP/AD URL**Description**

LDAP server URL. Example: value = ldap://localhost:389 or ldaps://localhost:636

Related Name

ranger.usersync.ldap.url

Default Value**API Name**

ranger.usersync.ldap.url

Required

false

Usersync User Group Name Attribute**Description**

LDAP user group name attribute. Generally it is the same as username attribute. Example: sAMAccountName in AD, uid or cn in OpenLDAP

Related Name

ranger.usersync.ldap.user.groupnameattribute

Default Value**API Name**

ranger.usersync.ldap.user.groupnameattribute

Required

false

Usersync User Name Attribute**Description**

LDAP user name attribute. Example: sAMAccountName in AD, uid or cn in OpenLDAP

Related Name

ranger.usersync.ldap.user.nameattribute

Default Value**API Name**

ranger.usersync.ldap.user.nameattribute

Required

false

Usersync User Object Class**Description**

LDAP User Object Class. Example: person or user

Related Name

ranger.usersync.ldap.user.objectclass

Default Value**API Name**

ranger.usersync.ldap.user.objectclass

Required

false

Usersync User Search Base**Description**

Search base for users. Sample value would be ou=users,dc=hadoop,dc=apache,dc=org. Overrides value specified in ranger.usersync.ldap.searchBase. Multiple Ous can be configured with ; (semicolon) separated eg: cn=users,dc=example,dc=com;ou=example1,ou=example2

Related Name

ranger.usersync.ldap.user.searchbase

Default Value**API Name**

ranger.usersync.ldap.user.searchbase

Required

false

Usersync User Search Filter**Description**

Optional additional filter constraining the users selected for syncing. A sample value would be (dept=eng). Customize the value to suit your deployment.

Related Name

ranger.usersync.ldap.user.searchfilter

Default Value**API Name**

ranger.usersync.ldap.user.searchfilter

Required

false

Usersync User Search Scope

Description

Search scope for the users. Value "base" indicates that only the entry specified as the search base in ranger.usersync.ldap.user.searchbase should be considered. "One" indicates that only the immediate children of the entry specified as the search base in ranger.usersync.ldap.user.searchbase should be considered. ranger.usersync.port

Required

true

Ranger Usersync Role Assignment List Delimiter**Description**

The parameter is used to specify delimiter while syncing roles to users and groups in Ranger Admin. It is a delimiter for roles. Example - "ROLE_SYS_ADMIN:u:username1,username2&ROLE_KEY_ADMIN:g:groupname1", where ROLE_SYS_ADMIN and ROLE_KEY_ADMIN are roles in Ranger Admin separated by delimiter &. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

Related Name

ranger.usersync.role.assignment.list.delimiter

Default Value

&

API Name

ranger.usersync.role.assignment.list.delimiter

Required

false

Usersync Sleeptime interval**Description**

Sleep time interval between user sync operations in milliseconds.

Related Name

ranger.usersync.sleeptimeinmillisbetweensynccycle

Default Value

1 minute(s)

API Name

ranger.usersync.sleeptimeinmillisbetweensynccycle

Required

false

Source for Syncing User and Groups**Description**

For syncing from Ldap source, use "org.apache.ranger.ldapusersync.process.LdapUserGroupBuilder". For syncing from Unix source, use "org.apache.ranger.unixusersync.process.UnixUserGroupBuilder". For syncing from File source, use "org.apache.ranger.unixusersync.process.FileSourceUserGroupBuilder"

Related Name

ranger.usersync.source.impl.class

Default Value

org.apache.ranger.unixusersync.process.UnixUserGroupBuilder

API Name

ranger.usersync.source.impl.class

Required

true

Ranger Usersync Unix Backend**Description**

The backend mechanism to read users and groups from a UNIX system. The value is applicable only on UNIX-based systems.

Related Name

ranger.usersync.unix.backend

Default Value

nss

API Name

ranger.usersync.unix.backend

Required

false

Usersync UNIX Minimum User ID

Description

Minimum User ID to start syncing. This should be set to avoid syncing of UNIX system-level users in the Ranger Admin.

Related Name

ranger.usersync.unix.minUserId

Default Value

500

API Name

ranger.usersync.unix.minUserId

Required

false

Usersync Enable User Search

Description

Enable User Search, when ranger.usersync.group.search.first.enabled is set to true.

Related Name

ranger.usersync.user.searchenabled

Default Value

false

API Name

ranger.usersync.user.searchenabled

Required

false

Ranger Usersync Username Groupname Assignment List Delimiter

Description

The parameter is used to specify a delimiter while syncing users and groups in Ranger Admin. Used as a delimiter to differentiate between two or more users and groups. Example - "ROLE_SYS_ADMIN:u:username1,username2", where username1 and username2 are separated by ,. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

Related Name

ranger.usersync.username.groupname.assignment.list.delimiter

Default Value

,

API Name

ranger.usersync.username.groupname.assignment.list.delimiter

Required

false

Ranger Usersync User Groups Assignment List Delimiter

Description

The parameter is used to specify delimiter while syncing users and groups along with specified roles in Ranger Admin. It is a delimiter to differentiate between users and groups from respective roles. Example - "ROLE_SYS_ADMIN:u:username1,username2&ROLE_SYS_ADMIN:g:groupname1,groupname2", where ROLE_SYS_ADMIN is a role. "u" is used to denote the list of users followed by actual usernames which are username1 and username2. While "g" is used to denote the list of groups followed by actual groupnames which are groupname1 and groupname2. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

Related Name

ranger.usersync.users.groups.assignment.list.delimiter

Default Value

:

API Name

ranger.usersync.users.groups.assignment.list.delimiter

Required

false

Ranger Usersync Conf Path

Description

Staging directory for Ranger Usersync Configuration. This should generally not be changed.

Related Name

ranger_usersync_conf_path

Default Value

/etc/ranger/usersync

API Name

ranger_usersync_conf_path

Required

true

Usersync Bind User Password

Description

Password for the LDAP bind user used for searching users.

Related Name

ranger.usersync.ldap.ldapbindpassword

Default Value**API Name**`ranger_usersync_ldap_ldapbindpassword`**Required**`false`**Ranger Usersync Max Heapsize****Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name`ranger_usersync_max_heap_size`**Default Value**`1 GiB`**API Name**`ranger_usersync_max_heap_size`**Required**`true`**Enable Ranger Usersync Metrics****Description**

Controls whether the Ranger Usersync metrics are enabled.

Related Name`ranger.usersync.metrics.enabled`**Default Value**`true`**API Name**`ranger_usersync_metrics_enabled`**Required**`false`**Ranger Usersync Metrics File Name****Description**

File name for the metrics exposed by Ranger Usersync. The file is updated at the frequency configured by Ranger Usersync Metrics Frequency.

Related Name`ranger.usersync.metrics.filename`**Default Value**`metrics.json`**API Name**`ranger_usersync_metrics_filename`**Required**`false`**Ranger Usersync Metrics File Path****Description**

The location at which the metrics exposed by Ranger Usersync will be written.

Related Name

ranger.usersync.metrics.filepath

Default Value

/var/log/ranger/metrics-usersync

API Name

ranger_usersync_metrics_filepath

Required

false

Ranger Usersync Metrics Frequency

Description

The frequency at which the metrics are logged at Ranger Usersync Metrics File Path.

Related Name

ranger.usersync.metrics.frequencytimeinmillis

Default Value

1 minute(s)

API Name

ranger_usersync_metrics_frequency

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgroupexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
 These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Ranger Usersync roles.

Related Name**Default Value**

rangerusersync

API Name

kerberos_role_princ_name

Required

true

Ranger Usersync TLS/SSL Client Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Usersync might connect to. This is used when Ranger Usersync is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ranger.usersync.truststore.file

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ranger Usersync TLS/SSL Client Trust Store Password**Description**

The password for the Ranger Usersync TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ranger.usersync.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Ranger Usersync Role Health Test

Description

When computing the overall RANGER health, consider Ranger Usersync's health

Related Name**Default Value**

true

API Name

RANGER_RANGER_USERSYNC_health_enabled

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

Required

true

Suppress Configuration Validator: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml**Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_conf/ranger-tagsync-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml**Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_conf/ranger-tagsync-site.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml**Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_conf/ranger-ugsync-site.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Role-Specific Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Configuration Validator: Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Ranger Admin Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Ranger Admin Log Directory**Description**

Whether to suppress configuration warnings produced by the Ranger Admin Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Role Specific System Group**Description**

Whether to suppress configuration warnings produced by the Role Specific System Group configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_process_groupname

Required

true

Suppress Configuration Validator: Role Specific System User**Description**

Whether to suppress configuration warnings produced by the Role Specific System User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_process_username

Required

true

Suppress Configuration Validator: Exclude Users from Audit Access Tab**Description**

Whether to suppress configuration warnings produced by the Exclude Users from Audit Access Tab configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.accesslogs.exclude.users.list

Required

true

Suppress Configuration Validator: Kerberos Cookie Path**Description**

Whether to suppress configuration warnings produced by the Kerberos Cookie Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.admin.kerberos.cookie.path

Required

true

Suppress Configuration Validator: Default Policy Groups**Description**

Whether to suppress configuration warnings produced by the Default Policy Groups configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.default.policy.groups

Required

true

Suppress Configuration Validator: Default Policy Users**Description**

Whether to suppress configuration warnings produced by the Default Policy Users configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.default.policy.users

Required

true

Suppress Configuration Validator: Admin AD Auth Base DN**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Base DN configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.base.dn

Required

true

Suppress Configuration Validator: Admin AD Auth Bind DN**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Bind DN configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.bind.dn

Required

true

Suppress Configuration Validator: Admin AD Auth Domain Name**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Domain Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.domain

Required

true

Suppress Configuration Validator: Admin AD Auth URL**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth URL configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.url

Required

true

Suppress Configuration Validator: Admin AD Auth User Search Filter**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth User Search Filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.ad.user.searchfilter

Required

true

Suppress Configuration Validator: Admin LDAP Auth Base DN**Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Base DN configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.base.dn

Required

true

Suppress Configuration Validator: Admin LDAP Auth Bind User**Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Bind User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.bind.dn

Required

true

Suppress Configuration Validator: Admin LDAP Auth Group Role Attribute**Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Role Attribute configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.group.roleattribute

Required

true

Suppress Configuration Validator: Admin LDAP Auth Group Search Base**Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Search Base configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.group.searchbase

Required

true

Suppress Configuration Validator: Admin LDAP Auth Group Search Filter

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Search Filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.group.searchfilter

Required

true

Suppress Configuration Validator: Admin LDAP Auth URL

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth URL configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.url

Required

true

Suppress Configuration Validator: Admin LDAP Auth User DN Pattern

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth User DN Pattern configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.ldap.user.dnpattern

Required

true

Suppress Configuration Validator: Admin LDAP Auth User Search Filter

Description

Whether to suppress configuration warnings produced by the Admin LDAP Auth User Search Filter configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_ranger.ldap.user.searchfilter`**Required**`true`**Suppress Configuration Validator: SSO Browser Useragent****Description**

Whether to suppress configuration warnings produced by the SSO Browser Useragent configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.sso.browser.useragent`**Required**`true`**Suppress Configuration Validator: SSO Provider Url****Description**

Whether to suppress configuration warnings produced by the SSO Provider Url configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.sso.providerurl`**Required**`true`**Suppress Configuration Validator: SSO Public Key****Description**

Whether to suppress configuration warnings produced by the SSO Public Key configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.sso.publickey`**Required**`true`**Suppress Configuration Validator: Tag Service Name****Description**

Whether to suppress configuration warnings produced by the Tag Service Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.tagservice.auto.name

Required

true

Suppress Configuration Validator: Capture Cluster name**Description**

Whether to suppress configuration warnings produced by the Capture Cluster name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.tagsync.atlas.default.cluster.name

Required

true

Suppress Configuration Validator: Ranger Tagsync Username**Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Username configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.tagsync.dest.ranger.username

Required

true

Suppress Configuration Validator: File Source: Filename**Description**

Whether to suppress configuration warnings produced by the File Source: Filename configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.tagsync.source.file.filename

Required

true

Suppress Configuration Validator: Admin UNIX Auth Service Hostname**Description**

Whether to suppress configuration warnings produced by the Admin UNIX Auth Service Hostname configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.unixauth.service.hostname

Required

true

Suppress Configuration Validator: Admin Unix Auth Service Port**Description**

Whether to suppress configuration warnings produced by the Admin Unix Auth Service Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.unixauth.service.port

Required

true

Suppress Configuration Validator: Usersync Filesource File Name**Description**

Whether to suppress configuration warnings produced by the Usersync Filesource File Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.filesource.file

Required

true

Suppress Configuration Validator: Usersync Filesource Delimiter**Description**

Whether to suppress configuration warnings produced by the Usersync Filesource Delimiter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.filesource.text.delimiter

Required

true

Suppress Configuration Validator: Ranger Usersync Group Based Role Assignment Rules**Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Group Based Role Assignment Rules configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.based.role.assignment.rules

Required

true

Suppress Configuration Validator: Usersync Group Member Attribute**Description**

Whether to suppress configuration warnings produced by the Usersync Group Member Attribute configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.memberattributename

Required

true

Suppress Configuration Validator: Usersync Group Name Attribute**Description**

Whether to suppress configuration warnings produced by the Usersync Group Name Attribute configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.nameattribute

Required

true

Suppress Configuration Validator: Usersync Group Object Class**Description**

Whether to suppress configuration warnings produced by the Usersync Group Object Class configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.group.objectclass

Required

true

Suppress Configuration Validator: Usersync Group Search Base**Description**

Whether to suppress configuration warnings produced by the Usersync Group Search Base configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.searchbase

Required

true

Suppress Configuration Validator: Usersync Group Search Filter**Description**

Whether to suppress configuration warnings produced by the Usersync Group Search Filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.group.searchfilter

Required

true

Suppress Configuration Validator: Usersync Bind User**Description**

Whether to suppress configuration warnings produced by the Usersync Bind User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.ldap.binddn

Required

true

Suppress Configuration Validator: Usersync Search Base**Description**

Whether to suppress configuration warnings produced by the Usersync Search Base configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.ldap.searchbase

Required

true

Suppress Configuration Validator: Usersync LDAP/AD URL**Description**

Whether to suppress configuration warnings produced by the Usersync LDAP/AD URL configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.ldap.url

Required

true

Suppress Configuration Validator: Usersync User Group Name Attribute**Description**

Whether to suppress configuration warnings produced by the Usersync User Group Name Attribute configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.ldap.user.groupnameattribute

Required

true

Suppress Configuration Validator: Usersync User Name Attribute**Description**

Whether to suppress configuration warnings produced by the Usersync User Name Attribute configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.ldap.user.nameattribute

Required

true

Suppress Configuration Validator: Usersync User Object Class

Description

Whether to suppress configuration warnings produced by the Usersync User Object Class configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.ldap.user.objectclass

Required

true

Suppress Configuration Validator: Usersync User Search Base

Description

Whether to suppress configuration warnings produced by the Usersync User Search Base configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.ldap.user.searchbase

Required

true

Suppress Configuration Validator: Usersync User Search Filter

Description

Whether to suppress configuration warnings produced by the Usersync User Search Filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.ldap.user.searchfilter

Required

true

Suppress Configuration Validator: Ranger Usersync Policymgr Username

Description

Whether to suppress configuration warnings produced by the Ranger Usersync Policymgr Username configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_ranger.usersync.policymgr.username`**Required**`true`**Suppress Configuration Validator: Unix Auth Service Hostname****Description**

Whether to suppress configuration warnings produced by the Unix Auth Service Hostname configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.port`**Required**`true`**Suppress Configuration Validator: Ranger Usersync Role Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Role Assignment List Delimiter configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.role.assignment.list.delimiter`**Required**`true`**Suppress Configuration Validator: Ranger Usersync Username Groupname Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Username Groupname Assignment List Delimiter configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.username.groupname.assignment.list.delimiter`**Required**`true`**Suppress Configuration Validator: Ranger Usersync User Groups Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync User Groups Assignment List Delimiter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger.usersync.users.groups.assignment.list.delimiter

Required

true

Suppress Configuration Validator: Ranger Admin Conf Path**Description**

Whether to suppress configuration warnings produced by the Ranger Admin Conf Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_admin_conf_path

Required

true

Suppress Configuration Validator: Ranger Admin Max Heapsize**Description**

Whether to suppress configuration warnings produced by the Ranger Admin Max Heapsize configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_admin_max_heap_size

Required

true

Suppress Configuration Validator: Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Ranger Admin Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_admin_role_env_safety_valve

Required

true

Suppress Configuration Validator: Admin AD Auth Bind Password**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Bind Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ldap_ad_bind_password

Required

true

Suppress Configuration Validator: Admin LDAP Auth Bind User Password**Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Bind User Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ldap_bind_password

Required

true

Suppress Configuration Validator: Knox Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the Knox Proxy User Groups configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_proxyuser_knox_groups

Required

true

Suppress Configuration Validator: Knox Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the Knox Proxy User Hosts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_proxyuser_knox_hosts

Required

true

Suppress Configuration Validator: Knox Proxy User Users**Description**

Whether to suppress configuration warnings produced by the Knox Proxy User Users configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_proxyuser_knox_users

Required

true

Suppress Configuration Validator: Ranger Tagsync Conf Path**Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Conf Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_tagsync_conf_path

Required

true

Suppress Configuration Validator: Ranger Tagsync Max Heapsize**Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Max Heapsize configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_tagsync_max_heap_size

Required

true

Suppress Configuration Validator: Ranger Tagsync Metrics File Name**Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Metrics File Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_tagsync_metrics_filename

Required

true

Suppress Configuration Validator: Ranger Tagsync Metrics File Path**Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Metrics File Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_tagsync_metrics_filepath

Required

true

Suppress Configuration Validator: Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_tagsync_role_env_safety_valve

Required

true

Suppress Configuration Validator: Ranger Tomcat Work Dir**Description**

Whether to suppress configuration warnings produced by the Ranger Tomcat Work Dir configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_tomcat_work_dir

Required

true

Suppress Configuration Validator: Ranger Usersync Conf Path**Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Conf Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_usersync_conf_path

Required

true

Suppress Configuration Validator: Usersync Bind User Password**Description**

Whether to suppress configuration warnings produced by the Usersync Bind User Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_usersync_ldap_ldapbindpassword

Required

true

Suppress Configuration Validator: Ranger Usersync Max Heapsize**Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Max Heapsize configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_usersync_max_heap_size

Required

true

Suppress Configuration Validator: Ranger Usersync Metrics File Name**Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Metrics File Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_usersync_metrics_filename

Required

true

Suppress Configuration Validator: Ranger Usersync Metrics File Path**Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Metrics File Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_usersync_metrics_filepath

Required

true

Suppress Configuration Validator: Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_usersync_role_env_safety_valve

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Ranger Admin TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Ranger Admin TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Ranger Admin TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Ranger Admin TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Ranger KMS Keyadmin User Initial Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Keyadmin User Initial Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_keyadmin_user_password

Required

true

Suppress Parameter Validation: Load Balancer Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Load Balancer Address parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_load_balancer_url

Required

true

Suppress Configuration Validator: Ranger Admin Count Validator**Description**

Whether to suppress configuration warnings produced by the Ranger Admin Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_admin_count_validator

Required

true

Suppress Parameter Validation: Ranger Database Host**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database Host parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_database_host

Required

true

Suppress Parameter Validation: Ranger Database Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_database_name

Required

true

Suppress Parameter Validation: Ranger Database User Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database User Password parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_database_password

Required

true

Suppress Parameter Validation: Ranger Database Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database Port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_database_port

Required

true

Suppress Parameter Validation: Ranger Database User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_database_user

Required

true

Suppress Parameter Validation: Ranger Plugin DFS Audit URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin DFS Audit URL parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_plugin_hdfs_audit_url

Required

true

Suppress Parameter Validation: Ranger Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_service_env_safety_valve

Required

true

Suppress Parameter Validation: Admin HTTP Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin HTTP Port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_service_http_port

Required

true

Suppress Parameter Validation: Admin HTTPS port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin HTTPS port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_service_https_port

Required

true

Suppress Configuration Validator: Ranger Tagsync Count Validator

Description

Whether to suppress configuration warnings produced by the Ranger Tagsync Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_tagsync_count_validator

Required

true

Suppress Configuration Validator: Ranger Usersync Count Validator**Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_usersync_count_validator

Required

true

Suppress Parameter Validation: Ranger Admin User Initial Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin User Initial Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_rangeradmin_user_password

Required

true

Suppress Parameter Validation: Ranger Tagsync User Initial Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync User Initial Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_rangertagsync_user_password

Required

true

Suppress Parameter Validation: Ranger Usersync User Initial Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync User Initial Password parameter.

Related Name

Default Value

false

API Name

service_config_suppression_rangerusersync_user_password

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Ranger Admin Health**Description**

Whether to suppress the results of the Ranger Admin Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_ranger_ranger_admin_healthy

Required

true

Suppress Health Test: Ranger Tagsync Health

Description

Whether to suppress the results of the Ranger Tagsync Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_ranger_ranger_ranger_tagsync_health

Required

Required

false

Other

Cloud Account Name

Description

Name of an AWS account. The associated AWS keys are emitted to Hue, Impala and the Hive Metastore Server.

Related Name**Default Value****API Name**

cloud_account

Required

true

Security

Credentials Protection Policy

Description

Determines a security policy for the distribution of AWS account credentials to cluster services. 'More Secure': Encrypted at all times and directly available to a limited set of services. 'Less Secure': Credentials may be in plain text in some configuration files for specific services in the

cluster. When IAM profiles are used, credentials are externally managed in AWS and there are no AWS credentials in any configuration files, so this setting is not applicable.

Related Name**Default Value**

SECURE

API Name

key_distribution_policy

Required

true

Suppressions**Suppress Parameter Validation: S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_aws_s3_service_env_safety_valve

Required

true

Suppress Parameter Validation: Default S3 Endpoint**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default S3 Endpoint parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_s3_endpoint

Required

true

Suppress Configuration Validator: S3Guard CDH Validator**Description**

Whether to suppress configuration warnings produced by the S3Guard CDH Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_s3guard_unsupported_cdh_validator

Required

true

Schema Registry Properties in Cloudera Runtime 7.1

Role groups:

Schema Registry Server

Advanced

Schema Registry Server XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for Schema Registry Server, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value**API Name**

logback_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml

Description

For advanced use only. A string to be inserted into registry.yaml for this role only.

Related Name**Default Value****API Name**

registry.yaml_role_safety_valve

Required

false

Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

SCHEMA_REGISTRY_SERVER_role_env_safety_valve

Required

false

Logs**Schema Registry Server Log Directory****Description**

The log directory for log files of the role Schema Registry Server.

Related Name

log_dir

Default Value

/var/log/schemaregistry

API Name

log_dir

Required

false

Schema Registry Server Logging Threshold**Description**

The minimum log level for Schema Registry Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Schema Registry Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Schema Registry Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Schema Registry Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Schema Registry Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

schema_registry_server_fd_thresholds

Required

false

Schema Registry Server Host Health Test**Description**

When computing the overall Schema Registry Server health, consider the host's health.

Related Name**Default Value**

true

API Name

schema_registry_server_host_health_enabled

Required

false

Schema Registry Server Process Health Test**Description**

Enables the health test that the Schema Registry Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

schema_registry_server_scm_health_enabled

Required

false

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Schema Registry Admin Port****Description**

The admin port for the server.

Related Name

schema.registry.adminPort

Default Value

7789

API Name

schema.registry.adminPort

Required

true

Schema Registry Allowed Resources**Description**

Allowed resources for Schema Registry.

Related Name

schema.registry.allowed.resources

Default Value

401.html, back-default.png, favicon.ico

API Name

schema.registry.allowed.resources

Required

false

Schema Version Cache Expiry Interval**Description**

Schema version cache expiry interval.

Related Name

schema.registry.cache.expiry.interval

Default Value

3600

API Name

schema.registry.cache.expiry.interval

Required

true

Schema Registry Cache Size**Description**

Schema Registry cache size.

Related Name

schema.registry.cache.size

Default Value

1000

API Name

schema.registry.cache.size

Required

Password For HTTP Proxy Server Username

Description

Password For HTTP Proxy Server Username.

Related Name

schema.registry.httpProxyPassword

Default Value**API Name**

schema.registry.httpProxyPassword

Required

false

HTTP Proxy Server

Description

URL for http proxy server. Please enter it in format protocol_name://host_name:port_number.

Related Name

schema.registry.httpProxyServer

Default Value**API Name**

schema.registry.httpProxyServer

Required

false

HTTP Proxy Server Availability

Description

Boolean to set if HTTP Proxy Server is available or not.

Related Name

schema.registry.httpProxyServer.available

Default Value

false

API Name

schema.registry.httpProxyServer.available

Required

false

Username For HTTP Proxy Server

Description

Username for http proxy server.

Related Name

schema.registry.httpProxyUsername

Default Value**API Name**

schema.registry.httpProxyUsername

Required

false

Schema Registry Jar Storage Directory Path

Description

Jar storage directory path.

Related Name

schema.registry.jar.storage.directory.path

Default Value

/tmp/schema-registry/local-jars

API Name

schema.registry.jar.storage.directory.path

Required

false

Schema Registry Jar Storage HDFS URL

Description

URL of the directory to be used for storing jars on HDFS when HDFS is not selected as an optional dependency.

Related Name

schema.registry.jar.storage.hdfs.url

Default Value

hdfs://localhost:8020

API Name

schema.registry.jar.storage.hdfs.url

Required

false

Schema Registry Jar Storage Type

Description

Jar storage type for storing jars on the local filesystem or on HDFS. If 'hdfs' is set but HDFS is not selected as an optional dependency, please provide a value for the 'Schema Registry Jar Storage HDFS URL' property.

Related Name

schema.registry.jar.storage.type

Default Value

local

API Name`schema.registry.jar.storage.type`**Required**`false`**Java Home Path Override****Description**

Java home path override for Schema Registry.

Related Name`schema.registry.jdk.home`**Default Value****API Name**`schema.registry.jdk.home`**Required**`false`**Schema Registry Kerberos Name Rules****Description**

Kerberos name rules for Schema Registry.

Related Name`schema.registry.kerberos.name.rules`**Default Value**

`RULE:[2:$1@$0]([jt]t@.*EXAMPLE.COM)s/.*/$MAPRED_USER/ RULE:[2:$1@$0]
([nd]n@.*EXAMPLE.COM)s/.*/$HDFS_USER/DEFAULT`

API Name`schema.registry.kerberos.name.rules`**Required**`false`**Schema Registry Kerberos Non Browser User Agents****Description**

Non browser user agents if kerberos is enabled.

Related Name`schema.registry.kerberos.non.browser.user.agents`**Default Value****API Name**`schema.registry.kerberos.non.browser.user.agents`**Required**`false`**Schema Registry Port****Description**

The port on which server accepts connections.

Related Name

schema.registry.port

Default Value

7788

API Name

schema.registry.port

Required

true

Schema Registry Servlet Filter

Description

Schema Registry servlet filter class.

Related Name

schema.registry.servlet.filter

Default Value

com.hortonworks.registries.auth.server.AuthenticationFilter

API Name

schema.registry.servlet.filter

Required

true

Schema Registry Admin Port (SSL)

Description

HTTPS admin port Schema Registry node runs on when SSL is enabled.

Related Name

schema.registry.ssl.adminPort

Default Value

7791

API Name

schema.registry.ssl.adminPort

Required

false

SSL Keystore Type

Description

The keystore type. It is blank by default but required if schema registry's ssl is enabled. e.g. PKCS12 or JKS.

Related Name

schema.registry.ssl.keyStoreType

Default Value

jks

API Name

schema.registry.ssl.keyStoreType

Required

false

Schema Registry Port (SSL)

Description

HTTPS port Schema Registry node runs on when SSL is enabled.

Related Name

schema.registry.ssl.port

Default Value

7790

API Name

schema.registry.ssl.port

Required

false

SSL TrustStore Type

Description

The truststore type. It is blank by default but required if schema registry's ssl is enabled. e.g. PKCS12 or JKS.

Related Name

schema.registry.ssl.trustStoreType

Default Value

jks

API Name

schema.registry.ssl.trustStoreType

Required

false

SSL ValidateCerts

Description

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates.

Related Name

schema.registry.ssl.validateCerts

Default Value

false

API Name

schema.registry.ssl.validateCerts

Required

false

SSL ValidatePeers

Description

Whether or not to validate TLS peer certificates.

Related Name

schema.registry.ssl.validatePeers

Default Value

false

API Name

schema.registry.ssl.validatePeers

Required

false

Schema Registry Query Timeout**Description**

Schema Registry query timeout.

Related Name

schema.registry.storage.query.timeout

Default Value

30 second(s)

API Name

schema.registry.storage.query.timeout

Required

true

Schema Registry Token Validity**Description**

Kerberos token validity for Schema Registry in ms.

Related Name

schema.registry.token.validity

Default Value

36000

API Name

schema.registry.token.validity

Required

false

Schema Registry Log Max Backup Index**Description**

The number of backup files.

Related Name

schema_registry_log_maxbackupindex

Default Value

20

API Name

schema_registry_log_maxbackupindex

Required

false

Schema Registry Log Max File Size**Description**

The maximum size of backup file before the log is rotated.

Related Name

schema_registry_log_maxfilesize

Default Value

256MB

API Name

schema_registry_log_maxfilesize

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**`rm_custom_resources`**Required**`false`**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**`500`**API Name**`rm_io_weight`**Required**`true`**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Schema Registry Server TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Schema Registry Server might connect to. This is used when Schema Registry Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

schema.registry.ssl.trustStorePath

Default Value**API Name**

ssl_client_truststore_location

Required

false

Schema Registry Server TLS/SSL Client Trust Store Password**Description**

The password for the Schema Registry Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

schema.registry.ssl.trustStorePassword

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Schema Registry Server**Description**

Encrypt communication between clients and Schema Registry Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl.enable

Default Value

false

API Name

ssl_enabled

Required

false

Schema Registry Server TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Schema Registry Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

schema.registry.ssl.keyStorePath

Default Value

API Name

ssl_server_keystore_location

Required

false

Schema Registry Server TLS/SSL Server JKS Keystore File Password

Description

The password for the Schema Registry Server JKS keystore file.

Related Name

schema.registry.ssl.keyStorePassword

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: SSL Keystore Type**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.keystoretype

Required

true

Suppress Parameter Validation: Schema Registry Port (SSL)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Port (SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.port

Required

true

Suppress Parameter Validation: SSL TrustStore Type**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.truststoretype

Required

true

Suppress Parameter Validation: SSL ValidateCerts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.validatecerts

Required

true

Suppress Parameter Validation: SSL ValidatePeers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidatePeers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema.registry.ssl.validatepeers

Required

true

Suppress Parameter Validation: Schema Registry Log Max Backup Index**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Log Max Backup Index parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema_registry_log_maxbackupindex

Required

true

Suppress Parameter Validation: Schema Registry Log Max File Size**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Log Max File Size parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema_registry_log_maxfilesize

Required

true

Suppress Parameter Validation: Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_schema_registry_server_role_env_safety_valve

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_schemaregistry_schema_registry_server_audit_health`**Required**`true`**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_schemaregistry_schema_registry_server_file_descriptor`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_schemaregistry_schema_registry_server_host_health`**Required**`true`

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_schemaregistry_schema_registry_server_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_schemaregistry_schema_registry_server_scm_health

Monitoring

Enable Service Level Health Alerts

Description
When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name
Default Value
true
API Name
enable_alerts
Required
false

Enable Configuration Change Alerts

Description
When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Healthy Schema Registry Server Monitoring Thresholds**Description**

The health test thresholds of the overall Schema Registry Server health. The check returns "Concerning" health if the percentage of "Healthy" Schema Registry Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Schema Registry Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.99 %, Critical: 49.99 %

API Name

SCHEMAREGISTRY_SCHEMA_REGISTRY_SERVER_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

false

Healthy Solr Server Monitoring Thresholds**Description**

The health test thresholds of the overall Solr Server health. The check returns "Concerning" health if the percentage of "Healthy" Solr Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Solr Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 95.0 %, Critical: 90.0 %

API Name

solr_solr_servers_healthy_thresholds

Required

false

Other**HDFS Data Directory****Description**

HDFS directory used for storage by this Solr service.

Related Name**Default Value**

/solr

API Name

hdfs_data_dir

Required

true

HDFS Service**Description**

Name of the HDFS service that this Search service instance depends on

Related Name**Default Value****API Name**

hdfs_service

Required

true

Ranger Plugin Trusted Proxy IP Address**Description**

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.solr.trusted.proxy.ipaddress

Default Value**API Name**

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded for IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.solr.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Ranger Service

Description

Name of the Ranger service that this Solr service instance depends on

Related Name**Default Value****API Name**

ranger_service

Required

false

Solr Server for Upgrade

Description

Solr server to be used while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7.

Related Name**Default Value****API Name**

solr_server_for_upgrade

Required

false

Upgrade Backup Directory

Description

Directory on the HDFS file system that is used as the backup directory while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7.

Related Name**Default Value**

/user/solr/upgrade_backup

API Name

solr_upgrade_backup_dir

Required

false

Upgrade Metadata Directory

Description

Directory on the local file system containing the migrated configurations and metadata required while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7. Note: This directory should be present in the Solr Server specified in 'Solr Server for Upgrade'.

Related Name**Default Value**

/var/lib/upgrade/cr7_config

API Name

solr_upgrade_metadata_dir

Required

true

Solr Watchdog Timeout

Description

If Solr does not respond on its web URL within this time interval, the Catalina process is killed.

Related Name**Default Value**

1 minute(s), 10 second(s)

API Name

solr_watchdog_timeout

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Search service instance depends on

Related Name**Default Value****API Name**

zookeeper_service

Required

true

ZooKeeper Znode

Description

ZooKeeper znode used to store information about this Solr service.

Related Name**Default Value**

/solr

API Name

zookeeper_znode

Required

true

Security

Enable Ranger Authorization for the Infrastructure Solr Service

Description

Enable fine-grained security using Ranger for the infrastructure (infra) Solr service. This option is only for the Solr service that the Ranger service is using (for ranger-audits, etc.). No other Solr service can or should enable this option.

Related Name**Default Value**

false

API Name

enable_ranger_authorization

Required

false

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

solr

API Name

kerberos_princ_name

Required

true

Active Directory Domain

Description

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name**Default Value****API Name**

ldap_domain

Required

false

Ranger DFS Audit Path

Description

The DFS path on which Ranger audits are written. The special placeholder '\${ranger_base_audit_url}' should be used as the prefix, in order to use the centralized location defined in the Ranger service.

Related Name

xasecure.audit.destination.hdfs.dir

Default Value`$ranger_base_audit_url/solr`**API Name**`ranger_audit_hdfs_dir`**Required**`false`**Ranger Audit DFS Spool Dir****Description**

Spool directory for Ranger audits being written to DFS.

Related Name`xasecure.audit.destination.hdfs.batch.filespool.dir`**Default Value**`/var/log/solr/audit/hdfs/spool`**API Name**`ranger_audit_hdfs_spool_dir`**Required**`false`**Ranger Audit Solr Spool Dir****Description**

Spool directory for Ranger audits being written to Solr.

Related Name`xasecure.audit.destination.solr.batch.filespool.dir`**Default Value**`/var/log/solr/audit/solr/spool`**API Name**`ranger_audit_solr_spool_dir`**Required**`false`**Ranger Policy Cache Directory****Description**

The directory where Ranger security policies are cached locally.

Related Name`ranger.plugin.solr.policy.cache.dir`**Default Value**`/var/lib/ranger/solr/policy-cache`**API Name**`ranger_policy_cache_dir`**Required**`false`**Enable LDAP Authentication****Description**

When checked, LDAP-based authentication for users is enabled.

Related Name**Default Value**

false

API Name

solr_enable_ldap_auth

Required

false

Solr TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Solr is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name**Default Value****API Name**

solr_https_keystore_file

Required

false

Solr TLS/SSL Server JKS Keystore File Password**Description**

The password for the Solr JKS keystore file.

Related Name

solr.jetty.keystore.password

Default Value**API Name**

solr_https_keystore_password

Required

false

Solr TLS/SSL Client Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Solr might connect to. This is used when Solr is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**

solr_https_truststore_file

Required

false

Solr TLS/SSL Client Trust Store Password

Description

The password for the Solr TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

solr.jetty.truststore.password

Default Value**API Name**

solr_https_truststore_password

Required

false

LDAP BaseDN

Description

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,*this parameter*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

Related Name**Default Value****API Name**

solr_ldap_basedn

Required

false

Enable LDAP TLS

Description

If true, attempts to establish a TLS (Transport Layer Security) connection with an LDAP server that was specified with ldap://. Not required when using an LDAP URL with prefix ldaps://, because that already specifies TLS. This option is also known as "Use StartTLS".

Related Name**Default Value**

false

API Name

solr_ldap_enable_starttls

Required

false

LDAP URL

Description

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps://. The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389,

and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name**Default Value****API Name**

solr_ldap_uri

Required

false

Solr Secure Authentication

Description

Choose the authentication mechanism used by Solr.

Related Name**Default Value**

simple

API Name

solr_security_authentication

Required

false

Enable TLS/SSL for Solr

Description

Encrypt communication between clients and Solr using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)). Additional manual steps must be performed; see [Enabling TLS/SSL for Solr](#).

Related Name**Default Value**

false

API Name

solr_use_ssl

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: Solr Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Solr Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Solr Admin Port**Description**

Whether to suppress configuration warnings produced by the Solr Admin Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_admin_port

Required

true

Suppress Configuration Validator: Solr Data Directory**Description**

Whether to suppress configuration warnings produced by the Solr Data Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_data_dir

Required

true

Suppress Configuration Validator: Solr HTTP Port**Description**

Whether to suppress configuration warnings produced by the Solr HTTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_http_port

Required

true

Suppress Configuration Validator: Solr HTTPS port**Description**

Whether to suppress configuration warnings produced by the Solr HTTPS port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_https_port

Required

true

Suppress Configuration Validator: Java Heap Size of Solr Server in Bytes**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Solr Server in Bytes configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_java_heapsize

Required

true

Suppress Configuration Validator: Java Configuration Options for Solr Server**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Solr Server configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_java_opts

Required

true

Suppress Configuration Validator: Solr Load Balancer**Description**

Whether to suppress configuration warnings produced by the Solr Load Balancer configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_load_balancer

Required

true

Suppress Configuration Validator: Solr Server Log Directory**Description**

Whether to suppress configuration warnings produced by the Solr Server Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_log_dir

Required

true

Suppress Configuration Validator: Solr Plugins Directory**Description**

Whether to suppress configuration warnings produced by the Solr Plugins Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_plugins_dir

Required

true

Suppress Configuration Validator: Solr Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Solr Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_solr_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: HDFS Data Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Data Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_data_dir

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Active Directory Domain**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap_domain

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger DFS Audit Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_dir

Required

true

Suppress Parameter Validation: Ranger Audit DFS Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_safety_valve

Required

true

Suppress Parameter Validation: Ranger Audit Solr Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Ranger Policy Cache Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_policy_cache_dir

Required

true

Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-security.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_security_safety_valve

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_core_site_safety_valve

Required

true

Suppress Parameter Validation: Solr Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_env_safety_valve

Required

true

Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_hdfs_site_safety_valve

Required

true

Suppress Parameter Validation: Solr TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_https_keystore_file

Required

true

Suppress Parameter Validation: Solr TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_https_keystore_password

Required

true

Suppress Parameter Validation: Solr TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_https_truststore_file

Required

true

Suppress Parameter Validation: Solr TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_https_truststore_password

Required

true

Suppress Parameter Validation: LDAP BaseDN**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_ldap_basedn

Required

true

Suppress Configuration Validator: LDAP TLS Validator**Description**

Whether to suppress configuration warnings produced by the LDAP TLS Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_ldap_tls_validator

Required

true

Suppress Parameter Validation: LDAP URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_ldap_uri

Required

true

Suppress Configuration Validator: LDAP Secure URI and Start TLS Validator**Description**

Whether to suppress configuration warnings produced by the LDAP Secure URI and Start TLS Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_ldaps_or_tls_validator

Required

true

Suppress Configuration Validator: Solr Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Solr Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_server_count_validator

Required

true

Suppress Parameter Validation: Upgrade Backup Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Upgrade Backup Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_upgrade_backup_dir

Required

true

Suppress Parameter Validation: Upgrade Metadata Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Upgrade Metadata Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solr_upgrade_metadata_dir

Required

true

Suppress Parameter Validation: Solrd Watchdog Timeout**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solrd Watchdog Timeout parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_solrd_watchdog_timeout

Required

true

Suppress Parameter Validation: ZooKeeper Znode**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Znode parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_znode

Required

true

Suppress Health Test: Solr Server Health**Description**

Whether to suppress the results of the Solr Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_solr_solr_servers_healthy

Required

true

Solr Server

Advanced

Solr Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Java Configuration Options for Solr Server

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

solr_java_opts

Required

false

Solr Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value**API Name**

SOLR_SERVER_role_env_safety_valve

Required

false

ZooKeeper Client Timeout**Description**

The time in milliseconds a client is allowed to not talk to ZooKeeper before its session expires.

Related Name

zkClientTimeout

Default Value

15 second(s)

API Name

zookeeper_client_timeout

Required

true

Logs**Solr Server Logging Threshold****Description**

The minimum log level for Solr Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Solr Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Solr Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Solr Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Solr Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Solr Server Log Directory

Description

Directory where Solr Server will place its log files.

Related Name**Default Value**

/var/log/solr

API Name

solr_log_dir

Required

true

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

`mgmt_navigator_failure_window`

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

`mgmt.navigator.status.check.enabled`

Default Value

true

API Name

`mgmt_navigator_status_check_enabled`

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

`false`

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

`false`

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

[]

API Name

role_triggers

Required

true

Solr Server API Liveness**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather status of Solr Cores from the Solr Server with a simple API request.

Related Name**Default Value**

true

API Name

solr_core_status_collection_health_enabled

Required

false

Solr Server API Liveness Request Duration**Description**

The health test thresholds on the duration of the Solr Server API request.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

solr_core_status_collection_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

solr_server_fd_thresholds

Required

false

Garbage Collection Duration Thresholds

Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

solr_server_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period

Description

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

solr_server_gc_duration_window

Required

false

Solr Server Host Health Test

Description

When computing the overall Solr Server health, consider the host's health.

Related Name**Default Value**

true

API Name

solr_server_host_health_enabled

Required

false

Solr Server Process Health Test

Description

Enables the health test that the Solr Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

solr_server_scm_health_enabled

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

solr_server_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

solr_server_web_metric_collection_thresholds

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Solr Data Directory****Description**

Directory on local file system where Solr Server keeps the configurations for collections.

Related Name**Default Value**

/var/lib/solr

API Name

solr_data_dir

Required

true

Graceful Shutdown Timeout**Description**

Timeout (in seconds) for graceful shutdown of this Solr server. Once this timeout is reached, Solr server is abruptly shutdown. A value of 0 means no timeout.

Related Name**Default Value**

3 minute(s)

API Name

solr_graceful_stop_timeout

Required

false

Solr Load Balancer**Description**

Address of the load balancer, specified in host:port format.

Related Name

Default Value**API Name**

solr_load_balancer

Required

false

Solr Plugins Directory**Description**

Directory on local file system where Solr Server can find additional JARs. This directory is not monitored for changes during the lifetime of a solr server, and a restart is required to read any updates to the directory contents.

Related Name**Default Value****API Name**

solr_plugins_dir

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Solr Max Connector Threads**Description**

The maximum number of request processing threads to be created by Solr server, which determines the maximum number of simultaneous requests that can be handled.

Related Name**Default Value**

10000

API Name

solr_max_connector_thread

Required

true

Ports and Addresses

Solr Admin Port

Description

Admin port of the Solr Server.

Related Name**Default Value**

8984

API Name

solr_admin_port

Required

true

Solr HTTP Port

Description

HTTP port of Solr Server.

Related Name

solr_http_port

Default Value

8983

API Name

solr_http_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit`**Required**`true`**HDFS Block Cache Blocks per Slab****Description**

Number of blocks per cache slab. The size of the cache is 8 KB (the block size) times the number of blocks per slab times the number of slabs.

Related Name`solr.hdfs.blockcache.blocksperbank`**Default Value**`16384`**API Name**`solr_hdfs_blockcache_blocksperbank`**Required**`true`**HDFS Block Cache Off-Heap Memory****Description**

Use off-heap memory when caching HDFS blocks in Solr.

Related Name`solr.hdfs.blockcache.direct.memory.allocation`**Default Value**`true`**API Name**`solr_hdfs_blockcache_direct_memory_allocation`**Required**`true`**HDFS Block Cache****Description**

Enable caching of HDFS blocks in Solr. There is one block cache per Solr collection. configured to use off-heap memory, Maximum Off-Heap Memory must be set high enough to account for all block caches.

Related Name`solr.hdfs.blockcache.enabled`**Default Value**`true`**API Name**`solr_hdfs_blockcache_enabled`

Required

true

HDFS Block Cache Number of Slabs**Description**

Number of slabs per block cache. The size of the cache is 8 KB (the block size) times the number of blocks per slab times the number of slabs.

Related Name

solr.hdfs.blockcache.slab.count

Default Value

1

API Name

solr_hdfs_blockcache_slab_count

Required

true

Java Direct Memory Size of Solr Server in Bytes**Description**

Maximum amount of off-heap memory in bytes that may be allocated by the Java process. Passed to Java -XX:MaxDirectMemorySize. If unset, defaults to the size of the heap.

Related Name**Default Value**

1 GiB

API Name

solr_java_direct_memory_size

Required

false

Java Heap Size of Solr Server in Bytes**Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

solr_java_heapsize

Required

false

Security**Solr HTTPS port****Description**

HTTPS port of Solr Server.

Related Name

	solr_https_port
Default Value	8985
API Name	
	solr_https_port
Required	false

Stacks Collection

Stacks Collection Data Retention

Description	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name	stacks_collection_data_retention
Default Value	100 MiB
API Name	stacks_collection_data_retention
Required	false

Stacks Collection Directory

Description	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.
Related Name	stacks_collection_directory
Default Value	
API Name	stacks_collection_directory
Required	false

Stacks Collection Enabled

Description	Whether or not periodic stacks collection is enabled.
Related Name	stacks_collection_enabled
Default Value	false
API Name	stacks_collection_enabled
Required	

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Solr Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

Spark Properties in Cloudera Runtime 7.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/spark

API Name

client_config_root_dir

Required

true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf

Description

For advanced use only, a string to be inserted into the client configuration for spark-conf/spark-defaults.conf.

Related Name**Default Value****API Name**

spark-conf/spark-defaults.conf_client_config_safety_valve

Required

false

Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh**Description**

For advanced use only, a string to be inserted into the client configuration for spark-conf/spark-env.sh.

Related Name**Default Value****API Name**

spark-conf/spark-env.sh_client_config_safety_valve

Required

false

Logs**Gateway Logging Threshold****Description**

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Monitoring**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

51

API Name

client_config_priority

Required

true

Spark Data Serializer**Description**

Name of class implementing org.apache.spark.serializer.Serializer to use in Spark applications.

Related Name

spark.serializer

Default Value

org.apache.spark.serializer.KryoSerializer

API Name

spark_data_serializer

Required

true

Default Application Deploy Mode**Description**

Which deploy mode to use by default. Can be overridden by users when launching applications.

Related Name

spark_deploy_mode

Default Value

client

API Name

spark_deploy_mode

Required

false

Caching Executor Idle Timeout**Description**

When dynamic allocation is enabled, time after which idle executors with cached RDDs blocks will be stopped. By default, they're never stopped.

Related Name

spark.dynamicAllocation.cachedExecutorIdleTimeout

Default Value**API Name**

spark_dynamic_allocation_cached_idle_timeout

Required

false

Enable Dynamic Allocation

Description

Enable dynamic allocation of executors in Spark applications.

Related Name

spark.dynamicAllocation.enabled

Default Value

true

API Name

spark_dynamic_allocation_enabled

Required

false

Executor Idle Timeout

Description

When dynamic allocation is enabled, time after which idle executors will be stopped.

Related Name

spark.dynamicAllocation.executorIdleTimeout

Default Value

1 minute(s)

API Name

spark_dynamic_allocation_idle_timeout

Required

false

Initial Executor Count

Description

When dynamic allocation is enabled, number of executors to allocate when the application starts. By default, this is the same value as the minimum number of executors.

Related Name

spark.dynamicAllocation.initialExecutors

Default Value**API Name**

spark_dynamic_allocation_initial_executors

Required

false

Maximum Executor Count

Description

When dynamic allocation is enabled, maximum number of executors to allocate. By default, Spark relies on YARN to control the maximum number of executors for the application.

Related Name

spark.dynamicAllocation.maxExecutors

Default Value**API Name**

spark_dynamic_allocation_max_executors

Required

false

Minimum Executor Count**Description**

When dynamic allocation is enabled, minimum number of executors to keep alive while the application is running.

Related Name

spark.dynamicAllocation.minExecutors

Default Value

0

API Name

spark_dynamic_allocation_min_executors

Required

false

Scheduler Backlog Timeout**Description**

When dynamic allocation is enabled, timeout before requesting new executors when there are backlogged tasks.

Related Name

spark.dynamicAllocation.schedulerBacklogTimeout

Default Value

1 second(s)

API Name

spark_dynamic_allocation_scheduler_backlog_timeout

Required

false

Sustained Scheduler Backlog Timeout**Description**

When dynamic allocation is enabled, timeout before requesting new executors after the initial backlog timeout has already expired. By default this is the same value as the initial backlog timeout.

Related Name

spark.dynamicAllocation.sustainedSchedulerBacklogTimeout

Default Value**API Name**

spark_dynamic_allocation_sustained_scheduler_backlog_timeout

Required

false

Shell Logging Threshold**Description**

The minimum log level for the Spark shell.

Related Name`spark_gateway_shell_logging_threshold`**Default Value**`WARN`**API Name**`spark_gateway_shell_logging_threshold`**Required**`true`**Enable Kill From UI****Description**

Whether to allow users to kill running stages from the Spark Web UI.

Related Name`spark.ui.killEnabled`**Default Value**`true`**API Name**`spark_gateway_ui_kill_enabled`**Required**`true`**Enable History****Description**

Write Spark application history logs to HDFS.

Related Name`spark.eventLog.enabled`**Default Value**`true`**API Name**`spark_history_enabled`**Required**`false`**Enable I/O Encryption****Description**

Whether to encrypt temporary shuffle and cache files stored by Spark on the local disks.

Related Name`spark.io.encryption.enabled`**Default Value**`false`**API Name**`spark_io_encryption_enabled`**Required**`false`

Enable Spark Lineage

Description

Whether to enable spark lineage support. If enabled, spark lineage is sent to Atlas.

Related Name

spark.lineage.enabled

Default Value

true

API Name

spark_lineage_enabled

Required

false

Enable Network Encryption

Description

Whether to encrypt communication between Spark processes belonging to the same application. Requires authentication (spark.authenticate) to be enabled.

Related Name

spark.network.crypto.enabled

Default Value

false

API Name

spark_network_encryption_enabled

Required

false

Enable Optimized S3 Committers

Description

Whether use optimized committers when writing data to S3.

Related Name

spark.cloudera.s3_committers.enabled

Default Value

true

API Name

spark_optimized_s3_committers_enabled

Required

false

Extra Python Path

Description

Python library paths to add to PySpark applications.

Related Name

spark_python_path

Default Value**API Name**

spark_python_path

Required

false

Enable Shuffle Service**Description**

Enables the external shuffle service. The external shuffle service preserves shuffle files written by executors so that the executors can be deallocated without losing work. Must be enabled if Enable Dynamic Allocation is enabled. Recommended and enabled by default.

Related Name

spark.shuffle.service.enabled

Default Value

true

API Name

spark_shuffle_service_enabled

Required

true

Enable Spark Web UI**Description**

Whether to enable the Spark Web UI on individual applications. It's recommended that the UI be disabled in secure clusters.

Related Name

spark.ui.enabled

Default Value

true

API Name

spark_ui_enabled

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_spark-conf/spark-defaults.conf_client_config_safety_valve

Required

true

Suppress Parameter Validation: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh parameter.

Related Name

Default Value

false

API Name

role_config_suppression_spark-conf/spark-env.sh_client_config_safety_valve

Required

true

Suppress Parameter Validation: Spark Data Serializer**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Data Serializer parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_spark_data_serializer

Required

true

Suppress Parameter Validation: Extra Python Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Extra Python Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_spark_python_path

Required

true

History Server**Advanced****History Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh**Description**

For advanced use only. A string to be inserted into spark-conf/spark-env.sh for this role only.

Related Name**Default Value****API Name**

spark-conf/spark-env.sh_role_safety_valve

Required

false

History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-history-server.conf**Description**

For advanced use only. A string to be inserted into spark-conf/spark-history-server.conf for this role only.

Related Name**Default Value****API Name**

spark-conf/spark-history-server.conf_role_safety_valve

Required

false

History Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

SPARK_YARN_HISTORY_SERVER_role_env_safety_valve

Required

false

Logs**History Server Log Directory****Description**

The log directory for log files of the role History Server.

Related Name

log_dir

Default Value

/var/log/spark

API Name

log_dir

Required

false

History Server Logging Threshold

Description

The minimum log level for History Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

History Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for History Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

History Server Max Log Size

Description

The maximum size, in megabytes, per log file for History Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

`enable_alerts`

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

`enable_config_alerts`

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

`log_directory_free_space_absolute_thresholds`

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

`log_directory_free_space_percentage_thresholds`

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name
Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name
Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

spark_yarn_history_server_fd_thresholds

Required

false

History Server Host Health Test

Description

When computing the overall History Server health, consider the host's health.

Related Name
Default Value

true

API Name

spark_yarn_history_server_host_health_enabled

Required

false

History Server Process Health Test

Description

Enables the health test that the History Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

spark_yarn_history_server_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Use Local Storage

Description

Whether to use local storage for caching application history data, which reduces memory usage and makes service restarts faster.

Related Name

enable_local_storage

Default Value

false

API Name

enable_local_storage

Required

false

Enable Event Log Cleaner**Description**

Specifies whether the History Server should periodically clean up event logs from storage.

Related Name

spark.history.fs.cleaner.enabled

Default Value

true

API Name

event_log_cleaner_enabled

Required

false

Event Log Cleaner Interval**Description**

How often the History Server will clean up event log files.

Related Name

spark.history.fs.cleaner.interval

Default Value

1 day(s)

API Name

event_log_cleaner_interval

Required

false

Maximum Event Log Age**Description**

Specifies the maximum age of the event logs.

Related Name

spark.history.fs.cleaner.maxAge

Default Value

7 day(s)

API Name

event_log_cleaner_max_age

Required

false

Admin Users**Description**

Comma-separated list of users who can view all applications when authentication is enabled.

Related Name

spark.history.ui.admin.acls

Default Value

knox

API Name

history_server_admin_users

Required

false

HDFS Polling Interval

Description

How often to poll HDFS for new applications.

Related Name

spark.history.fs.update.interval.seconds

Default Value

10 second(s)

API Name

history_server_fs_poll_interval

Required

false

Java Heap Size of History Server in Bytes

Description

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in bytes.

Related Name

history_server_max_heapsize

Default Value

512 MiB

API Name

history_server_max_heapsize

Required

true

Retained App Count

Description

Max number of application UIs to keep in the History Server's memory. All applications will still be available, but may take longer to load if they're not in memory.

Related Name

spark.history.retainedApplications

Default Value

50

API Name

history_server_retained_apps

Required

false

Enable User Authentication**Description**

Enables user authentication using SPNEGO (requires Kerberos), and enables access control to application history data.

Related Name

history_server_spnego_enabled

Default Value

false

API Name

history_server_spnego_enabled

Required

false

Local Storage Directory**Description**

Directory where to keep local caches of application history data.

Related Name

spark.history.store.path

Default Value

/var/lib/spark/history

API Name

local_storage_dir

Required

false

Max Local Storage Size**Description**

Approximate maximum amount of data to use in local storage for caching application history data.

Related Name

spark.history.store.maxDiskUsage

Default Value

10 GiB

API Name

local_storage_max_usage

Required

false

Enabled SSL/TLS Algorithms**Description**

A comma-separated list of algorithm names to enable when TLS/SSL is enabled. By default, all algorithms supported by the JRE are enabled.

Related Name

spark.ssl.historyServer.enabledAlgorithms

Default Value**API Name**

ssl_server_algorithms

Required

false

TLS/SSL Protocol

Description

The version of the TLS/SSL protocol to use when TLS/SSL is enabled.

Related Name

spark.ssl.historyServer.protocol

Default Value

TLSv1.2

API Name

ssl_server_protocol

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

History Server WebUI Port

Description

The port of the history server WebUI

Related Name

spark.history.ui.port

Default Value

18088

API Name

history_server_web_port

Required

true

TLS/SSL Port Number

Description

Port where to listen for TLS/SSL connections. HTTP connections will be redirected to this port when TLS/SSL is enabled.

Related Name

spark.ssl.historyServer.port

Default Value

18488

API Name

ssl_server_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Enable TLS/SSL for History Server

Description

Encrypt communication between clients and History Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

spark.ssl.historyServer.enabled

Default Value

false

API Name

ssl_enabled

Required

false

History Server TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when History Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

spark.ssl.historyServer.keyStore

Default Value**API Name**

ssl_server_keystore_location

Required

false

History Server TLS/SSL Server JKS Keystore File Password

Description

The password for the History Server JKS keystore file.

Related Name**Default Value****API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB
API Name
stacks_collection_data_retention
Required
false

Stacks Collection Directory

Description
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.
Related Name
stacks_collection_directory
Default Value
API Name
stacks_collection_directory
Required
false

Stacks Collection Enabled

Description
Whether or not periodic stacks collection is enabled.
Related Name
stacks_collection_enabled
Default Value
false
API Name
stacks_collection_enabled
Required
true

Stacks Collection Frequency

Description
The frequency with which stacks are collected.
Related Name
stacks_collection_frequency
Default Value
5.0 second(s)
API Name
stacks_collection_frequency
Required
false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Admin Users**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Users parameter.

Spark Service Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

Description

For advanced use only, a string to be inserted into spark-conf/spark-env.sh. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value**

API Name`spark-conf/spark-env.sh_service_safety_valve`**Required**`false`**Spark Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**`SPARK_ON_YARN_service_env_safety_valve`**Required**`false`**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**`true`**API Name**`enable_alerts`**Required**`false`**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**`false`**API Name**`enable_config_alerts`**Required**`false`**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I`

F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}}See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Required

false

Sqoop decimal padding**Description**

Enables padding for fixed point number types (decimal, number, numeric) in case of Avro and Parquet imports.

Related Name

sqoop.avro.decimal_padding.enable

Default Value

true

API Name

sqoop.avro.decimal_padding.enable

Required

false

Default precision for logical types**Description**

Specifies the default precision for fixed point number types. This value is only used if the precision was not specified in the source table.

Related Name

sqoop.avro.logical_types.decimal.default.precision

Default Value

38

API Name

sqoop.avro.logical_types.decimal.default.precision

Required

false

Default scale for logical types**Description**

Default scale for fixed point number types. This value is only used if the scale was not specified in the source table.

Related Name

sqoop.avro.logical_types.decimal.default.scale

Default Value

10

API Name

sqoop.avro.logical_types.decimal.default.scale

Required

false

Enable avro logical types**Description**

Enables the use of logical types in avro files, so that fixed point number types are converted to decimal during an import. Fixed point number types are converted to String if this property is set to false.

Related Name

sqoop.avro.logical_types.decimal.enable

Default Value

true

API Name

sqoop.avro.logical_types.decimal.enable

Required

false

Enable parquet logical types

Description

Enables the use of logical types in parquet files, so that fixed point number types are converted to decimal during an import. Fixed point number types are converted to String if this property is set to false.

