**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### Other

### Advertised Host

**Description**

If set, this is the hostname given out to producers, consumers, and other brokers to use in establishing connections. Never set this property at the group level; it should always be overridden on instance level.

**Related Name**

advertised.host.name

**Default Value****API Name**

advertised.host.name

**Required**

false

### Authenticate Zookeeper Connection

**Description**

Enables authentication of SASL connections with zookeeper, if Kerberos authentication is enabled. It also allows a broker to set SASL ACL on zookeeper nodes, which locks these nodes down so that only a Kafka broker can modify it.

**Related Name**

authenticate.zookeeper.connection

**Default Value**

true

**API Name**

authenticate.zookeeper.connection

**Required**

false

### Broker ID

**Description**

ID uniquely identifying each broker. Never set this property at the group level; it should always be overridden on instance level.

**Related Name**

broker.id

**Default Value****API Name**

broker.id

**Required**

false

**Additional Broker Java Options****Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

**Related Name**

broker\_java\_opts

**Default Value**

```
-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35  
-XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -  
XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC -Djava.awt.headless=true -  
Djava.net.preferIPv4Stack=true -Dcom.sun.management.jmxremote.host=127.0.0.1 -  
Dcom.sun.management.jmxremote.local.only=true -Djava.rmi.server.hostname=127.0.0.1
```

**API Name**

broker\_java\_opts

**Required**

false

**Java Heap Size of Broker****Description**

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in megabytes. Kafka does not generally require setting large heap sizes. It is better to let the file system cache utilize the available memory.

**Related Name**

broker\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

broker\_max\_heap\_size

**Required**

false

**Kafka Broker Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name****Default Value**

5 minute(s)

**API Name**

csd\_role\_diagnostics\_timeout

**Required**

false

**Graceful Shutdown Timeout****Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

**Related Name****Default Value**

2 minute(s)

**API Name**

graceful\_stop\_timeout

**Required**

false

**Enable Authenticated Communication with the JMX Agent****Description**

Enables Authenticated Communication with the JMX Agent.

**Related Name**

jmx.auth.enabled

**Default Value**

false

**API Name**

jmx.auth.enabled

**Required**

false

**Name of User with Read-Write Access to the JMX Agent****Description**

Specifies the name of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.control.user

**Default Value**

controlRole

**API Name**

jmx.control.user

**Required**

false

**Password of user with read-write access to the JMX agent****Description**

Specifies the password of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.control.user.passwd

**Default Value****API Name**`jmx.control.user.passwd`**Required**`false`**Name of User with read-only access to the JMX Agent****Description**

Specifies the name of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**`jmx.monitor.user`**Default Value**`monitorRole`**API Name**`jmx.monitor.user`**Required**`false`**Password of User with read-only Access to the JMX agent****Description**

Specifies the password of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**`jmx.monitor.user.passwd`**Default Value****API Name**`jmx.monitor.user.passwd`**Required**`false`**Enable TLS client authentication for JMX port****Description**

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the Kafka JMX TLS/SSL Server Trust Store file or the global trust store.

**Related Name**`jmx.ssl.client.auth.enabled`**Default Value**`false`**API Name**`jmx.ssl.client.auth.enabled`**Required**`false`

### Enable TLS/SSL for Kafka JMX

**Description**

Encrypt communication between clients and Kafka JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

jmx.ssl.enabled

**Default Value**

false

**API Name**

jmx.ssl.enabled

**Required**

false

### HTTP Metric Report Host

**Description**

The host that the HTTP metric reporter binds to.

**Related Name**

kafka.http.metrics.host

**Default Value**

0.0.0.0

**API Name**

kafka.http.metrics.host

**Required**

false

### Data Directories

**Description**

A list of one or more directories in which Kafka data is stored.. Each new partition created is placed in the directory that currently has the least amount of partitions.. Each directory should be on its own separate drive.

**Related Name**

log.dirs

**Default Value**

/var/local/kafka/data

**API Name**

log.dirs

**Required**

true

### Data Retention Size

**Description**

The amount of data to retain in the log for each topic-partition. This is the limit per partition. Multiply it by the number of partitions to get the total amount of data retained for the topic. This property can take -1 as a value, which is interpreted as unlimited. If both log.retention.ms and log.retention.bytes are set, a segment is deleted when either limit is exceeded.

**Related Name**

log.retention.bytes

**Default Value**

-1 B

**API Name**

log.retention.bytes

**Required**

false

**Data Retention Check Interval****Description**

The frequency, in milliseconds, that the log cleaner checks whether any log segment is eligible for deletion, per retention policies.

**Related Name**

log.retention.check.interval.ms

**Default Value**

5 minute(s)

**API Name**

log.retention.check.interval.ms

**Required**

false

**Data Retention Time****Description**

The maximum time before a new log segment is rolled out. If both log.retention.ms and log.retention.bytes are set, a segment is deleted when either limit is exceeded. This property can take -1 as a value, which is interpreted as unlimited.

**Related Name**

log.retention.ms

**Default Value**

7 day(s)

**API Name**

log.retention.ms

**Required**

true

**Data Log Roll Time****Description**

The maximum time before a new log segment is rolled out.

**Related Name**

log.roll.ms

**Default Value****API Name**

log.roll.ms

**Required**

false

### Segment File Size

**Description**

The log for a topic partition is stored as a directory of segment files. This setting controls the size to which a segment file can grow before a new segment is rolled over in the log. This value has to be larger than `message.max.bytes`.

**Related Name**

`log.segment.bytes`

**Default Value**

1 GiB

**API Name**

`log.segment.bytes`

**Required**

false

### Maximum Connections per IP Address

**Description**

Maximum number of connections allowed from each IP address.

**Related Name**

`max.connections.per.ip`

**Default Value****API Name**

`max.connections.per.ip`

**Required**

false

### Number of I/O Threads

**Description**

The number of I/O threads that the server uses for executing requests. You should have at least as many threads as you have disks.

**Related Name**

`num.io.threads`

**Default Value**

8

**API Name**

`num.io.threads`

**Required**

false

### Number of Network Threads

**Description**

Number of threads that the server uses to handle incoming requests and outgoing responses.

**Related Name**

`num.network.threads`

**Default Value**

8

**API Name**

num.network.threads

**Required**

false

**Number of Recovery Threads per data directory****Description**

Number of threads per data directory that the server uses for log recovery during startup and log flushing during shutdown. Increasing this value may improve broker startup performance if you have a high number of segments. The total number of recovery threads (number of threads per data dir \* number of data dirs) should not exceed the number of CPU cores. The default value is 1.

**Related Name**

num.recovery.threads.per.data.dir

**Default Value**

1

**API Name**

num.recovery.threads.per.data.dir

**Required**

false

**Number of Alter Log Dir Threads****Description**

Number of threads that the server uses to move data between log directories. The default value of this property is the same as the number of log directories.

**Related Name**

num.replica.alter.log.dirs.threads

**Default Value****API Name**

num.replica.alter.log.dirs.threads

**Required**

false

**Ranger Kafka Plugin Conf Path****Description**

Staging directory for Ranger Kafka Plugin Configuration. This should generally not be changed.

**Related Name**

ranger\_kafka\_plugin\_conf\_path

**Default Value**

/etc/ranger/kafka-plugin

**API Name**

ranger\_kafka\_plugin\_conf\_path

**Required**

true

### Ranger Kafka Plugin Audit Hdfs Spool Directory Path

**Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

xasecure.audit.destination.hdfs.batch.filespool.dir

**Default Value**

/var/log/kafka/audit/hdfs/spool

**API Name**

ranger\_kafka\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

### Ranger Kafka Plugin Policy Cache Directory Path

**Description**

The directory where Ranger security policies are cached locally.

**Related Name**

ranger.plugin.kafka.policy.cache.dir

**Default Value**

/var/lib/ranger/kafka/policy-cache

**API Name**

ranger\_kafka\_plugin\_policy\_cache\_directory

**Required**

true

### Ranger Kafka Plugin Audit Solr Spool Directory Path

**Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**

xasecure.audit.destination.solr.batch.filespool.dir

**Default Value**

/var/log/kafka/audit/solr/spool

**API Name**

ranger\_kafka\_plugin\_solr\_audit\_spool\_directory

**Required**

true

### Ranger Plugin Trusted Proxy IP Address

**Description**

Accepts a list of IP addresses of proxy servers for trusting.

**Related Name**

ranger.plugin.kafka.trusted.proxy.ipaddress

**Default Value****API Name**

ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

false

**Ranger Plugin Use X-Forwarded For IP Address****Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

**Related Name**

ranger.plugin.kafka.use.x-forwarded-for.ipaddress

**Default Value**

false

**API Name**

ranger\_plugin\_use\_x\_forwarded\_for\_ipaddress

**Required**

false

**Inter Broker Protocol****Description**

Protocol to be used for inter-broker communication. INFERRED uses the same protocol that is configured for external clients.

**Related Name**

security.inter.broker.protocol

**Default Value**

INFERRED

**API Name**

security.inter.broker.protocol

**Required**

false

**Socket receive buffer size.****Description**

The SO\_RCVBUF buffer of the socket server sockets. If the value is -1, the OS default will be used.

**Related Name**

socket.receive.buffer.bytes

**Default Value**

100 KiB

**API Name**

socket.receive.buffer.bytes

**Required**

false

**Socket receive buffer size.****Description**

The maximum number of bytes in a socket request

**Related Name**

socket.request.max.bytes

**Default Value**

100 MiB

**API Name**

socket.request.max.bytes

**Required**

false

**Socket send buffer size.****Description**

The SO\_SNDBUF buffer of the socket server sockets. If the value is -1, the OS default will be used.

**Related Name**

socket.send.buffer.bytes

**Default Value**

100 KiB

**API Name**

socket.send.buffer.bytes

**Required**

false

**SSL Client Authentication****Description**

Client authentication mode for SSL connections. This configuration has three valid values, "required", "requested" and "none". If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

**Related Name**

ssl.client.auth

**Default Value**

none

**API Name**

ssl.client.auth

**Required**

false

**Enable Zookeeper ACL****Description**

Enables brokers to set SASL ACL on zookeeper nodes if `authenticate.zookeeper.connection` is enabled.

**Related Name**

zookeeper.set.acl

**Default Value**

true

**API Name**

zookeeper.set.acl

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Advertised Port****Description**

The port to give out to producers, consumers, and other brokers to use in establishing connections. This only needs to be set if this port is different from the port the server should bind to.

**Related Name**

advertised.port

**Default Value****API Name**

advertised.port

**Required**

false

**JMX Port****Description**

Port for JMX.

**Related Name**

jmx\_port

**Default Value**

9393

**API Name**

jmx\_port

**Required**

false

**HTTP Metric Report Port****Description**

The port that the HTTP metric reporter listens on.

**Related Name**

kafka.http.metrics.port

**Default Value**

24042

**API Name**

kafka.http.metrics.port

**Required**

false

**TCP Port****Description**

Kafka broker port.

**Related Name**

port

**Default Value**

9092

**API Name**

port

**Required**

false

**TLS/SSL Port****Description**

Kafka broker secure port.

**Related Name**

ssl\_port

**Default Value**

9093

**API Name**

ssl\_port

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

#### Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.soft\_limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_soft\_limit

#### Required

true

### Security

#### Kafka Broker TLS/SSL Client Trust Store File

##### Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka Broker might connect to. This is used when Kafka Broker is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

##### Related Name

ssl.truststore.location

##### Default Value

##### API Name

ssl\_client\_truststore\_location

##### Required

false

#### Kafka Broker TLS/SSL Client Trust Store Password

##### Description

The password for the Kafka Broker TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

##### Related Name

ssl.truststore.password.generator

##### Default Value

##### API Name

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Kafka Broker****Description**

Encrypt communication between clients and Kafka Broker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Kafka Broker TLS/SSL Server JKS Keystore Key Password****Description**

The password that protects the private key contained in the JKS keystore used when Kafka Broker is acting as a TLS/SSL server.

**Related Name**

ssl.key.password.generator

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Kafka Broker TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka Broker is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Kafka Broker TLS/SSL Server JKS Keystore File Password****Description**

The password for the Kafka Broker JKS keystore file.

**Related Name**

ssl.keystore.password.generator

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

#### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Parameter Validation: Advertised Host

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advertised Host parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_advertised.host.name

**Required**

true

#### Suppress Parameter Validation: Advertised Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advertised Port parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_advertised.port

**Required**

true

**Suppress Parameter Validation: Broker ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Broker ID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker.id

**Required**

true

**Suppress Parameter Validation: Additional Broker Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Broker Java Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker\_java\_opts

**Required**

true

**Suppress Parameter Validation: Java Heap Size of Broker****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Broker parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user

**Required**

true

**Suppress Parameter Validation: Password of user with read-write access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user.passwd

**Required**

true

**Suppress Parameter Validation: Name of User with read-only access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with read-only access to the JMX Agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user

**Required**

true

### Suppress Parameter Validation: Password of User with read-only Access to the JMX agent

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with read-only Access to the JMX agent parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_jmx.monitor.user.passwd

#### Required

true

### Suppress Parameter Validation: JMX Port

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Port parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_jmx\_port

#### Required

true

### Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_kafka-monitoring.properties\_role\_safety\_valve

#### Required

true

### Suppress Parameter Validation: HTTP Metric Report Host

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metric Report Host parameter.

#### Related Name

**Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.host

**Required**

true

**Suppress Parameter Validation: HTTP Metric Report Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metric Report Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.port

**Required**

true

**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_broker\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Data Directories

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Data Directories parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log.dirs

**Required**

true

### Suppress Parameter Validation: Segment File Size

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Segment File Size parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log.segment.bytes

**Required**

true

### Suppress Parameter Validation: Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Kafka Broker Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Number of I/O Threads****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of I/O Threads parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.io.threads

**Required**

true

**Suppress Parameter Validation: Number of Network Threads****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Network Threads parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.network.threads

**Required**

true

**Suppress Parameter Validation: Number of Recovery Threads per data directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Recovery Threads per data directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.recovery.threads.per.data.dir

**Required**

true

**Suppress Parameter Validation: Number of Alter Log Dir Threads****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Alter Log Dir Threads parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_num.replica.alter.log.dirs.threads

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: TCP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TCP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_port

**Required**

true

**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-audit.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-security.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Kafka Plugin Conf Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_conf\_path

**Required**

true

### Suppress Parameter Validation: Ranger Kafka Plugin Audit Hdfs Spool Directory Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Audit Hdfs Spool Directory Path parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Kafka Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Policy Cache Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Kafka Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Audit Solr Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Broker TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Kafka Broker TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: TLS/SSL Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_port

**Required**

true

**Suppress Parameter Validation: Kafka Broker TLS/SSL Server JKS Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Kafka Broker TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Kafka Broker TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Lagging Replicas Test****Description**

Whether to suppress the results of the Lagging Replicas Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka-kafka\_broker-7.1.0-lagging\_replicas

**Required**

true

**Suppress Health Test: Offline Directory Test****Description**

Whether to suppress the results of the Offline Directory Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka-kafka\_broker-7.1.0-offline\_directories

**Required**

true

**Suppress Health Test: Offline Partitions Test****Description**

Whether to suppress the results of the Offline Partitions Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka-kafka\_broker-7.1.0-offline\_partitions

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**`role_health_suppression_kafka_kafka_broker_file_descriptor`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_kafka_kafka_broker_host_health`**Required**`true`**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_kafka_kafka_broker_log_directory_free_space`**Required**`true`**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_kafka_kafka_broker_scm_health`**Required**`true`

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_unexpected\_exits

**Required**

true

## Kafka Connect

### Advanced

#### Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

**Description**

For advanced use only. A string to be inserted into connect-distributed.properties for this role only.

**Related Name****Default Value****API Name**

connect-distributed.properties\_role\_safety\_valve

**Required**

false

#### Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name**

**Default Value****API Name**

KAFKA\_CONNECT\_role\_env\_safety\_valve

**Required**

false

**Kafka Connect Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs****Kafka Connect Log Directory****Description**

The log directory for log files of the role Kafka Connect.

**Related Name**

kafka\_connect.log4j.dir

**Default Value**

/var/log/kafka

**API Name**

log\_dir

**Required**

false

**Kafka Connect Logging Threshold****Description**

The minimum log level for Kafka Connect logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### Kafka Connect Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for Kafka Connect logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### Kafka Connect Max Log Size

**Description**

The maximum size, in megabytes, per log file for Kafka Connect logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

## Monitoring

### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

kafka\_connect\_fd\_thresholds

**Required**

false

**Kafka Connect Host Health Test****Description**

When computing the overall Kafka Connect health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

kafka\_connect\_host\_health\_enabled

**Required**

false

**Kafka Connect Process Health Test****Description**

Enables the health test that the Kafka Connect's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

kafka\_connect\_scm\_health\_enabled

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name**

**Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

### Other

#### Broker List for Kafka Connect

**Description**

Comma-separated list of IP:port (or hostname:port) pairs of brokers on source cluster for Kafka Connect to connect. This should be more than one, for high availability.

**Related Name**

`bootstrap.servers`

**Default Value****API Name**

`bootstrap.servers`

**Required**

true

#### `config.storage.replication.factor`

**Description**

Default replication factor of Kafka Connect's config storage topic

**Related Name**

`config.storage.replication.factor`

**Default Value**

1

**API Name**

`config.storage.replication.factor`

**Required**

true

**config.storage.topic****Description**

Topic to use for storing connector and task configurations; This should be a single partition, highly replicated and compacted topic. Kafka Connect will attempt to create the topic automatically when needed before starting Kafka Connect.

**Related Name**

config.storage.topic

**Default Value**

connect-configs

**API Name**

config.storage.topic

**Required**

true

**connect.log4j.connector.context****Description**

The ``%X{connector.context}`` parameter in the layout includes connector-specific and task-specific information in the log message, where appropriate. This makes it easier to identify those log messages that apply to a specific connector

**Related Name**

connector.context

**Default Value****API Name**

connector.context

**Required**

false

**group.id****Description**

Unique name for the cluster, used in forming the Connect cluster group. Note that this must not conflict with consumer group IDs.

**Related Name**

group.id

**Default Value**

connect-cluster

**API Name**

group.id

**Required**

true

**Kafka Connect Configuration Directory****Description**

Directory with all configurations for Kafka Connect daemons

**Related Name**

kafka.connect.conf.directory

**Default Value**

\$CONF\_DIR

**API Name**

kafka.connect.conf.directory

**Required**

true

**Java Home Path Override****Description**

Java Home Path Override for Kafka Connect

**Related Name**

kafka.connect.jdk.home

**Default Value****API Name**

kafka.connect.jdk.home

**Required**

false

**KAFKA\_HEAP\_OPTS****Description**

Memory heap params while using Kafka Connect.

**Related Name**

KAFKA\_HEAP\_OPTS

**Default Value**

-Xms256M -Xmx2G

**API Name**

KAFKA\_HEAP\_OPTS

**Required**

false

**key.converter****Description**

The converters specify the format of data in Kafka and how to translate it into Connect data. Every Connect user will need to configure these based on the format they want their data in when loaded from or stored into Kafka

**Related Name**

key.converter

**Default Value**

org.apache.kafka.connect.json.JsonConverter

**API Name**

key.converter

**Required**

true

### key.converter.schemas.enable

#### Description

Converter-specific settings can be passed in by prefixing the Converter's setting with the converter we want to apply it to

#### Related Name

key.converter.schemas.enable

#### Default Value

true

#### API Name

key.converter.schemas.enable

#### Required

true

### metrics.jetty.server.port

#### Description

Jetty Metrics port to expose JMX Json

#### Related Name

metrics.jetty.server.port

#### Default Value

38084

#### API Name

metrics.jetty.server.port

#### Required

true

### offset.flush.interval.ms

#### Description

Offset flush interval in ms.

#### Related Name

offset.flush.interval.ms

#### Default Value

1 minute(s)

#### API Name

offset.flush.interval.ms

#### Required

true

### offset.storage.replication.factor

#### Description

Default replication factor of Kafka Connect's offset storage topic

#### Related Name

offset.storage.replication.factor

#### Default Value

1

**API Name**

offset.storage.replication.factor

**Required**

true

**offset.storage.topic****Description**

Topic to use for storing offsets. Kafka Connect will attempt to create the topic automatically when needed, but you can always manually create before starting Kafka Connect.

**Related Name**

offset.storage.topic

**Default Value**

connect-offsets

**API Name**

offset.storage.topic

**Required**

true

**plugin.path****Description**

Path to directories immediately containing jars with plugins and their dependencies, uber-jars with plugins and their dependencies and classes of plugins and their dependencies

**Related Name**

plugin.path

**Default Value**

/var/lib/kafka

**API Name**

plugin.path

**Required**

false

**rest.extension.classes****Description**

JMS Json Rest Extension class

**Related Name**

rest.extension.classes

**Default Value**

com.cloudera.dim.kafka.metrics.JmxJsonMetricsRestExtension

**API Name**

rest.extension.classes

**Required**

true

**kafka.connect.rest.port****Description**

Kafka Connect rest port

**Related Name**

rest.port

**Default Value**

38083

**API Name**

rest.port

**Required**

true

**kafka.connect.secure.rest.port****Description**

Kafka Connect secure rest port

**Related Name**

secure.rest.port

**Default Value**

38085

**API Name**

secure.rest.port

**Required**

true

**SSL Client Authentication****Description**

Client authentication mode for SSL connections. If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

**Related Name**

ssl.client.auth

**Default Value**

none

**API Name**

ssl.client.auth

**Required**

false

**status.storage.replication.factor****Description**

Default replication factor of Kafka Connect's status storage topic

**Related Name**

status.storage.replication.factor

**Default Value**

1

**API Name**`status.storage.replication.factor`**Required**`true`**status.storage.topic****Description**

Topic to use for storing statuses. Kafka Connect will attempt to create the topic automatically when needed, but you can always manually create before starting Kafka Connect.

**Related Name**`status.storage.topic`**Default Value**`connect-status`**API Name**`status.storage.topic`**Required**`true`**value.converter****Description**

The converters specify the format of data in Kafka and how to translate it into Connect data. Every Connect user will need to configure these based on the format they want their data in when loaded from or stored into Kafka

**Related Name**`value.converter`**Default Value**`org.apache.kafka.connect.json.JsonConverter`**API Name**`value.converter`**Required**`true`**value.converter.schemas.enable****Description**

Converter-specific settings can be passed in by prefixing the Converter's setting with the converter we want to apply it to

**Related Name**`value.converter.schemas.enable`**Default Value**`true`**API Name**`value.converter.schemas.enable`**Required**`true`**Performance**

### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

### Resource Management

#### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

#### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

#### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

### Kafka Connect TLS/SSL Client Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka Connect might connect to. This is used when Kafka Connect is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

### Kafka Connect TLS/SSL Client Trust Store Password

**Description**

The password for the Kafka Connect TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.truststore.password.generator

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

### Enable TLS/SSL for Kafka Connect

**Description**

Encrypt communication between clients and Kafka Connect using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### Kafka Connect TLS/SSL Server JKS Keystore Key Password

**Description**

The password that protects the private key contained in the JKS keystore used when Kafka Connect is acting as a TLS/SSL server.

**Related Name**

ssl.key.password.generator

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Kafka Connect TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka Connect is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Kafka Connect TLS/SSL Server JKS Keystore File Password****Description**

The password for the Kafka Connect JKS keystore file.

**Related Name**

ssl.keystore.password.generator

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

#### Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

#### Related Name

stacks\_collection\_directory

#### Default Value

#### API Name

stacks\_collection\_directory

#### Required

false

### Stacks Collection Enabled

#### Description

Whether or not periodic stacks collection is enabled.

#### Related Name

stacks\_collection\_enabled

#### Default Value

false

#### API Name

stacks\_collection\_enabled

#### Required

true

### Stacks Collection Frequency

#### Description

The frequency with which stacks are collected.

#### Related Name

stacks\_collection\_frequency

#### Default Value

5.0 second(s)

#### API Name

stacks\_collection\_frequency

#### Required

false

### Stacks Collection Method

#### Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

#### Related Name

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Parameter Validation: Broker List for Kafka Connect****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Broker List for Kafka Connect parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_bootstrap.servers

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: config.storage.replication.factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the config.storage.replication.factor parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_config.storage.replication.factor

**Required**

true

**Suppress Parameter Validation: config.storage.topic****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the config.storage.topic parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_config.storage.topic

**Required**

true

**Suppress Parameter Validation: Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_connect-distributed.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: connect.log4j.connector.context****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the connect.log4j.connector.context parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_connector.context

**Required**

true

**Suppress Parameter Validation: group.id****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the group.id parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_group.id

**Required**

true

**Suppress Parameter Validation: Kafka Connect Configuration Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Configuration Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.connect.conf.directory

**Required**

true

**Suppress Parameter Validation: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.connect.jdk.home

**Required**

true

**Suppress Parameter Validation: Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_connect\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: KAFKA\_HEAP\_OPTS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KAFKA\_HEAP\_OPTS parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_heap\_opts

**Required**

true

**Suppress Parameter Validation: key.converter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the key.converter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_key.converter

**Required**

true

**Suppress Parameter Validation: Kafka Connect Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Connect Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: metrics.jetty.server.port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the metrics.jetty.server.port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics.jetty.server.port

**Required**

true

**Suppress Parameter Validation: offset.storage.replication.factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the offset.storage.replication.factor parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_offset.storage.replication.factor

**Required**

true

**Suppress Parameter Validation: offset.storage.topic****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the offset.storage.topic parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_offset.storage.topic

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: plugin.path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the plugin.path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_plugin.path

**Required**

true

**Suppress Parameter Validation: rest.extension.classes****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the rest.extension.classes parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rest.extension.classes

**Required**

true

**Suppress Parameter Validation: kafka.connect.rest.port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the kafka.connect.rest.port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rest.port

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: kafka.connect.secure.rest.port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the kafka.connect.secure.rest.port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_secure.rest.port

**Required**

true

**Suppress Parameter Validation: Kafka Connect TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

### Suppress Parameter Validation: Kafka Connect TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

### Suppress Parameter Validation: Kafka Connect TLS/SSL Server JKS Keystore Key Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

### Suppress Parameter Validation: Kafka Connect TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Parameter Validation: Kafka Connect TLS/SSL Server JKS Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ssl_server_keystore_password`**Required**`true`**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Parameter Validation: status.storage.replication.factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the status.storage.replication.factor parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_status.storage.replication.factor`**Required**`true`**Suppress Parameter Validation: status.storage.topic****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the status.storage.topic parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_status.storage.topic`**Required**`true`**Suppress Parameter Validation: value.converter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the value.converter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_value.converter

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

#### Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_kafka\_kafka\_connect\_log\_directory\_free\_space

#### Required

true

### Suppress Health Test: Process Status

#### Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_kafka\_kafka\_connect\_scm\_health

#### Required

true

### Suppress Health Test: Swap Memory Usage

#### Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_kafka\_kafka\_connect\_swap\_memory\_usage

#### Required

true

### Suppress Health Test: Unexpected Exits

#### Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_unexpected\_exits

**Required**

true

## Kafka MirrorMaker

### Advanced

#### Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KAFKA\_MIRROR\_MAKER\_role\_env\_safety\_valve

**Required**

false

#### Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_consumers.properties

**Description**

For advanced use only. A string to be inserted into mirror\_maker\_consumers.properties for this role only.

**Related Name****Default Value****API Name**

mirror\_maker\_consumers.properties\_role\_safety\_valve

**Required**

false

### Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_producers.properties

**Description**

For advanced use only. A string to be inserted into mirror\_maker\_producers.properties for this role only.

**Related Name****Default Value****API Name**

mirror\_maker\_producers.properties\_role\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name**

**Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_client.properties

**Description**

For advanced use only. A string to be inserted into ssl\_client.properties for this role only.

**Related Name****Default Value****API Name**

ssl\_client.properties\_role\_safety\_valve

**Required**

false

### Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_server.properties

**Description**

For advanced use only. A string to be inserted into ssl\_server.properties for this role only.

**Related Name****Default Value****API Name**

ssl\_server.properties\_role\_safety\_valve

**Required**

false

## Logs

### Kafka MirrorMaker Log Directory

**Description**

The log directory for log files of the role Kafka MirrorMaker.

**Related Name**

kafka\_mirrormaker.log4j.dir

**Default Value**

/var/log/kafka

**API Name**

log\_dir

**Required**

false

**Kafka MirrorMaker Logging Threshold****Description**

The minimum log level for Kafka MirrorMaker logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Kafka MirrorMaker Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Kafka MirrorMaker logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Kafka MirrorMaker Max Log Size****Description**

The maximum size, in megabytes, per log file for Kafka MirrorMaker logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name**

**Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

kafka\_mirror\_maker\_fd\_thresholds

**Required**

false

**Kafka MirrorMaker Host Health Test****Description**

When computing the overall Kafka MirrorMaker health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

kafka\_mirror\_maker\_host\_health\_enabled

**Required**

false

**Kafka MirrorMaker Process Health Test****Description**

Enables the health test that the Kafka MirrorMaker's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

kafka\_mirror\_maker\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.

- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Abort on Send Failure****Description**

Stop the entire mirror maker when a send failure occurs.

**Related Name**

abort.on.send.failure

**Default Value**

true

**API Name**

abort.on.send.failure

**Required**

false

**Producer Batch Size****Description**

This configuration controls the batch size in bytes. The producer will attempt to batch records together into fewer requests whenever multiple records are being sent to the same partition. This helps performance on both the client and the server.

**Related Name**

batch.size

**Default Value**

16 KiB

**API Name**

batch.size

**Required**

false

**Destination Broker List****Description**

Comma-separated list of IP:port (or hostname:port) pairs of brokers on destination cluster. This should be more than one, for high availability, but there's no need to list all brokers.

**Related Name**

bootstrap.servers

**Default Value****API Name**

bootstrap.servers

**Required**

true

**Producer Buffer Memory****Description**

The total bytes of memory the producer can use to buffer records waiting to be sent to the server.

**Related Name**

buffer.memory

**Default Value**

32 MiB

**API Name**

buffer.memory

**Required**

false

### Producer Compression Type

**Description**

The compression type for all data generated by the producer.

**Related Name**

compression.type

**Default Value**

none

**API Name**

compression.type

**Required**

false

### MirrorMaker Consumer Rebalance Listener

**Description**

A consumer rebalance listener of the ConsumerRebalanceListener type. Invoked when MirrorMaker's consumer rebalances.

**Related Name**

consumer.rebalance.listener

**Default Value****API Name**

consumer.rebalance.listener

**Required**

false

### MirrorMaker Consumer Rebalance Listener Arguments

**Description**

Arguments used by MirrorMaker consumer rebalance listener.

**Related Name**

consumer.rebalance.listener.args

**Default Value****API Name**

consumer.rebalance.listener.args

**Required**

false

### Consumer Request Timeout

**Description**

The maximum amount of time the consumer will wait for the response of a request. If the response is not received before the timeout elapses, the consumer will resend the request if necessary or fail the request if retries are exhausted.

**Related Name**

consumer.request.timeout.ms

**Default Value**

40 second(s)

**API Name**

consumer.request.timeout.ms

**Required**

false

**Destination Kafka Cluster's Security Protocol****Description**

Protocol used for communication with destination Kafka cluster.

**Related Name**

destination.security.protocol

**Default Value**

PLAINTEXT

**API Name**

destination.security.protocol

**Required**

false

**Destination Kafka Cluster's Client Auth****Description**

Only required if destination Kafka cluster requires client authentication.

**Related Name**

destination.ssl.client.auth

**Default Value**

false

**API Name**

destination.ssl.client.auth

**Required**

false

**Consumer Minimum Fetch Size****Description**

The minimum amount of data the server should return for a fetch request. If insufficient data is available, the request will wait for that much data to accumulate before answering the request. Setting this property to something greater than 1 will cause the server to wait for larger amounts of data to accumulate which can improve server throughput a bit at the cost of some additional latency.

**Related Name**

fetch.min.bytes

**Default Value**

1 B

**API Name**

fetch.min.bytes

**Required**

false

**Consumer Group ID****Description**

Name of the consumer group used by MirrorMaker. When multiple role instances are configured with the same topics and same group ID, the role instances load-balance replication for the topics. When multiple role instances are configured with the same topics but different group ID, each role instance replicates all the events for those topics - this can be used to replicate the source cluster into multiple destination clusters.

**Related Name**

group.id

**Default Value**

cloudera\_mirrormaker

**API Name**

group.id

**Required**

false

**Enable Authenticated Communication with the JMX Agent****Description**

Enables Authenticated Communication with the JMX Agent.