Related Name

sqoop.parquet.logical_types.decimal.enable

Default Value

API Name	service_config_suppression_sqoop_client_service_env_safety_valve
Required	true

Streams Messaging Manager Properties in Cloudera Runtime 7.1

Role groups:

Service-Wide

Advanced

System Group

Description	The group that this service's processes should run as.
Related Name	
Default Value	streamsmgmgr
API Name	process_groupname
Required	true

System User

Description	The user that this service's processes should run as.
Related Name	
Default Value	streamsmgmgr
API Name	process_username
Required	true

Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve)

Description	For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.
Related Name	

Default Value**API Name**`STREAMS_MESSAGING_MANAGER_service_env_safety_valve`**Required**`false`**Database****Streams Messaging Manager Database Host****Description**

Hostname of the database used by Streams Messaging Manager. If the port is non-default for your database type, use host:port notation.

Related Name`streams.messaging.manager.storage.connector.host`**Default Value**`localhost`**API Name**`smm_database_host`**Required**`true`**Streams Messaging Manager Database Name****Description**

Name of Streams Messaging Manager database.

Related Name`streams.messaging.manager.storage.connector.name`**Default Value**`streamsmgmgr`**API Name**`smm_database_name`**Required**`true`**Streams Messaging Manager Database User Password****Description**

Password for Streams Messaging Manager database.

Related Name`streams.messaging.manager.storage.connector.password`**Default Value****API Name**`smm_database_password`**Required**`true`

Streams Messaging Manager Database Port

Description

Port for Streams Messaging Manager database.

Related Name

streams.messaging.manager.storage.connector.port

Default Value

3306

API Name

smm_database_port

Required

true

Streams Messaging Manager Database Type

Description

Database type to be used (postgres).

Related Name

streams.messaging.manager.storage.connector.type

Default Value

mysql

API Name

smm_database_type

Required

true

Streams Messaging Manager Database User

Description

User for Streams Messaging Manager database.

Related Name

streams.messaging.manager.storage.connector.user

Default Value

streamsmgmr

API Name

smm_database_user

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server Role Health Test**Description**

When computing the overall STREAMS_MESSAGING_MANAGER health, consider Streams Messaging Manager Rest Admin Server's health

Related Name**Default Value**

true

API Name

STREAMS_MESSAGING_MANAGER_STREAMS_MESSAGING_MANAGER_SERVER_health_enabled

Required

false

Streams Messaging Manager UI Server Role Health Test**Description**

When computing the overall STREAMS_MESSAGING_MANAGER health, consider Streams Messaging Manager UI Server's health

Related Name**Default Value**

true

API Name

STREAMS_MESSAGING_MANAGER_STREAMS_MESSAGING_MANAGER_UI_health_enabled

Required

false

Other**Kafka Service****Description**

Name of the Kafka service that this Streams Messaging Manager service instance depends on

Related Name**Default Value****API Name**

kafka_service

Required

true

Enable Kerberos Authentication**Description**

Enables Kerberos authentication for this Streams Messaging Manager.

Related Name

kerberos.auth.enable

Default Value

false

API Name

kerberos.auth.enable

Required

false

Sentry Service**Description**

Name of the Sentry service that this Streams Messaging Manager service instance depends on

Related Name**Default Value****API Name**

sentry_service

Required

false

Streams Messaging Manager Port**Description**

The port on which server accepts connections.

Related Name

streams.messaging.manager.port

Default Value

8585

API Name

streams.messaging.manager.port

Required

true

Streams Messaging Manager port (SSL)**Description**

HTTPS port Streams Messaging Manager rest server runs on when SSL is enabled.

Related Name

streams.messaging.manager.ssl.port

Default Value

8587

API Name

streams.messaging.manager.ssl.port

Required

false

ZooKeeper Service**Description**

Name of the ZooKeeper service that this Streams Messaging Manager service instance depends on

Related Name**Default Value****API Name**

zookeeper_service

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Cloudera Manager Service Monitor Port**Description**

Whether to suppress configuration warnings produced by the Cloudera Manager Service Monitor Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cm.metrics.service.monitor.port

Required

true

Suppress Configuration Validator: Cloudera Manager Metrics TrustStore Type**Description**

Whether to suppress configuration warnings produced by the Cloudera Manager Metrics TrustStore Type configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cm.metrics.truststore.type

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_config.json_role_safety_valve

Required

true

Suppress Configuration Validator: consumer.group.refresh.interval.ms**Description**

Whether to suppress configuration warnings produced by the consumer.group.refresh.interval.ms configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_consumer.group.refresh.interval.ms

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_env.sh_role_safety_valve

Required

true

Suppress Configuration Validator: Inactive Group Timeout

Description

Whether to suppress configuration warnings produced by the Inactive Group Timeout configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_inactive.group.timeout.ms

Required

true

Suppress Configuration Validator: inactive.producer.timeout.ms

Description

Whether to suppress configuration warnings produced by the inactive.producer.timeout.ms configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_inactive.producer.timeout.ms

Required

true

Suppress Configuration Validator: LatencyMetricsConfig Metrics 15m Ttl Secs

Description

Whether to suppress configuration warnings produced by the LatencyMetricsConfig Metrics 15m Ttl Secs configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_latencymetricsconfig.metrics.15m.ttl.secs

Required

true

Suppress Configuration Validator: LatencyMetricsConfig Metrics Clean Frequency ms

Description

Whether to suppress configuration warnings produced by the LatencyMetricsConfig Metrics Clean Frequency ms configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_latencymetricsconfig.metrics.clean.frequency.ms`**Required**`true`**Suppress Configuration Validator: Latency Metrics Data Storage Path****Description**

Whether to suppress configuration warnings produced by the Latency Metrics Data Storage Path configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_latencymetricsconfig.metrics.storage`**Required**`true`**Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Log Directory configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_log_dir`**Required**`true`**Suppress Configuration Validator: Metrics Cache Refresh Interval ms****Description**

Whether to suppress configuration warnings produced by the Metrics Cache Refresh Interval ms configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_metrics.cache.refresh.interval.ms`**Required**`true`**Suppress Configuration Validator: Metrics Fetcher Class****Description**

Whether to suppress configuration warnings produced by the Metrics Fetcher Class configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.fetcher.class

Required

true

Suppress Configuration Validator: Number of Metrics Fetcher Threads**Description**

Whether to suppress configuration warnings produced by the Number of Metrics Fetcher Threads configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.fetcher.threads

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Java Heap Size of SMM**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of SMM configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_smm_heap_size

Required

true

Suppress Configuration Validator: SMM_JMX_OPTS**Description**

Whether to suppress configuration warnings produced by the SMM_JMX_OPTS configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_smm_jmx_opts

Required

true

Suppress Configuration Validator: SMM_JVM_PERF_OPTS**Description**

Whether to suppress configuration warnings produced by the SMM_JVM_PERF_OPTS configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_smm_jvm_perf_opts

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format)**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_ca_certificate_location

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_certificate_location

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore Key Password

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Location

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Password

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_privatekey_location

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Private Key Password

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Private Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_privatekey_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams-messaging-manager.yaml_role_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager Admin Port**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Admin Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.adminport

Required

true

Suppress Configuration Validator: Allow All Alert Notifications**Description**

Whether to suppress configuration warnings produced by the Allow All Alert Notifications configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.allow.all.alert.notifications

Required

true

Suppress Configuration Validator: Allowed resources**Description**

Whether to suppress configuration warnings produced by the Allowed resources configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.allowed.resources

Required

true

Suppress Configuration Validator: Java Home Path Override**Description**

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.jdk.home

Required

true

Suppress Configuration Validator: Kafka Alert Notification Topic**Description**

Whether to suppress configuration warnings produced by the Kafka Alert Notification Topic configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kafka.alert.notifications.topic

Required

true

Suppress Configuration Validator: Kafka Cache Refresh Interval ms**Description**

Whether to suppress configuration warnings produced by the Kafka Cache Refresh Interval ms configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kafka.cache.refresh.interval.ms

Required

true

Suppress Configuration Validator: Kerberos Name Rules**Description**

Whether to suppress configuration warnings produced by the Kerberos Name Rules configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.name.rules

Required

true

Suppress Configuration Validator: Kerberos Non Browser User Agents**Description**

Whether to suppress configuration warnings produced by the Kerberos Non Browser User Agents configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.non.browser.user.agents

Required

true

Suppress Configuration Validator: Streams Messaging Manager Log Max Backup Index**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Log Max Backup Index configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.log.maxbackupindex

Required

true

Suppress Configuration Validator: Streams Messaging Manager Log Max File Size**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Log Max File Size configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.log.maxfilesize

Required

true

Suppress Configuration Validator: Streams Messaging Manager NotifierProviders Config Classes**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager NotifierProviders Config Classes configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.providerclasses

Required

true

Suppress Configuration Validator: Save Notification Read Status Per User**Description**

Whether to suppress configuration warnings produced by the Save Notification Read Status Per User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.save.notification.read.status.per.user

Required

true

Suppress Configuration Validator: Schema Registry API url**Description**

Whether to suppress configuration warnings produced by the Schema Registry API url configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.schema.registry.url

Required

true

Suppress Configuration Validator: Servlet filter**Description**

Whether to suppress configuration warnings produced by the Servlet filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.servlet.filter

Required

true

Suppress Configuration Validator: Streams Messaging Manager Admin Port (SSL)**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Admin Port (SSL) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.adminport

Required

true

Suppress Configuration Validator: SSL Keystore Type**Description**

Whether to suppress configuration warnings produced by the SSL Keystore Type configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.keystoretype

Required

true

Suppress Configuration Validator: SSL TrustStore Type**Description**

Whether to suppress configuration warnings produced by the SSL TrustStore Type configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.truststoretype

Required

true

Suppress Configuration Validator: SSL ValidateCerts**Description**

Whether to suppress configuration warnings produced by the SSL ValidateCerts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatecerts

Required

true

Suppress Configuration Validator: SSL validatePeers**Description**

Whether to suppress configuration warnings produced by the SSL validatePeers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatepeers

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Port**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ui.port

Required

true

Suppress Configuration Validator: Streams Messaging Manager Configuration Directory**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Configuration Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.working.directory

Required

true

Suppress Configuration Validator: Streams Replication Manager Rest Host**Description**

Whether to suppress configuration warnings produced by the Streams Replication Manager Rest Host configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.host

Required

true

Suppress Configuration Validator: Streams Replication Manager Rest Port**Description**

Whether to suppress configuration warnings produced by the Streams Replication Manager Rest Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.port

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams_messaging_manager_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams_messaging_manager_ui_role_env_safety_valve

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database Host**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database Host parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smm_database_host

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smm_database_name

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database User Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database User Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smm_database_password

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database Port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smm_database_port

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smm_database_user

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Streams Messaging Manager Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_streams.messaging.manager.port

Required

true

Suppress Parameter Validation: Streams Messaging Manager port (SSL)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager port (SSL) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_streams.messaging.manager.ssl.port

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_streams_messaging_manager_server_count_validator

Required

true

Suppress Parameter Validation: Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_streams_messaging_manager_service_env_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_streams_messaging_manager_ui_count_validator

Required

true

Suppress Health Test: Streams Messaging Manager Rest Admin Server Health**Description**

Whether to suppress the results of the Streams Messaging Manager Rest Admin Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_streams_messaging_manager_streams_messaging_manager_streams_messaging_manager_server_health

Required

true

Suppress Health Test: Streams Messaging Manager UI Server Health**Description**

Whether to suppress the results of the Streams Messaging Manager UI Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_streams_messaging_manager_streams_messaging_manager_streams_messaging_manager_ui_health

Required

true

Streams Messaging Manager Rest Admin Server**Advanced****Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh****Description**

For advanced use only. A string to be inserted into env.sh for this role only.

Related Name**Default Value****API Name**

env.sh_role_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

	/tmp
API Name	
	oom_heap_dump_dir
Required	
	false

Dump Heap When Out of Memory

Description	When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.
Related Name	
Default Value	
	true
API Name	
	oom_heap_dump_enabled
Required	
	true

Kill When Out of Memory

Description	When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.
Related Name	
Default Value	
	true
API Name	
	oom_sigkill_enabled
Required	
	true

Automatically Restart Process

Description	When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.
Related Name	
Default Value	
	false
API Name	
	process_auto_restart
Required	
	true

Enable Metric Collection

Description	Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from
-------------	--

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml**Description**

For advanced use only. A string to be inserted into streams-messaging-manager.yaml for this role only.

Related Name**Default Value****API Name**

streams-messaging-manager.yaml_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

STREAMS_MESSAGING_MANAGER_SERVER_role_env_safety_valve

Required

false

Logs**Streams Messaging Manager Rest Admin Server Log Directory****Description**

The log directory for log files of the role Streams Messaging Manager Rest Admin Server.

Related Name

log_dir

Default Value

/var/log/streams-messaging-manager

API Name

log_dir

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO`

health:bad", "streamThreshold": 0, "enabled": "true"}}]See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

streams_messaging_manager_server_fd_thresholds

Required

false

Streams Messaging Manager Rest Admin Server Host Health Test**Description**

When computing the overall Streams Messaging Manager Rest Admin Server health, consider the host's health.

Related Name**Default Value**

true

API Name

streams_messaging_manager_server_host_health_enabled

Required

false

Streams Messaging Manager Rest Admin Server Process Health Test**Description**

Enables the health test that the Streams Messaging Manager Rest Admin Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

streams_messaging_manager_server_scm_health_enabled

Required

false

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Cloudera Manager Service Monitor Port****Description**

Port of Cloudera Manager's Service Monitor.

Related Name

cm.metrics.service.monitor.port

Default Value

9997

API Name

cm.metrics.service.monitor.port

Required

true

Cloudera Manager Metrics TrustStore Type**Description**

Cloudera Manager's truststore type.

Related Name

cm.metrics.truststore.type

Default Value

jks

API Name

cm.metrics.truststore.type

Required

true

consumer.group.refresh.interval.ms**Description**

Refresh interval for consumer group's consumption.

Related Name

consumer.group.refresh.interval.ms

Default Value

50000

API Name

consumer.group.refresh.interval.ms

Required

true

Graceful Shutdown Timeout**Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name**Default Value**

30 second(s)

API Name

graceful_stop_timeout

Required

false

Inactive Group Timeout**Description**

Timeout in ms for inactive group.

Related Name

inactive.group.timeout.ms

Default Value

1800000

API Name

inactive.group.timeout.ms

Required

true

inactive.producer.timeout.ms**Description**

Timeout in ms for Inactive producer.

Related Name

inactive.producer.timeout.ms

Default Value

1800000

API Name

inactive.producer.timeout.ms

Required

true

Enable Latency Metrics Processing

Description

To enable Latency Metrics Processing and Servicing, SMM will launch a service which continuously processes metrics received from producers and consumers and be able to provide responses to queries.

Related Name

latencyMetricsConfig.enable.latency.metrics.processing

Default Value

true

API Name

latencyMetricsConfig.enable.latency.metrics.processing

Required

true

LatencyMetricsConfig Metrics 15m Ttl Secs

Description

Determines the default TTL (Time To Live) for 15m granularity metrics (metrics are queryable in 15m).

Related Name

latencyMetricsConfig.metrics.15m.ttl.secs

Default Value

1209600

API Name

latencyMetricsConfig.metrics.15m.ttl.secs

Required

false

LatencyMetricsConfig Metrics Clean Frequency ms

Description

Frequency with which the metrics are cleaned from the above store in ms.

Related Name

latencyMetricsConfig.metrics.clean.frequency.ms

Default Value

21600000

API Name

latencyMetricsConfig.metrics.clean.frequency.ms

Required

false

Latency Metrics Data Storage Path**Description**

Path to store latency metrics data.

Related Name

latencyMetricsConfig.metrics.storage

Default Value

/var/lib/streamsmgmgr/latencymetrics/data

API Name

latencyMetricsConfig.metrics.storage

Required

false

logging threshold for logger appenders**Description**

logging threshold for logger appenders

Related Name

loggers.appenders.threshold

Default Value

TRACE

API Name

loggers.appenders.threshold

Required

false

logging level of all loggers**Description**

logging level of all loggers

Related Name

logging.level

Default Value

INFO

API Name

logging.level

Required

false

Logger org.apache.kafka Logging Level**Description**

Logger org.apache.kafka logging level.

Related Name

logging.org.apache.kafka.level

Default Value

INFO

API Name

logging.org.apache.kafka.level

Required

false

Logger `smm.kafka.webservice.common` Logging Level**Description**Logger `smm.kafka.webservice.common` logging level.**Related Name**

logging.smm.kafka.webservice.common.level

Default Value

DEBUG

API Name

logging.smm.kafka.webservice.common.level

Required

false

Metrics Cache Refresh Interval ms**Description**

Refresh interval for data collection from CM Metrics's Collector cache.

Related Name

metrics.cache.refresh.interval.ms

Default Value

50000

API Name

metrics.cache.refresh.interval.ms

Required

true

Metrics Fetcher Class**Description**

SMM's kafka metrics fetcher class.

Related Name

metrics.fetcher.class

Default Value

com.hortonworks.smm.kafka.services.metric.cm.CMMetricsFetcher

API Name

metrics.fetcher.class

Required

true

Number of Metrics Fetcher Threads**Description**

Number of metrics fetcher threads.

Related Name

metrics.fetcher.threads

Default Value

25

API Name

metrics.fetcher.threads

Required

true

Java Heap Size of SMM**Description**

Maximum size for the SMM Java process heap memory. Passed to Java -Xmx. Measured in megabytes.

Related Name

SMM_HEAP_SIZE

Default Value

6 GiB

API Name

SMM_HEAP_SIZE

Required

false

SMM_JMX_OPTS**Description**

Change parameters to setup jmxremote.

Related Name

SMM_JMX_OPTS

Default Value

-Dcom.sun.management.jmxremote -Dcom.sun.management.jmxremote.authenticate=false -Dcom.sun.management.jmxremote.ssl=false

API Name

SMM_JMX_OPTS

Required

false

SMM_JVM_PERF_OPTS**Description**

SMM JVM perf and gc opts.

Related Name

SMM_JVM_PERF_OPTS

Default Value

-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -XX:+ExplicitGCInvokesConcurrent -Djava.awt.headless=true

API Name

SMM_JVM_PERF_OPTS

Required

false

Streams Messaging Manager Admin Port**Description**

The admin port for the server.

Related Name

streams.messaging.manager.adminPort

Default Value

8586

API Name

streams.messaging.manager.adminPort

Required

true

AlertTopicConsumerConfig Poll Timeout ms**Description**

Alert topic Consumer config poll timeout in ms.

Related Name

streams.messaging.manager.alertTopicConsumerConfig.poll.timeout.ms

Default Value

1 second(s)

API Name

streams.messaging.manager.alertTopicConsumerConfig.poll.timeout.ms

Required

false

Allow All Alert Notifications**Description**

Whether to send the alert notifications periodically.

Related Name

streams.messaging.manager.allow.all.alert.notifications

Default Value

true

API Name

streams.messaging.manager.allow.all.alert.notifications

Required

false

Allowed resources**Description**

Allowed resources for Streams Messaging Manager.

Related Name

streams.messaging.manager.allowed.resources

Default Value

401.html, back-default.png, favicon.ico

API Name

streams.messaging.manager.allowed.resources

Required

false

Streams Messaging Manager Executor Thread Count**Description**

Alerts config executor thread count.

Related Name

streams.messaging.manager.executor.thread.count

Default Value

30

API Name

streams.messaging.manager.executor.thread.count

Required

true

Streams Messaging Manager Executor Thread Pool Size**Description**

NotifierProviders executor thread pool size.

Related Name

streams.messaging.manager.executor.thread.pool.size

Default Value

16

API Name

streams.messaging.manager.executor.thread.pool.size

Required

true

Java Home Path Override**Description**

Java Home Path Override for Streams Messaging Manager

Related Name

streams.messaging.manager.jdk.home

Default Value**API Name**

streams.messaging.manager.jdk.home

Required

false

Kafka Alert Notification Topic**Description**

Kafka alert notification topic name.

Related Name

streams.messaging.manager.kafka.alert.notifications.topic

Default Value

__smm_alert_notifications

API Name

streams.messaging.manager.kafka.alert.notifications.topic

Required

true

Kafka Cache Refresh Interval ms**Description**

SMM's cache refresh interval in ms for kafka.

Related Name

streams.messaging.manager.kafka.cache.refresh.interval.ms

Default Value

60000

API Name

streams.messaging.manager.kafka.cache.refresh.interval.ms

Required

false

Kafka Client Security Protocol**Description**

Protocol to be used for communicating with Kafka, INFERRED setup assumes that Kafka service is set up the same as SMM regarding kerberos and ssl.

Related Name

streams.messaging.manager.kafka.client.security.protocol

Default Value

INFERRED

API Name

streams.messaging.manager.kafka.client.security.protocol

Required

false

Streams Messaging Manager KafkaConsumerClient Poll Timeout ms**Description**

SMM's Kafka Consumer Client poll timeout in ms.

Related Name

streams.messaging.manager.kafkaConsumerClient.poll.timeout.ms

Default Value

1 second(s)

API Name

streams.messaging.manager.kafkaConsumerClient.poll.timeout.ms

Required

false

Kerberos Name Rules**Description**

Kerberos name rules for Streams Messaging Manager.

Related Name

streams.messaging.manager.kerberos.name.rules

Default ValueRULE:[2:\$1@\$0]([jt]t@.*EXAMPLE.COM)s/*/\$MAPRED_USER/ RULE:[2:\$1@\$0]
([nd]n@.*EXAMPLE.COM)s/*/\$HDFS_USER/DEFAULT**API Name**

streams.messaging.manager.kerberos.name.rules

Required

false

Kerberos Non Browser User Agents**Description**

Non browser user agents if kerberos is enabled.

Related Name

streams.messaging.manager.kerberos.non.browser.user.agents

Default Value**API Name**

streams.messaging.manager.kerberos.non.browser.user.agents

Required

false

Streams Messaging Manager Log Max Backup Index**Description**

The number of backup files

Related Name

streams.messaging.manager.log.maxbackupindex

Default Value

20

API Name

streams.messaging.manager.log.maxbackupindex

Required

false

Streams Messaging Manager Log Max File Size**Description**

The maximum size of backup file before the log is rotated

Related Name

streams.messaging.manager.log.maxfilesize

Default Value

256MB

API Name

streams.messaging.manager.log.maxfilesize

Required

false

Streams Messaging Manager NotifierProviders Config Classes**Description**

NotifierProviders config classes in list format.

Related Name

streams.messaging.manager.providerClasses

Default Value[com.hortonworks.smm.notifier.http.HttpNotifierProvider,
com.hortonworks.smm.notifier.email.EmailNotifierProvider]**API Name**

streams.messaging.manager.providerClasses

Required

true

Save Notification Read Status Per User**Description**

Alert notification save status flag per user.

Related Name

streams.messaging.manager.save.notification.read.status.per.user

Default Value

true

API Name

streams.messaging.manager.save.notification.read.status.per.user

Required

false

Schema Registry API url**Description**Provide API URL for Schema Registry. e.g http://SR_HOST:7788/api/v1 or https://
SR_HOST:7790/api/v1**Related Name**

streams.messaging.manager.schema.registry.url

Default Value**API Name**

streams.messaging.manager.schema.registry.url

Required

false

Servlet filter**Description**

Streams Messaging Manager servlet filter class.

Related Name

streams.messaging.manager.servlet.filter

Default Value

com.hortonworks.registries.auth.server.AuthenticationFilter

API Name

streams.messaging.manager.servlet.filter

Required

true

Streams Messaging Manager Admin Port (SSL)**Description**

HTTPS admin port Streams Messaging Manager rest server runs on when SSL is enabled.

Related Name

streams.messaging.manager.ssl.adminPort

Default Value

8588

API Name

streams.messaging.manager.ssl.adminPort

Required

false

SSL Keystore Type**Description**

The keystore type. Required if Streams Messaging Manager rest server's SSL is enabled. e.g. PKCS12 or JKS.

Related Name

streams.messaging.manager.ssl.keyStoreType

Default Value

jks

API Name

streams.messaging.manager.ssl.keyStoreType

Required

false

SSL TrustStore Type**Description**

The truststore type. Required if streams messaging manager's ssl is enabled. e.g. PKCS12 or JKS.

Related Name

streams.messaging.manager.ssl.trustStoreType

Default Value

jks

API Name

streams.messaging.manager.ssl.trustStoreType

Required

false

SSL ValidateCerts**Description**

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates.

Related Name

streams.messaging.manager.ssl.validateCerts

Default Value

false

API Name

streams.messaging.manager.ssl.validateCerts

Required

false

SSL validatePeers**Description**

Whether or not to validate TLS peer certificates.

Related Name

streams.messaging.manager.ssl.validatePeers

Default Value

false

API Name

streams.messaging.manager.ssl.validatePeers

Required

false

Streams Messaging Manager Query Timeout**Description**

Streams Messaging Manager query timeout.

Related Name

streams.messaging.manager.storage.query.timeout

Default Value

30 millisecond(s)

API Name

streams.messaging.manager.storage.query.timeout

Required

true

Token validity**Description**

Kerberos token validity for Streams Messaging Manager in ms.

Related Name

streams.messaging.manager.token.validity

Default Value

36000

API Name

streams.messaging.manager.token.validity

Required

false

Streams Messaging Manager Configuration Directory**Description**

Directory to Streams messaging manager additional libs, jars, isos, etc.

Related Name

streams.messaging.manager.working.directory

Default Value

/var/lib/streamsmgmgr

API Name

streams.messaging.manager.working.directory

Required

false

Configure Streams Replication Manager**Description**

Configure Streams Replication Manager.

Related Name

streams.replication.manager.configure

Default Value

false

API Name

streams.replication.manager.configure

Required

false

Streams Replication Manager Rest Host**Description**

Streams Replication Manager rest host.

Related Name

streams.replication.manager.host

Default Value**API Name**

streams.replication.manager.host

Required

false

Streams Replication Manager Rest Port**Description**

Streams Replication Manager rest port.

Related Name

streams.replication.manager.port

Default Value

6670

API Name

streams.replication.manager.port

Required

false

Streams Replication Manager Rest Protocol

Description

Streams Replication Manager rest protocol.

Related Name

streams.replication.manager.protocol

Default Value

http

API Name

streams.replication.manager.protocol

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgroupexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
 These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Streams Messaging Manager Rest Admin Server might connect to. This is used when Streams Messaging Manager Rest Admin Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

streams.messaging.manager.ssl.trustStorePath

Default Value**API Name**

ssl_client_truststore_location

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store Password**Description**

The password for the Streams Messaging Manager Rest Admin Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Streams Messaging Manager Rest Admin Server**Description**

Encrypt communication between clients and Streams Messaging Manager Rest Admin Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl.enable

Default Value

false

API Name

ssl_enabled

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Streams Messaging Manager Rest Admin Server is acting as a TLS/SSL server.

Related Name**Default Value****API Name**

ssl_server_keystore_keypassword

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Streams Messaging Manager Rest Admin Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

streams.messaging.manager.ssl.keyStorePath

Default Value**API Name**

ssl_server_keystore_location

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Password**Description**

The password for the Streams Messaging Manager Rest Admin Server JKS keystore file.

Related Name

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Cloudera Manager Service Monitor Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Service Monitor Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_cm.metrics.service.monitor.port

Required

true

Suppress Parameter Validation: Cloudera Manager Metrics TrustStore Type**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Metrics TrustStore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_cm.metrics.truststore.type

Required

true

Suppress Parameter Validation: consumer.group.refresh.interval.ms**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the consumer.group.refresh.interval.ms parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_consumer.group.refresh.interval.ms

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_env.sh_role_safety_valve

Required

true

Suppress Parameter Validation: Inactive Group Timeout**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Inactive Group Timeout parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_inactive.group.timeout.ms

Required

true

Suppress Parameter Validation: inactive.producer.timeout.ms**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the inactive.producer.timeout.ms parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_inactive.producer.timeout.ms

Required

true

Suppress Parameter Validation: LatencyMetricsConfig Metrics 15m Ttl Secs**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LatencyMetricsConfig Metrics 15m Ttl Secs parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_latencymetricsconfig.metrics.15m.ttl.secs

Required

true

Suppress Parameter Validation: LatencyMetricsConfig Metrics Clean Frequency ms**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LatencyMetricsConfig Metrics Clean Frequency ms parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_latencymetricsconfig.metrics.clean.frequency.ms

Required

true

Suppress Parameter Validation: Latency Metrics Data Storage Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Latency Metrics Data Storage Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_latencymetricsconfig.metrics.storage

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Metrics Cache Refresh Interval ms**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Cache Refresh Interval ms parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.cache.refresh.interval.ms

Required

true

Suppress Parameter Validation: Metrics Fetcher Class**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Fetcher Class parameter.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.fetcher.class

Required

true

Suppress Parameter Validation: Number of Metrics Fetcher Threads**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Metrics Fetcher Threads parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.fetcher.threads

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Java Heap Size of SMM**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of SMM parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_smm_heap_size

Required

true

Suppress Parameter Validation: SMM_JMX_OPTS**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SMM_JMX_OPTS parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_smm_jmx_opts

Required

true

Suppress Parameter Validation: SMM_JVM_PERF_OPTS**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SMM_JVM_PERF_OPTS parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_smm_jvm_perf_opts

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams-messaging-manager.yaml_role_safety_valve

Required

true

Suppress Parameter Validation: Streams Messaging Manager Admin Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Admin Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.adminport

Required

true

Suppress Parameter Validation: Allow All Alert Notifications**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allow All Alert Notifications parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.allow.all.alert.notifications

Required

true

Suppress Parameter Validation: Allowed resources**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed resources parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.allowed.resources

Required

true

Suppress Parameter Validation: Java Home Path Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.jdk.home

Required

true

Suppress Parameter Validation: Kafka Alert Notification Topic**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Alert Notification Topic parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kafka.alert.notifications.topic

Required

true

Suppress Parameter Validation: Kafka Cache Refresh Interval ms**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Cache Refresh Interval ms parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kafka.cache.refresh.interval.ms

Required

true

Suppress Parameter Validation: Kerberos Name Rules**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Name Rules parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.name.rules

Required

true

Suppress Parameter Validation: Kerberos Non Browser User Agents

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Non Browser User Agents parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.non.browser.user.agents

Required

true

Suppress Parameter Validation: Streams Messaging Manager Log Max Backup Index

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Log Max Backup Index parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.log.maxbackupindex

Required

true

Suppress Parameter Validation: Streams Messaging Manager Log Max File Size

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Log Max File Size parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.log.maxfilesize

Required

true

Suppress Parameter Validation: Streams Messaging Manager NotifierProviders Config Classes

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager NotifierProviders Config Classes parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_streams.messaging.manager.providerclasses`**Required**`true`**Suppress Parameter Validation: Save Notification Read Status Per User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Save Notification Read Status Per User parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_streams.messaging.manager.save.notification.read.status.per.user`**Required**`true`**Suppress Parameter Validation: Schema Registry API url****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry API url parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_streams.messaging.manager.schema.registry.url`**Required**`true`**Suppress Parameter Validation: Servlet filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Servlet filter parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_streams.messaging.manager.servlet.filter`**Required**`true`**Suppress Parameter Validation: Streams Messaging Manager Admin Port (SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Admin Port (SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.adminport

Required

true

Suppress Parameter Validation: SSL Keystore Type**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.keystoretype

Required

true

Suppress Parameter Validation: SSL TrustStore Type**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.truststoretype

Required

true

Suppress Parameter Validation: SSL ValidateCerts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatecerts

Required

true

Suppress Parameter Validation: SSL validatePeers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL validatePeers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatepeers

Required

true

Suppress Parameter Validation: Streams Messaging Manager Configuration Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Configuration Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.working.directory

Required

true

Suppress Parameter Validation: Streams Replication Manager Rest Host**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Rest Host parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.host

Required

true

Suppress Parameter Validation: Streams Replication Manager Rest Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Rest Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.port

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams_messaging_manager_server_role_env_safety_valve

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_unexpected_exits

Required

true

Streams Messaging Manager UI Server**Advanced****Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json****Description**

For advanced use only. A string to be inserted into config.json for this role only.

Related Name**Default Value****API Name**

config.json_role_safety_valve

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

STREAMS_MESSAGING_MANAGER_UI_role_env_safety_valve

Required

false

Logs

Streams Messaging Manager UI Server Log Directory

Description

The log directory for log files of the role Streams Messaging Manager UI Server.

Related Name

log_dir

Default Value

/var/log/streams-messaging-manager

API Name

log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following

configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]] See the trigger rules documentation for more

details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

streams_messaging_manager_ui_fd_thresholds

Required

false

Streams Messaging Manager UI Server Host Health Test**Description**

When computing the overall Streams Messaging Manager UI Server health, consider the host's health.

Related Name**Default Value**

true

API Name

streams_messaging_manager_ui_host_health_enabled

Required

false

Streams Messaging Manager UI Server Process Health Test**Description**

Enables the health test that the Streams Messaging Manager UI Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

streams_messaging_manager_ui_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name**Default Value**

30 second(s)

API Name

graceful_stop_timeout

Required

false

Streams Messaging Manager UI Port

Description

The port on which server accepts connections.

Related Name

streams.messaging.manager.ui.port

Default Value

9991

API Name

streams.messaging.manager.ui.port

Required

true

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Streams Messaging Manager UI Server TLS/SSL Certificate Trust Store File****Description**

The location on disk of the trust store, in .pem format, used to confirm the authenticity of TLS/SSL servers that Streams Messaging Manager UI Server might connect to. This is used when Streams Messaging Manager UI Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

streams.messaging.manager.ui.ssl.trust.store.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Enable TLS/SSL for Streams Messaging Manager UI Server**Description**

Encrypt communication between clients and Streams Messaging Manager UI Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

streams.messaging.manager.ui.ssl.enable

Default Value

false

API Name

ssl_enabled

Required

false

Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format)**Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name

streams.messaging.manager.ui.ssl.ca.cert.location

Default Value**API Name**

ssl_server_ca_certificate_location

Required

false

Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format)**Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

streams.messaging.manager.ui.ssl.cert.location

Default Value**API Name**

ssl_server_certificate_location

Required

false

Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format)**Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

streams.messaging.manager.ui.ssl.private.key.location

Default Value**API Name**

ssl_server_privatekey_location

Required

false

Streams Messaging Manager UI Server TLS/SSL Private Key Password**Description**

The password for the private key in the Streams Messaging Manager UI Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name**Default Value****API Name**

ssl_server_privatekey_password

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_config.json_role_safety_valve

Required

true

Suppress Parameter Validation: Streams Messaging Manager UI Server Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Streams Messaging Manager UI Server TLS/SSL Certificate Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server TLS/SSL Certificate Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_ca_certificate_location

Required

true

Suppress Parameter Validation: Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_certificate_location

Required

true

Suppress Parameter Validation: Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_privatekey_location

Required

true

Suppress Parameter Validation: Streams Messaging Manager UI Server TLS/SSL Private Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server TLS/SSL Private Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_privatekey_password

Required

true

Suppress Parameter Validation: Streams Messaging Manager UI Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.messaging.manager.ui.port

Required

true

Suppress Parameter Validation: Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams_messaging_manager_ui_role_env_safety_valve

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_ui_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_ui_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_ui_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_ui_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_ui_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_ui_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_ui_unexpected_exits

Required

true

Streams Replication Manager Properties in Cloudera Runtime 7.1

Role groups:

Service-Wide

Advanced**System Group****Description**

The group that this service's processes should run as.

Related Name**Default Value**

streamsrepmgr

API Name

process_groupname

Required

true

System User**Description**

The user that this service's processes should run as.

Related Name

Default Value

streamsrepmgr

API Name

process_username

Required

true

Streams Replication Manager Service Advanced Configuration Snippet (Safety Valve) for srm.properties**Description**

For advanced use only, a string to be inserted into srm.properties. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

srm.properties_service_safety_valve

Required

false

Streams Replication Manager Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

STREAMS_REPLICATION_MANAGER_service_env_safety_valve

Required

false

Monitoring**Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value**

API Name	smon_derived_configs_safety_valve
Required	false

SRM Driver Role Health Test

Description	When computing the overall STREAMS_REPLICATION_MANAGER health, consider SRM Driver's health
Related Name	
Default Value	true
API Name	STREAMS_REPLICATION_MANAGER_STREAMS_REPLICATION_MANAGER_DRIVER_health_enabled
Required	false

SRM Service Role Health Test

Description	When computing the overall STREAMS_REPLICATION_MANAGER health, consider SRM Service's health
Related Name	
Default Value	true
API Name	STREAMS_REPLICATION_MANAGER_STREAMS_REPLICATION_MANAGER_SERVICE_health_enabled
Required	false

Other

Streams Replication Manager Cluster alias

Description	Specifies cluster aliases for the clusters SRM is connecting to. Cluster aliases are comma delimited. For example, 'primary, backup'.
Related Name	clusters
Default Value	
API Name	clusters
Required	true

Emit Checkpoints Interval Seconds

Description

The interval at which SRM emits checkpoint information.

Related Name

emit.checkpoints.interval.seconds

Default Value

5 second(s)

API Name

emit.checkpoints.interval.seconds

Required

true

Kafka Service

Description

Name of the Kafka service that this Streams Replication Manager service instance depends on

Related Name**Default Value****API Name**

kafka_service

Required

false

Enable Kerberos Authentication

Description

Enables Kerberos authentication for this Streams Replication Manager.

Related Name

kerberos.auth.enable

Default Value

false

API Name

kerberos.auth.enable

Required

false

Replication Factor for Metrics Topics

Description

Replication factor for all metrics topics.

Related Name

metrics.topic.replication.factor

Default Value

3

API Name

metrics.topic.replication.factor

Required

false

Refresh Groups Interval Seconds

Description

The interval at which SRM looks for new consumer groups on source clusters.

Related Name

refresh.groups.interval.seconds

Default Value

10 minute(s)

API Name

refresh.groups.interval.seconds

Required

true

Refresh Topics Interval Seconds

Description

The interval at which SRM looks for new topics on source clusters.

Related Name

refresh.topics.interval.seconds

Default Value

10 minute(s)

API Name

refresh.topics.interval.seconds

Required

true

SRM_HEAP_OPTS

Description

Memory heap params.

Related Name

SRM_HEAP_OPTS

Default Value

-Xmx8G -Xms1G

API Name

SRM_HEAP_OPTS

Required

false

SRM_JMX_OPTS

Description

Change parameters to setup jmxremote.

Related Name

SRM_JMX_OPTS

Default Value

```
-Dcom.sun.management.jmxremote -Dcom.sun.management.jmxremote.authenticate=false -
Dcom.sun.management.jmxremote.ssl=false
```

API Name

SRM_JMX_OPTS

Required

false

SRM_JVM_PERF_OPTS**Description**

SRM JVM perf and gc opts.

Related Name

SRM_JVM_PERF_OPTS

Default Value

```
-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -
XX:+ExplicitGCInvokesConcurrent -Djava.awt.headless=true
```

API Name

SRM_JVM_PERF_OPTS

Required

false

Streams Replication Manager's Replication Configs**Description**

Specifies cluster bootstrap server information and cluster replication pairs. Bootstrap information for each alias defined in the clusters property has to be added as follows: 'primary.bootstrap.servers=mycluster1.example.com:9092,primary.bootstrap.servers=mycluster2.example.com:9092'.. Each cluster has to be added in a new line, if cluster has multiple nodes, add all nodes to the same line and delimit each with a comma. Cluster replication pairs can be defined as follows: 'primary->backup.enabled=true'.. Each unique replication pair has to be added in a new line.

Related Name

streams.replication.manager.config

Default Value**API Name**

streams.replication.manager.config

Required

true

Sync Topic Acls Enabled**Description**

Enables the monitoring of the source cluster for ACL changes.

Related Name

sync.topic.acls.enabled

Default Value

false

API Name

sync.topic.acls.enabled

Required

true

Sync Topic Acls Interval Seconds**Description**

The interval at which SRM checks the source cluster for ACL changes.

Related Name

sync.topic.acls.interval.seconds

Default Value

30 second(s)

API Name

sync.topic.acls.interval.seconds

Required

true

Sync Topic Configs Interval Seconds**Description**

The interval at which SRM checks the source cluster for configuration changes.

Related Name

sync.topic.configs.interval.seconds

Default Value

10 minute(s)

API Name

sync.topic.configs.interval.seconds

Required

true

Tasks Max**Description**

Maximum number of tasks for replication between clusters.

Related Name

tasks.max

Default Value

3

API Name

tasks.max

Required

true

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: SRM Driver Log Directory**Description**

Whether to suppress configuration warnings produced by the SRM Driver Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: SRM Driver XML Override**Description**

Whether to suppress configuration warnings produced by the SRM Driver XML Override configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml**Description**

Whether to suppress configuration warnings produced by the SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_srm-service.yaml_role_safety_valve

Required

true

Suppress Configuration Validator: SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties**Description**

Whether to suppress configuration warnings produced by the SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_srm.properties_role_safety_valve

Required

true

Suppress Configuration Validator: SRM Driver TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the SRM Driver TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: SRM Driver TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the SRM Driver TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: SRM Driver TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the SRM Driver TLS/SSL Server JKS Keystore Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: SRM Driver TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the SRM Driver TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: SRM Driver TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the SRM Driver TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Streams Replication Manager Driver Target Cluster**Description**

Whether to suppress configuration warnings produced by the Streams Replication Manager Driver Target Cluster configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.driver.target.cluster

Required

true

Suppress Configuration Validator: Java Home Path Override**Description**

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.jdk.home

Required

true

Suppress Configuration Validator: Log Format**Description**

Whether to suppress configuration warnings produced by the Log Format configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.log.format

Required

true

Suppress Configuration Validator: SRM Service Port**Description**

Whether to suppress configuration warnings produced by the SRM Service Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.service.port

Required

true

Suppress Configuration Validator: SRM Service Rpc Port**Description**

Whether to suppress configuration warnings produced by the SRM Service Rpc Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.service.rpcport

Required

true

Suppress Configuration Validator: SRM Service Https Port**Description**

Whether to suppress configuration warnings produced by the SRM Service Https Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.service.ssl.port

Required

true

Suppress Configuration Validator: Streams Replication Manager Service Target Cluster**Description**

Whether to suppress configuration warnings produced by the Streams Replication Manager Service Target Cluster configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.service.target.cluster

Required

true

Suppress Configuration Validator: SSL Keystore Type**Description**

Whether to suppress configuration warnings produced by the SSL Keystore Type configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.ssl.keystoretype

Required

true

Suppress Configuration Validator: SSL TrustStore Type**Description**

Whether to suppress configuration warnings produced by the SSL TrustStore Type configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.ssl.truststoretype

Required

true

Suppress Configuration Validator: SSL ValidateCerts**Description**

Whether to suppress configuration warnings produced by the SSL ValidateCerts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.ssl.validatecerts

Required

true

Suppress Configuration Validator: SSL ValidatePeers**Description**

Whether to suppress configuration warnings produced by the SSL ValidatePeers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.ssl.validatepeers

Required

true

Suppress Configuration Validator: SRM Driver Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the SRM Driver Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams_replication_manager_driver_role_env_safety_valve

Required

true

Suppress Configuration Validator: SRM Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the SRM Service Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_streams_replication_manager_service_role_env_safety_valve

Required

true

Suppress Parameter Validation: Streams Replication Manager Cluster alias**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Cluster alias parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_clusters

Required

true

Suppress Parameter Validation: Replication Factor for Metrics Topics**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replication Factor for Metrics Topics parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_metrics.topic.replication.factor

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Streams Replication Manager Service Advanced Configuration Snippet (Safety Valve) for srm.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Service Advanced Configuration Snippet (Safety Valve) for srm.properties parameter.

Related Name

Default Value

false

API Name

service_config_suppression_srm.properties_service_safety_valve

Required

true

Suppress Parameter Validation: SRM_HEAP_OPTS**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM_HEAP_OPTS parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_srm_heap_opts

Required

true

Suppress Parameter Validation: SRM_JMX_OPTS**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM_JMX_OPTS parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_srm_jmx_opts

Required

true

Suppress Parameter Validation: SRM_JVM_PERF_OPTS**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM_JVM_PERF_OPTS parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_srm_jvm_perf_opts

Required

true

Suppress Parameter Validation: Streams Replication Manager's Replication Configs**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager's Replication Configs parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_streams.replication.manager.config

Required

true

Suppress Configuration Validator: SRM Driver Count Validator**Description**

Whether to suppress configuration warnings produced by the SRM Driver Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_streams.replication.manager.driver_count_validator

Required

true

Suppress Configuration Validator: SRM Service Count Validator**Description**

Whether to suppress configuration warnings produced by the SRM Service Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_streams.replication.manager.service_count_validator

Required

true

Suppress Parameter Validation: Streams Replication Manager Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_streams_replication_manager_service_env_safety_valve

Required

true

Suppress Health Test: SRM Driver Health**Description**

Whether to suppress the results of the SRM Driver Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_streams_replication_manager_streams_replication_manager_streams_replication_manager_driver_health

Required

true

Suppress Health Test: SRM Service Health**Description**

Whether to suppress the results of the SRM Service Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_streams_replication_manager_streams_replication_manager_streams_replication_manager_service_health

Required

true

SRM Driver**Advanced****SRM Driver XML Override****Description**

For advanced use only, replace entire XML in the logback configuration file for SRM Driver, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value**API Name**

logback_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties**Description**

For advanced use only. A string to be inserted into srm.properties for this role only.

Related Name**Default Value****API Name**

srm.properties_role_safety_valve

Required

false

SRM Driver Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

STREAMS_REPLICATION_MANAGER_DRIVER_role_env_safety_valve

Required

false

Logs**SRM Driver Log Directory****Description**

The log directory for log files of the role SRM Driver.

Related Name

log_dir

Default Value

/var/log/streams-replication-manager

API Name

log_dir

Required

false

SRM Driver Logging Threshold**Description**

The minimum log level for SRM Driver logs

Related Name

Default Value	INFO
API Name	log_threshold
Required	false

SRM Driver Maximum Log File Backups

Description	The maximum number of rolled log files to keep for SRM Driver logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

SRM Driver Max Log Size

Description	The maximum size, in megabytes, per log file for SRM Driver logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	max_log_size
Required	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.
- **streamThreshold (optional)** - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled (optional)** - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`role_triggers`

Required

true

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

`streams_replication_manager_driver_fd_thresholds`

Required

false

SRM Driver Host Health Test**Description**

When computing the overall SRM Driver health, consider the host's health.

Related Name**Default Value**

true

API Name

`streams_replication_manager_driver_host_health_enabled`

Required

false

SRM Driver Process Health Test**Description**

Enables the health test that the SRM Driver's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name`streams_replication_manager_driver_scm_health_enabled`**Required**`false`**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**`Warning: Never, Critical: Any`**API Name**`unexpected_exits_thresholds`**Required**`false`**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

Related Name**Default Value**`5 minute(s)`**API Name**`unexpected_exits_window`**Required**`false`**Other****Streams Replication Manager Driver Target Cluster****Description**

Target cluster aliases for the srm-driver. When set, the srm-driver will collect data from all clusters, but will only write to the clusters specified here. Cluster aliases are comma separated.

Related Name`streams.replication.manager.driver.target.cluster`**Default Value****API Name**`streams.replication.manager.driver.target.cluster`**Required**`false`**Java Home Path Override****Description**

Java Home Path Override for Streams Replication Manager. If left empty, the java shipped with CM is used.

Related Name

streams.replication.manager.jdk.home

Default Value**API Name**

streams.replication.manager.jdk.home

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**SRM Driver TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that SRM Driver might connect to. This is used when SRM Driver is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

SRM Driver TLS/SSL Client Trust Store Password**Description**

The password for the SRM Driver TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for SRM Driver**Description**

Encrypt communication between clients and SRM Driver using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

SRM Driver TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when SRM Driver is acting as a TLS/SSL server.

Related Name

ssl.key.password

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

SRM Driver TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when SRM Driver is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

SRM Driver TLS/SSL Server JKS Keystore File Password**Description**

The password for the SRM Driver JKS keystore file.

Related Name

ssl.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: SRM Driver Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: SRM Driver XML Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver XML Override parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_srm.properties_role_safety_valve

Required

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_unexp
ected_exits

Required

true

SRM Service

Advanced

SRM Service XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for SRM Service, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value**API Name**

logback_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml**Description**

For advanced use only. A string to be inserted into srm-service.yaml for this role only.

Related Name**Default Value****API Name**

srm-service.yaml_role_safety_valve

Required

false

SRM Service Advanced Configuration Snippet (Safety Valve) for srm.properties**Description**

For advanced use only. A string to be inserted into srm.properties for this role only.

Related Name**Default Value****API Name**

srm.properties_role_safety_valve

Required

false

SRM Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

STREAMS_REPLICATION_MANAGER_SERVICE_role_env_safety_valve

Required

false

Logs

SRM Service Log Directory

Description	The log directory for log files of the role SRM Service.
Related Name	log_dir
Default Value	/var/log/streams-replication-manager
API Name	log_dir
Required	false

SRM Service Logging Threshold

Description	The minimum log level for SRM Service logs
Related Name	
Default Value	INFO
API Name	log_threshold
Required	false

SRM Service Maximum Log File Backups

Description	The maximum number of rolled log files to keep for SRM Service logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

SRM Service Max Log Size

Description	The maximum size, in megabytes, per log file for SRM Service logs. Typically used by log4j or logback.
Related Name	
Default Value	

	200 MiB
API Name	
	max_log_size
Required	
	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

Log Directory Free Space Monitoring Absolute Thresholds

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
Related Name	
Default Value	Warning: 10 GiB, Critical: 5 GiB
API Name	log_directory_free_space_absolute_thresholds
Required	false

Log Directory Free Space Monitoring Percentage Thresholds

Description	
-------------	--

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

streams_replication_manager_service_fd_thresholds

Required

false

SRM Service Host Health Test

Description

When computing the overall SRM Service health, consider the host's health.

Related Name**Default Value**

true

API Name

streams_replication_manager_service_host_health_enabled

Required

false

SRM Service Process Health Test

Description

Enables the health test that the SRM Service's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

streams_replication_manager_service_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Log Format

Description

Format of the messages output by logger.

Related Name

streams.replication.manager.log.format

Default Value

%dISO8601 %p %c: %m%n%rEx

API Name

streams.replication.manager.log.format

Required

false

SRM Service Port

Description

SRM Service port.

Related Name

streams.replication.manager.service.port

Default Value

6670

API Name

streams.replication.manager.service.port

Required

true

SRM Service Rpc Port

Description

SRM Service rpc port.

Related Name

streams.replication.manager.service.rpcPort

Default Value

6670

API Name

streams.replication.manager.service.rpcPort

Required

true

SRM Service Https Port

Description

SRM Service https port.

Related Name

streams.replication.manager.service.ssl.port

Default Value

6671

API Name`streams.replication.manager.service.ssl.port`**Required**`true`**Streams Replication Manager Service Target Cluster****Description**

Target cluster from which the SRM Service collects data.

Related Name`streams.replication.manager.service.target.cluster`**Default Value****API Name**`streams.replication.manager.service.target.cluster`**Required**`true`**SSL Keystore Type****Description**

The keystore type. Required if SSL is enabled for the SRM Service. For example, PKCS12 or JKS.

Related Name`streams.replication.manager.ssl.keyStoreType`**Default Value**`JKS`**API Name**`streams.replication.manager.ssl.keyStoreType`**Required**`false`**SSL TrustStore Type****Description**

The truststore type. Required if SSL is enabled for the SRM Service. For example, PKCS12 or JKS.

Related Name`streams.replication.manager.ssl.trustStoreType`**Default Value**`JKS`**API Name**`streams.replication.manager.ssl.trustStoreType`**Required**`false`**SSL ValidateCerts****Description**

Whether or not to validate TLS certificates before starting. If enabled, SRM will not start with expired or otherwise invalid certificates.

Related Name

streams.replication.manager.ssl.validateCerts

Default Value

false

API Name

streams.replication.manager.ssl.validateCerts

Required

false

SSL ValidatePeers**Description**

Whether or not to validate TLS peer certificates.

Related Name

streams.replication.manager.ssl.validatePeers

Default Value

false

API Name

streams.replication.manager.ssl.validatePeers

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

SRM Service TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that SRM Service might connect to. This is used when SRM Service is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

SRM Service TLS/SSL Client Trust Store Password

Description

The password for the SRM Service TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for SRM Service**Description**

Encrypt communication between clients and SRM Service using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

SRM Service TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when SRM Service is acting as a TLS/SSL server.

Related Name

ssl.key.password

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

SRM Service TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when SRM Service is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

ssl.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

SRM Service TLS/SSL Server JKS Keystore File Password**Description**

The password for the SRM Service JKS keystore file.

Related Name

ssl.keystore.password
Default Value
API Name
ssl_server_keystore_password
Required
false

Stacks Collection

Stacks Collection Data Retention

Description
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name
stacks_collection_data_retention
Default Value
100 MiB
API Name
stacks_collection_data_retention
Required
false

Stacks Collection Directory

Description
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.
Related Name
stacks_collection_directory
Default Value
API Name
stacks_collection_directory
Required
false

Stacks Collection Enabled

Description
Whether or not periodic stacks collection is enabled.
Related Name
stacks_collection_enabled
Default Value
false
API Name
stacks_collection_enabled
Required
true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: SRM Service Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: SRM Service XML Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service XML Override parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_srm-service.yaml_role_safety_valve

Required

true

Suppress Parameter Validation: SRM Service Advanced Configuration Snippet (Safety Valve) for srm.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Advanced Configuration Snippet (Safety Valve) for srm.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_srm.properties_role_safety_valve

Required

true

Suppress Parameter Validation: SRM Service TLS/SSL Client Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: SRM Service TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: SRM Service TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service TLS/SSL Server JKS Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: SRM Service TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: SRM Service TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Log Format**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Log Format parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.log.format

Required

true

Suppress Parameter Validation: SRM Service Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.service.port

Required

true

Suppress Parameter Validation: SRM Service Rpc Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Rpc Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.service.rpcport

Required

true

Suppress Parameter Validation: SRM Service Https Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Https Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.service.ssl.port

Required

true

Suppress Parameter Validation: Streams Replication Manager Service Target Cluster**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Service Target Cluster parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.service.target.cluster

Required

true

Suppress Parameter Validation: SSL Keystore Type**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.ssl.keystoretype

Required

true

Suppress Parameter Validation: SSL TrustStore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.ssl.truststoretype

Required

true

Suppress Parameter Validation: SSL ValidateCerts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.ssl.validatecerts

Required

true

Suppress Parameter Validation: SSL ValidatePeers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidatePeers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams.replication.manager.ssl.validatepeers

Required

true

Suppress Parameter Validation: SRM Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_streams_replication_manager_service_role_env_safety_valve

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_service_unexpected_exits

Required

true

Tez Properties in Cloudera Runtime 7.1

Role groups:

Gateway**Advanced****Deploy Directory****Description**

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/tez

API Name

client_config_root_dir

Required

true

Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml**Description**

For advanced use only, a string to be inserted into the client configuration for tez-conf/tez-site.xml.

Related Name**Default Value****API Name**

tez-conf/tez-site.xml_client_config_safety_valve

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

50

API Name

client_config_priority

Required

true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

	false
API Name	
	role_config_suppression_client_config_root_dir
Required	
	true

Suppress Parameter Validation: Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml parameter.
Related Name	
Default Value	false
API Name	
	role_config_suppression_tez-conf/tez-site.xml_client_config_safety_valve
Required	
	true

Service-Wide

Advanced

System Group

Description	The group that this service's processes should run as.
Related Name	
Default Value	hadoop
API Name	
	process_groupname
Required	
	true

System User

Description	The user that this service's processes should run as.
Related Name	
Default Value	tez
API Name	
	process_username
Required	
	true

Tez Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

TEZ_service_env_safety_valve

Required

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`service_triggers`

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

`smon_derived_configs_safety_valve`

Required

false

Other**Maximum Heartbeat Interval****Description**

The maximum heartbeat interval between the Application Master and RM in milliseconds.

Related Name

`tez.am.am-rm.heartbeat.interval-ms.max`

Default Value

250 millisecond(s)

API Name

`tez.am.am-rm.heartbeat.interval-ms.max`

Required

true

Maximum Timeout to Hold Idle Containers

Description

The maximum amount of time to hold on to a container if no task can be assigned to it immediately. Only active when reuse is enabled.

Related Name

tez.am.container.idle.release-timeout-max.millis

Default Value

20 second(s)

API Name

tez.am.container.idle.release-timeout-max.millis

Required

true

Minimum Timeout to Hold Idle Containers

Description

The minimum amount of time to hold on to a container that is idle. Only active when reuse is enabled.

Related Name

tez.am.container.idle.release-timeout-min.millis

Default Value

10 second(s)

API Name

tez.am.container.idle.release-timeout-min.millis

Required

true

Enable Container Reuse

Description

Configuration to specify whether container should be reused.

Related Name

tez.am.container.reuse.enabled

Default Value

true

API Name

tez.am.container.reuse.enabled

Required

true

Timeout Before Container Reuse

Description

The amount of time to wait before assigning a container to the next level of locality. NODE > RACK > NON_LOCAL

Related Name

tez.am.container.reuse.locality.delay-allocation-millis

Default Value

250 millisecond(s)

API Name

tez.am.container.reuse.locality.delay-allocation-millis

Required

true

Enable Container Reuse for Non-Local Tasks

Description

Whether to reuse containers for non-local tasks. Active only if reuse is enabled.

Related Name

tez.am.container.reuse.non-local-fallback.enabled

Default Value

false

API Name

tez.am.container.reuse.non-local-fallback.enabled

Required

true

Enable Container Reuse for Rack Local Tasks

Description

Whether to reuse containers for rack local tasks. Active only if reuse is enabled.

Related Name

tez.am.container.reuse.rack-fallback.enabled

Default Value

true

API Name

tez.am.container.reuse.rack-fallback.enabled

Required

true

Tez Application Master Default Command Line Options

Description

Cluster default Java options for the Tez Application Master process. These will be prepended to the properties specified via tez.am.launch.cmd-opts.

Related Name

tez.am.launch.cluster-default.cmd-opts

Default Value

-server -Djava.net.preferIPv4Stack=true

API Name

tez.am.launch.cluster-default.cmd-opts

Required

true

Tez Application Master Command Line Options

Description

Java options for the Tez Application Master process. The Xmx value is derived based on tez.am.resource.memory.mb and is 80% of the value by default. Used only if the value is not specified explicitly by the DAG definition.

Related Name

tez.am.launch.cmd-opts

Default Value

-XX:+PrintGCDetails -verbose:gc -XX:+UseNUMA -XX:+UseG1GC -XX:+ResizeTLAB -XX:+HeapDumpOnOutOfMemoryError -XX:HeapDumpPath=/tmp

API Name

tez.am.launch.cmd-opts

Required

true

Tez Application Master Environment Settings

Description

Additional execution environment entries for tez. This is not an additive property. You must preserve the original value if you want to have access to native libraries. Used only if the value is not specified explicitly by the DAG definition.

Related Name

tez.am.launch.env

Default Value

LD_LIBRARY_PATH=/opt/cloudera/parcels/CDH/lib/hadoop/lib/native

API Name

tez.am.launch.env

Required

true

Log level for Application Masters

Description

Root Logging level passed to the Tez Application Master.

Related Name

tez.am.log.level

Default Value

INFO

API Name

tez.am.log.level

Required

true

Number of Recovery Runs

Description

Specifies the total number of time the Application Master will run in case recovery is triggered.