**Related Name**

jmx.auth.enabled

**Default Value**

false

**API Name**

jmx.auth.enabled

**Required**

false

**Name of User with Read-Write Access to the JMX Agent****Description**

Specifies the name of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.control.user

**Default Value**

controlRole

**API Name**

jmx.control.user

**Required**

false

**Password of user with read-write access to the JMX agent****Description**

Specifies the password of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.control.user.passwd

**Default Value****API Name**`jmx.control.user.passwd`**Required**`false`**Name of User with read-only access to the JMX Agent****Description**

Specifies the name of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**`jmx.monitor.user`**Default Value**`monitorRole`**API Name**`jmx.monitor.user`**Required**`false`**Password of User with read-only Access to the JMX agent****Description**

Specifies the password of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**`jmx.monitor.user.passwd`**Default Value****API Name**`jmx.monitor.user.passwd`**Required**`false`**Enable TLS client authentication for JMX port****Description**

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the ZooKeeper JMX TLS/SSL Server Trust Store file or the global trust store.

**Related Name**`jmx.ssl.client.auth.enabled`**Default Value**`false`**API Name**`jmx.ssl.client.auth.enabled`**Required**`false`

### Enable TLS/SSL for Kafka JMX

**Description**

Encrypt communication between clients and Kafka JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

jmx.ssl.enabled

**Default Value**

false

**API Name**

jmx.ssl.enabled

**Required**

false

### Producer Linger Time

**Description**

The upper bound on the delay for batching. Once the producer gets a batch.size worth of records for a partition it will be sent immediately regardless of this setting. However, if fewer than this many bytes accumulated for this partition the producer will 'linger' for the specified time waiting for more records to show up.

**Related Name**

linger.ms

**Default Value**

0 second(s)

**API Name**

linger.ms

**Required**

false

### MirrorMaker Message Handler

**Description**

A MirrorMaker message handler of the MirrorMakerMessageHandler type that will process every record in-between producer and consumer.

**Related Name**

message.handler

**Default Value****API Name**

message.handler

**Required**

false

### MirrorMaker Message Handler Arguments

**Description**

Arguments used by MirrorMaker message handler.

**Related Name**

message.handler.args

**Default Value****API Name**`message.handler.args`**Required**`false`**Additional MirrorMaker Java Options****Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

**Related Name**`mirror_maker_java_opts`**Default Value**

```
-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35  
-XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -  
XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC -Djava.awt.headless=true -  
Djava.net.preferIPv4Stack=true -Dcom.sun.management.jmxremote.host=127.0.0.1 -  
Dcom.sun.management.jmxremote.local.only=true -Djava.rmi.server.hostname=127.0.0.1
```

**API Name**`mirror_maker_java_opts`**Required**`false`**Java Heap Size of MirrorMaker****Description**

Maximum size for the Java process heap memory. Passed to Java `-Xmx`. Measured in megabytes.

**Related Name**`mirror_maker_max_heap_size`**Default Value**`1 GiB`**API Name**`mirror_maker_max_heap_size`**Required**`false`**Number of Consumer Threads****Description**

Number of consumer threads.

**Related Name**`num.streams`**Default Value**`1`**API Name**`num.streams`**Required**

false

### Offset Commit Interval

#### Description

Offset commit interval in milliseconds.

#### Related Name

offset.commit.interval.ms

#### Default Value

60000

#### API Name

offset.commit.interval.ms

#### Required

false

### Producer Request Timeout

#### Description

The maximum amount of time the producer will wait for the response of a request. If the response is not received before the timeout elapses, the producer will resend the request if necessary or fail the request if retries are exhausted.

#### Related Name

producer.request.timeout.ms

#### Default Value

30 second(s)

#### API Name

producer.request.timeout.ms

#### Required

false

### Consumer Session Timeout

#### Description

The timeout used to detect failures when using the group management facilities of Kafka. When the heartbeat of a consumer is not received within the session timeout, the broker will mark the consumer as failed and rebalance the group. Note that the value must be in the allowable range as configured in the broker by `group.min.session.timeout.ms` and `group.max.session.timeout.ms`.

#### Related Name

session.timeout.ms

#### Default Value

30 second(s)

#### API Name

session.timeout.ms

#### Required

false

### Source Broker List

#### Description

Comma-separated list of IP:port (or hostname:port) pairs of brokers on source cluster. This should be more than one, for high availability, but there's no need to list all brokers.

**Related Name**

source.bootstrap.servers

**Default Value****API Name**

source.bootstrap.servers

**Required**

true

**Source Kafka Cluster's Security Protocol****Description**

Protocol used for communication with source Kafka cluster.

**Related Name**

source.security.protocol

**Default Value**

PLAINTEXT

**API Name**

source.security.protocol

**Required**

false

**Source Kafka Cluster's Client Auth****Description**

Only required if the source Kafka cluster requires client authentication.

**Related Name**

source.ssl.client.auth

**Default Value**

false

**API Name**

source.ssl.client.auth

**Required**

false

**Topic Whitelist****Description**

Regular expression that represents a set of topics to mirror.

**Related Name**

whitelist

**Default Value****API Name**

whitelist

**Required**

true

## Performance

### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Ports and Addresses

### JMX Port

**Description**

Port for JMX.

**Related Name**

jmx\_port

**Default Value**

9394

**API Name**

jmx\_port

**Required**

false

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Kafka MirrorMaker TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka MirrorMaker might connect to. This is used when Kafka MirrorMaker is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Kafka MirrorMaker TLS/SSL Client Trust Store Password****Description**

The password for the Kafka MirrorMaker TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.truststore.password.generator

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

### Enable TLS/SSL for Kafka MirrorMaker

**Description**

Encrypt communication between clients and Kafka MirrorMaker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### Kafka MirrorMaker TLS/SSL Server JKS Keystore Key Password

**Description**

The password that protects the private key contained in the JKS keystore used when Kafka MirrorMaker is acting as a TLS/SSL server.

**Related Name**

ssl.key.password.generator

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

### Kafka MirrorMaker TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka MirrorMaker is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### Kafka MirrorMaker TLS/SSL Server JKS Keystore File Password

**Description**

The password for the Kafka MirrorMaker JKS keystore file.

**Related Name**

ssl.keystore.password.generator

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Parameter Validation: Destination Broker List****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Destination Broker List parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_bootstrap.servers

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: MirrorMaker Consumer Rebalance Listener****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Consumer Rebalance Listener parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_consumer.rebalance.listener

**Required**

true

**Suppress Parameter Validation: MirrorMaker Consumer Rebalance Listener Arguments****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Consumer Rebalance Listener Arguments parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_consumer.rebalance.listener.args

**Required**

true

**Suppress Parameter Validation: Consumer Group ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Consumer Group ID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_group.id

**Required**

true

**Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user

**Required**

true

**Suppress Parameter Validation: Password of user with read-write access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user.passwd

**Required**

true

**Suppress Parameter Validation: Name of User with read-only access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with read-only access to the JMX Agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user

**Required**

true

**Suppress Parameter Validation: Password of User with read-only Access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with read-only Access to the JMX agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user.passwd

**Required**

true

### Suppress Parameter Validation: JMX Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_port

**Required**

true

### Suppress Parameter Validation: Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_mirror\_maker\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Kafka MirrorMaker Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: MirrorMaker Message Handler****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Message Handler parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_message.handler

**Required**

true

**Suppress Parameter Validation: MirrorMaker Message Handler Arguments****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Message Handler Arguments parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_message.handler.args

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_consumers.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_consumers.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_consumers.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Additional MirrorMaker Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional MirrorMaker Java Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_java\_opts

**Required**

true

**Suppress Parameter Validation: Java Heap Size of MirrorMaker****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of MirrorMaker parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_producers.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_producers.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_producers.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Source Broker List****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Source Broker List parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_source.bootstrap.servers

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_client.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_client.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_server.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_server.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server JKS Keystore Key Password

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server JKS Keystore Key Password parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

#### Required

true

### Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server JKS Keystore File Location

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server JKS Keystore File Location parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_server\_keystore\_location

#### Required

true

### Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server JKS Keystore File Password

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server JKS Keystore File Password parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_server\_keystore\_password

#### Required

true

### Suppress Parameter Validation: Stacks Collection Directory

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

#### Related Name

#### Default Value

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Topic Whitelist****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Topic Whitelist parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_whitelist

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_unexpected\_exits

**Required**

true

**Service-Wide****Advanced****Kafka Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

KAFKA\_service\_env\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

kafka

**API Name**

process\_groupname

**Required**

true

### System User

**Description**

The user that this service's processes should run as.

**Related Name****Default Value**

kafka

**API Name**

process\_username

**Required**

true

### Monitoring

#### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

#### Healthy Kafka Broker Monitoring Thresholds

**Description**

The health test thresholds of the overall Kafka Broker health. The check returns "Concerning" health if the percentage of "Healthy" Kafka Brokers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Kafka Brokers falls below the critical threshold.

**Related Name****Default Value**

Warning: 94.99 %, Critical: 49.99 %

**API Name**

KAFKA\_KAFKA\_BROKER\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other**

### Topic Auto Creation

**Description**

Enables auto creation of topics on the server. If set to true, it attempts to produce, consume, or fetch metadata for a non-existent topic automatically create the topic with the default replication factor and number of partitions.

**Related Name**

auto.create.topics.enable

**Default Value**

true

**API Name**

auto.create.topics.enable

**Required**

false

### Enable Automatic Leader Rebalancing

**Description**

If automatic leader rebalancing is enabled, the controller tries to balance leadership for partitions among the brokers by periodically returning leadership for each partition to the preferred replica, if that replica is available.

**Related Name**

auto.leader.rebalance.enable

**Default Value**

true

**API Name**

auto.leader.rebalance.enable

**Required**

false

### Enable Controlled Shutdown

**Description**

Enables controlled shutdown of the broker. If enabled, the broker moves all leaders on it to other brokers before shutting itself down. This reduces the unavailability window during shutdown.

**Related Name**

controlled.shutdown.enable

**Default Value**

true

**API Name**

controlled.shutdown.enable

**Required**

false

### Controlled Shutdown Maximum Attempts

**Description**

Number of unsuccessful controlled shutdown attempts before executing an unclean shutdown. For example, the default value of 3 means that the system will attempt a controlled shutdown 3 times before executing an unclean shutdown.

**Related Name**

controlled.shutdown.max.retries

**Default Value**

3

**API Name**

controlled.shutdown.max.retries

**Required**

false

**Default Replication Factor****Description**

The default replication factor for automatically created topics.

**Related Name**

default.replication.factor

**Default Value**

1

**API Name**

default.replication.factor

**Required**

false

**Enable Delegation Tokens****Description**

Enables authentication with delegation tokens for this Kafka service. When enabled, a secure password is automatically generated and used as the "delegation.token.master.key" property for Kafka Brokers. Only allowed if Kerberos authentication is enabled.

**Related Name**

delegation.token.enable

**Default Value**

true

**API Name**

delegation.token.enable

**Required**

false

**Delegation Token Expiry Time****Description**

The expiry time of a delegation token. A delegation token can be renewed before its expiry time to extend its validity up to its maximum lifetime. If it is not renewed, it will expire even if it has time remaining from its maximum lifetime.

**Related Name**

delegation.token.expiry.time.ms

**Default Value**

1 day(s)

**API Name**

delegation.token.expiry.time.ms

**Required**

false

**Delegation Token Maximum Lifetime****Description**

The maximum amount of time that a delegation token can be valid for.

**Related Name**

delegation.token.max.lifetime.ms

**Default Value**

7 day(s)

**API Name**

delegation.token.max.lifetime.ms

**Required**

false

**Enable Delete Topic****Description**

Enables topic deletion using admin tools. When delete topic is disabled, deleting topics through the admin tools has no effect.

**Related Name**

delete.topic.enable

**Default Value**

true

**API Name**

delete.topic.enable

**Required**

false

**Consumer Group Maximum Session Timeout****Description**

The minimum allowed session timeout for registered consumers. Shorter timeouts result in quicker failure detection at the cost of more frequent consumer heartbeating, which can overwhelm broker resources.

**Related Name**

group.max.session.timeout.ms

**Default Value**

30 minute(s)

**API Name**

group.max.session.timeout.ms

**Required**

false

**Consumer Group Minimum Session Timeout****Description**

The minimum allowed session timeout for registered consumers. Shorter timeouts result in quicker failure detection at the cost of more frequent consumer heartbeating, which can overwhelm broker resources.

**Related Name**

group.min.session.timeout.ms

**Default Value**

6 second(s)

**API Name**

group.min.session.timeout.ms

**Required**

false

**HDFS Service****Description**

Name of the HDFS service that this Kafka service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

false

**List of Metric Reporters****Description**

List of metric reporter class names. HTTP reporter is included by default.

**Related Name**

kafka.metrics.reporters

**Default Value**

nl.techop.kafka.KafkaHttpMetricsReporter

**API Name**

kafka.metrics.reporters

**Required**

false

**Enable Kerberos Authentication****Description**

Enables Kerberos authentication for this Kafka service.

**Related Name**

kerberos.auth.enable

**Default Value**

false

**API Name**

kerberos.auth.enable

**Required**

false

### LDAP URL

**Description**

The URL of LDAP for authenticating Kafka clients.

**Related Name**

ldap.auth.url

**Default Value****API Name**

ldap.auth.url

**Required**

false

### LDAP User DN Template

**Description**

The LDAP user DN template for authenticating Kafka clients.

**Related Name**

ldap.auth.user.dn.template

**Default Value****API Name**

ldap.auth.user.dn.template

**Required**

false

### Leader Imbalance Check Interval

**Description**

Defines the frequency of leader imbalance checks.

**Related Name**

leader.imbalance.check.interval.seconds

**Default Value**

5 minute(s)

**API Name**

leader.imbalance.check.interval.seconds

**Required**

false

### Leader Imbalance Allowed Per Broker

**Description**

The percentage of leader imbalance allowed per broker. The controller rebalances leadership if the leader imbalance ratio goes above the configured value per broker.

**Related Name**

leader.imbalance.per.broker.percentage

**Default Value**

10 %

**API Name**

leader.imbalance.per.broker.percentage

**Required**

false

**Log Cleaner Deduplication Buffer Size****Description**

The total memory used for log deduplication across all cleaner threads. This memory is statically allocated and will not cause GC problems.

**Related Name**

log.cleaner.dedupe.buffer.size

**Default Value**

128 MiB

**API Name**

log.cleaner.dedupe.buffer.size

**Required**

false

**Log Compaction Delete Record Retention Time****Description**

The amount of time to retain delete messages for log compacted topics. Once a consumer has seen an original message, it has to be ensured that it also sees the delete message. If the delete message is removed too quickly, this might not happen. The configurable delete retention time helps to circumvent this issue.

**Related Name**

log.cleaner.delete.retention.ms

**Default Value**

7 day(s)

**API Name**

log.cleaner.delete.retention.ms

**Required**

false

**Enable Log Compaction****Description**

Enables the log cleaner to compact topics with cleanup.policy=compact on this cluster.

**Related Name**

log.cleaner.enable

**Default Value**

true

**API Name**

log.cleaner.enable

**Required**

false

### Log Cleaner Clean Ratio

**Description**

Controls how frequently the log cleaner will attempt to clean the log. This ratio restricts the maximum space wasted by duplicates in the log. For example, if set to 0.5, then at most 50% of the log can be populated by duplicates. A higher ratio results in fewer, more efficient cleaning processes, but more wasted space in the log.

**Related Name**

log.cleaner.min.cleanable.ratio

**Default Value**

0.5

**API Name**

log.cleaner.min.cleanable.ratio

**Required**

false

### Number of Log Cleaner Threads

**Description**

The number of background threads used for log cleaning.

**Related Name**

log.cleaner.threads

**Default Value**

1

**API Name**

log.cleaner.threads

**Required**

false

### Log Flush Message Interval

**Description**

The number of messages written to a log partition before triggering an fsync on the log. Setting this property to a low value results in more frequent data to disk synchronization, but also has major impact on performance. For durability, Cloudera recommends the use of replication rather than depending on a single-server fsync. However, this setting can be used as an extra safety measure. If used in conjunction with log.flush.interval.ms, the log is flushed when either criteria is met.

**Related Name**

log.flush.interval.messages

**Default Value****API Name**

log.flush.interval.messages

**Required**

false

### Log Flush Time Interval

**Description**

The maximum time between fsync calls on the log. If used in conjunction with log.flush.interval.messages, the log is flushed when either criteria is met.

**Related Name**

log.flush.interval.ms

**Default Value****API Name**

log.flush.interval.ms

**Required**

false

**Log Flush Scheduler Interval****Description**

The frequency, in milliseconds, with which the log flusher checks whether any log is eligible to be flushed to disk.

**Related Name**

log.flush.scheduler.interval.ms

**Default Value****API Name**

log.flush.scheduler.interval.ms

**Required**

false

**Maximum Message Size****Description**

The maximum size of a message that the server can receive. This property has to be in sync with the maximum fetch size the consumers use. Otherwise, an unruly producer could publish messages that are too large for consumption.

**Related Name**

message.max.bytes

**Default Value**

1000000 B

**API Name**

message.max.bytes

**Required**

false

**Minimum Number of Replicas in ISR****Description**

The minimum number of replicas in the in-sync replica needed to satisfy a produce request where `required.acks=-1` (that is, all).

**Related Name**

min.insync.replicas

**Default Value**

1

**API Name**

min.insync.replicas

**Required**

false

### Enable Kafka Monitoring

**Description**

Enables Kafka monitoring.

**Related Name**

monitoring.enabled

**Default Value**

true

**API Name**

monitoring.enabled

**Required**

false

### Default Number of Partitions

**Description**

The default number of partitions for automatically created topics.

**Related Name**

num.partitions

**Default Value**

1

**API Name**

num.partitions

**Required**

false

### Number of Replica Fetchers

**Description**

Number of threads used to replicate messages from leaders. Increasing this value increases the degree of I/O parallelism in the follower broker.

**Related Name**

num.replica.fetchers

**Default Value**

4

**API Name**

num.replica.fetchers

**Required**

false

### Offset Retention Time

**Description**

After a consumer group loses all its consumers (i.e. becomes empty) its offsets will be kept for this retention period before getting discarded. For standalone consumers (using manual assignment), offsets will be expired after the time of last commit plus this retention period.

**Related Name**

offsets.retention.minutes

**Default Value**

7 day(s)

**API Name**

offsets.retention.minutes

**Required**

false

**Offset Commit Topic Number of Partitions****Description**

The number of partitions for the offset commit topic. Changing this value after deployment is currently unsupported, therefore, Cloudera recommends using a higher number of partitions (for example, 100-200) for production.

**Related Name**

offsets.topic.num.partitions

**Default Value**

50

**API Name**

offsets.topic.num.partitions

**Required**

false

**Offset Commit Topic Replication Factor****Description**

The replication factor for the offset commit topic. A higher setting (for example, 3 or 4) is recommended in order to ensure higher availability. If the offsets topic is created when there are fewer brokers than the replication factor, then the offsets topic is created with fewer replicas.

**Related Name**

offsets.topic.replication.factor

**Default Value**

3

**API Name**

offsets.topic.replication.factor

**Required**

false

**PAM Service****Description**

The PAM service name for authenticating Kafka clients. This corresponds to the service name in the PAM configuration.

**Related Name**

pam.auth.service

**Default Value**

login

**API Name**

pam.auth.service

**Required**

false

**Enable Producer Metrics****Description**

Enables producer metrics

**Related Name**

producer.metrics.enable

**Default Value**

true

**API Name**

producer.metrics.enable

**Required**

false

**Default Consumer Quota****Description**

Any consumer distinguished by clientId/consumer group will get throttled if it fetches more bytes than this value per-second.

**Related Name**

quota.consumer.default

**Default Value****API Name**

quota.consumer.default

**Required**

false

**Default Producer Quota****Description**

Any producer distinguished by clientId will get throttled if it produces more bytes than this value per-second.

**Related Name**

quota.producer.default

**Default Value****API Name**

quota.producer.default

**Required**

false

**Ranger Kafka Plugin Hdfs Audit Directory****Description**

The DFS path on which Ranger audits are written.

**Related Name**

ranger\_kafka\_plugin\_hdfs\_audit\_directory

**Default Value**`$ranger_base_audit_url/kafka`**API Name**`ranger_kafka_plugin_hdfs_audit_directory`**Required**`false`**'Ranger service' name for this Kafka service****Description**

Name of the 'Ranger service', that is used for authorization by this Kafka service. If this parameter is set to the placeholder value '{GENERATED\_RANGER\_SERVICE\_NAME}', a generated service name will be used, and if necessary, created. The generated service name will refer to the name of the cluster and the name of this Kafka service. The name can consist of alphanumeric and '\_' characters.

**Related Name**`ranger.plugin.kafka.service.name`**Default Value**`cm_kafka`**API Name**`ranger_plugin_kafka_service_name`**Required**`false`**RANGER Service****Description**

Name of the RANGER service that this Kafka service instance depends on

**Related Name****Default Value****API Name**`ranger_service`**Required**`false`**Replica Maximum Fetch Size****Description**

The maximum number of bytes to fetch for each partition in fetch requests that replicas send to the leader. This value should be larger than `message.max.bytes`.

**Related Name**`replica.fetch.max.bytes`**Default Value**`1 MiB`**API Name**`replica.fetch.max.bytes`**Required**`false`

### Allowed Replica Time Lag

**Description**

If a follower has not sent any fetch requests, nor has it consumed up to the leader's log end offset during this time, the leader removes the follower from the ISR set.

**Related Name**

replica.lag.time.max.ms

**Default Value**

10 second(s)

**API Name**

replica.lag.time.max.ms

**Required**

false

### SASL/PLAIN Authentication

**Description**

Authentication method that the SASL/PLAIN mechanism uses to authenticate clients.

**Related Name**

sasl.plain.auth

**Default Value**

none

**API Name**

sasl.plain.auth

**Required**

false

### Minimum Number of Replicas in ISR for Transaction State Log

**Description**

Overridden min.insync.replicas config for the transaction topic.

**Related Name**

transaction.state.log.min.isr

**Default Value**

2

**API Name**

transaction.state.log.min.isr

**Required**

false

### Transaction State Log Replication Factor

**Description**

The replication factor for the transaction topic (set higher to ensure availability). Internal topic creation will fail until the cluster size meets this replication factor requirement.

**Related Name**

transaction.state.log.replication.factor

**Default Value**

3

**API Name**

transaction.state.log.replication.factor

**Required**

false

**Enable Unclean Leader Election****Description**

Enables replicas not in the ISR set to be elected as leader as a last resort, even though doing so might result in data loss.

**Related Name**

unclean.leader.election.enable

**Default Value**

false

**API Name**

unclean.leader.election.enable

**Required**

false

**ZooKeeper Root****Description**

The znode in ZooKeeper used as a root for this Kafka cluster.

**Related Name**

zookeeper.chroot

**Default Value**

/kafka

**API Name**

zookeeper.chroot

**Required**

false

**Enable Secure Connection to ZooKeeper****Description**

Enables SSL/TLS connection to ZooKeeper for this Kafka service if dependent ZooKeeper service's zookeeper\_tls\_enabled configuration is enabled.

**Related Name**

zookeeper.secure.connection.enable

**Default Value**

true

**API Name**

zookeeper.secure.connection.enable

**Required**

false

**ZooKeeper Session Timeout****Description**

If the server fails to send a heartbeat to ZooKeeper within this period of time, it is considered dead. If set to a too low value, ZooKeeper might falsely consider a server dead. If set to a too high value, ZooKeeper might take too long to recognize a dead server.

**Related Name**

zookeeper.session.timeout.ms

**Default Value**

6 second(s)

**API Name**

zookeeper.session.timeout.ms

**Required**

false

### ZooKeeper Service

**Description**

Name of the ZooKeeper service that this Kafka service instance depends on

**Related Name****Default Value****API Name**

zookeeper\_service

**Required**

true

### Suppressions

#### Suppress Configuration Validator: Advertised Host

**Description**

Whether to suppress configuration warnings produced by the Advertised Host configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_advertised.host.name

**Required**

true

#### Suppress Configuration Validator: Advertised Port

**Description**

Whether to suppress configuration warnings produced by the Advertised Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_advertised.port

**Required**

true

**Suppress Configuration Validator: Destination Broker List****Description**

Whether to suppress configuration warnings produced by the Destination Broker List configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_bootstrap.servers

**Required**

true

**Suppress Configuration Validator: Broker ID****Description**

Whether to suppress configuration warnings produced by the Broker ID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker.id

**Required**

true

**Suppress Configuration Validator: Additional Broker Java Options****Description**

Whether to suppress configuration warnings produced by the Additional Broker Java Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker\_java\_opts

**Required**

true

**Suppress Configuration Validator: Java Heap Size of Broker****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Broker configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Configuration Validator: config.storage.replication.factor****Description**

Whether to suppress configuration warnings produced by the config.storage.replication.factor configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_config.storage.replication.factor

**Required**

true

**Suppress Configuration Validator: config.storage.topic****Description**

Whether to suppress configuration warnings produced by the config.storage.topic configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_config.storage.topic

**Required**

true

### Suppress Configuration Validator: Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

**Description**

Whether to suppress configuration warnings produced by the Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_connect-distributed.properties\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: connect.log4j.connector.context

**Description**

Whether to suppress configuration warnings produced by the connect.log4j.connector.context configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_connector.context

**Required**

true

### Suppress Configuration Validator: MirrorMaker Consumer Rebalance Listener

**Description**

Whether to suppress configuration warnings produced by the MirrorMaker Consumer Rebalance Listener configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_consumer.rebalance.listener

**Required**

true

**Suppress Configuration Validator: MirrorMaker Consumer Rebalance Listener Arguments****Description**

Whether to suppress configuration warnings produced by the MirrorMaker Consumer Rebalance Listener Arguments configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_consumer.rebalance.listener.args

**Required**

true

**Suppress Configuration Validator: Consumer Group ID****Description**

Whether to suppress configuration warnings produced by the Consumer Group ID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_group.id

**Required**

true

**Suppress Configuration Validator: Name of User with Read-Write Access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the Name of User with Read-Write Access to the JMX Agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user

**Required**

true

**Suppress Configuration Validator: Password of user with read-write access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the Password of user with read-write access to the JMX agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user.passwd

**Required**

true

**Suppress Configuration Validator: Name of User with read-only access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the Name of User with read-only access to the JMX Agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user

**Required**

true

**Suppress Configuration Validator: Password of User with read-only Access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the Password of User with read-only Access to the JMX agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user.passwd

**Required**

true

**Suppress Configuration Validator: JMX Port****Description**

Whether to suppress configuration warnings produced by the JMX Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_port

**Required**

true

**Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf****Description**

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka-conf/kafka-client.conf\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-cluster-configs.properties****Description**

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-cluster-configs.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka-conf/kafka-cluster-configs.properties\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties****Description**

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka-conf/kafka-ranger-repo.properties\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka-monitoring.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Connect Configuration Directory****Description**

Whether to suppress configuration warnings produced by the Kafka Connect Configuration Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.connect.conf.directory

**Required**

true

**Suppress Configuration Validator: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.connect.jdk.home

**Required**

true

**Suppress Configuration Validator: HTTP Metric Report Host****Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report Host configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.host

**Required**

true

**Suppress Configuration Validator: HTTP Metric Report Port****Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report Port configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.port

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_broker\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Kafka Connect Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_connect\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: KAFKA\_HEAP\_OPTS

**Description**

Whether to suppress configuration warnings produced by the KAFKA\_HEAP\_OPTS configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_heap\_opts

**Required**

true

### Suppress Configuration Validator: Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_mirror\_maker\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: key.converter

**Description**

Whether to suppress configuration warnings produced by the key.converter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_key.converter

**Required**

true

### Suppress Configuration Validator: Data Directories

**Description**

Whether to suppress configuration warnings produced by the Data Directories configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log.dirs

**Required**

true

**Suppress Configuration Validator: Segment File Size****Description**

Whether to suppress configuration warnings produced by the Segment File Size configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log.segment.bytes

**Required**

true

**Suppress Configuration Validator: Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker Log Directory****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: MirrorMaker Message Handler****Description**

Whether to suppress configuration warnings produced by the MirrorMaker Message Handler configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_message.handler

**Required**

true

**Suppress Configuration Validator: MirrorMaker Message Handler Arguments****Description**

Whether to suppress configuration warnings produced by the MirrorMaker Message Handler Arguments configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_message.handler.args

**Required**

true

**Suppress Configuration Validator: metrics.jetty.server.port****Description**

Whether to suppress configuration warnings produced by the metrics.jetty.server.port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics.jetty.server.port

**Required**

true

**Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_consumers.properties****Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_consumers.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_consumers.properties\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Additional MirrorMaker Java Options

**Description**

Whether to suppress configuration warnings produced by the Additional MirrorMaker Java Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_java\_opts

**Required**

true

### Suppress Configuration Validator: Java Heap Size of MirrorMaker

**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of MirrorMaker configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_max\_heap\_size

**Required**

true

### Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_producers.properties

**Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_producers.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_producers.properties\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Number of I/O Threads

**Description**

Whether to suppress configuration warnings produced by the Number of I/O Threads configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_num.io.threads

**Required**

true

**Suppress Configuration Validator: Number of Network Threads****Description**

Whether to suppress configuration warnings produced by the Number of Network Threads configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.network.threads

**Required**

true

**Suppress Configuration Validator: Number of Recovery Threads per data directory****Description**

Whether to suppress configuration warnings produced by the Number of Recovery Threads per data directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.recovery.threads.per.data.dir

**Required**

true

**Suppress Configuration Validator: Number of Alter Log Dir Threads****Description**

Whether to suppress configuration warnings produced by the Number of Alter Log Dir Threads configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.replica.alter.log.dirs.threads

**Required**

true

**Suppress Configuration Validator: offset.storage.replication.factor****Description**

Whether to suppress configuration warnings produced by the `offset.storage.replication.factor` configuration validator.

**Related Name****Default Value**

false

**API Name**

`role_config_suppression_offset.storage.replication.factor`

**Required**

true

**Suppress Configuration Validator: `offset.storage.topic`****Description**

Whether to suppress configuration warnings produced by the `offset.storage.topic` configuration validator.

**Related Name****Default Value**

false

**API Name**

`role_config_suppression_offset.storage.topic`

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

`role_config_suppression_oom_heap_dump_dir`

**Required**

true

**Suppress Configuration Validator: `plugin.path`****Description**

Whether to suppress configuration warnings produced by the `plugin.path` configuration validator.