Related Name

tez.am.max.app.attempts

Default Value

2
API Name
tez.am.max.app.attempts
Required
true

Maximum Task Attempts

Description
The maximum number of allowed task attempt failures on a node before it gets marked as blacklisted.
Related Name
tez.am.maxtaskfailures.per.node
Default Value
10
API Name
tez.am.maxtaskfailures.per.node
Required
true

Tez Application Master Memory

Description
The amount of memory to be used by the Application Master. Used only if the value is not specified explicitly by the DAG definition.
Related Name
tez.am.resource.memory.mb
Default Value
2 GiB
API Name
tez.am.resource.memory.mb
Required
true

History URL Template

Description
Template to generate the History URL for a particular Tez Application. Template replaces __APPLICATION_ID__ with the actual applicationId and __HISTORY_URL_BASE__ with the value from the tez.tez-ui.history-url.base config property
Related Name
tez.am.tez-ui.history-url.template
Default Value
__HISTORY_URL_BASE__?viewPath=%2F%23%2Ftez-app%2F__APPLICATION_ID__
API Name
tez.am.tez-ui.history-url.template
Required
true

Tez Application Master View ACLs

Description

Application Master view ACLs. This allows the specified users/groups to view the status of the Application Master and all DAGs that run within this Application Master. Value format: Comma separated list of users, followed by whitespace, followed by a comma separated list of groups.

Related Name

tez.am.view-acls

Default Value

*

API Name

tez.am.view-acls

Required

false

Tez Additional Classpath

Description

Specify additional classpath information to be used for Tez AM and all containers.

Related Name

tez.cluster.additional.classpath.prefix

Default Value**API Name**

tez.cluster.additional.classpath.prefix

Required

false

Maximum Number of Counters

Description

The number of allowed counters for the executing DAG.

Related Name

tez.counters.max

Default Value

10000

API Name

tez.counters.max

Required

true

Maximum Counter Groups

Description

The number of allowed counter groups for the executing DAG.

Related Name

tez.counters.max.groups

Default Value

3000

API Name

tez.counters.max.groups

Required

true

Whether to generate debug artifacts**Description**

Generate debug artifacts such as a text representation of the submitted DAG plan.

Related Name

tez.generate.debug.artifacts

Default Value

false

API Name

tez.generate.debug.artifacts

Required

true

Grouped Split Maximum Size**Description**

Upper bound on the size (in bytes) of a grouped split, to avoid generating excessively large split.

Related Name

tez.grouping.max-size

Default Value

1 GiB

API Name

tez.grouping.max-size

Required

true

Grouped Split Minimum Size**Description**

Lower bound on the size (in bytes) of a grouped split, to avoid generating too many splits.

Related Name

tez.grouping.min-size

Default Value

16 MiB

API Name

tez.grouping.min-size

Required

true

Queue Capacity Multiplier**Description**

The multiplier for available queue capacity when determining number of tasks for a Vertex. 1.7 with 100% queue available implies generating a number of tasks roughly equal to 170% of the available containers on the queue.

Related Name

tez.grouping.split-waves

Default Value

1.7

API Name

tez.grouping.split-waves

Required

true

Tez history events directory**Description**

Directory where proto logger writes the history events, should generally be sys.db database directory.

Related Name

tez.history.logging.proto-base-dir

Default Value

/warehouse/tablespace/managed/hive/sys.db

API Name

tez.history.logging.proto-base-dir

Required

true

DAGs per Group**Description**

DAGs per group.

Related Name

tez.history.logging.timeline-cache-plugin.old-num-dags-per-group

Default Value

5

API Name

tez.history.logging.timeline-cache-plugin.old-num-dags-per-group

Required

true

Enable Intermediate Data Compression**Description**

Whether intermediate data should be compressed or not.

Related Name

tez.runtime.compress

Default Value

true

API Name

tez.runtime.compress

Required

true

Codec for Compressing Intermediate Data

Description

The codec to be used if compressing intermediate data. Only applicable if `tez.runtime.compress` is enabled.

Related Name

`tez.runtime.compress.codec`

Default Value

`org.apache.hadoop.io.compress.SnappyCodec`

API Name

`tez.runtime.compress.codec`

Required

true

Publish Configuration Information

Description

Whether to publish configuration information to History logger.

Related Name

`tez.runtime.convert.user-payload.to.history-text`

Default Value

false

API Name

`tez.runtime.convert.user-payload.to.history-text`

Required

true

Sort Buffer Size

Description

The size of the sort buffer when output needs to be sorted.

Related Name

`tez.runtime.io.sort.mb`

Default Value

272 MiB

API Name

`tez.runtime.io.sort.mb`

Required

true

Enable Accessing the Local Files Directly

Description

If the shuffle input is on the local host bypass the http fetch and access the files directly.

Related Name

`tez.runtime.optimize.local.fetch`

Default Value

true

API Name

tez.runtime.optimize.local.fetch

Required

true

Pipeline Sorter Sort Threads**Description**

Tez runtime pipelined sorter sort threads.

Related Name

tez.runtime.pipelined.sorter.sort.threads

Default Value

2

API Name

tez.runtime.pipelined.sorter.sort.threads

Required

true

Fraction of Memory to Retain Shuffled Data**Description**

Fraction (0-1) of the available memory which can be used to retain shuffled data.

Related Name

tez.runtime.shuffle.fetch.buffer.percent

Default Value

0.6

API Name

tez.runtime.shuffle.fetch.buffer.percent

Required

true

Keep the Shuffle Connection Alive**Description**

This property determines if the shuffle connection should be kept alive. If not, then the connection needs to be reestablished.

Related Name

tez.runtime.shuffle.keep-alive.enabled

Default Value

true

API Name

tez.runtime.shuffle.keep-alive.enabled

Required

true

Maximum Percent of Shuffle Segment**Description**

This property determines the maximum size of a shuffle segment which can be fetched to memory. Fraction (0-1) of shuffle memory (after applying `tez.runtime.shuffle.fetch.buffer.percent`).

Related Name

`tez.runtime.shuffle.memory.limit.percent`

Default Value

0.25

API Name

`tez.runtime.shuffle.memory.limit.percent`

Required

true

Buffer Size for Unordered Output**Description**

The size of the buffer when output does not require to be sorted.

Related Name

`tez.runtime.unordered.output.buffer.size-mb`

Default Value

100 MiB

API Name

`tez.runtime.unordered.output.buffer.size-mb`

Required

true

Timeout for Application Master for a Task**Description**

Time (in seconds) for which the Tez Application Master should wait for a DAG to be submitted before shutting down.

Related Name

`tez.session.am.dag.submit.timeout.secs`

Default Value

5 minute(s)

API Name

`tez.session.am.dag.submit.timeout.secs`

Required

true

Timeout for Application Master to Come up**Description**

Time (in seconds) to wait for Application Master to come up when trying to submit a DAG from the client.

Related Name

`tez.session.client.timeout.secs`

Default Value

-1 second(s)

API Name

tez.session.client.timeout.secs

Required

true

ScatterGather Connection Maximum Fraction of Tasks**Description**

In case of a ScatterGather connection, once this fraction of source tasks have completed, all tasks on the current vertex can be scheduled. Number of tasks ready for scheduling on the current vertex scales linearly between min-fraction and max-fraction.

Related Name

tez.shuffle-vertex-manager.max-src-fraction

Default Value

0.4

API Name

tez.shuffle-vertex-manager.max-src-fraction

Required

true

ScatterGather Connection Minimum Fraction of Tasks**Description**

In case of a ScatterGather connection, the fraction of source tasks which should complete before tasks for the current vertex are schedule.

Related Name

tez.shuffle-vertex-manager.min-src-fraction

Default Value

0.2

API Name

tez.shuffle-vertex-manager.min-src-fraction

Required

true

TEZ Staging directory**Description**

The staging dir used while submitting DAGs.

Related Name

tez.staging-dir

Default Value

/tmp/\$user.name/staging

API Name

tez.staging-dir

Required

true

Heartbeat Interval**Description**

Time interval at which task counters are sent to the Application Master.

Related Name

tez.task.am.heartbeat.counter.interval-ms.max

Default Value

4 second(s)

API Name

tez.task.am.heartbeat.counter.interval-ms.max

Required

true

Generate Counters on a Per-Edge Basis

Description

Whether to generate counters on a per-edge basis for a Tez DAG. Helpful for in-depth analysis.

Related Name

tez.task.generate.counters.per.io

Default Value

true

API Name

tez.task.generate.counters.per.io

Required

true

Maximum Time Between Tasks

Description

The maximum amount of time, in seconds, to wait before a task asks an Application Master for another task.

Related Name

tez.task.get-task.sleep.interval-ms.max

Default Value

200 millisecond(s)

API Name

tez.task.get-task.sleep.interval-ms.max

Required

true

Tez Task Default Command Line Options

Description

Cluster default Java options for tasks. These will be prepended to the properties specified via tez.task.launch.cmd-opts.

Related Name

tez.task.launch.cluster-default.cmd-opts

Default Value

-server -Djava.net.preferIPv4Stack=true

API Name

tez.task.launch.cluster-default.cmd-opts

Required

true

Tez Task Command Line Options**Description**

Java options for tasks. The Xmx value is derived based on `tez.task.resource.memory.mb` and is 80% of this value by default. Used only if the value is not specified explicitly by the DAG definition.

Related Name`tez.task.launch.cmd-opts`**Default Value**

`-XX:+PrintGCDetails -verbose:gc -XX:+UseNUMA -XX:+UseG1GC -XX:+ResizeTLAB -XX:+HeapDumpOnOutOfMemoryError -XX:HeapDumpPath=/tmp`

API Name`tez.task.launch.cmd-opts`**Required**

true

Tez Task Environment Settings**Description**

Additional execution environment entries for tez. This is not an additive property. You must preserve the original value if you want to have access to native libraries. Used only if the value is not specified explicitly by the DAG definition.

Related Name`tez.task.launch.env`**Default Value**`LD_LIBRARY_PATH=/opt/cloudera/parcels/CDH/lib/hadoop/lib/native`**API Name**`tez.task.launch.env`**Required**

true

Maximum Number of Events in a Heartbeat**Description**

Maximum number of events to fetch from the Application Master by the tasks in a single heartbeat.

Related Name`tez.task.max-events-per-heartbeat`**Default Value**

500

API Name`tez.task.max-events-per-heartbeat`**Required**

true

Tez Task Memory**Description**

The amount of memory to be used by launched tasks. Used only if the value is not specified explicitly by the DAG definition.

Related Name

tez.task.resource.memory.mb

Default Value

1536 MiB

API Name

tez.task.resource.memory.mb

Required

true

Tez UI URL Base**Description**

The base of the Tez UI URL.

Related Name

tez.tez-ui.history-url.base

Default Value**API Name**

tez.tez-ui.history-url.base

Required

false

Use Hadoop Libs**Description**

This being true implies that the deployment is relying on hadoop jars being available on the cluster on all nodes.

Related Name

tez.use.cluster.hadoop-lib

Default Value

false

API Name

tez.use.cluster.hadoop-lib

Required

true

Enable Yarn Timeline-Service**Description**

Timeline service version we're currently using.

Related Name

yarn.timeline-service.enabled

Default Value

false

API Name

yarn.timeline-service.enabled

Required

true

YARN Service**Description**

Name of the YARN service that this Tez service instance depends on

Related Name**Default Value****API Name**

yarn_service

Required

true

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml**Description**

Whether to suppress configuration warnings produced by the Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_tez-conf/tez-site.xml_client_config_safety_valve

Required

true

Suppress Configuration Validator: Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Tez Application Master Default Command Line Options

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master Default Command Line Options parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.launch.cluster-default.cmd-opts

Required

true

Suppress Parameter Validation: Tez Application Master Command Line Options

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master Command Line Options parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.launch.cmd-opts

Required

true

Suppress Parameter Validation: Tez Application Master Environment Settings**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master Environment Settings parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.launch.env

Required

true

Suppress Parameter Validation: Number of Recovery Runs**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Recovery Runs parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.max.app.attempts

Required

true

Suppress Parameter Validation: History URL Template**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the History URL Template parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.tez-ui.history-url.template

Required

true

Suppress Parameter Validation: Tez Application Master View ACLs**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master View ACLs parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.am.view-acls

Required

true

Suppress Parameter Validation: Tez Additional Classpath**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Additional Classpath parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.cluster.additional.classpath.prefix

Required

true

Suppress Parameter Validation: Tez history events directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez history events directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.history.logging.proto-base-dir

Required

true

Suppress Parameter Validation: DAGs per Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DAGs per Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.history.logging.timeline-cache-plugin.old-num-dags-per-group

Required

true

Suppress Parameter Validation: Codec for Compressing Intermediate Data**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Codec for Compressing Intermediate Data parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.runtime.compress.codec

Required

true

Suppress Parameter Validation: TEZ Staging directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TEZ Staging directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.staging-dir

Required

true

Suppress Parameter Validation: Tez Task Default Command Line Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Task Default Command Line Options parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.task.launch.cluster-default.cmd-opts

Required

true

Suppress Parameter Validation: Tez Task Command Line Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Task Command Line Options parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.task.launch.cmd-opts

Required

true

Suppress Parameter Validation: Tez Task Environment Settings

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Task Environment Settings parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.task.launch.env

Required

true

Suppress Parameter Validation: Tez UI URL Base

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez UI URL Base parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez.tez-ui.history-url.base

Required

true

Suppress Parameter Validation: Tez Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_tez_service_env_safety_valve

Required

true

YARN Properties in Cloudera Runtime 7.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/hadoop

API Name

client_config_root_dir

Required

true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

Description

For advanced use only, a string to be inserted into the client configuration for mapred-site.xml.

Related Name**Default Value****API Name**

mapreduce_client_config_safety_valve

Required

false

Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh

Description

For advanced use only, key-value pairs (one on each line) to be inserted into the client configuration for hadoop-env.sh

Related Name**Default Value****API Name**

mapreduce_client_env_safety_valve

Required

false

Client Java Configuration Options

Description

These are Java command-line arguments. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name**Default Value**

-Djava.net.preferIPv4Stack=true

API Name

mapreduce_client_java_opts

Required

false

YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

Description

For advanced use only, a string to be inserted into the client configuration for yarn-site.xml.

Related Name**Default Value****API Name**

yarn_client_config_safety_valve

Required

false

Compression

Compression Level of Codecs

Description

Compression level for the codec used to compress MapReduce outputs. Default compression is a balance between speed and compression ratio.

Related Name

zlib.compress.level

Default Value

DEFAULT_COMPRESSION

API Name

zlib_compress_level

Required

false

Logs

Gateway Logging Threshold

Description

The minimum log level for Gateway logs

Related Name**Default Value**

INFO

API Name
log_threshold
Required
false

Monitoring

Enable Log Event Capture

Description
When set, each role identifies important log events and forwards them to Cloudera Manager.
Related Name
Default Value
true
API Name
catch_events
Required
false

Enable Configuration Change Alerts

Description
When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name
Default Value
false
API Name
enable_config_alerts
Required
false

Other

Alternatives Priority

Description
The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.
Related Name
Default Value
92
API Name
client_config_priority
Required
true

Client Failover Sleep Base Time

Description

Base sleep time between failover attempts. Used only if RM HA is enabled.

Related Name

yarn.client.failover-sleep-base-ms

Default Value

100 millisecond(s)

API Name

client_failover_sleep_base

Required

false

Client Failover Sleep Max Time

Description

Maximum sleep time between failover attempts. Used only if RM HA is enabled.

Related Name

yarn.client.failover-sleep-max-ms

Default Value

2 second(s)

API Name

client_failover_sleep_max

Required

false

Running Job History Location

Description

Location to store the job history files of running jobs. This is a path on the host where the JobTracker is running.

Related Name

hadoop.job.history.location

Default Value

/var/log/hadoop-mapreduce/history

API Name

hadoop_job_history_dir

Required

false

SequenceFile I/O Buffer Size

Description

Size of buffer for read and write operations of SequenceFiles.

Related Name

io.file.buffer.size

Default Value

64 KiB

API Name

io_file_buffer_size

Required

false

I/O Sort Factor**Description**

The number of streams to merge at the same time while sorting files. That is, the number of sort heads to use during the merge sort on the reducer side. This determines the number of open file handles. Merging more files in parallel reduces merge sort iterations and improves run time by eliminating disk I/O. Note that merging more files in parallel uses more memory. If 'io.sort.factor' is set too high or the maximum JVM heap is set too low, excessive garbage collection will occur. The Hadoop default is 10, but Cloudera recommends a higher value. Will be part of generated client configuration.

Related Name

mapreduce.task.io.sort.factor

Default Value

64

API Name

io_sort_factor

Required

false

I/O Sort Memory Buffer (MiB)**Description**

The total amount of memory buffer, in megabytes, to use while sorting files. Note that this memory comes out of the user JVM heap size (meaning total user JVM heap - this amount of memory = total user usable heap space). Note that Cloudera's default differs from Hadoop's default; Cloudera uses a bigger buffer by default because modern machines often have more RAM. The smallest value across all TaskTrackers will be part of generated client configuration.

Related Name

mapreduce.task.io.sort.mb

Default Value

256 MiB

API Name

io_sort_mb

Required

false

I/O Sort Spill Percent**Description**

The soft limit in either the buffer or record collection buffers. When this limit is reached, a thread will begin to spill the contents to disk in the background. Note that this does not imply any chunking of data to the spill. A value less than 0.5 is not recommended. The syntax is in decimal units; the default is 80% and is formatted 0.8. Will be part of generated client configuration.

Related Name

mapreduce.map.sort.spill.percent

Default Value

0.8

API Name

io_sort_spill_percent

Required

false

Use Compression on Map Outputs**Description**

If enabled, uses compression on the map outputs before they are sent across the network. Will be part of generated client configuration.

Related Name

mapreduce.map.output.compress

Default Value

true

API Name

mapred_compress_map_output

Required

false

Compression Codec of MapReduce Map Output**Description**

For MapReduce map outputs that are compressed, specify the compression codec to use. Will be part of generated client configuration.

Related Name

mapreduce.map.output.compress.codec

Default Value

org.apache.hadoop.io.compress.SnappyCodec

API Name

mapred_map_output_compression_codec

Required

false

Map Tasks Speculative Execution**Description**

If enabled, multiple instances of some map tasks may be executed in parallel.

Related Name

mapreduce.map.speculative

Default Value

false

API Name

mapred_map_tasks_speculative_execution

Required

false

Compress MapReduce Job Output**Description**

Compress the output of MapReduce jobs. Will be part of generated client configuration.

Related Name

mapreduce.output.fileoutputformat.compress

Default Value

false

API Name

mapred_output_compress

Required

false

Compression Codec of MapReduce Job Output

Description

For MapReduce job outputs that are compressed, specify the compression codec to use. Will be part of generated client configuration.

Related Name

mapreduce.output.fileoutputformat.compress.codec

Default Value

org.apache.hadoop.io.compress.DefaultCodec

API Name

mapred_output_compression_codec

Required

false

Compression Type of MapReduce Job Output

Description

For MapReduce job outputs that are compressed as SequenceFiles, you can select one of these compression type options: NONE, RECORD or BLOCK. Cloudera recommends BLOCK. Will be part of generated client configuration.

Related Name

mapreduce.output.fileoutputformat.compress.type

Default Value

BLOCK

API Name

mapred_output_compression_type

Required

false

Default Number of Parallel Transfers During Shuffle

Description

The default number of parallel transfers run by reduce during the copy (shuffle) phase. This number is calculated by the following formula: $\min(\text{number_of_nodes}, n * \min(\text{number_of_cores_per_node}, \text{number_of_spindles_per_node}))$ where the n represents how many streams you want to run per core/spindle. A value of 10 for n is appropriate in most cases. Will be part of generated client configuration.

Related Name

mapreduce.reduce.shuffle.parallelcopies

Default Value

10

API Name

mapred_reduce_parallel_copies

Required

false

Number of Map Tasks to Complete Before Reduce Tasks**Description**

Fraction of the number of map tasks in the job which should be completed before reduce tasks are scheduled for the job.

Related Name

mapreduce.job.reduce.slowstart.completedmaps

Default Value

0.8

API Name

mapred_reduce_slowstart_completed_maps

Required

false

Default Number of Reduce Tasks per Job**Description**

The default number of reduce tasks per job. Will be part of generated client configuration.

Related Name

mapreduce.job.reduces

Default Value

1

API Name

mapred_reduce_tasks

Required

false

Reduce Tasks Speculative Execution**Description**

If enabled, multiple instances of some reduce tasks may be executed in parallel.

Related Name

mapreduce.reduce.speculative

Default Value

false

API Name

mapred_reduce_tasks_speculative_execution

Required

false

Mapreduce Submit Replication

Description

The replication level for submitted job files.

Related Name

mapreduce.client.submit.file.replication

Default Value

10

API Name

mapred_submit_replication

Required

false

Mapreduce Task Timeout

Description

The number of milliseconds before a task will be terminated if it neither reads an input, writes an output, nor updates its status string.

Related Name

mapreduce.task.timeout

Default Value

10 minute(s)

API Name

mapred_task_timeout

Required

false

MR Application Environment

Description

Additional execution environment entries for map and reduce task processes.

Related Name

mapreduce.admin.user.env

Default Value

LD_LIBRARY_PATH=\$HADOOP_COMMON_HOME/lib/native:\$JAVA_LIBRARY_PATH

API Name

mapreduce_admin_user_env

Required

false

Maximum Number of Attempts for MapReduce Jobs

Description

The maximum number of application attempts for MapReduce jobs. The value of this parameter overrides ApplicationMaster Maximum Attempts for MapReduce jobs.

Related Name

mapreduce.am.max-attempts

Default Value

2

API Name

mapreduce_am_max_attempts

Required

false

MR Application Classpath**Description**

Classpaths to include for MapReduce applications. During evaluation, the string '{version}' in the value of this parameter will be replaced by the actual MapReduce version.

Related Name

mapreduce.application.classpath

Default Value

\$SHADOOP_CLIENT_CONF_DIR \$PWD/mr-framework/* \$MR2_CLASSPATH

API Name

mapreduce_application_classpath

Required

false

MR Application Framework Path**Description**

Path for MapReduce application framework. During evaluation, the string '{version}' in the value of this parameter will be replaced by the actual MapReduce version.

Related Name

mapreduce.application.framework.path

Default Value

/user/yarn/mapreduce/mr-framework/version-mr-framework.tar.gz#mr-framework

API Name

mapreduce_application_framework_path

Required

false

Application Framework**Description**

The application framework to run jobs with. If not set, jobs will be run with the local job runner.

Related Name

mapreduce.framework.name

Default Value

yarn

API Name

mapreduce_framework_name

Required

false

ACL For Modifying A Job**Description**

Specifies a list of users and/or groups that are allowed to modify job operations. For specifying a list of users and groups the format to use is "user1,user2 group1,group". If set to '*', it allows all users/groups to modify this job. If set to ' ' (i.e. space), it allows none. Irrespective of this ACL configuration, (a) job-owner, (b) the user who started the cluster, (c) members of an admin configured supergroup configured via `mapreduce.cluster.permissions.supergroup` and (d) queue administrators of the queue to which this job was submitted to configured via `acl-administer-jobs` for the specific queue in `mapred-queues.xml` can do all the modification operations on a job. Ignored unless `mapreduce.clouster.acls.enabled` is true.

Related Name

`mapreduce.job.acl-modify-job`

Default Value**API Name**

`mapreduce_job_acl_modify_job`

Required

false

ACL For Viewing A Job**Description**

Specifies a list of users and/or groups that are allowed to view private job details. For specifying a list of users and groups the format to use is "user1,user2 group1,group". If set to '*', it allows all users/groups to modify this job. If set to ' ' (i.e. space), it allows none. Irrespective of this ACL configuration, (a) job-owner, (b) the user who started the cluster, (c) members of an admin configured supergroup configured via `mapreduce.cluster.permissions.supergroup` and (d) queue administrators of the queue to which this job was submitted to configured via `acl-administer-jobs` for the specific queue in `mapred-queues.xml` can do all the view operations on a job. Ignored unless `mapreduce.cluster.acls.enabled` is true.

Related Name

`mapreduce.job.acl-view-job`

Default Value**API Name**

`mapreduce_job_acl_view_job`

Required

false

Redacted MapReduce Job Properties**Description**

A comma-separated list of job properties to redact in MapReduce.

Related Name

`mapreduce.job.redacted-properties`

Default Value

`fs.s3a.access.key fs.s3a.secret.key fs.adl.oauth2.credential dfs.adls.oauth2.credential fs.azure.account.oauth2.client.secret`

API Name

`mapreduce_job_redacted_properties`

Required

false

JobTracker MetaInfo Maxsize

Description

The maximum permissible size of the split metainfo file. The JobTracker won't attempt to read split metainfo files bigger than the configured value. No limits if set to -1.

Related Name

mapreduce.job.split.metainfo.maxsize

Default Value

10000000

API Name

mapreduce_jobtracker_split_metainfo_maxsize

Required

false

Map Task Java Opts Base

Description

Java opts for the map processes. The following symbol, if present, will be interpolated: @taskid@ is replaced by current TaskID. Any other occurrences of '@' will go unchanged. For example, to enable verbose gc logging to a file named for the taskid in /tmp pass a value of: "-verbose:gc -Xloggc:/tmp/@taskid@.gc". The configuration variable 'Map Task Memory' can be used to control the maximum memory of the map processes.

Related Name

mapreduce.map.java.opts

Default Value

-Djava.net.preferIPv4Stack=true

API Name

mapreduce_map_java_opts

Required

false

Reduce Task Java Opts Base

Description

Java opts for the reduce processes. The following symbol, if present, will be interpolated: @taskid@ is replaced by current TaskID. Any other occurrences of '@' will go unchanged. For example, to enable verbose gc logging to a file named for the taskid in /tmp pass a value of: "-verbose:gc -Xloggc:/tmp/@taskid@.gc". The configuration variable 'Reduce Task Memory' can be used to control the maximum memory of the reduce processes.

Related Name

mapreduce.reduce.java.opts

Default Value

-Djava.net.preferIPv4Stack=true

API Name

mapreduce_reduce_java_opts

Required

false

ApplicationMaster Environment

Description

Environment variables for the MapReduce ApplicationMaster. These settings can be overridden in the ApplicationMaster User Environment (yarn.app.mapreduce.am.env).

Related Name

yarn.app.mapreduce.am.admin.user.env

Default Value

LD_LIBRARY_PATH=\$HADOOP_COMMON_HOME/lib/native:\$JAVA_LIBRARY_PATH

API Name

yarn_app_mapreduce_am_admin_user_env

Required

false

ApplicationMaster Java Opts Base

Description

Java command line arguments passed to the MapReduce ApplicationMaster.

Related Name

yarn.app.mapreduce.am.command-opts

Default Value

-Djava.net.preferIPv4Stack=true

API Name

yarn_app_mapreduce_am_command_opts

Required

false

Performance

JHist File Format

Description

File format the AM will use when generating the .jhist file. Valid values are "json" for text output and "binary" for faster parsing.

Related Name

mapreduce.jobhistory.jhist.format

Default Value

binary

API Name

mapred_jobhistory_jhist_format

Required

false

Enable Optimized Map-side Output Collector

Description

Whether map tasks should attempt to use the optimized native implementation of the map-side output collector. This can improve performance of many jobs that are shuffle-intensive. Experimental in CDH 5.2.

Related Name**Default Value**

false

API Name

mapreduce_enable_native_map_output_collector

Required

false

Job Counter Groups Limit**Description**

Limit on the number of counter groups allowed per job.

Related Name

mapreduce.job.counters.groups.max

Default Value

50

API Name

mapreduce_job_counter_groups_limit

Required

false

Job Counters Limit**Description**

Limit on the number of counters allowed per job.

Related Name

mapreduce.job.counters.max

Default Value

120

API Name

mapreduce_job_counters_limit

Required

false

Enable Ubertask Optimization**Description**

Whether to enable ubertask optimization, which runs "sufficiently small" jobs sequentially within a single JVM. "Small" is defined by the mapreduce.job.ubertask.maxmaps, mapreduce.job.ubertask.maxreduces, and mapreduce.job.ubertask.maxbytes settings.

Related Name

mapreduce.job.ubertask.enable

Default Value

false

API Name

mapreduce_job_ubertask_enabled

Required

false

Ubertask Maximum Job Size

Description

Threshold for number of input bytes, beyond which a job is considered too big for ubertask optimization. If no value is specified, dfs.block.size is used as a default.

Related Name

mapreduce.job.ubertask.maxbytes

Default Value**API Name**

mapreduce_job_ubertask_maxbytes

Required

false

Ubertask Maximum Maps

Description

Threshold for number of maps, beyond which a job is considered too big for ubertask optimization.

Related Name

mapreduce.job.ubertask.maxmaps

Default Value

9

API Name

mapreduce_job_ubertask_maxmaps

Required

false

Ubertask Maximum Reduces

Description

Threshold for number of reduces, beyond which a job is considered too big for ubertask optimization. Note: As of CDH 5, MR2 does not support more than one reduce in an ubertask. (Zero is valid.)

Related Name

mapreduce.job.ubertask.maxreduces

Default Value

1

API Name

mapreduce_job_ubertask_maxreduces

Required

false

Resource Management

Client Java Heap Size in Bytes

Description

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

825955249 B

API Name

mapreduce_client_java_heapsize

Required

false

Heap to Container Size Ratio

Description

The ratio of heap size to container size for both map and reduce tasks. The heap should be smaller than the container size to allow for some overhead of the JVM.

Related Name

mapreduce.job.heap.memory-mb.ratio

Default Value

0.8

API Name

mapreduce_job_heap_memory_mb_ratio

Required

false

Map Task CPU Virtual Cores

Description

The number of virtual CPU cores allocated for each map task of a job. This parameter has no effect prior to CDH 4.4.

Related Name

mapreduce.map.cpu.vcores

Default Value

1

API Name

mapreduce_map_cpu_vcores

Required

false

Map Task Maximum Heap Size

Description

The maximum Java heap size, in bytes, of the map processes. This number will be formatted and concatenated with 'Map Task Java Opts Base' to pass to Hadoop.

Related Name**Default Value**

0 B

API Name

mapreduce_map_java_opts_max_heap

Required

false

Map Task Memory

Description

The amount of physical memory, in MiB, allocated for each map task of a job. For versions before CDH 5.5, if not specified, by default it is set to 1024. For CDH 5.5 and higher, a value less than 128 is not supported but if it is specified as 0, the amount of physical memory to request is inferred from Map Task Maximum Heap Size and Heap to Container Size Ratio. If Map Task Maximum Heap Size is not specified, by default the amount of physical memory to request is set to 1024.

Related Name

mapreduce.map.memory.mb

Default Value

0 B

API Name

mapreduce_map_memory_mb

Required

false

Reduce Task CPU Virtual Cores

Description

The number of virtual CPU cores for each reduce task of a job.

Related Name

mapreduce.reduce.cpu.vcores

Default Value

1

API Name

mapreduce_reduce_cpu_vcores

Required

false

Reduce Task Maximum Heap Size

Description

The maximum Java heap size, in bytes, of the reduce processes. This number will be formatted and concatenated with 'Reduce Task Java Opts Base' to pass to Hadoop.

Related Name**Default Value**

0 B

API Name

mapreduce_reduce_java_opts_max_heap

Required

false

Reduce Task Memory

Description

The amount of physical memory, in MiB, allocated for each reduce task of a job. For versions before CDH 5.5, if not specified, by default it is set to 1024. For CDH 5.5 and higher, a value less than 128 is not supported but if it is specified as 0, the amount of physical memory to request is inferred from Reduce Task Maximum Heap Size and Heap to Container Size Ratio. If Reduce Task

Maximum Heap Size is not specified, by default the amount of physical memory to request is set to 1024. This parameter has no effect prior to CDH 4.4.

Related Name

mapreduce.reduce.memory.mb

Default Value

0 B

API Name

mapreduce_reduce_memory_mb

Required

false

ApplicationMaster Java Maximum Heap Size

Description

The maximum heap size, in bytes, of the Java MapReduce ApplicationMaster. This number will be formatted and concatenated with 'ApplicationMaster Java Opts Base' to pass to Hadoop.

Related Name**Default Value**

825955249 B

API Name

yarn_app_mapreduce_am_max_heap

Required

false

ApplicationMaster Virtual CPU Cores

Description

The virtual CPU cores requirement, for the ApplicationMaster. This parameter has no effect prior to CDH 4.4.

Related Name

yarn.app.mapreduce.am.resource.cpu-vcores

Default Value

1

API Name

yarn_app_mapreduce_am_resource_cpu_vcores

Required

false

ApplicationMaster Memory

Description

The physical memory requirement, in MiB, for the ApplicationMaster.

Related Name

yarn.app.mapreduce.am.resource.mb

Default Value

1 GiB

API Name

yarn_app_mapreduce_am_resource_mb

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Running Job History Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Running Job History Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_job_history_dir

Required

true

Suppress Parameter Validation: I/O Sort Factor**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the I/O Sort Factor parameter.

Related Name

Default Value

false

API Name

role_config_suppression_io_sort_factor

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Compression Codec of MapReduce Map Output**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Compression Codec of MapReduce Map Output parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapred_map_output_compression_codec

Required

true

Suppress Parameter Validation: Compression Codec of MapReduce Job Output**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Compression Codec of MapReduce Job Output parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapred_output_compression_codec

Required

true

Suppress Parameter Validation: MR Application Environment**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MR Application Environment parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_admin_user_env

Required

true

Suppress Parameter Validation: Maximum Number of Attempts for MapReduce Jobs**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Number of Attempts for MapReduce Jobs parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_am_max_attempts

Required

true

Suppress Parameter Validation: MR Application Classpath**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MR Application Classpath parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_application_classpath

Required

true

Suppress Parameter Validation: MR Application Framework Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MR Application Framework Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_application_framework_path

Required

true

Suppress Parameter Validation: MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_client_config_safety_valve

Required

true

Suppress Parameter Validation: Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_client_env_safety_valve

Required

true

Suppress Parameter Validation: YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_client_config_safety_valve

Required

true

JobHistory Server

Advanced

Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)

Description

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into hadoop-metrics2.properties.

Related Name**Default Value****API Name**

hadoop_metrics2_safety_valve

Required

false

System Group

Description

The group that the JobHistory Server process should run as.

Related Name**Default Value**

hadoop

API Name

history_process_groupname

Required

true

System User

Description

The user that the JobHistory Server process should run as.

Related Name**Default Value**

mapred

API Name

history_process_username

Required

true

JobHistory Server Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

For advanced use only. A string to be inserted into yarn-site.xml for this role only.

Related Name**Default Value****API Name**

jobhistory_config_safety_valve

Required

false

JobHistory Server Advanced Configuration Snippet (Safety Valve) for mapred-site.xml**Description**

For advanced use only. A string to be inserted into mapred-site.xml for this role only.

Related Name**Default Value****API Name**

jobhistory_mapred_safety_valve

Required

false

JobHistory Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

JOBHISTORY_role_env_safety_valve

Required

false

JobHistory Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Java Configuration Options for JobHistory Server**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS -Dlibrary.leveldbjni.path=CMF_CONF_DIR

API Name

mr2_jobhistory_java_opts

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

	3
API Name	
	process_start_retries
Required	
	false

Process Start Wait Timeout

Description	The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.
Related Name	
Default Value	20
API Name	
	process_start_secs
Required	
	false

Logs

JobHistory Server Logging Threshold

Description	The minimum log level for JobHistory Server logs
Related Name	
Default Value	INFO
API Name	
	log_threshold
Required	
	false

JobHistory Server Maximum Log File Backups

Description	The maximum number of rolled log files to keep for JobHistory Server logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	
	max_log_backup_index
Required	
	false

JobHistory Server Max Log Size

Description

The maximum size, in megabytes, per log file for JobHistory Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

JobHistory Server Log Directory

Description

Directory where JobHistory Server will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hadoop-mapreduce

API Name

mr2_jobhistory_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

jobhistory_fd_thresholds

Required

false

Garbage Collection Duration Thresholds

Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

jobhistory_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period**Description**

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

jobhistory_gc_duration_window

Required

false

JobHistory Server Host Health Test**Description**

When computing the overall JobHistory Server health, consider the host's health.

Related Name**Default Value**

true

API Name

jobhistory_host_health_enabled

Required

false

JobHistory Server Process Health Test**Description**

Enables the health test that the JobHistory Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

jobhistory_scm_health_enabled

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

jobhistory_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

jobhistory_web_metric_collection_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files

Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .*, alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .*, alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.
- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.
- **streamThreshold (optional)** - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled (optional)** - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`role_triggers`

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other**Enable Job ACL****Description**

Specifies whether ACLs should be checked for authorization when users perform various operations. If enabled, access control checks are made by MapReduce when requests are made by users for queue operations and job operations. Queue operations include submitting job to a queue

or killing a job in the queue. Job operations include viewing the job-details (See `mapreduce.job.acl-view-job`), or modifying a job (See `mapreduce.job.acl-modify-job`).

Related Name

`mapreduce.cluster.acls.enabled`

Default Value

`false`

API Name

`mapreduce_cluster_acls_enabled`

Required

`false`

Job History Files Cleaner Interval

Description

Time interval for history cleaner to check for files to delete. Files are only deleted if they are older than `mapreduce.jobhistory.max-age-ms`.

Related Name

`mapreduce.jobhistory.cleaner.interval`

Default Value

`1 day(s)`

API Name

`mapreduce_jobhistory_cleaner_interval`

Required

`false`

Job History Files Maximum Age

Description

Job history files older than this time duration will be deleted when the history cleaner runs.

Related Name

`mapreduce.jobhistory.max-age-ms`

Default Value

`7 day(s)`

API Name

`mapreduce_jobhistory_max_age_ms`

Required

`false`

Max Shuffle Connections

Description

Maximum allowed connections for the shuffle. Set to 0 (zero) to indicate no limit on the number of connections.

Related Name

`mapreduce.jobhistory.loadedjob.tasks.max`

Default Value

`-1`

API Name

mapreduce_shuffle_max_connections

Required

false

MapReduce ApplicationMaster Staging Root Directory**Description**

The root HDFS directory of the staging area for users' MR2 jobs; for example /user. The staging directories are always named after the user.

Related Name

yarn.app.mapreduce.am.staging-dir

Default Value

/user

API Name

yarn_app_mapreduce_am_staging_dir

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**MapReduce JobHistory Server Port****Description**

The port of the MapReduce JobHistory Server. Together with the hostname of the JobHistory role, forms the address.

Related Name

mapreduce.jobhistory.address

Default Value

10020

API Name

mapreduce_jobhistory_address

Required

false

MapReduce JobHistory Server Admin Interface Port

Description

The port of the MapReduce JobHistory Server administrative interface. Together with the host name of the JobHistory role forms the address.

Related Name

mapreduce.jobhistory.admin.address

Default Value

10033

API Name

mapreduce_jobhistory_admin_address

Required

false

MapReduce JobHistory Web Application HTTP Port

Description

The HTTP port of the MapReduce JobHistory Server web application. Together with the host name of the JobHistory role forms the address.

Related Name

mapreduce.jobhistory.webapp.address

Default Value

19888

API Name

mapreduce_jobhistory_webapp_address

Required

false

MapReduce JobHistory Web Application HTTPS Port (TLS/SSL)

Description

The HTTPS port of the MapReduce JobHistory Server web application. Together with the host name of the JobHistory role forms the address.

Related Name

mapreduce.jobhistory.webapp.https.address

Default Value

19890

API Name

mapreduce_jobhistory_webapp_https_address

Required

false

Bind JobHistory Server to Wildcard Address

Description

If enabled, the JobHistory Server binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name**Default Value**

false

API Name

yarn_jobhistory_bind_wildcard

Required

false

Resource Management**Java Heap Size of JobHistory Server in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

mr2_jobhistory_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Role-Specific Kerberos Principal

Description	Kerberos principal used by the JobHistory Server roles.
Related Name	
Default Value	mapred
API Name	kerberos_role_princ_name
Required	true

Stacks Collection

Stacks Collection Data Retention

Description	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name	stacks_collection_data_retention
Default Value	100 MiB
API Name	stacks_collection_data_retention
Required	false

Stacks Collection Directory

Description	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.
Related Name	stacks_collection_directory
Default Value	
API Name	stacks_collection_directory
Required	false

Stacks Collection Enabled

Description	Whether or not periodic stacks collection is enabled.
Related Name	stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_metrics2_safety_valve

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_history_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_history_process_username

Required

true

Suppress Parameter Validation: JobHistory Server Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jobhistory_config_safety_valve

Required

true

Suppress Parameter Validation: JobHistory Server Advanced Configuration Snippet (Safety Valve) for mapred-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jobhistory_mapred_safety_valve

Required

true

Suppress Parameter Validation: JobHistory Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jobhistory_role_env_safety_valve

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: JobHistory Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: MapReduce JobHistory Server Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Server Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_jobhistory_address

Required

true

Suppress Parameter Validation: MapReduce JobHistory Server Admin Interface Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Server Admin Interface Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_jobhistory_admin_address

Required

true

Suppress Parameter Validation: MapReduce JobHistory Web Application HTTP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Web Application HTTP Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_jobhistory_webapp_address

Required

true

Suppress Parameter Validation: MapReduce JobHistory Web Application HTTPS Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Web Application HTTPS Port (TLS/SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapreduce_jobhistory_webapp_https_address

Required

true

Suppress Parameter Validation: Java Configuration Options for JobHistory Server**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for JobHistory Server parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mr2_jobhistory_java_opts

Required

true

Suppress Parameter Validation: JobHistory Server Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: MapReduce ApplicationMaster Staging Root Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce ApplicationMaster Staging Root Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_app_mapreduce_am_staging_dir

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_file_descriptor

Required

true

Suppress Health Test: GC Duration**Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_gc_duration

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_unexpected_exits

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_jobhistory_web_metric_collection

Required

true

NodeManager**Advanced****Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)****Description**

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into hadoop-metrics2.properties.

Related Name**Default Value****API Name**

hadoop_metrics2_safety_valve

Required

false

CGroups Hierarchy**Description**

Path (rooted in the cgroups hierarchy on the machine) where to place YARN-managed cgroups.

Related Name

yarn.nodemanager.linux-container-executor.cgroups.hierarchy

Default Value

/hadoop-yarn

API Name

linux_container_executor_cgroups_hierarchy

Required

false

NodeManager Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Healthchecker Script Arguments

Description

Comma-separated list of arguments which are to be passed to node health script when it is being launched.

Related Name

yarn.nodemanager.health-checker.script.opts

Default Value**API Name**

mapred_healthchecker_script_args

Required

false

Healthchecker Script Path

Description

Absolute path to the script which is periodically run by the node health monitoring service to determine if the node is healthy or not. If the value of this key is empty or the file does not exist in the location configured here, the node health monitoring service is not started.

Related Name

yarn.nodemanager.health-checker.script.path

Default Value**API Name**

mapred_healthchecker_script_path

Required

false

Java Configuration Options for NodeManager

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS -Dlibrary.leveldbjni.path=CMF_CONF_DIR

API Name

node_manager_java_opts

Required

false

NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

For advanced use only. A string to be inserted into yarn-site.xml for this role only.

Related Name**Default Value****API Name**

nodemanager_config_safety_valve

Required

false

Enable Container Launch Debug Information**Description**

Generate additional logs about container launches for e.g. a copy of the launch script and lists the directory contents of the container work dir also following symlinks to a max-depth of 5.

Related Name

yarn.nodemanager.log-container-debug-info.enabled

Default Value

false

API Name

nodemanager_log_container_debug_info_enabled

Required

false

NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml**Description**

For advanced use only. A string to be inserted into mapred-site.xml for this role only.

Related Name**Default Value****API Name**

nodemanager_mapred_safety_valve

Required

false

NodeManager Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

NODEMANAGER_role_env_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Localized Dir Deletion Delay**Description**

Number of seconds after an application finishes before the NodeManager's DeletionService will delete the application's localized file and log directory. To diagnose YARN application problems, set this property's value large enough (for example, to 600 = 10 minutes) to permit examination of these directories.

Related Name

yarn.nodemanager.delete.debug-delay-sec

Default Value

0

API Name

yarn_nodemanager_delete_debug_delay_sec

Required

false

Disk Health Checker Disk Utilization Watermark Low Threshold Percentage**Description**

The low threshold percentage of disk space used when a bad disk is marked as good. Values can range from 0.0 to 100.0. This applies to yarn.nodemanager.local-dirs and yarn.nodemanager.log-dirs. Note that if its value is more than yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-percentage or not set, it will be set to the same value as yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-percentage.

Related Name

yarn.nodemanager.disk-health-checker.disk-utilization-watermark-low-per-disk-percentage

Default Value**API Name**

yarn_nodemanager_disk_health_checker_disk_utilization_watermark_low_per_disk_percentage

Required

false

Disk Health Checker Frequency**Description**

Frequency, in milliseconds, of running disk health checker.

Related Name

yarn.nodemanager.disk-health-checker.interval-ms

Default Value

2 minute(s)

API Name

yarn_nodemanager_disk_health_checker_interval_ms

Required

false

Dish Health Checker Max Disk Utilization Percent

Description

The maximum percentage of disk space utilization allowed after which a disk is marked as bad. Values can range from 0.0 to 100.0. If the value is greater than or equal to 100, the NodeManager will check for full disk. This applies to local directories and log directories.

Related Name

yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-percentage

Default Value

90.0 %

API Name

yarn_nodemanager_disk_health_checker_max_disk_utilization_per_disk_percentage

Required

false

Disk Health Checker Minimum Health Disk Space

Description

The minimum space that must be available on a disk for it to be used. This applies to local directories and log directories.

Related Name

yarn.nodemanager.disk-health-checker.min-free-space-per-disk-mb

Default Value

0 B

API Name

yarn_nodemanager_disk_health_checker_min_free_space_per_disk_mb

Required

false

Disk Health Checker Minimum Health Disks Fraction

Description

The minimum fraction of number of disks to be healthy for the NodeManager to launch new containers. This correspond to both local directories and log directories; that is, if there are fewer healthy local directories (or log directories) available, then new containers will not be launched on this node.

Related Name

yarn.nodemanager.disk-health-checker.min-healthy-disks

Default Value

0.25

API Name

yarn_nodemanager_disk_health_checker_min_healthy_disks

Required

false

Docker on YARN

Enable Docker Containers

Description

Specifies if Docker containers in YARN are enabled.

Related Name**Default Value**

false

API Name

docker_on_yarn_enabled

Required

false

Allowed Devices for Docker Containers

Description

Specifies the devices that Docker containers are allowed to mount. By default, no devices are allowed to be mounted.

Related Name

docker.allowed.devices

Default Value**API Name**

yarn_docker_allowed_devices

Required

false

Allowed Read-Only Mounts for Docker Containers

Description

Specifies the directories that Docker containers are allowed to mount in read-only mode. NodeManager Local Directories and Cgroups root are always added to this list. Ensure that any additional default read-only mounts are also added here.

Related Name

docker.allowed.ro-mounts

Default Value**API Name**

yarn_docker_allowed_ro_mounts

Required

false

Allowed Read-Write Mounts for Docker Containers

Description

Specifies the directories that Docker containers are allowed to mount in read-write mode. NodeManager Local Directories and NodeManager Container Log Directories are always added to this list. Ensure that any additional default read-write mounts are also added here.

Related Name

docker.allowed.rw-mounts

Default Value**API Name**

yarn_docker_allowed_rw_mounts

Required

false

Allowed Volume Drivers for Docker Containers**Description**

Specifies the volume drivers which are allowed to be used with Docker. By default, no volume drivers are allowed.

Related Name

docker.allowed.volume-drivers

Default Value**API Name**

yarn_docker_allowed_volume_drivers

Required

false

Docker Binary Path**Description**

Specifies the path of the binary in the hosts that is used to launch Docker containers. Its default value is /usr/bin/docker.

Related Name

docker.binary

Default Value

/usr/bin/docker

API Name

yarn_docker_binary

Required

false

Enable No-new-privileges Flag for Docker Containers**Description**

Specifies if the no-new-privileges flag for docker run is enabled. The no-new-privileges flag ensures that the process or its children processes do not gain any additional privileges. Set to 'true' to enable.

Related Name

docker.no-new-privileges.enabled

Default Value

false

API Name

yarn_docker_no_new_privileges_enabled

Required

false

Trusted Registries for Docker Containers**Description**

Specifies the list of trusted docker registries for running trusted docker containers. By default, no registries are defined.

Related Name`docker.trusted.registries`**Default Value****API Name**`yarn_docker_trusted_registries`**Required**`false`**Allowed Docker Container Networks****Description**

Specifies the networks that are allowed for Docker containers. Valid values are determined by Docker networks available from the `docker network ls` command.

Related Name`yarn.nodemanager.runtime.linux.docker.allowed-container-networks`**Default Value**`host none bridge`**API Name**`yarn_nodemanager_runtime_linux_docker_allowed_container_networks`**Required**`false`**Docker Capabilities****Description**

Specifies the capabilities assigned to Docker containers when they are launched. The values may not be case-sensitive from a docker perspective, but Cloudera recommends to keep them uppercase.

Related Name`yarn.nodemanager.runtime.linux.docker.capabilities`**Default Value**`CHOWN, DAC_OVERRIDE, FSETID, FOWNER, MKNOD, NET_RAW, SETGID, SETUID, SETFCAP, SETPCAP, NET_BIND_SERVICE, SYS_CHROOT, KILL, AUDIT_WRITE`**API Name**`yarn_nodemanager_runtime_linux_docker_capabilities`**Required**`false`**Default Docker Container Network****Description**

Specifies which allowed network is used when launching Docker containers but no network is specified in the request. This network must be added to `yarn.nodemanager.runtime.linux.docker.allowed-container-networks`.

Related Name`yarn.nodemanager.runtime.linux.docker.default-container-network`**Default Value**`host`**API Name**

yarn_nodemanager_runtime_linux_docker_default_container_network

Required

false

Default Read-Only Mounts for Docker Containers**Description**

A list that specifies the default read-only mounts to be bind-mounted into all Docker containers that use DockerContainerRuntime. NodeManager Local Directories and Cgroups root are always added to this list. Ensure that any additional default read-only mounts are also added to the Allowed Read-Only Mounts list.

Related Name

yarn.nodemanager.runtime.linux.docker.default-ro-mounts

Default Value**API Name**

yarn_nodemanager_runtime_linux_docker_default_ro_mounts

Required

false

Default Read-Write Mounts for Docker Containers**Description**

A list that specifies the default read-write mounts to be bind-mounted into all Docker containers that use DockerContainerRuntime. NodeManager Local Directories and NodeManager Container Log Directories are always added to this list. Ensure that any additional default read-write mounts are also added to the Allowed Read-Write Mounts list.

Related Name

yarn.nodemanager.runtime.linux.docker.default-rw-mounts

Default Value**API Name**

yarn_nodemanager_runtime_linux_docker_default_rw_mounts

Required

false

Default Tempfs Mounts for Docker Containers**Description**

Specifies the directories in tmpfs that Docker containers are allowed to mount. By default, no directories are allowed in tmpfs to be mounted.

Related Name

yarn.nodemanager.runtime.linux.docker.default-tmpfs-mounts

Default Value**API Name**

yarn_nodemanager_runtime_linux_docker_default_tmpfs_mounts

Required

false

Allow Delayed Removal of Docker Containers**Description**

Specifies if Debug Deletion Delay is used for Docker containers. Debug Deletion Delay is useful for troubleshooting Docker container related launch failures. For more information, see `yarn.nodemanager.delete.debug-delay-sec`.

Related Name

`yarn.nodemanager.runtime.linux.docker.delayed-removal.allowed`

Default Value

false

API Name

`yarn_nodemanager_runtime_linux_docker_delayed_removal_allowed`

Required

false

Enable User Remapping for Docker Containers

Description

Specifies if Docker containers can run with the UID (User Identifier) and GID (Group Identifier) of the calling user.

Related Name

`yarn.nodemanager.runtime.linux.docker.enable-userremapping.allowed`

Default Value

true

API Name

`yarn_nodemanager_runtime_linux_docker_enable_userremapping_allowed`

Required

false

Allow Using Host PID Namespace for Docker Containers

Description

Specifies if Docker containers are allowed to use the host PID namespace.

Related Name

`yarn.nodemanager.runtime.linux.docker.host-pid-namespace.allowed`

Default Value

false

API Name

`yarn_nodemanager_runtime_linux_docker_host_pid_namespace_allowed`

Required

false

ACL for Privileged Docker Containers

Description

A comma-separated list that specifies the users who can request privileged Docker containers if privileged Docker containers are allowed.

Related Name

`yarn.nodemanager.runtime.linux.docker.privileged-containers.acl`

Default Value**API Name**

`yarn_nodemanager_runtime_linux_docker_privileged_containers_acl`**Required**`false`**Allow Privileged Docker Containers****Description**

Specifies if applications are allowed to run in privileged containers. Privileged containers are granted the complete set of capabilities and are not subject to the limitations imposed by the device cgroup controller. Use with extreme care!

Related Name`yarn.nodemanager.runtime.linux.docker.privileged-containers.allowed`**Default Value**`false`**API Name**`yarn_nodemanager_runtime_linux_docker_privileged_containers_allowed`**Required**`false`**User Remapping GID Threshold for Docker Containers****Description**

Specifies the minimum GID (Group Identifier) for a remapped user. Users with GIDs lower than this minimum value are not allowed to launch Docker containers when user remapping (`yarn.nodemanager.runtime.linux.docker.enable-userremapping.allowed`) is enabled.

Related Name`yarn.nodemanager.runtime.linux.docker.userremapping-gid-threshold`**Default Value**`1`**API Name**`yarn_nodemanager_runtime_linux_docker_userremapping_gid_threshold`**Required**`false`**User Remapping UID Threshold for Docker Containers****Description**

Specifies the minimum UID (User Identifier) for a remapped user. Users with UIDs lower than this minimum value are not allowed to launch Docker containers when user remapping (`yarn.nodemanager.runtime.linux.docker.enable-userremapping.allowed`) is enabled.

Related Name`yarn.nodemanager.runtime.linux.docker.userremapping-uid-threshold`**Default Value**`1`**API Name**`yarn_nodemanager_runtime_linux_docker_userremapping_uid_threshold`**Required**`false`

GPU Management

Enable GPU Usage

Description

Allows NodeManagers to provide GPU devices to YARN applications that request them.

Related Name**Default Value**

false

API Name

gpu_enabled

Required

false

NodeManager GPU Devices Allowed

Description

Specifies GPU devices which can be managed by YARN NodeManager (comma-separated). Manually specify GPU devices if auto detection of GPU devices failed or you only want a subset of GPU devices to be managed by YARN. A GPU device is identified by the minor device number and index: An example of manual specification is "0:0,1:1,2:2,3:4" to allow YARN NodeManager to manage GPU devices with indices 0/1/2/3 and minor number 0/1/2/4 numbers.

Related Name

yarn.nodemanager.resource-plugins.gpu.allowed-gpu-devices

Default Value

auto

API Name

gpu_plugin_allowed_devices

Required

false

NodeManager GPU Detection Executable

Description

Path to the executable program which YARN runs to get GPU-related information. When this value is empty (default), YARN NodeManager will try to locate the executable itself. An example value is: /usr/local/bin/nvidia-smi

Related Name

yarn.nodemanager.resource-plugins.gpu.path-to-discovery-executables

Default Value**API Name**

gpu_plugin_detector_path

Required

false

Log Aggregation

Log Aggregation Policy

Description

Specifies the types of container logs that are uploaded during the log aggregation.

Related Name

yarn.nodemanager.log-aggregation.policy.class

Default Value

org.apache.hadoop.yarn.server.nodemanager.containermanager.logaggregation.AllContainerLogAggregationPolicy

API Name

yarn_nodemanager_log_aggregation_policy_class

Required

false

Log Aggregation Roll Monitoring Interval

Description

Defines how often NodeManagers wake up to upload log files. If this value is 0 or less than 0, the logs are uploaded when the application is completed.

Related Name

yarn.nodemanager.log-aggregation.roll-monitoring-interval-seconds

Default Value

-1 second(s)

API Name

yarn_nodemanager_log_aggregation_roll_monitoring_interval_seconds

Required

false

Minimum Hard Limit for Log Aggregation Roll Monitoring Interval

Description

Defines the hard minimum value for yarn.nodemanager.log-aggregation.roll-monitoring-interval-seconds, if Log Aggregation Roll Monitoring Interval has been set to a positive value.

Related Name

yarn.nodemanager.log-aggregation.roll-monitoring-interval-seconds.min

Default Value

1 hour(s)

API Name

yarn_nodemanager_log_aggregation_roll_monitoring_interval_seconds_min

Required

false

Remote App Log Directory

Description

Specifies the path of the directory where application logs are stored after an application is completed.

Related Name

yarn.nodemanager.remote-app-log-dir

Default Value

/tmp/logs

API Name

yarn_nodemanager_remote_app_log_dir
Required
false

Remote App Log Directory Suffix

Description
The remote log directory is created at {yarn.nodemanager.remote-app-log-dir}/{user}/{thisParam}
Related Name
yarn.nodemanager.remote-app-log-dir-suffix
Default Value
logs
API Name
yarn_nodemanager_remote_app_log_dir_suffix
Required
false

Logs

NodeManager Logging Threshold

Description
The minimum log level for NodeManager logs
Related Name
Default Value
INFO
API Name
log_threshold
Required
false

NodeManager Maximum Log File Backups

Description
The maximum number of rolled log files to keep for NodeManager logs. Typically used by log4j or logback.
Related Name
Default Value
10
API Name
max_log_backup_index
Required
false

NodeManager Max Log Size

Description
The maximum size, in megabytes, per log file for NodeManager logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

NodeManager Log Directory**Description**

Directory where NodeManager will place its log files.

Related Name

hadoop.log.dir

Default Value

/var/log/hadoop-yarn

API Name

node_manager_log_dir

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .*, alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

NodeManager Connectivity Health Check**Description**

Enables the health check that verifies the NodeManager is connected to the ResourceManager.

Related Name**Default Value**

`true`

API Name

`nodemanager_connectivity_health_enabled`

Required

`false`

NodeManager Connectivity Tolerance at Startup**Description**

The amount of time to wait for the NodeManager to fully start up and connect to the ResourceManager before enforcing the connectivity check.

Related Name**Default Value**

`3 minute(s)`

API Name

`nodemanager_connectivity_tolerance_seconds`

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

nodemanager_fd_thresholds

Required

false

Garbage Collection Duration Thresholds

Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

nodemanager_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period

Description

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

nodemanager_gc_duration_window

Required

false

NodeManager Health Checker Health Check

Description

Enables the health check that verifies the NodeManager is seen as healthy by the ResourceManager.

Related Name**Default Value**

true

API Name

nodemanager_health_checker_health_enabled

Required

false

NodeManager Host Health Test**Description**

When computing the overall NodeManager health, consider the host's health.