**Related Name****Default Value**

false

**API Name**

`role_config_suppression_plugin.path`

**Required**

true

**Suppress Configuration Validator: TCP Port****Description**

Whether to suppress configuration warnings produced by the TCP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_port

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ranger-kafka-security.xml_role_safety_valve`**Required**`true`**Suppress Configuration Validator: Ranger Kafka Plugin Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Conf Path configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kafka_plugin_conf_path`**Required**`true`**Suppress Configuration Validator: Ranger Kafka Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Audit Hdfs Spool Directory Path configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kafka_plugin_hdfs_audit_spool_directory`**Required**`true`**Suppress Configuration Validator: Ranger Kafka Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Policy Cache Directory Path configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kafka_plugin_policy_cache_directory`**Required**`true`**Suppress Configuration Validator: Ranger Kafka Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Configuration Validator: rest.extension.classes****Description**

Whether to suppress configuration warnings produced by the rest.extension.classes configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rest.extension.classes

**Required**

true

**Suppress Configuration Validator: kafka.connect.rest.port****Description**

Whether to suppress configuration warnings produced by the kafka.connect.rest.port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rest.port

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: kafka.connect.secure.rest.port****Description**

Whether to suppress configuration warnings produced by the kafka.connect.secure.rest.port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_secure.rest.port

**Required**

true

**Suppress Configuration Validator: Source Broker List****Description**

Whether to suppress configuration warnings produced by the Source Broker List configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_source.bootstrap.servers

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_client.properties****Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_client.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Kafka Broker TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: TLS/SSL Port****Description**

Whether to suppress configuration warnings produced by the TLS/SSL Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_port

**Required**

true

**Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_server.properties****Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_server.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker TLS/SSL Server JKS Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server JKS Keystore Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Configuration Validator: Kafka Broker TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Kafka Broker TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: status.storage.replication.factor****Description**

Whether to suppress configuration warnings produced by the status.storage.replication.factor configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_status.storage.replication.factor

**Required**

true

**Suppress Configuration Validator: status.storage.topic****Description**

Whether to suppress configuration warnings produced by the status.storage.topic configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_status.storage.topic

**Required**

true

**Suppress Configuration Validator: value.converter****Description**

Whether to suppress configuration warnings produced by the value.converter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_value.converter

**Required**

true

**Suppress Configuration Validator: Topic Whitelist****Description**

Whether to suppress configuration warnings produced by the Topic Whitelist configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_whitelist

**Required**

true

**Suppress Parameter Validation: Controlled Shutdown Maximum Attempts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Controlled Shutdown Maximum Attempts parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_controlled.shutdown.max.retries

**Required**

true

**Suppress Parameter Validation: Default Replication Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Replication Factor parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_default.replication.factor

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: List of Metric Reporters****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the List of Metric Reporters parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kafka.metrics.reporters

**Required**

true

**Suppress Configuration Validator: Kafka Broker Count Validator****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kafka\_broker\_count\_validator

**Required**

true

**Suppress Configuration Validator: Kafka Connect Count Validator****Description**

Whether to suppress configuration warnings produced by the Kafka Connect Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kafka\_connect\_count\_validator

**Required**

true

**Suppress Configuration Validator: Kafka MirrorMaker Count Validator****Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kafka\_mirror\_maker\_count\_validator

**Required**

true

**Suppress Parameter Validation: Kafka Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kafka\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: LDAP URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap.auth.url

**Required**

true

**Suppress Parameter Validation: LDAP User DN Template****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User DN Template parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap.auth.user.dn.template

**Required**

true

**Suppress Parameter Validation: Leader Imbalance Check Interval****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Leader Imbalance Check Interval parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_leader.imbalance.check.interval.seconds

**Required**

true

**Suppress Parameter Validation: Leader Imbalance Allowed Per Broker****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Leader Imbalance Allowed Per Broker parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_leader.imbalance.per.broker.percentage

**Required**

true

**Suppress Parameter Validation: Maximum Message Size****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Message Size parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_message.max.bytes

**Required**

true

**Suppress Parameter Validation: Minimum Number of Replicas in ISR****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Minimum Number of Replicas in ISR parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_min.insync.replicas

**Required**

true

**Suppress Parameter Validation: Default Number of Partitions****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Number of Partitions parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_num.partitions

**Required**

true

**Suppress Parameter Validation: Number of Replica Fetchers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Replica Fetchers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_num.replica.fetchers

**Required**

true

**Suppress Parameter Validation: Offset Commit Topic Number of Partitions****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Commit Topic Number of Partitions parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_offsets.topic.num.partitions

**Required**

true

**Suppress Parameter Validation: Offset Commit Topic Replication Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Commit Topic Replication Factor parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_offsets.topic.replication.factor

**Required**

true

**Suppress Parameter Validation: PAM Service****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the PAM Service parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_pam.auth.service

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

### Suppress Parameter Validation: Ranger Kafka Plugin Hdfs Audit Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Hdfs Audit Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kafka\_plugin\_hdfs\_audit\_directory

**Required**

true

### Suppress Parameter Validation: 'Ranger service' name for this Kafka service

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the 'Ranger service' name for this Kafka service parameter.

**Related Name****Default Value**

false

**API Name**`service_config_suppression_ranger_plugin_kafka_service_name`**Required**`true`**Suppress Parameter Validation: Replica Maximum Fetch Size****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replica Maximum Fetch Size parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_replica.fetch.max.bytes`**Required**`true`**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_service_triggers`**Required**`true`**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_smon_derived_configs_safety_valve`**Required**`true`**Suppress Parameter Validation: Transaction State Log Replication Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Transaction State Log Replication Factor parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_transaction.state.log.replication.factor

**Required**

true

**Suppress Parameter Validation: ZooKeeper Root****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Root parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper.chroot

**Required**

true

**Suppress Parameter Validation: ZooKeeper Session Timeout****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Session Timeout parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper.session.timeout.ms

**Required**

true

**Suppress Health Test: Kafka Broker Health****Description**

Whether to suppress the results of the Kafka Broker Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_kafka\_kafka\_broker\_healthy

**Required**

true

## Key Trustee KMS Properties in Cloudera Runtime 7.1

Role groups:

### Key Management Server Proxy

**Advanced****Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

For advanced use only. A string to be inserted into core-site.xml for this role only.

**Related Name****Default Value****API Name**

core-site.xml\_role\_safety\_valve

**Required**

false

**Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-acls.xml****Description**

For advanced use only. A string to be inserted into kms-acls.xml for this role only.

**Related Name****Default Value****API Name**

kms-acls.xml\_role\_safety\_valve

**Required**

false

**Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-site.xml****Description**

For advanced use only. A string to be inserted into kms-site.xml for this role only.

**Related Name****Default Value****API Name**

kms-site.xml\_role\_safety\_valve

**Required**

false

**Key Management Server Proxy Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KMS\_KEYTRUSTEE\_role\_env\_safety\_valve

**Required**

false

**Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kts-site.xml****Description**

For advanced use only. A string to be inserted into kts-site.xml for this role only.

**Related Name****Default Value****API Name**

kts-site.xml\_role\_safety\_valve

**Required**

false

**Key Management Server Proxy Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

`oom_heap_dump_enabled`

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

`oom_sigkill_enabled`

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

`process_auto_restart`

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for ssl-server.xml

**Description**

For advanced use only. A string to be inserted into ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ssl-server.xml\_role\_safety\_valve

**Required**

false

### Logs

### Key Management Server Proxy Log Directory

**Description**

The log directory for log files of the role Key Management Server Proxy.

**Related Name**

log.dir

**Default Value**

/var/log/kms-keytrustee

**API Name**

log\_dir

**Required**

false

### Key Management Server Proxy Logging Threshold

**Description**

The minimum log level for Key Management Server Proxy logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### Key Management Server Proxy Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for Key Management Server Proxy logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### Key Management Server Proxy Max Log Size

**Description**

The maximum size, in megabytes, per log file for Key Management Server Proxy logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

kms\_keytrustee\_fd\_thresholds

**Required**

false

**Key Management Server Proxy Host Health Test****Description**

When computing the overall Key Management Server Proxy health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

kms\_keytrustee\_host\_health\_enabled

**Required**

false

### Key Management Server Proxy Process Health Test

**Description**

Enables the health test that the Key Management Server Proxy's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

kms\_keytrustee\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.

- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAM and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other**

### Key Trustee Server Auth Code

**Description**

Key Trustee Server auth code used for KMS to authenticate against the server

**Related Name**

cloudera.trustee.keyprovider.auth

**Default Value****API Name**

cloudera\_trustee\_keyprovider\_auth

**Required**

true

### Active Key Trustee Server

**Description**

Active Key Trustee Server hostname that backs the KMS.

**Related Name**

cloudera.trustee.keyprovider.hostname-ACTIVE

**Default Value****API Name**

cloudera\_trustee\_keyprovider\_hostname-ACTIVE

**Required**

true

### Passive Key Trustee Server

**Description**

Passive Key Trustee Server hostname that backs the KMS. Only needed for Key Trustee Server high availability.

**Related Name**

cloudera.trustee.keyprovider.hostname-PASSIVE

**Default Value****API Name**

cloudera\_trustee\_keyprovider\_hostname-PASSIVE

**Required**

false

### Key Trustee Server Org Name

**Description**

Key Trustee Server Organization that keys are stored against.

**Related Name**

cloudera.trustee.keyprovider.org

**Default Value****API Name**

cloudera\_trustee\_keyprovider\_org

**Required**

true

### Key Trustee Server Key Provider Pool Timeout

**Description**

Key Trustee key provider pool timeout.

**Related Name**

cloudera.trustee.keyprovider.pool.abandoned.timeout

**Default Value**

5 minute(s)

**API Name**

cloudera\_trustee\_keyprovider\_pool\_abandoned\_timeout

**Required**

true

### Key Trustee Server Key Provider Max Connections

**Description**

Key Trustee Server Key Provider Max Connections.

**Related Name**

cloudera.trustee.keyprovider.pool.max

**Default Value**

5

**API Name**

cloudera\_trustee\_keyprovider\_pool\_max

**Required**

true

### Key Trustee Server Key Provider Pool Max Idle

**Description**

Key Trustee Server Key Provider Pool Max Idle.

**Related Name**

cloudera.trustee.keyprovider.pool.max.idle

**Default Value**

2

**API Name**

cloudera\_trustee\_keyprovider\_pool\_max\_idle

**Required**

true

### Key Trustee Server Key Provider Pool Min Idle

**Description**

Key Trustee Server Key Provider Pool Min Idle.

**Related Name**

cloudera.trustee.keyprovider.pool.min.idle

**Default Value**

1

**API Name**

cloudera\_trustee\_keyprovider\_pool\_min\_idle

**Required**

true

**Key Trustee Server Round Robin Reads****Description**

Distribute read requests amongst the available Key Trustee Servers. Only effective when a passive server is specified.

**Related Name**

cloudera.trustee.keyprovider.roundrobin

**Default Value**

true

**API Name**

cloudera\_trustee\_keyprovider\_roundrobin

**Required**

false

**Flume Proxy User Groups****Description**

Allows the flume superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.flume.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_flume\_groups

**Required**

false

**Flume Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the flume user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

hadoop.kms.proxyuser.flume.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_flume\_hosts

**Required**

false

### HDFS Proxy User Groups

**Description**

Allows the hdfs superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.hdfs.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hdfs\_groups

**Required**

false

### HDFS Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the hdfs user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

hadoop.kms.proxyuser.hdfs.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hdfs\_hosts

**Required**

false

### Hive Proxy User Groups

**Description**

Allows the hive superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.hive.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hive\_groups

**Required**

false

### Hive Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the hive user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.hive.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hive\_hosts

**Required**

false

### HTTP Proxy User Groups

**Description**

Allows the HTTP superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.HTTP.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_HTTP\_groups

**Required**

false

### HTTP Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.HTTP.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_HTTP\_hosts

**Required**

false

### HttpFS Proxy User Groups

**Description**

Allows the httpfs superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.httpfs.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_httpfs\_groups

**Required**

false

**HttpFS Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the httpfs user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.httpfs.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_httpfs\_hosts

**Required**

false

**Hue Proxy User Groups****Description**

Allows the hue superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.hue.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hue\_groups

**Required**

false

**Hue Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the hue user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.hue.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hue\_hosts

**Required**

false

**Mapred Proxy User Groups****Description**

Allows the mapred superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.mapred.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_mapred\_groups

**Required**

false

**Mapred Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the mapred user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

hadoop.kms.proxyuser.mapred.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_mapred\_hosts

**Required**

false

**Oozie Proxy User Groups****Description**

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.oozie.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_oozie\_groups

**Required**

false

### Oozie Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.oozie.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_oozie\_hosts

**Required**

false

### YARN Proxy User Groups

**Description**

Allows the yarn superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.yarn.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_yarn\_groups

**Required**

false

### YARN Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the yarn user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.yarn.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_yarn\_hosts

**Required**

false

### Key Trustee KeyStoreProvider Directory

**Description**

Directory to the keystore file used by Key Trustee KeyStoreProvider that backs the KMS.

**Related Name**

hadoop.kms.key.provider.uri

**Default Value**

/var/lib/kms-keytrustee

**API Name**

hadoop\_security\_key\_provider\_dir

**Required**

true

**Key Trustee KeyStoreProvider Configuration Directory****Description**

Directory to store configuration of keystore file used by Key Trustee KeyStoreProvider that backs the KMS.

**Related Name**

keytrustee.kms.key.provider.conf.uri

**Default Value**

/var/lib/kms-keytrustee/keytrustee

**API Name**

keytrustee\_security\_key\_provider\_conf\_dir

**Required**

true

**KMS Accept Count****Description**

The maximum queue length for incoming connection requests when all possible request processing threads are in use. Any requests received when the queue is full will be refused. This configuration is only supported in CDH 5.11 and up.

**Related Name**

hadoop.http.accept.queue.size

**Default Value**

500

**API Name**

kms\_accept\_count

**Required**

false

**KMS Blacklist Users****Description**

A comma-separated list of users (no spaces) for whom to disallow access to key material. These users can still fetch key metadata and create encrypted encryption keys, but are unable to do any other KMS operations. Typically, HDFS superusers will be specified here.

**Related Name**

kms\_blacklist\_users

**Default Value****API Name**

kms\_blacklist\_users

**Required**

false

**KMS Heap Size****Description**

Maximum heap size of the KMS.

**Related Name**

kms\_heap\_size

**Default Value**

1 GiB

**API Name**

kms\_heap\_size

**Required**

true

**Additional Java Configuration Options for KMS****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

**Related Name**

kms\_java\_opts

**Default Value****API Name**

kms\_java\_opts

**Required**

false

**KMS Max Threads****Description**

Maximum number of threads used to handle KMS requests.

**Related Name**

hadoop.http.max.threads

**Default Value**

250

**API Name**

kms\_max\_threads

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name**

**Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****KMS HTTP Port****Description**

Port used by clients to interact with the KMS.

**Related Name**

hadoop.kms.http.port

**Default Value**

16000

**API Name**

kms\_http\_port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value**

**API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Key Management Server Proxy TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Key Management Server Proxy might connect to. This is used when Key Management Server Proxy is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Key Management Server Proxy TLS/SSL Client Trust Store Password****Description**

The password for the Key Management Server Proxy TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.truststore.password.generator

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Key Management Server Proxy****Description**

Encrypt communication between clients and Key Management Server Proxy using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

hadoop.kms.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Key Management Server Proxy TLS/SSL Server JKS Keystore Key Password****Description**

The password that protects the private key contained in the JKS keystore used when Key Management Server Proxy is acting as a TLS/SSL server.

**Related Name**

ssl.server.keystore.keypassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Key Management Server Proxy TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Key Management Server Proxy is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.server.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Key Management Server Proxy TLS/SSL Server JKS Keystore File Password****Description**

The password for the Key Management Server Proxy JKS keystore file.

**Related Name**

ssl.server.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Parameter Validation: Key Trustee Server Auth Code

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Auth Code parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cloudera\_trustee\_keyprovider\_auth

**Required**

true

#### Suppress Parameter Validation: Active Key Trustee Server

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_cloudera\_trustee\_keyprovider\_hostname-active

**Required**

true

**Suppress Parameter Validation: Passive Key Trustee Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cloudera\_trustee\_keyprovider\_hostname-passive

**Required**

true

**Suppress Parameter Validation: Key Trustee Server Org Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Org Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cloudera\_trustee\_keyprovider\_org

**Required**

true

**Suppress Parameter Validation: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_core-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Flume Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Flume Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_flume\_groups

**Required**

true

### Suppress Parameter Validation: Flume Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Flume Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_flume\_hosts

**Required**

true

### Suppress Parameter Validation: HDFS Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hdfs\_groups

**Required**

true

### Suppress Parameter Validation: HDFS Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hdfs\_hosts

**Required**

true

**Suppress Parameter Validation: Hive Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_groups

**Required**

true

**Suppress Parameter Validation: Hive Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_hosts

**Required**

true

**Suppress Parameter Validation: HTTP Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_groups

**Required**

true

**Suppress Parameter Validation: HTTP Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy User Hosts parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_hosts

**Required**

true

**Suppress Parameter Validation: HttpFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_httpfs\_groups

**Required**

true

**Suppress Parameter Validation: HttpFS Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_httpfs\_hosts

**Required**

true

**Suppress Parameter Validation: Hue Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_groups

**Required**

true

**Suppress Parameter Validation: Hue Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_hosts

**Required**

true

**Suppress Parameter Validation: Mapred Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Mapred Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_mapred\_groups

**Required**

true

**Suppress Parameter Validation: Mapred Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Mapred Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_mapred\_hosts

**Required**

true

**Suppress Parameter Validation: Oozie Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_groups

**Required**

true

### Suppress Parameter Validation: Oozie Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_hosts

**Required**

true

### Suppress Parameter Validation: YARN Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_groups

**Required**

true

### Suppress Parameter Validation: YARN Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_hosts

**Required**

true

### Suppress Parameter Validation: Key Trustee KeyStoreProvider Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee KeyStoreProvider Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_key\_provider\_dir

**Required**

true

**Suppress Parameter Validation: Key Trustee KeyStoreProvider Configuration Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee KeyStoreProvider Configuration Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_security\_key\_provider\_conf\_dir

**Required**

true

**Suppress Parameter Validation: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-acls.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-acls.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms-acls.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: KMS Blacklist Users

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KMS Blacklist Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_blacklist\_users

**Required**

true

### Suppress Parameter Validation: KMS HTTP Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KMS HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_http\_port

**Required**

true

### Suppress Parameter Validation: Additional Java Configuration Options for KMS

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Java Configuration Options for KMS parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_java\_opts

**Required**

true

### Suppress Parameter Validation: Key Management Server Proxy Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_keytrustee\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kts-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kts-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kts-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Management Server Proxy Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Management Server Proxy Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for ssl-server.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ssl-server.xml_role_safety_valve`**Required**`true`**Suppress Parameter Validation: Key Management Server Proxy TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ssl_client_truststore_location`**Required**`true`**Suppress Parameter Validation: Key Management Server Proxy TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ssl_client_truststore_password`**Required**`true`**Suppress Parameter Validation: Key Management Server Proxy TLS/SSL Server JKS Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ssl_server_keystore_keypassword`**Required**`true`

### Suppress Parameter Validation: Key Management Server Proxy TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Parameter Validation: Key Management Server Proxy TLS/SSL Server JKS Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Proxy TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

### Suppress Parameter Validation: Stacks Collection Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_kms\_keytrustee\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_kms\_keytrustee\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_kms\_keytrustee\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_kms\_keytrustee\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_kms\_keytrustee\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_kms\_keytrustee\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_kms\_keytrustee\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### Key Trustee KMS Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

KEYTRUSTEE\_service\_env\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

kms

**API Name**

process\_groupname

**Required**

true

**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**

kms

**API Name**

process\_username

**Required**

true

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

#### Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

#### Related Name

#### Default Value

false

#### API Name

enable\_config\_alerts

#### Required

false

### Service Triggers

#### Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

[]

#### API Name

service\_triggers

#### Required

true

### Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

#### Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

#### Related Name

#### Default Value

**API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****ZooKeeper Authentication Type for Secret Signer****Description**

ZooKeeper Authentication for Secret Signer. Can be either "none" or "sasl"

**Related Name**

hadoop.kms.authentication.signer.secret.provider.zookeeper.auth.type

**Default Value**

none

**API Name**

hadoop\_kms\_authentication\_signer\_secret\_provider\_zookeeper\_auth\_type

**Required**

true

**Authentication Secret Signer ZooKeeper Path****Description**

Authentication Secret Signer ZooKeeper path. Is required to be set for KMS High Availability deployments

**Related Name**

hadoop.kms.authentication.signer.secret.provider.zookeeper.path

**Default Value**

/kmsZKRoot

**API Name**

hadoop\_kms\_authentication\_signer\_secret\_provider\_zookeeper\_path

**Required**

true

**Authentication Type****Description**

Authentication type for the KMS. Can either be "simple" or "kerberos".

**Related Name**

hadoop.kms.authentication.type

**Default Value**

simple

**API Name**

hadoop\_kms\_authentication\_type

**Required**

true

**KMS Load Balancer****Description**

Key Management Store Load Balancer, used with multiple KMS roles (KMS high availability). In CDH 5.4 and higher, this Key Trustee KMS service typically has the ZooKeeper dependency set, and this property is left blank. In this case, the ZooKeeper-based high availability URL is automatically generated for clients. To use an external load balancer, specify the URL to that load balancer. When using the ZooKeeper-based load balancer, all KMS roles must listen on the same port.

**Related Name**

kms\_load\_balancer

**Default Value****API Name**

kms\_load\_balancer

**Required**

false

**ZooKeeper Service****Description**

Name of the ZooKeeper service that this Key Trustee KMS service instance depends on

**Related Name****Default Value****API Name**

zookeeper\_service

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Key Trustee Server Auth Code****Description**

Whether to suppress configuration warnings produced by the Key Trustee Server Auth Code configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_cloudera_trustee_keyprovider_auth`**Required**`true`**Suppress Configuration Validator: Active Key Trustee Server****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_cloudera_trustee_keyprovider_hostname-active`**Required**`true`**Suppress Configuration Validator: Passive Key Trustee Server****Description**

Whether to suppress configuration warnings produced by the Passive Key Trustee Server configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_cloudera_trustee_keyprovider_hostname-passive`**Required**`true`**Suppress Configuration Validator: Key Trustee Server Org Name****Description**

Whether to suppress configuration warnings produced by the Key Trustee Server Org Name configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_cloudera_trustee_keyprovider_org`**Required**`true`**Suppress Configuration Validator: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for core-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_core-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Flume Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Flume Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_flume\_groups

**Required**

true

**Suppress Configuration Validator: Flume Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Flume Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_flume\_hosts

**Required**

true

**Suppress Configuration Validator: HDFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the HDFS Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hdfs\_groups

**Required**

true

### Suppress Configuration Validator: HDFS Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the HDFS Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hdfs\_hosts

**Required**

true

### Suppress Configuration Validator: Hive Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the Hive Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_groups

**Required**

true

### Suppress Configuration Validator: Hive Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the Hive Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_hosts

**Required**

true

### Suppress Configuration Validator: HTTP Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the HTTP Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_hadoop_kms_proxyuser_http_groups`**Required**`true`**Suppress Configuration Validator: HTTP Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the HTTP Proxy User Hosts configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_http_hosts`**Required**`true`**Suppress Configuration Validator: HttpFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the HttpFS Proxy User Groups configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_httpfs_groups`**Required**`true`**Suppress Configuration Validator: HttpFS Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the HttpFS Proxy User Hosts configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_httpfs_hosts`**Required**`true`**Suppress Configuration Validator: Hue Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_groups

**Required**

true

**Suppress Configuration Validator: Hue Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_hosts

**Required**

true

**Suppress Configuration Validator: Mapred Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Mapred Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_mapred\_groups

**Required**

true

**Suppress Configuration Validator: Mapred Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Mapred Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_mapred\_hosts

**Required**

true

### Suppress Configuration Validator: Oozie Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the Oozie Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_groups

**Required**

true

### Suppress Configuration Validator: Oozie Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the Oozie Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_hosts

**Required**

true

### Suppress Configuration Validator: YARN Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the YARN Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_groups

**Required**

true

### Suppress Configuration Validator: YARN Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the YARN Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_hosts

**Required**

true

**Suppress Configuration Validator: Key Trustee KeyStoreProvider Directory****Description**

Whether to suppress configuration warnings produced by the Key Trustee KeyStoreProvider Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_key\_provider\_dir

**Required**

true

**Suppress Configuration Validator: Key Trustee KeyStoreProvider Configuration Directory****Description**

Whether to suppress configuration warnings produced by the Key Trustee KeyStoreProvider Configuration Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_security\_key\_provider\_conf\_dir

**Required**

true

**Suppress Configuration Validator: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-acls.xml****Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-acls.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms-acls.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-site.xml****Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kms-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: KMS Blacklist Users****Description**

Whether to suppress configuration warnings produced by the KMS Blacklist Users configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_blacklist\_users

**Required**

true

**Suppress Configuration Validator: KMS HTTP Port****Description**

Whether to suppress configuration warnings produced by the KMS HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_http\_port

**Required**

true

**Suppress Configuration Validator: Additional Java Configuration Options for KMS****Description**

Whether to suppress configuration warnings produced by the Additional Java Configuration Options for KMS configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_java\_opts

**Required**

true

### Suppress Configuration Validator: Key Management Server Proxy Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_keytrustee\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kts-site.xml

**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for kts-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kts-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Key Management Server Proxy Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Key Management Server Proxy Log Directory

**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy Log Directory configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Configuration Validator: Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for ssl-server.xml

**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy Advanced Configuration Snippet (Safety Valve) for ssl-server.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl-server.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Key Management Server Proxy TLS/SSL Client Trust Store File

**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

### Suppress Configuration Validator: Key Management Server Proxy TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

### Suppress Configuration Validator: Key Management Server Proxy TLS/SSL Server JKS Keystore Key Password

**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy TLS/SSL Server JKS Keystore Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Configuration Validator: Key Management Server Proxy TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Key Management Server Proxy TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Parameter Validation: Authentication Secret Signer ZooKeeper Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Authentication Secret Signer ZooKeeper Path parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hadoop\_kms\_authentication\_signer\_secret\_provider\_zookeeper\_path

**Required**

true

### Suppress Parameter Validation: Key Trustee KMS Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee KMS Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keytrustee\_service\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Key Management Server Proxy Count Validator

**Description**

Whether to suppress configuration warnings produced by the Key Management Server Proxy Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kms\_keytrustee\_count\_validator

**Required**

true

### Suppress Parameter Validation: KMS Load Balancer

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KMS Load Balancer parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kms\_load\_balancer

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

## Key Trustee Server Properties in Cloudera Runtime 7.1

Role groups:

### Active Database

#### Advanced

#### Active Database Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

DB\_ACTIVE\_role\_env\_safety\_valve

**Required**

false

#### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

#### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Monitoring****File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

db\_active\_fd\_thresholds

**Required**

false

**Active Database Host Health Test****Description**

When computing the overall Active Database health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

db\_active\_host\_health\_enabled

**Required**

false

**Active Database Process Health Test****Description**

Enables the health test that the Active Database's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

db\_active\_scm\_health\_enabled

**Required**

false

**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

## Role Triggers

### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

### Related Name

### Default Value

[]

### API Name

role\_triggers

### Required

true

## Unexpected Exits Thresholds

### Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

### Related Name

### Default Value

Warning: Never, Critical: Any

### API Name

unexpected\_exits\_thresholds

### Required

false

## Unexpected Exits Monitoring Period

### Description

The period to review when computing unexpected exits.

### Related Name

### Default Value

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Database Storage Directory****Description**

Directory (local file system) where the Key Trustee Server database will be stored. Changing this value after the service has been started will have no effect.

**Related Name**

db\_root

**Default Value**

/var/lib/keytrustee/db

**API Name**

db\_root

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Key Trustee Server Database Port****Description**

The Key Trustee Server database server port. Changing this value after the service has been started will have no effect.

**Related Name**

db\_port

**Default Value**

11381

**API Name**

db\_port

**Required**

true

## Resource Management

### Cgroup CPU Shares

#### Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

#### Related Name

cpu.shares

#### Default Value

1024

#### API Name

rm\_cpu\_shares

#### Required

true

### Custom Control Group Resources (overrides Cgroup settings)

#### Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

#### Related Name

custom.cgroups

#### Default Value

#### API Name

rm\_custom\_resources

#### Required

false

### Cgroup I/O Weight

#### Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

#### Related Name

blkio.weight

#### Default Value

500

#### API Name

rm\_io\_weight

#### Required

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Active Database Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Database Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_db\_active\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Key Trustee Server Database Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Database Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_db\_port

**Required**

true

### Suppress Parameter Validation: Database Storage Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Storage Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_db\_root

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_host\_health

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_unexpected\_exits

**Required**

true

## Active Key Trustee Server

### Advanced

#### Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KEYTRUSTEE\_ACTIVE\_SERVER\_role\_env\_safety\_valve

**Required**

false

#### Active Key Trustee Server XML Override

**Description**

For advanced use only, replace entire XML in the logback configuration file for Active Key Trustee Server, ignoring all logging configuration.

**Related Name**

logback\_safety\_valve

**Default Value****API Name**

logback\_safety\_valve

**Required**

false

#### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties

**Description**

For advanced use only. A string to be inserted into ssl.properties for this role only.

**Related Name****Default Value**

**API Name**

ssl.properties\_role\_safety\_valve

**Required**

false

**Logs****Active Key Trustee Server Logging Threshold****Description**

The minimum log level for Active Key Trustee Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Active Key Trustee Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Active Key Trustee Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Active Key Trustee Server Max Log Size****Description**

The maximum size, in megabytes, per log file for Active Key Trustee Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

keytrustee\_active\_server\_fd\_thresholds

**Required**

false

### Active Key Trustee Server Host Health Test

**Description**

When computing the overall Active Key Trustee Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

keytrustee\_active\_server\_host\_health\_enabled

**Required**

false

### Active Key Trustee Server Process Health Test

**Description**

Enables the health test that the Active Key Trustee Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

keytrustee\_active\_server\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

`role_triggers`

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name**

**Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Key Trustee Server Port****Description**

The Key Trustee Server port number.

**Related Name**

keytrustee\_port

**Default Value**

11371

**API Name**

keytrustee\_port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value**

**API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)****Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Active Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

**Related Name**

ssl.cacert.location

**Default Value****API Name**

ssl\_server\_ca\_certificate\_location

**Required**

false

**Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format)****Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Active Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

ssl.cert.location

**Default Value**

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee.pem

**API Name**

ssl\_server\_certificate\_location

**Required**

false

**Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format)****Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Active Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

ssl.privatekey.location

**Default Value**

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee-pk.pem

**API Name**

ssl\_server\_privatekey\_location

**Required**

false

**Active Key Trustee Server TLS/SSL Private Key Password****Description**

The password for the private key in the Active Key Trustee Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

**Related Name**

ssl.privatekey.password

**Default Value****API Name**

ssl\_server\_privatekey\_password

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_active\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Trustee Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_port

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server XML Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server XML Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logback\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

### Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

### Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_unexpected\_exits

**Required**

true

**Passive Database****Advanced****Passive Database Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

DB\_PASSIVE\_role\_env\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

#### Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

#### Related Name

#### Default Value

true

#### API Name

process\_should\_monitor

#### Required

true

### Process Start Retry Attempts

#### Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

#### Related Name

#### Default Value

3

#### API Name

process\_start\_retries

#### Required

false

### Process Start Wait Timeout

#### Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

#### Related Name

#### Default Value

20

#### API Name

process\_start\_secs

#### Required

false

### Monitoring

#### File Descriptor Monitoring Thresholds

#### Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

db\_passive\_fd\_thresholds

**Required**

false

**Passive Database Host Health Test****Description**

When computing the overall Passive Database health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

db\_passive\_host\_health\_enabled

**Required**

false

**Passive Database Process Health Test****Description**

Enables the health test that the Passive Database's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

db\_passive\_scm\_health\_enabled

**Required**

false

**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### Other

### Database Storage Directory

**Description**

Directory (local file system) where the Key Trustee Server database will be stored. Changing this value after the service has been started will have no effect.

**Related Name**

db\_root

**Default Value**

/var/lib/keytrustee/db

**API Name**

db\_root

**Required**

false

### Retry Attempts

**Description**

Number of times a connection attempt will be made before giving up.

**Related Name**

retry\_attempts

**Default Value**

30

**API Name**

retry\_attempts

**Required**

true

### Retry Timeout

**Description**

Number of seconds to wait between retries.

**Related Name**

retry\_timeout

**Default Value**

1 second(s)

**API Name**

retry\_timeout

**Required**

true

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Key Trustee Server Database Port****Description**

The Key Trustee Server database server port. Changing this value after the service has been started will have no effect.

**Related Name**

db\_port

**Default Value**

11381

**API Name**

db\_port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

#### Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.soft\_limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_soft\_limit

#### Required

true

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

##### Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

##### Related Name

##### Default Value

false

##### API Name

role\_config\_suppression\_cdh\_version\_validator

##### Required

true

#### Suppress Parameter Validation: Passive Database Environment Advanced Configuration Snippet (Safety Valve)

##### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Database Environment Advanced Configuration Snippet (Safety Valve) parameter.

##### Related Name

##### Default Value

false

##### API Name

role\_config\_suppression\_db\_passive\_role\_env\_safety\_valve

##### Required

true

### Suppress Parameter Validation: Key Trustee Server Database Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Database Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_db\_port

**Required**

true

### Suppress Parameter Validation: Database Storage Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Storage Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_db\_root

**Required**

true

### Suppress Parameter Validation: Retry Timeout

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Retry Timeout parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_retry\_timeout

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_host\_health

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_unexpected\_exits

**Required**

true

## Passive Key Trustee Server

### Advanced

#### Passive Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KEYTRUSTEE\_PASSIVE\_SERVER\_role\_env\_safety\_valve

**Required**

false

#### Passive Key Trustee Server XML Override

**Description**

For advanced use only, replace entire XML in the logback configuration file for Passive Key Trustee Server, ignoring all logging configuration.

**Related Name**

logback\_safety\_valve

**Default Value****API Name**

logback\_safety\_valve

**Required**

false

#### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Passive Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties

**Description**

For advanced use only. A string to be inserted into ssl.properties for this role only.

**Related Name****Default Value**

**API Name**

ssl.properties\_role\_safety\_valve

**Required**

false

**Logs****Passive Key Trustee Server Logging Threshold****Description**

The minimum log level for Passive Key Trustee Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Passive Key Trustee Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Passive Key Trustee Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Passive Key Trustee Server Max Log Size****Description**

The maximum size, in megabytes, per log file for Passive Key Trustee Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

keytrustee\_passive\_server\_fd\_thresholds

**Required**

false

### Passive Key Trustee Server Host Health Test

**Description**

When computing the overall Passive Key Trustee Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

keytrustee\_passive\_server\_host\_health\_enabled

**Required**

false

### Passive Key Trustee Server Process Health Test

**Description**

Enables the health test that the Passive Key Trustee Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

keytrustee\_passive\_server\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name**

**Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Key Trustee Server Port****Description**

The Key Trustee Server port number.