Related Name**Default Value**

true

API Name

nodemanager_host_health_enabled

Required

false

NodeManager Local Directories Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Local Directories.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

nodemanager_local_data_directories_free_space_absolute_thresholds

Required

false

NodeManager Local Directories Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Local Directories. Specified as a percentage of the capacity on that filesystem. This setting is not used if a NodeManager Local Directories Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

nodemanager_local_data_directories_free_space_percentage_thresholds

Required

false

NodeManager Container Log Directories Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Container Log Directories.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

nodemanager_log_directories_free_space_absolute_thresholds

Required

false

NodeManager Container Log Directories Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Container Log Directories. Specified as a percentage of the capacity on that filesystem. This setting is not used if a NodeManager Container Log Directories Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

nodemanager_log_directories_free_space_percentage_thresholds

Required

false

NodeManager Recovery Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Recovery Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

nodemanager_recovery_directory_free_space_absolute_thresholds

Required

false

NodeManager Recovery Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Recovery Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a NodeManager Recovery Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

nodemanager_recovery_directory_free_space_percentage_thresholds

Required

false

NodeManager Process Health Test**Description**

Enables the health test that the NodeManager's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

nodemanager_scm_health_enabled

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

nodemanager_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

nodemanager_web_metric_collection_thresholds

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Enable Shuffle Auxiliary Service

Description

If enabled, adds 'org.apache.hadoop.mapred.ShuffleHandler' to the NodeManager auxiliary services. This is required for MapReduce applications.

Related Name**Default Value**

true

API Name

mapreduce_aux_service

Required

false

Max Shuffle Connections

Description

Maximum allowed connections for the shuffle. Set to 0 (zero) to indicate no limit on the number of connections.

Related Name

mapreduce.shuffle.max.connections

Default Value

0

API Name

mapreduce_shuffle_max_connections

Required

false

Containers Environment Variable

Description

Environment variables that should be forwarded from the NodeManager's environment to the container's.

Related Name

yarn.nodemanager.admin-env

Default Value

MALLOC_ARENA_MAX=\$MALLOC_ARENA_MAX

API Name

yarn_nodemanager_admin_env

Required

false

Container Manager Thread Count**Description**

Number of threads container manager uses.

Related Name

yarn.nodemanager.container-manager.thread-count

Default Value

20

API Name

yarn_nodemanager_container_manager_thread_count

Required

false

Cleanup Thread Count**Description**

Number of threads used in cleanup.

Related Name

yarn.nodemanager.delete.thread-count

Default Value

4

API Name

yarn_nodemanager_delete_thread_count

Required

false

Containers Environment Variables Whitelist**Description**

Environment variables that containers may override rather than use NodeManager's default.

Related Name

yarn.nodemanager.env-whitelist

Default Value

JAVA_HOME, HADOOP_COMMON_HOME, HADOOP_HDFS_HOME,
HADOOP_CLIENT_CONF_DIR, HADOOP_YARN_HOME, HADOOP_MAPRED_HOME,
MR2_CLASSPATH, JAVA_LIBRARY_PATH, HADOOP_HOME, PATH, LANG, TZ

API Name

yarn_nodemanager_env_whitelist

Required

false

Heartbeat Interval

Description

Heartbeat interval to ResourceManager

Related Name

yarn.resourcemanager.nodemangers.heartbeat-interval-ms

Default Value

1 second(s)

API Name

yarn_nodemanager_heartbeat_interval_ms

Required

false

NodeManager Local Directories

Description

List of directories on the local filesystem where a NodeManager stores intermediate data files.

Related Name

yarn.nodemanager.local-dirs

Default Value**API Name**

yarn_nodemanager_local_dirs

Required

true

Localizer Cache Cleanup Interval

Description

Address where the localizer IPC is.

Related Name

yarn.nodemanager.localizer.cache.cleanup.interval-ms

Default Value

10 minute(s)

API Name

yarn_nodemanager_localizer_cache_cleanup_interval_ms

Required

false

Localizer Cache Target Size

Description

Target size of localizer cache in MB, per local directory.

Related Name

yarn.nodemanager.localizer.cache.target-size-mb

Default Value

10 GiB

API Name

yarn_nodemanager_localizer_cache_target_size_mb

Required

false

Localizer Client Thread Count**Description**

Number of threads to handle localization requests.

Related Name

yarn.nodemanager.localizer.client.thread-count

Default Value

5

API Name

yarn_nodemanager_localizer_client_thread_count

Required

false

Localizer Fetch Thread Count**Description**

Number of threads to use for localization fetching.

Related Name

yarn.nodemanager.localizer.fetch.thread-count

Default Value

4

API Name

yarn_nodemanager_localizer_fetch_thread_count

Required

false

NodeManager Container Log Directories**Description**

List of directories on the local filesystem where a NodeManager stores container log files.

Related Name

yarn.nodemanager.log-dirs

Default Value

/var/log/hadoop-yarn/container

API Name

yarn_nodemanager_log_dirs

Required

true

Log Retain Duration**Description**

Time in seconds to retain user logs. Only applicable if log aggregation is disabled.

Related Name

yarn.nodemanager.log.retain-seconds

Default Value

3 hour(s)

API Name

yarn_nodemanager_log_retain_seconds

Required

false

NodeManager Recovery Directory**Description**

The local filesystem directory in which the NodeManager stores state when recovery is enabled. Recovery is enabled by default.

Related Name

yarn.nodemanager.recovery.dir

Default Value

/var/lib/hadoop-yarn/yarn-nm-recovery

API Name

yarn_nodemanager_recovery_dir

Required

false

Allowed Linux Runtimes**Description**

Specifies the runtimes that are allowed when LinuxContainerExecutor is used.

Related Name

yarn.nodemanager.runtime.linux.allowed-runtimes

Default Value

default

API Name

yarn_nodemanager_runtime_linux_allowed_runtimes

Required

false

Sleep Delay Before SIGKILL**Description**

Specifies the time in milliseconds between sending a SIGTERM and a SIGKILL signal to a running container.

Related Name

yarn.nodemanager.sleep-delay-before-sigkill.ms

Default Value

10 second(s)

API Name

yarn_nodemanager_sleep_delay_before_sigkill_ms

Required

false

Performance

Max Shuffle Threads

Description

Maximum allowed threads for serving shuffle connections. Set to zero to indicate the default of 2 times the number of available processors.

Related Name

mapreduce.shuffle.max.threads

Default Value

80

API Name

mapreduce_shuffle_max_threads

Required

false

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

NodeManager Web Application HTTPS Port (TLS/SSL)

Description

The HTTPS port of the NodeManager web application.

Related Name

yarn.nodemanager.webapp.https.address

Default Value

8044

API Name

nodemanager_webserver_https_port

Required

false

NodeManager Web Application HTTP Port

Description

The HTTP Port of the NodeManager web application.

Related Name

yarn.nodemanager.webapp.address

Default Value

8042

API Name

nodemanager_webserver_port

Required

false

NodeManager IPC Address**Description**

The address of the NodeManager IPC.

Related Name

yarn.nodemanager.address

Default Value

8041

API Name

yarn_nodemanager_address

Required

false

Localizer Port**Description**

Address where the localizer IPC is.

Related Name

yarn.nodemanager.localizer.address

Default Value

8040

API Name

yarn_nodemanager_localizer_address

Required

false

Resource Management**Java Heap Size of NodeManager in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

node_manager_java_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the

value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Strict CGroup Resource Usage**Description**

CGROUPS allows cpu usage limits to be hard or soft. When this setting is true, containers cannot use more CPU usage than allocated even if spare CPU is available. This ensures that containers can only use CPU that they were allocated. When set to false, containers can use spare CPU if available. It should be noted that irrespective of whether set to true or false, at no time can the combined CPU usage of all containers exceed the value specified in Containers CPU Limit Percentage.

Related Name

yarn.nodemanager.linux-container-executor.cgroups.strict-resource-usage

Default Value

false

API Name

yarn_nodemanager_linux_container_executor_cgroups_strict_resource_usage

Required

false

Container Virtual CPU Cores**Description**

Number of virtual CPU cores that can be allocated for containers. This parameter has no effect prior to CDH 4.4.

Related Name

yarn.nodemanager.resource.cpu-vcores

Default Value

8

API Name

yarn_nodemanager_resource_cpu_vcores

Required

true

Container Memory

Description

Amount of physical memory, in MiB, that can be allocated for containers.

Related Name

yarn.nodemanager.resource.memory-mb

Default Value

8 GiB

API Name

yarn_nodemanager_resource_memory_mb

Required

true

Containers CPU Limit Percentage

Description

Amount of CPU reserved for all the containers on each node.

Related Name

yarn.nodemanager.resource.percentage-physical-cpu-limit

Default Value

100

API Name

yarn_nodemanager_resource_percentage_physical_cpu_limit

Required

false

Enable Virtual Memory Check

Description

Enforce virtual memory limit on containers, given as a ratio to physical memory.

Related Name

yarn.nodemanager.vmem-check-enabled

Default Value

false

API Name

yarn_nodemanager_vmem_check_enabled

Required

false

Virtual Memory to Physical Memory Ratio**Description**

Ratio between virtual memory to physical memory when setting `yarn.nodemanager.vmem-check-enabled` to true. Container allocations are expressed in terms of physical memory, and virtual memory usage is allowed to exceed this allocation by this ratio. At least 2.1 is suggested to be set.

Related Name`yarn.nodemanager.vmem-pmem-ratio`**Default Value**

2.1

API Name`yarn_nodemanager_vmem_pmem_ratio`**Required**

false

Resource Types**Resource Allocations****Description**

Each NodeManager can independently define the resources that are available from that node.

Related Name**Default Value****API Name**`resource_allocations`**Required**

false

Security**Allowed System Users****Description**

List of users explicitly whitelisted to be allowed to run containers. Users with IDs lower than the "Minimum User Id" setting may be whitelisted by using this setting.

Related Name`allowed.system.users`**Default Value**`nobody impala hive llama hbase`**API Name**`container_executor_allowed_system_users`**Required**

false

Banned System Users**Description**

List of users banned from running containers.

Related Name

banned.users

Default Value

hdfs yarn mapred bin

API Name

container_executor_banned_users

Required

false

Container Executor Group

Description

The system group that owns the container-executor binary. This does not need to be changed unless the ownership of the binary is explicitly changed.

Related Name

yarn.nodemanager.linux-container-executor.group

Default Value

yarn

API Name

container_executor_group

Required

false

Minimum User ID

Description

The minimum Linux user ID allowed. Used to prevent other super users.

Related Name

min.user.id

Default Value

1000

API Name

container_executor_min_user_id

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name`stacks_collection_data_retention`**Required**`false`**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name`stacks_collection_directory`**Default Value****API Name**`stacks_collection_directory`**Required**`false`**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

Related Name`stacks_collection_enabled`**Default Value**`false`**API Name**`stacks_collection_enabled`**Required**`true`**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

Related Name`stacks_collection_frequency`**Default Value**`5.0 second(s)`**API Name**`stacks_collection_frequency`**Required**`false`**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that

have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Allowed System Users

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed System Users parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_container_executor_allowed_system_users

Required

true

Suppress Parameter Validation: Banned System Users

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Banned System Users parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_container_executor_banned_users

Required

true

Suppress Parameter Validation: Container Executor Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Executor Group parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_container_executor_group

Required

true

Suppress Parameter Validation: NodeManager GPU Devices Allowed**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager GPU Devices Allowed parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gpu_plugin_allowed_devices

Required

true

Suppress Parameter Validation: NodeManager GPU Detection Executable**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager GPU Detection Executable parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gpu_plugin_detector_path

Required

true

Suppress Parameter Validation: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_metrics2_safety_valve

Required

true

Suppress Parameter Validation: CGroups Hierarchy**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the CGroups Hierarchy parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_linux_container_executor_cgroups_hierarchy

Required

true

Suppress Parameter Validation: NodeManager Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: Healthchecker Script Arguments

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Healthchecker Script Arguments parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapred_healthchecker_script_args

Required

true

Suppress Parameter Validation: Healthchecker Script Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Healthchecker Script Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mapred_healthchecker_script_path

Required

true

Suppress Parameter Validation: Java Configuration Options for NodeManager

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for NodeManager parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_node_manager_java_opts

Required

true

Suppress Parameter Validation: NodeManager Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_node_manager_log_dir

Required

true

Suppress Parameter Validation: NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_nodemanager_config_safety_valve

Required

true

Suppress Parameter Validation: NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_nodemanager_mapred_safety_valve

Required

true

Suppress Parameter Validation: NodeManager Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_nodemanager_role_env_safety_valve

Required

true

Suppress Parameter Validation: NodeManager Web Application HTTPS Port (TLS/SSL)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Web Application HTTPS Port (TLS/SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_nodemanager_webserver_https_port

Required

true

Suppress Parameter Validation: NodeManager Web Application HTTP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Web Application HTTP Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_nodemanager_webserver_port

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Allowed Devices for Docker Containers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Devices for Docker Containers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_docker_allowed_devices

Required

true

Suppress Parameter Validation: Allowed Read-Only Mounts for Docker Containers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Read-Only Mounts for Docker Containers parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_yarn_docker_allowed_ro_mounts`**Required**`true`**Suppress Parameter Validation: Allowed Read-Write Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Read-Write Mounts for Docker Containers parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_yarn_docker_allowed_rw_mounts`**Required**`true`**Suppress Parameter Validation: Allowed Volume Drivers for Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Volume Drivers for Docker Containers parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_yarn_docker_allowed_volume_drivers`**Required**`true`**Suppress Parameter Validation: Docker Binary Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Docker Binary Path parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_yarn_docker_binary`**Required**`true`**Suppress Configuration Validator: Validates configuration of YARN NodeManagers when Docker on YARN feature is enabled.****Description**

Whether to suppress configuration warnings produced by the Validates configuration of YARN NodeManagers when Docker on YARN feature is enabled. configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_docker_on_yarn_validator

Required

true

Suppress Parameter Validation: Trusted Registries for Docker Containers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Trusted Registries for Docker Containers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_docker_trusted_registries

Required

true

Suppress Configuration Validator: YARN GPU Resources Validator**Description**

Whether to suppress configuration warnings produced by the YARN GPU Resources Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_gpu_validator

Required

true

Suppress Parameter Validation: NodeManager IPC Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager IPC Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_address

Required

true

Suppress Parameter Validation: Containers Environment Variable

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Containers Environment Variable parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_admin_env

Required

true

Suppress Parameter Validation: Containers Environment Variables Whitelist

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Containers Environment Variables Whitelist parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_env_whitelist

Required

true

Suppress Parameter Validation: NodeManager Local Directories

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Local Directories parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_local_dirs

Required

true

Suppress Parameter Validation: Localizer Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Localizer Port parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_yarn_nodemanager_localizer_address`**Required**`true`**Suppress Parameter Validation: Minimum Hard Limit for Log Aggregation Roll Monitoring Interval****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Minimum Hard Limit for Log Aggregation Roll Monitoring Interval parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_log_aggregation_roll_monitoring_interval_seconds_min`**Required**`true`**Suppress Configuration Validator: Log Aggregation Roll Monitoring Interval Minimum Validator****Description**

Whether to suppress configuration warnings produced by the Log Aggregation Roll Monitoring Interval Minimum Validator configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_log_aggregation_roll_monitoring_interval_seconds_minimum_validator`**Required**`true`**Suppress Parameter Validation: NodeManager Container Log Directories****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Container Log Directories parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_log_dirs`**Required**`true`**Suppress Parameter Validation: NodeManager Recovery Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Recovery Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_recovery_dir

Required

true

Suppress Parameter Validation: Remote App Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_remote_app_log_dir

Required

true

Suppress Parameter Validation: Remote App Log Directory Suffix**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory Suffix parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_remote_app_log_dir_suffix

Required

true

Suppress Parameter Validation: Allowed Linux Runtimes**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Linux Runtimes parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_allowed_runtimes

Required

true

Suppress Parameter Validation: Allowed Docker Container Networks

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Docker Container Networks parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_docker_allowed_container_networks

Required

true

Suppress Parameter Validation: Docker Capabilities

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Docker Capabilities parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_docker_capabilities

Required

true

Suppress Parameter Validation: Default Docker Container Network

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Docker Container Network parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_container_network

Required

true

Suppress Parameter Validation: Default Read-Only Mounts for Docker Containers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Read-Only Mounts for Docker Containers parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_ro_mounts`**Required**`true`**Suppress Parameter Validation: Default Read-Write Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Read-Write Mounts for Docker Containers parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_rw_mounts`**Required**`true`**Suppress Parameter Validation: Default Tempfs Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Tempfs Mounts for Docker Containers parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_tmpfs_mounts`**Required**`true`**Suppress Parameter Validation: ACL for Privileged Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ACL for Privileged Docker Containers parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_runtime_linux_docker_privileged_containers_acl`**Required**`true`**Suppress Configuration Validator: YARN Resource Types Validator****Description**

Whether to suppress configuration warnings produced by the YARN Resource Types Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resources_validator

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_node_manager_audit_health

Required

true

Suppress Health Test: ResourceManager Connectivity**Description**

Whether to suppress the results of the ResourceManager Connectivity health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_node_manager_connectivity

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_node_manager_file_descriptor

Required

true

Suppress Health Test: GC Duration

Description

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_node_manager_gc_duration

Required

true

Suppress Health Test: NodeManager Health Checker

Description

Whether to suppress the results of the NodeManager Health Checker health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_node_manager_health_checker

Required

true

Suppress Health Test: Heap Dump Directory Free Space

Description

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_node_manager_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_node_manager_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_node_manager_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_node_manager_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_node_manager_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_node_manager_unexpected_exits

Required

true

Suppress Health Test: Web Server Status

Description

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_node_manager_web_metric_collection

Required

ResourceManager**Advanced****Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)****Description**

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into hadoop-metrics2.properties.

Related Name**Default Value****API Name**

hadoop_metrics2_safety_valve

Required

false

ResourceManager Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Java Configuration Options for ResourceManager**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS -Dlibrary.leveldbjni.path=CMF_CONF_DIR

API Name

resource_manager_java_opts

Required

false

ResourceManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

For advanced use only. A string to be inserted into yarn-site.xml for this role only.

Related Name**Default Value****API Name**

resourcemanager_config_safety_valve

Required

false

ResourceManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml**Description**

For advanced use only. A string to be inserted into mapred-site.xml for this role only.

Related Name**Default Value****API Name**

resourcemanager_mapred_safety_valve

Required

false

ResourceManager Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

RESOURCEMANAGER_role_env_safety_valve

Required

false

ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes_allow.txt**Description**

For advanced use only. A string to be inserted into nodes_allow.txt for this role only.

Related Name**Default Value****API Name**

rm_hosts_allow_safety_valve

Required

false

ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes_exclude.txt**Description**

For advanced use only. A string to be inserted into nodes_exclude.txt for this role only.

Related Name**Default Value****API Name**

rm_hosts_exclude_safety_valve

Required

false

Logs**ResourceManager Logging Threshold****Description**

The minimum log level for ResourceManager logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

ResourceManager Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for ResourceManager logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name	max_log_backup_index
Required	false

ResourceManager Max Log Size

Description	The maximum size, in megabytes, per log file for ResourceManager logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	max_log_size
Required	false

ResourceManager Log Directory

Description	Directory where ResourceManager will place its log files.
Related Name	hadoop.log.dir
Default Value	/var/log/hadoop-yarn
API Name	resource_manager_log_dir
Required	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	
--------------------	--

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files

Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .*, alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .*, alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

resourcemanager_fd_thresholds

Required

false

Garbage Collection Duration Thresholds

Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

resourcemanager_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period

Description

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

resourcemanager_gc_duration_window

Required

false

ResourceManager Host Health Test

Description

When computing the overall ResourceManager health, consider the host's health.

Related Name**Default Value**

true

API Name

resourcemanager_host_health_enabled

Required

false

ResourceManager Process Health Test

Description

Enables the health test that the ResourceManager's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

resourcemanager_scm_health_enabled

Required

false

Health Test Startup Tolerance

Description

The amount of time allowed after this role is started that failures of health tests that rely on communication with this role will be tolerated.

Related Name**Default Value**

5 minute(s)

API Name

resourcemanager_startup_tolerance_minutes

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

resourcemanager_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

resourcemanager_web_metric_collection_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Capacity Scheduler Configuration Advanced Configuration Snippet (Safety Valve)****Description**

Enter an XML string that represents the Capacity Scheduler configuration.

Related Name**Default Value**

```
<configuration> <property> <name>yarn.scheduler.capacity.root.queues</name> <value>default</value> </property> <property>
<name>yarn.scheduler.capacity.root.capacity</name> <value>100</value> </property> <property>
<name>yarn.scheduler.capacity.root.default.capacity</name> <value>100</value> </property>
<property> <name>yarn.scheduler.capacity.root.default.maximum-am-resource-percent</name> <value>0.2</value> </property> <property> <name>yarn.scheduler.capacity.schedule-
asynchronously.enable</name> <value>true</value> </property> </configuration>
```

API Name

resourcemanager_capacity_scheduler_configuration

Required

true

Fair Scheduler Assign Multiple Tasks**Description**

Enables multiple Fair Scheduler container assignments in one heartbeat, which improves cluster throughput when there are many small tasks to run.

Related Name

yarn.scheduler.fair.assignmultiple

Default Value

true

API Name

resourcemanager_fair_scheduler_assign_multiple

Required

true

Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)**Description**

An XML string that will be inserted verbatim into the Fair Scheduler allocations file. For CDH 5, overrides the configuration set using the Pools configuration UI. For CDH 4, this is the only way to configure the Fair Scheduler for YARN.

Related Name**Default Value****API Name**

resourcemanager_fair_scheduler_configuration

Required

false

Fair Scheduler Dynamic Max Assign**Description**

During node heartbeat, the ResourceManager will allocate up to half the available resources on a node. Only valid if yarn.scheduler.fair.assignmultiple is set to true.

Related Name

yarn.scheduler.fair.dynamicmaxassign

Default Value

true

API Name

resourcemanager_fair_scheduler_dynamic_max_assign

Required

false

Fair Scheduler Max Assign**Description**

Limit the number of containers allocated by the ResourceManager with each node heartbeat. -1 is equivalent to unlimited. Only valid if yarn.scheduler.fair.assignmultiple is true and yarn.scheduler.fair.dynamic.max.assign is false.

Related Name

yarn.scheduler.fair.maxassign

Default Value

-1

API Name

resourcemanager_fair_scheduler_max_assign

Required

false

Enable Fair Scheduler Preemption**Description**

When enabled, if a pool's minimum share is not met for some period of time, the Fair Scheduler preempts applications in other pools. Preemption guarantees that production applications are not starved while also allowing the cluster to be used for experimental and research applications. To minimize wasted computation, the Fair Scheduler preempts the most recently launched applications.

Related Name

yarn.scheduler.fair.preemption

Default Value

false

API Name

resourcemanager_fair_scheduler_preemption

Required

true

Fair Scheduler Size-Based Weight**Description**

When enabled, the Fair Scheduler will assign shares to individual apps based on their size, rather than providing an equal share to all apps regardless of size.

Related Name

yarn.scheduler.fair.sizebasedweight

Default Value

false

API Name

resourcemanager_fair_scheduler_size_based_weight

Required

true

Fair Scheduler User As Default Queue**Description**

When set to true, the Fair Scheduler uses the username as the default pool name, in the event that a pool name is not specified. When set to false, all applications are run in a shared pool, called default.

Related Name

yarn.scheduler.fair.user-as-default-queue

Default Value

true

API Name

resourcemanager_fair_scheduler_user_as_default_queue

Required

true

ApplicationMaster Monitor Expiry**Description**

The expiry interval to wait until an ApplicationMaster is considered dead.

Related Name

yarn.am.liveness-monitor.expiry-interval-ms

Default Value

10 minute(s)

API Name

yarn_am_liveness_monitor_expiry_interval_ms

Required

false

NodeManager Monitor Expiry

Description

The expiry interval to wait until a NodeManager is considered dead.

Related Name

yarn.nm.liveness-monitor.expiry-interval-ms

Default Value

10 minute(s)

API Name

yarn_nm_liveness_monitor_expiry_interval_ms

Required

false

Admin Client Thread Count

Description

Number of threads used to handle the ResourceManager admin interface.

Related Name

yarn.resourcemanager.admin.client.thread-count

Default Value

1

API Name

yarn_resourcemanager_admin_client_thread_count

Required

false

ApplicationMaster Maximum Attempts

Description

The maximum number of application attempts. This is a global setting for all ApplicationMasters.. Each ApplicationMaster can specify its individual maximum through the API, but if the individual maximum is more than the global maximum, the ResourceManager overrides it.

Related Name

yarn.resourcemanager.am.max-attempts

Default Value

2

API Name

yarn_resourcemanager_am_max_retries

Required

false

ApplicationMaster Monitor Interval

Description

The periodic interval that the ResourceManager will check whether ApplicationMasters is still alive.

Related Name

yarn.resourcemanager.amliveliness-monitor.interval-ms

Default Value

1 second(s)

API Name`yarn_resourcemanager_amliveliness_monitor_interval_ms`**Required**`false`**Client Thread Count****Description**

The number of threads used to handle applications manager requests.

Related Name`yarn.resourcemanager.client.thread-count`**Default Value**`50`**API Name**`yarn_resourcemanager_client_thread_count`**Required**`false`**Container Monitor Interval****Description**

The periodic interval that the ResourceManager will check whether containers are still alive.

Related Name`yarn_resourcemanager.container.liveness-monitor.interval-ms`**Default Value**`10 minute(s)`**API Name**`yarn_resourcemanager_container_liveness_monitor_interval_ms`**Required**`false`**Max Completed Applications****Description**

The maximum number of completed applications that the ResourceManager keeps.

Related Name`yarn_resourcemanager.max-completed-applications`**Default Value**`10000`**API Name**`yarn_resourcemanager_max_completed_applications`**Required**`false`**NodeManager Monitor Interval****Description**

The periodic interval that the ResourceManager will check whether NodeManagers are still alive.

Related Name

yarn.resourcemanager.nm.liveness-monitor.interval-ms

Default Value

1 second(s)

API Name

yarn_resourcemanager_nm_liveness_monitor_interval_ms

Required

false

Enable ResourceManager Proxy User Privileges**Description**

When enabled, ResourceManager has proxy user privileges.

Related Name

yarn.resourcemanager.proxy-user-privileges.enabled

Default Value

true

API Name

yarn_resourcemanager_proxy_user_privileges_enabled

Required

false

Enable ResourceManager Recovery**Description**

When enabled, any applications that were running on the cluster when the ResourceManager died will be recovered when the ResourceManager next starts. Note: If RM-HA is enabled, then this configuration is always enabled.

Related Name

yarn.resourcemanager.recovery.enabled

Default Value

true

API Name

yarn_resourcemanager_recovery_enabled

Required

false

Resource Tracker Thread Count**Description**

Number of threads to handle resource tracker calls.

Related Name

yarn.resourcemanager.resource-tracker.client.thread-count

Default Value

50

API Name

yarn_resourcemanager_resource_tracker_client_thread_count

Required

false

Scheduler Class

Description

The class to use as the resource scheduler. FairScheduler is only supported in CDH 4.2.1 and later.

Related Name

yarn.resourcemanager.scheduler.class

Default Value

org.apache.hadoop.yarn.server.resourcemanager.scheduler.capacity.CapacityScheduler

API Name

yarn_resourcemanager_scheduler_class

Required

false

Scheduler Thread Count

Description

The number of threads used to handle requests through the scheduler interface.

Related Name

yarn.resourcemanager.scheduler.client.thread-count

Default Value

50

API Name

yarn_resourcemanager_scheduler_client_thread_count

Required

false

ZooKeeper Session Timeout

Description

The timeout for the ResourceManager session with ZooKeeper. The session expires if the ZooKeeper ensemble does not hear from the ResourceManager within the specified timeout period (no heartbeat). Session expiration is managed by the ZooKeeper ensemble, not by the ResourceManager.

Related Name

yarn.resourcemanager.zk-timeout-ms

Default Value

1 minute(s)

API Name

yarn_resourcemanager_zk_timeout_ms

Required

false

Resource Calculator Class

Description

The Resource Calculator implementation to be used to compare Resources in the scheduler. The DefaultResourceCalculator only uses Memory while DominantResourceCalculator uses Dominant-resource to compare multi-dimensional resources such as Memory, CPU etc.

Related Name

yarn.scheduler.capacity.resource-calculator

Default Value

org.apache.hadoop.yarn.util.resource.DominantResourceCalculator

API Name

yarn_scheduler_capacity_resource_calculator

Required

false

Fair Scheduler Preemption Utilization Threshold**Description**

The utilization threshold after which preemption kicks in. The utilization is computed as the maximum ratio of usage to capacity among all resources.

Related Name

yarn.scheduler.fair.preemption.cluster-utilization-threshold

Default Value

0.8

API Name

yarn_scheduler_fair_preemption_cluster_utilization_threshold

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**ResourceManager Web Application HTTPS Port (TLS/SSL)****Description**

The HTTPS port of the ResourceManager web application.

Related Name

yarn.resourcemanager.webapp.https.address

Default Value

8090

API Name

resourcemanager_webserver_https_port

Required

false

ResourceManager Web Application HTTP Port

Description

The HTTP port of the ResourceManager web application.

Related Name

yarn.resourcemanager.webapp.address

Default Value

8088

API Name

resourcemanager_webserver_port

Required

false

ResourceManager Address

Description

The address of the applications manager interface in the ResourceManager.

Related Name

yarn.resourcemanager.address

Default Value

8032

API Name

yarn_resourcemanager_address

Required

false

Administration Address

Description

The address of the admin interface in the ResourceManager.

Related Name

yarn.resourcemanager.admin.address

Default Value

8033

API Name

yarn_resourcemanager_admin_address

Required

false

Resource Tracker Address

Description

The address of the resource tracker interface in the ResourceManager.

Related Name

yarn.resourcemanager.resource-tracker.address

Default Value

8031

API Name	yarn_resourcemanager_resource_tracker_address
Required	false

Scheduler Address

Description	The address of the scheduler interface in the ResourceManager.
Related Name	yarn.resourcemanager.scheduler.address
Default Value	8030
API Name	yarn_resourcemanager_scheduler_address
Required	false

Bind ResourceManager to Wildcard Address

Description	If enabled, the ResourceManager binds to the wildcard address ("0.0.0.0") on all of its ports.
Related Name	
Default Value	false
API Name	yarn_rm_bind_wildcard
Required	false

Resource Management

Java Heap Size of ResourceManager in Bytes

Description	Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.
Related Name	
Default Value	1 GiB
API Name	resource_manager_java_heapsize
Required	false

Fair Scheduler Node Locality Threshold

Description	For applications that request containers on particular nodes, the number of scheduling opportunities since the last container assignment to wait before accepting a placement on another node. Expressed
--------------------	--

as a float between 0 and 1, which, as a fraction of the cluster size, is the number of scheduling opportunities to pass up. If not set, this means don't pass up any scheduling opportunities. Requires Fair Scheduler continuous scheduling to be disabled. If continuous scheduling is enabled, `yarn.scheduler.fair.locality-delay-node-ms` should be used instead.

Related Name

`yarn.scheduler.fair.locality.threshold.node`

Default Value**API Name**

`resourcemanager_fair_scheduler_locality_threshold_node`

Required

false

Fair Scheduler Rack Locality Threshold**Description**

For applications that request containers on particular racks, the number of scheduling opportunities since the last container assignment to wait before accepting a placement on another rack. Expressed as a float between 0 and 1, which, as a fraction of the cluster size, is the number of scheduling opportunities to pass up. If not set, this means don't pass up any scheduling opportunities. Requires Fair Scheduler continuous scheduling to be disabled. If continuous scheduling is enabled, `yarn.scheduler.fair.locality-delay-rack-ms` should be used instead.

Related Name

`yarn.scheduler.fair.locality.threshold.rack`

Default Value**API Name**

`resourcemanager_fair_scheduler_locality_threshold_rack`

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

`cpu.shares`

Default Value

1024

API Name

`rm_cpu_shares`

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command:

resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'

These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not

managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Enable Fair Scheduler Continuous Scheduling**Description**

Enable continuous scheduling in the Fair Scheduler. When enabled, scheduling decisions are decoupled from NodeManager heartbeats, leading to faster resource allocations.

Related Name

yarn.scheduler.fair.continuous-scheduling-enabled

Default Value

false

API Name

yarn_scheduler_fair_continuous_scheduling_enabled

Required

false

Fair Scheduler Node Locality Delay**Description**

For applications that request containers on particular nodes, the minimum time in milliseconds the Fair Scheduler waits before accepting a placement on another node. Requires Fair Scheduler continuous scheduling to be enabled. If continuous scheduling is disabled, yarn.scheduler.fair.locality.threshold.node should be used instead.

Related Name

yarn.scheduler.fair.locality-delay-node-ms

Default Value

2 second(s)

API Name

yarn_scheduler_fair_locality_delay_node_ms

Required

false

Fair Scheduler Rack Locality Delay**Description**

For applications that request containers on particular racks, the minimum time in milliseconds the Fair Scheduler waits before accepting a placement on another rack. Requires Fair Scheduler continuous scheduling to be enabled. If continuous scheduling is disabled, yarn.scheduler.fair.locality.threshold.rack should be used instead.

Related Name

yarn.scheduler.fair.locality-delay-rack-ms

Default Value

4 second(s)

API Name

yarn_scheduler_fair_locality_delay_rack_ms

Required

false

Container Memory Increment

Description

If using the Fair Scheduler, memory requests will be rounded up to the nearest multiple of this number. This parameter has no effect prior to CDH 5.

Related Name

yarn.scheduler.increment-allocation-mb

Default Value

512 MiB

API Name

yarn_scheduler_increment_allocation_mb

Required

true

Container Virtual CPU Cores Increment

Description

If using the Fair Scheduler, virtual core requests will be rounded up to the nearest multiple of this number. This parameter has no effect prior to CDH 5.

Related Name

yarn.scheduler.increment-allocation-vcores

Default Value

1

API Name

yarn_scheduler_increment_allocation_vcores

Required

true

Container Memory Maximum

Description

The largest amount of physical memory, in MiB, that can be requested for a container.

Related Name

yarn.scheduler.maximum-allocation-mb

Default Value

64 GiB

API Name

yarn_scheduler_maximum_allocation_mb

Required

true

Container Virtual CPU Cores Maximum

Description

The largest number of virtual CPU cores that can be requested for a container. This parameter has no effect prior to CDH 4.4.

Related Name

yarn.scheduler.maximum-allocation-vcores

Default Value

32

API Name

yarn_scheduler_maximum_allocation_vcores

Required

true

Container Memory Minimum

Description

The smallest amount of physical memory, in MiB, that can be requested for a container. If using the Capacity or FIFO scheduler (or any scheduler, prior to CDH 5), memory requests will be rounded up to the nearest multiple of this number.

Related Name

yarn.scheduler.minimum-allocation-mb

Default Value

1 GiB

API Name

yarn_scheduler_minimum_allocation_mb

Required

true

Container Virtual CPU Cores Minimum

Description

The smallest number of virtual CPU cores that can be requested for a container. If using the Capacity or FIFO scheduler (or any scheduler, prior to CDH 5), virtual core requests will be rounded up to the nearest multiple of this number. This parameter has no effect prior to CDH 4.4.

Related Name

yarn.scheduler.minimum-allocation-vcores

Default Value

1

API Name

yarn_scheduler_minimum_allocation_vcores

Required

true

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hadoop_metrics2_safety_valve

Required

true

Suppress Parameter Validation: ResourceManager Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Java Configuration Options for ResourceManager

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for ResourceManager parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_resource_manager_java_opts

Required

true

Suppress Parameter Validation: ResourceManager Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_resource_manager_log_dir

Required

true

Suppress Parameter Validation: Capacity Scheduler Configuration Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Capacity Scheduler Configuration Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_capacity_scheduler_configuration

Required

true

Suppress Parameter Validation: ResourceManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_config_safety_valve

Required

true

Suppress Parameter Validation: Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Fair Scheduler XML Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_fair_scheduler_configuration

Required

true

Suppress Parameter Validation: ResourceManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_mapred_safety_valve

Required

true

Suppress Parameter Validation: ResourceManager Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_role_env_safety_valve

Required

true

Suppress Parameter Validation: ResourceManager Web Application HTTPS Port (TLS/SSL)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Web Application HTTPS Port (TLS/SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_webserver_https_port

Required

true

Suppress Parameter Validation: ResourceManager Web Application HTTP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Web Application HTTP Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_webserver_port

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes_allow.txt**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes_allow.txt parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_hosts_allow_safety_valve

Required

true

Suppress Parameter Validation: ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes_exclude.txt**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes_exclude.txt parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_hosts_exclude_safety_valve

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: ResourceManager Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resourcemanager_address

Required

true

Suppress Parameter Validation: Administration Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Administration Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resourcemanager_admin_address

Required

true

Suppress Parameter Validation: ApplicationMaster Maximum Attempts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ApplicationMaster Maximum Attempts parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resourcemanager_am_max_retries

Required

true

Suppress Parameter Validation: Resource Tracker Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Resource Tracker Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resourcemanager_resource_tracker_address

Required

true

Suppress Parameter Validation: Scheduler Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Scheduler Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resourcemanager_scheduler_address

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_resource_manager_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_resource_manager_file_descriptor

Required

true

Suppress Health Test: GC Duration**Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_resource_manager_gc_duration

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_resource_manager_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_resource_manager_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_resource_manager_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_resource_manager_scm_health`**Required**`true`**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_resource_manager_swap_memory_usage`**Required**`true`**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_resource_manager_unexpected_exits`**Required**`true`**Suppress Health Test: Web Server Status****Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_resource_manager_web_metric_collection`**Required**`true`**Service-Wide**

Advanced

System User's Home Directory

Description

The home directory of the system user on the local filesystem. This setting must reflect the system's configured value - only changing it here will not change the actual home directory.

Related Name**Default Value**

/var/lib/hadoop-yarn

API Name

hdfs_user_home_dir

Required

true

HDFS Replication Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

Description

For advanced use only, a string to be inserted into mapred-site.xml. Applies to all HDFS Replication jobs.

Related Name**Default Value****API Name**

mapreduce_service_replication_config_safety_valve

Required

false

System Group

Description

The group that this service's processes should run as. (Except the Job History Server, which has its own group.)

Related Name**Default Value**

hadoop

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as. (Except the Job History Server, which has its own user)

Related Name**Default Value**

yarn

API Name

process_username

Required

true

YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-audit.xml**Description**

For advanced use only, a string to be inserted into ranger-yarn-audit.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_audit_safety_valve

Required

false

YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-security.xml**Description**

For advanced use only, a string to be inserted into ranger-yarn-security.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ranger_security_safety_valve

Required

false

YARN Application Classpath**Description**

Entries to add to the classpaths of YARN applications.

Related Name

yarn.application.classpath

Default Value

\$SHADOOP_CLIENT_CONF_DIR \$SHADOOP_COMMON_HOME/*
\$SHADOOP_COMMON_HOME/lib/* \$SHADOOP_HDFS_HOME/* \$SHADOOP_HDFS_HOME/
lib/* \$SHADOOP_YARN_HOME/* \$SHADOOP_YARN_HOME/lib/*

API Name

yarn_application_classpath

Required

false

YARN Service Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

For advanced use only, a string to be inserted into core-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

yarn_core_site_safety_valve

Required

false

Fair Scheduler Configuration Rules (Deployed)**Description**

A list specifying the rules to run to determine which Fair Scheduler configuration to use.

Related Name**Default Value**

[]

API Name

yarn_fs_schedule_rules

Required

false

Fair Scheduler Configuration Rules (Staged)**Description**

A list specifying the rules to run to determine which Fair Scheduler configuration to use. Typically edited using the Rules configuration UI.

Related Name**Default Value****API Name**

yarn_fs_schedule_rules_draft

Required

false

Fair Scheduler Allocations (Deployed)**Description**

JSON representation of all the configurations that the Fair Scheduler can take on across all schedules.

Related Name**Default Value**

```
queuePlacementRules: [ create: true, name: specified , name: nestedUserQueue, rules:
[ name: default, queue: users ] ], queues: [ name: root, queues: [ name: default, queues: [],
schedulablePropertiesList: [ scheduleName: default ], schedulingPolicy: drf , name: users, queues:
[], schedulablePropertiesList: [ scheduleName: default ], schedulingPolicy: drf, type: parent ],
schedulablePropertiesList: [ scheduleName: default ], schedulingPolicy: drf ], users: []
```

API Name

yarn_fs_scheduled_allocations

Required

false

Fair Scheduler Allocations (Staged)

Description

JSON representation of all the configurations that the Fair Scheduler can take on across all schedules. Typically edited using the Pools configuration UI.

Related Name**Default Value****API Name**

yarn_fs_scheduled_allocations_draft

Required

false

YARN Service Advanced Configuration Snippet (Safety Valve) for hadoop-policy.xml

Description

For advanced use only, a string to be inserted into hadoop-policy.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

yarn_hadoop_policy_config_safety_valve

Required

false

YARN Service Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

Description

For advanced use only, a string to be inserted into yarn-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

yarn_service_config_safety_valve

Required

false

YARN Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

yarn_service_env_safety_valve

Required

false

YARN Service MapReduce Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into mapred-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

yarn_service_mapred_safety_valve

Required

false

HDFS Replication Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

For advanced use only, a string to be inserted into yarn-site.xml. Applies to all HDFS Replication jobs.

Related Name**Default Value****API Name**

yarn_service_replication_config_safety_valve

Required

false

YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml**Description**

For advanced use only, a string to be inserted into ssl-client.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

yarn_ssl_client_safety_valve

Required

false

YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml**Description**

For advanced use only, a string to be inserted into ssl-server.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

yarn_ssl_server_safety_valve

Required

false

Log Aggregation

Enable Log Aggregation

Description

Specifies if log aggregation is enabled.

Related Name

yarn.log-aggregation-enable

Default Value

true

API Name

yarn_log_aggregation_enable

Required

false

Supported Log Aggregation File Formats

Description

Specifies which log file formats are supported. The first file format in the list is used to write the aggregated logs. TFile format is always added to support backward compatibility.

Related Name

yarn.log-aggregation.file-formats

Default Value

IFile TFile

API Name

yarn_log_aggregation_file_formats

Required

false

Remote App Log Directory for IFile Format

Description

Specifies the path of the directory where application logs are stored after an application is completed if IFile format is given as the file format for writing. This configuration overwrites the one given in NodeManager level (yarn.nodemanager.remote-app-log-dir).

Related Name

yarn.log-aggregation.IFile.remote-app-log-dir

Default Value

/tmp/logs

API Name

yarn_log_aggregation_IFile_remote_app_log_dir

Required

false

Remote App Log Directory Suffix for IFile Format

Description

The remote log directory is created at {remote-app-log-dir}/{user}/{thisParam} if IFile format is selected for writing. This configuration overwrites the one given in NodeManager level (yarn.nodemanager.remote-app-log-dir-suffix).

Related Name`yarn.log-aggregation.IFile.remote-app-log-dir-suffix`**Default Value**`ifile`**API Name**`yarn_log_aggregation_IFile_remote_app_log_dir_suffix`**Required**`false`**Log Aggregation Retention Period****Description**

Specifies how long aggregation logs are kept before they are deleted.

Related Name`yarn.log-aggregation.retain-seconds`**Default Value**`7 day(s)`**API Name**`yarn_log_aggregation_retain_seconds`**Required**`false`**Log Aggregation Status Timeout****Description**

Specifies the maximum amount of time that the NodeManager has for reporting a container's log aggregation status. If no log aggregation status is sent by the NodeManager within the allotted time, the ResourceManager reports a TIME_OUT log aggregation status for that container.

Related Name`yarn.log-aggregation-status.time-out.ms`**Default Value**`10 minute(s)`**API Name**`yarn_log_aggregation_status_time_out_ms`**Required**`false`**Remote App Log Directory for TFile Format****Description**

Specifies the path of the directory where application logs are stored after an application is completed if TFile format is selected for writing. This configuration overwrites the one given in NodeManager level (`yarn.nodemanager.remote-app-log-dir`).

Related Name`yarn.log-aggregation.TFile.remote-app-log-dir`**Default Value****API Name**`yarn_log_aggregation_TFile_remote_app_log_dir`

Required

false

Remote App Log Directory Suffix for TFile Format**Description**

The remote log directory is created at {remote-app-log-dir}/{user}/{thisParam} if TFile format is selected for writing. This configuration overwrites the one given in NodeManager level (yarn.nodemanager.remote-app-log-dir-suffix).

Related Name

yarn.log-aggregation.TFile.remote-app-log-dir-suffix

Default Value**API Name**

yarn_log_aggregation_TFile_remote_app_log_dir_suffix

Required

false

Log Aggregation Compression Type**Description**

Specifies the TFile compression type used to compress aggregated logs.

Related Name

yarn.nodemanager.log-aggregation.compression-type

Default Value

none

API Name

yarn_nodemanager_log_aggregation_compression_type

Required

false

Monitoring**Admin Users Applications List Visibility Settings****Description**

Controls which applications an admin user can see in the applications list view

Related Name**Default Value**

ALL

API Name

admin_application_list_settings

Required

true

Enable Log Event Capture**Description**

When set, each role identifies important log events and forwards them to Cloudera Manager.

Related Name

Default Value

true

API Name

catch_events

Required

false

Cloudera Manager Container Usage Metrics Directory**Description**

DFS directory where the container usage metrics from Cloudera Manager sink are stored by YARN NodeManagers. Cloudera Service Monitor will read the container usage metrics and aggregate them for generating usage reports. Note: If you change this, you will need to re-run the Create YARN Container Usage Metrics Dir command.

Related Name**Default Value**

/tmp/cmYarnContainerMetrics

API Name

cm_yarn_container_usage_input_dir

Required

true

Maximum Hours to Aggregate Usage Metrics**Description**

Maximum number of hours in the past for which container usage aggregation is performed by Cloudera Service Monitor.

Related Name**Default Value**

6

API Name

cm_yarn_container_usage_job_go_back_window_hours

Required

true

Reduce Tasks for Container Usage MapReduce Job**Description**

Number of reduce tasks to use for the MapReduce job to aggregate container usage metrics.

Related Name**Default Value**

1

API Name

cm_yarn_container_usage_job_num_reduce_tasks

Required

true

Container Usage MapReduce Job Pool

Description

YARN pool which is used to submit the job to aggregate container usage metrics.

Related Name**Default Value****API Name**

cm_yarn_container_usage_job_pool

Required

false

Container Usage MapReduce Job User

Description

User that Cloudera Service Monitor uses to run the MapReduce job to aggregate container usage metrics. Note: If you change this user, you need to change the owner of the existing Container Usage Metrics and Output Directories.

Related Name**Default Value****API Name**

cm_yarn_container_usage_job_user

Required

false

Container Usage Output Directory

Description

DFS directory where the aggregated container usage metrics are stored by Cloudera Service Monitor. This directory is created by Cloudera Service Monitor before running the usage aggregation MapReduce job for the first time.

Related Name**Default Value**

/tmp/cmYarnContainerMetricsAggregate

API Name

cm_yarn_container_usage_output_dir

Required

true

Enable Container Usage Metrics Collection

Description

Enables storing YARN container usage metrics in HDFS and periodically running a MapReduce job from Cloudera Service Monitor to aggregate them into per-application metrics. This is required for YARN usage reporting to work.

Related Name**Default Value**

false

API Name

cm_yarn_enable_container_usage_aggregation

Required

true

Enable Service Level Health Alerts**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Event Retry Frequency**Description**

The frequency in which the log4j event publication appender will retry sending undelivered log events to the Event server, in seconds

Related Name**Default Value**

30

API Name

log_event_retry_frequency

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`service_triggers`

Required

true

Service Monitor Client Config Overrides**Description**

For advanced use only, a list of configuration properties that will be used by the Service Monitor instead of the current client configuration for the service.

Related Name**Default Value**

```

```

API Name

`smon_client_config_overrides`

Required

false

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value**

API Name

smon_derived_configs_safety_valve

Required

false

Non-Admin Users Applications List Visibility Settings**Description**

Controls which applications non-admin users can see in the applications list view

Related Name**Default Value**

ALL

API Name

user_application_list_settings

Required

true

Active ResourceManager Detection Window**Description**

The tolerance window used in YARN service tests that depend on detection of the active ResourceManager.

Related Name**Default Value**

3 minute(s)

API Name

yarn_active_resourcemanager_detection_window

Required

false

YARN Application Aggregates**Description**

Controls the aggregate metrics generated for YARN applications. The structure is a JSON list of the attributes to aggregate and the entities to aggregate to. For example, if the attributeName is 'maps_completed' and the aggregationTargets is ['USER'] then the Service Monitor will create the metric 'yarn_application_maps_completed_rate' and, every ten minutes, will record the total maps completed for each user across all their YARN applications. By default it will also record the number of applications submitted ('apps_submitted_rate') for both users and pool. For a full list of the supported attributes see the YARN search page. Note that the valid aggregation targets are USER, YARN_POOL, and YARN (the service), and that these aggregate metrics can be viewed on both the reports and charts search pages.

Related Name**Default Value**

```
[ {attributeName: maps_total, aggregationTargets: [USER, YARN_POOL_USER,
YARN_POOL, YARN, CLUSTER] }, {attributeName: reduces_total, aggregationTargets: [USER,
YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] }, {attributeName: cpu_milliseconds,
aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] },
{attributeName: mb_millis_maps, aggregationTargets: [USER, YARN_POOL_USER,
YARN_POOL, YARN, CLUSTER] }, {attributeName: mb_millis_reduces, aggregationTargets:
```

```
[USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName:
vcores_millis_maps, aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL,
YARN, CLUSTER] , attributeName: vcores_millis_reduces, aggregationTargets: [USER,
YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName: file_bytes_read,
aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] ,
attributeName: file_bytes_written, aggregationTargets: [USER, YARN_POOL_USER,
YARN_POOL, YARN, CLUSTER] , attributeName: hdfs_bytes_read, aggregationTargets:
[USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName:
hdfs_bytes_written, aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL,
YARN, CLUSTER] , attributeName: cm_cpu_milliseconds, aggregationTargets: [USER,
YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName: application_duration,
aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] ,
attributeName: s3a_bytes_read, aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL,
YARN, CLUSTER] , attributeName: s3a_bytes_written, aggregationTargets: [USER,
YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName: adl_bytes_read,
aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] ,
attributeName: adl_bytes_written, aggregationTargets: [USER, YARN_POOL_USER,
YARN_POOL, YARN, CLUSTER] ]
```

API Name

yarn_application_aggregates

Required

false

Container Metrics Sampling Interval**Description**

Interval at which YARN container usage metrics are sampled. Increasing this configuration can reduce the accuracy of container usage metrics, whereas setting it too low will increase the resources used to compute container usage.

Related Name

yarn.nodemanager.container-monitor.interval-ms

Default Value

3 second(s)

API Name

yarn_container_seconds_per_sample

Required

true

JobHistory Server Role Health Test**Description**

When computing the overall YARN health, consider JobHistory Server's health

Related Name**Default Value**

true

API Name

yarn_jobhistoryserver_health_enabled

Required

false

Healthy NodeManager Monitoring Thresholds

Description

The health test thresholds of the overall NodeManager health. The check returns "Concerning" health if the percentage of "Healthy" NodeManagers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" NodeManagers falls below the critical threshold.

Related Name**Default Value**

Warning: 95.0 %, Critical: 90.0 %

API Name

yarn_nodemangers_healthy_thresholds

Required

false

ResourceManager Activation Startup Tolerance

Description

The amount of time after ResourceManager(s) start that the lack of an active ResourceManager will be tolerated. This is an advanced option that does not often need to be changed.

Related Name**Default Value**

3 minute(s)

API Name

yarn_resourcemanager_activation_startup_tolerance

Required

false

Active ResourceManager Role Health Check

Description

When computing the overall YARN service health, whether to consider the active ResourceManager's health.

Related Name**Default Value**

true

API Name

yarn_resourcemangers_health_enabled

Required

false

Standby ResourceManager Health Check

Description

When computing the overall YARN service health, whether to consider the health of the standby ResourceManager.

Related Name**Default Value**

true

API Name`yarn_standby_resourcemanager_health_enabled`**Required**`false`**Other****HDFS Service****Description**

Name of the HDFS service that this YARN service instance depends on

Related Name**Default Value****API Name**`hdfs_service`**Required**`true`**Serve logs over HTTP****Description**

Whether to serve logs over HTTP from YARN web servers. This includes listing the logs directory at the /logs endpoint, which may be a security concern.

Related Name`hadoop.http.logs.enabled`**Default Value**`true`**API Name**`http_logs_enabled`**Required**`false`**Queue Manager Service****Description**

Name of the Queue Manager service that this YARN service instance depends on

Related Name**Default Value****API Name**`queuemanager_service`**Required**`false`**Ranger Plugin Trusted Proxy IP Address****Description**

Accepts a list of IP addresses of proxy servers for trusting.

Related Name`ranger.plugin.yarn.trusted.proxy.ipaddress`

Default Value**API Name**

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded for IP Address**Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.yarn.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Ranger Service**Description**

Name of the Ranger service that this Yarn service instance depends on

Related Name**Default Value****API Name**

ranger_service

Required

false

Enable ResourceManager ACLs**Description**

Whether users and groups specified in Admin ACL should be checked for authorization to perform admin operations.

Related Name

yarn.acl.enable

Default Value

true

API Name

yarn_acl_enable

Required

false

Admin ACL**Description**

ACL that determines which users and groups can submit and kill applications in any pool, and can issue commands on ResourceManager roles.

Related Name

yarn.admin.acl

Default Value

yarn

API Name

yarn_admin_acl

Required

false

Node Labels**Description**

Enable YARN Node Labels.

Related Name

yarn.node-labels.enabled

Default Value

true

API Name

yarn_node_labels_enabled

Required

false

Node Manager Graceful Decommission Timeout**Description**

This is the maximum time to wait for running containers and applications to complete before transition a DECOMMISSIONING node into DECOMMISSIONED. (-1 indicates infinite timeout, 0 indicates non-graceful)

Related Name

yarn.resourcemanager.nodemanager-graceful-decommission-timeout-secs

Default Value

0 second(s)

API Name

yarn_resourcemanager_nodemanager_graceful_decommission_timeout_secs

Required

false

Preemption**Description**

Enables Preemption for ResourceManager Capacity Scheduler.

Related Name

yarn.resourcemanager.scheduler.monitor.enable

Default Value

true

API Name

yarn_resourcemanager_scheduler_monitor_enable

Required

false

RM-HA Cluster ID

Description

Cluster ID used when ResourceManager is Highly Available.

Related Name

yarn.resourcemanager.cluster-id

Default Value

yarnRM

API Name

yarn_rm_ha_cluster_id

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this YARN service instance depends on

Related Name

Default Value

API Name

zookeeper_service

Required

false

Proxy

Llama Proxy User Groups

Description

Comma-delimited list of groups that you want to allow the Llama (AM for Impala) user to impersonate. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.proxyuser.llama.groups

Default Value

*

API Name

llama_proxy_user_groups_list

Required

false

Llama Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the Llama (AM for Impala) user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.proxyuser.llama.hosts

Default Value

*

API Name

llama_proxy_user_hosts_list

Required

false

Resource Management

Limit Nonsecure Container Executor Users

Description

This determines the user Linux container executor should run as on a non-secure cluster. If this value is set to true, then all containers will be launched as the user specified in yarn.nodemanager.linux-container-executor.nonsecure-mode.local-user. If this value is set to false, then containers will run as the user who submitted the application.

Related Name

Default Value

true

API Name

yarn_nodemanager_linux_container_executor_nonsecure_mode_limit_users

Required

false

UNIX User for Nonsecure Mode with Linux Container Executor

Description

UNIX user that containers run as when Linux-container-executor is used in nonsecure mode.

Related Name

yarn.nodemanager.linux-container-executor.nonsecure-mode.local-user

Default Value

nobody

API Name

yarn_nodemanager_linux_container_executor_nonsecure_mode_local_user

Required

false

Allow Undeclared Pools

Description

When set to true, pools specified in applications but not explicitly configured, are created at runtime with default settings. When set to false, applications specifying pools not explicitly configured run in a pool named default. This setting applies when an application explicitly specifies a pool and when the application runs in a pool named with the username associated with the application.

Related Name`yarn.scheduler.fair.allow-undeclared-pools`**Default Value**`true`**API Name**`yarn_scheduler_fair_allow_undeclared_pools`**Required**`false`**Use CGroups for Resource Management****Description**

Whether YARN creates a cgroup per container, thereby isolating the CPU usage of containers. When set, `yarn.nodemanager.linux-container-executor.resources-handler.class` is configured to `org.apache.hadoop.yarn.server.nodemanager.util.CgroupsLCEResourcesHandler`. The host (in Cloudera Manager) must have cgroups enabled. The number of shares allocated to all YARN containers is configured by adjusting the CPU shares value of the Node Manager in the Resource Management configuration group.

Related Name`yarn.nodemanager.linux-container-executor.resources-handler.class`**Default Value**`false`**API Name**`yarn_service_cgroups`**Required**`false`**Always Use Linux Container Executor****Description**

Whether YARN uses the Linux Container Executor both in secure (Kerberos) and insecure (not Kerberos) environments. Cgroups enforcement only works when the Linux Container Executor is used.

Related Name`yarn.nodemanager.container-executor.class`**Default Value**`false`**API Name**`yarn_service_lce_always`**Required**`false`**Resource Types****Resource Types****Description**

Resource definition can be extended to include arbitrary countable resources. A countable resource is a resource that is consumed while a container is running, but is released afterwards. CPU, memory and GPU are countable resources.

Related Name	
Default Value	
API Name	resource_types
Required	false

Security

Enable Kerberos Authentication for HTTP Web-Consoles

Description	Enables Kerberos authentication for Hadoop HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled for the HDFS service.
Related Name	
Default Value	false
API Name	hadoop_secure_web_ui
Required	false

Kerberos Principal

Description	Kerberos principal short name used by all roles of this service.
Related Name	
Default Value	yarn
API Name	kerberos_princ_name
Required	true

Hive LLAP Kerberos Conf Staging Path

Description	Staging directory for Hive LLAP Kerberos Configuration. This should generally not be changed.
Related Name	hive_llap_kerberos_staging_path
Default Value	/var/lib/hadoop-yarn
API Name	llap_kerberos_staging_path
Required	false

Ranger DFS Audit Path

Description

The DFS path on which Ranger audits are written. The special placeholder '\${ranger_base_audit_url}' should be used as the prefix, in order to use the centralized location defined in the Ranger service.

Related Name

xasecure.audit.destination.hdfs.dir

Default Value

\$ranger_base_audit_url/yarn

API Name

ranger_audit_hdfs_dir

Required

false

Ranger Audit DFS Spool Dir

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/yarn/audit/hdfs/spool

API Name

ranger_audit_hdfs_spool_dir

Required

false

Ranger Audit Solr Spool Dir

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/yarn/audit/solr/spool

API Name

ranger_audit_solr_spool_dir

Required

false

Ranger Policy Cache Directory

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.yarn.policy.cache.dir

Default Value

/var/lib/ranger/yarn/policy-cache

API Name

ranger_policy_cache_dir

Required

false

TLS/SSL Client Truststore File Location**Description**

Path to the truststore file used when roles of this service act as TLS/SSL clients. Overrides the cluster-wide default truststore location set in HDFS. This truststore must be in JKS format. The truststore contains certificates of trusted servers, or of Certificate Authorities trusted to identify servers. The contents of the truststore can be modified without restarting any roles. By default, changes to its contents are picked up within ten seconds. If not set, the default Java truststore is used to verify certificates.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

TLS/SSL Client Truststore File Password**Description**

Password for the TLS/SSL client truststore. Overrides the cluster-wide default truststore password set in HDFS.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Hadoop TLS/SSL Server Keystore Key Password**Description**

Password that protects the private key contained in the server keystore used for encrypted shuffle and encrypted web UIs. Applies to all configurations of daemon roles of this service.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Hadoop TLS/SSL Server Keystore File Location

Description

Path to the keystore file containing the server certificate and private key used for encrypted shuffle and encrypted web UIs. Applies to configurations of all daemon roles of this service.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Hadoop TLS/SSL Server Keystore File Password

Description

Password for the server keystore file used for encrypted shuffle and encrypted web UIs. Applies to configurations of all daemon roles of this service.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

SSL/TLS Cipher Suite

Description

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

Related Name

ssl.server.exclude.cipher.list

Default Value

modern2018

API Name

tls_ciphers

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

API Name

role_config_suppression_mr2_jobhistory_log_dir

Required

true

Suppress Configuration Validator: Java Configuration Options for NodeManager**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for NodeManager configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_node_manager_java_opts

Required

true

Suppress Configuration Validator: NodeManager Log Directory**Description**

Whether to suppress configuration warnings produced by the NodeManager Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_node_manager_log_dir

Required

true

Suppress Configuration Validator: NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

Whether to suppress configuration warnings produced by the NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nodemanager_config_safety_valve

Required

true

Suppress Configuration Validator: NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml**Description**

Whether to suppress configuration warnings produced by the NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nodemanager_mapred_safety_valve

Required

true

Suppress Configuration Validator: NodeManager Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the NodeManager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nodemanager_role_env_safety_valve

Required

true

Suppress Configuration Validator: NodeManager Web Application HTTPS Port (TLS/SSL)

Description

Whether to suppress configuration warnings produced by the NodeManager Web Application HTTPS Port (TLS/SSL) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nodemanager_webserver_https_port

Required

true

Suppress Configuration Validator: NodeManager Web Application HTTP Port

Description

Whether to suppress configuration warnings produced by the NodeManager Web Application HTTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nodemanager_webserver_port

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Java Configuration Options for ResourceManager**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for ResourceManager configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_resource_manager_java_opts

Required

true

Suppress Configuration Validator: ResourceManager Log Directory**Description**

Whether to suppress configuration warnings produced by the ResourceManager Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_resource_manager_log_dir

Required

true

Suppress Configuration Validator: Capacity Scheduler Configuration Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Capacity Scheduler Configuration Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_capacity_scheduler_configuration

Required

true

Suppress Configuration Validator: ResourceManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

Whether to suppress configuration warnings produced by the ResourceManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_config_safety_valve

Required

true

Suppress Configuration Validator: Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Fair Scheduler XML Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_fair_scheduler_configuration

Required

true

Suppress Configuration Validator: ResourceManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

Description

Whether to suppress configuration warnings produced by the ResourceManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_mapred_safety_valve

Required

true

Suppress Configuration Validator: ResourceManager Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the ResourceManager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_role_env_safety_valve

Required

true

Suppress Configuration Validator: ResourceManager Web Application HTTPS Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the ResourceManager Web Application HTTPS Port (TLS/SSL) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_webserver_https_port

Required

true

Suppress Configuration Validator: ResourceManager Web Application HTTP Port**Description**

Whether to suppress configuration warnings produced by the ResourceManager Web Application HTTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_resourcemanager_webserver_port

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes_allow.txt**Description**

Whether to suppress configuration warnings produced by the ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes_allow.txt configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_hosts_allow_safety_valve

Required

true

Suppress Configuration Validator: ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes_exclude.txt**Description**

Whether to suppress configuration warnings produced by the ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes_exclude.txt configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_hosts_exclude_safety_valve

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: ApplicationMaster Environment**Description**

Whether to suppress configuration warnings produced by the ApplicationMaster Environment configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_app_mapreduce_am_admin_user_env

Required

true

Suppress Configuration Validator: ApplicationMaster Java Opts Base**Description**

Whether to suppress configuration warnings produced by the ApplicationMaster Java Opts Base configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_app_mapreduce_am_command_opts

Required

true

Suppress Configuration Validator: ApplicationMaster Java Maximum Heap Size Validator**Description**

Whether to suppress configuration warnings produced by the ApplicationMaster Java Maximum Heap Size Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_app_mapreduce_am_max_heap_yarn_app_mapreduce_am_resource_mb_validator

Required

true

Suppress Configuration Validator: MapReduce ApplicationMaster Staging Root Directory**Description**

Whether to suppress configuration warnings produced by the MapReduce ApplicationMaster Staging Root Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_app_mapreduce_am_staging_dir

Required

true

Suppress Configuration Validator: YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

Whether to suppress configuration warnings produced by the YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_client_config_safety_valve

Required

true

Suppress Configuration Validator: Allowed Devices for Docker Containers**Description**

Whether to suppress configuration warnings produced by the Allowed Devices for Docker Containers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_docker_allowed_devices

Required

true

Suppress Configuration Validator: Allowed Read-Only Mounts for Docker Containers**Description**

Whether to suppress configuration warnings produced by the Allowed Read-Only Mounts for Docker Containers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_docker_allowed_ro_mounts

Required

true

Suppress Configuration Validator: Allowed Read-Write Mounts for Docker Containers**Description**

Whether to suppress configuration warnings produced by the Allowed Read-Write Mounts for Docker Containers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_docker_allowed_rw_mounts

Required

true

Suppress Configuration Validator: Allowed Volume Drivers for Docker Containers**Description**

Whether to suppress configuration warnings produced by the Allowed Volume Drivers for Docker Containers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_docker_allowed_volume_drivers

Required

true

Suppress Configuration Validator: Docker Binary Path**Description**

Whether to suppress configuration warnings produced by the Docker Binary Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_docker_binary

Required

true

Suppress Configuration Validator: Validates configuration of YARN NodeManagers when Docker on YARN feature is enabled.**Description**

Whether to suppress configuration warnings produced by the Validates configuration of YARN NodeManagers when Docker on YARN feature is enabled. configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_docker_on_yarn_validator

Required

true

Suppress Configuration Validator: Trusted Registries for Docker Containers

Description

Whether to suppress configuration warnings produced by the Trusted Registries for Docker Containers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_docker_trusted_registries

Required

true

Suppress Configuration Validator: YARN GPU Resources Validator

Description

Whether to suppress configuration warnings produced by the YARN GPU Resources Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_gpu_validator

Required

true

Suppress Configuration Validator: NodeManager IPC Address

Description

Whether to suppress configuration warnings produced by the NodeManager IPC Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_address

Required

true

Suppress Configuration Validator: Containers Environment Variable

Description

Whether to suppress configuration warnings produced by the Containers Environment Variable configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_admin_env

Required

true

Suppress Configuration Validator: Containers Environment Variables Whitelist**Description**

Whether to suppress configuration warnings produced by the Containers Environment Variables Whitelist configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_env_whitelist

Required

true

Suppress Configuration Validator: NodeManager Local Directories**Description**

Whether to suppress configuration warnings produced by the NodeManager Local Directories configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_local_dirs

Required

true

Suppress Configuration Validator: Localizer Port**Description**

Whether to suppress configuration warnings produced by the Localizer Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_localizer_address

Required

true

Suppress Configuration Validator: Minimum Hard Limit for Log Aggregation Roll Monitoring Interval**Description**

Whether to suppress configuration warnings produced by the Minimum Hard Limit for Log Aggregation Roll Monitoring Interval configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_yarn_nodemanager_log_aggregation_roll_monitoring_interval_seconds_min

Required

true

Suppress Configuration Validator: Log Aggregation Roll Monitoring Interval Minimum Validator**Description**

Whether to suppress configuration warnings produced by the Log Aggregation Roll Monitoring Interval Minimum Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_log_aggregation_roll_monitoring_interval_seconds_minimum_validator

Required

true

Suppress Configuration Validator: NodeManager Container Log Directories**Description**

Whether to suppress configuration warnings produced by the NodeManager Container Log Directories configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_log_dirs

Required

true

Suppress Configuration Validator: NodeManager Recovery Directory**Description**

Whether to suppress configuration warnings produced by the NodeManager Recovery Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_recovery_dir

Required

true

Suppress Configuration Validator: Remote App Log Directory**Description**

Whether to suppress configuration warnings produced by the Remote App Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_remote_app_log_dir

Required

true

Suppress Configuration Validator: Remote App Log Directory Suffix**Description**

Whether to suppress configuration warnings produced by the Remote App Log Directory Suffix configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_remote_app_log_dir_suffix

Required

true

Suppress Configuration Validator: Allowed Linux Runtimes**Description**

Whether to suppress configuration warnings produced by the Allowed Linux Runtimes configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_allowed_runtimes

Required

true

Suppress Configuration Validator: Allowed Docker Container Networks**Description**

Whether to suppress configuration warnings produced by the Allowed Docker Container Networks configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_docker_allowed_container_networks

Required

true

Suppress Configuration Validator: Docker Capabilities**Description**

Whether to suppress configuration warnings produced by the Docker Capabilities configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_docker_capabilities

Required

true

Suppress Configuration Validator: Default Docker Container Network**Description**

Whether to suppress configuration warnings produced by the Default Docker Container Network configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_container_network

Required

true

Suppress Configuration Validator: Default Read-Only Mounts for Docker Containers**Description**

Whether to suppress configuration warnings produced by the Default Read-Only Mounts for Docker Containers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_ro_mounts

Required

true

Suppress Configuration Validator: Default Read-Write Mounts for Docker Containers**Description**

Whether to suppress configuration warnings produced by the Default Read-Write Mounts for Docker Containers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_rw_mounts

Required

true

Suppress Configuration Validator: Default Tempfs Mounts for Docker Containers**Description**

Whether to suppress configuration warnings produced by the Default Tempfs Mounts for Docker Containers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_tmpfs_mounts

Required

true

Suppress Configuration Validator: ACL for Privileged Docker Containers**Description**

Whether to suppress configuration warnings produced by the ACL for Privileged Docker Containers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_nodemanager_runtime_linux_docker_privileged_containers_acl

Required

true

Suppress Configuration Validator: ResourceManager Address**Description**

Whether to suppress configuration warnings produced by the ResourceManager Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resourcemanager_address

Required

true

Suppress Configuration Validator: Administration Address**Description**

Whether to suppress configuration warnings produced by the Administration Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resourcemanager_admin_address

Required

true

Suppress Configuration Validator: ApplicationMaster Maximum Attempts**Description**

Whether to suppress configuration warnings produced by the ApplicationMaster Maximum Attempts configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resourcemanager_am_max_retries

Required

true

Suppress Configuration Validator: Resource Tracker Address**Description**

Whether to suppress configuration warnings produced by the Resource Tracker Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resourcemanager_resource_tracker_address

Required

true

Suppress Configuration Validator: Scheduler Address**Description**

Whether to suppress configuration warnings produced by the Scheduler Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resourcemanager_scheduler_address

Required

true

Suppress Configuration Validator: YARN Resource Types Validator

Description

Whether to suppress configuration warnings produced by the YARN Resource Types Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_resources_validator

Required

true

Suppress Parameter Validation: Cloudera Manager Container Usage Metrics Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Container Usage Metrics Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_cm_yarn_container_usage_input_dir

Required

true

Suppress Parameter Validation: Container Usage MapReduce Job Pool

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Usage MapReduce Job Pool parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_cm_yarn_container_usage_job_pool

Required

true

Suppress Parameter Validation: Container Usage MapReduce Job User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Usage MapReduce Job User parameter.

Related Name**Default Value**

false

API Name`service_config_suppression_cm_yarn_container_usage_job_user`**Required**`true`**Suppress Parameter Validation: Container Usage Output Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Usage Output Directory parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_cm_yarn_container_usage_output_dir`**Required**`true`**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**`false`**API Name**`service_config_suppression_gateway_count_validator`**Required**`true`**Suppress Configuration Validator: Secure Web UI Validator****Description**

Whether to suppress configuration warnings produced by the Secure Web UI Validator configuration validator.

Related Name**Default Value**`false`**API Name**`service_config_suppression_hadoop_secure_web_ui`**Required**`true`**Suppress Configuration Validator: Hadoop TLS/SSL Validator****Description**

Whether to suppress configuration warnings produced by the Hadoop TLS/SSL Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_ssl_validator

Required

true

Suppress Parameter Validation: System User's Home Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User's Home Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_user_home_dir

Required

true

Suppress Configuration Validator: JobHistory Server Count Validator**Description**

Whether to suppress configuration warnings produced by the JobHistory Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_jobhistory_count_validator

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Llama Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Llama Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_llama_proxy_user_groups_list

Required

true

Suppress Parameter Validation: Llama Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Llama Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_llama_proxy_user_hosts_list

Required

true

Suppress Parameter Validation: Hive LLAP Kerberos Conf Staging Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive LLAP Kerberos Conf Staging Path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_llap_kerberos_staging_path

Required

true

Suppress Parameter Validation: HDFS Replication Advanced Configuration Snippet (Safety Valve) for mapred-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Replication Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_mapreduce_service_replication_config_safety_valve

Required

true

Suppress Configuration Validator: NodeManager Count Validator**Description**

Whether to suppress configuration warnings produced by the NodeManager Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_nodemanager_count_validator

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger DFS Audit Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_audit_hdfs_dir

Required

true

Suppress Parameter Validation: Ranger Audit DFS Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-audit.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-audit.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_safety_valve

Required

true

Suppress Parameter Validation: Ranger Audit Solr Spool Dir**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Ranger Policy Cache Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_policy_cache_dir

Required

true

Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-security.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_security_safety_valve

Required

true

Suppress Configuration Validator: ResourceManager Count Validator**Description**

Whether to suppress configuration warnings produced by the ResourceManager Count Validator configuration validator.

Related Name**Default Value**

false

API Name`service_config_suppression_resourcemanager_count_validator`**Required**`true`**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_service_triggers`**Required**`true`**Suppress Parameter Validation: Service Monitor Client Config Overrides****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Client Config Overrides parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_smon_client_config_overrides`**Required**`true`**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_smon_derived_configs_safety_valve`**Required**`true`**Suppress Parameter Validation: TLS/SSL Client Truststore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Client Truststore File Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: TLS/SSL Client Truststore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Client Truststore File Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Hadoop TLS/SSL Server Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop TLS/SSL Server Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Hadoop TLS/SSL Server Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop TLS/SSL Server Keystore File Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Hadoop TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop TLS/SSL Server Keystore File Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Admin ACL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin ACL parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_admin_acl

Required

true

Suppress Parameter Validation: YARN Application Aggregates

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Application Aggregates parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_application_aggregates

Required

true

Suppress Parameter Validation: YARN Application Classpath

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Application Classpath parameter.

Related Name**Default Value**

false

API Name`service_config_suppression_yarn_application_classpath`**Required**`true`**Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_yarn_core_site_safety_valve`**Required**`true`**Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for hadoop-policy.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for hadoop-policy.xml parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_yarn_hadoop_policy_config_safety_valve`**Required**`true`**Suppress Parameter Validation: Supported Log Aggregation File Formats****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Supported Log Aggregation File Formats parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_yarn_log_aggregation_file_formats`**Required**`true`**Suppress Parameter Validation: Remote App Log Directory for IFile Format****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory for IFile Format parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_log_aggregation_ifile_remote_app_log_dir

Required

true

Suppress Parameter Validation: Remote App Log Directory Suffix for IFile Format**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory Suffix for IFile Format parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_log_aggregation_ifile_remote_app_log_dir_suffix

Required

true

Suppress Parameter Validation: Remote App Log Directory for TFile Format**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory for TFile Format parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_log_aggregation_tfile_remote_app_log_dir

Required

true

Suppress Parameter Validation: Remote App Log Directory Suffix for TFile Format**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory Suffix for TFile Format parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_log_aggregation_tfile_remote_app_log_dir_suffix

Required

true

Suppress Parameter Validation: UNIX User for Nonsecure Mode with Linux Container Executor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the UNIX User for Nonsecure Mode with Linux Container Executor parameter.

Related Name

Default Value

false

API Name

service_config_suppression_yarn_nodemanager_linux_container_executor_nonsecure_mode_local_user

Required

true

Suppress Configuration Validator: Yarn Queue Manager Validator

Description

Whether to suppress configuration warnings produced by the Yarn Queue Manager Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_yarn_queue_manager_validator

Required

true

Suppress Configuration Validator: YARN Resource Types Validator

Description

Whether to suppress configuration warnings produced by the YARN Resource Types Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_yarn_resources_validator

Required

true

Suppress Parameter Validation: RM-HA Cluster ID

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the RM-HA Cluster ID parameter.

Related Name

Default Value

false

API Name

service_config_suppression_yarn_rm_ha_cluster_id

Required

true

Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_service_config_safety_valve

Required

true

Suppress Parameter Validation: YARN Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_service_env_safety_valve

Required

true

Suppress Parameter Validation: YARN Service MapReduce Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service MapReduce Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_service_mapred_safety_valve

Required

true

Suppress Parameter Validation: HDFS Replication Advanced Configuration Snippet (Safety Valve) for yarn-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Replication Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_service_replication_config_safety_valve

Required

true

Suppress Parameter Validation: YARN Services Dependencies Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Services Dependencies Path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_services_framework_path

Required

true

Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_yarn_ssl_client_safety_valve

Required

true

Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml parameter.

Related Name**Default Value**

	false
API Name	
	service_config_suppression_yarn_ssl_server_safety_valve
Required	
	true

Suppress Health Test: JobHistory Server Health

Description	Whether to suppress the results of the JobHistory Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	
	false
API Name	
	service_health_suppression_yarn_jobhistory_health
Required	
	true

Suppress Health Test: NodeManager Health

Description	Whether to suppress the results of the NodeManager Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	
	false
API Name

YARN Services Management

Enable YARN Services

Description

Configure YARN to support yarn managed services, enabling this will allow users to create long running YARN services like LLAP.

Related Name**Default Value**

true

API Name

yarn_services_enabled

Required

false

YARN Services Dependencies Path

Description

This is the path where the YARN services dependencies tarball should be uploaded.

Related Name

yarn.service.framework.path

Default Value

/user/yarn/services/service-framework/\$cdhVersion/service-dep.tar.gz

API Name

yarn_services_framework_path

Required

false

YARN Queue Manager Properties in Cloudera Runtime 7.1

Role groups:

Service-Wide

Advanced

YARN Queue Manager Service Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties

Description

For advanced use only, a string to be inserted into conf/webapp.properties. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

conf/webapp.properties_service_safety_valve

Required

false

System Group

Description

The group that this service's processes should run as.

Related Name**Default Value**

hadoop

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name**Default Value**

yarn

API Name

process_username

Required

true

YARN Queue Manager Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

QUEUEMANAGER_service_env_safety_valve

Required

false

Monitoring**Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on

how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Configuration Validator: YARN Queue Manager Store Count Validator**Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Store Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_queuemanager_store_count_validator

Required

true

Suppress Configuration Validator: YARN Queue Manager Webapp Count Validator**Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_queuemanager_webapp_count_validator

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

YARN Queue Manager Store

Advanced

YARN Queue Manager Store Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties

Description

For advanced use only. A string to be inserted into conf/webapp.properties for this role only.

Related Name**Default Value****API Name**

conf/webapp.properties_role_safety_valve

Required

false

YARN Queue Manager Store Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

YARN Queue Manager Store Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

QUEUEMANAGER_STORE_role_env_safety_valve

Required

false

Logs**YARN Queue Manager Store Log Directory****Description**

The log directory for log files of the role YARN Queue Manager Store.

Related Name`yarn_queuemanager_store_log_dir`**Default Value**`/var/log/yarn/queuemanager`**API Name**`log_dir`**Required**`false`**YARN Queue Manager Store Logging Threshold****Description**

The minimum log level for YARN Queue Manager Store logs

Related Name**Default Value**`INFO`**API Name**`log_threshold`**Required**`false`**YARN Queue Manager Store Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for YARN Queue Manager Store logs. Typically used by log4j or logback.

Related Name**Default Value**`10`**API Name**`max_log_backup_index`**Required**`false`**YARN Queue Manager Store Max Log Size****Description**

The maximum size, in megabytes, per log file for YARN Queue Manager Store logs. Typically used by log4j or logback.

Related Name**Default Value**`200 MiB`**API Name**`max_log_size`**Required**`false`

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

`enable_alerts`

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

`enable_config_alerts`

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

`log_directory_free_space_absolute_thresholds`

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name`log_directory_free_space_percentage_thresholds`**Required**`false`**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**`monitoring_metric_filter`**Required**`false`**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**`Warning: 200 B, Critical: Never`**API Name**`process_swap_memory_thresholds`**Required**`false`

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

queuemanager_store_fd_thresholds

Required

false

YARN Queue Manager Store Host Health Test

Description

When computing the overall YARN Queue Manager Store health, consider the host's health.

Related Name**Default Value**

true

API Name

queuemanager_store_host_health_enabled

Required

false

YARN Queue Manager Store Process Health Test

Description

Enables the health test that the YARN Queue Manager Store's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

queuemanager_store_scm_health_enabled

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Enable TLS/SSL for YARN Queue Manager Store

Description

Encrypt communication between clients and YARN Queue Manager Store using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

queuemanager_store_ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

YARN Queue Manager Store TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when YARN Queue Manager Store is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

queuemanager_store_keystore_file

Default Value**API Name**

ssl_server_keystore_location

Required

false

YARN Queue Manager Store TLS/SSL Server JKS Keystore File Password

Description

The password for the YARN Queue Manager Store JKS keystore file.

Related Name

queuemanager_store_password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: YARN Queue Manager Store Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_conf/webapp.properties_role_safety_valve

Required

true

Suppress Parameter Validation: YARN Queue Manager Store Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

Suppress Parameter Validation: YARN Queue Manager Store Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: YARN Queue Manager Store Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_queuemanager_store_role_env_safety_valve

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: YARN Queue Manager Store TLS/SSL Server JKS Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: YARN Queue Manager Store TLS/SSL Server JKS Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store TLS/SSL Server JKS Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_store_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_store_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_store_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_store_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_store_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_queuemanager_queuemanager_store_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_store_unexpected_exits

Required

true

YARN Queue Manager Webapp**Advanced****YARN Queue Manager Webapp Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties****Description**

For advanced use only. A string to be inserted into conf/webapp.properties for this role only.

Related Name**Default Value****API Name**

conf/webapp.properties_role_safety_valve

Required

false

YARN Queue Manager Webapp Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

`oom_heap_dump_dir`

Default Value

`/tmp`

API Name

`oom_heap_dump_dir`

Required

`false`

Dump Heap When Out of Memory

Description

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

`true`

API Name

`oom_heap_dump_enabled`

Required

`true`

Kill When Out of Memory

Description

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

`true`

API Name

`oom_sigkill_enabled`

Required

`true`

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

YARN Queue Manager Webapp Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

QUEUEMANAGER_WEBAPP_role_env_safety_valve

Required

false

Logs

YARN Queue Manager Webapp Log Directory

Description

The log directory for log files of the role YARN Queue Manager Webapp.

Related Name

yarn_queuemanager_webapp_log_dir

Default Value

/var/log/yarn/queuemanager

API Name

log_dir

Required

false

YARN Queue Manager Webapp Logging Threshold

Description

The minimum log level for YARN Queue Manager Webapp logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

YARN Queue Manager Webapp Maximum Log File Backups

Description

The maximum number of rolled log files to keep for YARN Queue Manager Webapp logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

YARN Queue Manager Webapp Max Log Size**Description**

The maximum size, in megabytes, per log file for YARN Queue Manager Webapp logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value**API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

queuemanager_webapp_fd_thresholds

Required

false

YARN Queue Manager Webapp Host Health Test**Description**

When computing the overall YARN Queue Manager Webapp health, consider the host's health.

Related Name**Default Value**

true

API Name

queuemanager_webapp_host_health_enabled

Required

false

YARN Queue Manager Webapp Process Health Test**Description**

Enables the health test that the YARN Queue Manager Webapp's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

queuemanager_webapp_scm_health_enabled

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Existing Cloudera Manager API Client Username****Description**

An existing user that can make configuration changes via the Cloudera Manager API from YARN Queue Manager.

Related Name

queuemanager_cm_api_client_login_name

Default Value**API Name**

queuemanager_cm_api_client_login_name

Required

true

Existing Cloudera Manager API Client Password**Description**

Login credentials of the user who can make configuration changes via the Cloudera Manager API from YARN Queue Manager.

Related Name

queuemanager_cm_api_client_login_password

Default Value**API Name**

queuemanager_cm_api_client_login_password

Required

true

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

YARN Queue Manager Webapp Port

Description

The port that the YARN Queue Manager Webapp user interface listens on.

Related Name

queuemanager_webapp_port

Default Value

8082

API Name

queuemanager_webapp_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit`**Required**`true`**Security****YARN Queue Manager Webapp TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that YARN Queue Manager Webapp might connect to. This is used when YARN Queue Manager Webapp is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`queuemanager.webapp.ssl.truststore.location`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**YARN Queue Manager Webapp TLS/SSL Client Trust Store Password****Description**

The password for the YARN Queue Manager Webapp TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name`queuemanager.webapp.ssl.truststore.password`**Default Value****API Name**`ssl_client_truststore_password`**Required**`false`**Enable TLS/SSL for YARN Queue Manager Webapp****Description**

Encrypt communication between clients and YARN Queue Manager Webapp using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name`queuemanager_webapp_ssl_enabled`

Default Value

false

API Name

ssl_enabled

Required

false

YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when YARN Queue Manager Webapp is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

queuemanager_webapp_keystore_file

Default Value**API Name**

ssl_server_keystore_location

Required

false

YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Password**Description**

The password for the YARN Queue Manager Webapp JKS keystore file.

Related Name

queuemanager_keystore_password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_webapp_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_webapp_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_webapp_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_webapp_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_queuemanager_queuemanager_webapp_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_queuemanager_queuemanager_webapp_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_queuemanager_queuemanager_webapp_unexpected_exits

Required

true

Zeppelin Properties in Cloudera Runtime 7.1

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Zeppelin Server TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Zeppelin Server TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server TLS/SSL Client Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Zeppelin Server TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Zeppelin Server TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

API Name

role_config_suppression_zeppelin.dep.localrepo

Required

true

Suppress Configuration Validator: Zeppelin interpreter group order**Description**

Whether to suppress configuration warnings produced by the Zeppelin interpreter group order configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_zeppelin.interpreter.group.order

Required

true

Suppress Configuration Validator: Zeppelin Local repository location**Description**

Whether to suppress configuration warnings produced by the Zeppelin Local repository location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.interpreter.localrepo

Required

true

Suppress Configuration Validator: Zeppelin notebook location**Description**

Whether to suppress configuration warnings produced by the Zeppelin notebook location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.notebook.dir

Required

true

Suppress Configuration Validator: Zeppelin notebook storage class**Description**

Whether to suppress configuration warnings produced by the Zeppelin notebook storage class configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.notebook.storage

Required

true

Suppress Configuration Validator: Zeppelin Server Bind Address**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Bind Address configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.server.addr

Required

true

Suppress Configuration Validator: Zeppelin shiro Knox main block**Description**

Whether to suppress configuration warnings produced by the Zeppelin shiro Knox main block configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.shiro.knox.main.block

Required

true

Suppress Configuration Validator: Zeppelin shiro main block**Description**

Whether to suppress configuration warnings produced by the Zeppelin shiro main block configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.shiro.main.block

Required

true

Suppress Configuration Validator: Zeppelin shiro main session block**Description**

Whether to suppress configuration warnings produced by the Zeppelin shiro main session block configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.shiro.main.session.block

Required

true

Suppress Configuration Validator: Zeppelin shiro roles block

Description

Whether to suppress configuration warnings produced by the Zeppelin shiro roles block configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.shiro.roles.block

Required

true

Suppress Configuration Validator: Zeppelin shiro urls block

Description

Whether to suppress configuration warnings produced by the Zeppelin shiro urls block configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.shiro.urls.block

Required

true

Suppress Configuration Validator: Zeppelin shiro user block

Description

Whether to suppress configuration warnings produced by the Zeppelin shiro user block configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.shiro.user.block

Required

true

Suppress Configuration Validator: Zeppelin ssl client auth

Description

Whether to suppress configuration warnings produced by the Zeppelin ssl client auth configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.ssl.client.auth

Required

true

Suppress Configuration Validator: Zeppelin ssl keystore type**Description**

Whether to suppress configuration warnings produced by the Zeppelin ssl keystore type configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.ssl.keystore.type

Required

true

Suppress Configuration Validator: Zeppelin ssl truststore type**Description**

Whether to suppress configuration warnings produced by the Zeppelin ssl truststore type configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.ssl.truststore.type

Required

true

Suppress Configuration Validator: Zeppelin temp webapps directory**Description**

Whether to suppress configuration warnings produced by the Zeppelin temp webapps directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.war.tempdir

Required

true

Suppress Configuration Validator: Zeppelin websocket text size**Description**

Whether to suppress configuration warnings produced by the Zeppelin websocket text size configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.websocket.max.text.message.size

Required

true

Suppress Configuration Validator: Zeppelin Server Port**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin_server_port

Required

true

Suppress Configuration Validator: Zeppelin Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Zeppelin Server SSL Port**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server SSL Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin_server_ssl_port

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Configuration Validator: Zeppelin Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_zeppelin_server_count_validator

Required

true

Suppress Parameter Validation: Zeppelin Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zeppelin_service_env_safety_valve

Required

true

Suppress Health Test: Zeppelin Server Health**Description**

Whether to suppress the results of the Zeppelin Server Health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_zeppelin_zeppelin_zeppelin_server_health

Required

true

Zeppelin Server

Advanced

Zeppelin Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-env.sh

Description

For advanced use only. A string to be inserted into zeppelin-conf/zeppelin-env.sh for this role only.

Related Name**Default Value****API Name**

zeppelin-conf/zeppelin-env.sh_role_safety_valve

Required

false

Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-site.xml

Description

For advanced use only. A string to be inserted into zeppelin-conf/zeppelin-site.xml for this role only.

Related Name**Default Value****API Name**

zeppelin-conf/zeppelin-site.xml_role_safety_valve

Required

false

Zeppelin Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

ZEPPELIN_SERVER_role_env_safety_valve

Required

false

Logs**Zeppelin Server Log Directory****Description**

The log directory for log files of the role Zeppelin Server.

Related Name

log_dir

Default Value

/var/log/zeppelin

API Name

log_dir

Required

false

Zeppelin Server Logging Threshold**Description**

The minimum log level for Zeppelin Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Zeppelin Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Zeppelin Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Zeppelin Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Zeppelin Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value**API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

`zeppelin_server_fd_thresholds`

Required

false

Zeppelin Server Host Health Test

Description

When computing the overall Zeppelin Server health, consider the host's health.

Related Name**Default Value**

true

API Name

`zeppelin_server_host_health_enabled`

Required

false

Zeppelin Server Process Health Test

Description

Enables the health test that the Zeppelin Server's process state is consistent with the role configuration

config persistence layer implementation

Related Name

zeppelin.config.storage.class

Default Value

org.apache.zeppelin.storage.FileSystemConfigStorage

API Name

zeppelin.config.storage.class

Required

false

Zeppelin Local repository location**Description**

Local repository for dependency loader

Related Name

zeppelin.dep.localrepo

Default Value

/var/lib/zeppelin/local-repo

API Name

zeppelin.dep.localrepo

Required

false

Zeppelin interpreter group order**Description**

Zeppelin interpreter group order

Related Name

zeppelin.interpreter.group.order

Default Value

livy, md, angular, sh, jdbc, spark

API Name

zeppelin.interpreter.group.order

Required

false

Zeppelin Local repository location**Description**

Local repository for interpreter's additional dependency loading

Related Name

zeppelin.interpreter.localRepo

Default Value

/var/lib/zeppelin/local-repo

API Name

zeppelin.interpreter.localRepo

Required

false

Zeppelin notebook location

Description

path or URI for notebook persist

Related Name

zeppelin.notebook.dir

Default Value

file:///var/lib/zeppelin/notebook

API Name

zeppelin.notebook.dir

Required

false

Zeppelin notebook public access

Description

Make notebook public by default when created, private otherwise

Related Name

zeppelin.notebook.public

Default Value

false

API Name

zeppelin.notebook.public

Required

false

Zeppelin notebook storage class

Description

versioned notebook persistence layer implementation

Related Name

zeppelin.notebook.storage

Default Value

org.apache.zeppelin.notebook.repo.FileSystemNotebookRepo

API Name

zeppelin.notebook.storage

Required

false

Zeppelin Server Bind Address**Description**

Zeppelin Server Bind Address

Related Name

zeppelin.server.addr

Default Value

0.0.0.0

API Name

zeppelin.server.addr

Required

false

Zeppelin shiro knox main block**Description**

Content of shiro knox main block

Related Name

zeppelin.shiro.knox.main.block

Default Value

```
krbRealm = org.apache.zeppelin.realm.kerberos.KerberosRealm
krbRealm.principal=SPNEGO_PRINCIPAL krbRealm.keytab=KEYTAB_FILE
krbRealm.nameRules=DEFAULT krbRealm.signatureSecretFile=CONF_DIR/http_secret
krbRealm.tokenValidity=36000 krbRealm.cookieDomain=DOMAIN krbRealm.cookiePath=/ authc
= org.apache.zeppelin.realm.kerberos.KerberosAuthenticationFilter
```

API Name

zeppelin.shiro.knox.main.block

Required

false

Zeppelin shiro main block**Description**

Content of main block

Related Name

zeppelin.shiro.main.block

Default Value

pamRealm=org.apache.zeppelin.realm.PamRealm pamRealm.service=sshd

API Name

zeppelin.shiro.main.block

Required

false

Zeppelin shiro main session block**Description**

Content of main session block

Related Name

zeppelin.shiro.main.session.block

Default Value

sessionManager = org.apache.shiro.web.session.mgt.DefaultWebSessionManager cookie = org.apache.shiro.web.servlet.SimpleCookie cookie.name = JSESSIONID cookie.httpOnly = true sessionManager.sessionIdCookie = \$cookie securityManager.sessionManager = \$sessionManager securityManager.sessionManager.globalSessionTimeout = 86400000 shiro.loginUrl = /api/login

API Name

zeppelin.shiro.main.session.block

Required

false

Zeppelin shiro roles block

Description

Content of roles block

Related Name

zeppelin.shiro.roles.block

Default Value

API Name

zeppelin.shiro.roles.block

Required

false

Zeppelin shiro urls block

Description

Content of urls block

Related Name

zeppelin.shiro.urls.block

Default Value

/api/version = anon /api/interpreter/setting/restart/** = authc /api/interpreter/** = authc, roles[zeppelin_admin_group] /api/notebook-repositories/** = authc, roles[zeppelin_admin_group] /api/configurations/** = authc, roles[zeppelin_admin_group] /api/credential/** = authc, roles[zeppelin_admin_group] /api/admin/** = authc, roles[zeppelin_admin_group] /** = authc

API Name

zeppelin.shiro.urls.block

Required

false

Zeppelin shiro user block

Description

Content of user block

Related Name

zeppelin.shiro.user.block

Default Value

API Name

zeppelin.shiro.user.block

Required

false

Zeppelin ssl client auth**Description**

Should client authentication be used for SSL connections?

Related Name

zeppelin.ssl.client.auth

Default Value

false

API Name

zeppelin.ssl.client.auth

Required

false

Zeppelin ssl keystore type**Description**

The format of the given keystore (e.g. JKS or PKCS12)

Related Name

zeppelin.ssl.keystore.type

Default Value

jks

API Name

zeppelin.ssl.keystore.type

Required

false

Zeppelin ssl truststore type**Description**

The format of the given truststore (e.g. JKS or PKCS12). Defaults to the same type as the keystore type

Related Name

zeppelin.ssl.truststore.type

Default Value

jks

API Name

zeppelin.ssl.truststore.type

Required

false

Zeppelin temp webapps directory**Description**

Location of jetty temporary directory

Related Name

zeppelin.war.tempdir

Default Value`/var/lib/zeppelin/webapps`**API Name**`zeppelin.war.tempdir`**Required**`false`**Zeppelin websocket text size****Description**

Size in characters of the maximum text message to be received by websocket. Defaults to 1024000

Related Name`zeppelin.websocket.max.text.message.size`**Default Value**`1024000`**API Name**`zeppelin.websocket.max.text.message.size`**Required**`false`**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**`rlimit_fds`**Required**`false`**Ports and Addresses****Zeppelin Server Port****Description**

The port of the Zeppelin server

Related Name`zeppelin.server.port`**Default Value**`8885`**API Name**`zeppelin_server_port`**Required**`false`

Zeppelin Server SSL Port

Description

The SSL port of the Zeppelin server

Related Name

zeppelin.server.ssl.port

Default Value

8886

API Name

zeppelin_server_ssl_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Zeppelin Server TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Zeppelin Server might connect to. This is used when Zeppelin Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

zeppelin.ssl.truststore.path

Default Value**API Name**

ssl_client_truststore_location

Required

false

Zeppelin Server TLS/SSL Client Trust Store Password

Description

The password for the Zeppelin Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

zeppelin.ssl.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Zeppelin Server

Description

Encrypt communication between clients and Zeppelin Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

zeppelin.ssl

Default Value

false

API Name

ssl_enabled

Required

false

Zeppelin Server TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Zeppelin Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

zeppelin.ssl.keystore.path

Default Value**API Name**

ssl_server_keystore_location

Required

false

Zeppelin Server TLS/SSL Server JKS Keystore File Password

Description

The password for the Zeppelin Server JKS keystore file.

Related Name

zeppelin.ssl.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Zeppelin Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Zeppelin Server Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Zeppelin Server TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Zeppelin Server TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server TLS/SSL Client Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Zeppelin Server TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Zeppelin Server TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-env.sh**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-env.sh parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin-conf/zeppelin-env.sh_role_safety_valve

Required

true

Suppress Parameter Validation: Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin-conf/zeppelin-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Admin Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Group parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.admin.group

Required

true

Suppress Parameter Validation: Zeppelin anonymous**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin anonymous parameter.

Related Name

Default Value

false

API Name

role_config_suppression_zeppelin.anonymous.allowed

Required

true

Suppress Parameter Validation: Zeppelin interpreter config location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin interpreter config location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.config.fs.dir

Required

true

Suppress Parameter Validation: Zeppelin config storage class**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin config storage class parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.config.storage.class

Required

true

Suppress Parameter Validation: Zeppelin Local repository location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Local repository location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.dep.localrepo

Required

true

Suppress Parameter Validation: Zeppelin interpreter group order**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin interpreter group order parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.interpreter.group.order

Required

true

Suppress Parameter Validation: Zeppelin Local repository location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Local repository location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.interpreter.localrepo

Required

true

Suppress Parameter Validation: Zeppelin notebook location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin notebook location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.notebook.dir

Required

true

Suppress Parameter Validation: Zeppelin notebook storage class**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin notebook storage class parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.notebook.storage

Required

true

Suppress Parameter Validation: Zeppelin Server Bind Address

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Bind Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.server.addr

Required

true

Suppress Parameter Validation: Zeppelin shiro Knox main block

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro Knox main block parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.shiro.knox.main.block

Required

true

Suppress Parameter Validation: Zeppelin shiro main block

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro main block parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.shiro.main.block

Required

true

Suppress Parameter Validation: Zeppelin shiro main session block

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro main session block parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_zeppelin.shiro.main.session.block`**Required**`true`**Suppress Parameter Validation: Zeppelin shiro roles block****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro roles block parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_zeppelin.shiro.roles.block`**Required**`true`**Suppress Parameter Validation: Zeppelin shiro urls block****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro urls block parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_zeppelin.shiro.urls.block`**Required**`true`**Suppress Parameter Validation: Zeppelin shiro user block****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro user block parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_zeppelin.shiro.user.block`**Required**`true`**Suppress Parameter Validation: Zeppelin ssl client auth****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin ssl client auth parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.ssl.client.auth

Required

true

Suppress Parameter Validation: Zeppelin ssl keystore type**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin ssl keystore type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.ssl.keystore.type

Required

true

Suppress Parameter Validation: Zeppelin ssl truststore type**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin ssl truststore type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.ssl.truststore.type

Required

true

Suppress Parameter Validation: Zeppelin temp webapps directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin temp webapps directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.war.tempdir

Required

true

Suppress Parameter Validation: Zeppelin websocket text size**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin websocket text size parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin.websocket.max.text.message.size

Required

true

Suppress Parameter Validation: Zeppelin Server Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin_server_port

Required

true

Suppress Parameter Validation: Zeppelin Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin_server_role_env_safety_valve

Required

true

Suppress Parameter Validation: Zeppelin Server SSL Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server SSL Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zeppelin_server_ssl_port

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zeppelin_zeppelin_server_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zeppelin_zeppelin_server_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zeppelin_zeppelin_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zeppelin_zeppelin_server_log_directory_free_space

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zeppelin_zeppelin_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zeppelin_zeppelin_server_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zeppelin_zeppelin_server_unexpected_exits

Required

true

ZooKeeper Properties in Cloudera Runtime 7.1

Role groups:

Server

Advanced

ZooKeeper 'Four Letter Word' Command Whitelist

Description

ZooKeeper responds to specific Four-Letter-Word diagnostic telnet commands on its client port. Here you can configure which commands should be accepted by the server. Use asterisk ('*') to enable all of them.

Related Name

4lw.commands.whitelist

Default Value

conf cons crst dirs dump envi gtmk ruok stmk srst srvr stat wchs mntr isro

API Name

4lw_commands_whitelist

Required

false

Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

`oom_heap_dump_dir`**Default Value**`/tmp`**API Name**`oom_heap_dump_dir`**Required**`false`**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_heap_dump_enabled`**Required**`true`**Kill When Out of Memory****Description**

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**`true`**API Name**`oom_sigkill_enabled`**Required**`true`**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**`true`**API Name**`process_auto_restart`**Required**`true`

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value**API Name**

SERVER_role_env_safety_valve

Required

false

Java Configuration Options for Zookeeper Server**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

zk_server_java_opts

Required

false

Server Advanced Configuration Snippet (Safety Valve) for zoo.cfg**Description**

For advanced use only. A string to be inserted into zoo.cfg for this role only.

Related Name**Default Value****API Name**

zookeeper_config_safety_valve

Required

false

Logs**Server Logging Threshold****Description**

The minimum log level for Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Server Max Log Size

Description

The maximum size, in megabytes, per log file for Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

ZooKeeper Log Directory

Description

Directory where ZooKeeper will place its log files.

Related Name

Default Value

/var/log/zookeeper

API Name

zk_server_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

```
version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0,
threshold: WARN, content: .* is deprecated. Instead, use .* , alert: false, rate: 0, threshold: WARN,
content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* ,
alert: false, rate: 1, periodminutes: 1, threshold: WARN ]
```

API Name

log_event_whitelist

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

ZooKeeper Server Connection Count Thresholds

Description

The health check thresholds of the weighted average size of the ZooKeeper Server connection count over a recent period. See ZooKeeper Server Connection Count Monitoring Period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

zookeeper_server_connection_count_thresholds

Required

false

ZooKeeper Server Connection Count Monitoring Period

Description

The period to review when computing the moving average of the connection count. Specified in minutes.

Related Name

Default Value

3 minute(s)

API Name

zookeeper_server_connection_count_window

Required

false

Data Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Data Directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

zookeeper_server_data_directory_free_space_absolute_thresholds

Required

false

Data Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Data Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Data Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

zookeeper_server_data_directory_free_space_percentage_thresholds

Required

false

Transaction Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Transaction Log Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

zookeeper_server_data_log_directory_free_space_absolute_thresholds

Required

false

Transaction Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Transaction Log Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Transaction Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

zookeeper_server_data_log_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

zookeeper_server_fd_thresholds

Required

false

Garbage Collection Duration Thresholds**Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

zookeeper_server_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period**Description**

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

zookeeper_server_gc_duration_window

Required

false

Server Host Health Test**Description**

When computing the overall Server health, consider the host's health.

Related Name**Default Value**

true

API Name

zookeeper_server_host_health_enabled

Required

false

Maximum Latency Monitoring Thresholds**Description**

The percentage thresholds of the ratio of the maximum request latency to the maximum client-negotiable session timeout since the server was started.

Related Name**Default Value**

Warning: 75.0 %, Critical: 100.0 %

API Name

zookeeper_server_max_latency_thresholds

Required

false

ZooKeeper Server Outstanding Requests Thresholds**Description**

The health check thresholds of the weighted average size of the ZooKeeper Server outstanding requests queue over a recent period. See ZooKeeper Server Outstanding Requests Monitoring Period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

zookeeper_server_outstanding_requests_thresholds

Required

false

ZooKeeper Server Outstanding Requests Monitoring Period**Description**

The period to review when computing the moving average of the outstanding requests queue size. Specified in minutes.

Related Name**Default Value**

3 minute(s)

API Name

zookeeper_server_outstanding_requests_window

Required

false

Quorum Membership Detection Window**Description**

The tolerance window that will be used in the detection of a ZooKeeper server's membership in a quorum. Specified in minutes.

Related Name**Default Value**

3 minute(s)

API Name

zookeeper_server_quorum_membership_detection_window

Required

false

Enable the Quorum Membership Check

Description

Enables the quorum membership check for this ZooKeeper Server.

Related Name**Default Value**

true

API Name

zookeeper_server_quorum_membership_enabled

Required

false

Server Process Health Test

Description

Enables the health test that the Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

zookeeper_server_scm_health_enabled

Required

false

Other

Client Port Address

Description

The address (IPv4, IPv6, or hostname) to monitor for client connections. This is the address that clients attempt to connect to. This setting is optional, because by default, ZooKeeper binds in such a way that any connection to the client port for any address/interface/NIC on the server will be accepted.

Related Name

clientPortAddress

Default Value**API Name**

clientPortAddress

Required

false

Data Directory

Description

The disk location that ZooKeeper will use to store its database snapshots.

Related Name

dataDir

Default Value

/var/lib/zookeeper

API Name

dataDir

Required

false

Transaction Log Directory**Description**

The disk location that ZooKeeper will use to store its transaction logs.

Related Name

dataLogDir

Default Value

/var/lib/zookeeper

API Name

dataLogDir

Required

false

Enable JMX Agent**Description**

Enables the JMX agent on the ZooKeeper server. Turning this off on any of the ZooKeeper servers that are part of a service will prevent Cloudera Manager from being able to monitor that server and may affect the monitoring provided on the entire service.

Related Name**Default Value**

true

API Name

enable_jmx_agent

Required

false

Enable Authenticated Communication with the JMX Agent**Description**

Enables authentication when interacting with the JMX agent on the ZooKeeper server.

Related Name**Default Value**

false

API Name

enable_jmx_authentication

Required

false

Enable ZooKeeper Admin Server**Description**

The AdminServer is an embedded HTTP server that provides a REST interface for different diagnostics commands in ZooKeeper. The results of the commands are returned in JSON. The

AdminServer is optional to enable, you should consider it as an alternative to the 'Four-Letter-Word' telnet interface.

Related Name

admin.enableServer

Default Value

false

API Name

enable_zookeeper_admin_server

Required

false

Name of User with Read-Only access to the JMX Agent**Description**

Specifies the name of the user that has read-only privileges when using password file based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name**Default Value**

monitorRole

API Name

jmx_passwd_file_readonly_user

Required

false

Password of User with Read-Only Access to the JMX agent**Description**

Specifies the password of the user that has read-only privileges when using password file based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name**Default Value**

API Name

jmx_passwd_file_readonly_user_password

Required

false

Name of User with Read-Write Access to the JMX Agent**Description**

Specifies the name of the user that has read-write privileges when using password file based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name**Default Value**

controlRole

API Name

jmx_passwd_file_readwrite_user

Required

false

Password of user with read-write access to the JMX agent**Description**

Specifies the password of the user that has read-write privileges when using password file based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name**Default Value**

API Name

jmx_passwd_file_readwrite_user_password

Required

false

Maximum Client Connections**Description**

The maximum number of concurrent connections (at the socket level) that a single client, identified by the IP address, may make to a single member of the ZooKeeper ensemble. This setting is used to prevent certain classes of DoS attacks, including file descriptor exhaustion. To remove the limit on concurrent connections, set this value to 0.

Related Name

maxClientCnxns

Default Value

60

API Name

maxClientCnxns

Required

false

Maximum Session Timeout**Description**

The maximum session timeout, in milliseconds, that the ZooKeeper Server will allow the client to negotiate

Related Name

maxSessionTimeout

Default Value

40000

API Name

maxSessionTimeout

Required

false

Minimum Session Timeout**Description**

The minimum session timeout, in milliseconds, that the ZooKeeper Server will allow the client to negotiate

Related Name

minSessionTimeout

Default Value

4000

API Name

minSessionTimeout

Required

false

ZooKeeper Server ID

Description

Unique identifier for each ZooKeeper server, typically starts at 1

Related Name

myid

Default Value**API Name**

serverId

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Client Port

Description

The port to monitor for client connections. This is the port that clients attempt to connect to.

Related Name

clientPort

Default Value

2181

API Name

clientPort

Required

false

Election Port**Description**

The port to monitor for leadership election

Related Name**Default Value**

4181

API Name

electionPort

Required

false

Quorum Port**Description**

The port to monitor for inter-server communication

Related Name**Default Value**

3181

API Name

quorumPort

Required

false

JMX Remote Port**Description**

The port used by the ZooKeeper Server's RMI registry. This is required to enable JMX access through RMI which is required for Cloudera Manager ZooKeeper monitoring. This is added as "-Dcom.sun.management.jmxremote.port" to the ZooKeeper Server's JVM command line.

Related Name**Default Value**

9010

API Name

server_jmx_agent_port

Required

false

JMX RMI Server Port**Description**

The port used by the ZooKeeper Server's RMI server to handle JMX RMI requests. This is added as "-Dcom.sun.management.jmxremote.rmi.port=*port*" to the ZooKeeper Server's JVM command line. This has an effect only in Oracle JDK 7u4 and higher. If the setting is left blank, the JMX Remote

Port value is used. If set to 0 or -1, this setting is ignored. When this setting is not in effect, the JVM uses a random port for the RMI server.

Related Name**Default Value****API Name**

server_jmx_rmi_port

Required

false

Admin Server Port

Description

Port number for the REST Admin Server embedded in ZooKeeper.

Related Name

admin.serverPort

Default Value

5181

API Name

zookeeper_admin_server_port

Required

false

Secure Client Port

Description

The port used in ZooKeeper to accept TLS/SSL connections from clients. You need to select 'Enable TLS/SSL for ZooKeeper' in order to have this port open. Any client that connects to this port must use TLS/SSL.

Related Name

secureClientPort

Default Value

2182

API Name

zookeeper_secure_client_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Java Heap Size of ZooKeeper Server in Bytes**Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

zookeeper_server_java_heapsize

Required

false

Security**Enable TLS client authentication for JMX port****Description**

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the ZooKeeper JMX TLS/SSL Server Trust Store File or the global trust store.

Related Name**Default Value**

false

API Name

jmx_tls_client_auth_enabled

Required

false

Enable TLS/SSL for ZooKeeper JMX

Description

Encrypt communication between clients and ZooKeeper JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

Default Value

false

API Name

jmx_tls_enabled

Required

false

ZooKeeper JMX TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when ZooKeeper JMX is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

Default Value

API Name

jmx_tls_keystore

Required

false

ZooKeeper JMX TLS/SSL Server JKS Keystore File Password

Description

The password for the ZooKeeper JMX JKS keystore file.

Related Name

Default Value

API Name

jmx_tls_keystore_password

Required

false

ZooKeeper JMX TLS/SSL Server Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that ZooKeeper JMX might connect to. This is used when ZooKeeper JMX is the server in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

Default Value

API Name

jmx_tls_truststore

Required

false

ZooKeeper JMX TLS/SSL Server Trust Store Password**Description**

The password for the ZooKeeper JMX TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

jmx_tls_truststore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper JMX TLS/SSL Server JKS Keystore File Location parameter.

Related Name

Default Value

false

API Name`role_config_suppression_jmx_tls_keystore`**Required**`true`**Suppress Parameter Validation: ZooKeeper JMX TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper JMX TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_jmx_tls_keystore_password`**Required**`true`**Suppress Parameter Validation: ZooKeeper JMX TLS/SSL Server Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper JMX TLS/SSL Server Trust Store File parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_jmx_tls_truststore`**Required**`true`**Suppress Parameter Validation: ZooKeeper JMX TLS/SSL Server Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper JMX TLS/SSL Server Trust Store Password parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_jmx_tls_truststore_password`**Required**`true`**Suppress Parameter Validation: Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Quorum Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Quorum Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_quorumport

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: JMX Remote Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Remote Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_server_jmx_agent_port

Required

true

Suppress Parameter Validation: JMX RMI Server Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX RMI Server Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_server_jmx_rmi_port

Required

true

Suppress Parameter Validation: Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_server_role_env_safety_valve

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Java Configuration Options for Zookeeper Server**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Zookeeper Server parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zk_server_java_opts

Required

true

Suppress Parameter Validation: ZooKeeper Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zk_server_log_dir

Required

true

Suppress Parameter Validation: Admin Server Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Server Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zookeeper_admin_server_port

Required

true

Suppress Parameter Validation: Server Advanced Configuration Snippet (Safety Valve) for zoo.cfg**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server Advanced Configuration Snippet (Safety Valve) for zoo.cfg parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zookeeper_config_safety_valve

Required

true

Suppress Parameter Validation: Secure Client Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Client Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_zookeeper_secure_client_port

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_audit_health

Required

true

Suppress Health Test: Connection Count**Description**

Whether to suppress the results of the Connection Count health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_connection_count

Required

true

Suppress Health Test: Data Directory Free Space**Description**

Whether to suppress the results of the Data Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_data_directory_free_space

Required

true

Suppress Health Test: Transaction Log Directory Free Space**Description**

Whether to suppress the results of the Transaction Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_zookeeper_server_data_log_directory_free_space

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_file_descriptor

Required

true

Suppress Health Test: GC Duration**Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_gc_duration

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_log_directory_free_space

Required

true

Suppress Health Test: Maximum Request Latency

Description

Whether to suppress the results of the Maximum Request Latency health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_max_latency

Required

true

Suppress Health Test: Outstanding Requests

Description

Whether to suppress the results of the Outstanding Requests health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_zookeeper_server_outstanding_requests

Required

true

Suppress Health Test: Quorum Membership**Description**

Whether to suppress the results of the Quorum Membership health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_quorum_membership

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_zookeeper_server_unexpected_exits

Required

true

Service-Wide

Advanced

Auto Purge Time Interval

Description

The time interval in hours for which the purge task has to be triggered. Set to a positive integer (1 and above) to enable the auto purging. Defaults to 24.

Related Name

autopurge.purgeInterval

Default Value

1 day(s)

API Name

autopurgeInterval

Required

false

Auto Purge Snapshots Retain Count

Description

When enabled, ZooKeeper auto purge feature retains this many most recent snapshots and the corresponding transaction logs in the dataDir and dataLogDir respectively and deletes the rest. Defaults to 5. Minimum value is 3.

Related Name

autopurge.snapRetainCount

Default Value

5

API Name

autopurgeSnapRetainCount

Required

false

System Group

Description

The group that this service's processes should run as.

Related Name**Default Value**

zookeeper

API Name

process_groupname

Required

true

System User**Description**

The user that this service's processes should run as.

Related Name**Default Value**

zookeeper

API Name

process_username

Required

true

Enable auto-creation of data directories**Description**

Automatically create data directories at startup, if they do not exist. Enabling this configuration should be used with care as it will suppress any errors in setup of data directories.

Related Name**Default Value**

false

API Name

zookeeper_datadir_autocreate

Required

false

ZooKeeper Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

zookeeper_env_safety_valve

Required

false

Monitoring

Enable Log Event Capture

Description

When set, each role identifies important log events and forwards them to Cloudera Manager.

Related Name**Default Value**

true

API Name

catch_events

Required

false

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Log Event Retry Frequency

Description

The frequency in which the log4j event publication appender will retry sending undelivered log events to the Event server, in seconds

Related Name**Default Value**

30

API Name

log_event_retry_frequency

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Default Value

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

ZooKeeper Canary Connection Timeout

Description

Configures the timeout used by the canary for connection establishment with ZooKeeper servers

Related Name

Default Value

10 second(s)

API Name

zookeeper_canary_connection_timeout

Required

false

ZooKeeper Canary Health Check

Description

Enables the health check that a client can connect to ZooKeeper and perform basic operations

Related Name**Default Value**

true

API Name

zookeeper_canary_health_enabled

Required

false

ZooKeeper Canary Operation Timeout

Description

Configures the timeout used by the canary for ZooKeeper operations

Related Name**Default Value**

30 second(s)

API Name

zookeeper_canary_operation_timeout

Required

false

ZooKeeper Canary Root Znode Path

Description

Configures the path of the root znode under which all canary updates are performed

Related Name**Default Value**

/cloudera_manager_zookeeper_canary

API Name

zookeeper_canary_root_path

Required

false

ZooKeeper Canary Session Timeout

Description

Configures the timeout used by the canary sessions with ZooKeeper servers

Related Name**Default Value**

30 second(s)

API Name

zookeeper_canary_session_timeout

Required

false

Healthy Server Monitoring Thresholds**Description**

The health test thresholds of the overall Server health. The check returns "Concerning" health if the percentage of "Healthy" Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

zookeeper_servers_healthy_thresholds

Required

false

Other**Cleanup Retain Count****Description**

The number of snapshot files and corresponding transaction logs to keep when running the Cleanup command.

Related Name**Default Value**

5

API Name

cleanupRetainCount

Required

false

Initialization Limit**Description**

Amount of time, in ticks, to allow followers to connect and sync to a leader. Increase this value as needed, if the amount of data managed by ZooKeeper is large.

Related Name

initLimit

Default Value

10

API Name

initLimit

Required

false

Jute Max Buffer

Description

The maximum size of the data that can be stored in a znode in bytes.

Related Name

jute.maxbuffer

Default Value

4 MiB

API Name

jute_maxbuffer

Required

false

Leader Serves

Description

Whether the leader accepts client connections.

Related Name

leaderServes

Default Value

yes

API Name

leaderServes

Required

false

Quorum Connection Manager Thread Pool Size

Description

Size of the thread pool quorum connection manager uses to manage connections between quorum servers. Only applies when ZooKeeper Server to Server SASL Authentication is enabled.

Related Name

quorum.cnxn.threads.size

Default Value

20

API Name

quorum_cnxn_threads_size

Required

false

Synchronization Limit

Description

Amount of time, in ticks, to allow followers to sync with ZooKeeper. If followers fall too far behind a leader, they are dropped.

Related Name

syncLimit

Default Value

5

API Name

syncLimit

Required

false

Tick Time**Description**

The length of time, in milliseconds, of a single tick, which is the basic time unit used by ZooKeeper. A tick is used to regulate heartbeats and timeouts.

Related Name

tickTime

Default Value

2000

API Name

tickTime

Required

false

Security**Enable Kerberos Authentication****Description**

Enable Kerberos authentication for ZooKeeper.

Related Name

enableSecurity

Default Value

false

API Name

enableSecurity

Required

false

Kerberos Principal**Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

zookeeper

API Name

kerberos_princ_name

Required

true

Enable Server to Server SASL Authentication**Description**

Enables SASL authentication between ZooKeeper servers. Only applies when ZooKeeper Kerberos Authentication is enabled.

Related Name

quorum.auth.enableSasl

Default Value

false

API Name

quorum_auth_enable_sasl

Required

false

Enable TLS/SSL for ZooKeeper

Description

Encrypt ZooKeeper communication using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)). This option will encrypt all internal communication between ZooKeeper servers (this feature is called QuorumSSL in ZooKeeper). Additionally, choosing this option will also encrypt the communication between ZooKeeper servers and all ZooKeeper client services that support TLS/SSL connections.

Related Name

zookeeper_tls_enabled

Default Value

false

API Name

zookeeper_tls_enabled

Required

false

ZooKeeper TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when ZooKeeper is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

zookeeper_tls_keystore

Default Value**API Name**

zookeeper_tls_keystore

Required

false

ZooKeeper TLS/SSL Server JKS Keystore File Password

Description

The password for the ZooKeeper JKS keystore file.