**Related Name**

keytrustee\_port

**Default Value**

11371

**API Name**

keytrustee\_port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value**

**API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Passive Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)****Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

**Related Name**

ssl.cacert.location

**Default Value****API Name**

ssl\_server\_ca\_certificate\_location

**Required**

false

**Passive Key Trustee Server TLS/SSL Server Certificate File (PEM Format)****Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

ssl.cert.location

**Default Value**

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee.pem

**API Name**

ssl\_server\_certificate\_location

**Required**

false

**Passive Key Trustee Server TLS/SSL Server Private Key File (PEM Format)****Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

ssl.privatekey.location

**Default Value**

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee-pk.pem

**API Name**

ssl\_server\_privatekey\_location

**Required**

false

**Passive Key Trustee Server TLS/SSL Private Key Password****Description**

The password for the private key in the Passive Key Trustee Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

**Related Name**

ssl.privatekey.password

**Default Value****API Name**

ssl\_server\_privatekey\_password

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Passive Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_passive\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Trustee Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_port

**Required**

true

**Suppress Parameter Validation: Passive Key Trustee Server XML Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server XML Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logback\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Passive Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Passive Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server TLS/SSL Server CA Certificate (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

### Suppress Parameter Validation: Passive Key Trustee Server TLS/SSL Server Certificate File (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server TLS/SSL Server Certificate File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

### Suppress Parameter Validation: Passive Key Trustee Server TLS/SSL Server Private Key File (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server TLS/SSL Server Private Key File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Parameter Validation: Passive Key Trustee Server TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server TLS/SSL Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_unexpected\_exits

**Required**

true

**Service-Wide****Advanced****Key Trustee Server Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

KEYTRUSTEE\_SERVER\_service\_env\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

keytrustee

**API Name**

process\_groupname

**Required**

true

**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**

keytrustee

**API Name**

process\_username

**Required**

true

**Key Trustee Server Service Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

For advanced use only, a string to be inserted into ssl.properties. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ssl.properties\_service\_safety\_valve

**Required**

false

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name**

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

## Other

### Supported Cipher Configuration for SSL

**Description**

A list of allowed and disallowed ciphers, colon-separated (':'). Using an exclamation mark (!) in front of the cipher name will disallow the respective cipher.

For a list of cipher options, run the following command on the Key Trustee Server host:

```
openssl list -cipher-algorithms
```

If blank then [default ciphers](#) are set.

**Related Name**

ciphers

**Default Value****API Name**

ciphers

**Required**

false

### Key Trustee Home

**Description**

Home directory of Key Trustee.

**Related Name**

keytrustee.home

**Default Value**

/var/lib/keytrustee/.keytrustee

**API Name**

keytrustee.home

**Required**

false

### Minimum TLS Support

**Description**

Minimum TLS protocol supported.

**Related Name**

tls.min.protocols

**Default Value**

TLSv1

**API Name**

tls.min.protocols

**Required**

false

### Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Configuration Validator: Active Database Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Active Database Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_db\_active\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Passive Database Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Passive Database Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_db\_passive\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Key Trustee Server Database Port

**Description**

Whether to suppress configuration warnings produced by the Key Trustee Server Database Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_db\_port

**Required**

true

**Suppress Configuration Validator: Database Storage Directory****Description**

Whether to suppress configuration warnings produced by the Database Storage Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_db\_root

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_active\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Passive Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Passive Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_passive\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Key Trustee Server Port****Description**

Whether to suppress configuration warnings produced by the Key Trustee Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_port

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server XML Override****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server XML Override configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logback\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Retry Timeout****Description**

Whether to suppress configuration warnings produced by the Retry Timeout configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_retry\_timeout

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Configuration Validator: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Configuration Validator: Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties

**Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl.properties\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

### Suppress Configuration Validator: Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server TLS/SSL Private Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Parameter Validation: Supported Cipher Configuration for SSL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Supported Cipher Configuration for SSL parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ciphers

**Required**

true

**Suppress Configuration Validator: Active Database Count Validator****Description**

Whether to suppress configuration warnings produced by the Active Database Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_db\_active\_count\_validator

**Required**

true

**Suppress Configuration Validator: Passive Database Count Validator****Description**

Whether to suppress configuration warnings produced by the Passive Database Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_db\_passive\_count\_validator

**Required**

true

**Suppress Parameter Validation: Key Trustee Home****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Home parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keytrustee.home

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keytrustee\_active\_server\_count\_validator

**Required**

true

### Suppress Configuration Validator: Passive Key Trustee Server Count Validator

**Description**

Whether to suppress configuration warnings produced by the Passive Key Trustee Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keytrustee\_passive\_server\_count\_validator

**Required**

true

### Suppress Parameter Validation: Key Trustee Server Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keytrustee\_server\_service\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Trustee Server Service Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Service Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl.properties\_service\_safety\_valve

**Required**

true

## Key-Value Store Indexer Properties in Cloudera Runtime 7.1

Role groups:

### Lily HBase Indexer

#### Advanced

#### Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml

**Description**

For advanced use only. A string to be inserted into hbase-indexer-site.xml for this role only.

**Related Name****Default Value****API Name**

hbase\_indexer\_config\_safety\_valve

**Required**

false

#### Java Configuration Options for Lily HBase Indexer

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value**

JAVA\_GC\_ARGS

**API Name**

hbase\_indexer\_java\_opts

**Required**

false

#### System Group

**Description**

The group that the HBase Indexer process should run as.

**Related Name****Default Value**

hbase

**API Name**

hbase\_indexer\_process\_groupname

**Required**

true

#### System User

**Description**

The user that the HBase Indexer process should run as.

**Related Name****Default Value**

hbase

**API Name**

hbase\_indexer\_process\_username

**Required**

true

**Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

HBASE\_INDEXER\_role\_env\_safety\_valve

**Required**

false

**HBase Indexer ZooKeeper Session Timeout****Description**

ZooKeeper session timeout. Controls the amount of time the HBase Indexer will attempt to connect to ZooKeeper before timing out.

**Related Name**

hbaseindexer.zookeeper.session.timeout

**Default Value**

1 minute(s)

**API Name**

hbase\_indexer\_zk\_session\_timeout

**Required**

false

**Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

`oom_heap_dump_dir`

**Default Value**

`/tmp`

**API Name**

`oom_heap_dump_dir`

**Required**

`false`

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

`true`

**API Name**

`oom_heap_dump_enabled`

**Required**

`true`

### Kill When Out of Memory

**Description**

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

`true`

**API Name**

`oom_sigkill_enabled`

**Required**

`true`

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name**

**Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

## Logs

### HBase Indexer Log Directory

**Description**

Directory where HBase Indexer will place its log files.

**Related Name****Default Value**

/var/log/hbase-solr

**API Name**

hbase\_indexer\_log\_dir

**Required**

true

### Lily HBase Indexer Logging Threshold

**Description**

The minimum log level for Lily HBase Indexer logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### Lily HBase Indexer Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for Lily HBase Indexer logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### Lily HBase Indexer Max Log Size

**Description**

The maximum size, in megabytes, per log file for Lily HBase Indexer logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

hbase\_indexer\_fd\_thresholds

**Required**

false

**Lily HBase Indexer Host Health Test****Description**

When computing the overall Lily HBase Indexer health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

hbase\_indexer\_host\_health\_enabled

**Required**

false

**Lily HBase Indexer Process Health Test****Description**

Enables the health test that the Lily HBase Indexer's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

hbase\_indexer\_scm\_health\_enabled

**Required**

false

**Heap Dump Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Heap Dump Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

### Unexpected Exits Thresholds

#### Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

#### Related Name

#### Default Value

Warning: Never, Critical: Any

#### API Name

`unexpected_exits_thresholds`

#### Required

false

### Unexpected Exits Monitoring Period

#### Description

The period to review when computing unexpected exits.

#### Related Name

#### Default Value

5 minute(s)

#### API Name

`unexpected_exits_window`

#### Required

false

### Performance

#### Maximum Process File Descriptors

#### Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

#### Related Name

#### Default Value

#### API Name

`rlimit_fds`

#### Required

false

### Ports and Addresses

#### HBase Indexer HTTP Port

#### Description

HTTP port used by HBase Indexer.

#### Related Name

`hbaseindexer.http.port`

**Default Value**

11060

**API Name**

hbase\_indexer\_http\_port

**Required**

true

**Resource Management****Java Heap Size of Lily HBase Indexer in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

hbase\_indexer\_java\_heapsize

**Required**

false

**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Lily HBase Indexer roles.

**Related Name****Default Value**

hbase

**API Name**

kerberos\_role\_princ\_name

**Required**

true

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: HBase Indexer HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Indexer HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_http\_port

**Required**

true

**Suppress Parameter Validation: Java Configuration Options for Lily HBase Indexer****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Lily HBase Indexer parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_java\_opts

**Required**

true

### Suppress Parameter Validation: HBase Indexer Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Indexer Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_log\_dir

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_process\_username

**Required**

true

### Suppress Parameter Validation: Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_file\_descriptor

**Required**

true

### Suppress Health Test: Heap Dump Directory Free Space

**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_heap\_dump\_directory\_free\_space

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### Key-Value Store Indexer Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml

**Description**

For advanced use only, a string to be inserted into sentry-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

keystore\_indexer\_sentry\_safety\_valve

**Required**

false

#### Key-Value Store Indexer Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ks\_indexer\_env\_safety\_valve

**Required**

false

### Monitoring

#### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Healthy Lily HBase Indexer Monitoring Thresholds****Description**

The health test thresholds of the overall Lily HBase Indexer health. The check returns "Concerning" health if the percentage of "Healthy" Lily HBase Indexers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Lily HBase Indexers falls below the critical threshold.

**Related Name****Default Value**

Warning: 95.0 %, Critical: 90.0 %

**API Name**

ks\_indexer\_indexers\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Morphlines****Custom Mime-types File****Description**

Text that goes verbatim into custom-mimetypes.xml file used by HBase Indexers.

**Related Name****Default Value**

```

```

**API Name**

grok\_dictionary\_conf\_file

**Required**

false

### Morphlines File

**Description**

Text that goes into morphlines.conf file used by HBase Indexers. The text goes verbatim into the config file except that \$ZK\_HOST is replaced by the ZooKeeper quorum of the Solr service.

**Related Name****Default Value**

```
SOLR_LOCATOR : # Name of solr collection collection : collection # ZooKeeper ensemble
zkHost : $ZK_HOST morphlines : [ id : morphline importCommands : [org.kitesdk.**
com.ngdata.**] commands : [ extractHBaseCells mappings : [ inputColumn : data:* outputField :
data type : string source : value ] logDebug format : output record: , args : [ @ ] ] ]
```

**API Name**

morphlines\_conf\_file

**Required**

false

### Other

### HBase Service

**Description**

Name of the HBase service that this Key-Value Store Indexer service instance depends on

**Related Name****Default Value****API Name**

hbase\_service

**Required**

true

### Sentry Service

**Description**

Name of the Sentry service that this Key-Value Store Indexer service instance depends on

**Related Name****Default Value****API Name**

sentry\_service

**Required**

false

### Solr Service

**Description**

Name of the Solr service that this Key-Value Store Indexer service instance depends on

**Related Name****Default Value****API Name**

solr\_service

**Required**

true

**Security****HBase Indexer Secure Authentication****Description**

Authentication mechanism used by HBase Indexer.

**Related Name**

hbaseindexer.authentication.type

**Default Value**

simple

**API Name**

hbase\_indexer\_security\_authentication

**Required**

false

**HBase Indexer TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HBase Indexer might connect to. This is used when HBase Indexer is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name****Default Value****API Name**

keystore\_indexer\_truststore\_file

**Required**

false

**HBase Indexer TLS/SSL Client Trust Store Password****Description**

The password for the HBase Indexer TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name****Default Value****API Name**

keystore\_indexer\_truststore\_password

**Required**

false

**Suppressions**

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Configuration Validator: Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml

**Description**

Whether to suppress configuration warnings produced by the Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_config\_safety\_valve

**Required**

true

### Suppress Configuration Validator: HBase Indexer HTTP Port

**Description**

Whether to suppress configuration warnings produced by the HBase Indexer HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_http\_port

**Required**

true

### Suppress Configuration Validator: Java Configuration Options for Lily HBase Indexer

**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Lily HBase Indexer configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_java\_opts

**Required**

true

**Suppress Configuration Validator: HBase Indexer Log Directory****Description**

Whether to suppress configuration warnings produced by the HBase Indexer Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_log\_dir

**Required**

true

**Suppress Configuration Validator: System Group****Description**

Whether to suppress configuration warnings produced by the System Group configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_process\_groupname

**Required**

true

**Suppress Configuration Validator: System User****Description**

Whether to suppress configuration warnings produced by the System User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_process\_username

**Required**

true

**Suppress Configuration Validator: Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Configuration Validator: Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Custom Mime-types File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Mime-types File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_custom\_mimetypes\_file

**Required**

true

**Suppress Parameter Validation: Grok Dictionary File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Grok Dictionary File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_grok\_dictionary\_conf\_file

**Required**

true

**Suppress Configuration Validator: Lily HBase Indexer Count Validator****Description**

Whether to suppress configuration warnings produced by the Lily HBase Indexer Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hbase\_indexer\_count\_validator

**Required**

true

**Suppress Parameter Validation: Key-Value Store Indexer Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key-Value Store Indexer Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keystore\_indexer\_sentry\_safety\_valve

**Required**

true

**Suppress Parameter Validation: HBase Indexer TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Indexer TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keystore\_indexer\_truststore\_file

**Required**

true

**Suppress Parameter Validation: HBase Indexer TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Indexer TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keystore\_indexer\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Key-Value Store Indexer Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key-Value Store Indexer Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ks\_indexer\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Morphlines File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Morphlines File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_morphlines\_conf\_file

**Required**

true

### Suppress Parameter Validation: Service Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

### Suppress Health Test: Lily HBase Indexer Health

**Description**

Whether to suppress the results of the Lily HBase Indexer Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ks\_indexer\_hbase\_indexers\_healthy

**Required**

true

## Knox Properties in Cloudera Runtime 7.1

Role groups:

### Gateway

## Advanced

### Deploy Directory

**Description**

The directory where the client configs will be deployed

**Related Name****Default Value**

/etc/knox

**API Name**

client\_config\_root\_dir

**Required**

true

## Monitoring

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

## Other

### Alternatives Priority

**Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

**Related Name****Default Value**

50

**API Name**

client\_config\_priority

**Required**

true

## Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

## Knox Gateway

### Advanced

**Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties****Description**

For advanced use only. A string to be inserted into conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties for this role only.

**Related Name****Default Value****API Name**

conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties\_role\_safety\_valve

**Required**

false

**Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties****Description**

For advanced use only. A string to be inserted into conf/auto-discovery-advanced-configuration-cdp-proxy.properties for this role only.

**Related Name****Default Value****API Name**

conf/auto-discovery-advanced-configuration-cdp-proxy.properties\_role\_safety\_valve

**Required**

false

**Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml****Description**

For advanced use only. A string to be inserted into conf/cdp-resources.xml for this role only.

**Related Name****Default Value****API Name**

conf/cdp-resources.xml\_role\_safety\_valve

**Required**

false

**Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml****Description**

For advanced use only. A string to be inserted into conf/gateway-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/gateway-site.xml\_role\_safety\_valve

**Required**

false

**Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-knox-audit.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-knox-audit.xml\_role\_safety\_valve

**Required**

false

**Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-knox-policymgr-ssl.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-knox-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

### Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml

**Description**

For advanced use only. A string to be inserted into conf/ranger-knox-security.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-knox-security.xml\_role\_safety\_valve

**Required**

false

### Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KNOX\_GATEWAY\_role\_env\_safety\_valve

**Required**

false

### Knox Gateway Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

## Logs

### Knox Gateway Log Directory

**Description**

The log directory for log files of the role Knox Gateway.

**Related Name**

log\_dir

**Default Value**

/var/log/knox/gateway

**API Name**

log\_dir

**Required**

false

**Knox Gateway Logging Threshold****Description**

The minimum log level for Knox Gateway logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Knox Gateway Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Knox Gateway logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Knox Gateway Max Log Size****Description**

The maximum size, in megabytes, per log file for Knox Gateway logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

knox\_gateway\_fd\_thresholds

**Required**

false

### Knox Gateway Host Health Test

**Description**

When computing the overall Knox Gateway health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

knox\_gateway\_host\_health\_enabled

**Required**

false

### Knox Gateway Process Health Test

**Description**

Enables the health test that the Knox Gateway's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

knox\_gateway\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

`role_triggers`

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

**Other****Knox Gateway Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name**

**Default Value**

5 minute(s)

**API Name**

csd\_role\_diagnostics\_timeout

**Required**

false

**Knox Simplified Topology Management - API Authentication Provider****Description**

Authentication provider declaration used by pre-deinfed topologies such as admin, metadata or cdp-proxy-api.

**Related Name**

gateway\_api\_authentication\_provider

**Default Value**

role=authentication authentication.name=ShiroProvider authentication.param.sessionTimeout=30  
 authentication.param.main.pamRealm=org.apache.knox.gateway.shirorealm.KnoxPamRealm  
 authentication.param.main.pamRealm.service=login authentication.param.urls./\*\*=authcBasic

**API Name**

gateway\_api\_authentication\_provider

**Required**

false

**Auto Discovery - Advanced Configuration Monitoring Interval****Description**

Defines the frequency of Knox's service auto-discovery advanced configuration files (auto-discovery-advanced-configuration-[cdp-proxy|cdp-proxy-api].properties) monitoring.

**Related Name**

gateway.cloudera.manager.advanced.service.discovery.config.monitor.interval

**Default Value**

10 second(s)

**API Name**

gateway\_auto\_discovery\_advanced\_configuration\_monitor\_interval

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Atlas API****Description**

Enables Knox auto-discovery for the Atlas API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.atlas-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_atlas

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Phoenix/Avatica

**Description**

Enables Knox auto-discovery for the Phoenix/Avatica API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.avatica

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_avatica

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Cloudera Manager API

**Description**

Enables Knox auto-discovery for the Cloudera Manager API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.cm-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_cm\_api

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Cruise Control API

**Description**

Enables Knox auto-discovery for the Cruise Control API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.cruise-control-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_cruise\_control

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Hive Server

**Description**

Enables Knox auto-discovery for the Hive Server in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.hive

**Default Value**

true

**API Name**`gateway_auto_discovery_cdp_proxy_api_enabled_hive`**Required**`false`**Enable Auto Discovery (cdp-proxy-api) - Impala Catalog Server****Description**

Enables Knox auto-discovery for the Impala Catalog Server in the cdp-proxy-api topology.

**Related Name**`gateway.auto.discovery.cdp-proxy-api.enabled.impala`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_api_enabled_impala`**Required**`false`**Enable Auto Discovery (cdp-proxy-api) - Livy Server API****Description**

Enables Knox auto-discovery for the Livy Server API in the cdp-proxy-api topology.

**Related Name**`gateway.auto.discovery.cdp-proxy-api.enabled.livyserver`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_api_enabled_livyserver`**Required**`false`**Enable Auto Discovery (cdp-proxy-api) - NameNode****Description**

Enables Knox auto-discovery for the NameNode in the cdp-proxy-api topology.

**Related Name**`gateway.auto.discovery.cdp-proxy-api.enabled.namenode`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_api_enabled_namenode`**Required**`false`**Enable Auto Discovery (cdp-proxy-api) - NiFi****Description**

Enables Knox auto-discovery for the NiFi in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.nifi

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_nifi

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - NiFi Registry****Description**

Enables Knox auto-discovery for the NiFi Registry in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.nifi-registry

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_nifi\_registry

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Oozie Server****Description**

Enables Knox auto-discovery for the Oozie Server in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.oozie

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_oozie

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Profiler Admin API****Description**

Enables Knox auto-discovery for the Profiler Admin API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-admin-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_profiler\_admin\_api

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Profiler Metrics API

**Description**

Enables Knox auto-discovery for the Profiler Metrics API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-metrics-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_profiler\_metrics\_api

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Profiler Scheduler API

**Description**

Enables Knox auto-discovery for the Profiler Scheduler API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-scheduler-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_profiler\_scheduler\_api

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Ranger Admin

**Description**

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.ranger

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_ranger

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - ResourceManager

**Description**

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.resourcemanager

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_resourcemanager

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Schema Registry API****Description**

Enables Knox auto-discovery for the Schema Registry API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.schema-registry

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_schema\_registry

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Stream Messaging Manager API****Description**

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.smm-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_smm

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Solr Server****Description**

Enables Knox auto-discovery for the Solr Server in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.solr

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_solr

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - HBase Master API****Description**

Enables Knox auto-discovery for the HBase Master API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.webhbase

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_webhbase

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - WebHDFS API****Description**

Enables Knox auto-discovery for the WebHDFS API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.webhdfs

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_webhdfs

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Atlas API****Description**

Enables Knox auto-discovery for the Atlas API in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.atlas-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_atlas

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Atlas Web UI****Description**

Enables Knox auto-discovery for the Atlas Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.atlas

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_atlas\_ui

**Required**

false

### Enable Auto Discovery (cdp-proxy) - Cloudera Manager API

**Description**

Enables Knox auto-discovery for the Cloudera Manager API in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.cm-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_cm\_api

**Required**

false

### Enable Auto Discovery (cdp-proxy) - Cloudera Manager Admin Console

**Description**

Enables Knox auto-discovery for the Cloudera Manager Admin Console in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.cm-ui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_cm\_ui

**Required**

false

### Enable Auto Discovery (cdp-proxy) - Data Analytics Studio

**Description**

Enables Knox auto-discovery for the Data Analytics Studio in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.das

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_das

**Required**

false

### Enable Auto Discovery (cdp-proxy) - HBase Web UI

**Description**

Enables Knox auto-discovery for the HBase Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.hbaseui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_hbase\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Namenode Web UI****Description**

Enables Knox auto-discovery for the Namenode Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.hdfsui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_hdfs\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Hue Server****Description**

Enables Knox auto-discovery for the Hue Server in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.hue

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_hue

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Impala Catalog Server Web UI****Description**

Enables Knox auto-discovery for the Impala Catalog Server Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.impalau

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_impala\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - HistoryServer Web UI****Description**

Enables Knox auto-discovery for the HistoryServer Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.jobhistoryui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_jobhistory\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Kudu Master Web UI****Description**

Enables Knox auto-discovery for the Kudu Master Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.kuduui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_kudu\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Livy Server Web UI****Description**

Enables Knox auto-discovery for the Livy Server Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.livyserver

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_livyserver

**Required**

false

**Enable Auto Discovery (cdp-proxy) - NameNode****Description**

Enables Knox auto-discovery for the NameNode in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.namenode

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_namenode

**Required**

false

**Enable Auto Discovery (cdp-proxy) - NiFi****Description**

Enables Knox auto-discovery for the NiFi in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.nifi

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_nifi

**Required**

false

**Enable Auto Discovery (cdp-proxy) - NiFi Registry****Description**

Enables Knox auto-discovery for the NiFi Registry in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.nifi-registry

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_nifi\_registry

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Oozie Server****Description**

Enables Knox auto-discovery for the Oozie Server in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.oozie

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_oozie

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Oozie Web UI****Description**

Enables Knox auto-discovery for the Oozie Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.oozieui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_oozie\_ui

**Required**

false

### Enable Auto Discovery (cdp-proxy) - Ranger Admin

**Description**

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.ranger

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_ranger

**Required**

false

### Enable Auto Discovery (cdp-proxy) - Ranger Admin Web UI

**Description**

Enables Knox auto-discovery for the Ranger Admin Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.rangerui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_ranger\_ui

**Required**

false

### Enable Auto Discovery (cdp-proxy) - ResourceManager

**Description**

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.resourcemanager

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_resourcemanager

**Required**

false

### Enable Auto Discovery (cdp-proxy) - Stream Messaging Manager API

**Description**

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.smm-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_smm

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Stream Messaging Manager Web UI****Description**

Enables Knox auto-discovery for the Stream Messaging Manager Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.smm-ui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_smm\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Solr Server****Description**

Enables Knox auto-discovery for the Solr Server in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.solr

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_solr

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Spark 3 History Server Web UI****Description**

Enables Knox auto-discovery for the Spark 3 History Server Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.spark3historyui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_spark3history\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Spark History Server Web UI****Description**

Enables Knox auto-discovery for the Spark History Server Web UI in the cdp-proxy topology.

**Related Name**`gateway.auto.discovery.cdp-proxy.enabled.sparkhistoryui`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_sparkhistory_ui`**Required**`false`**Enable Auto Discovery (cdp-proxy) - ResourceManager Web UI****Description**

Enables Knox auto-discovery for the ResourceManager Web UI in the cdp-proxy topology.

**Related Name**`gateway.auto.discovery.cdp-proxy.enabled.yarnui`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_yarn_ui`**Required**`false`**Enable Auto Discovery (cdp-proxy) - ResourceManager Web UI V2****Description**

Enables Knox auto-discovery for the ResourceManager Web UI V2 in the cdp-proxy topology.

**Related Name**`gateway.auto.discovery.cdp-proxy.enabled.yarnuiv2`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_yarn_ui_v2`**Required**`false`**Enable Auto Discovery (cdp-proxy) - Zeppelin Server Web UI****Description**

Enables Knox auto-discovery for the Zeppelin Server Web UI in the cdp-proxy topology.

**Related Name**`gateway.auto.discovery.cdp-proxy.enabled.zeppelinui`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_zeppelin_ui`**Required**`false`

### Enable Auto Discovery (cdp-proxy) - Zeppelin Server

**Description**

Enables Knox auto-discovery for the Zeppelin Server in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.zeppelinws

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_zeppelin\_ws

**Required**

false

### Enable/Disable Service Auto-Discovery

**Description**

Whether Knox's service auto-discovery feature is enabled

**Related Name**

gateway.auto.discovery.enabled

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_enabled

**Required**

false

### Knox Simplified Topology Management - Monitoring Interval

**Description**

Defines the frequency of Cloudera Manager resources (descriptors and shared providers) file (cdp-resources.xml) monitoring.

**Related Name**

gateway.cloudera.manager.descriptors.monitor.interval

**Default Value**

10 second(s)

**API Name**

gateway\_cloudera\_manager\_descriptors\_monitor\_interval

**Required**

false

### Auto Discovery - Cluster Configuration Monitoring Interval

**Description**

Defines the frequency of cluster configuration monitoring.

**Related Name**

gateway.cluster.config.monitor.cm.interval

**Default Value**

1 minute(s)

**API Name**

gateway\_cluster\_configuration\_monitor\_interval

**Required**

false

**Knox Gateway Configuration Directory****Description**

Contains configuration files that apply to the gateway globally (i.e. not cluster specific ).

**Related Name**

gateway\_conf\_dir

**Default Value**

/var/lib/knox/gateway/conf

**API Name**

gateway\_conf\_dir

**Required**

false

**Knox Gateway Data Directory****Description**

Contains security and topology specific artifacts as well as important applications for admin-ui

**Related Name**

gateway\_data\_dir

**Default Value**

/var/lib/knox/gateway/data

**API Name**

gateway\_data\_dir

**Required**

false

**Gateway - Default App Topology Name****Description**

When a topology file is deployed with a file name that matches the configured default topology name, a specialized mapping for URLs is installed for that particular topology. This allows the URLs that are expected by the existing Hadoop CLIs for WebHDFS to be used in interacting with the specific Hadoop cluster that is represented by the default topology file.

**Related Name**

default.app.topology.name

**Default Value**

cdp-proxy

**API Name**

gateway\_default\_topology\_name

**Required**

false

**Knox Simplified Topology Management - cdp-proxy****Description**

Knox descriptor block for 'cdp-proxy' topology. 'providerConfigRef' indicates the name of shared-provider the given descriptor would like to use. The rest of the entries hold service information. The structure of an service information entry is: \$SERVICE\_NAME[:\$PARAMETER\_NAME=\$PARAMETER\_VALUE]. The 'url' and 'version' parameter names are preserved keywords to set the given service's URL and version. For instance: HIVE:url=http://localhost:123, HIVE:version:3.0.0, HIVE:test.pramameter.name=test.parameter.value

**Related Name**

cdp-proxy

**Default Value**

providerConfigRef=sso CM-API:httpclient.connectionTimeout=5m CM-API:httpclient.socketTimeout=5m HUE:httpclient.connectionTimeout=5m HUE:httpclient.socketTimeout=5m IMPALA:httpclient.connectionTimeout=5m IMPALA:httpclient.socketTimeout=5m NIFI:useTwoWaySsl=true NIFI-REGISTRY:useTwoWaySsl=true RANGER:replayBufferSize=65

**API Name**

gateway\_descriptor\_cdp\_proxy

**Required**

false

**Knox Simplified Topology Management - cdp-proxy-api****Description**

Knox descriptor block for 'cdp-proxy-api' topology. 'providerConfigRef' indicates the name of shared-provider the given descriptor would like to use. The rest of the entries hold service information. The structure of an service information entry is: \$SERVICE\_NAME[:\$PARAMETER\_NAME=\$PARAMETER\_VALUE]. The 'url' and 'version' parameter names are preserved keywords to set the given service's URL and version. For instance: NIFI, HIVE:url=http://localhost:123, HIVE:version:3.0.0, HIVE:test.pramameter.name=test.parameter.value

**Related Name**

cdp-proxy-api

**Default Value**

providerConfigRef=pam CM-API:httpclient.connectionTimeout=5m CM-API:httpclient.socketTimeout=5m HIVE:httpclient.connectionTimeout=5m HIVE:httpclient.socketTimeout=5m IMPALA:httpclient.connectionTimeout=5m IMPALA:httpclient.socketTimeout=5m NIFI:useTwoWaySsl=true NIFI-REGISTRY:useTwoWaySsl=true RANGER:replayBufferSize=65

**API Name**

gateway\_descriptor\_cdp\_proxy\_api

**Required**

false

**Knox Gateway Dispatch Whitelist****Description**

The whitelist to be applied for dispatches associated with the service roles specified by gateway.dispatch.whitelist.services. By default this is replaced with DEFAULT or HTTPS\_ONLY based on if TLS is enabled.

**Related Name**

gateway.dispatch.whitelist

**Default Value**

WHITELIST\_CONFIG\_REPLACEME

**API Name**

gateway\_dispatch\_whitelist

**Required**

false

**Knox Gateway Dispatch Whitelist Services****Description**

The comma-delimited list of service roles for which the 'gateway.dispatch.whitelist' should be applied

**Related Name**

gateway.dispatch.whitelist.services

**Default Value**

DATANODE, HBASEUI, HDFSUI, IMPALAUUI, JOBHISTORYUI, KUDUUI, NODEUI, YARNUI, YARNUIV2, knoxauth

**API Name**

gateway\_dispatch\_whitelist\_services

**Required**

false

**Gateway Config Directory****Description**

The directory within 'gateway\_data\_dir' that contains gateway topology files and deployments.

**Related Name**

gateway.gateway.conf.dir

**Default Value**

deployments

**API Name**

gateway\_gateway\_conf\_dir

**Required**

false

**Knox Gateway Initial/Max Heapsize****Description**

Initial/Maximum size for the Java Process heap. Passed to Java -Xmx/-Xms. Measured in megabytes.

**Related Name**

gateway\_heap\_size

**Default Value**

1 GiB

**API Name**

gateway\_heap\_size

**Required**

true

### Additional Gateway Java Options

**Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here. -Xmx/-Xms should not be specified here: to set the heapsize use the 'Knox Gateway Initial/Max Heapsize' parameter

**Related Name**

gateway\_java\_opts

**Default Value****API Name**

gateway\_java\_opts

**Required**

false

### Admin Groups

**Description**

Admin groups for Knox

**Related Name**

gateway.knox.admin.groups

**Default Value****API Name**

gateway\_knox\_admin\_groups

**Required**

false

### Knox Gateway Log Level

**Description**

The logging level of Knox Gateway

**Related Name**

gateway\_log\_level

**Default Value**

ERROR

**API Name**

gateway\_log\_level

**Required**

false

### Knox Master Secret

**Description**

The master secret is used to access secured artifacts by the gateway instance. Keystore, trust stores and credential stores are all protected with the master secret. NOTE: changing the master secret will require you to change passwords protecting the keystores for the gateway, identity keystores and all credential stores

**Related Name**

gateway\_master\_secret

**Default Value**

**API Name**

gateway\_master\_secret

**Required**

true

**Gateway Path****Description**

The default context path for the gateway.

**Related Name**

gateway.path

**Default Value**

gateway

**API Name**

gateway\_path

**Required**

true

**Ranger Knox Plugin Conf Path****Description**

Staging directory for Ranger Knox Plugin Configuration. This should generally not be changed.