Related Name

zookeeper_tls_keystore_password

Default Value**API Name**`zookeeper_tls_keystore_password`**Required**`false`**ZooKeeper TLS/SSL Server Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that ZooKeeper might connect to. This is used when ZooKeeper is the server in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`zookeeper_tls_truststore`**Default Value****API Name**`zookeeper_tls_truststore`**Required**`false`**ZooKeeper TLS/SSL Server Trust Store Password****Description**

The password for the ZooKeeper TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name`zookeeper_tls_truststore_password`**Default Value****API Name**`zookeeper_tls_truststore_password`**Required**`false`**Suppressions****Suppress Configuration Validator: ZooKeeper 'Four Letter Word' Command Whitelist****Description**

Whether to suppress configuration warnings produced by the ZooKeeper 'Four Letter Word' Command Whitelist configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_4lw_commands_whitelist`

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Client Port**Description**

Whether to suppress configuration warnings produced by the Client Port configuration validator.

Required	true

Suppress Parameter Validation: Service Triggers

Description	
-------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: ZooKeeper Canary Root Znode Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Canary Root Znode Path parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_canary_root_path

Required

true

Suppress Parameter Validation: ZooKeeper Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_env_safety_valve

Required

true

Suppress Configuration Validator: ZooKeeper Server Count Validator**Description**

Whether to suppress configuration warnings produced by the ZooKeeper Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_odd_number_of_servers_validator

Required

true

Suppress Configuration Validator: ZooKeeper Server-to-Server Authentication Validation**Description**

Whether to suppress configuration warnings produced by the ZooKeeper Server-to-Server Authentication Validation configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_server_to_server_authentication_validator

Required

true

Suppress Parameter Validation: ZooKeeper TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_tls_keystore

Required

true

Suppress Parameter Validation: ZooKeeper TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_tls_keystore_password

Required

true

Suppress Parameter Validation: ZooKeeper TLS/SSL Server Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper TLS/SSL Server Trust Store File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_tls_truststore

Required

true

Suppress Parameter Validation: ZooKeeper TLS/SSL Server Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper TLS/SSL Server Trust Store Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper_tls_truststore_password

Required

true

Suppress Health Test: ZooKeeper Canary**Description**

Whether to suppress the results of the ZooKeeper Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_zookeeper_canary_health

Required

true

Suppress Health Test: Server Health**Description**

Whether to suppress the results of the Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_zookeeper_servers_healthy

Required

true

Host Configuration Properties

Advanced

P2P Parcel Distribution Port

Description

TCP port (on each cluster host) to be used for P2P Parcel Distribution. Set to 0 to disable P2P Parcel Distribution. This setting should only be modified when no parcels are being distributed.

Related Name

Default Value

7191

API Name

flood_torrent_port

Required

false

Cloudera Manager Agent Monitoring Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) used by Cloudera Manager Agent.

Related Name

Default Value

API Name

host_agent_safety_valve

Required

false

Java Home Directory

Description

Explicitly set the value of JAVA_HOME for all processes. This will override the auto-detection logic that is normally used.

Related Name

Default Value

API Name

java_home

Required

false

Host Upgrade Domain

Description

For advanced use only, the HDFS Upgrade Domain that a host belongs to. Only applies to DataNode hosts. Any DataNode hosts without an Upgrade Domain set will default to using the rack assignment of the host. This setting is not used if the Upgrade Domains block placement policy is not enabled for HDFS.

Related Name

upgrade_domain

Default Value

API Name

upgrade_domain

Required

false

Monitoring

Enable Health Alerts for This Host

Description

When set, Cloudera Manager will send alerts when the health of this host reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

false

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Cloudera Manager Agent TLS Certificate Expiry Thresholds

Description

The health test thresholds for monitoring the certificate of Cloudera Manager Agent.

Related Name**Default Value**

Warning: 60 day(s), Critical: 7 day(s)

API Name

host_agent_certificate_expiry_thresholds

Required

false

Cloudera Manager Agent Log Directory Free Space Monitoring Absolute Thresholds

Description

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's log directory.

Related Name**Default Value**

Warning: 2 GiB, Critical: 1 GiB

API Name

host_agent_log_directory_free_space_absolute_thresholds

Required

false

Cloudera Manager Agent Log Directory Free Space Monitoring Percentage Thresholds

Description

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Cloudera Manager Agent Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

host_agent_log_directory_free_space_percentage_thresholds

Required

false

Cloudera Manager Agent Parcel Directory Free Space Monitoring Absolute Thresholds

Description

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's parcel directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

host_agent_parcel_directory_free_space_absolute_thresholds

Required

false

Cloudera Manager Agent Parcel Directory Free Space Monitoring Percentage Thresholds

Description

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's parcel directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Cloudera Manager Agent Parcel Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

host_agent_parcel_directory_free_space_percentage_thresholds

Required

false

Cloudera Manager Agent Process Directory Free Space Monitoring Absolute Thresholds

Description

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's process directory.

Related Name**Default Value**

Warning: 200 MiB, Critical: 100 MiB

API Name

host_agent_process_directory_free_space_absolute_thresholds

Required

false

Cloudera Manager Agent Process Directory Free Space Monitoring Percentage Thresholds

Description

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's process directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Cloudera Manager Agent Process Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

host_agent_process_directory_free_space_percentage_thresholds

Required

false

Host Entropy Thresholds

Description

The health check thresholds for the available entropy on the host.

Related Name**Default Value**

Warning: 100.0, Critical: 50.0

API Name

host_available_entropy_thresholds

Required

false

Host Clock Offset Thresholds

Description

The thresholds for the host clock offset health test. The test compares this threshold against the absolute value of the clock offset reported by the host's NTP service from the 'ntpd -np' or 'chronyc sources' command. Setting both the warning and critical threshold values to never turns off collection of the clock offset by the Cloudera Manager Agent. If no time synchronization is in use, both threshold values should be set to never. Cloudera recommends using NTP for time synchronization of Hadoop clusters.

Related Name**Default Value**

Warning: 3 second(s), Critical: 10 second(s)

API Name

host_clock_offset_thresholds

Required

false

Default Process Swap Memory Thresholds

Description

The default health test thresholds on the swap memory usage of the processes on the host. This value is used if process level threshold is equal to the default.

Related Name**Default Value**

Warning: 200.0 page(s), Critical: Never

API Name

host_default_proc_memswap_thresholds

Required

false

Disk Device Collection Exclusion Regex

Description

The regular expression used to filter monitored disk devices and partitions. Disk device (for example, sda) and partition (for example, sda2) names that match this pattern will be excluded from metric collection.

Related Name

Default Value

^\$

API Name

host_disk_collection_filter

Required

false

Host DNS Resolution Duration Thresholds**Description**

The health check thresholds for the host DNS resolution duration.

Related Name**Default Value**

Warning: 1 second(s), Critical: Never

API Name

host_dns_resolution_duration_thresholds

Required

false

Hostname and Canonical Name Health Check**Description**

Whether the hostname and canonical names for this host are consistent when checked from a Java process.

Related Name**Default Value**

true

API Name

host_dns_resolution_enabled

Required

false

Filesystem Collection Exclusion Regex**Description**

The regular expression used to filter monitored filesystems. Mountpoints for filesystems (for example, /data/1) that match this pattern will be excluded from metric collection.

Related Name**Default Value**

^\$

API Name

host_fs_collection_filter

Required

false

Host Memory Swapping Thresholds**Description**

The health test thresholds of the number of pages swapped out on the host in the last 15 minutes

Related Name**Default Value**

Warning: 200.0 page(s), Critical: Never

API Name

host_memswap_thresholds

Required

false

Host Memory Swapping Check Window

Description

The amount of time over which the memory swapping test checks for pages swapped.

Related Name**Default Value**

15 minute(s)

API Name

host_memswap_window

Required

false

Host Network Frame Error Test Minimum Required Packets

Description

The minimum number of received packets that must be received within the test window for this test to return "Bad" health. If less than this number of packets is received during the test window, the health check will never return "Bad" health.

Related Name**Default Value**

0

API Name

host_network_frame_errors_floor

Required

false

Host Network Frame Error Percentage Thresholds

Description

The health check thresholds for the percentage of received packets that are frame errors.

Related Name**Default Value**

Warning: Any, Critical: 0.5 %

API Name

host_network_frame_errors_thresholds

Required

false

Host Network Frame Error Check Window

Description

The amount of time over which the host frame error checks for frame errors.

Related Name**Default Value**

15 minute(s)

API Name

host_network_frame_errors_window

Required

false

Network Interface Collection Exclusion Regex

Description

The regular expression used to filter monitored network interfaces. Network interfaces that match this pattern will be excluded from metric collection.

Related Name**Default Value**

^lo\$

API Name

host_network_interface_collection_filter

Required

false

Host's Network Interfaces Slow Link Modes Thresholds

Description

The thresholds for the health check of the number of network interfaces that appear to be operating at less than full speed.

Related Name**Default Value**

Warning: Any, Critical: Never

API Name

host_network_interfaces_slow_mode_thresholds

Required

false

Network Interface Expected Duplex Mode

Description

The expected duplex mode for network interfaces.

Related Name**Default Value**

Full

API Name

host_nic_expected_duplex_mode

Required

false

Network Interface Expected Link Speed**Description**

The expected network interface link speed.

Related Name**Default Value**

1000

API Name

host_nic_expected_speed

Required

false

Host Process Health Test**Description**

Enables the health test that the host's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

host_scm_health_enabled

Required

false

Host Triggers**Description**

The configured triggers for this host. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific host.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if the host wait time exceeds 500 ms: [{"triggerName": "sample-trigger", "triggerExpression": "IF (select await_time where hostname=\$HOSTNAME and last(await_time) > 500ms) DO health:concerning", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

	[]
API Name	
	host_triggers
Required	
	true

Parcels

Parcel Directory

Description

The directory that parcels will be installed into on the host(s). The download 'parcel-cache' directory will be placed next to this directory on the filesystem. If the 'parcel_dir' variable is set in the Agent's config.ini file, it will override this value.

Related Name**Default Value**

/opt/cloudera/parcels

API Name

parcels_directory

Required

true

Resource Management

Memory Overcommit Validation Threshold

Description

Threshold used when validating the allocation of RAM on a host. 0 means all of the memory is reserved for the system. 1 means none is reserved. Values can range from 0 to 1.

Related Name**Default Value**

0.8

API Name

memory_overcommit_threshold

Required

false

Enable Cgroup-based Resource Management

Description

Enables resource management using control groups (cgroups). When toggled, roles on the host must be restarted for cgroups to be enabled or disabled. Per-resource controls are found in the configuration pages of role configuration groups and individual roles. Control groups are a feature of the Linux kernel, and support varies by distribution; see the Cloudera Manager documentation for details.

Related Name

Default Value

false

API Name

rm_enabled

Required

true

Suppressions

Suppress Configuration Validator: Cloudera Manager Agent User and Group Validator

Description

Whether to suppress configuration warnings produced by the Cloudera Manager Agent User and Group Validator configuration validator.

Related Name**Default Value**

false

API Name

host_config_suppression_agent_system_user_group_validator

Required

true

Suppress Configuration Validator: CGroups Disabled Validator

Description

Whether to suppress configuration warnings produced by the CGroups Disabled Validator configuration validator.

Related Name**Default Value**

false

API Name

host_config_suppression_cgroups_disabled_validator

Required

true

Suppress Parameter Validation: P2P Parcel Distribution Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the P2P Parcel Distribution Port parameter.

Related Name**Default Value**

false

API Name

host_config_suppression_flood_torrent_port

Required

true

Suppress Parameter Validation: Cloudera Manager Agent Monitoring Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Agent Monitoring Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

host_config_suppression_host_agent_safety_valve

Required

true

Suppress Parameter Validation: Disk Device Collection Exclusion Regex

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Disk Device Collection Exclusion Regex parameter.

Related Name**Default Value**

false

API Name

host_config_suppression_host_disk_collection_filter

Required

true

Suppress Parameter Validation: Filesystem Collection Exclusion Regex

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Filesystem Collection Exclusion Regex parameter.

Related Name**Default Value**

false

API Name

host_config_suppression_host_fs_collection_filter

Required

true

Suppress Parameter Validation: Network Interface Collection Exclusion Regex

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Network Interface Collection Exclusion Regex parameter.

Related Name**Default Value**

false

API Name

host_config_suppression_host_network_interface_collection_filter

Required

true

Suppress Parameter Validation: Host Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Triggers parameter.

Related Name**Default Value**

false

API Name

host_config_suppression_host_triggers

Required

true

Suppress Parameter Validation: Java Home Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Directory parameter.

Related Name**Default Value**

false

API Name

host_config_suppression_java_home

Required

true

Suppress Configuration Validator: Java Version Validator**Description**

Whether to suppress configuration warnings produced by the Java Version Validator configuration validator.

Related Name**Default Value**

false

API Name

host_config_suppression_java_version_required_for_cdh_validator

Required

true

Suppress Configuration Validator: Memory Overcommitted Validator**Description**

Whether to suppress configuration warnings produced by the Memory Overcommitted Validator configuration validator.

Related Name**Default Value**

false

API Name

host_config_suppression_memory_overcommitted_validator

Required

true

Suppress Parameter Validation: Parcel Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Parcel Directory parameter.

Related Name**Default Value**

false

API Name

host_config_suppression_parcels_directory

Required

true

Suppress Configuration Validator: Rack Diversity Validator**Description**

Whether to suppress configuration warnings produced by the Rack Diversity Validator configuration validator.

Related Name**Default Value**

false

API Name

host_config_suppression_rack_diversity_validator

Required

true

Suppress Configuration Validator: Supervisord Version Validator**Description**

Whether to suppress configuration warnings produced by the Supervisord Version Validator configuration validator.

Related Name**Default Value**

false

API Name

host_config_suppression_supervisord_version_matched_with_cm_validator

Required

true

Suppress Parameter Validation: Host Upgrade Domain

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Upgrade Domain parameter.

Related Name

Default Value

false

API Name

host_config_suppression_upgrade_domain

Required

true

Suppress Health Test: Certificate Expiration

Description

Whether to suppress the results of the Certificate Expiration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

host_health_suppression_host_agent_certificate_expiry

Required

true

Suppress Health Test: Agent Log Directory

Description

Whether to suppress the results of the Agent Log Directory health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

host_health_suppression_host_agent_log_directory_free_space

Required

true

Suppress Health Test: Agent Parcel Directory

Description

Whether to suppress the results of the Agent Parcel Directory health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

host_health_suppression_host_agent_parcel_directory_free_space

Required

true

Suppress Health Test: Agent Process Directory**Description**

Whether to suppress the results of the Agent Process Directory health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

host_health_suppression_host_agent_process_directory_free_space

Required

true

Suppress Health Test: Entropy**Description**

Whether to suppress the results of the Entropy health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

host_health_suppression_host_available_entropy

Required

true

Suppress Health Test: Clock Offset**Description**

Whether to suppress the results of the Clock Offset health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

host_health_suppression_host_clock_offset

Required

true

Suppress Health Test: DNS Resolution

Description

Whether to suppress the results of the DNS Resolution health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

host_health_suppression_host_dns_resolution

Required

true

Suppress Health Test: Swapping

Description

Whether to suppress the results of the Swapping health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

host_health_suppression_host_memory_swapping

Required

true

Suppress Health Test: Frame Errors

Description

Whether to suppress the results of the Frame Errors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

host_health_suppression_host_network_frame_errors

Required

true

Suppress Health Test: Network Interface Speed

Description

Whether to suppress the results of the Network Interface Speed health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

host_health_suppression_host_network_interfaces_slow_mode

Required

true

Suppress Health Test: Agent Status**Description**

Whether to suppress the results of the Agent Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

host_health_suppression_host_scm_health

Required

true

Cloudera Manager Server Properties

Advanced

Command Eviction Age**Description**

Length of time after which inactive commands are evicted from the database. Default is two years.

Related Name**Default Value**

730 day(s)

API Name

command_eviction_age_hours

Required

true

Cloudera Manager Server Local Data Storage Directory**Description**

Local path used by Cloudera Manager for storing data, including command result files. Note that changes to this configuration will only apply to commands started after the change. It is highly recommended that existing data be migrated over to the new location for the data to be accessible via and managed by Cloudera Manager.

Related Name

Default Value`/var/lib/cloudera-scm-server`**API Name**`command_storage_path`**Required**`false`**Enable Debugging of API****Description**

When enabled, the server log will contain traces of all API calls.

Related Name**Default Value**`false`**API Name**`enable_api_debug`**Required**`true`**Extra JVM arguments for Java-based services****Description**

A list of extra JVM arguments that Cloudera Manager will append to the command line for Java-based services.

Related Name**Default Value****API Name**`extra_jvm_opts`**Required**`false`**Agent Heartbeat Logging Directory****Description**

Specifies the location where Agent heartbeat requests and responses should be logged, for debugging purposes. If empty, logging is disabled.

Related Name**Default Value****API Name**`heartbeat_logging_dir`**Required**`false`**Offline Command Timeout****Description**

The amount of time (in seconds) to wait for all requested hosts to be offlined. If all requested hosts are not transitioned to offline in this interval, the command fails. If timeout occurs, hosts that

transitioned to maintenance stay in maintenance, and those that failed to transition are returned to the normal state.

Related Name**Default Value**

10 minute(s)

API Name

offline_default_timeout

Required

false

Cloudera Manager Descriptor Fetch Timeout**Description**

Timeout for Cloudera Management Service roles to fetch deployment descriptor from Cloudera Manager service. This may need to be increased for larger deployments where Management roles are timing out trying to fetch the descriptor.

Related Name

scm.server.proxy.timeout

Default Value

10 second(s)

API Name

scm_proxy_timeout

Required

true

Tags Limit**Description**

The maximum number of tags that can be created globally. Note that creating more tags than are allowed by the default limit may lead to decreased performance of Cloudera Manager.

Related Name**Default Value**

100000

API Name

tags_limit

Required

false

Maximum Number of Time-Series Streams Returned Per Heatmap**Description**

The maximum number of time-series streams returned by a single time-series heatmap query. The default is 10,000 streams. This value can be set higher, but increasing it may negatively impact chart performance and may require more resources be given to the Cloudera Manager Server, Host Monitor, and Service Monitor.

Related Name**Default Value**

10000

API Name

tsquery_heatmap_streams_limit

Required

true

Time-Series Request Timeout**Description**

Timeout for requests to Service and Host Monitor.

Related Name**Default Value**

20 second(s)

API Name

tsquery_request_timeout

Required

true

Maximum Number of Time-Series Streams Returned Per Scatter Plot**Description**

The maximum number of time-series streams returned by a single time-series scatter plot. The default is 1000 streams. This value can be set higher, but increasing it may negatively impact chart performance and may require more resources be given to the Cloudera Manager Server, Host Monitor, and Service Monitor.

Related Name**Default Value**

1000

API Name

tsquery_scatter_streams_limit

Required

true

Maximum Number Of Time-Series Streams Returned Per Line-Based Chart**Description**

The maximum number of time-series streams that will be returned by a single time-series query. The default is 250 streams. This value can be set higher, but increasing it may negatively impact chart performance and may require more resources be given to the Cloudera Manager Server, Host Monitor, and Service Monitor.

Related Name**Default Value**

250

API Name

tsquery_streams_limit

Required

true

Maximum Number of Time-Series Streams Returned Per Table

Description

The maximum number of time-series streams returned in a single time-series table. The default is 2000 streams. This value can be set higher, but increasing it may negatively impact chart performance and may require more resources be given to the Cloudera Manager Server, Host Monitor, and Service Monitor.

Related Name**Default Value**

2000

API Name

tsquery_table_streams_limit

Required

true

Altus

Telemetry Altus Account

Description

The account to use for data collection to Altus. This by itself does not enable telemetry. Telemetry needs to be explicitly enabled for specific services.

Related Name**Default Value****API Name**

telemetry_altus_account

Required

false

Custom Service Descriptors

Enable Local Descriptor Repository

Description

When enabled, the server will read custom service descriptors from the local filesystem.

Related Name**Default Value**

true

API Name

csd_repo_enabled

Required

true

Local Descriptor Repository Path

Description

Path to the local repository where custom service descriptors are located.

Related Name**Default Value**`/opt/cloudera/csd`**API Name**`csd_repo_path`**Required**`true`

External Authentication

Authentication Backend Order

Description

The order in which authentication back ends are used for authenticating a user. Emergency Administrator Access allows Full and User Administrators in the local database to authenticate if external authentication is not functioning.

Related Name**Default Value**`DB_ONLY`**API Name**`auth_backend_order`**Required**`true`

External Authentication Program Path

Description

An external script (or binary) to use to authenticate users. Username is passed as the first command line argument. The password is passed over stdin. You can configure the return codes for the external script on the Roles page. A negative return value indicates a failure. A failure description can be printed to stderr.

Related Name**Default Value****API Name**`auth_script`**Required**`false`

Authorization Backend Order.

Description

The order in which authorization back ends are used for authorizing a user. This determines where a user's roles come from. If "Database and External" is chosen, then the union of all roles is used.

Related Name**Default Value**`EXTERNAL_AND_DB`

API Name

authorization_backend_order

Required

true

Enable SPNEGO/Kerberos Authentication for the Admin Console and API**Description**

When enabled, you can authenticate to the Cloudera Manager Admin Console and API using Kerberos via the SPNEGO protocol. If you have not imported Kerberos admin credentials, you must also specify the Kerberos principal for SPNEGO authentication and Kerberos keytab file for SPNEGO authentication. This method of authentication is in addition to the configured external authentication methods.

Related Name**Default Value**

false

API Name

krb_auth_enable

Required

true

Exclude Users for SPNEGO/Kerberos Authentication**Description**

Users in this list will not be allowed to authenticate to Cloudera Manager using SPNEGO/Kerberos. They can still authenticate using other methods.

Related Name**Default Value**

admin

API Name

krb_auth_exclude_users

Required

false

Keytab File for SPNEGO Authentication Override**Description**

This is a path to the keytab file that Cloudera Manager will use for SPNEGO/Kerberos authentication. You can leave this blank to have Cloudera Manager automatically generate this keytab.

Related Name**Default Value****API Name**

krb_auth_keytab

Required

false

Kerberos Principal for SPNEGO Authentication Override

Description

This is the full name of the service principal that Cloudera Manager will use for SPNEGO/Kerberos authentication. It is usually "HTTP/fqdn@REALM" where "fqdn" is the Cloudera Manager host and "REALM" is the Kerberos domain. The Kerberos keytab file for SPNEGO authentication must contain an entry for this principal. You can leave this blank to have Cloudera Manager automatically generate this principal.

Related Name**Default Value****API Name**

krb_auth_principal

Required

false

LDAP Bind User Distinguished Name

Description

Distinguished name of the user to bind to AD as for user authentication search/bind and group lookup for role authorization. For openLDAP based directories this should be a DN string, for Active Directory this can be just a username, combined with the "Active Directory Domain" value for login. For example username in the field and example.com in the active directory domain will result in the User Principal Name value of username@example.com being used to bind. If you put a UPM value here, do not over-configure the "active directory domain" field otherwise you will end up presenting username@example.com@example.com for binds. AD will accept a UPN value or the DN value as a valid Bind DN; An example of a Distinguished Name (DN): CN=cdh admin,OU=svcaccount,DC=example,DC=com An example of a UPN value: cdhadmin@example.com

Related Name**Default Value****API Name**

ldap_bind_dn

Required

false

LDAP Bind Distinguished Name for Monitoring

Description

Distinguished name of the user to bind as for LDAP monitoring purposes. Enter a name that is compliant with [RFC 2253](#) , e.g. CN=example,OU=users,DC=example,DC=com.

Related Name**Default Value****API Name**

ldap_bind_dn_monitoring

Required

false

LDAP Bind Password

Description

The password of the bind user.

Related Name**Default Value****API Name**

ldap_bind_pw

Required

false

LDAP Bind Password for Monitoring**Description**

Password of the bind user used for LDAP monitoring purposes. If empty, the password of the authentication bind user will be used.

Related Name**Default Value****API Name**

ldap_bind_pw_monitoring

Required

false

LDAP Distinguished Name Pattern**Description**

This setting is deprecated and soon to be removed, do not use LDAP Distinguished Name Pattern for configuration moving forward. It is not necessary to use and deprecated as a configuration approach for LDAP and AD in general.

Related Name**Default Value****API Name**

ldap_dn_pattern

Required

false

LDAP Group Search Base**Description**

The distinguished name indicating the path within the directory information tree to begin user searches from. For example in AD it would be cn=groups,dc=example,dc=com. Or in an openLDAP compatible situation it would be something like ou=groups,dc=example,dc=com. Check with your directory administration team on the proper search base to configure for your environment.

Related Name**Default Value****API Name**

ldap_group_search_base

Required

false

LDAP Group Search Filter

Description

The search filter to use for finding groups for authorization of authenticated users for their Cloudera Manager role. For Active Directory and openLDAP compatible directories this will usually be (member={0}), where {0} will be replaced by DN string for a successfully authenticated user through the search/bind process. This requires configuration of the LDAP Bind User Distinguished Name field.

Related Name**Default Value****API Name**

ldap_group_search_filter

Required

false

External Authentication Type

Description

The type of external authentication to use.

Related Name**Default Value**

ACTIVE_DIRECTORY

API Name

ldap_type

Required

true

LDAP URL

Description

The URL of the LDAP server. The URL must be prefixed with ldap:// or ldaps://. The URL can optionally specify a custom port, for example: ldaps://ldap_server.example.com:1636. Note that usernames and passwords will be transmitted in the clear unless either an ldaps:// URL is used, or "Enable LDAP TLS" is turned on (where available). Also note that encryption must be in use between the client and this service for the same reason. For more detail on the LDAP URL format, see [RFC 2255](#)

Related Name**Default Value****API Name**

ldap_url

Required

false

LDAP User Search Base

Description

The distinguished name indicating the path within the directory information tree to begin user searches from. For example in AD it would be cn=users,dc=example,dc=com. Or in an openLDAP compatible situation it would be something like ou=people,dc=example,dc=com. Check with your directory administration team on the proper user search base to configure for your environment.

Related Name**Default Value****API Name**

ldap_user_search_base

Required

false

LDAP User Search Filter**Description**

The search filter to use for finding users. For AD configuration it will be (sAMAccountName={0}) and for openLDAP compatible directories it will usually be (uid={0}). Note that a custom attribute can also be used if the directory is configured differently for user names. The {0} expands the currently authenticating user's name entered in the login form for the query.

Related Name**Default Value****API Name**

ldap_user_search_filter

Required

false

Active Directory Domain**Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name**Default Value****API Name**

nt_domain

Required

false

Allowed Groups for Knox Proxy**Description**

When Apache Knox makes a proxy request to Cloudera Manager, the proxied user must belong to one of these LDAP groups. This configuration is only used if LDAP authentication is enabled and the Authorization Backend Order is not Database Only. A wildcard "*" entry allows any group.

Related Name**Default Value****API Name**

proxyuser_knox_groups

Required

false

Allowed Hosts for Knox Proxy

Description

When Apache Knox makes a proxy request to Cloudera Manager, the request must come from one of these hosts. You can specify either an IP address or a fully-qualified domain name. If using multiple Knox gateways, make sure that all gateway hosts are listed here. A wildcard "*" entry allows any host.

Related Name**Default Value****API Name**

proxyuser_knox_hosts

Required

false

Knox Proxy Principal

Description

This is the service name of the Kerberos principal that Apache Knox will use to authenticate to Cloudera Manager when making proxy requests. Usually, this should be set to "knox" when using Knox to proxy to Cloudera Manager. If empty, Cloudera Manager will not accept proxy requests from any principal. The service name does not have to be a valid user.

Related Name**Default Value****API Name**

proxyuser_knox_principal

Required

false

Allowed Users for Knox Proxy

Description

When Apache Knox makes a proxy request to Cloudera Manager, the proxied user must be one of these users. A wildcard "*" entry allows any user.

Related Name**Default Value****API Name**

proxyuser_knox_users

Required

false

SAML Entity Alias

Description

Unique alias used to identify the selected instance of local service provider based on used URL.

Related Name**Default Value**

clouderaManager

API Name

saml_entity_alias

Required

false

SAML Entity Base URL**Description**

The Base URL used to construct redirect URLs reported in this server's SP metadata. Leave this blank to let the server calculate the base URL itself.

Related Name**Default Value****API Name**

saml_entity_base_url

Required

false

SAML Entity ID**Description**

The ID that Cloudera Manager will use to identify itself to the IDP. This value should be unique to this Cloudera Manager installation.

Related Name**Default Value**

clouderaManager

API Name

saml_entity_id

Required

true

Alias of SAML Sign/Encrypt Private Key**Description**

The alias used to identify the sign/encrypt private key in the SAML keystore.

Related Name**Default Value****API Name**

saml_key_alias

Required

false

SAML Sign/Encrypt Private Key Password**Description**

The password for the sign/encrypt private key in the SAML keystore.

Related Name**Default Value****API Name**

saml_key_password

Required

false

SAML Keystore Password**Description**

The password for the SAML keystore.

Related Name**Default Value****API Name**

saml_keystore_password

Required

false

Path to SAML Keystore File**Description**

The filesystem path to the keystore file containing the SP private key and any necessary public certificates to validate the IDP.

Related Name**Default Value****API Name**

saml_keystore_path

Required

false

SAML Login URL**Description**

If your IDP does not support SP-initiated SSO (very uncommon), you use a separate login URL, outside of Cloudera Manager. Provide that URL here so that Cloudera Manager can use it when a user needs to log in.

Related Name**Default Value****API Name**

saml_login_url

Required

false

Path to SAML IDP Metadata File**Description**

The filesystem path to the IDP metadata XML file.

Related Name**Default Value****API Name**

saml_metadata_path

Required

false

SAML Attribute Identifier for User Role**Description**

The URN OID that will identify the user's role in the SAML attributes. Only has an effect when 'Attribute' based role assignment is used.

Related Name**Default Value**

urn:oid:2.5.4.11

API Name

saml_oid_role

Required

true

SAML Attribute Identifier for User ID**Description**

The URN OID that will identify the user's ID in the SAML attributes.

Related Name**Default Value**

urn:oid:0.9.2342.19200300.100.1.1

API Name

saml_oid_user

Required

true

SAML Response Binding**Description**

The SAML Binding format that the IDP is asked to use when sending authentication responses.

Related Name**Default Value**

ARTIFACT

API Name

saml_response_binding

Required

true

SAML Role Assignment Mechanism**Description**

The mechanism to use for assigning roles to users. 'Attribute' assigns roles based on a SAML attribute. 'Script' assigns roles based on the result of an external script.

Related Name**Default Value**

ATTRIBUTE

API Name

saml_role_mapper

Required

true

Path to SAML Role Assignment Script**Description**

An external script (or binary) to use to assign roles to SAML users. The username is passed as the first command-line argument. You can configure the return codes for the external script on the Roles page. A negative return value indicates a failure.

Related Name**Default Value****API Name**

saml_role_script

Required

false

Source of User ID in SAML Response**Description**

Whether the user ID should be obtained from the SAML response's NameID field or from an attribute

Related Name**Default Value**

ATTRIBUTE

API Name

saml_user_source

Required

true

Kerberos

Active Directory Account Prefix**Description**

Prefix used in names while creating accounts in Active Directory. The prefix can be up to 10 characters long and can be set to identify accounts used for authentication by CDH processes. Used only if Active Directory KDC is used for authentication.

Related Name**Default Value****API Name**

ad_account_prefix

Required

false

Active Directory Account Properties

Description

Active Directory account properties used in credential generation. Used only if Active Directory KDC is being used for authentication.

Related Name**Default Value**

accountExpires=0, objectClass=top, objectClass=person, objectClass=organizationalPerson, objectClass=user

API Name

ad_account_properties

Required

false

Active Directory Delete Accounts on Credential Regeneration

Description

Set this option to true if regeneration of credentials should automatically delete the associated Active Directory accounts. Used only if Active Directory KDC is used for authentication.

Related Name**Default Value**

false

API Name

ad_delete_on_regenerate

Required

false

Active Directory Suffix

Description

Active Directory suffix where all the accounts used by CDH daemons will be created. Used only if Active Directory KDC is being used for authentication.

Related Name**Default Value**

ou=hadoop, DC=hadoop, DC=com

API Name

ad_kdc_domain

Required

true

Active Directory LDAP Port

Description

Port to use for LDAP when using Active Directory for authentication. This port is going to transmit encrypted information protected by Kerberos SASL.

Related Name**Default Value**

389

API Name

ad_ldap_port

Required

true

Active Directory LDAPS Port**Description**

Port to use for LDAP over TLS/SSL when using Active Directory for authentication.

Related Name**Default Value**

636

API Name

ad_ldaps_port

Required

true

Active Directory Password Properties**Description**

Active Directory password properties used in password generation. Used only if Active Directory KDC is being used for authentication.

Related Name**Default Value**

length=12, minLowerCaseLetters=2, minUpperCaseLetters=2, minDigits=2, minSpaces=0, minSpecialChars=0, specialChars=?.!\$%^*()-_+=~

API Name

ad_password_properties

Required

false

Active Directory Set Encryption Types**Description**

Set this option to true if creation of Active Directory accounts should automatically turn on the associated encryption types represented by the msDS-EncryptionTypes field. Used only if Active Directory KDC is used for authentication.

Related Name**Default Value**

false

API Name

ad_set_encryption_types

Required

false

Custom Kerberos Keytab Retrieval Script**Description**

Specify the path to a custom script (or executable) to retrieve a Kerberos keytab. The script should take two arguments: a destination file to write the keytab to, and the full principal name to retrieve

the key for. If this property is specified, Cloudera Manager ignores all other properties specified for Kerberos setup.

Related Name**Default Value****API Name**

gen_keytab_script

Required

false

Active Directory Domain Controller Override**Description**

If multiple Active Directory Domain Controllers are behind a load-balancer, Cloudera Manager should be provided with the address of one of them. Cloudera Manager then sends commands to create accounts to that Domain Controller only. Note: This setting is used only while creating accounts. CDH services use the value entered in the KDC Server Host field only while authenticating.

Related Name**Default Value****API Name**

kdc_account_creation_host_override

Required

false

KDC Admin Server Host**Description**

Host where the KDC Admin server is located. Port number is optional and can be provided as hostname[:port]

Related Name

admin_server

Default Value**API Name**

kdc_admin_host

Required

false

KDC Server Host**Description**

Host where the KDC server is located. Port number is optional and can be provided as hostname[:port]

Related Name

kdc

Default Value**API Name**

kdc_host

Required

false

KDC Type**Description**

Type of KDC used for authentication in CDH clusters

Related Name**Default Value**

MIT KDC

API Name

kdc_type

Required

true

DNS Lookup KDC**Description**

Indicate whether DNS SRV records should be used to locate the KDCs and other servers for a realm, if they are not listed in the krb5.conf information for the realm.

Related Name

dns_lookup_kdc

Default Value

false

API Name

krb_dns_lookup_kdc

Required

true

Domain Name(s)**Description**

Domain(s) which are mapped to this Kerberos Realm. This is used to generate [domain_realm] section. Also, the first domain is used as default_domain in [realms] section

Related Name**Default Value****API Name**

krb_domain

Required

false

Kerberos Encryption Types**Description**

Encryption types supported by KDC. Note: To use AES encryption, make sure you have deployed JCE Unlimited Strength Policy File by following the instructions [here](#).

Related Name**Default Value**

rc4-hmac

API Name

krb_enc_types

Required

false

Forwardable Tickets**Description**

If this flag is true, initial tickets will be forwardable by default, if allowed by the KDC.

Related Name

forwardable

Default Value

true

API Name

krb_forwardable

Required

true

KDC Timeout**Description**

The maximum time to wait for a reply from the KDC. A time of 0 seconds means "use the client's default".

Related Name

kdc_timeout

Default Value

3 second(s)

API Name

krb_kdc_timeout

Required

false

Advanced Configuration Snippet (Safety Valve) for [libdefaults] section of krb5.conf**Description**

For advanced use only. Any text here will be emitted verbatim in the [libdefaults] section of krb5.conf.

Related Name**Default Value****API Name**

krb_libdefaults_safety_valve

Required

false

Manage krb5.conf through Cloudera Manager**Description**

Whether Cloudera Manager should configure and deploy krb5.conf on secure clusters. If this property is not checked, then you must ensure that krb5.conf is deployed on hosts in a secure cluster as well as on Cloudera Manager Server's host.

Related Name**Default Value**

false

API Name

krb_manage_krb5_conf

Required

false

Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf**Description**

For advanced use only. Cloudera Manager configures the [libdefaults], [realms] and [domain_realm] section of krb5.conf. Any text here will be emitted verbatim after them in krb5.conf.

Related Name**Default Value****API Name**

krb_other_safety_valve

Required

false

Advanced Configuration Snippet (Safety Valve) for the Default Realm in krb5.conf**Description**

For advanced use only. Any text here will be emitted verbatim in the [realms] section of krb5.conf for the specified security realm. If you want to add realms besides the default one, configure them using Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf.

Related Name**Default Value****API Name**

krb_realms_safety_valve

Required

false

Kerberos Renewable Lifetime**Description**

Default renewable lifetime for initial ticket requests.

Related Name

renew_lifetime

Default Value

7 day(s)

API Name

krb_renew_lifetime

Required

true

Kerberos Ticket Lifetime**Description**

Default lifetime for initial ticket requests.

Related Name

ticket_lifetime

Default Value

1 day(s)

API Name

krb_ticket_lifetime

Required

true

Maximum Renewable Life for Principals**Description**

Maximum renewable lifetime for Kerberos principals generated by Cloudera Manager. This property is used only if MIT KDC is used. Set this property to zero if the KDC should provide the maximum renewable lifetime. Note: Principals with non-renewable tickets are not recommended because they can prevent Hadoop services from functioning.

Related Name**Default Value**

5 day(s)

API Name

max_renew_life

Required

true

Kerberos Security Realm**Description**

The realm to use for Kerberos security. Note: Changing this setting would clear up all existing credentials and keytabs from Cloudera Manager.

Related Name

default_realm

Default Value

HADOOP.COM

API Name

security_realm

Required

true

Kerberos Trusted Realms**Description**

List of Kerberos realms that all services on this Cloudera Manager should trust. This parameter is used to configure and verify krb5.conf file. The parameter is auto-configured while adding a peer, but it is recommended that users ensure the values are correct.

Related Name

trusted_realms

Default Value**API Name**

trusted_realms

Required

false

Monitoring

Cross Entity Aggregate Generation Filters

Description

Specifies two filters, an allowlist (whitelist) and a denylist (blacklist), that impact cross-entity aggregates generated by the Cloudera Manager monitoring system. By default, cross-entity aggregates are generated for all types. The denylist entries can be used to disable generation of cross-entity aggregates, and allowlist entries can be used to force their creation. The JSON structure of this field is as follows:

- blacklist - A filter that when matched will prevent cross-entity aggregate creation. The structure of the filter is outlined below.
- whitelist - A filter that when matched will force cross-entity aggregate creation. The structure of the filter is outlined below. This filter takes precedence over the denylist filter, so if both are matched, an aggregate will be generated.

The JSON structure of either filter is as follows:

- types - A list of entries in the following format sourceType::targetType::aggregateMetricType, e.g. DATANODE::RACK::STATISTICAL.
- streams - A list of entries in the following format sourceType::targetType::metricName::aggregateMetricType, e.g. HOST::CLUSTER::fd_open::TOTAL.

In the above filters the source and target types are entity type strings used within the metric system. ROLE, SERVICE and ALL are wildcards that match all role types, service types and all types respectively. Metrics are referred to by their user facing names, so counter-based metrics will be in _rate form. The two types of aggregate metrics are TOTAL and STATISTICAL. After making changes to this field, both the Cloudera Manager Server and the Service and Host Monitors should be restarted. For advanced use only. You could break Cloudera Manager charting and health functionality by editing this field.

Related Name**Default Value**

blacklist: streams : [], types : [KUDU_REPLICA::KUDU_TABLET::STATISTICAL] , whitelist: streams : [], types : []

API Name

cross_entity_aggregate_filters

Required

false

Set health status to Bad if the Agent heartbeats fail**Description**

If an Agent fails to send this number of expected consecutive heartbeats to the Server, a "Bad" health status is assigned to that Agent.

Related Name**Default Value**

10 time(s)

API Name

missed_hb_bad

Required

true

Set health status to Concerning if the Agent heartbeats fail**Description**

If an Agent fails to send this number of expected consecutive heartbeats to the Server, a "Concerning" health status is assigned to that Agent.

Related Name**Default Value**

5 time(s)

API Name

missed_hb_concerning

Required

true

Network

Proxy Password**Description**

The basic authentication password for the proxy.

Related Name**Default Value****API Name**

parcel_proxy_password

Required

false

Proxy Port**Description**

The port for the proxy server to be used when the Cloudera Manager Server accesses the Internet, such as when downloading parcels and uploading diagnostic data.

Related Name**Default Value****API Name**

parcel_proxy_port

Required

false

Proxy Protocol**Description**

The protocol to use for the proxy server when the Cloudera Manager Server accesses the Internet, such as when downloading parcels and uploading diagnostic data.

Related Name**Default Value**

Allow Usage Data Collection**Description**

Allows Cloudera to collect usage data, including the use of Google Analytics.

Related Name**Default Value**

true

API Name

allow_usage_data

Required

true

CDP Private Cloud Repository URLs

Description

URLs of the remote repositories where Cloudera Manager can download the CDP Private Cloud installer. There should be a manifest.json under these URLs. If you are using local mirror repositories, do not delete these local mirrors until after the corresponding CDP Private Cloud deployment has been upgraded or uninstalled.

Related Name**Default Value**

`https://archive.cloudera.com/p/cdp-pvc/latest`

API Name

`cdppc_repo_urls`

Required

`false`

Custom Banner Text

Description

The custom banner is used to display customer specific text in the header area.

Related Name**Default Value****API Name**

`custom_banner_html`

Required

`false`

Custom Header Color

Description

The custom header color is used to distinguish different instances of Cloudera Manager.

Related Name**Default Value**

`BLACK`

API Name

`custom_header_color`

Required

`true`

Custom Information Assurance Policy Text

Description

An information assurance policy statement that must be agreed to in order for a user to login.

Related Name**Default Value****API Name**

`custom_ia_policy`

Required

`false`

Enable Embedded Database Check

Description

When this option is unchecked, warnings about the embedded PostgreSQL database are suppressed.

Related Name**Default Value**

true

API Name

enable_embedded_db_check

Required

false

Enable Events Widget Auto-Search

Description

When enabled, the Events widget at the bottom of many pages will auto-fire its default search on page load.

Related Name**Default Value**

true

API Name

events_widget_search_on_load

Required

true

Maximum Cluster Count Shown In Full

Description

When the number of clusters exceeds this number, only the cluster summary information will be shown on the home page.

Related Name**Default Value**

2

API Name

home_page_full_limit

Required

true

System Identifier

Description

An identifier for this system, to be included with diagnostic data bundles.

Related Name**Default Value**

default

API Name

system_identifier

Required

true

Parcels

Automatically Distribute Available Parcels

Description

Whether available parcels should be automatically distributed to any cluster that already has parcels of the same product.

Related Name**Default Value**

false

API Name

distribute_parcels_automatically

Required

true

Automatically Download New Parcels

Description

Whether new parcels discovered on the remote parcel repository should be automatically downloaded.

Related Name**Default Value**

false

API Name

download_parcels_automatically

Required

true

Cloudera Manager Manages Parcels

Description

Whether Cloudera Manager should manage which parcels should be present on all managed hosts.

Related Name**Default Value**

true

API Name

manages_parcels

Required

true

Automatically Downloaded Products

Description

If automatic parcel downloading is enabled, the list of products that will be downloaded.

Related Name

Default Value

CDH

API Name

parcel_autodownload_products

Required

false

Automatically Remove Old Parcels**Description**

Whether parcels for old versions of an activated product should be removed from a cluster when they are no longer in use.

Related Name**Default Value**

false

API Name

parcel_cleanup_automatically

Required

true

Number of Old Parcel Versions to Retain**Description**

If automatic removal of old parcels is enabled, the number of old parcels to keep. Any old parcels beyond this value will any be removed. If this is set to zero, no old parcels will be retained.

Related Name**Default Value**

3

API Name

parcel_cleanup_threshold

Required

true

Parcel Distribution Rate Limit**Description**

Per-second rate limit for parcel distribution. The default of 50MiB/second allows for parcel distribution to saturate about half of a Gigabit link.

Related Name**Default Value**

50 MiB

API Name

parcel_distribute_rate_limit_kbs_per_second

Required

true

Maximum Parcel Uploads**Description**

Maximum number of concurrent uploads allowed to distribute parcels to individual hosts. The maximum allowed number of concurrent uploads is 50.

Related Name**Default Value**

10

API Name

parcel_max_upload

Required

true

Validate Parcel Relations

Description

Enforce that parcel dependencies are satisfied and conflicts are prevented when activating parcels. Parcel relations (Depends, Conflicts, and Replaces) can be defined the manifests of parcel repositories. Cloudera Manager can also enforce some default relations if none are defined in the manifest.

Related Name**Default Value**

true

API Name

parcel_relation_validation

Required

true

Local Parcel Repository Path

Description

Path to the local package parcel repository from which binaries are served to the Agents.

Related Name**Default Value**

/opt/cloudera/parcel-repo

API Name

parcel_repo_path

Required

true

Create System-Wide Symlinks for Active Parcels

Description

Whether system-wide symlinks should be created for the active parcels (for example, /usr/bin/hadoop).

Related Name**Default Value**

true

API Name

parcel_symlinks

Required

true

Parcel Update Frequency**Description**

How often to check local and remote parcel repositories for new parcels and if any old parcels should be cleaned up. Setting a value of 0 disables the parcel check.

Related Name**Default Value**

1 hour(s)

API Name

parcel_update_freq

Required

true

Create Users and Groups, and Apply File Permissions for Parcels**Description**

Whether a parcel's specified users, groups and file permissions should be applied. This may not be desired if custom users and groups are being used, or if they have to be created externally (eg: in LDAP)

Related Name**Default Value**

true

API Name

parcel_users_groups_permissions

Required

true

Remote Parcel Repository URLs**Description**

URLs of the remote parcel repositories where Cloudera Manager checks for new parcels. When checking for new parcels, Cloudera Manager sends the ID of the server and the server version to the repository host. The special variable {latest_supported} is replaced with the latest version of CDH that Cloudera Manager supports when checks are made.

Related Name**Default Value**

https://archive.cloudera.com/p/cdh7/latest_supported/parcels/ https://archive.cloudera.com/cdh7/latest_supported/parcels/ https://archive.cloudera.com/p/cdh6/latest_supported/parcels/ https://archive.cloudera.com/cdh6/latest_supported/parcels/ <https://archive.cloudera.com/p/cdh5/parcels/latest> <https://archive.cloudera.com/cdh5/parcels/5.16/> <https://parcels.repos.intel.com/mkl/latest>

API Name

remote_parcel_repo_urls

Required

false

Retain Downloaded Parcel Files

Description

Whether downloaded parcel files be kept by Agents after they have been unpacked. Keeping the parcel files consumes additional disk space but allows downloads to be avoided if the parcel ever needs to be unpacked again.

Related Name**Default Value**

true

API Name

retain_parcels_in_cache

Required

true

Performance

Send Agent heartbeat every

Description

The interval between each heartbeat that is sent from Agents to the server

Related Name**Default Value**

15 second(s)

API Name

heartbeat_interval

Required

true

Agent heartbeat requester

Description

Whether heartbeat request must be made on-demand instead of relying on the next periodic heartbeat. System property setting "cmf.heartbeat.enableExplicit=false" takes precedence over this configuration.

Related Name**Default Value**

true

API Name

heartbeat_requester

Required

true

Ports and Addresses

Agent Port to connect to Server

Description

Specify the port for Agents to use to connect to the Server. Must be 1024 or higher.

Related Name**Default Value**

7182

API Name

agent_port

Required

true

Cloudera Manager Hostname Override

Description

Override to use for Cloudera Manager's hostname. Normally this is determined automatically, but this can be used if `InetAddress.getLocalhost()` is returning the loopback address.

Related Name**Default Value****API Name**

cm_host_name

Required

false

Cloudera Manager Frontend URL

Description

If you are using a proxy such as Knox or a load balancer to access Cloudera Manager, specify the frontend URL of that proxy here. This will be used as a prefix for generating URLs and quick links. This should be in the form of `https://server:port` and should not contain any path information starting at `/cmf`. After making a change, restart the Alert Publisher role to ensure all emails are generated using this url.

Related Name

frontend_url

Default Value**API Name**

frontend_url

Required

false

HTTP Port for Admin Console

Description

Specify the HTTP port to use to access the Server via the Admin Console. Must be 1024 or higher.

Related Name**Default Value**

7180

API Name

http_port

Required

true

HTTPS Port for Admin Console**Description**

Specify the HTTPS port to use to access the Server via the Admin Console. Must be 1024 or higher.

Related Name**Default Value**

7183

API Name

https_port

Required

true

Replication

Custom Kerberos Keytab Location (to be used for replication for secure clusters on this Cloudera Manager)**Description**

Define a custom Kerberos keytab location on the Cloudera Manager host to use for replication. If this configuration is specified, the "Custom Kerberos Principal Name" must also be specified. The keytab should be owned by the user running the Cloudera Manager server process (typically "cloudera-scm") and should be configured with a filesystem access control of "0400".

Related Name**Default Value****API Name**

bdr_replication_kerberos_keytab_location

Required

false

Custom Kerberos Principal Name (to be used for replication for secure clusters on this Cloudera Manager)**Description**

Define a custom Kerberos principal name with an entry in the custom keytab defined in "Custom Kerberos Keytab Location". The principal should be a fully qualified name of an existing principal (eg. adminuser@MY.COMPANY.COM) and the principal must have an entry in the keytab specified in "Custom Kerberos Keytab Location". The principal should also be a superuser in all distributed file system services on secure clusters in this Cloudera Manager.

Related Name**Default Value****API Name**

bdr_replication_kerberos_principal_name

Required

false

Reports

Report Configurations

Description

List of configurations for the Cluster Utilization Report.

Related Name**Default Value**

[name: Default, tenantType: POOL, daysOfWeek: [], isAllDay: true, startHourOfDay: 0, endHourOfDay: 23 , name: Weekdays, tenantType: POOL, daysOfWeek: [1, 2, 3, 4, 5], isAllDay: true, startHourOfDay: 0, endHourOfDay: 23]

API Name

report_configurations

Required

true

Security

Use TLS Encryption for Agents

Description

Select this option to enable TLS encryption between the Server and Agents.

Related Name**Default Value**

false

API Name

agent_tls

Required

false

JKS Keystore File Password for Automatic TLS configuration

Description

The password for JKS keystore file used for automatic TLS configuration of Cloudera Manager server, agent and services.

Related Name**Default Value****API Name**

auto_tls_keystore_password

Required

false

JKS Truststore File Password for Automatic TLS configuration

Description

The password for JKS truststore file used for automatic TLS configuration of Cloudera Manager server, agent and services.

Related Name**Default Value****API Name**

auto_tls_truststore_password

Required

false

Automatic configuration of TLS for services**Description**

Allows automatic configuration of TLS for services using Cloudera Manager's TLS configuration without specifying TLS related settings like keystore path, password etc. for each service.

Related Name**Default Value**

NONE

API Name

auto_tls_type

Required

false

Redaction Parameters for Diagnostic Bundles**Description**

Note: Do not edit this property in the classic layout. Switch to the new layout to edit and test your rules inline. Use this property to define a list of rules to be followed for redacting sensitive information from diagnostic bundles. Click + to add a new redaction rule. You can choose one of the preconfigured rules or add a custom rule. When specifying a custom rule, the Search field should contain a regular expression to be matched against the data. If a match is found, it is replaced by the contents of the Replace field. Trigger is an optional field. It can be used to specify a simple string to be searched in the data. If the string is found, the redactor attempts to find a match for the Search regex. If no trigger is specified, redaction occurs by matching the Search regular expression. Use the Trigger field to enhance performance: simple string matching is faster than regular expression matching. Test your rules by entering sample text into the Test Redaction Rules text box and clicking Test Redaction. If no rules match, the text you entered is returned unchanged.

Related Name**Default Value**

version: 1, rules: [description: Redact passwords from json files, caseSensitive: false, trigger: password, search: \password\[]*:[]*[^\\]+\\, replace: \password\: \BUNDLE-REDACTED \, description: Redact password= and password:, caseSensitive: false, trigger: password, search: password[:=][^\\\\]+, replace: password=BUNDLE-REDACTED , description: Redact passwd= and passwd:, caseSensitive: false, trigger: passwd, search: passwd[:=][^\\\\]+, replace: passwd=BUNDLE-REDACTED , description: Redact pass= and pass:, caseSensitive: false, trigger: pass, search: pass[:=][^\\\\]+, replace: pass=BUNDLE-REDACTED , description: Redact PASSWORD, , caseSensitive: false, trigger: PASSWORD, , search: PASSWORD, [^\\\\]+, replace: PASSWORD, BUNDLE-REDACTED , description: Redact key= and key:, caseSensitive: false, trigger: key, search: key[:=][^\\\\]+, replace: key=BUNDLE-REDACTED , description: Redact secret= and secret:, caseSensitive: false, trigger: secret, search: secret[:=][^\\\\]+, replace: secret=BUNDLE-REDACTED , description: Redact credential= and credential:, caseSensitive:

```
false, trigger: credential, search: credential[:=][^ \\\\[+], replace: credential=BUNDLE-
REDACTED , description: Redact token= and token:, caseSensitive: false, trigger: token, search:
token[:=][^ \\\\[+], replace: token=BUNDLE-REDACTED , description: Redact keyid= and
keyid:, caseSensitive: false, trigger: keyid, search: keyid[:=][^ \\\\[+], replace: keyid=BUNDLE-
REDACTED ]
```

API Name

diag_bundle_redaction_policy

Required

false

Host certificate generator command.**Description**

Utility to be executed on CM server host to generate certificates for a new host. Host name will be passed as the sole positional argument. The process is expected to write to stdout a zip file containing keys/certificates.

Related Name**Default Value****API Name**

host_cert_generator

Required

false

Cloudera Manager TLS/SSL Server JKS Keystore File Password**Description**

The password for the Cloudera Manager JKS keystore file.

Related Name**Default Value****API Name**

keystore_password

Required

false

Cloudera Manager TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Cloudera Manager is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name**Default Value****API Name**

keystore_path

Required

false

Last login audit**Description**

Enable audit for last login of current user.

Related Name**Default Value**

true

API Name

last_login_enabled

Required

false

Verify Agent Hostname Against Certificate**Description**

Select this option to verify that agent hostnames must match their TLS client certificates.

Related Name**Default Value**

true

API Name

need_agent_hostname_validation

Required

true

Use TLS Authentication of Agents to Server**Description**

Select this option to enable TLS Authentication of Agents to the Server.

Related Name**Default Value**

false

API Name

need_agent_validation

Required

true

Minimum password length**Description**

Minimum number of characters, including letters, digits, and special characters required in the password for local Cloudera Manager users.

Related Name**Default Value**

0

API Name

password_min_length

Required

false

Minimum number of digits required in password**Description**

Specifies the minimum number of digits required in the password.

Related Name**Default Value**

0

API Name

password_min_no_of_digits

Required

false

Minimum number of letters required in password**Description**

Specifies the minimum number of letters required in the password.

Related Name**Default Value**

0

API Name

password_min_no_of_letters

Required

false

Minimum number of special characters required in password**Description**

Specifies the minimum number of non-alphanumeric characters required in the password.

Related Name**Default Value**

0

API Name

password_min_no_of_special_chars

Required

false

HTTP Referer Check**Description**

Whether to verify "Referer" in HTTP header for state changing requests. This protects against cross-site request forgery, but may need to be turned off if browsers or proxies in your environment do not specify the header.

Related Name**Default Value**

true

API Name

referer_check

Required

true

Maximum Number of Active User Sessions

Description

Restrict users to a certain number of active sessions at a time. If set, a user is limited to the specified number of sessions, and the oldest session is terminated if the user logs in somewhere else. If not set, users can be logged in from as many places as they choose. If the user has 'Remember Me' turned on, or SAML is used for authentication, the user is automatically logged back in each time the session is ended. '0' means no limit is applied.

Related Name

Default Value

0

API Name

session_limit_concurrency

Required

true

Allow 'Remember Me' Option

Description

Whether to allow a user to select 'Remember Me' when logging in. If this is set, the user will not need to log in again for two weeks (unless the server is restarted during that time). If the user chooses 'Remember Me', then the session timeout is ignored.

Related Name

Default Value

true

API Name

session_remember_me

Required

true

Session Timeout

Description

The length of time a user's session can be idle for before the user must log in again.

Related Name

Default Value

30 minute(s)

API Name

session_timeout

Required

true

Show Stacktraces On Error Pages

Description

Control whether stacktraces are shown on error pages. While stacktraces help with debugging, they can sometimes expose sensitive information to a potentially malicious user.

Related Name

Default Value

false

API Name

show_stacktraces

Required

true

Server SSL Certificate Host Name.**Description**

Host name associated with CM Server SSL certificate to be passed to configuration of newly added host as the host agents are to connect to.

Related Name**Default Value****API Name**

ssl_certificate_hostname

Required

false

Supported SSL/TLS versions**Description**

The SSL/TLS protocol versions to accept HTTPS connections from. Note that the available cipher suites also affect which protocol versions can be negotiated, and some cipher suites are only available in higher versions.

Related Name**Default Value**

SSLv2Hello, TLSv1.2

API Name

supported_tls_versions

Required

true

Cloudera Manager TLS/SSL Client Trust Store Password**Description**

The password for the Cloudera Manager TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

truststore_password

Required

false

Cloudera Manager TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Cloudera Manager might connect to. This is used when Cloudera Manager is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**

truststore_path

Required

false

Use TLS Encryption for Admin Console

Description

Enable TLS encryption (HTTPS) between the user and the Cloudera Manager Admin Console. When checked, the HTTPS port will be used.

Related Name**Default Value**

false

API Name

web_tls

Required

false

Support

Audit Records Eviction Frequency

Description

Frequency (in minutes) to remove records from Cloudera Manager Audit table. Setting it to 0 will disable this function.

Related Name**Default Value**

30 minute(s)

API Name

audit_records_evict_frequency

Required

false

Audit Records batch eviction size

Description

Audit records are removed in batches. This field configures the size of the batch.

Related Name

Default Value

0

API Name

audit_records_evict_no_of_records

Required

false

Audit Records Eviction Control**Description**

Enable removal of records from Cloudera Manager Audit table. None means stop removing audit records.

Related Name**Default Value**

MINUTE

API Name

audit_records_evit_schedule

Required

true

Audit Records Life Time**Description**

Remove Audit Records older than the configured date

Related Name**Default Value****API Name**

audit_records_life_time

Required

false

Number of Diagnostic Bundles to Keep**Description**

The maximum number of command results to keep before deleting them from local storage. This property is used for the commands that generate large result files. A value of -1 indicates no limit.

Related Name**Default Value**

10

API Name

cluster_stats_count

Required

false

Scheduled Diagnostic Data Size (MB)**Description**

Approximate size in MB of scheduled diagnostic data bundle

Related Name**Default Value**

100

API Name

cluster_stats_default_size_mb

Required

false

Use HTTPS to Upload Diagnostic Data**Description**

Whether to use HTTPS to upload diagnostic data bundles instead of the now-deprecated SFTP. Uses proxy settings from the network setting.

Related Name**Default Value**

true

API Name

cluster_stats_http

Required

true

Diagnostic Data Bundle Directory**Description**

Local directory to store diagnostic data bundles. Leave blank to store bundles for 24 hours. This directory must be writable by the cloudera-scm user.

Related Name**Default Value****API Name**

cluster_stats_path

Required

false

Scheduled Diagnostic Data Collection Frequency**Description**

Frequency of automatically collecting diagnostic data and sending to Cloudera support.

Related Name**Default Value**

WEEKLY

API Name

cluster_stats_schedule

Required

true

Scheduled Diagnostic Data Collection Time**Description**

	Time of day to collect and send diagnostic data to Cloudera
Related Name	
Default Value	
API Name	cluster_stats_start
Required	false

Diagnostic Data Temp Directory

Description	Local path to assemble diagnostic data bundles. Leave blank to assemble these bundles in your JVM temp directory. Set this value if you run out of disk space while collecting diagnostic data.
Related Name	
Default Value	
API Name	cluster_stats_tmp_path
Required	false

Diagnostic Bundle Collection Thread Pool Size

Description	Maximum limit of threads used by Cloudera Manager during diagnostic bundle
Related Name	
Default Value	128
API Name	diag_bundle_max_threads
Required	false

Diagnostic Bundle Scale Factor

Description	Scaling factor is directly proportional to the time taken to collect diagnostic bundle. Increase this value to reduce the timeouts during data collection
Related Name	
Default Value	0.133
API Name	diag_bundle_scale_out_factor
Required	false

Send Diagnostic Data to Cloudera Automatically

Description	
-------------	--

Allows the Server to automatically send diagnostic data when a collection is triggered.

Related Name**Default Value**

true

API Name

phone_home

Required

true

Stale Process Threshold Days

Description

Stale processes are ones that have been stopped. Cloudera Manager removes information about these stale processes from the Cloudera Manager Database after a configurable number of days. This field allows changing that number of days.

Related Name**Default Value**

1 day(s)

API Name

stale_process_threshold

Required

false

Suppressions

Suppress Parameter Validation: Active Directory Account Prefix

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Account Prefix parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ad_account_prefix

Required

true

Suppress Parameter Validation: Active Directory Suffix

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Suffix parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ad_kdc_domain

Required

true

Suppress Parameter Validation: Active Directory LDAP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory LDAP Port parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ad_ldap_port

Required

true

Suppress Parameter Validation: Active Directory LDAPS Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory LDAPS Port parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ad_ldaps_port

Required

true

Suppress Parameter Validation: Agent Port to connect to Server**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Agent Port to connect to Server parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_agent_port

Required

true

Suppress Parameter Validation: External Authentication Program Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the External Authentication Program Path parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_auth_script

Required

true

Suppress Parameter Validation: JKS Keystore File Password for Automatic TLS configuration**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JKS Keystore File Password for Automatic TLS configuration parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_auto_tls_keystore_password

Required

true

Suppress Parameter Validation: JKS Truststore File Password for Automatic TLS configuration**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JKS Truststore File Password for Automatic TLS configuration parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_auto_tls_truststore_password

Required

true

Suppress Parameter Validation: Custom Kerberos Keytab Location (to be used for replication for secure clusters on this Cloudera Manager)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Kerberos Keytab Location (to be used for replication for secure clusters on this Cloudera Manager) parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_bdr_replication_kerberos_keytab_location

Required

true

Suppress Parameter Validation: Custom Kerberos Principal Name (to be used for replication for secure clusters on this Cloudera Manager)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Kerberos Principal Name (to be used for replication for secure clusters on this Cloudera Manager) parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_bdr_replication_kerberos_principal_name

Required

true

Suppress Parameter Validation: CDP Private Cloud Repository URLs

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the CDP Private Cloud Repository URLs parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_cdppc_repo_urls

Required

true

Suppress Parameter Validation: Diagnostic Data Bundle Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Diagnostic Data Bundle Directory parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_cluster_stats_path

Required

true

Suppress Parameter Validation: Diagnostic Data Temp Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Diagnostic Data Temp Directory parameter.

Related Name

Default Value

false

API Name

scm_config_suppression_cluster_stats_tmp_path

Required

true

Suppress Parameter Validation: Cloudera Manager Hostname Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Hostname Override parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_cm_host_name

Required

true

Suppress Parameter Validation: Cloudera Manager Server Local Data Storage Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Server Local Data Storage Directory parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_command_storage_path

Required

true

Suppress Parameter Validation: Cross Entity Aggregate Generation Filters**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cross Entity Aggregate Generation Filters parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_cross_entity_aggregate_filters

Required

true

Suppress Parameter Validation: Local Descriptor Repository Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Local Descriptor Repository Path parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_csd_repo_path

Required

true

Suppress Parameter Validation: Custom Banner Text**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Banner Text parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_custom_banner_html

Required

true

Suppress Parameter Validation: Custom Information Assurance Policy Text**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Information Assurance Policy Text parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_custom_ia_policy

Required

true

Suppress Parameter Validation: Redaction Parameters for Diagnostic Bundles**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Redaction Parameters for Diagnostic Bundles parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_diag_bundle_redaction_policy

Required

true

Suppress Parameter Validation: Extra JVM arguments for Java-based services

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Extra JVM arguments for Java-based services parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_extra_jvm_opts

Required

true

Suppress Parameter Validation: Cloudera Manager Frontend URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Frontend URL parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_frontend_url

Required

true

Suppress Parameter Validation: Custom Kerberos Keytab Retrieval Script

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Kerberos Keytab Retrieval Script parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_gen_keytab_script

Required

true

Suppress Parameter Validation: Agent Heartbeat Logging Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Agent Heartbeat Logging Directory parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_heartbeat_logging_dir

Required

true

Suppress Parameter Validation: Host certificate generator command.**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host certificate generator command. parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_host_cert_generator

Required

true

Suppress Parameter Validation: HTTP Port for Admin Console**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Port for Admin Console parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_http_port

Required

true

Suppress Parameter Validation: HTTPS Port for Admin Console**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTPS Port for Admin Console parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_https_port

Required

true

Suppress Parameter Validation: Active Directory Domain Controller Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain Controller Override parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_kdc_account_creation_host_override

Required

true

Suppress Parameter Validation: KDC Admin Server Host**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KDC Admin Server Host parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_kdc_admin_host

Required

true

Suppress Parameter Validation: KDC Server Host**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KDC Server Host parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_kdc_host

Required

true

Suppress Parameter Validation: Cloudera Manager TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_keystore_password

Required

true

Suppress Parameter Validation: Cloudera Manager TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_keystore_path

Required

true

Suppress Parameter Validation: Exclude Users for SPNEGO/Kerberos Authentication**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Users for SPNEGO/Kerberos Authentication parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_auth_exclude_users

Required

true

Suppress Parameter Validation: Keytab File for SPNEGO Authentication Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Keytab File for SPNEGO Authentication Override parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_auth_keytab

Required

true

Suppress Parameter Validation: Kerberos Principal for SPNEGO Authentication Override**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal for SPNEGO Authentication Override parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_auth_principal

Required

true

Suppress Parameter Validation: Domain Name(s)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Domain Name(s) parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_domain

Required

true

Suppress Configuration Validator: Validator for Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf**Description**

Whether to suppress configuration warnings produced by the Validator for Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf configuration validator.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_domain_realm

Required

true

Suppress Parameter Validation: Kerberos Encryption Types**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Encryption Types parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_enc_types

Required

true

Suppress Parameter Validation: KDC Timeout**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KDC Timeout parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_kdc_timeout

Required

true

Suppress Parameter Validation: Advanced Configuration Snippet (Safety Valve) for [libdefaults] section of krb5.conf**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advanced Configuration Snippet (Safety Valve) for [libdefaults] section of krb5.conf parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_libdefaults_safety_valve

Required

true

Suppress Parameter Validation: Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_other_safety_valve

Required

true

Suppress Parameter Validation: Advanced Configuration Snippet (Safety Valve) for the Default Realm in krb5.conf**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advanced Configuration Snippet (Safety Valve) for the Default Realm in krb5.conf parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_realms_safety_valve

Required

true

Suppress Parameter Validation: Kerberos Renewable Lifetime

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Renewable Lifetime parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_renew_lifetime

Required

true

Suppress Parameter Validation: Kerberos Ticket Lifetime

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Ticket Lifetime parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_krb_ticket_lifetime

Required

true

Suppress Parameter Validation: LDAP Bind User Distinguished Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind User Distinguished Name parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ldap_bind_dn

Required

true

Suppress Parameter Validation: LDAP Bind Distinguished Name for Monitoring

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind Distinguished Name for Monitoring parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ldap_bind_dn_monitoring

Required

true

Suppress Parameter Validation: LDAP Bind Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind Password parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ldap_bind_pw

Required

true

Suppress Parameter Validation: LDAP Bind Password for Monitoring**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind Password for Monitoring parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ldap_bind_pw_monitoring

Required

true

Suppress Parameter Validation: LDAP Distinguished Name Pattern**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Distinguished Name Pattern parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ldap_dn_pattern

Required

true

Suppress Parameter Validation: LDAP Group Search Base**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Search Base parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ldap_group_search_base

Required

true

Suppress Parameter Validation: LDAP Group Search Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Search Filter parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ldap_group_search_filter

Required

true

Suppress Parameter Validation: LDAP URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ldap_url

Required

true

Suppress Parameter Validation: LDAP User Search Base**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User Search Base parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ldap_user_search_base

Required

true

Suppress Parameter Validation: LDAP User Search Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User Search Filter parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ldap_user_search_filter

Required

true

Suppress Configuration Validator: Mixed Packages And Parcels**Description**

Whether to suppress configuration warnings produced by the Mixed Packages And Parcels configuration validator.

Related Name**Default Value**

false

API Name

scm_config_suppression_mixed_packages_and_parcels

Required

true

Suppress Parameter Validation: Active Directory Domain**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_nt_domain

Required

true

Suppress Parameter Validation: Automatically Downloaded Products**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Automatically Downloaded Products parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_parcel_autodownload_products

Required

true

Suppress Parameter Validation: Proxy Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Password parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_parcel_proxy_password

Required

true

Suppress Parameter Validation: Proxy Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Port parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_parcel_proxy_port

Required

true

Suppress Parameter Validation: Proxy Server**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Server parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_parcel_proxy_server

Required

true

Suppress Parameter Validation: Proxy User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy User parameter.

Related Name

Default Value

false

API Name

scm_config_suppression_parcel_proxy_user

Required

true

Suppress Parameter Validation: Local Parcel Repository Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Local Parcel Repository Path parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_parcel_repo_path

Required

true

Suppress Parameter Validation: Allowed Groups for Knox Proxy**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Groups for Knox Proxy parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_proxyuser_knox_groups

Required

true

Suppress Parameter Validation: Allowed Hosts for Knox Proxy**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Hosts for Knox Proxy parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_proxyuser_knox_hosts

Required

true

Suppress Parameter Validation: Knox Proxy Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy Principal parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_proxyuser_knox_principal

Required

true

Suppress Parameter Validation: Allowed Users for Knox Proxy**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Users for Knox Proxy parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_proxyuser_knox_users

Required

true

Suppress Parameter Validation: Remote Parcel Repository URLs**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote Parcel Repository URLs parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_remote_parcel_repo_urls

Required

true

Suppress Parameter Validation: HTTP authentication password override for Cloudera Repositories**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP authentication password override for Cloudera Repositories parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_remote_repo_override_password

Required

true

Suppress Parameter Validation: HTTP authentication username override for Cloudera Repositories**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP authentication username override for Cloudera Repositories parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_remote_repo_override_user

Required

true

Suppress Parameter Validation: Report Configurations**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Report Configurations parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_report_configurations

Required

true

Suppress Parameter Validation: SAML Entity Alias**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Entity Alias parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_entity_alias

Required

true

Suppress Parameter Validation: SAML Entity Base URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Entity Base URL parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_entity_base_url

Required

true

Suppress Parameter Validation: SAML Entity ID**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Entity ID parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_entity_id

Required

true

Suppress Parameter Validation: Alias of SAML Sign/Encrypt Private Key**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alias of SAML Sign/Encrypt Private Key parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_key_alias

Required

true

Suppress Parameter Validation: SAML Sign/Encrypt Private Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Sign/Encrypt Private Key Password parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_key_password

Required

true

Suppress Parameter Validation: SAML Keystore Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Keystore Password parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_keystore_password

Required

true

Suppress Parameter Validation: Path to SAML Keystore File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Path to SAML Keystore File parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_keystore_path

Required

true

Suppress Parameter Validation: SAML Login URL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Login URL parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_login_url

Required

true

Suppress Parameter Validation: Path to SAML IDP Metadata File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Path to SAML IDP Metadata File parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_metadata_path

Required

true

Suppress Parameter Validation: SAML Attribute Identifier for User Role**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Attribute Identifier for User Role parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_oid_role

Required

true

Suppress Parameter Validation: SAML Attribute Identifier for User ID**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Attribute Identifier for User ID parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_oid_user

Required

true

Suppress Parameter Validation: Path to SAML Role Assignment Script**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Path to SAML Role Assignment Script parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_saml_role_script

Required

true

Suppress Configuration Validator: Cloudera Manager Server Restart**Description**

Whether to suppress configuration warnings produced by the Cloudera Manager Server Restart configuration validator.

Related Name**Default Value**

false

API Name

scm_config_suppression_scm_server_restart

Required

true

Suppress Parameter Validation: Kerberos Security Realm**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Security Realm parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_security_realm

Required

true

Suppress Parameter Validation: Server SSL Certificate Host Name.**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server SSL Certificate Host Name. parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_ssl_certificate_hostname

Required

true

Suppress Parameter Validation: System Identifier**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Identifier parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_system_identifier

Required

true

Suppress Configuration Validator: Tags Limit Validator**Description**

Whether to suppress configuration warnings produced by the Tags Limit Validator configuration validator.

Related Name

Default Value

false

API Name

scm_config_suppression_tags_limit

Required

true

Suppress Configuration Validator: TLS With Kerberos Validator**Description**

Whether to suppress configuration warnings produced by the TLS With Kerberos Validator configuration validator.

Related Name**Default Value**

false

API Name

scm_config_suppression_tls_with_kerberos_validator

Required

true

Suppress Parameter Validation: Kerberos Trusted Realms**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Trusted Realms parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_trusted_realms

Required

true

Suppress Parameter Validation: Cloudera Manager TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_truststore_password

Required

true

Suppress Parameter Validation: Cloudera Manager TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager TLS/SSL Client Trust Store File parameter.

Related Name**Default Value**

false

API Name

scm_config_suppression_truststore_path

Required

true

Cloudera Management Service

Role groups:

Activity Monitor

Advanced

Activity Monitor Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

ACTIVITYMONITOR_role_env_safety_valve

Required

false

Event Publication Maximum Queue Size

Description

The maximum size of the queue in which events published from this role will be buffered. If this queue becomes full (for example, due to an outage), subsequent events will be dropped.

Related Name

activityevents.event.publish.queue.max

Default Value

20000

API Name

actmon_event_publication_queue_size_max

Required

true

Event Publication Retry Period

Description

If an event cannot be delivered immediately by this role, this value controls how long to wait before Event Publisher retries delivery.

Related Name

activityevents.event.publish.retry.ms

Default Value

5000

API Name

actmon_event_publication_retry_period

Required

true

Java Configuration Options for Activity Monitor

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

firehose_java_opts

Required

false

Activity Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf

Description

For advanced use only. A string to be inserted into cmon.conf for this role only.

Related Name**Default Value****API Name**

firehose_safety_valve

Required

false

Activity Monitor Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Database**Activity Monitor Database Hostname****Description**

Name of host where Activity Monitor's database is running. It is highly recommended that this database is on the same host as the Activity Monitor. If the database is not running on its default port, specify the port number using this syntax: 'host:port'

Related Name**Default Value**

localhost

API Name

firehose_database_host

Required

false

Activity Monitor Database Name**Description**

Name of the Activity Monitor's database.

Related Name**Default Value**

firehose

API Name

firehose_database_name

Required

true

Activity Monitor Database Password**Description**

Password for logging in to the Activity Monitor database

Related Name

db.hibernate.connection.password

Default Value**API Name**

firehose_database_password

Required

false

Activity Monitor Database Type**Description**

Type of database to use for Activity Monitor.

Related Name

Default Value

mysql

API Name

firehose_database_type

Required

false

Activity Monitor Database Username**Description**

Username for logging in to the Activity Monitor database.

Related Name

db.hibernate.connection.username

Default Value

firehose

API Name

firehose_database_user

Required

true

Logs

Activity Monitor Logging Threshold**Description**

The minimum log level for Activity Monitor logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Activity Monitor Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Activity Monitor logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Activity Monitor Max Log Size

Description

The maximum size, in megabytes, per log file for Activity Monitor logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Activity Monitor Log Directory

Description

Location of log files for Activity Monitor

Related Name**Default Value**

/var/log/cloudera-scm-firehose

API Name

mgmt_log_dir

Required

false

Monitoring

Activity Monitor Activity Monitor Pipeline Monitoring Thresholds

Description

The health test thresholds for monitoring the Activity Monitor activity monitor pipeline. This specifies the number of dropped messages that will be tolerated over the monitoring time period.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

activitymonitor_activity_monitor_pipeline_thresholds

Required

false

Activity Monitor Activity Monitor Pipeline Monitoring Time Period

Description

The time period over which the Activity Monitor activity monitor pipeline will be monitored for dropped messages.

Related Name**Default Value**

5 minute(s)

API Name

activitymonitor_activity_monitor_pipeline_window

Required

false

Activity Monitor Activity Tree Pipeline Monitoring Thresholds**Description**

The health test thresholds for monitoring the Activity Monitor activity tree pipeline. This specifies the number of dropped messages that will be tolerated over the monitoring time period.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

activitymonitor_activity_tree_pipeline_thresholds

Required

false

Activity Monitor Activity Tree Pipeline Monitoring Time Period**Description**

The time period over which the Activity Monitor activity tree pipeline will be monitored for dropped messages.

Related Name**Default Value**

5 minute(s)

API Name

activitymonitor_activity_tree_pipeline_window

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

activitymonitor_fd_thresholds

Required

false

Activity Monitor Host Health Test**Description**

When computing the overall Activity Monitor health, consider the host's health.

Related Name

Default Value

true

API Name

activitymonitor_host_health_enabled

Required

false

Pause Duration Thresholds**Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

activitymonitor_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

activitymonitor_pause_duration_window

Required

false

Activity Monitor Process Health Test**Description**

Enables the health test that the Activity Monitor's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

activitymonitor_scm_health_enabled

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

activitymonitor_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

activitymonitor_web_metric_collection_thresholds

Required

false

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- alert - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- rate (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- periodminutes - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- threshold - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- content - match only those messages for which contents match this regular expression.
- exceptiontype - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

version: 0, rules: [alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .*, alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .*, alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.
- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.

- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a `DataNode` fires if the `DataNode` has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

`role_triggers`

Required

true

Cloudera Manager Descriptor Age Thresholds**Description**

The health test thresholds for monitoring the time since the Cloudera Manager descriptor was last refreshed.

Related Name**Default Value**

Warning: 60000.0, Critical: 120000.0

API Name

`scm_descriptor_age_thresholds`

Required

false

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Event Publication Log Quiet Time Period

Description

To avoid producing excessive amounts of log output, the Event Publisher component of this role is limited to emitting one message per time period. This value controls the size of that time period.

Related Name

Required

true

Use the Authentication Service to enable Single Sign On

Description

Use the Authentication Service to enable Single Sign On for the Firehose debug servers. Requires a running Authentication Service.

Related Name

debug.servlet.auth.enabled

Default Value

false

API Name

debug_servlet_auth_enabled

Required

false

Purge Activities Data at This Age

Description

In Activity Monitor, purge data about MapReduce jobs and aggregate activities when the data reaches this age in hours. By default, Activity Monitor keeps data about activities for 336 hours (14 days).

Related Name

firehose.activity.purge.duration.hours

Default Value

14 day(s)

API Name

firehose_activity_purge_duration_hours

Required

false

Purge Attempts Data at This Age

Description

In the Activity Monitor, purge data about MapReduce attempts when the data reaches this age in hours. Because attempt data may consume large amounts of database space, you may wish to purge it more frequently than activity data. By default, Activity Monitor keeps data about attempts for 336 hours (14 days).

Related Name

firehose.attempt.purge.duration.hours

Default Value

14 day(s)

API Name

firehose_attempt_purge_duration_hours

Required

false

Starting Interval for Descriptor Fetch Attempts

Description

The starting interval between fetch attempts for the SCM descriptor when Cloudera Management Service roles are starting. The interval is increased by an additional one second with each failed fetch attempt.

Related Name

mgmt.descriptor.fetch.frequency

Default Value

2 second(s)

API Name

mgmt_descriptor_fetch_frequency

Required

true

Descriptor Fetch Max Attempts

Description

Maximum number of attempts to fetch the SCM descriptor when Cloudera Management Service roles are starting. If the roles are not able to get the descriptor in this number of attempts, then the roles exit.

Related Name

mgmt.num.descriptor.fetch.tries

Default Value

10

API Name

mgmt_num_descriptor_fetch_tries

Required

true

Purge MapReduce Service Data at This Age**Description**

The number of hours of past service-level data to keep in the Activity Monitor database, such as total slots running. The default is to keep data for 336 hours (14 days).

Related Name

timeseries.expiration.hours

Default Value

14 day(s)

API Name

timeseries_expiration_hours

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Bind Activity Monitor to Wildcard Address****Description**

If enabled, the Activity Monitor binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name**Default Value**

false

API Name

amon_bind_wildcard

Required

false

Activity Monitor Web UI Port**Description**

Port for Activity Monitor's Debug page. Set to -1 to disable the debug server.

Related Name

debug.servlet.port

Default Value

8087

API Name

firehose_debug_port

Required

false

Activity Monitor Web UI HTTPS Port**Description**

Port for Activity Monitor's HTTPS Debug page.

Related Name

debug.servlet.https.port

Default Value

9087

API Name

firehose_debug_tls_port

Required

false

Activity Monitor Listen Port**Description**

Port where Activity Monitor is listening for agent messages.

Related Name

firehose.server.port

Default Value

9999

API Name

firehose_listen_port

Required

false

Activity Monitor Nozzle Port**Description**

Port where Activity Monitor's query API is exposed.

Related Name

nozzle.server.port

Default Value

9998

API Name

firehose_nozzle_port

Required

false

Resource Management

Java Heap Size of Activity Monitor in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

firehose_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Activity Monitor Kerberos Principal

Description

Kerberos principal used by the Activity Monitor. Note: Activity Monitoring should always use the principal used by Hue service.

Related Name**Default Value**

hue

API Name

kerberos_role_princ_name

Required

true

Enable TLS/SSL for Firehose Debug Server

Description

Encrypt communication between clients and Firehose Debug Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

debug.servlet.https.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Firehose Debug Server TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Firehose Debug Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

debug.servlet.https.keystorePath

Default Value**API Name**

ssl_server_keystore_location

Required

false

Firehose Debug Server TLS/SSL Server JKS Keystore File Password

Description

The password for the Firehose Debug Server JKS keystore file.

Related Name

debug.servlet.https.keystorePassword

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

false

Alert Publisher Advanced Configuration Snippet (Safety Valve) for alertpublisher.conf**Description**

For advanced use only. A string to be inserted into alertpublisher.conf for this role only.

Related Name**Default Value****API Name**

alertpublisher_safety_valve

Required

false

Alert Publisher Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Alert Publisher Logging Threshold

Description

The minimum log level for Alert Publisher logs

Related Name**Default Value**

INFO

API Name

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

`false`

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Alerts: Enable Email Alerts**Description**

This setting allows you to turn email alert delivery on and off.

Related Name

mailserver.enabled

Default Value

true

API Name

alert_mailserver_enabled

Required

false

Alert: Mail From Address**Description**

The 'From' address to use for alert emails

Related Name**Default Value**

noreply@localhost

API Name

alert_mailserver_from_address

Required

false

Alerts: Mail Server Hostname**Description**

The IP address or hostname of the mail server to send alerts to

Related Name**Default Value**

localhost

API Name

alert_mailserver_hostname

Required

true

Alerts: Mail Server Password**Description**

The password to use to log into the mail server. Warning: this password will be sent over the network to the Alert Publisher host in clear text. In addition, the password will be stored in a plain text file on the Alert Publisher host with restrictive file system permissions.

Related Name**Default Value****API Name**

alert_mailserver_password

Required

false

Alerts: Mail Server Protocol

Description

The protocol to use for sending email alerts.

Related Name

Default Value

smtp

API Name

alert_mailserver_protocol

Required

true

Alerts: Mail Message Recipients

Description

A comma-separated list of email addresses to send alerts to

Related Name

Default Value

root@localhost

API Name

alert_mailserver_recipients

Required

true

Alerts: Mail Server Username

Description

The username to use to log into the mail server

Related Name

Default Value

API Name

alert_mailserver_username

Required

false

Custom Alert Script

Description

If configured, this script is invoked on the machine hosting the alert publisher role. The script must be readable and executable by the cloudera-scm user. The script is passed, as a single argument, a path to a UTF-8 JSON file containing a list of alerts. Alerts are, by default, batched over time, and the batch size and the batch interval are configurable with the "Alert Publisher: Maximum Batch Size" and "Alert Publisher: Maximum Batch Interval" configuration options. The alerts file is deleted when the script finishes executing. Only one instance of this script is invoked at any given time, and the script must terminate. The standard out and standard error messages from this script are logged to the alert publisher role's log file.

Related Name

alert.script.path

Default Value**API Name**

alert_script_path

Required

false

Alert Publisher: Maximum Batch Size**Description**

The Alert Publisher can be configured to batch multiple alerts into a single email. This setting specifies the maximum number of alerts that will be batched into a single email (regardless of the batch interval).

Related Name

alert.aggregate.maxSize

Default Value

32

API Name

alertpublisher_aggregate_max_size

Required

false

Alert Publisher: Maximum Batch Interval**Description**

The Alert Publisher can be configured to batch multiple alerts into a single email. This setting specifies the maximum amount of time (in milliseconds) that the Alert Publisher waits before sending an email of the current batch.

Related Name

alert.aggregate.timeout.millis

Default Value

1 minute(s)

API Name

alertpublisher_aggregate_timeout

Required

false

Alerts: Email footer**Description**

Optional. If not empty, the text entered here will be inserted verbatim as a footer in HTML and plain-text emails.

Related Name

alert.email.footer

Default Value**API Name**

alertpublisher_email_footer

Required

false

Alerts: Email header**Description**

Optional. If not empty, the text entered here will be inserted verbatim as a header in HTML and plain-text emails.

Related Name

alert.email.header

Default Value**API Name**

alertpublisher_email_header

Required

false

Alerts: Mail Message Format**Description**

The format of the email alert message. The 'JSON' format is easy for scripts/programs to parse. The 'HTML' and 'text' formats are designed to be easily read by people.

Related Name

mail.format

Default Value

html

API Name

mail_format

Required

true

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Alerts: Mail Server TCP Port****Description**

Optional. The TCP port where the mail server is listening. If not specified, defaults to 25 if SMTP is selected, or 465 if SMTPS is selected.

Related Name**Default Value****API Name**

alert_mailserver_port

Required

false

Alerts: Listen Port

Description

Port where the Alert Publisher listens for internal API requests.

Related Name

alertpublisher.internalapi.port

Default Value

10101

API Name

alertpublisher_internalapi_port

Required

false

Resource Management

Java Heap Size of Alert Publisher in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

256 MiB

API Name

alert_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

SNMP**SNMP Authentication Protocol Pass Phrase****Description**

Pass phrase to use for SNMP authentication protocol

Related Name

alert.snmp.auth.password

Default Value**API Name**

alert_snmp_auth_password

Required

false

SNMP Authentication Protocol**Description**

Authentication algorithm to use for authentication

Related Name

alert.snmp.auth.protocol

Default Value

SHA

API Name

alert_snmp_auth_protocol

Required

false

SNMPv2 Community String

Description

Community string to use to identify this service. Generated SNMPv2 traps will use this string for authentication purpose.

Related Name

alert.snmp.community

Default Value**API Name**

alert_snmp_community

Required

false

SNMP Retry Count

Description

Number of time to try before trap is timed out. If this value is set to '0' the trap will be sent only once.

Related Name

alert.snmp.retries

Default Value

0

API Name

alert_snmp_retries

Required

true

SNMP Server Engine Id

Description

Engine Id to use for authentication and privacy. Engine Id is normally a hexadecimal number (e.g. 8000173e03a0c095f80c68). Engine Id along with pass phrases are used to generate keys for authentication and privacy protocols.

Related Name

alert.snmp.security.engineid

Default Value**API Name**

alert_snmp_security_engineid

Required

false

SNMP Security Level

Description

Level of security to use for SNMP v3 protocol. Currently only 'no authentication' and 'authentication with no privacy' is supported. Select 'SNMPv2' to use 'Community String' based SNMPv2 authentication.

Related Name

alert.snmp.security.level

Default Value

SNMPv2

API Name

alert_snmp_security_level

Required

true

SNMP NMS Hostname**Description**

Hostname of the SNMP NMS (network management software). It can be a DNS name or IP address of the host listening for SNMP traps and notifications. For reference, here is Cloudera Manager [SNMP Mib](#) .

Related Name

alert.snmp.server.hostname

Default Value**API Name**

alert_snmp_server_hostname

Required

false

SNMP Server Port**Description**

Port number on which SNMP server is listening.

Related Name

alert.snmp.server.port

Default Value

162

API Name

alert_snmp_server_port

Required

true

SNMP Timeout**Description**

Time to wait before an SNMP trap is resent or timed out.

Related Name

alert.snmp.timeout

Default Value

5 second(s)

API Name

alert_snmp_timeout

Required

true

SNMP Security UserName

Description

Name of a user to use for SNMP security.

Related Name

alert.snmp.username

Default Value**API Name**

alert_snmp_username

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Parameter Validation: Alert: Mail From Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alert: Mail From Address parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_alert_mailserver_from_address

Required

true

Suppress Parameter Validation: Alerts: Mail Server Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Mail Server Hostname parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_alert_mailserver_hostname

Required

true

Suppress Parameter Validation: Alerts: Mail Server Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Mail Server Password parameter.

Suppress Parameter Validation: Alerts: Mail Server TCP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Mail Server TCP Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_alert_mailserver_port

Required

true

Suppress Parameter Validation: Alerts: Mail Message Recipients**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Mail Message Recipients parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_alert_mailserver_recipients

Required

true

Suppress Parameter Validation: Alerts: Mail Server Username**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Mail Server Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_alert_mailserver_username

Required

true

Suppress Parameter Validation: Custom Alert Script**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Alert Script parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_alert_script_path

Required

true

Suppress Parameter Validation: SNMP Authentication Protocol Pass Phrase**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMP Authentication Protocol Pass Phrase parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_alert_snmp_auth_password

Required

true

Suppress Parameter Validation: SNMPv2 Community String**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMPv2 Community String parameter.

Related Name

Default Value

false

API Name

role_config_suppression_alert_snmp_community

Required

true

Suppress Parameter Validation: SNMP Server Engine Id**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMP Server Engine Id parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_alert_snmp_security_engineid

Required

true

Suppress Parameter Validation: SNMP NMS Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMP NMS Hostname parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_alert_snmp_server_hostname

Required

true

Suppress Parameter Validation: SNMP Server Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMP Server Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_alert_snmp_server_port

Required

true

Suppress Parameter Validation: SNMP Security UserName**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMP Security UserName parameter.

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_alert_publisher_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_alert_publisher_unexpected_exits

Required

true

Event Server

Advanced

Java Configuration Options for Event Server**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

eventserver_java_opts

Required

false

Maximum Number of Events Returned by Any Query**Description**

The maximum number of events that any query can return. Note: A high value can increase the amount of memory required by Event Server, as well as affect query response times.

Related Name

eventcatcher.max.query.events

Default Value

10000

API Name

eventserver_max_query_events

Required

true

Maximum Write Queue Length**Description**

The maximum number of events that can be queued for write before further requests are rejected

Related Name

eventcatcher.ingest.pipeline.max

Default Value

10000

API Name

eventserver_max_write_queue_size

Required

true

Number of Core Event Writer Threads**Description**

The number of threads that Event Server will use to write events to its store concurrently

Related Name

eventcatcher.num.ingest.threads

Default Value

2

API Name

eventserver_num_pipeline_threads

Required

true

Event Server Query Timeout**Description**

The amount of time, in milliseconds, that Cloudera Manager and the Alert Publisher will wait for the Event Server to respond to a query.

Related Name

eventserver.query.timeout

Default Value

60000

API Name

eventserver_query_timeout

Required

false

Event Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

EVENTSERVER_role_env_safety_valve

Required

false

Event Server Advanced Configuration Snippet (Safety Valve) for eventserver.conf**Description**

For advanced use only. A string to be inserted into eventserver.conf for this role only.

Related Name**Default Value****API Name**

eventserver_safety_valve

Required

false

Event Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists,

role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

process_start_secs

Required

false

Logs

Event Server Logging Threshold

Description

The minimum log level for Event Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Event Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Event Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Event Server Max Log Size

Description

The maximum size, in megabytes, per log file for Event Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Event Server Log Directory

Description

Directory where Event Server will place its log files.

Related Name**Default Value**

/var/log/cloudera-scm-eventserver

API Name

mgmt_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Event Store Capacity Monitoring Thresholds

Description

The health test thresholds on the number of events in the event store. Specified as a percentage of the maximum number of events in Event Server store.

Related Name**Default Value**

Warning: 115.0 %, Critical: 130.0 %

API Name

eventserver_capacity_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

eventserver_fd_thresholds

Required

false

Garbage Collection Duration Thresholds**Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

eventserver_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period**Description**

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

eventserver_gc_duration_window

Required

false

Event Server Host Health Test**Description**

When computing the overall Event Server health, consider the host's health.

Related Name**Default Value**

true

API Name

eventserver_host_health_enabled

Required

false

Event Server Index Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Event Server Index Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

eventserver_index_directory_free_space_absolute_thresholds

Required

false

Event Server Index Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Event Server Index Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Event Server Index Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

eventserver_index_directory_free_space_percentage_thresholds

Required

false

Event Server Process Health Test**Description**

Enables the health test that the Event Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

eventserver_scm_health_enabled

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

eventserver_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

eventserver_web_metric_collection_thresholds

Required

false

Event Server Write Pipeline Monitoring Thresholds

Description

The health test thresholds for monitoring the Event Server write pipeline. This specifies the number of dropped messages that will be tolerated over the monitoring time period.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

eventserver_write_pipeline_thresholds

Required

false

Event Server Write Pipeline Monitoring Time Period

Description

The time period over which the Event Server write pipeline will be monitored for dropped messages.

Related Name**Default Value**

5 minute(s)

API Name

eventserver_write_pipeline_window

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for

that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.
- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use_d_mb metric:

- Include only Health Test Metric Set: Selected.

- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Cloudera Manager Descriptor Age Thresholds**Description**

The health test thresholds for monitoring the time since the Cloudera Manager descriptor was last refreshed.

Related Name**Default Value**

Warning: 60000.0, Critical: 120000.0

API Name

scm_descriptor_age_thresholds

Required

false

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Alert On Transitions Out of Alerting Health****Description**

If set, the health events for transitions out of an alertable health level will also be considered an alert. For example, consider an entity that is configured to alert when it has bad health. If that entity's health becomes bad, an alert will be generated. If this setting is enabled, an alert will also be generated when it returns to good health. If this setting is disabled, then no alert will be generated when it returns to good health. Note that an entity must have `enable_alerts` set to true for health alerts to be generated for it. And make sure to reference the per-entity setting to turn on health alerts.

Related Name**Default Value**

false

API Name

eventserver_alert_on_transition_out_of_alerting_health_enabled

Required

false

Health Alert Threshold**Description**

Threshold at which a health event will be considered an alert. Note that an entity must have `enable_alerts` set to true for health alerts to be generated for it. And make sure to reference the per-entity setting to turn on health alerts.

Related Name**Default Value**

Bad

API Name

eventserver_health_events_alert_threshold

Required

false

Event Server Index Directory**Description**

Location of the Lucene index for Event Server

Related Name

eventcatcher.server.lucene_dir

Default Value

/var/lib/cloudera-scm-eventserver

API Name

eventserver_index_dir

Required

false

Maximum Number of Events in the Event Server Store**Description**

The maximum size of the Event Server store, in events. Once this size is exceeded, events is deleted started with the oldest first until the size of the store returns below this threshold

Related Name

eventcatcher.event.capacity

Default Value

5000000

API Name

eventserver_max_index_size

Required

true

Starting Interval for Descriptor Fetch Attempts**Description**

The starting interval between fetch attempts for the SCM descriptor when Cloudera Management Service roles are starting. The interval is increased by an additional one second with each failed fetch attempt.

Related Name

mgmt.descriptor.fetch.frequency

Default Value

2 second(s)

API Name

mgmt_descriptor_fetch_frequency

Required

true

Descriptor Fetch Max Attempts**Description**

Maximum number of attempts to fetch the SCM descriptor when Cloudera Management Service roles are starting. If the roles are not able to get the descriptor in this number of attempts, then the roles exit.

Related Name

mgmt.num.descriptor.fetch.tries

Default Value

10

API Name

mgmt_num_descriptor_fetch_tries

Required

true

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Event Server Web UI Port

Description

Port for the Event Server's Debug page. Set to -1 to disable debug server.

Related Name

eventcatcher.server.debug.port

Default Value

8084

API Name

eventserver_debug_port

Required

false

Event Query Port

Description

Port on which the Event Server listens for queries for events.

Related Name

eventcatcher.server.httpport

Default Value

7185

API Name

eventserver_http_port

Required

false

Event Publish Port

Description

Port on which the Event Server listens for the publication of events.

Related Name

eventcatcher.server.port

Default Value

7184

API Name

eventserver_listen_port

Required

false

Resource Management

Java Heap Size of EventServer in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

1 GiB

API Name

event_server_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Host Monitor Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

HOSTMONITOR_role_env_safety_valve

Required

false

Host Monitor Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Event Publication Maximum Queue Size**Description**

The maximum size of the queue in which events published from this role will be buffered. If this queue becomes full (for example, due to an outage), subsequent events will be dropped.

Related Name

health.event.publish.queue.max

Default Value

20000

API Name

svcmon_event_publication_queue_size_max

Required

true

Event Publication Retry Period

Description

If an event cannot be delivered immediately by this role, this value controls how long to wait before Event Publisher retries delivery.

Related Name

health.event.publish.retry.ms

Default Value

5000

API Name

svcmon_event_publication_retry_period

Required

true

Logs

Host Monitor Logging Threshold

Description

The minimum log level for Host Monitor logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Host Monitor Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Host Monitor logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Host Monitor Max Log Size

Description

The maximum size, in megabytes, per log file for Host Monitor logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Host Monitor Log Directory**Description**

Location of log files for Host Monitor

Related Name**Default Value**

/var/log/cloudera-scm-firehose

API Name

mgmt_log_dir

Required

false

Monitoring

Metrics Aggregation Run Duration Thresholds**Description**

The health test thresholds for monitoring the metrics aggregation run duration.

Related Name**Default Value**

Warning: 10 second(s), Critical: 30 second(s)

API Name

aggregation_run_duration_thresholds

Required

false

Enable Health Alerts for this Role**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Host Monitor Storage Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Host Monitor Storage Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

firehose_storage_directory_free_space_absolute_thresholds

Required

false

Host Monitor Storage Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Host Monitor Storage Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Host Monitor Storage Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

firehose_storage_directory_free_space_percentage_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

hostmonitor_fd_thresholds

Required

false

Host Monitor Host Health Test**Description**

When computing the overall Host Monitor health, consider the host's health.

Related Name**Default Value**

true

API Name

hostmonitor_host_health_enabled

Required

false

Host Monitor Host Pipeline Monitoring Thresholds**Description**

The health test thresholds for monitoring the Host Monitor host pipeline. This specifies the number of dropped messages that will be tolerated over the monitoring time period.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

hostmonitor_host_pipeline_thresholds

Required

false

Host Monitor Host Pipeline Monitoring Time Period**Description**

The time period over which the Host Monitor host pipeline will be monitored for dropped messages.

Related Name**Default Value**

5 minute(s)

API Name

hostmonitor_host_pipeline_window

Required

false

Pause Duration Thresholds**Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

hostmonitor_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

hostmonitor_pause_duration_window

Required

false

Host Monitor Process Health Test**Description**

Enables the health test that the Host Monitor's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

hostmonitor_scm_health_enabled

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

hostmonitor_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

hostmonitor_web_metric_collection_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files

Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .*, alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .*, alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Cloudera Manager Metric Schema Age Thresholds**Description**

The health test thresholds for monitoring the time since the Cloudera Manager metric schema was last refreshed.

Related Name**Default Value**

Warning: 60000.0, Critical: 120000.0

API Name

metric_schema_age_thresholds_name

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

role_triggers

Required

true

Cloudera Manager Descriptor Age Thresholds

Description

The health test thresholds for monitoring the time since the Cloudera Manager descriptor was last refreshed.

Related Name

Default Value

Warning: 60000.0, Critical: 120000.0

API Name

scm_descriptor_age_thresholds

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Use the Authentication Service to enable Single Sign On

Description

Use the Authentication Service to enable Single Sign On for the Firehose debug servers. Requires a running Authentication Service.

Related Name

debug.servlet.auth.enabled

Default Value

false

API Name

debug_servlet_auth_enabled

Required

false

Host Monitor Storage Directory

Description

The directory where Host Monitor data is stored. The Host Monitor stores metric time series and health information.

Related Name

firehose.storage.base.directory

Default Value

/var/lib/cloudera-host-monitor

API Name

firehose_storage_dir

Required

true

Time-Series Storage

Description

The approximate amount of disk space dedicated to storing time series and health data. Once the store has reached its maximum size, older data is deleted to make room for newer data. The disk usage is approximate because data is deleted only when the limit is reached. Note that Cloudera Manager stores time-series data at a number of different data granularities, and these granularities have different effective retention periods. Specifically, Cloudera Manager stores metric data as both raw data points and ten-minutely, hourly, six-hourly, daily, and weekly summary data points. Raw data consumes the bulk of the allocated storage space, weekly summaries the least. As such, raw data is retained for the shortest amount of time, while weekly summary points are unlikely to ever be deleted. See the "Storage" tab on the 'Host Monitor' -> 'Charts Library' -> 'Host Monitor Storage' page for more information on how space is consumed within the Host Monitor. This tab also shows information about the amount of data retained and time window covered by each data granularity.

Related Name

firehose_time_series_storage_bytes

Default Value

10 GiB

API Name

firehose_time_series_storage_bytes

Required

false

Health Event Startup Policy

Description

This setting controls whether health events are emitted when this monitoring role is started. If set to "none", then no health events are emitted. If set to "bad" then health events are emitted for subjects with bad or concerning health. If set to "all" then health events are emitted for all subjects for all health values. The default is "bad".

Related Name

health.event.publish.startup.policy

Default Value

bad

API Name

health_event_publish_startup_policy

Required

false

Starting Interval for Descriptor Fetch Attempts**Description**

The starting interval between fetch attempts for the SCM descriptor when Cloudera Management Service roles are starting. The interval is increased by an additional one second with each failed fetch attempt.

Related Name

mgmt.descriptor.fetch.frequency

Default Value

2 second(s)

API Name

mgmt_descriptor_fetch_frequency

Required

true

Descriptor Fetch Max Attempts**Description**

Maximum number of attempts to fetch the SCM descriptor when Cloudera Management Service roles are starting. If the roles are not able to get the descriptor in this number of attempts, then the roles exit.

Related Name

mgmt.num.descriptor.fetch.tries

Default Value

10

API Name

mgmt_num_descriptor_fetch_tries

Required

true

Event Publication Log Quiet Time Period**Description**

To avoid producing excessive amounts of log output, the Event Publisher component of this role is limited to emitting one message per time period. This value controls the size of that time period.

Related Name

health.event.publish.log.suppress.window.ms

Default Value

1 minute(s)

API Name

svcmon_event_publication_log_suppress_window

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Host Monitor Web UI Port

Description

Port for Host Monitor's Debug page. Set to -1 to disable the debug server.

Related Name

debug.servlet.port

Default Value

8091

API Name

firehose_debug_port

Required

false

Host Monitor Web UI HTTPS Port

Description

Port for Host Monitor's HTTPS Debug page.

Related Name

debug.servlet.https.port

Default Value

9091

API Name

firehose_debug_tls_port

Required

false

Host Monitor Listen Port

Description

Port where Host Monitor is listening for agent messages.

Related Name

firehose.server.port

Default Value

9995

API Name

firehose_listen_port

Required

false

Host Monitor Nozzle Port**Description**

Port where Host Monitor's query API is exposed.

Related Name

nozzle.server.port

Default Value

9994

API Name

firehose_nozzle_port

Required

false

Bind Host Monitor to Wildcard Address**Description**

If enabled, the Host Monitor binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name**Default Value**

false

API Name

hmon_bind_wildcard

Required

false

Resource Management**Java Heap Size of Host Monitor in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

firehose_heapsize

Required

false

Maximum Non-Java Memory of Host Monitor**Description**

The amount of memory the Host Monitor can use off of the Java heap.

Related Name

firehose_non_java_memory_bytes

Default Value

2 GiB

API Name

firehose_non_java_memory_bytes

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Enable TLS/SSL for Firehose Debug Server****Description**

Encrypt communication between clients and Firehose Debug Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

	debug.servlet.https.enabled
Default Value	false
API Name	ssl_enabled
Required	false

Firehose Debug Server TLS/SSL Server JKS Keystore File Location

Description	The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Firehose Debug Server is acting as a TLS/SSL server. The keystore must be in JKS format.
Related Name	debug.servlet.https.keystorePath
Default Value	
API Name	ssl_server_keystore_location
Required	false

Firehose Debug Server TLS/SSL Server JKS Keystore File Password

Description	The password for the Firehose Debug Server JKS keystore file.
Related Name	debug.servlet.https.keystorePassword
Default Value	
API Name	ssl_server_keystore_password
Required	false

Stacks Collection

Stacks Collection Data Retention

Description	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name	stacks_collection_data_retention
Default Value	100 MiB
API Name	stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

Navigator Audit Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

NAVIGATOR_role_env_safety_valve

Required

false

Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties**Description**

For advanced use only. A string to be inserted into cloudera-navigator.properties for this role only.

Related Name**Default Value****API Name**

navigator_server_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

PII Masking Regular Expression**Description**

Regular expression that identifies the strings to be masked. Changing this expression does not mask the strings in previous entries. Leave blank to bypass masking. This feature is superseded by cluster-wide redaction of logs and SQL queries, as an HDFS service-wide configuration parameter.

Related Name

navigator.pii.masking.regex

Default Value

```
(4[0-9]12(?:[0-9]3)?)(5[1-5][0-9]14)(3[47][0-9]13)(3(?:0[0-5][68][0-9])[0-9]11)(6(?:011|5[0-9]2)[0-9]12)((?:2131|1800|35\d3)\d11)
```

API Name

pii_masking_regex

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Database**Navigator Audit Server Database Hostname****Description**

Name of the host where Navigator Audit Server's database is running. It is highly recommended that this database is on the same host as Navigator Audit Server. If the database is not running on its default port, specify the port number using this syntax: 'host:port'

Related Name

navigator.db.host

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files

Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .* , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.
- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.

- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking **View as JSON**. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

`navigator_fd_thresholds`

Required

false

Garbage Collection Duration Thresholds**Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

`navigator_gc_duration_thresholds`

Required

false

Garbage Collection Duration Monitoring Period**Description**

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

navigator_gc_duration_window

Required

false

Navigator Audit Server Host Health Test**Description**

When computing the overall Navigator Audit Server health, consider the host's health.

Related Name**Default Value**

true

API Name

navigator_host_health_enabled

Required

false

Navigator Audit Server Process Health Test**Description**

Enables the health test that the Navigator Audit Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

navigator_scm_health_enabled

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

navigator_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

navigator_web_metric_collection_thresholds

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Navigator Audit Server Data Expiration Period****Description**

The number of hours of past audit events to keep in the Navigator Audit Server database. This will affect the size of the database.

Related Name

navigator.db.hours.retained

Default Value

90 day(s)

API Name

hours_retained

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Navigator Audit Server Web UI Port

Description

The port where Navigator Audit Server starts a debug web server. Set to -1 to disable debug server.

Related Name

navigator.server.debug.port

Default Value

8089

API Name

navigator_debug_port

Required

false

Navigator Audit Server Port

Description

The port where Navigator Audit Server listens for requests

Related Name

navigator.server.port

Default Value

7186

API Name

navigator_server_port

Required

false

Publishing

Kafka Topic

Description

The name of the Kafka topic where Navigator will publish audit events.

Related Name**Default Value**

	NavigatorAuditEvents
API Name	navigator_kafka_publishing_topic
Required	false

Resource Management

Java Heap Size of Auditing Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

1 GiB

API Name

navigator_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

`rm_memory_soft_limit`**Required**`true`

Security

Navigator Kerberos Principal

Description

Kerberos principal used by Navigator to authenticate to all services except HDFS. Note: Navigator should use the principal used by Hue service if you are using MapReduce1 service in any cluster.

Related Name**Default Value**`hue`**API Name**`kerberos_role_princ_name`**Required**`true`

Navigator TLS/SSL Client Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Navigator might connect to. This is used when Navigator is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**`navigator_truststore_file`**Required**`false`

Navigator TLS/SSL Client Trust Store Password

Description

The password for the Navigator TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**`navigator_truststore_password`**Required**`false`

Enable TLS/SSL for NAVIGATOR

Description

Encrypt communication between clients and NAVIGATOR using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

nav.http.enable_ssl

Default Value

false

API Name

ssl_enabled

Required

false

TLS/SSL Keystore Key Password

Description

The password that protects the private key contained in the JKS keystore used when NAVIGATOR is acting as a TLS/SSL server.

Related Name

nav.ssl.keyManagerPassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

TLS/SSL Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when NAVIGATOR is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

nav.ssl.keyStorePath

Default Value**API Name**

ssl_server_keystore_location

Required

false

TLS/SSL Keystore File Password

Description

The password for the NAVIGATOR JKS keystore file.

Related Name

nav.ssl.keyStorePassword

Default Value**API Name**

ssl_server_keystore_password
Required
false

Stacks Collection

Stacks Collection Data Retention

Description
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name
stacks_collection_data_retention
Default Value
100 MiB
API Name
stacks_collection_data_retention
Required
false

Stacks Collection Directory

Description
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.
Related Name
stacks_collection_directory
Default Value
API Name
stacks_collection_directory
Required
false

Stacks Collection Enabled

Description
Whether or not periodic stacks collection is enabled.
Related Name
stacks_collection_enabled
Default Value
false
API Name
stacks_collection_enabled
Required
true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Navigator Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: Navigator Audit Server Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: Navigator Audit Server Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mgmt_log_dir

Required

true

Suppress Parameter Validation: Navigator Audit Server Database Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Database Hostname parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_database_host

Required

true

Suppress Parameter Validation: Navigator Audit Server Database Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Database Name parameter.

Related Name**Default Value**

false

API Name

Navigator Metadata Server

Advanced

Allow Usage Data Collection

Description

Allows Cloudera to collect usage data, including the use of Google Analytics.

Related Name

nav.allow_usage_data

Default Value

true

API Name

allow_usage_data

Required

true

Navigator Metadata Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Navigator Metadata Server Install Dir**Description**

The directory where Navigator Metadata Server is installed. This allows overriding the version packaged with the Cloudera Manager Server.

Related Name**Default Value****API Name**

nav_install_dir

Required

false

Navigator Metadata Server Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties**Description**

For advanced use only, a string to be inserted into the client configuration for navigator.client.properties.

Related Name**Default Value****API Name**

navigator_client_config_safety_valve

Required

false

Java Configuration Options for Navigator Metadata Server**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

navigator_java_opts

Required

false

Navigator Metadata Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties

Description

For advanced use only. A string to be inserted into cloudera-navigator.properties for this role only.

Related Name

Default Value

API Name

navigator_safety_valve

Required

false

Navigator Metadata Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

NAVIGATORMETASERVER_role_env_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Cloudera Navigator**Enable Audit Collection****Description**

Enable collection of audit events from the service's roles.

Related Name

navigator.audit.enabled

Default Value

true

API Name

navigator_audit_enabled

Required

false

Audit Event Filter**Description**

Event filters are defined in a JSON object like the following: { "defaultAction": ("accept", "discard"), "rules": [{ "action": ("accept", "discard"), "fields": [{ "name": "fieldName", "match": "regex" }] }] } A filter has a default action and a list of rules, in order of precedence. Each rule defines an action, and a list of fields to match against the audit event. A rule is "accepted" if all the listed field entries match the audit event. At that point, the action declared by the rule is taken. If

no rules match the event, the default action is taken. Actions default to "accept" if not defined in the JSON object. The following is the list of fields that can be filtered for NAVMS events:

- operation: Navigator operation performed e.g. auditReport, savedSearch etc.
- username: the user performing the action.
- ipAddress: the IP from where the request originated.
- allowed: whether the operation was allowed or denied.

Related Name

Cloudera Navigator S3 Lineage AWS Credentials**Description**

Enable Cloudera Navigator to extract metadata and lineage for data that is written to S3 buckets in this account.

Related Name**Default Value****API Name**

nav_extraction_external_account

Required

false

LDAP Bind User Distinguished Name**Description**

Distinguished name of the user to bind to AD as for user authentication search/bind and group lookup for role authorization. For openLDAP based directories this should be a DN string, for Active Directory this can be just a username, combined with the "Active Directory Domain" value for login. For example username in the field and example.com in the active directory domain will result in the User Principal Name value of username@example.com being used to bind. If you put a UPM value here, do not over-configure the "active directory domain" field otherwise you will end up presenting username@example.com@example.com for binds. AD will accept a UPN value or the DN value as a valid Bind DN; An example of a Distinguished Name (DN): CN=cdh admin,OU=svcaccount,DC=example,DC=com An example of a UPN value: cdhadmin@example.com

Related Name

nav.ldap.bind.dn

Default Value**API Name**

nav_ldap_bind_dn

Required

false

LDAP Bind Password

Description

The password of the bind user.

Related Name

nav.ldap.bind.pw

Default Value**API Name**

nav_ldap_bind_pw

Required

false

LDAP Distinguished Name Pattern

Description

This setting is deprecated and soon to be removed, do not use LDAP Distinguished Name Pattern for configuration moving forward. It is not necessary to use and deprecated as a configuration approach for LDAP and AD in general.

Related Name

nav.ldap.dn.pattern

Default Value**API Name**

nav_ldap_dn_pattern

Required

false

LDAP Group Search Base

Description

The distinguished name indicating the path within the directory information tree to begin group searches from. For example in AD it would be cn=groups,dc=example,dc=com. Or in an openLDAP compatible situation it would be something like ou=groups,dc=example,dc=com. Check with your directory administration team on the proper search base to configure for your environment.

Related Name

nav.ldap.group.search.base

Default Value**API Name**

nav_ldap_group_search_base

Required

false

LDAP Group Search Filter For Logged In User

Description

A search filter for finding groups that the logged-in user belongs to. Typically, this is (member={0}), where {0} is replaced by the DN of a successfully authenticated user.

Related Name

nav.ldap.group.search.filter

Default Value**API Name**`nav_ldap_group_search_filter`**Required**`false`**LDAP Groups Search Filter****Description**

The search filter to use for finding groups for authorization of authenticated users for their cloudera manager role. For Active Directory and openLDAP compatible directories this will usually be (member={0}), where {0} will be replaced by DN string for a successfully authenticated user through the search/bind process. This requires configuration of the LDAP Bind User Distinguished Name field.

Related Name`nav.ldap.groups.search.filter`**Default Value**`(&(objectClass=groupOfNames)(cn=*0*))`**API Name**`nav_ldap_groups_search_filter`**Required**`false`**LDAP URL****Description**

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name`nav.ldap.url`**Default Value****API Name**`nav_ldap_url`**Required**`false`**LDAP User Search Base****Description**

The distinguished name indicating the path within the directory information tree to begin user searches from. For example in AD it would be cn=users,dc=example,dc=com. Or in an openLDAP compatible situation it would be something like ou=people,dc=example,dc=com. Check with your directory administration team on the proper user search base to configure for your environment.

Related Name`nav.ldap.user.search.base`**Default Value**

API Name

nav_ldap_user_search_base

Required

false

LDAP User Search Filter**Description**

The search filter to use for finding users. For AD configuration it will be (sAMAccountName={0}) and for openLDAP compatible directories it will usually be (uid={0}). Note that a custom attribute can also be used if the directory is configured differently for user names. The {0} expands the currently authenticating user's name entered in the login form for the query.

Related Name

nav.ldap.user.search.filter

Default Value**API Name**

nav_ldap_user_search_filter

Required

false

Active Directory Domain**Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Required

false

Source of User ID in SAML Response**Description**

Whether the user ID should be obtained from the SAML response NameID field or from an attribute

Related Name

nav.saml.user.source

Default Value

ATTRIBUTE

API Name

nav_saml_user_source

Required

true

Cloudera Telemetry Publisher S3 Bucket**Description**

The name of the S3 bucket where Cloudera Telemetry Publisher from remote clusters will upload metadata to for Cloudera Navigator.

Related Name

nav_telemetry_bucket_name

Default Value**API Name**

nav_telemetry_bucket_name

Required

false

Cloudera Telemetry Publisher AWS Credentials**Description**

Enable Cloudera Navigator to extract metadata and lineage from other clusters (e.g., Cloudera Altus) collected via Cloudera Telemetry Publisher.

Related Name**Default Value****API Name**

nav_telemetry_external_account

Required

false

Extractor Filter**HDFS Filter Enable****Description**

Enable HDFS Filtering. When Enabled, filters out the extraction of the items in the denylist.

Related Name

nav.filter.hdfs.enable

Default Value

false

API Name

nav_filter_hdfs_enable

Required

false

HDFS Filter Blacklist**Description**

List of paths to be filtered out. The paths can be regular expressions.

Related Name

nav.filter.hdfs.blacklist

Default Value**API Name**

nav_filter_hdfs_rules

Required

false

S3 Filter Default Action

Description

Set to Accept to extract all S3 buckets except for the excluded ones. Set to Discard to extract only the buckets that are included.

Related Name

nav.filter.s3.default.action

Default Value

ACCEPT

API Name

nav_filter_s3_default_action

Required

false

S3 Filter Enable

Description

Enable S3 Filtering

Related Name

nav.filter.s3.enable

Default Value

false

API Name

nav_filter_s3_enable

Required

false

S3 Filter list

Description

List of S3 buckets to be whitelisted or blacklisted. The strings can be regular expressions.

Related Name

nav.filter.s3.list

Default Value**API Name**

nav_filter_s3_rules

Required

false

Logs

Audit Log Directory

Description

Path to the directory where audit logs will be written. The directory will be created if it doesn't exist.

Related Name

audit_event_log_dir

Default Value

/var/log/cloudera-scm-navigator/audit

API Name

audit_event_log_dir

Required

false

Navigator Metadata Server Logging Threshold**Description**

The minimum log level for Navigator Metadata Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Navigator Metadata Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Navigator Metadata Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Navigator Metadata Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Navigator Metadata Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Navigator Metadata Server Log Directory**Description**

Directory where Navigator Metadata Server will place its log files.

Related Name

Default Value`/var/log/cloudera-scm-navigator`**API Name**`mgmt_log_dir`**Required**`false`**Maximum Audit Log File Size****Description**

Maximum size of audit log file in MB before it is rolled over.