**Related Name**

gateway\_ranger\_knox\_plugin\_conf\_path

**Default Value**

/var/lib/knox/ranger-knox-plugin

**API Name**

gateway\_ranger\_knox\_plugin\_conf\_path

**Required**

true

**Ranger Knox Plugin Audit Hdfs Spool Directory Path****Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

xasecure.audit.destination.hdfs.batch.filespool.dir

**Default Value**

/var/log/knox/gateway/audit/hdfs/spool

**API Name**

gateway\_ranger\_knox\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Ranger Knox Plugin Policy Cache Directory Path****Description**

The directory where Ranger security policies are cached locally.

**Related Name**

ranger.plugin.knox.policy.cache.dir

**Default Value**

/var/lib/ranger/knox/gateway/policy-cache

**API Name**

gateway\_ranger\_knox\_plugin\_policy\_cache\_directory

**Required**

true

**Ranger Knox Plugin Audit Solr Spool Directory Path****Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**

xasecure.audit.destination.solr.batch.filespool.dir

**Default Value**

/var/log/knox/gateway/audit/solr/spool

**API Name**

gateway\_ranger\_knox\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Ranger Plugin Trusted Proxy IP Address****Description**

Accepts a list of IP addresses of proxy servers for trusting.

**Related Name**

ranger.plugin.knox.trusted.proxy.ipaddress

**Default Value****API Name**

gateway\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

false

**Ranger Plugin Use X-Forwarded For IP Address****Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

**Related Name**

ranger.plugin.knox.use.x-forwarded-for.ipaddress

**Default Value**

false

**API Name**

gateway\_ranger\_plugin\_use\_x\_forwarded\_for\_ipaddress

**Required**

false

### Cookie Scoping Enabled

**Description**

Enable/Disable cookie scoping feature.

**Related Name**

gateway.scope.cookies.feature.enabled

**Default Value**

false

**API Name**

gateway\_scope\_cookies\_feature\_enabled

**Required**

false

### Security - Signing Key Alias

**Description**

The alias for the signing keypair within the keystore specified via gateway\_signing\_keystore\_name

**Related Name**

gateway.signing.key.alias

**Default Value****API Name**

gateway\_signing\_key\_alias

**Required**

false

### Security - Signing Keystore Name

**Description**

The filename of keystore file that contains the signing keypair

**Related Name**

gateway.signing.keystore.name

**Default Value****API Name**

gateway\_signing\_keystore\_name

**Required**

false

### Security - Signing Keystore Type

**Description**

The type of the keystore file where the signing keypair is stored. See gateway\_signing\_keystore\_name

**Related Name**

gateway.signing.keystore.type

**Default Value****API Name**

gateway\_signing\_keystore\_type

**Required**

false

### Knox Simplified Topology Management - SSO Authentication Provider

#### Description

Authentication provider declaration used by the UIs using the Knox SSO capabilities such as the Admin and Home Page UIs.

#### Related Name

gateway\_sso\_authentication\_provider

#### Default Value

```
role=authentication authentication.name=ShiroProvider authentication.param.sessionTimeout=30
authentication.param.redirectToUrl=/$GATEWAY_PATH/knox_sso/knoxauth/
login.html authentication.param.restrictedCookies=rememberme, WWW-Authenticate
authentication.param.main.pamRealm=org.apache.knox.gateway.shirorealm.KnoxPamRealm
authentication.param.main.pamRealm.service=login authentication.param.urls./**=authcBasic
```

#### API Name

gateway\_sso\_authentication\_provider

#### Required

false

### Security - TLS Certificate Alias (Optional)

#### Description

The alias for the Gateway's TLS certificate and keypair within the default keystore or the keystore specified via gateway.tls.keystore.path

#### Related Name

gateway\_tls\_certificate\_alias

#### Default Value

#### API Name

gateway\_tls\_certificate\_alias

#### Required

false

### Security - TLS Certificate Path (Optional)

#### Description

The path for the TLS certificate which Knox will import in the CM generated/distributed keystore in case SSL is enabled (if any).

#### Related Name

gateway\_tls\_certificate\_path

#### Default Value

#### API Name

gateway\_tls\_certificate\_path

#### Required

false

### Websockets Enabled

#### Description

Enable/Disable websocket feature.

**Related Name**`gateway.websocket.feature.enabled`**Default Value**`true`**API Name**`gateway_websocket_feature_enabled`**Required**`false`**X-Forwarded Header Context Service Name****Description**

The service name to be added in x-forward-context header.

**Related Name**`gateway.xforwarded.header.context.append.servicename`**Default Value**`LIVYSERVER`**API Name**`gateway_xforwarded_header_context_append_servicename`**Required**`false`**Admin Group Mapping - Class Name****Description**

The class name used for Hadoop admin group mapping

**Related Name**`gateway.group.config.hadoop.security.group.mapping`**Default Value**`org.apache.hadoop.security.ShellBasedUnixGroupsMapping`**API Name**`hadoop_security_group_mapping_class`**Required**`false`**Hadoop Group Mapping - Negative Cache Expiration****Description**

The Hadoop group mapping negative cache expiration in seconds

**Related Name**`gateway.group.config.hadoop.security.groups.negative-cache.secs`**Default Value**`5 second(s)`**API Name**`hadoop_security_group_negative_cache_expiration_seconds`**Required**`false`

### Hadoop Group Mapping - Positive Cache Expiration

**Description**

The Hadoop group mapping positive cache expiration in seconds

**Related Name**

gateway.group.config.hadoop.security.groups.cache.secs

**Default Value**

10 second(s)

**API Name**

hadoop\_security\_group\_positive\_cache\_expiration\_seconds

**Required**

false

### krb5.conf Location

**Description**

Absolute path to krb5.conf file

**Related Name**

java.security.krb5.conf

**Default Value**

/etc/krb5.conf

**API Name**

java\_security\_krb5\_conf

**Required**

false

### KRB5 Debug

**Description**

Boolean flag indicating whether to enable debug messages for krb5 authentication

**Related Name**

sun.security.krb5.debug

**Default Value**

false

**API Name**

sun\_security\_krb5\_debug

**Required**

false

### Performance

#### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Gateway HTTP Port****Description**

The HTTP port for the Gateway.

**Related Name**

gateway.port

**Default Value**

8443

**API Name**

gateway\_port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path'  
\*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

`rm_memory_soft_limit`**Required**`true`**Security****Knox Gateway TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Knox Gateway might connect to. This is used when Knox Gateway is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**`gateway.httpclient.truststore.path`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Knox Gateway TLS/SSL Client Trust Store Password****Description**

The password for the Knox Gateway TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name****Default Value****API Name**`ssl_client_truststore_password`**Required**`false`**Enable TLS/SSL for Knox Gateway****Description**

Encrypt communication between clients and Knox Gateway using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**`knox.enableTLS`**Default Value**`false`**API Name**`ssl_enabled`**Required**`false`

### Knox Gateway TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Knox Gateway is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

gateway.tls.keystore.path

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### Knox Gateway TLS/SSL Server JKS Keystore File Password

**Description**

The password for the Knox Gateway JKS keystore file.

**Related Name****Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value**

**API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions**

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/auto-discovery-advanced-configuration-cdp-proxy.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/cdp-resources.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/gateway-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Simplified Topology Management - API Authentication Provider****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - API Authentication Provider parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_api\_authentication\_provider

**Required**

true

**Suppress Parameter Validation: Knox Gateway Configuration Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Configuration Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_conf\_dir

**Required**

true

### Suppress Parameter Validation: Knox Gateway Data Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_data\_dir

**Required**

true

### Suppress Parameter Validation: Gateway - Default App Topology Name

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway - Default App Topology Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_default\_topology\_name

**Required**

true

### Suppress Parameter Validation: Knox Simplified Topology Management - cdp-proxy

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - cdp-proxy parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_descriptor\_cdp\_proxy

**Required**

true

### Suppress Parameter Validation: Knox Simplified Topology Management - cdp-proxy-api

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - cdp-proxy-api parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_descriptor\_cdp\_proxy\_api

**Required**

true

**Suppress Parameter Validation: Knox Gateway Dispatch Whitelist****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Dispatch Whitelist parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_dispatch\_whitelist

**Required**

true

**Suppress Parameter Validation: Knox Gateway Dispatch Whitelist Services****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Dispatch Whitelist Services parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_dispatch\_whitelist\_services

**Required**

true

**Suppress Parameter Validation: Gateway Config Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Config Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_gateway\_conf\_dir

**Required**

true

**Suppress Parameter Validation: Knox Gateway Initial/Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Initial/Max Heapsize parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_heap\_size

**Required**

true

**Suppress Parameter Validation: Additional Gateway Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Gateway Java Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_java\_opts

**Required**

true

**Suppress Parameter Validation: Admin Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_knox\_admin\_groups

**Required**

true

**Suppress Parameter Validation: Knox Master Secret****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Master Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_master\_secret

**Required**

true

**Suppress Parameter Validation: Gateway Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_path

**Required**

true

**Suppress Parameter Validation: Gateway HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_port

**Required**

true

**Suppress Parameter Validation: Ranger Knox Plugin Conf Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_conf\_path

**Required**

true

**Suppress Parameter Validation: Ranger Knox Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Audit Hdfs Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

### Suppress Parameter Validation: Ranger Knox Plugin Policy Cache Directory Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Policy Cache Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_policy\_cache\_directory

**Required**

true

### Suppress Parameter Validation: Ranger Knox Plugin Audit Solr Spool Directory Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Audit Solr Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_solr\_audit\_spool\_directory

**Required**

true

### Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

### Suppress Parameter Validation: Security - Signing Key Alias

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Key Alias parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_key\_alias

**Required**

true

**Suppress Parameter Validation: Security - Signing Keystore Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_keystore\_name

**Required**

true

**Suppress Parameter Validation: Security - Signing Keystore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_keystore\_type

**Required**

true

**Suppress Parameter Validation: Knox Simplified Topology Management - SSO Authentication Provider****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - SSO Authentication Provider parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_sso\_authentication\_provider

**Required**

true

**Suppress Parameter Validation: Security - TLS Certificate Alias (Optional)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - TLS Certificate Alias (Optional) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_tls\_certificate\_alias

**Required**

true

**Suppress Parameter Validation: Security - TLS Certificate Path (Optional)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - TLS Certificate Path (Optional) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_tls\_certificate\_path

**Required**

true

**Suppress Parameter Validation: X-Forwarded Header Context Service Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the X-Forwarded Header Context Service Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_xforwarded\_header\_context\_append\_servicename

**Required**

true

**Suppress Parameter Validation: Admin Group Mapping - Class Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Group Mapping - Class Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_group\_mapping\_class

**Required**

true

### Suppress Parameter Validation: krb5.conf Location

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the krb5.conf Location parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_java\_security\_krb5\_conf

#### Required

true

### Suppress Parameter Validation: Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Environment Advanced Configuration Snippet (Safety Valve) parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_knox\_gateway\_role\_env\_safety\_valve

#### Required

true

### Suppress Parameter Validation: Knox Gateway Logging Advanced Configuration Snippet (Safety Valve)

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_log4j\_safety\_valve

#### Required

true

### Suppress Parameter Validation: Knox Gateway Log Directory

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Log Directory parameter.

#### Related Name

**Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Knox Gateway TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Knox Gateway TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Knox Gateway TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Knox Gateway TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

### Suppress Parameter Validation: Stacks Collection Directory

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_stacks\_collection\_directory

#### Required

true

### Suppress Health Test: Audit Pipeline Test

#### Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_knox\_knox\_gateway\_audit\_health

#### Required

true

### Suppress Health Test: File Descriptors

#### Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_knox\_knox\_gateway\_file\_descriptor

#### Required

true

### Suppress Health Test: Host Health

#### Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

**Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_unexpected\_exits

**Required**

true

## Knox IDBroker

### Advanced

#### Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml

**Description**

For advanced use only. A string to be inserted into conf/gateway-reloadable.xml for this role only.

**Related Name****Default Value****API Name**

conf/gateway-reloadable.xml\_role\_safety\_valve

**Required**

false

#### Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

**Description**

For advanced use only. A string to be inserted into conf/gateway-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/gateway-site.xml\_role\_safety\_valve

**Required**

false

#### Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

IDBROKER\_role\_env\_safety\_valve

**Required**

false

**Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs****Knox IDBroker Log Directory****Description**

The log directory for log files of the role Knox IDBroker.

**Related Name**

log\_dir

**Default Value**

/var/log/knox/idbroker

**API Name**

log\_dir

**Required**

false

**Knox IDBroker Logging Threshold****Description**

The minimum log level for Knox IDBroker logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Knox IDBroker Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Knox IDBroker logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Knox IDBroker Max Log Size****Description**

The maximum size, in megabytes, per log file for Knox IDBroker logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

idbroker\_fd\_thresholds

**Required**

false

### Knox IDBroker Host Health Test

**Description**

When computing the overall Knox IDBroker health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

idbroker\_host\_health\_enabled

**Required**

false

### Knox IDBroker Process Health Test

**Description**

Enables the health test that the Knox IDBroker's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

idbroker\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Knox IDBroker Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name****Default Value**

5 minute(s)

**API Name**

csd\_role\_diagnostics\_timeout

**Required**

false

**Knox IDBroker AWS Credentials Key****Description**

The AWS credentials key

**Related Name**

idbroker\_aws\_credentials\_key

**Default Value****API Name**

idbroker\_aws\_credentials\_key

**Required**

false

**Knox IDBroker AWS Credentials Secret****Description**

The AWS credentials secret

**Related Name**

idbroker\_aws\_credentials\_secret

**Default Value****API Name**

idbroker\_aws\_credentials\_secret

**Required**

false

**Knox IDBroker AWS Group Mapping****Description**

The list of AWS group-role mappings in 'group=role[;group=role]...[;group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=arn:aws:iam:XYZ:role/s3full;audit=arn:aws:iam:XYZ:role/s3Read

**Related Name**

idbroker.aws.group.role.mapping

**Default Value****API Name**

idbroker\_aws\_group\_mapping

**Required**

false

**Knox IDBroker AWS User Default Group Mapping****Description**

The list of AWS user default group mappings in 'user=group[;user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

**Related Name**

idbroker.aws.user.default.group.mapping

**Default Value****API Name**

idbroker\_aws\_user\_default\_group\_mapping

**Required**

false

**Knox IDBroker AWS User Mapping****Description**

The list of AWS user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=arn:aws:iam:XYZ:role/s3full;guest=arn:aws:iam:XYZ:role/s3Read

**Related Name**

idbroker.aws.user.role.mapping

**Default Value****API Name**

idbroker\_aws\_user\_mapping

**Required**

false

### Knox IDBroker AZURE ADLS2 Tenant Name

#### Description

The name of the AZURE AD tenant. A tenant is a representation of an organization. It's a dedicated instance of Azure AD that an organization or application developer receives when the organization or application developer creates a relationship with Microsoft

#### Related Name

idbroker\_azure\_adls2\_tenant\_name

#### Default Value

#### API Name

idbroker\_azure\_adls2\_tenant\_name

#### Required

false

### Knox IDBroker AZURE 'blob-contributor' ClientID

#### Description

The client ID credential for 'blob-contributor' role

#### Related Name

idbroker\_azure\_blob\_contributor\_clientid

#### Default Value

#### API Name

idbroker\_azure\_blob\_contributor\_clientid

#### Required

false

### Knox IDBroker AZURE 'blob-contributor' Secret

#### Description

The secret credential for 'blob-contributor' role

#### Related Name

idbroker\_azure\_blob\_contributor\_secret

#### Default Value

#### API Name

idbroker\_azure\_blob\_contributor\_secret

#### Required

false

### Knox IDBroker AZURE 'blob-reader' ClientID

#### Description

The client ID credential for 'blob-reader' role

#### Related Name

idbroker\_azure\_blob\_reader\_clientid

#### Default Value

#### API Name

idbroker\_azure\_blob\_reader\_clientid

**Required**

false

**Knox IDBroker AZURE 'blob-reader' Secret****Description**

The secret credential for 'blob-reader' role

**Related Name**

idbroker\_azure\_blob\_reader\_secret

**Default Value****API Name**

idbroker\_azure\_blob\_reader\_secret

**Required**

false

**Knox IDBroker AZURE Group Mapping****Description**

The list of AZURE group-role mappings in 'group=role[;group=role]...[;group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=blob-contributor

**Related Name**

idbroker.adls2.group.role.mapping

**Default Value****API Name**

idbroker\_azure\_group\_mapping

**Required**

false

**Knox IDBroker AZURE User Default Group Mapping****Description**

The list of AZURE user default group mappings in 'user=group[user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

**Related Name**

idbroker.azure.user.default.group.mapping

**Default Value****API Name**

idbroker\_azure\_user\_default\_group\_mapping

**Required**

false

**Knox IDBroker AZURE User Mapping****Description**

The list of AZURE user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=blob-contributor

**Related Name**

idbroker.adls2.user.role.mapping

**Default Value****API Name**

idbroker\_azure\_user\_mapping

**Required**

false

**Knox IDBroker AZURE VM Assumer Identity****Description**

A user assigned managed identity that has Virtual Machine Contributor and Managed Identity Operator roles scoped at the resource group where IDBroker Virtual Machine is running.

**Related Name**

idbroker\_azure\_vm\_assumer\_identity

**Default Value****API Name**

idbroker\_azure\_vm\_assumer\_identity

**Required**

false

**Knox IDBroker Configuration Directory****Description**

Contains configuration files that apply to the gateway globally (i.e. not cluster specific ).

**Related Name**

idbroker\_conf\_dir

**Default Value**

/var/lib/knox/idbroker/conf

**API Name**

idbroker\_conf\_dir

**Required**

false

**Knox IDBroker Data Directory****Description**

Contains security and topology specific artifacts as well as important applications for admin-ui

**Related Name**

idbroker\_data\_dir

**Default Value**

/var/lib/knox/idbroker/data

**API Name**

idbroker\_data\_dir

**Required**

false

**Gateway - Default App Topology Name****Description**

When a topology file is deployed with a file name that matches the configured default topology name, a specialized mapping for URLs is installed for that particular topology. This allows the URLs that are expected by the existing Hadoop CLIs for WebHDFS to be used in interacting with the specific Hadoop cluster that is represented by the default topology file.

**Related Name**

default.app.topology.name

**Default Value****API Name**

idbroker\_default\_topology\_name

**Required**

false

**Gateway Config Directory****Description**

The directory within 'idbroker\_data\_dir' that contains gateway topology files and deployments.

**Related Name**

gateway.gateway.conf.dir

**Default Value**

deployments

**API Name**

idbroker\_gateway\_gateway\_conf\_dir

**Required**

false

**Admin Groups****Description**

Admin groups for Knox

**Related Name**

gateway.knox.admin.groups

**Default Value****API Name**

idbroker\_gateway\_knox\_admin\_groups

**Required**

false

**Gateway Path****Description**

The default context path for the gateway.

**Related Name**

gateway.path

**Default Value**

gateway

**API Name**

idbroker\_gateway\_path

**Required**

true

**Cookie Scoping Enabled****Description**

Enable/Disable cookie scoping feature.

**Related Name**

gateway.scope.cookies.feature.enabled

**Default Value**

false

**API Name**

idbroker\_gateway\_scope\_cookies\_feature\_enabled

**Required**

false

**Security - Signing Key Alias****Description**

The alias for the signing keypair within the keystore specified via idbroker\_gateway\_signing\_keystore\_name

**Related Name**

gateway.signing.key.alias

**Default Value****API Name**

idbroker\_gateway\_signing\_key\_alias

**Required**

false

**Security - Signing Keystore Name****Description**

The filename of keystore file that contains the signing keypair

**Related Name**

gateway.signing.keystore.name

**Default Value****API Name**

idbroker\_gateway\_signing\_keystore\_name

**Required**

false

**Security - Signing Keystore Type****Description**

The type of the keystore file where the signing keypair is stored. See `idbroker_gateway_signing_keystore_name`

**Related Name**

`gateway.signing.keystore.type`

**Default Value****API Name**

`idbroker_gateway_signing_keystore_type`

**Required**

`false`

**Knox IDBroker GCP Credential Key****Description**

The GCP Credential Key

**Related Name**

`idbroker_gcp_credential_key`

**Default Value****API Name**

`idbroker_gcp_credential_key`

**Required**

`false`

**Knox IDBroker GCP Credential Secret****Description**

The GCP Credential Secret

**Related Name**

`idbroker_gcp_credential_secret`

**Default Value****API Name**

`idbroker_gcp_credential_secret`

**Required**

`false`

**Knox IDBroker GCP Group Mapping****Description**

The list of GCP group-role mappings in 'group=role[:group=role]...[:group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: `admin=storage-admin@XYZ.iam.gserviceaccount.com;audit=storage-read-only@XYZ.iam.gserviceaccount.com`

**Related Name**

`idbroker.gcp.group.role.mapping`

**Default Value****API Name**

`idbroker_gcp_group_mapping`

**Required**

false

**Knox IDBroker GCP User Default Group Mapping****Description**

The list of GCP user default group mappings in 'user=group[;user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

**Related Name**

idbroker.gcp.user.default.group.mapping

**Default Value****API Name**

idbroker\_gcp\_user\_default\_group\_mapping

**Required**

false

**Knox IDBroker GCP User Mapping****Description**

The list of GCP user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=storage-admin@XYZ.iam.gserviceaccount.com;guest=storage-read-only@XYZ.iam.gserviceaccount.com

**Related Name**

idbroker.gcp.user.role.mapping

**Default Value****API Name**

idbroker\_gcp\_user\_mapping

**Required**

false

**Admin Group Mapping - Class Name****Description**

The class name used for Hadoop admin group mapping

**Related Name**

gateway.group.config.hadoop.security.group.mapping

**Default Value**

org.apache.hadoop.security.ShellBasedUnixGroupsMapping

**API Name**

idbroker\_hadoop\_security\_group\_mapping\_class

**Required**

false

**IDBroker Initial/Max Heapsize****Description**

Initial/Maximum size for the Java Process heap. Passed to Java -Xmx/-Xms. Measured in megabytes.

**Related Name**

idbroker\_heap\_size

**Default Value**

1 GiB

**API Name**

idbroker\_heap\_size

**Required**

true

**Additional IDBroker Java Options****Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here. -Xmx/-Xms should not be specified here: to set the heapsize use the 'Knox Gateway Initial/Max Heapsize' parameter

**Related Name**

idbroker\_java\_opts

**Default Value****API Name**

idbroker\_java\_opts

**Required**

false

**krb5.conf Location****Description**

Absolute path to krb5.conf file

**Related Name**

java.security.krb5.conf

**Default Value**

/etc/krb5.conf

**API Name**

idbroker\_java\_security\_krb5\_conf

**Required**

false

**Kerberos Proxyuser Block****Description**

Proxyuser configuration used in Knox's 'dt' topology in case Kerberos is enabled. Must conform a valid JSON key-value format!

**Related Name**

idbroker\_kerberos\_dt\_proxyuser\_block

**Default Value**

hadoop.proxyuser.livy.hosts: \* hadoop.proxyuser.livy.groups: \* hadoop.proxyuser.hive.hosts: \*  
 hadoop.proxyuser.hive.groups: \* hadoop.proxyuser.httpfs.hosts: \* hadoop.proxyuser.httpfs.groups:  
 \* hadoop.proxyuser.hue.hosts: \* hadoop.proxyuser.hue.groups: \* hadoop.proxyuser.oozie.hosts:  
 \* hadoop.proxyuser.oozie.groups: \* hadoop.proxyuser.impala.hosts: \*  
 hadoop.proxyuser.impala.groups: \*

**API Name**

idbroker\_kerberos\_dt\_proxyuser\_block

**Required**

false

**IDBroker Knox Token TTL****Description**

This indicates the lifespan of the token. Once it expires a new token must be acquired from KnoxToken service. This is in milliseconds.

**Related Name**

idbroker\_knox\_token\_ttl\_ms

**Default Value**

1 hour(s)

**API Name**

idbroker\_knox\_token\_ttl\_ms

**Required**

false

**Knox IDBroker Log Directory****Description**

The folder where Knox IDBroker puts its logs

**Related Name**

idbroker\_log\_dir

**Default Value**

/var/log/knox/idbroker

**API Name**

idbroker\_log\_dir

**Required**

false

**IDBroker Log Level****Description**

The logging level of IDBroker

**Related Name**

idbroker\_log\_level

**Default Value**

ERROR

**API Name**

idbroker\_log\_level

**Required**

false

**IDBroker Master Secret****Description**

The master secret is used to access secured artifacts by the gateway instance. Keystore, trust stores and credential stores are all protected with the master secret. NOTE: changing the master secret will require you to change passwords protecting the keystores for the gateway, identity keystores and all credential stores

**Related Name**

idbroker\_master\_secret

**Default Value****API Name**

idbroker\_master\_secret

**Required**

true

### Gateway Config Refresh Interval

**Description**

Defines the frequency of gateway configuration refresh.

**Related Name**

gateway.config.refresh.interval

**Default Value**

10 second(s)

**API Name**

idbroker\_relaodable\_refresh\_interval\_ms

**Required**

false

### KRB5 Debug

**Description**

Boolean flag indicating whether to enable debug messages for krb5 authentication

**Related Name**

sun.security.krb5.debug

**Default Value**

false

**API Name**

idbroker\_sun\_security\_krb5\_debug

**Required**

false

### Performance

#### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Gateway HTTP Port****Description**

The HTTP port for the Gateway.

**Related Name**

gateway.port

**Default Value**

8444

**API Name**

idbroker\_gateway\_port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path'  
 \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Knox IDBroker TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Knox IDBroker might connect to. This is used when Knox IDBroker is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

gateway.httpclient.truststore.path

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Knox IDBroker TLS/SSL Client Trust Store Password****Description**

The password for the Knox IDBroker TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name****Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Knox IDBroker****Description**

Encrypt communication between clients and Knox IDBroker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

knox.enableTLS

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### Knox IDBroker TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Knox IDBroker is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

gateway.tls.keystore.path

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### Knox IDBroker TLS/SSL Server JKS Keystore File Password

**Description**

The password for the Knox IDBroker JKS keystore file.

**Related Name****Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value**

**API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions**

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/gateway-reloadable.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/gateway-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Knox IDBroker AWS Credentials Key

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AWS Credentials Key parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_credentials\_key

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AWS Credentials Secret****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AWS Credentials Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_credentials\_secret

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AWS Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AWS Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_group\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AWS User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AWS User Default Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_user\_default\_group\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AWS User Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AWS User Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_user\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE ADLS2 Tenant Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE ADLS2 Tenant Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_adls2\_tenant\_name

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE 'blob-contributor' ClientID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE 'blob-contributor' ClientID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_contributor\_clientid

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE 'blob-contributor' Secret****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE 'blob-contributor' Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_contributor\_secret

**Required**

true

### Suppress Parameter Validation: Knox IDBroker AZURE 'blob-reader' ClientID

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE 'blob-reader' ClientID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_reader\_clientid

**Required**

true

### Suppress Parameter Validation: Knox IDBroker AZURE 'blob-reader' Secret

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE 'blob-reader' Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_reader\_secret

**Required**

true

### Suppress Parameter Validation: Knox IDBroker AZURE Group Mapping

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_group\_mapping

**Required**

true

### Suppress Parameter Validation: Knox IDBroker AZURE User Default Group Mapping

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE User Default Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_idbroker_azure_user_default_group_mapping`**Required**`true`**Suppress Parameter Validation: Knox IDBroker AZURE User Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE User Mapping parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_idbroker_azure_user_mapping`**Required**`true`**Suppress Parameter Validation: Knox IDBroker AZURE VM Assumer Identity****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE VM Assumer Identity parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_idbroker_azure_vm_assumer_identity`**Required**`true`**Suppress Parameter Validation: Knox IDBroker Configuration Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Configuration Directory parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_idbroker_conf_dir`**Required**`true`**Suppress Parameter Validation: Knox IDBroker Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_data\_dir

**Required**

true

**Suppress Parameter Validation: Gateway - Default App Topology Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway - Default App Topology Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_default\_topology\_name

**Required**

true

**Suppress Parameter Validation: Gateway Config Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Config Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_gateway\_conf\_dir

**Required**

true

**Suppress Parameter Validation: Admin Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_knox\_admin\_groups

**Required**

true

### Suppress Parameter Validation: Gateway Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_path

**Required**

true

### Suppress Parameter Validation: Gateway HTTP Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_port

**Required**

true

### Suppress Parameter Validation: Security - Signing Key Alias

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Key Alias parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_signing\_key\_alias

**Required**

true

### Suppress Parameter Validation: Security - Signing Keystore Name

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_signing\_keystore\_name

**Required**

true

**Suppress Parameter Validation: Security - Signing Keystore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_signing\_keystore\_type

**Required**

true

**Suppress Parameter Validation: Knox IDBroker GCP Credential Key****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP Credential Key parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_credential\_key

**Required**

true

**Suppress Parameter Validation: Knox IDBroker GCP Credential Secret****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP Credential Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_credential\_secret

**Required**

true

**Suppress Parameter Validation: Knox IDBroker GCP Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP Group Mapping parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_group\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker GCP User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP User Default Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_user\_default\_group\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker GCP User Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP User Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_user\_mapping

**Required**

true

**Suppress Parameter Validation: Admin Group Mapping - Class Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Group Mapping - Class Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_hadoop\_security\_group\_mapping\_class

**Required**

true

**Suppress Parameter Validation: IDBroker Initial/Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the IDBroker Initial/Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_heap\_size

**Required**

true

**Suppress Parameter Validation: Additional IDBroker Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional IDBroker Java Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_java\_opts

**Required**

true

**Suppress Parameter Validation: krb5.conf Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the krb5.conf Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_java\_security\_krb5\_conf

**Required**

true

**Suppress Parameter Validation: Kerberos Proxyuser Block****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Proxyuser Block parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_kerberos\_dt\_proxyuser\_block

**Required**

true

### Suppress Parameter Validation: Knox IDBroker Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_log\_dir

**Required**

true

### Suppress Parameter Validation: IDBroker Master Secret

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the IDBroker Master Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_master\_secret

**Required**

true

### Suppress Parameter Validation: Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox IDBroker Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Knox IDBroker TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Knox IDBroker TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Knox IDBroker TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Parameter Validation: Knox IDBroker TLS/SSL Server JKS Keystore File Password

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Server JKS Keystore File Password parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_server\_keystore\_password

#### Required

true

### Suppress Parameter Validation: Stacks Collection Directory

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_stacks\_collection\_directory

#### Required

true

### Suppress Health Test: Audit Pipeline Test

#### Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_knox\_idbroker\_audit\_health

#### Required

true

### Suppress Health Test: File Descriptors

#### Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

**Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### Knox Service Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

**Description**

For advanced use only, a string to be inserted into conf/gateway-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

conf/gateway-site.xml\_service\_safety\_valve

**Required**

false

#### Knox Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name**

**Default Value****API Name**

KNOX\_service\_env\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

knox

**API Name**

process\_groupname

**Required**

true

**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**

knox

**API Name**

process\_username

**Required**

true

**Monitoring****Enable Service Level Health Alerts****Description**When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Healthy Knox IDBroker Monitoring Thresholds

**Description**

The health test thresholds of the overall Knox IDBroker health. The check returns "Concerning" health if the percentage of "Healthy" Knox IDBrokers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Knox IDBrokers falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 49.0 %

**API Name**

KNOX\_IDBROKER\_healthy\_thresholds

**Required**

false

### Healthy Knox Gateway Monitoring Thresholds

**Description**

The health test thresholds of the overall Knox Gateway health. The check returns "Concerning" health if the percentage of "Healthy" Knox Gateways falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Knox Gateways falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 49.0 %

**API Name**

KNOX\_KNOX\_GATEWAY\_healthy\_thresholds

**Required**

false

### Service Triggers

**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

`service_triggers`

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

`smon_derived_configs_safety_valve`

**Required**

false

**Other****Automatic Restart on Stop****Description**

Automatically restart the service when a stop is issued.

**Related Name**

`autorestart_on_stop`

**Default Value**

false

**API Name**

`autorestart_on_stop`

**Required**

false

### HDFS Service

**Description**

Name of the HDFS service that this Knox service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

false

### Enable Kerberos Authentication

**Description**

Boolean flag indicating whether the Hadoop cluster protected by Gateway is secured with Kerberos

**Related Name**

gateway.hadoop.kerberos.secured

**Default Value**

false

**API Name**

kerberos.auth.enabled

**Required**

false

### Knox PAM Realm - Service Name

**Description**

Using KnoxPamRealm requires a PAM service name. This is the name of the file under '/etc/pam.d' that is used to initialize and configure the PAM subsystem. Normally, this file reflects the application using it. For example 'login', 'sshd', 'su', etc...

**Related Name**

knox\_pam\_realm\_service

**Default Value**

login

**API Name**

knox\_pam\_realm\_service

**Required**

false

### Ranger Knox Plugin Hdfs Audit Directory

**Description**

The HDFS path on which Ranger audits are written.

**Related Name**

ranger\_knox\_plugin\_hdfs\_audit\_directory

**Default Value**

\$ranger\_base\_audit\_url/knox

**API Name**

ranger\_knox\_plugin\_hdfs\_audit\_directory

**Required**

false

**RANGER Service****Description**

Name of the RANGER service that this Knox service instance depends on

**Related Name****Default Value****API Name**

ranger\_service

**Required**

false

**Save Alias Command Input****Description**

This parameter serves as the input for the 'Save Alias' command. The input must follow the following format:  
topology\_name\_1[:topology\_name\_2:....:topology\_name\_N].alias\_name=password

**Related Name**

save\_alias\_command\_input\_password

**Default Value****API Name**

save\_alias\_command\_input\_password

**Required**

false

**Security****Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

knox

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/auto-discovery-advanced-configuration-cdp-proxy.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/cdp-resources.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/gateway-reloadable.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/gateway-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Simplified Topology Management - API Authentication Provider****Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - API Authentication Provider configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_api\_authentication\_provider

**Required**

true

**Suppress Configuration Validator: Knox Gateway Configuration Directory****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Configuration Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_conf\_dir

**Required**

true

**Suppress Configuration Validator: Knox Gateway Data Directory****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_data\_dir

**Required**

true

**Suppress Configuration Validator: Gateway - Default App Topology Name****Description**

Whether to suppress configuration warnings produced by the Gateway - Default App Topology Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_default\_topology\_name

**Required**

true

**Suppress Configuration Validator: Knox Simplified Topology Management - cdp-proxy****Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - cdp-proxy configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_descriptor\_cdp\_proxy

**Required**

true

**Suppress Configuration Validator: Knox Simplified Topology Management - cdp-proxy-api****Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - cdp-proxy-api configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_descriptor\_cdp\_proxy\_api

**Required**

true

**Suppress Configuration Validator: Knox Gateway Dispatch Whitelist****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Dispatch Whitelist configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_dispatch\_whitelist

**Required**

true

**Suppress Configuration Validator: Knox Gateway Dispatch Whitelist Services****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Dispatch Whitelist Services configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_dispatch\_whitelist\_services

**Required**

true

### Suppress Configuration Validator: Gateway Config Directory

**Description**

Whether to suppress configuration warnings produced by the Gateway Config Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_gateway\_conf\_dir

**Required**

true

### Suppress Configuration Validator: Knox Gateway Initial/Max Heapsize

**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Initial/Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_heap\_size

**Required**

true

### Suppress Configuration Validator: Additional Gateway Java Options

**Description**

Whether to suppress configuration warnings produced by the Additional Gateway Java Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_java\_opts

**Required**

true

### Suppress Configuration Validator: Admin Groups

**Description**

Whether to suppress configuration warnings produced by the Admin Groups configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_gateway_knox_admin_groups`**Required**`true`**Suppress Configuration Validator: Knox Master Secret****Description**

Whether to suppress configuration warnings produced by the Knox Master Secret configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_gateway_master_secret`**Required**`true`**Suppress Configuration Validator: Gateway Path****Description**

Whether to suppress configuration warnings produced by the Gateway Path configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_gateway_path`**Required**`true`**Suppress Configuration Validator: Gateway HTTP Port****Description**

Whether to suppress configuration warnings produced by the Gateway HTTP Port configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_gateway_port`**Required**`true`**Suppress Configuration Validator: Ranger Knox Plugin Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Conf Path configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_conf\_path

**Required**

true

**Suppress Configuration Validator: Ranger Knox Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Audit Hdfs Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Knox Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Policy Cache Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Knox Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_solr\_audit\_spool\_directory

**Required**

true

### Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address

**Description**

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

### Suppress Configuration Validator: Security - Signing Key Alias

**Description**

Whether to suppress configuration warnings produced by the Security - Signing Key Alias configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_key\_alias

**Required**

true

### Suppress Configuration Validator: Security - Signing Keystore Name

**Description**

Whether to suppress configuration warnings produced by the Security - Signing Keystore Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_keystore\_name

**Required**

true

### Suppress Configuration Validator: Security - Signing Keystore Type

**Description**

Whether to suppress configuration warnings produced by the Security - Signing Keystore Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_keystore\_type

**Required**

true

**Suppress Configuration Validator: Knox Simplified Topology Management - SSO Authentication Provider****Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - SSO Authentication Provider configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_sso\_authentication\_provider

**Required**

true

**Suppress Configuration Validator: Security - TLS Certificate Alias (Optional)****Description**

Whether to suppress configuration warnings produced by the Security - TLS Certificate Alias (Optional) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_tls\_certificate\_alias

**Required**

true

**Suppress Configuration Validator: Security - TLS Certificate Path (Optional)****Description**

Whether to suppress configuration warnings produced by the Security - TLS Certificate Path (Optional) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_tls\_certificate\_path

**Required**

true

**Suppress Configuration Validator: X-Forwarded Header Context Service Name****Description**

Whether to suppress configuration warnings produced by the X-Forwarded Header Context Service Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_xforwarded\_header\_context\_append\_servicename

**Required**

true

**Suppress Configuration Validator: Admin Group Mapping - Class Name****Description**

Whether to suppress configuration warnings produced by the Admin Group Mapping - Class Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_group\_mapping\_class

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AWS Credentials Key****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Credentials Key configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_credentials\_key

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AWS Credentials Secret****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Credentials Secret configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_credentials\_secret

**Required**

true

### Suppress Configuration Validator: Knox IDBroker AWS Group Mapping

**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_group\_mapping

**Required**

true

### Suppress Configuration Validator: Knox IDBroker AWS User Default Group Mapping

**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS User Default Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_user\_default\_group\_mapping

**Required**

true

### Suppress Configuration Validator: Knox IDBroker AWS User Mapping

**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS User Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_user\_mapping

**Required**

true

### Suppress Configuration Validator: Knox IDBroker AZURE ADLS2 Tenant Name

**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE ADLS2 Tenant Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_adls2\_tenant\_name

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE 'blob-contributor' ClientID****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-contributor' ClientID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_contributor\_clientid

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE 'blob-contributor' Secret****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-contributor' Secret configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_contributor\_secret

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE 'blob-reader' ClientID****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-reader' ClientID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_reader\_clientid

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE 'blob-reader' Secret****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-reader' Secret configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_reader\_secret

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_group\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE User Default Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_user\_default\_group\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE User Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE User Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_user\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE VM Assumer Identity****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE VM Assumer Identity configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_vm\_assumer\_identity

**Required**

true

**Suppress Configuration Validator: Knox IDBroker Configuration Directory****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Configuration Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_conf\_dir

**Required**

true

**Suppress Configuration Validator: Knox IDBroker Data Directory****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_data\_dir

**Required**

true

**Suppress Configuration Validator: Gateway - Default App Topology Name****Description**

Whether to suppress configuration warnings produced by the Gateway - Default App Topology Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_default\_topology\_name

**Required**

true

### Suppress Configuration Validator: Gateway Config Directory

**Description**

Whether to suppress configuration warnings produced by the Gateway Config Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_gateway\_conf\_dir

**Required**

true

### Suppress Configuration Validator: Admin Groups

**Description**

Whether to suppress configuration warnings produced by the Admin Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_knox\_admin\_groups

**Required**

true

### Suppress Configuration Validator: Gateway Path

**Description**

Whether to suppress configuration warnings produced by the Gateway Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_path

**Required**

true

### Suppress Configuration Validator: Gateway HTTP Port

**Description**

Whether to suppress configuration warnings produced by the Gateway HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_idbroker_gateway_port`**Required**`true`**Suppress Configuration Validator: Security - Signing Key Alias****Description**

Whether to suppress configuration warnings produced by the Security - Signing Key Alias configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_idbroker_gateway_signing_key_alias`**Required**`true`**Suppress Configuration Validator: Security - Signing Keystore Name****Description**

Whether to suppress configuration warnings produced by the Security - Signing Keystore Name configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_idbroker_gateway_signing_keystore_name`**Required**`true`**Suppress Configuration Validator: Security - Signing Keystore Type****Description**

Whether to suppress configuration warnings produced by the Security - Signing Keystore Type configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_idbroker_gateway_signing_keystore_type`**Required**`true`**Suppress Configuration Validator: Knox IDBroker GCP Credential Key****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP Credential Key configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_credential\_key

**Required**

true

**Suppress Configuration Validator: Knox IDBroker GCP Credential Secret****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP Credential Secret configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_credential\_secret

**Required**

true

**Suppress Configuration Validator: Knox IDBroker GCP Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_group\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker GCP User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP User Default Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_user\_default\_group\_mapping

**Required**

true

### Suppress Configuration Validator: Knox IDBroker GCP User Mapping

**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP User Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_user\_mapping

**Required**

true

### Suppress Configuration Validator: Admin Group Mapping - Class Name

**Description**

Whether to suppress configuration warnings produced by the Admin Group Mapping - Class Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_hadoop\_security\_group\_mapping\_class

**Required**

true

### Suppress Configuration Validator: IDBroker Initial/Max Heapsize

**Description**

Whether to suppress configuration warnings produced by the IDBroker Initial/Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_heap\_size

**Required**

true

### Suppress Configuration Validator: Additional IDBroker Java Options

**Description**

Whether to suppress configuration warnings produced by the Additional IDBroker Java Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_java\_opts

**Required**

true

**Suppress Configuration Validator: krb5.conf Location****Description**

Whether to suppress configuration warnings produced by the krb5.conf Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_java\_security\_krb5\_conf

**Required**

true

**Suppress Configuration Validator: Kerberos Proxyuser Block****Description**

Whether to suppress configuration warnings produced by the Kerberos Proxyuser Block configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_kerberos\_dt\_proxyuser\_block

**Required**

true

**Suppress Configuration Validator: Knox IDBroker Log Directory****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_log\_dir

**Required**

true

**Suppress Configuration Validator: IDBroker Master Secret****Description**

Whether to suppress configuration warnings produced by the IDBroker Master Secret configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_master\_secret

**Required**

true

**Suppress Configuration Validator: Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: krb5.conf Location****Description**

Whether to suppress configuration warnings produced by the krb5.conf Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_java\_security\_krb5\_conf

**Required**

true

**Suppress Configuration Validator: Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_knox\_gateway\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Knox Gateway Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Knox Gateway Log Directory

**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Configuration Validator: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Knox Gateway TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Knox Gateway TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Knox Gateway TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Knox Gateway TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Knox Service Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Service Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_conf/gateway-site.xml\_service\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Gateway Count Validator

**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

### Suppress Configuration Validator: Knox IDBroker Count Validator

**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_idbroker\_count\_validator

**Required**

true

### Suppress Parameter Validation: Kerberos Principal

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

### Suppress Configuration Validator: Knox Gateway Count Validator

**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_knox\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: Knox PAM Realm - Service Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox PAM Realm - Service Name parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_knox\_pam\_realm\_service

**Required**

true

**Suppress Parameter Validation: Knox Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_knox\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Ranger Knox Plugin Hdfs Audit Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Hdfs Audit Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_knox\_plugin\_hdfs\_audit\_directory

**Required**

true

**Suppress Parameter Validation: Save Alias Command Input****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Save Alias Command Input parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_save\_alias\_command\_input\_password

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

### Suppress Health Test: Knox IDBroker Health

**Description**

Whether to suppress the results of the Knox IDBroker Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_knox\_idbroker\_healthy

**Required**

true

### Suppress Health Test: Knox Gateway Health

**Description**

Whether to suppress the results of the Knox Gateway Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_knox\_knox\_gateway\_healthy

**Required**

true

## Kudu Properties in Cloudera Runtime 7.1

Role groups:

### Master

## Advanced

### Master Advanced Configuration Snippet (Safety Valve) for gflagfile

**Description**

For advanced use only. A string to be inserted into gflagfile for this role only.

**Related Name****Default Value****API Name**

gflagfile\_role\_safety\_valve

**Required**

false

### Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties

**Description**

For advanced use only. A string to be inserted into kudu-monitoring.properties for this role only.

**Related Name****Default Value****API Name**

kudu-monitoring.properties\_role\_safety\_valve

**Required**

false

### Master Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KUDU\_MASTER\_role\_env\_safety\_valve

**Required**

false

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

#### Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

#### Related Name

#### Default Value

true

#### API Name

process\_should\_monitor

#### Required

true

### Process Start Retry Attempts

#### Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

#### Related Name

#### Default Value

3

#### API Name

process\_start\_retries

#### Required

false

### Process Start Wait Timeout

#### Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

#### Related Name

#### Default Value

20

#### API Name

process\_start\_secs

#### Required

false

### Logs

### Master Maximum Log Level to Buffer

#### Description

Log messages logged at this level or lower are buffered in memory.

**Related Name**

logbuflevel

**Default Value**

0

**API Name**

glog\_logbuflevel

**Required**

false

**Master Maximum Log Size****Description**

Approximate maximum log file size in megabytes before rolling to a new log file.

**Related Name**

max\_log\_size

**Default Value**

1800 MiB

**API Name**

glog\_maxlogsize

**Required**

false

**Master Minimum Log Level****Description**

Messages logged via LOG() at a lower level than this are not logged anywhere.

**Related Name**

minloglevel

**Default Value**

0

**API Name**

glog\_minloglevel

**Required**

false

**Master Minimum Log Verbosity****Description**

Messages logged via VLOG() at a lower verbosity than this are not logged anywhere.

**Related Name**

v

**Default Value**

0

**API Name**

glog\_verbose

**Required**

false

### Master Log Directory

**Description**

The log directory for log files of the role Master.

**Related Name**

log\_dir

**Default Value**

/var/log/kudu

**API Name**

log\_dir

**Required**

false

### Monitoring

#### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

#### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

kudu\_master\_fd\_thresholds

**Required**

false

**Master Host Health Test****Description**

When computing the overall Master health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

kudu\_master\_host\_health\_enabled

**Required**

false

**Master Process Health Test****Description**

Enables the health test that the Master's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

kudu\_master\_scm\_health\_enabled

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Master Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name****Default Value**

1 minute(s)

**API Name**

csd\_role\_diagnostics\_timeout

**Required**

false

**Default Number of Replicas****Description**

Default number of replicas for each tablet.

**Related Name**

default\_num\_replicas

**Default Value**

3

**API Name**

default\_num\_replicas

**Required**

true

**Kudu Master Data Directories****Description**

Directories where Kudu masters will store data blocks.

**Related Name**

fs\_data\_dirs

**Default Value****API Name**

fs\_data\_dirs

**Required**

true

### Kudu Master WAL Directory

**Description**

Directory where Kudu masters will store write-ahead logs. It can be the same as one of the data directories, but not a sub-directory of a data directory. Master and tablet servers must use different directories when co-located on the same machine.

**Related Name**

fs\_wal\_dir

**Default Value****API Name**

fs\_wal\_dir

**Required**

true

### Kudu Master WAL Fsyncs All Entries

**Description**

If true, the Master will use the fsync system call to ensure that all modifications to the catalog table are durably written to disk. **WARNING:** In this release, enabling this option can cause serious issues.

**Related Name**

log\_force\_fsync\_all

**Default Value**

false

**API Name**

log\_force\_fsync\_all

**Required**

true

### Master Address

**Description**

Configuration that's automatically set by Cloudera Manager to propagate the Master's address to the Tablet Servers.

**Related Name**

server.address

**Default Value****API Name**

master\_address

**Required**

false

### Kudu Master Core Dump Directory

**Description**

If Enable Core Dump is set, Kudu masters will dump cores to this location.

**Related Name**

master\_core\_dump\_directory

**Default Value**

/var/log/kudu

**API Name**

master\_core\_dump\_directory

**Required**

true

**Kudu Metrics URL Parameters****Description**

The URL query parameters to append to the `/metrics` URL when collecting Kudu metrics.

**Related Name**

metrics\_url\_parameters

**Default Value**

compact=1&level=info

**API Name**

metrics\_url\_parameters

**Required**

true

**Kudu Master Web UI Interface****Description**

The interface of the Kudu Master Web UI. If blank, binds to 0.0.0.0.

**Related Name**

webservice\_interface

**Default Value****API Name**

webservice\_interface

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses**

### Kudu Master Web UI Port

**Description**

The port of the Kudu Master Web UI.

**Related Name**

webserver\_port

**Default Value**

8051

**API Name**

webserver\_port

**Required**

true

### Resource Management

#### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

#### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

#### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

### Enable TLS/SSL for Master

**Description**

Encrypt communication between clients and Master using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### Master TLS/SSL Server CA Certificate (PEM Format)

**Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

**Related Name****Default Value****API Name**

ssl\_server\_ca\_certificate\_location

**Required**

false

### Master TLS/SSL Server Certificate File (PEM Format)

**Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

webserver\_certificate\_file

**Default Value****API Name**

ssl\_server\_certificate\_location

**Required**

false

### Master TLS/SSL Server Private Key File (PEM Format)

**Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

webserver\_private\_key\_file

**Default Value**

**API Name**

ssl\_server\_privatekey\_location

**Required**

false

**Master TLS/SSL Private Key Password****Description**

The password for the private key in the Master TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

**Related Name**

webserver\_private\_key\_password\_cmd

**Default Value****API Name**

ssl\_server\_privatekey\_password

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Default Number of Replicas****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Number of Replicas parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_default\_num\_replicas

**Required**

true

**Suppress Parameter Validation: Kudu Master Data Directories****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Master Data Directories parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_data\_dirs

**Required**

true

**Suppress Parameter Validation: Kudu Master WAL Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Master WAL Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_wal\_dir

**Required**

true

**Suppress Parameter Validation: Master Advanced Configuration Snippet (Safety Valve) for gflagfile****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Advanced Configuration Snippet (Safety Valve) for gflagfile parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gflagfile\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu-monitoring.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Master Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu\_master\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Master Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Master Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_master\_address

**Required**

true

**Suppress Parameter Validation: Kudu Master Core Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Master Core Dump Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_master\_core\_dump\_directory

**Required**

true

**Suppress Parameter Validation: Kudu Metrics URL Parameters****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Metrics URL Parameters parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics\_url\_parameters

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Master TLS/SSL Server CA Certificate (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master TLS/SSL Server CA Certificate (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

**Suppress Parameter Validation: Master TLS/SSL Server Certificate File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master TLS/SSL Server Certificate File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

**Suppress Parameter Validation: Master TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master TLS/SSL Server Private Key File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Parameter Validation: Master TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master TLS/SSL Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

### Suppress Parameter Validation: Kudu Master Web UI Interface

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Master Web UI Interface parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_interface

**Required**

true

### Suppress Parameter Validation: Kudu Master Web UI Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Master Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_port

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### Kudu Service Advanced Configuration Snippet (Safety Valve) for gflagfile

**Description**

For advanced use only, a string to be inserted into gflagfile. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

gflagfile\_service\_safety\_valve

**Required**

false

#### Kudu Service Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties

**Description**

For advanced use only, a string to be inserted into kudu-monitoring.properties. Applies to configurations of all roles in this service except client configuration.

**Related Name**

**Default Value****API Name**`kudu-monitoring.properties_service_safety_valve`**Required**`false`**Kudu Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**`KUDU_service_env_safety_valve`**Required**`false`**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**`kudu`**API Name**`process_groupname`**Required**`true`**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**`kudu`**API Name**`process_username`**Required**`true`**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****Enable Core Dump****Description**

Used to generate a core dump to get more information about a Kudu crash. Unless otherwise configured systemwide using `/proc/sys/kernel/core_pattern`, the dump is generated in the configured core dump directory. The core file can be very large.

**Related Name**

enable\_core\_dump

**Default Value**

false

**API Name**

enable\_core\_dump

**Required**

true

**Enable Secure Authentication, Encryption, And Web UI****Description**

Enable secure authentication and encryption between all Kudu clients and servers as well as between individual servers. Also enables secure authentication in every Kudu server's web UI. Kerberos must be configured.

**Related Name**

enable\_security

**Default Value**

false

**API Name**

enable\_security

**Required**

true

### Maximum Number of Per-tablet-server Replica Moves

**Description**

Maximum number of replica moves to perform concurrently on one tablet server: moves of replicas to the server and moves of replicas off of the server count against this limit.

**Related Name**

rb\_max\_moves\_per\_server

**Default Value**

5

**API Name**

rb\_max\_moves\_per\_server

**Required**

false

### Maximum Allowed Runtime of the Rebalancing Tool

**Description**

Maximum time to run the rebalancing, in seconds. Specifying 0 means not imposing any limit on the rebalancing run time.

**Related Name**

rb\_max\_run\_time\_sec

**Default Value**

0

**API Name**

rb\_max\_run\_time\_sec

**Required**

false

### Maximum Allowed Duration Without Rebalancer Progress

**Description**

Maximum duration of the 'staleness' interval where the rebalance can not make progress. If this period elapses without the rebalancer making progress, it will exit indicating failure. This may happen in case of a persistent problem with the cluster or when some unexpected concurrent activity is present (such as automatic recovery of failed replicas, etc.)

**Related Name**

rb\_max\_staleness\_interval\_sec

**Default Value**

300

**API Name**

rb\_max\_staleness\_interval\_sec

**Required**

false

### Maximum Allowed Runtime to Rolling Restart a Batch of Servers

**Description**

Maximum time to allow for the restart of a batch of servers during a rolling restart. If this period elapses without the cluster becoming healthy, the rolling restart will exit indicating failure. This may happen if there is a persistent problem with the cluster.

**Related Name**

rr\_batch\_time\_limit\_sec

**Default Value**

1800

**API Name**

rr\_batch\_time\_limit\_sec

**Required**

false

**Rolling Restart Health Check Interval****Description**

Interval in seconds with which to check the health of a cluster in waiting for a server or batch of servers to come back online, before moving onto the next server or batch of servers during a rolling restart.

**Related Name**

rr\_health\_check\_interval\_sec

**Default Value**

60

**API Name**

rr\_health\_check\_interval\_sec

**Required**

false

**Sentry Service****Description**

Name of the Sentry service that this Kudu service instance depends on

**Related Name****Default Value****API Name**

sentry\_service

**Required**

false

**Superuser Access Control List****Description**

The list of usernames to allow as super users, comma-separated. A '\*' entry indicates that all authenticated users are allowed. If this is left unset or blank, the default behavior is that the identity of the daemon itself determines the superuser. If the daemon is logged in from a Keytab, then the local username from the Kerberos principal is used; otherwise, the local Unix username is used.

**Related Name**

superuser\_acl

**Default Value****API Name**

superuser\_acl

**Required**

false

### User Access Control List

#### Description

The list of usernames who may access the cluster, comma-separated. A '\*' entry indicates that all authenticated users are allowed.

#### Related Name

user\_acl

#### Default Value

\*

#### API Name

user\_acl

#### Required

false

### Security

#### Kerberos Principal

##### Description

Kerberos principal short name used by all roles of this service.

##### Related Name

##### Default Value

kudu

##### API Name

kerberos\_princ\_name

##### Required

true

### Suppressions

#### Suppress Configuration Validator: Kudu Tablet Server Block Cache Capacity

##### Description

Whether to suppress configuration warnings produced by the Kudu Tablet Server Block Cache Capacity configuration validator.

##### Related Name

##### Default Value

false

##### API Name

role\_config\_suppression\_block\_cache\_capacity\_mb

##### Required

true

#### Suppress Configuration Validator: CDH Version Validator

##### Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Default Number of Replicas****Description**

Whether to suppress configuration warnings produced by the Default Number of Replicas configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_default\_num\_replicas

**Required**

true

**Suppress Configuration Validator: Kudu Master Data Directories****Description**

Whether to suppress configuration warnings produced by the Kudu Master Data Directories configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_data\_dirs

**Required**

true

**Suppress Configuration Validator: Kudu Master WAL Directory****Description**

Whether to suppress configuration warnings produced by the Kudu Master WAL Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_wal\_dir

**Required**

true

### Suppress Configuration Validator: Master Advanced Configuration Snippet (Safety Valve) for gflagfile

**Description**

Whether to suppress configuration warnings produced by the Master Advanced Configuration Snippet (Safety Valve) for gflagfile configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gflagfile\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties

**Description**

Whether to suppress configuration warnings produced by the Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu-monitoring.properties\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Master Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Master Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu\_master\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Tablet Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Tablet Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_kudu\_tserver\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Master Log Directory****Description**

Whether to suppress configuration warnings produced by the Master Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Kudu Tablet Server Maintenance Threads****Description**

Whether to suppress configuration warnings produced by the Kudu Tablet Server Maintenance Threads configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_maintenance\_manager\_num\_threads

**Required**

true

**Suppress Configuration Validator: Master Address****Description**

Whether to suppress configuration warnings produced by the Master Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_master\_address

**Required**

true

**Suppress Configuration Validator: Kudu Master Core Dump Directory****Description**

Whether to suppress configuration warnings produced by the Kudu Master Core Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_master\_core\_dump\_directory

**Required**

true

**Suppress Configuration Validator: Kudu Tablet Server Hard Memory Limit****Description**

Whether to suppress configuration warnings produced by the Kudu Tablet Server Hard Memory Limit configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_memory\_limit\_hard\_bytes

**Required**

true

**Suppress Configuration Validator: Kudu Metrics URL Parameters****Description**

Whether to suppress configuration warnings produced by the Kudu Metrics URL Parameters configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics\_url\_parameters

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Configuration Validator: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Configuration Validator: Master TLS/SSL Server CA Certificate (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the Master TLS/SSL Server CA Certificate (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

### Suppress Configuration Validator: Master TLS/SSL Server Certificate File (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the Master TLS/SSL Server Certificate File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

### Suppress Configuration Validator: Master TLS/SSL Server Private Key File (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the Master TLS/SSL Server Private Key File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ssl_server_privatekey_location`**Required**`true`**Suppress Configuration Validator: Master TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the Master TLS/SSL Private Key Password configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ssl_server_privatekey_password`**Required**`true`**Suppress Configuration Validator: Kudu Tablet Server Core Dump Directory****Description**

Whether to suppress configuration warnings produced by the Kudu Tablet Server Core Dump Directory configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_tserver_core_dump_directory`**Required**`true`**Suppress Configuration Validator: Kudu Master Web UI Interface****Description**

Whether to suppress configuration warnings produced by the Kudu Master Web UI Interface configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_webserver_interface`**Required**`true`**Suppress Configuration Validator: Kudu Master Web UI Port****Description**

Whether to suppress configuration warnings produced by the Kudu Master Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_port

**Required**

true

**Suppress Parameter Validation: Kudu Service Advanced Configuration Snippet (Safety Valve) for gflagfile****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Service Advanced Configuration Snippet (Safety Valve) for gflagfile parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gflagfile\_service\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: Kudu Service Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Service Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kudu-monitoring.properties\_service\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Master Count Validator

**Description**

Whether to suppress configuration warnings produced by the Master Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kudu\_master\_count\_validator

**Required**

true

### Suppress Parameter Validation: Kudu Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kudu\_service\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Tablet Server Count Validator

**Description**

Whether to suppress configuration warnings produced by the Tablet Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kudu\_tserver\_count\_validator

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Superuser Access Control List****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Superuser Access Control List parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_superuser\_acl

**Required**

true

**Suppress Parameter Validation: User Access Control List****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the User Access Control List parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_user\_acl

**Required**

true

**Tablet Server****Advanced****Tablet Server Advanced Configuration Snippet (Safety Valve) for gflagfile****Description**

For advanced use only. A string to be inserted into gflagfile for this role only.

**Related Name****Default Value****API Name**

gflagfile\_role\_safety\_valve

**Required**

false

**Tablet Server Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties****Description**

For advanced use only. A string to be inserted into kudu-monitoring.properties for this role only.

**Related Name****Default Value****API Name**

kudu-monitoring.properties\_role\_safety\_valve

**Required**

false

### Tablet Server Environment Advanced Configuration Snippet (Safety Valve)

#### Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

#### Related Name

#### Default Value

#### API Name

KUDU\_TSERVER\_role\_env\_safety\_valve

#### Required

false

### Automatically Restart Process

#### Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

#### Related Name

#### Default Value

false

#### API Name

process\_auto\_restart

#### Required

true

### Enable Metric Collection

#### Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

#### Related Name

#### Default Value

true

#### API Name

process\_should\_monitor

#### Required

true

### Process Start Retry Attempts

#### Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

#### Related Name

**Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs****Tablet Server Maximum Log Level to Buffer****Description**

Log messages logged at this level or lower are buffered in memory.

**Related Name**

logbuflevel

**Default Value**

0

**API Name**

glog\_logbuflevel

**Required**

false

**Tablet Server Maximum Log Size****Description**

Approximate maximum log file size in megabytes before rolling to a new log file.

**Related Name**

max\_log\_size

**Default Value**

1800 MiB

**API Name**

glog\_maxlogsize

**Required**

false

### Tablet Server Minimum Log Level

**Description**

Messages logged via LOG() at a lower level than this are not logged anywhere.

**Related Name**

minloglevel

**Default Value**

0

**API Name**

glog\_minloglevel

**Required**

false

### Tablet Server Minimum Log Verbosity

**Description**

Messages logged via VLOG() at a lower verbosity than this are not logged anywhere.

**Related Name**

v

**Default Value**

0

**API Name**

glog\_verbose

**Required**

false

### Tablet Server Log Directory

**Description**

The log directory for log files of the role Tablet Server.

**Related Name**

log\_dir

**Default Value**

/var/log/kudu

**API Name**

log\_dir

**Required**

false

## Monitoring

### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

kudu\_tserver\_fd\_thresholds

**Required**

false

**Tablet Server Host Health Test****Description**

When computing the overall Tablet Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

kudu\_tserver\_host\_health\_enabled

**Required**

false

**Tablet Server Process Health Test****Description**

Enables the health test that the Tablet Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

kudu\_tserver\_scm\_health\_enabled

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name**

**Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Kudu Tablet Server Block Cache Capacity****Description**

Maximum amount of memory allocated to the Kudu Tablet Server's block cache.

**Related Name**

block\_cache\_capacity\_mb

**Default Value**

512 MiB

**API Name**

block\_cache\_capacity\_mb

**Required**

true

### Tablet Server Diagnostics Collection Timeout

**Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name****Default Value**

1 minute(s)

**API Name**

csd\_role\_diagnostics\_timeout

**Required**

false

### Kudu Tablet Server Data Directories

**Description**

Directories where Kudu tablet servers will store data blocks.

**Related Name**

fs\_data\_dirs

**Default Value****API Name**

fs\_data\_dirs

**Required**

true

### Kudu Tablet Server WAL Directory

**Description**

Directory where Kudu tablet servers will store write-ahead logs. It can be the same as one of the data directories, but not a sub-directory of a data directory. Master and tablet servers must use different directories when co-located on the same machine.

**Related Name**

fs\_wal\_dir

**Default Value****API Name**

fs\_wal\_dir

**Required**

true

### Kudu Tablet Server WAL Fsyncs All Entries

**Description**

If true, the Tablet Server will use the fsync system call to ensure that all writes are durably written to the write-ahead log (WAL) before responding. If false, edits will be written to the Linux buffer cache on a majority of replicas before responding.

**Related Name**

log\_force\_fsync\_all

**Default Value**

false

**API Name**

log\_force\_fsync\_all

**Required**

true

**Kudu Tablet Server Maintenance Threads****Description**

The number of threads devoted to background maintenance operations such as flushes and compactions. If the tablet server appears to be falling behind on write operations (inserts, updates, and deletes) but CPU and disk resources are not saturated, increasing this thread count will devote more resources to these background operations.

**Related Name**

maintenance\_manager\_num\_threads

**Default Value**

1

**API Name**

maintenance\_manager\_num\_threads

**Required**

true

**Kudu Tablet Server Hard Memory Limit****Description**

Maximum amount of memory that the Kudu Tablet Server will use before it starts rejecting all incoming writes.

**Related Name**

memory\_limit\_hard\_bytes

**Default Value**

4 GiB

**API Name**

memory\_limit\_hard\_bytes

**Required**

true

**Kudu Metrics URL Parameters****Description**

The URL query parameters to append to the `/metrics` URL when collecting Kudu metrics.

**Related Name**

metrics\_url\_parameters

**Default Value**

compact=1&level=info

**API Name**

metrics\_url\_parameters

**Required**

true

**Tablet History Max Age****Description**

The maximum amount of time, in seconds, to preserve tablet data history, including history required to perform diff scans and incremental backups. The duration defined by this parameter is also the maximum amount of time it is possible to wait after a full or incremental backup before performing the next incremental backup. Setting the value to -1 disables history removal.