Related Name`navigator.audit_log_max_file_size`**Default Value**`100 MiB`**API Name**`navigator_audit_log_max_file_size`**Required**`false`

Monitoring

Enable Health Alerts for this Role**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**`true`**API Name**`enable_alerts`**Required**`false`**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**`false`**API Name**`enable_config_alerts`**Required**`false`

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

version: 0, rules: [alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .*, alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .*, alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

false

Audit Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Audit Log Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

`navigatormetaserver_audit_event_log_directory_free_space_absolute_thresholds`

Required

false

Audit Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Audit Log Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Audit Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

`navigatormetaserver_audit_event_log_directory_free_space_percentage_thresholds`

Required

Navigator Metadata Server Storage Dir Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Navigator Metadata Server Storage Dir.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

navigatormetaserver_data_directory_free_space_absolute_thresholds

Required

false

Navigator Metadata Server Storage Dir Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Navigator Metadata Server Storage Dir. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Navigator Metadata Server Storage Dir Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

navigatormetaserver_data_directory_free_space_percentage_thresholds

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

navigatormetaserver_fd_thresholds

Required

false

Navigator Metadata Server Host Health Test**Description**

When computing the overall Navigator Metadata Server health, consider the host's health.

Related Name**Default Value**

true

API Name

navigatormetaserver_host_health_enabled

Required

false

Navigator Metadata Server Process Health Test**Description**

Enables the health test that the Navigator Metadata Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

navigatormetaserver_scm_health_enabled

Required

false

Solr Element Count Threshold**Description**

Threshold for throwing alert when the Solr Element Count reaches

Related Name**Default Value**

Warning: 5.0E8, Critical: 1.0E9

API Name

navigatormetaserver_solr_element_count_threshold

Required

false

Solr Relation Count Threshold**Description**

Threshold for throwing alert when the Solr Relation Count reaches

Related Name**Default Value**

Warning: 5.0E8, Critical: 1.0E9

API Name

navigatormetaserver_solr_relation_count_threshold

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Navigator Metadata Server Storage Dir****Description**

The directory where Navigator Metadata Server data is stored. Note that changing this location does not migrate existing data.

Related Name

nav.data.dir

Default Value

/var/lib/cloudera-scm-navigator

API Name

data_dir

Required

false

Default Facets**Description**

List of metadata properties used by default for Navigator search facets. If no facets are listed, the facets used are some system properties such as "sourceType", "type", "owner", "clusterTemplate", "tags", "deleted". Your entries here replace these system facets. For example, to include some of the system properties and a managed property "region" in the "sales" namespace, include entries such as "type", "owner", and "sales.region".

Related Name

nav.search.default_facets

Default Value**API Name**

nav_search_default_facets

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Policies

Enable Expression Input

Description

Allows policy properties to be specified using Java expressions.

Related Name

nav.policy.expression.enable

Default Value

false

API Name

nav_policies_expression_input

Required

false

JMS Password

Description

The password of the JMS user to which notifications of changes to entities affected by policies are sent.

Related Name

navms.jms.password

Default Value

API Name

nav_policies_jms_password

Required

false

JMS Queue

Description

The JMS queue to which notifications of changes to entities affected by policies are sent.

Related Name

navms.jms.queue

Default Value

Navigator

API Name

nav_policies_jms_queue

Required

false

JMS URL**Description**

The URL of the JMS server to which notifications of changes to entities affected by policies are sent.

Related Name

navms.jms.url

Default Value

tcp://localhost:61616

API Name

nav_policies_jms_url

Required

false

JMS User**Description**

The JMS user to which notifications of changes to entities affected by policies are sent.

Related Name

navms.jms.user

Default Value

admin

API Name

nav_policies_jms_user

Required

false

Ports and Addresses

Navigator Metadata Server Port**Description**

The port where Navigator Metadata Server listens for requests

Related Name

nav.http.port

Default Value

7187

API Name

navigator_server_port

Required

false

Resource Management

Java Heap Size of Navigator Metadata Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

2 GiB

API Name

navigator_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Navigator Kerberos Principal****Description**

Kerberos principal used by Navigator to authenticate to all services except HDFS. Note: Navigator should use the principal used by Hue service if you are using MapReduce1 service in any of the clusters.

Related Name**Default Value**

hue

API Name

kerberos_role_princ_name

Required

true

Navigator Kerberos Principal for HDFS**Description**

Kerberos principal used by Navigator to authenticate to HDFS services. Note: This principal must have administrator and superuser privileges on all HDFS services.

Related Name**Default Value**

hdfs

API Name

nav_hdfs_kerberos_princ

Required

true

Enable TLS/SSL for Navigator Metadata Server**Description**

Encrypt communication between clients and Navigator Metadata Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

nav.http.enable_ssl

Default Value

false

API Name

ssl_enabled

Required

false

TLS/SSL Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Navigator Metadata Server is acting as a TLS/SSL server.

Related Name

nav.ssl.keyManagerPassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required
false

TLS/SSL Keystore File Location

Description
The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Navigator Metadata Server is acting as a TLS/SSL server. The keystore must be in JKS format.
Related Name
nav.ssl.keyStorePath
Default Value
API Name
ssl_server_keystore_location
Required
false

TLS/SSL Keystore File Password

Description
The password for the Navigator Metadata Server JKS keystore file.
Related Name
nav.ssl.keyStorePassword
Default Value
API Name
ssl_server_keystore_password
Required
false

Stacks Collection

Stacks Collection Data Retention

Description
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name
stacks_collection_data_retention
Default Value
100 MiB
API Name
stacks_collection_data_retention
Required
false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Parameter Validation: Audit Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Log Directory parameter.

Related Name**Default Value**

false

API Name

Suppress Health Test: Solr Relation Count Threshold Test

Description

Whether to suppress the results of the Solr Relation Count Threshold Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_nms_solr_relation_count

Required

true

Reports Manager

Advanced

Extra Space Ratio for Indexing

Description

Reports Manager uses an array to store HDFS directory tree during indexing. The size of this array is $3 * \text{number of filesystem objects in HDFS} * (1 + \text{extra space ratio})$. Increasing this ratio allows Reports Manager to create the directory tree faster, but consumes more memory. Also, extra space ratio must be set to a small enough value so that size of the array is below the maximum allowed in Java, which is $2^{31} - 1$.

Related Name

index.space.extra.ratio

Default Value

0.2

API Name

headlamp_index_space_extra_ratio

Required

false

Index Writer Thread Pool Queue Size

Description

Size of the queue to use for holding index writer tasks before they are executed. For faster indexing performance, consider increasing this to a small multiple of the Maximum Index Writer Threads configured value.

Related Name

index.writer.max.queue.size

Default Value

4

API Name

headlamp_index_writer_max_queue_size

Required

false

Maximum Index Writer Threads

Description

Maximum number of concurrent threads to use when writing the index. For faster indexing performance, consider increasing it to a small multiple of the number of cores on the Reports Manager host.

Related Name

index.writer.num.threads

Default Value

2

API Name

headlamp_index_writer_num_threads

Required

false

Java Configuration Options for Reports Manager

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

headlamp_java_opts

Required

false

Maximum Document Buffer Size**Description**

Amount of memory that can be used for buffering documents before they are flushed to the index. For faster indexing performance, consider increasing this value.

Related Name

lucene.max.buffer.size.mb

Default Value

32 MiB

API Name

headlamp_lucene_max_buffer_size_mb

Required

false

Index Merge Factor**Description**

Reports Manager index is built in sections that are merged as the build progresses. This configuration determines how often index sections are merged. With smaller values, less memory is used while indexing, but indexing speed is slower. For faster indexing performance, consider increasing this value.

Related Name

lucene.merge.factor

Default Value

100

API Name

headlamp_lucene_merge_factor

Required

false

Publish HBase Space Usage**Description**

When set, publishes HBase space usage metrics to support HBase usage reporting. This feature is only supported for the HBase service in CDH 5 and higher.

Related Name

publish.hbase.space

Default Value

true

API Name

headlamp_publish_hbase_metrics

Required

false

Reports Manager Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.db.properties**Description**

For advanced use only. A string to be inserted into headlamp.db.properties for this role only.

Related Name**Default Value****API Name**

reportsmanager_db_safety_valve

Required

false

Reports Manager Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

REPORTSMANAGER_role_env_safety_valve

Required

false

Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.conf**Description**

For advanced use only. A string to be inserted into headlamp.conf for this role only.

Related Name

Default Value**API Name**

reportsmanager_safety_valve

Required

false

Database

Reports Manager Database Hostname

Description

Name of the host where Reports Manager's database is running. It is highly recommended that this database is on the same host as Reports Manager. If the database is not running on its default port, specify the port number using this syntax: 'host:port'

Related Name

com.cloudera.headlamp.db.host

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files

Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name

Default Value

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .* , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

reportsmanager_fd_thresholds

Required

false

Reports Manager Host Health Test

Description

When computing the overall Reports Manager health, consider the host's health.

Related Name**Default Value**

true

API Name

reportsmanager_host_health_enabled

Required

false

Pause Duration Thresholds

Description

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

reportsmanager_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period

Description

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

reportsmanager_pause_duration_window

Required

false

Reports Manager Process Health Test**Description**

Enables the health test that the Reports Manager's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

reportsmanager_scm_health_enabled

Required

false

Reports Manager Working Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Reports Manager Working Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

reportsmanager_scratch_directory_free_space_absolute_thresholds

Required

false

Reports Manager Working Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Reports Manager Working Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Reports Manager Working Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

reportsmanager_scratch_directory_free_space_percentage_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

API Name

role_triggers

Required

true

Cloudera Manager Descriptor Age Thresholds

Description

The health test thresholds for monitoring the time since the Cloudera Manager descriptor was last refreshed.

Related Name

Default Value

Warning: 60000.0, Critical: 120000.0

API Name

scm_descriptor_age_thresholds

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Reports Manager Working Directory****Description**

Directory for Reports Manager to use for its working files

Related Name

scratch.dir

Default Value

/var/lib/cloudera-scm-headlamp

API Name

headlamp_scratch_dir

Required

false

Reports Manager Update Frequency**Description**

Frequency in which Reports Manager refreshes its view of HDFS.

Related Name

update.frequency.seconds

Default Value

1 hour(s)

API Name

headlamp_update_frequency_seconds

Required

false

Starting Interval for Descriptor Fetch Attempts**Description**

The starting interval between fetch attempts for the SCM descriptor when Cloudera Management Service roles are starting. The interval is increased by an additional one second with each failed fetch attempt.

Related Name

mgmt.descriptor.fetch.frequency

Default Value

2 second(s)

API Name

mgmt_descriptor_fetch_frequency

Required

true

Descriptor Fetch Max Attempts**Description**

Maximum number of attempts to fetch the SCM descriptor when Cloudera Management Service roles are starting. If the roles are not able to get the descriptor in this number of attempts, then the roles exit.

Related Name

mgmt.num.descriptor.fetch.tries

Default Value

10

API Name

mgmt_num_descriptor_fetch_tries

Required

true

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Bind Reports Manager to Wildcard Address****Description**

If enabled, the Reports Manager binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name**Default Value**

false

API Name

headlamp_bind_wildcard

Required

false

Reports Manager Web UI Port**Description**

The port where Reports Manager starts a debug web server. Set to -1 to disable debug server.

Related Name

debug.server.port

Default Value

8083

API Name

headlamp_debug_port

Required

false

Reports Manager Server Port**Description**

The port where Reports Manager listens for requests

Related Name

server.port

Default Value

5678

API Name

headlamp_server_port

Required

false

Resource Management**Java Heap Size of Reports Manager in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

headlamp_heapsize

Required

false

Cgroup CPU Shares**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the

value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security**Reports Manager Kerberos Principal****Description**

Kerberos principal used by Reports Manager. Note: This principal must have administrator and superuser privileges on all HDFS services.

Related Name**Default Value**

hdfs

API Name

kerberos_role_princ_name

Required

true

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Reports Manager Database Hostname**Description**

firehose_safety_valve

Required

false

Service Monitor Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

true

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Service Monitor Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

SERVICEMONITOR_role_env_safety_valve

Required

false

Event Publication Maximum Queue Size

Description

The maximum size of the queue in which events published from this role will be buffered. If this queue becomes full (for example, due to an outage), subsequent events will be dropped.

Related Name

health.event.publish.queue.max

Default Value

20000

API Name

svcmmon_event_publication_queue_size_max

Required

true

Event Publication Retry Period

Description

If an event cannot be delivered immediately by this role, this value controls how long to wait before Event Publisher retries delivery.

Related Name

health.event.publish.retry.ms

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .* , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Cloudera Manager Metric Schema Age Thresholds**Description**

The health test thresholds for monitoring the time since the Cloudera Manager metric schema was last refreshed.

Related Name**Default Value**

Warning: 60000.0, Critical: 120000.0

API Name

metric_schema_age_thresholds_name

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value**API Name**

monitoring_metric_filter

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Heap Size Thresholds

Description

The health test thresholds for the heap used.

Related Name**Default Value**

Warning: 90.0 %, Critical: 95.0 %

API Name

servicemonitor_heap_size_thresholds

Required

false

Service Monitor Host Health Test

Description

When computing the overall Service Monitor health, consider the host's health.

Related Name**Default Value**

true

API Name

servicemonitor_host_health_enabled

Required

false

Pause Duration Thresholds

Description

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

servicemonitor_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period

Description

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

servicemonitor_pause_duration_window

Required

false

Service Monitor Role Pipeline Monitoring Thresholds

Description

The health test thresholds for monitoring the Service Monitor role pipeline. This specifies the number of dropped messages that will be tolerated over the monitoring time period.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

servicemonitor_role_pipeline_thresholds

Required

false

Service Monitor Role Pipeline Monitoring Time Period

Description

The time period over which the Service Monitor role pipeline will be monitored for dropped messages.

Related Name**Default Value**

5 minute(s)

API Name

servicemonitor_role_pipeline_window

Required

false

Service Monitor Process Health Test**Description**

Enables the health test that the Service Monitor's process state is consistent with the role configuration

Related Name**Default Value**

API Name

unexpected_exits_window

Required

false

YARN MapReduce Counter Descriptions**Description**

This JSON document contains metadata that is used by the Service Monitor's YARN application monitoring feature for YARN-based MapReduce counter handling. Each counter description has the following fields:

- name (mandatory) - the name of the counter, for example, org.apache.hadoop.mapreduce.filesystemcounter.file_bytes_read.
- units (mandatory) - the units of the counter.
- attributeName (optional) - the attribute name to use for the counter within Cloudera Manager, this name will be used to identify the counter within the YARN Application Monitoring feature and in the Cloudera Manager API. If not specified the portion of the counter name after the last period will be used.
- displayName (optional) - a display name for the counter. If not specified the full counter name will be used.
- description (optional) - a description of the counter. If not specified the full counter name will be used.

API Name

yarn_application_mapreduce_counters

Required

false

Other

Use the Authentication Service to enable Single Sign On
Description

Use the Authentication Service to enable Single Sign On for the Firehose debug servers. Requires a running Authentication Service.

Related Name

debug.servlet.auth.enabled

Default Value

false

API Name

debug_servlet_auth_enabled

Required

false

Impala Storage

Description

The approximate amount of disk space dedicated to storing Impala query data. Once the store has reached its maximum size, older data is deleted to make room for newer queries. The disk usage is approximate because data is deleted only when the limit is reached.

Related Name

firehose_impala_storage_bytes

Default Value

1 GiB

API Name

firehose_impala_storage_bytes

Required

false

Reports Time-series Storage

Description

The approximate amount of disk space dedicated to storing time series for reporting data. Once the store has reached its maximum size, older data is deleted to make room for newer data. The disk usage is approximate because data is deleted only when the limit is reached. See the "Disk Usage" tab on the Service Monitor page for more information on how space is consumed in the Service Monitor. This tab also shows information about the amount of data retained and the time window covered by each data granularity.

Related Name

firehose_reports_storage_bytes

Default Value

API Name

firehose_reports_storage_bytes

Required

false

Service Monitor Storage Directory

Description

The directory where Service Monitor data is stored. The Service Monitor stores metric time series and health information, as well as Impala query and YARN application metadata if Impala and/or YARN are configured.

Related Name`firehose.storage.base.directory`**Default Value**`/var/lib/cloudera-service-monitor`**API Name**`firehose_storage_dir`**Required**`true`**Time-Series Storage****Description**

The approximate amount of disk space dedicated to storing time series and health data. Once the store has reached its maximum size, older data is deleted to make room for newer data. The disk usage is approximate because data is deleted only when the limit is reached. Note that Cloudera Manager stores time-series data at a number of different data granularities, and these granularities have different effective retention periods. Specifically, Cloudera Manager stores metric data as both raw data points and ten-minutely, hourly, six-hourly, daily, and weekly summary data points. Raw data consumes the bulk of the allocated storage space, weekly summaries the least. As such, raw data is retained for the shortest amount of time, while weekly summary points are unlikely to ever be deleted. See the "Storage" tab on the 'Service Monitor' -> 'Charts Library' -> 'Service Monitor Storage' page for more information on how space is consumed within the Service Monitor. This tab also shows information about the amount of data retained and time window covered by each data granularity.

Related Name`firehose_time_series_storage_bytes`**Default Value**`10 GiB`**API Name**`firehose_time_series_storage_bytes`**Required**`false`**YARN Storage****Description**

The approximate amount of disk space dedicated to storing YARN application data. Once the store has reached its maximum size, older data is deleted to make room for newer applications. The disk usage is approximate because data is deleted only when the limit is reached.

Related Name`firehose_yarn_storage_bytes`**Default Value**`1 GiB`**API Name**`firehose_yarn_storage_bytes`**Required**`false`

Health Event Startup Policy

Description

This setting controls whether health events are emitted when this monitoring role is started. If set to "none", then no health events are emitted. If set to "bad" then health events are emitted for subjects with bad or concerning health. If set to "all" then health events are emitted for all subjects for all health values. The default is "bad".

Related Name

health.event.publish.startup.policy

bad

API Name

health_event_publish_startup_policy

Required

false

Starting Interval for Descriptor Fetch Attempts

Description

The starting interval between fetch attempts for the SCM descriptor when Cloudera Management Service roles are starting. The interval is increased by an additional one second with each failed fetch attempt.

Related Name

mgmt.descriptor.fetch.frequency

Default Value

2 second(s)

API Name

mgmt_descriptor_fetch_frequency

Required

true

Descriptor Fetch Max Attempts

Description

Maximum number of attempts to fetch the SCM descriptor when Cloudera Management Service roles are starting. If the roles are not able to get the descriptor in this number of attempts, then the roles exit.

Related Name

mgmt.num.descriptor.fetch.tries

Default Value

10

API Name

mgmt_num_descriptor_fetch_tries

Required

true

Event Publication Log Quiet Time Period

Description

To avoid producing excessive amounts of log output, the Event Publisher component of this role is limited to emitting one message per time period. This value controls the size of that time period.

Related Name

health.event.publish.log.suppress.window.ms

Default Value

1 minute(s)

API Name

svcmon_event_publication_log_suppress_window

Required

true

Default Value

9996

API Name

firehose_nozzle_port

Required

false

Bind Service Monitor to Wildcard Address**Description**

If enabled, the Service Monitor binds to the wildcard address ("0.0.0.0") on all of its ports.

Related Name**Default Value**

false

API Name

smon_bind_wildcard

Required

false

Resource Management**Java Heap Size of Service Monitor in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

1 GiB

API Name

firehose_heapsize

Required

false

Maximum Non-Java Memory of Service Monitor

Description

The amount of memory the Service Monitor can use off of the Java heap.

Related Name

firehose_non_java_memory_bytes

Default Value

2 GiB

API Name

firehose_non_java_memory_bytes

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

Enable TLS/SSL for Firehose Debug Server

Description

Encrypt communication between clients and Firehose Debug Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

debug.servlet.https.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Firehose Debug Server TLS/SSL Server JKS Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Firehose Debug Server is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

debug.servlet.https.keystorePath

Default Value**API Name**

ssl_server_keystore_location

Required

false

Firehose Debug Server TLS/SSL Server JKS Keystore File Password

Description

The password for the Firehose Debug Server JKS keystore file.

Related Name

debug.servlet.https.keystorePassword

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

Required

true

Suppress Parameter Validation: Firehose Debug Server TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Firehose Debug Server TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: YARN MapReduce Counter Descriptions**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN MapReduce Counter Descriptions parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_application_mapreduce_counters

Required

true

Suppress Health Test: Metrics Aggregation Run Duration Test**Description**

Whether to suppress the results of the Metrics Aggregation Run Duration Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_aggregation_run_duration

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_file_descriptor

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_heap_dump_directory_free_space

Required

true

Suppress Health Test: Heap Size**Description**

Whether to suppress the results of the Heap Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_heap_size

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_log_directory_free_space

Required

true

Suppress Health Test: Cloudera Manager Metric Schema Age**Description**

Whether to suppress the results of the Cloudera Manager Metric Schema Age health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_metric_schema_fetch

Required

true

Suppress Health Test: Pause Duration**Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_pause_duration

Required

true

Suppress Health Test: Role Pipeline**Description**

Whether to suppress the results of the Role Pipeline health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_role_pipeline

Required

true

Suppress Health Test: Cloudera Manager Descriptor Age**Description**

Whether to suppress the results of the Cloudera Manager Descriptor Age health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_scm_descriptor_fetch

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_scm_health

Required

true

Suppress Health Test: Service Monitor Storage Directory Free Space**Description**

Whether to suppress the results of the Service Monitor Storage Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_storage_directory_free_space

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_service_monitor_unexpected_exits

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_service_monitor_web_metric_collection

Required

true

Service-Wide

Advanced

Cloudera Management Service Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

mgmt_service_env_safety_valve

Required

false

Cloudera Management Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml**Description**

For advanced use only, a string to be inserted into ssl-client.xml. This setting currently applies to the Reports Manager only.

Related Name**Default Value****API Name**

mgmt_ssl_client_safety_valve

Required

false

Small Files Reporting: HDFS Service for Data Staging**Description**

Data collection for small files analysis requires a data staging area in HDFS. If you enable data collection for small files reporting, this property sets which HDFS service stages the data.

Related Name

nav.smallfiles.hdfs.staging.service.name

Default Value**API Name**

navigator_small_files_staging_hdfs_service_name

Required

false

Small Files Reporting: Enable Data Collection**Description**

When Small Files Reporting is enabled, Navigator passes additional metadata to the Telemetry Publisher so the data can be used by Cloudera Workload XM (WXM). This additional data allows WXM to identify Impala query performance issues caused when data is organized into small files in HDFS. Enable this option only when Telemetry Publisher is enabled.

Related Name

nav.smallfiles.reporting.enabled

Default Value

false

API Name

navigator_smallfiles_enabled

Required

true

Small Files Reporting: HDFS Staging Location**Description**

Data collection for small files analysis requires a data staging area in HDFS. If you enable data collection for small files reporting, this property sets the HDFS location where Small Files Reporting data is staged. If the directory doesn't already exist, Navigator creates it using the same credentials it uses for HDFS extraction from this service.

Related Name

nav.smallfiles.hdfs.staging.root.path

Default Value

/user/cloudera/navigator/smallfiles

API Name

navigator_smallfiles_hdfs_path

Required

false

System Group

Description	The group that this service's processes should run as.
Related Name	
Default Value	cloudera-scm
API Name	process_groupname
Required	true

System User

Description	The user that this service's processes should run as.
Related Name	
Default Value	cloudera-scm
API Name	process_username
Required	true

Monitoring

Enable Log Event Capture

Description	When set, each role identifies important log events and forwards them to Cloudera Manager.
Related Name	
Default Value	true
API Name	catch_events
Required	false

Enable Service Level Health Alerts

Description	When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	false
API Name	enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Cloudera Manager KDC Server Connection Health Thresholds**Description**

The health test thresholds for monitoring the KDC Server connection health by login time.

Related Name**Default Value**

Warning: 500 millisecond(s), Critical: 1 second(s)

API Name

kdc_availability_thresholds

Required

false

Cloudera Manager LDAP Server Connection Health Thresholds**Description**

The health test thresholds for monitoring the LDAP Server connection health by login time.

Related Name**Default Value**

Warning: 500 millisecond(s), Critical: 1 second(s)

API Name

ldap_availability_thresholds

Required

false

Log Event Retry Frequency**Description**

The frequency in which the log4j event publication appender will retry sending undelivered log events to the Event server, in seconds

Related Name**Default Value**

30

API Name

log_event_retry_frequency

Required

false

Activity Monitor Role Health Test**Description**

When computing the overall MGMT health, consider Activity Monitor's health

Related Name**Default Value**

true

API Name

mgmt_activitymonitor_health_enabled

Required

false

Alert Publisher Role Health Test**Description**

When computing the overall MGMT health, consider Alert Publisher's health

Related Name**Default Value**

true

API Name

mgmt_alertpublisher_health_enabled

Required

false

Cloudera Manager TLS Certificate Expiry Thresholds**Description**

The health test thresholds for monitoring the certificate of Cloudera Manager Server.

Related Name**Default Value**

Warning: 60 day(s), Critical: 7 day(s)

API Name

mgmt_certificate_expiry_thresholds

Required

false

Cloudera Manager Server Clock Offset Thresholds**Description**

The health test thresholds for monitoring the clock offset between the Cloudera Manager Server and the Service Monitor.

Related Name**Default Value**

Warning: 30 second(s), Critical: 1 minute(s)

API Name

mgmt_clock_offset_with_smon_thresholds

Required

false

Command Storage Directory Free Space Monitoring Thresholds**Description**

The health test thresholds for monitoring the free space on the filesystem that contains the Cloudera Manager Server command storage directory.

Related Name**Default Value**

Warning: 2 GiB, Critical: 1 GiB

API Name

mgmt_command_storage_directory_free_space_absolute_thresholds

Required

false

Embedded Database Free Space Monitoring Thresholds**Description**

The health test thresholds for monitoring the free space on the volume for the embedded PostgreSQL database optionally running on the Cloudera Manager Server. If the embedded database is not in use, this has no effect.

Related Name**Default Value**

Warning: 2 GiB, Critical: 1 GiB

API Name

mgmt_embedded_database_free_space_absolute_thresholds

Required

false

Event Server Role Health Test**Description**

When computing the overall MGMT health, consider Event Server's health

Related Name**Default Value**

true

API Name

mgmt_eventserver_health_enabled

Required

false

Host Monitor Role Health Test**Description**

When computing the overall MGMT health, consider Host Monitor's health

Related Name

Default Value	true
API Name	mgmt_hostmonitor_health_enabled
Required	false

Navigator Audit Server Role Health Test

Description	When computing the overall MGMT health, consider Navigator Audit Server's health
Related Name	
Default Value	true
API Name	mgmt_navigator_health_enabled
Required	false

Navigator Metadata Server Role Health Test

Description	When computing the overall MGMT health, consider Navigator Metadata Server's health
Related Name	
Default Value	true
API Name	mgmt_navigatormetaserver_health_enabled
Required	false

Reports Manager Role Health Test

Description	When computing the overall MGMT health, consider Reports Manager's health
Related Name	
Default Value	true
API Name	mgmt_reportsmanager_health_enabled
Required	false

Service Monitor Role Health Test

Description	When computing the overall MGMT health, consider Service Monitor's health
Related Name	

Default Value

true

API Name

mgmt_servicemonitor_health_enabled

Required

false

Telemetry Publisher Role Health Test**Description**

When computing the overall MGMT health, consider Telemetry Publisher's health

Related Name**Default Value**

true

API Name

mgmt_telemetrypublisher_health_enabled

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other

Emit Sensitive Data In Stderr

Description

If set, sensitive data, like passwords, are emitted to stderr.

Related Name**Default Value**

false

API Name

mgmt_emit_sensitive_data_in_stderr

Required

true

Minimum Kerberos Ticket Validity Period

Description

The minimum Kerberos ticket validity period. The Cloudera Management Services attempt to log in again only after this minimum period of time has elapsed.

Related Name

tgt.login.validity.period

Default Value

1 hour(s)

API Name

tgt_login_validity_period

Required

false

Publishing

Kafka Service

Description

The Kafka service where Navigator will publish audit events.

Related Name**Default Value**

API Name

navigator_kafka_publishing_service

Required

false

Security

TLS/SSL Client Truststore File Location

Description

Path to the client truststore file used in HTTPS communication. This truststore contains certificates of trusted servers, or of Certificate Authorities trusted to identify servers. If set, this is used to verify certificates in HTTPS communication with CDH services and the Cloudera Manager Server. If not set, the default Java truststore is used to verify certificates. The contents of this truststore can be modified without restarting the Cloudera Management Service roles. By default, changes to its contents are picked up within ten seconds.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Cloudera Manager Server TLS/SSL Client Trust Store Password

Description

The password for the Cloudera Manager Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Suppressions

Suppress Configuration Validator: Activity Monitor Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Activity Monitor Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_activitymonitor_role_env_safety_valve

Required

true

Suppress Configuration Validator: Reports Manager Web UI Port**Description**

Whether to suppress configuration warnings produced by the Reports Manager Web UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_headlamp_debug_port

Required

true

Suppress Configuration Validator: Java Configuration Options for Reports Manager**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Reports Manager configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_headlamp_java_opts

Required

true

Suppress Configuration Validator: Reports Manager Working Directory**Description**

Whether to suppress configuration warnings produced by the Reports Manager Working Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_headlamp_scratch_dir

Required

true

Suppress Configuration Validator: Reports Manager Server Port**Description**

Whether to suppress configuration warnings produced by the Reports Manager Server Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_headlamp_server_port

Required

true

Suppress Configuration Validator: Host Monitor Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Host Monitor Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hostmonitor_role_env_safety_valve

Required

true

Suppress Configuration Validator: Role-Specific Kerberos Principal

Description

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Configuration Validator: Service Monitor Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Service Monitor Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Rules to Extract Events from Log Files**Description**

Whether to suppress configuration warnings produced by the Rules to Extract Events from Log Files configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Configuration Validator: Telemetry Publisher Data Directory**Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Data Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_mgmt_data_dir

Required

true

Suppress Configuration Validator: Service Monitor Log Directory**Description**

Whether to suppress configuration warnings produced by the Service Monitor Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_mgmt_log_dir

Required

true

Suppress Configuration Validator: HDFS Filter Blacklist**Description**

Whether to suppress configuration warnings produced by the HDFS Filter Blacklist configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_filter_hdfs_rules

Required

true

Suppress Configuration Validator: S3 Filter list**Description**

Whether to suppress configuration warnings produced by the S3 Filter list configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_filter_s3_rules

Required

true

Suppress Configuration Validator: Navigator Kerberos Principal for HDFS**Description**

Whether to suppress configuration warnings produced by the Navigator Kerberos Principal for HDFS configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_hdfs_kerberos_princ

Required

true

Suppress Configuration Validator: Navigator Metadata Server Install Dir**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Install Dir configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_install_dir

Required

true

Suppress Configuration Validator: LDAP Bind User Distinguished Name**Description**

Whether to suppress configuration warnings produced by the LDAP Bind User Distinguished Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_ldap_bind_dn

Required

true

Suppress Configuration Validator: LDAP Bind Password**Description**

Whether to suppress configuration warnings produced by the LDAP Bind Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_ldap_bind_pw

Required

true

Suppress Configuration Validator: LDAP Distinguished Name Pattern**Description**

Whether to suppress configuration warnings produced by the LDAP Distinguished Name Pattern configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_ldap_dn_pattern

Required

true

Suppress Configuration Validator: LDAP Group Search Base**Description**

Whether to suppress configuration warnings produced by the LDAP Group Search Base configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_ldap_group_search_base

Required

true

Suppress Configuration Validator: LDAP Group Search Filter For Logged In User**Description**

Whether to suppress configuration warnings produced by the LDAP Group Search Filter For Logged In User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_ldap_group_search_filter

Required

true

Suppress Configuration Validator: LDAP Groups Search Filter**Description**

Whether to suppress configuration warnings produced by the LDAP Groups Search Filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_ldap_groups_search_filter

Required

true

Suppress Configuration Validator: LDAP URL**Description**

Whether to suppress configuration warnings produced by the LDAP URL configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_ldap_url

Required

true

Suppress Configuration Validator: LDAP User Search Base**Description**

Whether to suppress configuration warnings produced by the LDAP User Search Base configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_ldap_user_search_base

Required

true

Suppress Configuration Validator: LDAP User Search Filter**Description**

Whether to suppress configuration warnings produced by the LDAP User Search Filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_ldap_user_search_filter

Required

true

Suppress Configuration Validator: Navigator Metadata Server Database Hostname**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Database Hostname configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_metaserver_database_host

Required

true

Suppress Configuration Validator: Navigator Metadata Server Database Name**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Database Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_metaserver_database_name

Required

true

Suppress Configuration Validator: Navigator Metadata Server Database Password**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Database Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_metaserver_database_password

Required

true

Suppress Configuration Validator: Navigator Metadata Server Database Username**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Database Username configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_metaserver_database_user

Required

true

Suppress Configuration Validator: Active Directory Domain**Description**

Whether to suppress configuration warnings produced by the Active Directory Domain configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_nt_domain

Required

true

Suppress Configuration Validator: JMS Password**Description**

Whether to suppress configuration warnings produced by the JMS Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_policies_jms_password

Required

true

Suppress Configuration Validator: JMS Queue**Description**

Whether to suppress configuration warnings produced by the JMS Queue configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_policies_jms_queue

Required

true

Suppress Configuration Validator: JMS URL**Description**

Whether to suppress configuration warnings produced by the JMS URL configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_policies_jms_url

Required

true

Suppress Configuration Validator: JMS User**Description**

Whether to suppress configuration warnings produced by the JMS User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_policies_jms_user

Required

true

Suppress Configuration Validator: SAML Entity Base URL**Description**

Whether to suppress configuration warnings produced by the SAML Entity Base URL configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_entity_base_url

Required

true

Suppress Configuration Validator: SAML Entity ID**Description**

Whether to suppress configuration warnings produced by the SAML Entity ID configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_entity_id

Required

true

Suppress Configuration Validator: Alias of SAML Sign/Encrypt Private Key**Description**

Whether to suppress configuration warnings produced by the Alias of SAML Sign/Encrypt Private Key configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_key_alias

Required

true

Suppress Configuration Validator: SAML Sign/Encrypt Private Key Password**Description**

Whether to suppress configuration warnings produced by the SAML Sign/Encrypt Private Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_key_password

Required

true

Suppress Configuration Validator: SAML Keystore Password**Description**

Whether to suppress configuration warnings produced by the SAML Keystore Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_keystore_password

Required

true

Suppress Configuration Validator: Path to SAML Keystore File

Description

Whether to suppress configuration warnings produced by the Path to SAML Keystore File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_keystore_path

Required

true

Suppress Configuration Validator: SAML Login URL

Description

Whether to suppress configuration warnings produced by the SAML Login URL configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_login_url

Required

true

Suppress Configuration Validator: Path to SAML IDP Metadata File

Description

Whether to suppress configuration warnings produced by the Path to SAML IDP Metadata File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_metadata_path

Required

true

Suppress Configuration Validator: SAML Attribute Identifier for User Role

Description

Whether to suppress configuration warnings produced by the SAML Attribute Identifier for User Role configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_oid_role

Required

true

Suppress Configuration Validator: SAML Attribute Identifier for User ID**Description**

Whether to suppress configuration warnings produced by the SAML Attribute Identifier for User ID configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_oid_user

Required

true

Suppress Configuration Validator: SAML Attribute Values for Roles**Description**

Whether to suppress configuration warnings produced by the SAML Attribute Values for Roles configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_role_map

Required

true

Suppress Configuration Validator: Path to SAML Role Assignment Script**Description**

Whether to suppress configuration warnings produced by the Path to SAML Role Assignment Script configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_saml_role_script

Required

true

Suppress Configuration Validator: Default Facets**Description**

Whether to suppress configuration warnings produced by the Default Facets configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_nav_search_default_facets

Required

true

Suppress Configuration Validator: Cloudera Telemetry Publisher S3 Bucket**Description**

Whether to suppress configuration warnings produced by the Cloudera Telemetry Publisher S3 Bucket configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_nav_telemetry_bucket_name

Required

true

Suppress Configuration Validator: Audit Event Filter**Description**

Whether to suppress configuration warnings produced by the Audit Event Filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_audit_event_filter

Required

true

Suppress Configuration Validator: Navigator Metadata Server Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_client_config_safety_valve

Required

true

Suppress Configuration Validator: Navigator Audit Server Database Hostname**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Database Hostname configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_database_host

Required

true

Suppress Configuration Validator: Navigator Audit Server Database Name**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Database Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_database_name

Required

true

Suppress Configuration Validator: Navigator Audit Server Database Password**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Database Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_database_password

Required

true

Suppress Configuration Validator: Navigator Audit Server Database Username**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Database Username configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_database_user

Required

true

Suppress Configuration Validator: Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for db.navigator.properties**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for db.navigator.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_db_safety_valve

Required

true

Suppress Configuration Validator: Navigator Audit Server Web UI Port**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Web UI Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_debug_port

Required

true

Suppress Configuration Validator: Java Configuration Options for Navigator Audit**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Navigator Audit configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_java_opts

Required

true

Suppress Configuration Validator: Kafka Topic**Description**

Whether to suppress configuration warnings produced by the Kafka Topic configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_navigator_kafka_publishing_topic

Required

true

Suppress Configuration Validator: Navigator Audit Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_role_env_safety_valve

Required

true

Suppress Configuration Validator: Navigator Metadata Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_safety_valve

Required

true

Suppress Configuration Validator: Navigator Audit Server Port**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_server_port

Required

true

Suppress Configuration Validator: Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_server_safety_valve

Required

true

Suppress Configuration Validator: Navigator TLS/SSL Client Trust Store File**Description**

Whether to suppress configuration warnings produced by the Navigator TLS/SSL Client Trust Store File configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_truststore_file

Required

true

Suppress Configuration Validator: Navigator TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the Navigator TLS/SSL Client Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigator_truststore_password

Required

true

Suppress Configuration Validator: Navigator Metadata Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_navigatormetaserver_role_env_safety_valve

Required

true

Suppress Configuration Validator: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: PII Masking Regular Expression**Description**

Whether to suppress configuration warnings produced by the PII Masking Regular Expression configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_pii_masking_regex

Required

true

Suppress Configuration Validator: Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.db.properties**Description**

Whether to suppress configuration warnings produced by the Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.db.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_reportsmanager_db_safety_valve

Required

true

Suppress Configuration Validator: Reports Manager Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Reports Manager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_reportsmanager_role_env_safety_valve

Required

true

Suppress Configuration Validator: Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.conf

Description

Whether to suppress configuration warnings produced by the Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.conf configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_reportsmanager_safety_valve

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Service Monitor Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Service Monitor Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_servicemonitor_role_env_safety_valve

Required

true

Suppress Configuration Validator: SNMP Validator

Description

Whether to suppress configuration warnings produced by the SNMP Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_snmp_validator

Required

true

Suppress Configuration Validator: TLS/SSL Keystore Key Password

Description

Whether to suppress configuration warnings produced by the TLS/SSL Keystore Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: Firehose Debug Server TLS/SSL Server JKS Keystore File Location

Description

Whether to suppress configuration warnings produced by the Firehose Debug Server TLS/SSL Server JKS Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Firehose Debug Server TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the Firehose Debug Server TLS/SSL Server JKS Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Telemetry Publisher Web UI Port.**Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Web UI Port. configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetry_publisher_debug_port

Required

true

Suppress Configuration Validator: Telemetry Publisher Web UI IPAddress.**Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Web UI IPAddress. configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetry_publisher_debug_server_interface

Required

true

Suppress Configuration Validator: Telemetry Publisher Server Port**Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Server Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetry_publisher_server_port

Required

true

Suppress Configuration Validator: Java Configuration Options for Telemetry Publisher**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Telemetry Publisher configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_java_opts

Required

true

Suppress Configuration Validator: Proxy Password**Description**

Whether to suppress configuration warnings produced by the Proxy Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_proxy_password

Required

true

Suppress Configuration Validator: Proxy Port**Description**

Whether to suppress configuration warnings produced by the Proxy Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_proxy_port

Required

true

Suppress Configuration Validator: Proxy Server**Description**

Whether to suppress configuration warnings produced by the Proxy Server configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_proxy_server

Required

true

Suppress Configuration Validator: Proxy User**Description**

Whether to suppress configuration warnings produced by the Proxy User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_proxy_user

Required

true

Suppress Configuration Validator: Telemetry Publisher Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_role_env_safety_valve

Required

true

Suppress Configuration Validator: Telemetry Publisher Advanced Configuration Snippet (Safety Valve) for telemetrypublisher.conf**Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Advanced Configuration Snippet (Safety Valve) for telemetrypublisher.conf configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_safety_valve

Required

true

Suppress Configuration Validator: Telemetry Kerberos Principal for HDFS**Description**

Whether to suppress configuration warnings produced by the Telemetry Kerberos Principal for HDFS configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_tp_hdfs_kerberos_princ

Required

true

Suppress Configuration Validator: YARN MapReduce Counter Descriptions**Description**

Whether to suppress configuration warnings produced by the YARN MapReduce Counter Descriptions configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_yarn_application_mapreduce_counters

Required

true

Suppress Configuration Validator: Activity Monitor Count Validator**Description**

Whether to suppress configuration warnings produced by the Activity Monitor Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_activitymonitor_count_validator

Required

true

Suppress Configuration Validator: Alert Publisher Count Validator**Description**

Whether to suppress configuration warnings produced by the Alert Publisher Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_alertpublisher_count_validator

Required

true

Suppress Configuration Validator: Event Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Event Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_eventserver_count_validator

Required

true

Suppress Configuration Validator: Host Monitor Count Validator**Description**

Whether to suppress configuration warnings produced by the Host Monitor Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hostmonitor_count_validator

Required

true

Suppress Configuration Validator: Cloudera Management Service Host Colocation Validator**Description**

Whether to suppress configuration warnings produced by the Cloudera Management Service Host Colocation Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_mgmt_colocation_validator

Required

true

Suppress Parameter Validation: Cloudera Management Service Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Management Service Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_mgmt_service_env_safety_valve

Required

true

Suppress Parameter Validation: Cloudera Management Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Management Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_mgmt_ssl_client_safety_valve

Required

true

Suppress Configuration Validator: Navigator Audit Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_count_validator

Required

true

Suppress Parameter Validation: Small Files Reporting: HDFS Staging Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Small Files Reporting: HDFS Staging Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_smallfiles_hdfs_path

Required

true

Suppress Configuration Validator: Navigator Metadata Server Count Validator**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_navigatormetaserver_count_validator

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Configuration Validator: Reports Manager Count Validator**Description**

Whether to suppress configuration warnings produced by the Reports Manager Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_reportsmanager_count_validator

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Configuration Validator: Service Monitor Count Validator**Description**

Whether to suppress configuration warnings produced by the Service Monitor Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_servicemonitor_count_validator

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: TLS/SSL Client Truststore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Client Truststore File Location parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Cloudera Manager Server TLS/SSL Client Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Server TLS/SSL Client Trust Store Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Telemetry Publisher Count Validator**Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_telemetrypublisher_count_validator

Required

true

Suppress Health Test: KDC Server Connection Health**Description**

Whether to suppress the results of the KDC Server Connection Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_kdc_availability

Required

true

Suppress Health Test: LDAP Server Connection Health**Description**

Whether to suppress the results of the LDAP Server Connection Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_ldap_availability

Required

true

Suppress Health Test: Activity Monitor Health**Description**

Whether to suppress the results of the Activity Monitor Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_mgmt_activity_monitor_health

Required

true

Suppress Health Test: Alert Publisher Health

Description

Whether to suppress the results of the Alert Publisher Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_mgmt_alert_publisher_health

Required

true

Suppress Health Test: Certificate Expiration

Description

Whether to suppress the results of the Certificate Expiration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_mgmt_certificates_expiry

Required

true

Suppress Health Test: Cloudera Manager Server Clock Offset

Description

Whether to suppress the results of the Cloudera Manager Server Clock Offset health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_mgmt_clock_offset_with_smon

Required

true

Suppress Health Test: Command Storage Directory Free Space

Description

Whether to suppress the results of the Command Storage Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_mgmt_command_storage_directory_free_space

Required

true

Suppress Health Test: Embedded Database Free Space**Description**

Whether to suppress the results of the Embedded Database Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_mgmt_embedded_db_free_space

Required

true

Suppress Health Test: Event Server Health**Description**

Whether to suppress the results of the Event Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_mgmt_event_server_health

Required

true

Suppress Health Test: Host Monitor Health**Description**

Whether to suppress the results of the Host Monitor Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_mgmt_host_monitor_health

Required

true

Suppress Health Test: Navigator Audit Server Health

Description

Whether to suppress the results of the Navigator Audit Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_mgmt_navigator_health

Required

true

Suppress Health Test: Navigator Metadata Server Health

Description

Whether to suppress the results of the Navigator Metadata Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_mgmt_navigatormetaserver_health

Required

true

Suppress Health Test: Reports Manager Health

Description

Whether to suppress the results of the Reports Manager Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_mgmt_reports_manager_health

Required

true

Suppress Health Test: Service Monitor Health

Description

Whether to suppress the results of the Service Monitor Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_mgmt_service_monitor_health

Required

true

Suppress Health Test: Telemetry Publisher Health**Description**

Whether to suppress the results of the Telemetry Publisher Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_mgmt_telemetrypublisher_health

Required

true

Telemetry Publisher

Advanced

Telemetry Publisher Export Period**Description**

The export period in seconds.

Related Name

export.period

Default Value

1 minute(s)

API Name

export_period

Required

true

Telemetry Publisher Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Telemetry Publisher Data Directory**Description**

Storage for tracking persistent state of the role.

Related Name

data.dir

Default Value

/var/lib/cloudera-scm-telemetrypublisher

API Name

mgmt_data_dir

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Telemetry Publisher Polling Period

Description

The extractor polling period in seconds.

Related Name

extractor.poll_period

Default Value

1 minute(s)

API Name

poll_period

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Java Configuration Options for Telemetry Publisher**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

telemetrypublisher_java_opts

Required

false

Log and Query Redaction**Description**

Telemetry Publisher recommends and by default requires that Log and Query Redaction be enabled for all CDH clusters. If disabled for any cluster, an alert will be raised during role start. Disable this setting to allow running without redaction.

Related Name

log_query_redaction

Default Value

true

API Name

telemetrypublisher_log_query_redaction

Required

true

Proxy Support for Telemetry Publisher**Description**

When set, Telemetry Publisher sends telemetry through a proxy server.

Related Name

telemetrypublisher.proxy.enabled

Default Value

false

API Name

telemetrypublisher_proxy_enabled

Required

false

Proxy Password**Description**

Proxy Server Password. This configuration is used only when proxy support is enabled for Telemetry Publisher.

Related Name

telemetrypublisher.proxy.password

Default Value**API Name**

telemetrypublisher_proxy_password

Required

false

Proxy Port**Description**

Proxy Server Port. This configuration is used only when proxy support is enabled for Telemetry Publisher.

Related Name

telemetrypublisher.proxy.port

Default Value**API Name**

telemetrypublisher_proxy_port

Required

false

Proxy Server**Description**

Proxy Server Hostname. This configuration is used only when proxy support is enabled for Telemetry Publisher.

Related Name

telemetrypublisher.proxy.server

Default Value**API Name**

telemetrypublisher_proxy_server

Required

false

Proxy User**Description**

Proxy Server User. This configuration is used only when proxy support is enabled for Telemetry Publisher.

Related Name

telemetrypublisher.proxy.user

Default Value**API Name**

telemetrypublisher_proxy_user

Required

false

Telemetry Publisher Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

TELEMETRYPUBLISHER_role_env_safety_valve

Required

false

Telemetry Publisher Advanced Configuration Snippet (Safety Valve) for telemetrypublisher.conf**Description**

For advanced use only. A string to be inserted into telemetrypublisher.conf for this role only.

Related Name**Default Value****API Name**

telemetrypublisher_safety_valve
Required
false

Telemetry Publisher Thread Pool Size

Description
The number of parallel threads used for extractor task execution.
Related Name
extractor.thread_pool_size
Default Value
10
API Name
thread_pool_size
Required
true

Logs

Telemetry Publisher Logging Threshold

Description
The minimum log level for Telemetry Publisher logs
Related Name
Default Value
INFO
API Name
log_threshold
Required
false

Telemetry Publisher Maximum Log File Backups

Description
The maximum number of rolled log files to keep for Telemetry Publisher logs. Typically used by log4j or logback.
Related Name
Default Value
10
API Name
max_log_backup_index
Required
false

Telemetry Publisher Max Log Size

Description
The maximum size, in megabytes, per log file for Telemetry Publisher logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Telemetry Publisher Log Directory**Description**

Directory where Telemetry Publisher will place its log files.

Related Name**Default Value**

/var/log/cloudera-scm-telemetrypublisher

API Name

mgmt_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Rules to Extract Events from Log Files**Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

Related Name**Default Value**

version: 0, rules: [alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .*, alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN]

API Name

log_event_whitelist

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

`process_swap_memory_thresholds`

Required

`false`

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Telemetry Publisher Data Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Telemetry Publisher Data Directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

telemetrypublisher_data_directory_free_space_absolute_thresholds

Required

false

Telemetry Publisher Data Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Telemetry Publisher Data Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Telemetry Publisher Data Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

telemetrypublisher_data_directory_free_space_percentage_thresholds

Required

false

Metrics Data Export Failure Thresholds

Description

The health test thresholds for monitoring the data export failure count.

Related Name**Default Value**

Warning: 3.0 time(s), Critical: 5.0 time(s)

API Name

telemetrypublisher_data_export_failure_thresholds

Required

true

Telemetry Publisher Data Export Monitoring Time Period

Description

The time period over which the telemetry publisher data export for streams will be monitored for failed export.

Related Name**Default Value**

5 minute(s)

API Name

telemetrypublisher_data_export_failure_window

Required

true

Metrics Data Ingest Failure Thresholds

Description

The health test thresholds for monitoring the data ingest failure count.

Related Name**Default Value**

Warning: 3.0 time(s), Critical: 5.0 time(s)

API Name

telemetrypublisher_data_ingest_failure_thresholds

Required

true

Telemetry Publisher Data Ingest Monitoring Time Period

Description

The time period over which the telemetry publisher data ingest for streams will be monitored for failed ingest.

Related Name**Default Value**

5 minute(s)

API Name

telemetrypublisher_data_ingest_failure_window

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

telemetrypublisher_fd_thresholds

Required

false

Garbage Collection Duration Thresholds

Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

telemetrypublisher_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period

Description

The period to review when computing the moving average of garbage collection time.

Related Name**Default Value**

5 minute(s)

API Name

telemetrypublisher_gc_duration_window

Required

false

Telemetry Publisher Host Health Test

Description

When computing the overall Telemetry Publisher health, consider the host's health.

Related Name**Default Value**

true

API Name

telemetrypublisher_host_health_enabled

Required

false

Telemetry Publisher Process Health Test**Description**

Enables the health test that the Telemetry Publisher's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

telemetrypublisher_scm_health_enabled

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

telemetrypublisher_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

telemetrypublisher_web_metric_collection_thresholds

Required

false

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Telemetry Publisher Web UI IPAddress.****Description**

The IP where Telemetry Publisher starts a debug web server.

Related Name

telemetry_publisher.debug.server.interface

Default Value

0.0.0.0

API Name

telemetry_publisher_debug_server_interface

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Telemetry Publisher Web UI Port.

Description

The port where Telemetry Publisher starts a debug web server. Set to -1 to disable debug server.

Related Name

telemetry_publisher.debug.port

Default Value

10111

API Name

telemetry_publisher_debug_port

Required

false

Telemetry Publisher Server Port

Description

The port where Telemetry Publisher listens for requests

Related Name

telemetry_publisher.server.port

Default Value

10110

API Name

telemetry_publisher_server_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`
 These settings override other cgroup settings.

Related Name

`custom.cgroups`

Default Value**API Name**

`rm_custom_resources`

Required

`false`

Cgroup I/O Weight**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

`blkio.weight`

Default Value

`500`

API Name

`rm_io_weight`

Required

`true`

Cgroup Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

`memory.limit_in_bytes`

Default Value

`-1 MiB`

API Name

`rm_memory_hard_limit`

Required

`true`

Cgroup Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Java Heap Size of TelemetryPublisher in Bytes**Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

telemetry_publisher_heapsize

Required

false

Security**Telemetry Kerberos Principal****Description**

Kerberos principal used by Telemetry Publisher to authenticate to all services except HDFS. Note: Telemetry should use the principal used by Hue service if you are using MapReduce1 service in any of the clusters.

Related Name**Default Value**

hue

API Name

kerberos_role_princ_name

Required

true

Enable TLS/SSL for Telemetry Publisher**Description**

Encrypt communication between clients and Telemetry Publisher using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

telemetrypublisher.http.enable_ssl

Default Value

false

API Name

ssl_enabled

Required

false

Telemetry Publisher TLS/SSL Server JKS Keystore Key Password**Description**

The password that protects the private key contained in the JKS keystore used when Telemetry Publisher is acting as a TLS/SSL server.

Related Name

telemetrypublisher.ssl.keyManagerPassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Telemetry Publisher TLS/SSL Server JKS Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Telemetry Publisher is acting as a TLS/SSL server. The keystore must be in JKS format.

Related Name

telemetrypublisher.ssl.keyStorePath

Default Value**API Name**

ssl_server_keystore_location

Required

false

Telemetry Publisher TLS/SSL Server JKS Keystore File Password**Description**

The password for the Telemetry Publisher JKS keystore file.

Related Name

telemetrypublisher.ssl.keyStorePassword

Default Value**API Name**

ssl_server_keystore_password

Required

false

Telemetry Kerberos Principal for HDFS

Description

Kerberos principal used by Telemetry Publisher to authenticate to HDFS services. Note: This principal must be in the same groups as the principals used by Job History and Spark History Servers.

Related Name

telemetrypublisher.dfs.user

Default Value

hdfs

API Name

tp_hdfs_kerberos_princ

Required

true

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Telemetry Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: Telemetry Publisher Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Rules to Extract Events from Log Files**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_event_whitelist

Required

true

Suppress Parameter Validation: Telemetry Publisher Data Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Data Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mgmt_data_dir

Required

true

Suppress Parameter Validation: Telemetry Publisher Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_mgmt_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Telemetry Publisher TLS/SSL Server JKS Keystore Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher TLS/SSL Server JKS Keystore Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Telemetry Publisher TLS/SSL Server JKS Keystore File Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher TLS/SSL Server JKS Keystore File Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Telemetry Publisher TLS/SSL Server JKS Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher TLS/SSL Server JKS Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Telemetry Publisher Web UI Port.**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Web UI Port. parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetry_publisher_debug_port

Required

true

Suppress Parameter Validation: Telemetry Publisher Web UI IPAddress.**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Web UI IPAddress. parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetry_publisher_debug_server_interface

Required

true

Suppress Parameter Validation: Telemetry Publisher Server Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Server Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_telemetry_publisher_server_port

Required

true

Suppress Parameter Validation: Java Configuration Options for Telemetry Publisher**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Telemetry Publisher parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_java_opts

Required

true

Suppress Parameter Validation: Proxy Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_proxy_password

Required

true

Suppress Parameter Validation: Proxy Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_proxy_port

Required

true

Suppress Parameter Validation: Proxy Server**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Server parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_proxy_server

Required

true

Suppress Parameter Validation: Proxy User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy User parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_proxy_user

Required

true

Suppress Parameter Validation: Telemetry Publisher Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_role_env_safety_valve

Required

true

Suppress Parameter Validation: Telemetry Publisher Advanced Configuration Snippet (Safety Valve) for telemetrypublisher.conf**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Advanced Configuration Snippet (Safety Valve) for telemetrypublisher.conf parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_telemetrypublisher_safety_valve

Required

true

Suppress Parameter Validation: Telemetry Kerberos Principal for HDFS**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Kerberos Principal for HDFS parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_tp_hdfs_kerberos_princ

Required

true

Suppress Health Test: Data Export Test For Stream Hive-Query-Audits**Description**

Whether to suppress the results of the Data Export Test For Stream Hive-Query-Audits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive__query__audits_data_export_failure

Required

true

Suppress Health Test: Data Ingest Test For Stream Hive-Query-Audits**Description**

Whether to suppress the results of the Data Ingest Test For Stream Hive-Query-Audits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive__query__audits_data_ingest_failure

Required

true

Suppress Health Test: Data Export Test For Stream Hive-Tez-App**Description**

Whether to suppress the results of the Data Export Test For Stream Hive-Tez-App health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive__tez__app_data_export_failure

Required

true

Suppress Health Test: Data Ingest Test For Stream Hive-Tez-App**Description**

Whether to suppress the results of the Data Ingest Test For Stream Hive-Tez-App health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_hive__tez__app_data_ingest_failure

Required

true

Suppress Health Test: Data Export Test For Stream Impala-Query-Profile**Description**

Whether to suppress the results of the Data Export Test For Stream Impala-Query-Profile health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impala__query__profile_data_export_failure

Required

true

Suppress Health Test: Data Ingest Test For Stream Impala-Query-Profile**Description**

Whether to suppress the results of the Data Ingest Test For Stream Impala-Query-Profile health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name`role_health_suppression_impala__query__profile_data_ingest_failure`**Required**`true`**Suppress Health Test: Data Export Test For Stream Oozie-Workflows****Description**

Whether to suppress the results of the Data Export Test For Stream Oozie-Workflows health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_oozie__workflows_data_export_failure`**Required**`true`**Suppress Health Test: Data Ingest Test For Stream Oozie-Workflows****Description**

Whether to suppress the results of the Data Ingest Test For Stream Oozie-Workflows health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_oozie__workflows_data_ingest_failure`**Required**`true`**Suppress Health Test: Data Export Test For Stream Spark2_on_yarn-Event-Log****Description**

Whether to suppress the results of the Data Export Test For Stream Spark2_on_yarn-Event-Log health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_spark2_on_yarn__event__log_data_export_failure`**Required**`true`

Suppress Health Test: Data Ingest Test For Stream Spark2_on_yarn-Event-Log**Description**

Whether to suppress the results of the Data Ingest Test For Stream Spark2_on_yarn-Event-Log health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_spark2_on_yarn__event__log_data_ingest_failure

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_telemetrypublisher_audit_health

Required

true

Suppress Health Test: Telemetry Publisher Data Directory Free Space**Description**

Whether to suppress the results of the Telemetry Publisher Data Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_telemetrypublisher_data_directory_free_space

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_telemetrypublisher_file_descriptor

Required

true

Suppress Health Test: GC Duration**Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_telemetrypublisher_gc_duration

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_telemetrypublisher_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_telemetrypublisher_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_telemetrypublisher_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_telemetrypublisher_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_telemetrypublisher_swap_memory_usage

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_telemetrypublisher_unexpected_exits

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_telemetrypublisher_web_metric_collection

Required

true

Suppress Health Test: Data Export Test For Stream Yarn-Apps**Description**

Whether to suppress the results of the Data Export Test For Stream Yarn-Apps health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_yarn__apps_data_export_failure

Required

true

Suppress Health Test: Data Ingest Test For Stream Yarn-Apps**Description**

Whether to suppress the results of the Data Ingest Test For Stream Yarn-Apps health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_yarn__apps_data_ingest_failure

Required

true

Suppress Health Test: Data Export Test For Stream Yarn-Jhist**Description**

Whether to suppress the results of the Data Export Test For Stream Yarn-Jhist health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_yarn__jhist_data_export_failure

Required

true

Suppress Health Test: Data Ingest Test For Stream Yarn-Jhist**Description**

Whether to suppress the results of the Data Ingest Test For Stream Yarn-Jhist health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_yarn__jhist_data_ingest_failure

Required

true