**Related Name**

tablet\_history\_max\_age\_sec

**Default Value**

7 day(s)

**API Name**

tablet\_history\_max\_age\_sec

**Required**

true

**Tablet Server Quiescing Interval****Description**

Interval in seconds with which to check whether a Tablet Server has fully quiesced

**Related Name**

ts\_quiescing\_retry\_interval\_sec

**Default Value**

30

**API Name**

ts\_quiescing\_retry\_interval\_sec

**Required**

false

**Maximum Allowed Runtime to Quiesce a Tablet Server****Description**

Maximum time to wait for a Tablet Server to fully quiesce, relinquishing leadership of all Tablets and completion of all active scans.

**Related Name**

ts\_quiescing\_time\_limit\_sec

**Default Value**

1800

**API Name**

ts\_quiescing\_time\_limit\_sec

**Required**

false

**Kudu Tablet Server Core Dump Directory****Description**

If Enable Core Dump is set, Kudu Tablet Servers will dump cores to this location.

**Related Name**

tserver\_core\_dump\_directory

**Default Value**

/var/log/kudu

**API Name**

tserver\_core\_dump\_directory

**Required**

true

**Kudu Tablet Server Web UI Interface****Description**

The interface of the Kudu Tablet Server Web UI. If blank, binds to 0.0.0.0.

**Related Name**

webserver\_interface

**Default Value****API Name**

webserver\_interface

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Kudu Tablet Server Web UI Port****Description**

The port of the Kudu Tablet Server Web UI.

**Related Name**

webserver\_port

**Default Value**

8050

**API Name**

webserver\_port

**Required**

true

**Resource Management**

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

#### Enable TLS/SSL for Tablet Server

**Description**

Encrypt communication between clients and Tablet Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### Tablet Server TLS/SSL Server CA Certificate (PEM Format)

**Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

**Related Name****Default Value****API Name**

ssl\_server\_ca\_certificate\_location

**Required**

false

### Tablet Server TLS/SSL Server Certificate File (PEM Format)

**Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

webserver\_certificate\_file

**Default Value****API Name**

ssl\_server\_certificate\_location

**Required**

false

### Tablet Server TLS/SSL Server Private Key File (PEM Format)

**Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

webserver\_private\_key\_file

**Default Value****API Name**

ssl\_server\_privatekey\_location

**Required**

false

### Tablet Server TLS/SSL Private Key Password

**Description**

The password for the private key in the Tablet Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

**Related Name**

webserver\_private\_key\_password\_cmd

**Default Value****API Name**

ssl\_server\_privatekey\_password

**Required**

false

**Suppressions****Suppress Parameter Validation: Kudu Tablet Server Block Cache Capacity****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Block Cache Capacity parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_block\_cache\_capacity\_mb

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server Data Directories****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Data Directories parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_data\_dirs

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server WAL Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server WAL Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_wal\_dir

**Required**

true

**Suppress Parameter Validation: Tablet Server Advanced Configuration Snippet (Safety Valve) for gflagfile****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Advanced Configuration Snippet (Safety Valve) for gflagfile parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gflagfile\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Tablet Server Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu-monitoring.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Tablet Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu\_tserver\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Tablet Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server Maintenance Threads****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Maintenance Threads parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_maintenance\_manager\_num\_threads

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server Hard Memory Limit****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Hard Memory Limit parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_memory\_limit\_hard\_bytes

**Required**

true

**Suppress Parameter Validation: Kudu Metrics URL Parameters****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Metrics URL Parameters parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics\_url\_parameters

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Tablet Server TLS/SSL Server CA Certificate (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Server CA Certificate (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

**Suppress Parameter Validation: Tablet Server TLS/SSL Server Certificate File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Server Certificate File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

**Suppress Parameter Validation: Tablet Server TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Server Private Key File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Parameter Validation: Tablet Server TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server Core Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Core Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_tserver\_core\_dump\_directory

**Required**

true

### Suppress Parameter Validation: Kudu Tablet Server Web UI Interface

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Web UI Interface parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_interface

**Required**

true

### Suppress Parameter Validation: Kudu Tablet Server Web UI Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_port

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_unexpected\_exits

**Required**

true

## Livy Properties in Cloudera Runtime 7.1

Role groups:

### Gateway

#### Advanced

#### Deploy Directory

**Description**

The directory where the client configs will be deployed

**Related Name****Default Value**

/etc/livy

**API Name**

client\_config\_root\_dir

**Required**

true

### Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf

**Description**

For advanced use only, a string to be inserted into the client configuration for livy-conf/livy-client.conf.

**Related Name****Default Value****API Name**

livy-conf/livy-client.conf\_client\_config\_safety\_valve

**Required**

false

### Monitoring

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Other

#### Alternatives Priority

**Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

**Related Name****Default Value**

50

**API Name**

client\_config\_priority

**Required**

true

### Security

#### Gateway TLS/SSL Client Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This is used when Gateway is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

livy.truststore

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Gateway TLS/SSL Client Trust Store Password****Description**

The password for the Gateway TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

livy.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Parameter Validation: Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy-conf/livy-client.conf\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Gateway TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Gateway TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Livy Server****Advanced**

### Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf

**Description**

For advanced use only. A string to be inserted into livy-conf/livy.conf for this role only.

**Related Name****Default Value****API Name**

livy-conf/livy.conf\_role\_safety\_valve

**Required**

false

### Livy Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

LIVY\_SERVER\_role\_env\_safety\_valve

**Required**

false

### Livy Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs****Livy Server Log Directory****Description**

The log directory for log files of the role Livy Server.

**Related Name**

log\_dir

**Default Value**

/var/log/livy

**API Name**

log\_dir

**Required**

false

**Livy Server Logging Threshold****Description**

The minimum log level for Livy Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Livy Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Livy Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Livy Server Max Log Size****Description**

The maximum size, in megabytes, per log file for Livy Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name**

**Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

livy\_server\_fd\_thresholds

**Required**

false

**Livy Server Host Health Test****Description**

When computing the overall Livy Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

livy\_server\_host\_health\_enabled

**Required**

false

**Livy Server Process Health Test****Description**

Enables the health test that the Livy Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

livy\_server\_scm\_health\_enabled

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO`

health:bad", "streamThreshold": 0, "enabled": "true"}}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Enable Access Control****Description**

Perform access control when processing user requests.

**Related Name**

livy.server.access-control.enabled

**Default Value**

true

**API Name**

livy\_access\_control\_enabled

**Required**

false

**Admin Users****Description**

List of users with admin permissions (can view and modify any session).

**Related Name**

livy.superusers

**Default Value**

knox zeppelin

**API Name**

livy\_admin\_users

**Required**

false

**Extra JVM Options****Description**

Command line options to add to the Livy Server JVM. May be used also to override options automatically added by CM.

**Related Name**

livy\_extra\_java\_opts

**Default Value****API Name**

livy\_extra\_java\_opts

**Required**

false

**Enable User Impersonation****Description**

Start applications as the requesting user, instead of using the Livy account.

**Related Name**

livy.impersonation.enabled

**Default Value**

true

**API Name**

livy\_impersonation\_enabled

**Required**

false

**Max Header Size****Description**

Maximum size of a header field accepted by the Livy server. May need to be increased in certain environments where SPNEGO is enabled.

**Related Name**

livy.server.request-header.size

**Default Value**

128 KiB

**API Name**

livy\_max\_header\_size

**Required**

false

**Java Heap Size of Livy Server****Description**

Maximum size for the Java process heap memory.

**Related Name**

livy\_max\_heapsize

**Default Value**

512 MiB

**API Name**

livy\_max\_heapsize

**Required**

false

**Enable RPC Encryption****Description**

Enable encryption of communication between the Livy session and managed Spark sessions.

**Related Name**

livy\_rpc\_encryption\_enabled

**Default Value**

true

**API Name**

livy\_rpc\_encryption\_enabled

**Required**

false

**Enable Livy Thrift Server****Description**

Enables the Livy Thrift server

**Related Name**

livy.server.thrift.enabled

**Default Value**

false

**API Name**

livy\_server\_thrift\_enabled

**Required**

false

**Livy Thrift Server Transport Mode****Description**

Transport mode used by the Livy Thrift server

**Related Name**

livy.server.thrift.transport.mode

**Default Value**

binary

**API Name**

livy\_server\_thrift\_transport\_mode

**Required**

false

### Enable Session Recovery

**Description**

Enable recovery of live sessions when the Livy server restarts. Uses HDFS to store recovery information.

**Related Name**

livy\_session\_recovery\_enabled

**Default Value**

true

**API Name**

livy\_session\_recovery\_enabled

**Required**

false

### Enable User Authentication

**Description**

Enables user authentication using SPNEGO when Kerberos is enabled.

**Related Name**

livy\_spnego\_enabled

**Default Value**

true

**API Name**

livy\_spnego\_enabled

**Required**

false

### Performance

#### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Livy Server Port****Description**

The port of the Livy server

**Related Name**

livy.server.port

**Default Value**

8998

**API Name**

livy\_server\_port

**Required**

false

**Livy Thrift Server Port****Description**

The port of the Livy Thrift server

**Related Name**

livy.server.thrift.port

**Default Value**

10090

**API Name**

livy\_server\_thrift\_port

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

#### Enable TLS/SSL for Livy Server

**Description**

Encrypt communication between clients and Livy Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

livy.tls.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

#### Livy Server TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Livy Server is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

livy.keystore

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

#### Livy Server TLS/SSL Server JKS Keystore File Password

**Description**

The password for the Livy Server JKS keystore file.

**Related Name**

livy.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

#### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy-conf/livy.conf\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Admin Users

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_admin\_users

**Required**

true

### Suppress Parameter Validation: Extra JVM Options

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Extra JVM Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_extra\_java\_opts

**Required**

true

### Suppress Parameter Validation: Livy Server Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_port

**Required**

true

**Suppress Parameter Validation: Livy Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Livy Thrift Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Thrift Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_thrift\_port

**Required**

true

**Suppress Parameter Validation: Livy Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Livy Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Livy Server TLS/SSL Server JKS Keystore File Location

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server TLS/SSL Server JKS Keystore File Location parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_server\_keystore\_location

#### Required

true

### Suppress Parameter Validation: Livy Server TLS/SSL Server JKS Keystore File Password

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server TLS/SSL Server JKS Keystore File Password parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_server\_keystore\_password

#### Required

true

### Suppress Parameter Validation: Stacks Collection Directory

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_stacks\_collection\_directory

#### Required

true

### Suppress Health Test: Audit Pipeline Test

#### Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### Livy Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

LIVY\_service\_env\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

livy

**API Name**

process\_groupname

**Required**

true

**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**

livy

**API Name**

process\_username

**Required**

true

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

#### Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

#### Related Name

#### Default Value

false

#### API Name

enable\_config\_alerts

#### Required

false

### Livy Server Role Health Test

#### Description

When computing the overall LIVY health, consider Livy Server's health

#### Related Name

#### Default Value

true

#### API Name

LIVY\_LIVY\_SERVER\_health\_enabled

#### Required

false

### Service Triggers

#### Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Default Value

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****HMS Service****Description**

Name of the HMS service that this Livy service instance depends on

**Related Name****Default Value****API Name**

hms\_service

**Required**

false

**Recovery Directory (HDFS)****Description**

Location where to store recovery metadata.

**Related Name**

livy.server.recovery.state-store.url

**Default Value**

/user/livy/recovery

**API Name**

livy\_recovery\_dir

**Required**

false

**SPARK\_ON\_YARN Service****Description**

Name of the SPARK\_ON\_YARN service that this Livy service instance depends on

**Related Name**

**Default Value****API Name**

spark\_on\_yarn\_service

**Required**

true

**YARN Service****Description**

Name of the YARN service that this Livy service instance depends on

**Related Name****Default Value****API Name**

yarn\_service

**Required**

true

**Security****Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

livy

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

### Suppress Configuration Validator: Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf

**Description**

Whether to suppress configuration warnings produced by the Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy-conf/livy-client.conf\_client\_config\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf

**Description**

Whether to suppress configuration warnings produced by the Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy-conf/livy.conf\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Admin Users

**Description**

Whether to suppress configuration warnings produced by the Admin Users configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_admin\_users

**Required**

true

**Suppress Configuration Validator: Extra JVM Options****Description**

Whether to suppress configuration warnings produced by the Extra JVM Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_extra\_java\_opts

**Required**

true

**Suppress Configuration Validator: Livy Server Port****Description**

Whether to suppress configuration warnings produced by the Livy Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_port

**Required**

true

**Suppress Configuration Validator: Livy Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Livy Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Livy Thrift Server Port****Description**

Whether to suppress configuration warnings produced by the Livy Thrift Server Port configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_thrift\_port

**Required**

true

**Suppress Configuration Validator: Livy Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Livy Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Livy Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Livy Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Gateway TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the Gateway TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Gateway TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Gateway TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Livy Server TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Livy Server TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Livy Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Livy Server TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: Recovery Directory (HDFS)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recovery Directory (HDFS) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_livy\_recovery\_dir

**Required**

true

**Suppress Configuration Validator: Livy Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Livy Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_livy\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: Livy Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_livy\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

#### Required

true

### Suppress Health Test: Livy Server Health

#### Description

Whether to suppress the results of the Livy Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

service\_health\_suppression\_livy\_livy\_livy\_server\_health

#### Required

true

## Oozie Properties in Cloudera Runtime 7.1

Role groups:

### Oozie Server

#### Advanced

### Oozie Server Logging Advanced Configuration Snippet (Safety Valve)

#### Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

#### Related Name

#### Default Value

#### API Name

log4j\_safety\_valve

#### Required

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

`oom_heap_dump_dir`

**Default Value**

`/tmp`

**API Name**

`oom_heap_dump_dir`

**Required**

`false`

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

`true`

**API Name**

`oom_heap_dump_enabled`

**Required**

`true`

### Kill When Out of Memory

**Description**

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

`true`

**API Name**

`oom_sigkill_enabled`

**Required**

`true`

### Oozie Server Advanced Configuration Snippet (Safety Valve) for `action-conf/default.xml`

**Description**

For advanced use only. A string to be inserted into `action-conf/default.xml` for this role only.

**Related Name****Default Value**

**API Name**

oozie\_action\_config\_default\_safety\_valve

**Required**

false

**Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml****Description**

For advanced use only. A string to be inserted into oozie-site.xml for this role only.

**Related Name****Default Value****API Name**

oozie\_config\_safety\_valve

**Required**

false

**Oozie ActionService Executor Extension Classes****Description**

Comma-separated list of ActionService executor extension classes. Only action types with associated executors can be used in workflows. For CDH 5.4 and higher, this parameter is used only to specify additional classes for workflows. All executor extension classes included in that release will be added automatically and do not need to be specified.

**Related Name**

oozie.service.ActionService.executor.ext.classes

**Default Value****API Name**

oozie\_executor\_extension\_classes

**Required**

false

**Java Configuration Options for Oozie Server****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value**

```
-XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -
XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -XX:MaxMetaspaceFreeRatio=80
-XX:+DisableExplicitGC
```

**API Name**

oozie\_java\_opts

**Required**

false

### Directory For JSP Temp Files

**Description**

Directory to use to for temporary JSP file storage.

**Related Name**

oozie.jsp.tmp.dir

**Default Value**

/tmp

**API Name**

oozie\_jsp\_tmp\_dir

**Required**

false

### Default Launcher Max Attempts

**Description**

The default YARN maximal attempt count of the Launcher ApplicationMaster.

**Related Name**

oozie.launcher.default.max.attempts

**Default Value**

2

**API Name**

oozie\_launcher\_default\_max\_attempts

**Required**

false

### Default Launcher Memory

**Description**

The default amount of memory in MiB that is allocated for the Launcher ApplicationMasters.

**Related Name**

oozie.launcher.default.memory.mb

**Default Value**

2 GiB

**API Name**

oozie\_launcher\_default\_memory

**Required**

false

### Default Launcher Queue

**Description**

The default YARN pool where the Launcher ApplicationMaster is placed.

**Related Name**

oozie.launcher.default.queue

**Default Value**

default

**API Name**

oozie\_launcher\_default\_queue

**Required**

false

**Oozie Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

OOZIE\_SERVER\_role\_env\_safety\_valve

**Required**

false

**Oozie HTTP Request Header Size****Description**

Controls the size of the HTTP request header.

**Related Name**

oozie.http.request.header.size

**Default Value**

64 KiB

**API Name**

oozie\_service\_http\_request\_header\_size

**Required**

false

**Oozie HTTP Response Header Size****Description**

Controls the size of the HTTP response header.

**Related Name**

oozie.http.response.header.size

**Default Value**

64 KiB

**API Name**

oozie\_service\_http\_response\_header\_size

**Required**

false

**Oozie SchemaService Workflow Extension Schemas****Description**

Comma-separated list of SchemaService workflow extension schemas for additional action types. From CDH 5.4 and higher, this parameter is used only to specify additional schemas for workflows. All schemas included in that release will be added automatically and do not need to be specified.

**Related Name**

oozie.service.SchemaService.wf.ext.schemas

**Default Value****API Name**

oozie\_workflow\_extension\_schemas

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Database

#### Oozie Server Data Directory

**Description**

Directory where the Oozie Server places its data. Only applicable when using Derby as the database type.

**Related Name****Default Value**

/var/lib/oozie/data

**API Name**

oozie\_data\_dir

**Required**

false

#### Oozie Server Database Host

**Description**

Hostname of the database used by Oozie Server. If the port is non-default for your database type, use host:port notation. Does not apply if you are using Derby as the database type.

**Related Name****Default Value**

localhost

**API Name**

oozie\_database\_host

**Required**

false

#### Oozie Server Database Name

**Description**

Name of the database used by Oozie Server.

**Related Name****Default Value**

oozie

**API Name**

oozie\_database\_name

**Required**

false

**Oozie Server Database Password****Description**

Password for connecting to the database used by Oozie Server. Does not apply if you are using Derby as the database type.

**Related Name**

oozie.service.JPIService.jdbc.password

**Default Value****API Name**

oozie\_database\_password

**Required**

false

**Oozie Server Database Type****Description**

Type of the database used by Oozie Server.

**Related Name****Default Value**

derby

**API Name**

oozie\_database\_type

**Required**

false

**Oozie Server Database User****Description**

Username for connecting to the database used by Oozie Server. Does not apply if you are using Derby as the database type.

**Related Name**

oozie.service.JPIService.jdbc.username

**Default Value**

sa

**API Name**

oozie\_database\_user

**Required**

false

**Logs****Oozie Server Logging Threshold****Description**

The minimum log level for Oozie Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### Oozie Server Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for Oozie Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

720

**API Name**

max\_log\_backup\_index

**Required**

false

### Oozie Server Log Directory

**Description**

Directory where Oozie Server will place its log files.

**Related Name****Default Value**

/var/log/oozie

**API Name**

oozie\_log\_dir

**Required**

false

### Monitoring

#### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Heap Dump Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**`log_directory_free_space_absolute_thresholds`**Required**`false`**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**`Warning: Never, Critical: Never`**API Name**`log_directory_free_space_percentage_thresholds`**Required**`false`**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**`monitoring_metric_filter`**Required**`false`

### Workflow Status Metrics Collection Interval

**Description**

Workflow Status metrics collection interval.

**Related Name**

oozie.service.DBLiteWorkflowStoreService.status.metrics.collection.interval

**Default Value**

1 minute(s)

**API Name**

oozie\_job\_metric\_collection\_interval

**Required**

false

### Oozie Server Callable Queue Monitoring Threshold

**Description**

The health test thresholds of the weighted average size of the Oozie Server callable queue over a recent period. See also Oozie Server Callable Queue Monitoring Period.

**Related Name****Default Value**

Warning: 80.0 %, Critical: 95.0 %

**API Name**

oozie\_server\_callable\_queue\_threshold

**Required**

false

### Oozie Server Callable Queue Monitoring Period

**Description**

The period over which to compute the moving average of the callable queue size.

**Related Name****Default Value**

5 minute(s)

**API Name**

oozie\_server\_callable\_queue\_window

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

oozie\_server\_fd\_thresholds

**Required**

false

**Oozie Server Host Health Test****Description**

When computing the overall Oozie Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

oozie\_server\_host\_health\_enabled

**Required**

false

**Pause Duration Thresholds****Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

oozie\_server\_pause\_duration\_thresholds

**Required**

false

**Pause Duration Monitoring Period****Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

**Related Name****Default Value**

5 minute(s)

**API Name**

oozie\_server\_pause\_duration\_window

**Required**

false

**Oozie Server Process Health Test****Description**

Enables the health test that the Oozie Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

oozie\_server\_scm\_health\_enabled

**Required**

false

**Enable Oozie Server Shared Libraries Version Check****Description**

If true, enables version check for Oozie Server and installed shared libraries.

**Related Name****Default Value**

true

**API Name**

oozie\_server\_shared\_lib\_version\_check\_enabled

**Required**

false

**Web Metric Collection****Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

oozie\_server\_web\_metric\_collection\_enabled

**Required**

false

**Web Metric Collection Duration****Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

oozie\_server\_web\_metric\_collection\_thresholds

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name**

**Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### Other

### Oozie Email Action From Address

**Description**

The from address to be used for mailing all emails for Oozie email action

**Related Name**

oozie.email.from.address

**Default Value**

oozie@localhost

**API Name**

oozie\_email\_from\_address

**Required**

false

### Oozie Email Action SMTP Authentication Enabled

**Description**

Enable SMTP authentication for Oozie email action

**Related Name**

oozie.email.smtp.auth

**Default Value**

false

**API Name**

oozie\_email\_smtp\_auth

**Required**

false

### Oozie Email Action SMTP Host

**Description**

The SMTP server host to use for Oozie email action

**Related Name**

oozie.email.smtp.host

**Default Value**

localhost

**API Name**

oozie\_email\_smtp\_host

**Required**

false

**Oozie Email Action SMTP Authentication Password****Description**

SMTP password for Oozie email action

**Related Name**

oozie.email.smtp.password

**Default Value****API Name**

oozie\_email\_smtp\_password

**Required**

false

**Oozie Email Action SMTP Authentication Username****Description**

SMTP username for Oozie email action

**Related Name**

oozie.email.smtp.username

**Default Value****API Name**

oozie\_email\_smtp\_username

**Required**

false

**Oozie Server Plugins****Description**

Comma-separated list of Oozie plug-ins to be activated. If one plugin cannot be loaded, all the plugins are ignored.

**Related Name**

oozie.services.ext

**Default Value****API Name**

oozie\_plugins\_list

**Required**

false

**Maximum concurrency for a given callable type****Description**

Maximum concurrency for a given callable type.. Each command is a callable type: submit, start, run, etc.. Each action type is a callable type: MapReduce, SSH, sub-workflow, etc. All commands that use action executors (action-start, action-end. etc.) use the action type as the callable type.

**Related Name**

oozie.service.CallableQueueService.callable.concurrency

**Default Value**

10

**API Name**

oozie\_service\_callablequeueservice\_callable\_concurrency

**Required**

false

**Maximum Callable Queue Size****Description**

Maximum callable queue size

**Related Name**

oozie.service.CallableQueueService.queue.size

**Default Value**

10000

**API Name**

oozie\_service\_callablequeueservice\_queue\_size

**Required**

false

**Number Threads For Executing Callables****Description**

Number of threads used for executing callables

**Related Name**

oozie.service.CallableQueueService.threads

**Default Value**

50

**API Name**

oozie\_service\_callablequeueservice\_threads

**Required**

false

**Enable The Metrics Instrumentation Service****Description**

Whether to use the Codehale-based metrics for instrumentation. Enabling this disables the 'instrumentation' REST endpoint and enables the 'metrics' REST endpoint (*hostname:port/v2/admin/metrics*).

**Related Name****Default Value**

true

**API Name**

oozie\_use\_metric\_instrumentation

**Required**

false

### Enable Oozie Server Web Console

**Description**

If true, enables the Oozie Server web console. ExtJS 2.2 zip archive must be extracted to /var/lib/oozie on the same host as the Oozie Server.

**Related Name****Default Value**

false

**API Name**

oozie\_web\_console

**Required**

false

### Days to Keep Completed Bundle Jobs

**Description**

Completed bundle jobs older than this value, in days, will be purged by the PurgeService.

**Related Name**

oozie.service.PurgeService.bundle.older.than

**Default Value**

7 day(s)

**API Name**

purgeservice\_bundle\_older\_than

**Required**

false

### Days to Keep Completed Coordinator Jobs

**Description**

Completed coordinator jobs older than this value, in days, will be purged by the PurgeService.

**Related Name**

oozie.service.PurgeService.coord.older.than

**Default Value**

7 day(s)

**API Name**

purgeservice\_coord\_older\_than

**Required**

false

### Days to Keep Completed Workflow Jobs

**Description**

Completed workflow jobs older than this value, in days, will be purged by the PurgeService.

**Related Name**

oozie.service.PurgeService.older.than

**Default Value**

30 day(s)

**API Name**

purgeservice\_older\_than

**Required**

false

**Enable Purge for Long-Running Coordinator Jobs****Description**

Whether to purge completed workflows and their corresponding coordinator actions of long-running coordinator jobs if the completed workflow jobs are older than the value specified in `oozie.service.PurgeService.older.than`.

**Related Name**

`oozie.service.PurgeService.purge.old.coord.action`

**Default Value**

true

**API Name**

`purgeservice_purge_old_coord_action`

**Required**

false

**Performance****Default Launcher Virtual CPU Cores****Description**

The default number of Virtual CPU Cores that are allocated for the Launcher ApplicationMasters.

**Related Name**

`oozie.launcher.default.vcores`

**Default Value**

1

**API Name**

`oozie_launcher_default_vcores`

**Required**

false

**Oozie Server Threadpool Size****Description**

Controls the threadpool size for the Oozie Server (both Jetty and Tomcat).

**Related Name**

`oozie.server.threadpool.max.threads`

**Default Value**

150

**API Name**

`oozie_service_threadpool_max_threads`

**Required**

false

**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Oozie Email Action SMTP Port****Description**

The SMTP server port to use for Oozie email action

**Related Name**

oozie.email.smtp.port

**Default Value**

25

**API Name**

oozie\_email\_smtp\_prt

**Required**

false

**Oozie HTTP Port****Description**

Port of Oozie Server

**Related Name****Default Value**

11000

**API Name**

oozie\_http\_port

**Required**

false

**Oozie HTTPS Port****Description**

Port of the Oozie Server when using TLS/SSL.

**Related Name**

oozie.https.port

**Default Value**

11443

**API Name**

oozie\_https\_port

**Required**

false

## Resource Management

### Java Heap Size of Oozie Server in Bytes

#### Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

#### Related Name

#### Default Value

1 GiB

#### API Name

oozie\_java\_heapsize

#### Required

false

### Cgroup CPU Shares

#### Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

#### Related Name

cpu.shares

#### Default Value

1024

#### API Name

rm\_cpu\_shares

#### Required

true

### Custom Control Group Resources (overrides Cgroup settings)

#### Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

#### Related Name

custom.cgroups

#### Default Value

#### API Name

rm\_custom\_resources

#### Required

false

### Cgroup I/O Weight

#### Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

### Excluded Cipher Suites

**Description**

List of cipher suite names that should be excluded.

**Related Name**

oozie.https.exclude.cipher.suites

**Default Value**

TLS\_ECDHE\_RSA\_WITH\_RC4\_128\_SHA  
SSL\_DHE\_RSA\_EXPORT\_WITH\_DES40\_CBC\_SHA SSL\_RSA\_WITH\_DES\_CBC\_SHA  
SSL\_DHE\_RSA\_WITH\_DES\_CBC\_SHA SSL\_RSA\_EXPORT\_WITH\_RC4\_40\_MD5  
SSL\_RSA\_EXPORT\_WITH\_DES40\_CBC\_SHA SSL\_RSA\_WITH\_RC4\_128\_MD5

**API Name**

oozie\_https\_exclude\_cipher\_suites

**Required**

false

### Enabled TLS Protocols

**Description**

TLS protocols accepted by the Oozie Server.

**Related Name**

oozie.https.include.protocols

**Default Value**

SSLv2Hello, TLSv1, TLSv1.1, TLSv1.2

**API Name**

oozie\_https\_include\_protocols

**Required**

false

### Oozie TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Oozie is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

oozie.https.keystore.file

**Default Value**

/var/lib/oozie/.keystore

**API Name**

oozie\_https\_keystore\_file

**Required**

false

### Oozie TLS/SSL Server JKS Keystore File Password

**Description**

The password for the Oozie JKS keystore file.

**Related Name**

oozie.https.keystore.pass

**Default Value****API Name**

oozie\_https\_keystore\_password

**Required**

false

**Oozie TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Oozie might connect to. This is used when Oozie is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

oozie.https.truststore.file

**Default Value****API Name**

oozie\_https\_truststore\_file

**Required**

false

**Oozie TLS/SSL Client Trust Store Password****Description**

The password for the Oozie TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

oozie.https.truststore.pass

**Default Value****API Name**

oozie\_https\_truststore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Oozie Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_action\_config\_default\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Oozie Server Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_data\_dir

**Required**

true

**Suppress Parameter Validation: Oozie Server Database Host****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Database Host parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_host

**Required**

true

**Suppress Parameter Validation: Oozie Server Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Database Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_name

**Required**

true

**Suppress Parameter Validation: Oozie Server Database Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Database Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_password

**Required**

true

**Suppress Parameter Validation: Oozie Server Database User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Database User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_user

**Required**

true

### Suppress Parameter Validation: Oozie Email Action From Address

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Email Action From Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_from\_address

**Required**

true

### Suppress Parameter Validation: Oozie Email Action SMTP Host

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Email Action SMTP Host parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_host

**Required**

true

### Suppress Parameter Validation: Oozie Email Action SMTP Authentication Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Email Action SMTP Authentication Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_password

**Required**

true

### Suppress Parameter Validation: Oozie Email Action SMTP Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Email Action SMTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_prt

**Required**

true

**Suppress Parameter Validation: Oozie Email Action SMTP Authentication Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Email Action SMTP Authentication Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_username

**Required**

true

**Suppress Parameter Validation: Oozie ActionService Executor Extension Classes****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie ActionService Executor Extension Classes parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_executor\_extension\_classes

**Required**

true

**Suppress Parameter Validation: Oozie HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_http\_port

**Required**

true

**Suppress Parameter Validation: Excluded Cipher Suites****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Excluded Cipher Suites parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_exclude\_cipher\_suites

**Required**

true

**Suppress Parameter Validation: Oozie TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_keystore\_file

**Required**

true

**Suppress Parameter Validation: Oozie TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Oozie HTTPS Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie HTTPS Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_port

**Required**

true

**Suppress Parameter Validation: Oozie TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_truststore\_file

**Required**

true

**Suppress Parameter Validation: Oozie TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Java Configuration Options for Oozie Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Oozie Server parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_java\_opts

**Required**

true

**Suppress Parameter Validation: Directory For JSP Temp Files****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Directory For JSP Temp Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_jsp\_tmp\_dir

**Required**

true

### Suppress Parameter Validation: Default Launcher Queue

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Launcher Queue parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_launcher\_default\_queue

**Required**

true

### Suppress Parameter Validation: Oozie Server Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_log\_dir

**Required**

true

### Suppress Parameter Validation: Oozie Server Plugins

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Plugins parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_plugins\_list

**Required**

true

### Suppress Parameter Validation: Oozie Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Oozie SchemaService Workflow Extension Schemas****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie SchemaService Workflow Extension Schemas parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_workflow\_extension\_schemas

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_audit\_health

**Required**

true

**Suppress Health Test: Callable Queue Size****Description**

Whether to suppress the results of the Callable Queue Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_callablequeue\_size\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Pause Duration****Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_pause\_duration

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_scm\_health

**Required**

true

**Suppress Health Test: Oozie Server Shared Library Check****Description**

Whether to suppress the results of the Oozie Server Shared Library Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_shared\_lib\_version\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_unexpected\_exits

**Required**

true

**Suppress Health Test: Web Server Status****Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_web\_metric\_collection

**Required**

true

**Service-Wide****Advanced****Oozie Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

oozie\_env\_safety\_valve

**Required**

false

### System Group

**Description**

The group that this service's processes should run as.

**Related Name****Default Value**

oozie

**API Name**

process\_groupname

**Required**

true

### System User

**Description**

The user that this service's processes should run as.

**Related Name****Default Value**

oozie

**API Name**

process\_username

**Required**

true

### Database

#### Database Dump File

**Description**

File where the database gets dumped to or loaded from.

**Related Name****Default Value**

/tmp/oozie\_database\_dump.zip

**API Name**

database\_dump\_file

**Required**

false

### Monitoring

#### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Healthy Oozie Server Monitoring Thresholds****Description**

The health test thresholds of the overall Oozie Server health. The check returns "Concerning" health if the percentage of "Healthy" Oozie Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Oozie Servers falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 51.0 %

**API Name**

oozie\_servers\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "`

streamThreshold": 10, "enabled": "true"}}See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****Hive Service****Description**

Name of the Hive service that this Oozie service instance depends on. This is used to configure Oozie HCat integration.

**Related Name****Default Value****API Name**

hive\_service

**Required**

false

**MapReduce Service****Description**

Service to run MapReduce jobs against

**Related Name****Default Value****API Name**

mapreduce\_yarn\_service

**Required**

true

### Oozie Event Listeners

**Description**

List of event listeners used by the Oozie service. Listeners needed for JMS or SLA integration are automatically emitted if they are enabled.

**Related Name**

oozie.service.EventHandlerService.event.listeners

**Default Value****API Name**

oozie\_event\_listeners

**Required**

false

### JMS Broker

**Description**

URL of the JMS Broker used by the Oozie service in JMS integration is enabled.

**Related Name**

oozie.jms.producer.connection.properties

**Default Value**

tcp://localhost:61616

**API Name**

oozie\_jms\_broker

**Required**

false

### Oozie Load Balancer Hostname

**Description**

Hostname of the load balancer used if Oozie HA is enabled.

**Related Name****Default Value****API Name**

oozie\_load\_balancer

**Required**

false

### Coordinator Job Lookup Interval

**Description**

Coordinator Job Lookup trigger command is scheduled at this interval (in seconds).

**Related Name**

oozie.service.CoordMaterializeTriggerService.lookup.interval

**Default Value**

5 minute(s)

**API Name**

oozie\_service\_coord\_lookup\_interval

**Required**

false

### Coordinator Action Input Check Default Timeout

**Description**

Default timeout for a Coordinator Action input check (in minutes) for a Coordinator Job.

**Related Name**

oozie.service.coord.normal.default.timeout

**Default Value**

2 hour(s)

**API Name**

oozie\_service\_coord\_normal\_default\_timeout

**Required**

false

### ShareLib Root Directory

**Description**

Root of the directory in HDFS where the Oozie ShareLibs are stored. The libraries are stored in the share/lib subdirectory under the specified root directory.

**Related Name**

oozie.service.WorkflowAppService.system.libpath

**Default Value**

/user/oozie

**API Name**

oozie\_sharelib\_rootdir

**Required**

true

### Oozie Upload ShareLib Command Timeout

**Description**

The timeout in seconds used for the Oozie Upload ShareLib command. When the value is zero, there is no timeout for the command.

**Related Name****Default Value**

270

**API Name**

oozie\_upload\_sharelib\_cmd\_timeout

**Required**

false

### Oozie Upload ShareLib Command Concurrency Level

**Description**

The number of threads that Oozie will use for the Upload ShareLib command.

**Related Name****Default Value**

8

**API Name**

oozie\_upload\_sharelib\_concurrency

**Required**

false

**Enable JMS Integration****Description**

Whether to configure Oozie properties needed for JMS integration

**Related Name****Default Value**

false

**API Name**

oozie\_use\_jms

**Required**

false

**Enable SLA Integration****Description**

Whether to configure Oozie properties needed for SLA integration

**Related Name****Default Value**

false

**API Name**

oozie\_use\_sla

**Required**

false

**Use ACLs on Znode****Description**

Use ACLs on Znode while a secure ZooKeeper is used for Oozie High Availability. Note: This config is not emitted if ZooKeeper is not secure.

**Related Name**

oozie.zookeeper.secure

**Default Value**

true

**API Name**

oozie\_zk\_secure

**Required**

false

**ZooKeeper Namespace****Description**

Namespace used by this Oozie service in ZooKeeper when High Availability is enabled.

**Related Name**

oozie.zookeeper.namespace

**Default Value**

oozie

**API Name**

oozie\_zookeeper\_namespace

**Required**

false

**Spark on Yarn Service****Description**

Name of the Spark on Yarn service that this Oozie service instance depends on

**Related Name****Default Value****API Name**

spark\_on\_yarn\_service

**Required**

false

**ZooKeeper Service****Description**

Name of the ZooKeeper service that this Oozie service instance depends on

**Related Name****Default Value****API Name**

zookeeper\_service

**Required**

false

**Ports and Addresses****Oozie Load Balancer HTTP Port****Description**

HTTP port of the load balancer used if Oozie HA is enabled and SSL is disabled.

**Related Name****Default Value****API Name**

oozie\_load\_balancer\_http\_port

**Required**

false

**Oozie Load Balancer HTTPS Port****Description**

HTTPS port of the load balancer used if Oozie HA is enabled and SSL is enabled.

**Related Name**

**Default Value****API Name**

oozie\_load\_balancer\_https\_port

**Required**

false

**Security****Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

oozie

**API Name**

kerberos\_princ\_name

**Required**

true

**Oozie Credential Classes****Description**

A list of credential class mappings for CredentialsProvider.

**Related Name**

oozie.credentials.credentialclasses

**Default Value**hcat=org.apache.oozie.action.hadoop.HCatCredentials  
hbase=org.apache.oozie.action.hadoop.HbaseCredentials  
hive2=org.apache.oozie.action.hadoop.Hive2Credentials**API Name**

oozie\_credential\_classes

**Required**

false

**Enable TLS/SSL for Oozie****Description**

Encrypt communication between clients and Oozie using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

oozie.https.enabled

**Default Value**

false

**API Name**

oozie\_use\_ssl

**Required**

false

## Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Configuration Validator: Oozie Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Oozie Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Configuration Validator: Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml

**Description**

Whether to suppress configuration warnings produced by the Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_action\_config\_default\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml****Description**

Whether to suppress configuration warnings produced by the Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Oozie Server Data Directory****Description**

Whether to suppress configuration warnings produced by the Oozie Server Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_data\_dir

**Required**

true

**Suppress Configuration Validator: Oozie Server Database Host****Description**

Whether to suppress configuration warnings produced by the Oozie Server Database Host configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_host

**Required**

true

### Suppress Configuration Validator: Oozie Server Database Name

**Description**

Whether to suppress configuration warnings produced by the Oozie Server Database Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_name

**Required**

true

### Suppress Configuration Validator: Oozie Server Database Password

**Description**

Whether to suppress configuration warnings produced by the Oozie Server Database Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_password

**Required**

true

### Suppress Configuration Validator: Oozie Server Database User

**Description**

Whether to suppress configuration warnings produced by the Oozie Server Database User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_user

**Required**

true

### Suppress Configuration Validator: Oozie Email Action From Address

**Description**

Whether to suppress configuration warnings produced by the Oozie Email Action From Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_from\_address

**Required**

true

**Suppress Configuration Validator: Oozie Email Action SMTP Host****Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Host configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_host

**Required**

true

**Suppress Configuration Validator: Oozie Email Action SMTP Authentication Password****Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Authentication Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_password

**Required**

true

**Suppress Configuration Validator: Oozie Email Action SMTP Port****Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_prt

**Required**

true

**Suppress Configuration Validator: Oozie Email Action SMTP Authentication Username****Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Authentication Username configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_username

**Required**

true

**Suppress Configuration Validator: Oozie ActionService Executor Extension Classes****Description**

Whether to suppress configuration warnings produced by the Oozie ActionService Executor Extension Classes configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_executor\_extension\_classes

**Required**

true

**Suppress Configuration Validator: Oozie HTTP Port****Description**

Whether to suppress configuration warnings produced by the Oozie HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_http\_port

**Required**

true

**Suppress Configuration Validator: Excluded Cipher Suites****Description**

Whether to suppress configuration warnings produced by the Excluded Cipher Suites configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_exclude\_cipher\_suites

**Required**

true

**Suppress Configuration Validator: Oozie TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_keystore\_file

**Required**

true

**Suppress Configuration Validator: Oozie TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Oozie HTTPS Port****Description**

Whether to suppress configuration warnings produced by the Oozie HTTPS Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_port

**Required**

true

**Suppress Configuration Validator: Oozie TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_truststore\_file

**Required**

true

### Suppress Configuration Validator: Oozie TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_truststore\_password

**Required**

true

### Suppress Configuration Validator: Java Configuration Options for Oozie Server

**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Oozie Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_java\_opts

**Required**

true

### Suppress Configuration Validator: Directory For JSP Temp Files

**Description**

Whether to suppress configuration warnings produced by the Directory For JSP Temp Files configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_jsp\_tmp\_dir

**Required**

true

### Suppress Configuration Validator: Default Launcher Queue

**Description**

Whether to suppress configuration warnings produced by the Default Launcher Queue configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_launcher\_default\_queue

**Required**

true

**Suppress Configuration Validator: Oozie Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Oozie Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_log\_dir

**Required**

true

**Suppress Configuration Validator: Oozie Server Plugins****Description**

Whether to suppress configuration warnings produced by the Oozie Server Plugins configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_plugins\_list

**Required**

true

**Suppress Configuration Validator: Oozie Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Oozie Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Oozie SchemaService Workflow Extension Schemas****Description**

Whether to suppress configuration warnings produced by the Oozie SchemaService Workflow Extension Schemas configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_workflow\_extension\_schemas

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Parameter Validation: Database Dump File

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Dump File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_dump\_file

**Required**

true

### Suppress Parameter Validation: Kerberos Principal

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

### Suppress Parameter Validation: Oozie Credential Classes

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Credential Classes parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_credential\_classes

**Required**

true

### Suppress Parameter Validation: Oozie Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Oozie Event Listeners****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Event Listeners parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_event\_listeners

**Required**

true

**Suppress Parameter Validation: JMS Broker****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMS Broker parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_jms\_broker

**Required**

true

**Suppress Parameter Validation: Oozie Load Balancer Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer Hostname parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_load\_balancer

**Required**

true

**Suppress Parameter Validation: Oozie Load Balancer HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer HTTP Port parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_load\_balancer\_http\_port

**Required**

true

**Suppress Parameter Validation: Oozie Load Balancer HTTPS Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer HTTPS Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_load\_balancer\_https\_port

**Required**

true

**Suppress Configuration Validator: Oozie Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Oozie Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: ShareLib Root Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ShareLib Root Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_sharelib\_rootdir

**Required**

true

**Suppress Parameter Validation: ZooKeeper Namespace****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Namespace parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_zookeeper\_namespace

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

#### Required

true

### Suppress Health Test: Oozie Server Health

#### Description

Whether to suppress the results of the Oozie Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

service\_health\_suppression\_oozie\_oozie\_servers\_healthy

#### Required

true

## Ozone Properties in Cloudera Runtime 7.1

Role groups:

### Gateway

#### Advanced

#### Deploy Directory

#### Description

The directory where the client configs will be deployed

#### Related Name

#### Default Value

/etc/ozone

#### API Name

client\_config\_root\_dir

#### Required

true

### Gateway Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

**Description**

For advanced use only, a string to be inserted into the client configuration for ozone-conf/ozone-site.xml.

**Related Name****Default Value****API Name**

ozone-conf/ozone-site.xml\_client\_config\_safety\_valve

**Required**

false

### Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

**Description**

For advanced use only, a string to be inserted into the client configuration for ozone-conf/ssl-client.xml.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_client\_config\_safety\_valve

**Required**

false

## Logs

### Gateway Logging Threshold

**Description**

The minimum log level for Gateway logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Monitoring****Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Other****Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

**Related Name****Default Value**

50

**API Name**

client\_config\_priority

**Required**

true

**Security****Gateway TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This is used when Gateway is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.client.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

### Gateway TLS/SSL Client Trust Store Password

**Description**

The password for the Gateway TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.client.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Parameter Validation: Deploy Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

#### Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Gateway TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

### Suppress Parameter Validation: Gateway TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

## Ozone DataNode

### Advanced

#### Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties

**Description**

For advanced use only. A string to be inserted into ozone-conf/dn-audit-log4j2.properties for this role only.

**Related Name****Default Value****API Name**

ozone-conf/dn-audit-log4j2.properties\_role\_safety\_valve

**Required**

false

### Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

**Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

false

**Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

false

**Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

false

**Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

OZONE\_DATANODE\_role\_env\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Logs

#### Ozone DataNode Log Directory

**Description**

The log directory for log files of the role Ozone DataNode.

**Related Name**

log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

log\_dir

**Required**

false

**Ozone DataNode Logging Threshold****Description**

The minimum log level for Ozone DataNode logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Ozone DataNode Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Ozone DataNode logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Ozone DataNode Max Log Size****Description**

The maximum size, in megabytes, per log file for Ozone DataNode logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring**

### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ozone\_datanode\_fd\_thresholds

**Required**

false

### Ozone DataNode Host Health Test

**Description**

When computing the overall Ozone DataNode health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ozone\_datanode\_host\_health\_enabled

**Required**

false

### Ozone DataNode Process Health Test

**Description**

Enables the health test that the Ozone DataNode's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ozone\_datanode\_scm\_health\_enabled

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### Role Triggers

**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other**

### Datanode Ratis Metadata Directory

**Description**

This directory is used for storing Datanode Ratis metadata. Ideally, this should be mapped to a fast disk like an SSD.

**Related Name**

dfs.container.ratis.datanode.storage.dir

**Default Value**

/var/lib/hadoop-ozone/datanode/ratis/data

**API Name**

dfs.container.ratis.datanode.storage.dir

**Required**

true

### Datanode Data Directory

**Description**

Determines where on the local filesystem HDDS data will be stored.

**Related Name**

hdds.datanode.dir

**Default Value**

/var/lib/hadoop-ozone/datanode/data

**API Name**

hdds.datanode.dir

**Required**

true

### Ozone Log Directory

**Description**

Directory where Ozone DataNode logs will be written to

**Related Name**

ozone.log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

ozone.log.dir

**Required**

false

### Datanode Metadata Directory

**Description**

Determines where on the local filesystem datanode security certificates will be stored.

**Related Name**

ozone.metadata.dirs

**Default Value**

/var/lib/hadoop-ozone/datanode/ozone-metadata

**API Name**

ozone.metadata.dirs

**Required**

true

**Datanode ID Directory****Description**

Ozone Datanode ID Directory

**Related Name**

ozone.scm.datanode.id.dir

**Default Value**

/var/lib/hadoop-ozone/datanode

**API Name**

ozone.scm.datanode.id.dir

**Required**

true

**Java Heap Size of DataNode****Description**

Maximum size for the Java process heap memory.

**Related Name**

ozone\_datanode\_heap\_size

**Default Value**

4 GiB

**API Name**

ozone\_datanode\_heap\_size

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Ozone Datanode HTTP Web UI Port****Description**

The base port that the Ozone Datanode web user interface listens on. The host name is combined with this port to form the 'hdds.datanode.http-address'.

**Related Name**

ozone.datanode.http-port

**Default Value**

9882

**API Name**

ozone.datanode.http-port

**Required**

true

**Ozone Datanode Port (TLS/SSL)****Description**

The base port that the Ozone Datanode web user interface listens on when using HTTPS. The host name is combined with this port to form the 'hdds.datanode.https-address'.

**Related Name**

ozone.datanode.https-port

**Default Value**

9883

**API Name**

ozone.datanode.https-port

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Ozone DataNode TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone DataNode might connect to. This is used when Ozone DataNode is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.client.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Ozone DataNode TLS/SSL Client Trust Store Password****Description**

The password for the Ozone DataNode TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.client.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Ozone DataNode****Description**

Encrypt communication between clients and Ozone DataNode using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ozone.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Ozone DataNode TLS/SSL Server JKS Keystore Key Password****Description**

The password that protects the private key contained in the JKS keystore used when Ozone DataNode is acting as a TLS/SSL server.

**Related Name**

ssl.server.keystore.keypassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Ozone DataNode TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone DataNode is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.server.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Ozone DataNode TLS/SSL Server JKS Keystore File Password****Description**

The password for the Ozone DataNode JKS keystore file.

**Related Name**

ssl.server.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection**

### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Datanode Ratis Metadata Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis Metadata Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_dfs.container.ratis.datanode.storage.dir

**Required**

true

### Suppress Parameter Validation: Datanode Data Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.datanode.dir

**Required**

true

### Suppress Parameter Validation: Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone DataNode Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/dn-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Datanode HTTP Web UI Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Datanode HTTP Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.http-port

**Required**

true

### Suppress Parameter Validation: Ozone Datanode Port (TLS/SSL)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Datanode Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.https-port

**Required**

true

### Suppress Parameter Validation: Ozone Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ozone.log.dir`**Required**`true`**Suppress Parameter Validation: Datanode Metadata Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Metadata Directory parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.metadata.dirs`**Required**`true`**Suppress Parameter Validation: Datanode ID Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode ID Directory parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.scm.datanode.id.dir`**Required**`true`**Suppress Parameter Validation: Java Heap Size of DataNode****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of DataNode parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone_datanode_heap_size`**Required**`true`**Suppress Parameter Validation: Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_datanode\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ozone DataNode TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

### Suppress Parameter Validation: Ozone DataNode TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

### Suppress Parameter Validation: Ozone DataNode TLS/SSL Server JKS Keystore Key Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

### Suppress Parameter Validation: Ozone DataNode TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Parameter Validation: Ozone DataNode TLS/SSL Server JKS Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ssl_server_keystore_password`**Required**`true`**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_ozon_ozon_datanode_audit_health`**Required**`true`**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_ozon_ozon_datanode_file_descriptor`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_datanode\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_datanode\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_datanode\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_datanode\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_datanode\_unexpected\_exits

**Required**

true

**Ozone Manager****Advanced****Ozone Manager Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties****Description**

For advanced use only. A string to be inserted into `ozone-conf/om-audit-log4j2.properties` for this role only.

**Related Name****Default Value****API Name**

ozone-conf/om-audit-log4j2.properties\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

For advanced use only. A string to be inserted into `ozone-conf/ozone-site.xml` for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-audit.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ranger-ozone-audit.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-policymgr-ssl.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ranger-ozone-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-security.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ranger-ozone-security.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

**Related Name**

**Default Value****API Name**

ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

OZONE\_MANAGER\_role\_env\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

## Logs

### Ozone Manager Log Directory

**Description**

The log directory for log files of the role Ozone Manager.

**Related Name**

log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

log\_dir

**Required**

false

**Ozone Manager Logging Threshold****Description**

The minimum log level for Ozone Manager logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Ozone Manager Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Ozone Manager logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Ozone Manager Max Log Size****Description**

The maximum size, in megabytes, per log file for Ozone Manager logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

#### Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

#### Related Name

#### Default Value

#### API Name

`monitoring_metric_filter`

#### Required

false

### File Descriptor Monitoring Thresholds

#### Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

#### Related Name

#### Default Value

Warning: 50.0 %, Critical: 70.0 %

#### API Name

`ozone_manager_fd_thresholds`

#### Required

false

### Ozone Manager Host Health Test

#### Description

When computing the overall Ozone Manager health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ozone\_manager\_host\_health\_enabled

**Required**

false

**Ozone Manager Process Health Test****Description**

Enables the health test that the Ozone Manager's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ozone\_manager\_scm\_health\_enabled

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

`role_triggers`

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

**Other****Java Heap Size of Ozone Manager****Description**

Maximum size for the Java process heap memory.

**Related Name**

`om_max_heap_size`

**Default Value**

4 GiB

**API Name**

om\_max\_heap\_size

**Required**

false

**Ozone Log Directory****Description**

Directory where Ozone Manager logs will be written to

**Related Name**

ozone.log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

ozone.log.dir

**Required**

false

**Ozone Manager Metadata Directory****Description**

Determines where on the local filesystem Ozone Manager security certificates will be stored.

**Related Name**

ozone.metadata.dirs

**Default Value**

/var/lib/hadoop-ozone/om/ozone-metadata

**API Name**

ozone.metadata.dirs

**Required**

true

**Ozone Manager Data Directory****Description**

Directory where the OzoneManager stores its metadata.

**Related Name**

ozone.om.db.dirs

**Default Value**

/var/lib/hadoop-ozone/om/data

**API Name**

ozone.om.db.dirs

**Required**

true

**Ozone Manager HTTP Bind Hostname****Description**

The actual address the OM web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.om.http-address'.

**Related Name**

ozone.om.http-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.om.http-bind-host

**Required**

false

### Secure Ozone Manager HTTPS Bind Hostname

**Description**

The actual address the OM web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.om.https-address'.

**Related Name**

ozone.om.https-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.om.https-bind-host

**Required**

false

### Ozone Manager Ratis Storage Directory

**Description**

This directory is used for storing Ozone Manager's Ratis metadata like logs. Ideally, this should be mapped to a fast disk like an SSD.

**Related Name**

ozone.om.ratis.storage.dir

**Default Value**

/var/lib/hadoop-ozone/om/ratis

**API Name**

ozone.om.ratis.storage.dir

**Required**

true

### Ranger Ozone Plugin Conf Path

**Description**

Staging directory for Ranger Ozone Plugin Configuration. This should generally not be changed.

**Related Name**

ranger\_ozone\_plugin\_conf\_path

**Default Value**

/etc/ranger/ozone-plugin

**API Name**

ranger\_ozone\_plugin\_conf\_path

**Required**

true

**Ranger Ozone Plugin Policy Cache Directory Path****Description**

The directory where Ranger security policies are cached locally.

**Related Name**

ranger.plugin.ozone.policy.cache.dir

**Default Value**

/var/lib/ranger/ozone/policy-cache

**API Name**

ranger\_ozone\_plugin\_policy\_cache\_directory

**Required**

true

**Ranger Ozone Plugin Audit Solr Spool Directory Path****Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**

xasecure.audit.destination.solr.batch.filespool.dir

**Default Value**

/var/log/hadoop-ozone/ranger-audit/solr/spool

**API Name**

ranger\_ozone\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Ozone Manager HTTP Web UI Port****Description**

The base port that the Ozone Manager HTTP web user interface listens on. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.http-address'.

**Related Name**

ozone.om.http-port

**Default Value**

9874

**API Name**

ozone.om.http-port

**Required**

true

**Secure Ozone Manager Web UI Port (TLS/SSL)****Description**

The base port that the Ozone Manager HTTP web user interface listens on when using HTTPS. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.https-address'.

**Related Name**

ozone.om.https-port

**Default Value**

9875

**API Name**

ozone.om.https-port

**Required**

false

**Ozone Manager Ratis port****Description**

The base port that Ozone Manager's Ratis Server listens on if multiple Ozone Manager's are configured.

**Related Name**

ozone.om.ratis-port

**Default Value**

9872

**API Name**

ozone.om.ratis-port

**Required**

false

**Ozone Manager RPC port****Description**

The base port that Ozone Manager listens on when serving RPCs. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.address'.

**Related Name**

ozone.om.rpc-port

**Default Value**

9862

**API Name**

ozone.om.rpc-port

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

`rm_io_weight`**Required**`true`**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit`**Required**`true`**Security****Ozone Manager TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone Manager might connect to. This is used when Ozone Manager is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.client.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Ozone Manager TLS/SSL Client Trust Store Password****Description**

The password for the Ozone Manager TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.client.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Ozone Manager****Description**

Encrypt communication between clients and Ozone Manager using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ozone.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Ozone Manager TLS/SSL Server JKS Keystore Key Password****Description**

The password that protects the private key contained in the JKS keystore used when Ozone Manager is acting as a TLS/SSL server.

**Related Name**

ssl.server.keystore.keypassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

### Ozone Manager TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone Manager is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.server.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### Ozone Manager TLS/SSL Server JKS Keystore File Password

**Description**

The password for the Ozone Manager JKS keystore file.

**Related Name**

ssl.server.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

## Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Ozone Manager Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Manager Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Java Heap Size of Ozone Manager

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Ozone Manager parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_om\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/om-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

### Suppress Parameter Validation: Ozone Manager Metadata Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Metadata Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.metadata.dirs

**Required**

true

**Suppress Parameter Validation: Ozone Manager Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.db.dirs

**Required**

true

**Suppress Parameter Validation: Ozone Manager HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager HTTP Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.http-bind-host

**Required**

true

**Suppress Parameter Validation: Ozone Manager HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager HTTP Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.http-port

**Required**

true

**Suppress Parameter Validation: Secure Ozone Manager HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone Manager HTTPS Bind Hostname parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.https-bind-host

**Required**

true

**Suppress Parameter Validation: Secure Ozone Manager Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone Manager Web UI Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.https-port

**Required**

true

**Suppress Parameter Validation: Ozone Manager Ratis port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Ratis port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.ratis-port

**Required**

true

**Suppress Parameter Validation: Ozone Manager Ratis Storage Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Ratis Storage Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.ratis.storage.dir

**Required**

true

**Suppress Parameter Validation: Ozone Manager RPC port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager RPC port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.rpc-port

**Required**

true

### Suppress Parameter Validation: Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_manager\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Ozone Plugin Conf Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_conf\_path

**Required**

true

### Suppress Parameter Validation: Ranger Ozone Plugin Policy Cache Directory Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Policy Cache Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Ozone Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Audit Solr Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ozone Manager TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ozone Manager TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ozone Manager TLS/SSL Server JKS Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Ozone Manager TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ozone Manager TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_manager\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_manager\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_manager\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_manager\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_manager\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_manager\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_manager\_unexpected\_exits

**Required**

true

**Ozone Prometheus****Advanced****Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml****Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-prometheus.yml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ozone-prometheus.yml\_role\_safety\_valve

**Required**

false

**Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name**

**Default Value****API Name**

OZONE\_PROMETHEUS\_role\_env\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Monitoring

#### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

`ozone_prometheus_fd_thresholds`

**Required**

`false`

**Ozone Prometheus Host Health Test****Description**

When computing the overall Ozone Prometheus health, consider the host's health.

**Related Name****Default Value**

`true`

**API Name**

`ozone_prometheus_host_health_enabled`

**Required**

`false`

### Ozone Prometheus Process Health Test

#### Description

Enables the health test that the Ozone Prometheus's process state is consistent with the role configuration

#### Related Name

#### Default Value

true

#### API Name

ozone\_prometheus\_scm\_health\_enabled

#### Required

false

### Process Swap Memory Thresholds

#### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

#### Related Name

#### Default Value

Warning: 200 B, Critical: Never

#### API Name

process\_swap\_memory\_thresholds

#### Required

false

### Role Triggers

#### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Ozone Log Directory****Description**

Directory where Prometheus logs will be written to

**Related Name**

ozone.log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

ozone.log.dir

**Required**

false

**Prometheus Data Retention time.****Description**

How long to retain samples in storage. Units Supported: y, w, d, h, m, s, ms.

**Related Name**

ozone.prometheus.data.retention.time

**Default Value**

15d

**API Name**

ozone.prometheus.data.retention.time

**Required**

false

### Prometheus Data Directory

**Description**

Directory where the Prometheus Server stores its metadata.

**Related Name**

ozone.prometheus.db.dir

**Default Value**

/var/lib/hadoop-ozone/prometheus/data

**API Name**

ozone.prometheus.db.dir

**Required**

true

### Prometheus server extra flags.

**Description**

Extra command line flags that can be used while starting up the server. For example, '--query.timeout=2m --query.max-samples=5000'

**Related Name**

ozone.prometheus.extra.flags

**Default Value****API Name**

ozone.prometheus.extra.flags

**Required**

false

### Prometheus server log level.

**Description**

Only log messages with the given severity or above. One of: [debug, info, warn, error]

**Related Name**

ozone.prometheus.log.level

**Default Value**

info

**API Name**

ozone.prometheus.log.level

**Required**

false

## Performance

### Maximum Process File Descriptors

#### Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

#### Related Name

#### Default Value

#### API Name

rlimit\_fds

#### Required

false

## Ports and Addresses

### Prometheus HTTP Port

#### Description

The base port that the prometheus web user interface listens on.

#### Related Name

ozone.prometheus.http-port

#### Default Value

9090

#### API Name

ozone.prometheus.http-port

#### Required

true

## Resource Management

### Cgroup CPU Shares

#### Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

#### Related Name

cpu.shares

#### Default Value

1024

#### API Name

rm\_cpu\_shares

#### Required

true

### Custom Control Group Resources (overrides Cgroup settings)

#### Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-prometheus.yml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

**Suppress Parameter Validation: Prometheus Data Retention time.****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus Data Retention time. parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.data.retention.time

**Required**

true

**Suppress Parameter Validation: Prometheus Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.db.dir

**Required**

true

**Suppress Parameter Validation: Prometheus server extra flags.****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus server extra flags. parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.extra.flags

**Required**

true

### Suppress Parameter Validation: Prometheus HTTP Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.http-port

**Required**

true

### Suppress Parameter Validation: Prometheus server log level.

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus server log level. parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.log.level

**Required**

true

### Suppress Parameter Validation: Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_prometheus\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_prometheus\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_prometheus\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_prometheus\_host\_health

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_prometheus\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_prometheus\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_prometheus\_unexpected\_exits

**Required**

true

## Ozone Recon

### Advanced

#### Ozone Recon Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

#### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

**Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

false

### Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

false

### Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

false

### Ozone Recon Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

OZONE\_RECON\_role\_env\_safety\_valve

**Required**

false

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs****Ozone Recon Log Directory****Description**

The log directory for log files of the role Ozone Recon.

**Related Name**

log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

log\_dir

**Required**

false

**Ozone Recon Logging Threshold****Description**

The minimum log level for Ozone Recon logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Ozone Recon Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Ozone Recon logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### Ozone Recon Max Log Size

**Description**

The maximum size, in megabytes, per log file for Ozone Recon logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

### Monitoring

#### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ozone\_recon\_fd\_thresholds

**Required**

false

### Ozone Recon Host Health Test

**Description**

When computing the overall Ozone Recon health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ozone\_recon\_host\_health\_enabled

**Required**

false

### Ozone Recon Process Health Test

**Description**

Enables the health test that the Ozone Recon's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ozone\_recon\_scm\_health\_enabled

**Required**

false

### Process Swap Memory Thresholds

#### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

#### Related Name

#### Default Value

Warning: 200 B, Critical: Never

#### API Name

process\_swap\_memory\_thresholds

#### Required

false

### Role Triggers

#### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

[]

#### API Name

role\_triggers

#### Required

true

### Unexpected Exits Thresholds

#### Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

#### Related Name

#### Default Value

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Ozone Log Directory****Description**

Directory where Recon logs will be written to

**Related Name**

ozone.log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

ozone.log.dir

**Required**

false

**Recon Metadata Directory****Description**

Determines where on the local filesystem recon security certificates will be stored.

**Related Name**

ozone.metadata.dirs

**Default Value**

/var/lib/hadoop-ozone/recon/ozone-metadata

**API Name**

ozone.metadata.dirs

**Required**

true

**Recon Data Directory****Description**

Directory where the Recon Server stores its metadata.

**Related Name**

ozone.recon.db.dir

**Default Value**

/var/lib/hadoop-ozone/recon/data

**API Name**

ozone.recon.db.dir

**Required**

true

**Recon HTTP Bind Hostname****Description**

The actual address the Recon web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.recon.http-address'.

**Related Name**

ozone.recon.http-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.recon.http-bind-host

**Required**

false

**Secure Recon HTTPS Bind Hostname****Description**

The actual address the Recon web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.recon.https-address'.

**Related Name**

ozone.recon.https-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.recon.https-bind-host

**Required**

false

**Recon OzoneManager Data Directory****Description**

Directory where the Recon Server stores OzoneManager's metadata

**Related Name**

ozone.recon.om.db.dir

**Default Value**

/var/lib/hadoop-ozone/recon/om/data

**API Name**

ozone.recon.om.db.dir

**Required**

true

**Recon StorageContainerManager Data Directory****Description**

Directory where the Recon Server stores StorageContainerManager's metadata

**Related Name**

ozone.recon.scm.db.dirs

**Default Value**

/var/lib/hadoop-ozonerecon/scm/data

**API Name**

ozone.recon.scm.db.dirs

**Required**

true

**Java Heap Size of Recon****Description**

Maximum size for the Java process heap memory.

**Related Name**

ozone\_recon\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

ozone\_recon\_max\_heap\_size

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Recon HTTP Web UI Port****Description**

The base port that the Recon web user interface listens on. The host name of the Recon web user interface is combined with this port to form the 'ozone.recon.http-address'.

**Related Name**

ozone.recon.http-port

**Default Value**

9888

**API Name**

ozone.recon.http-port

**Required**

true

**Secure Recon Web UI Port (TLS/SSL)****Description**

The base port that the Recon web user interface listens on when using HTTPS. The host name of the Recon web user interface is combined with this port to form the 'ozone.recon.https-address'.

**Related Name**

ozone.recon.https-port

**Default Value**

9889

**API Name**

ozone.recon.https-port

**Required**

false

**Recon RPC Port****Description**

The base port that Recon listens on when serving RPCs. The host name of Recon is combined with this port to form the 'ozone.recon.address'.

**Related Name**

ozone.recon.rpc-port

**Default Value**

9891

**API Name**

ozone.recon.rpc-port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit`**Required**`true`**Security****Ozone Recon TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone Recon might connect to. This is used when Ozone Recon is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**`ssl.client.truststore.location`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Ozone Recon TLS/SSL Client Trust Store Password****Description**

The password for the Ozone Recon TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**`ssl.client.truststore.password`**Default Value**

**API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Ozone Recon****Description**

Encrypt communication between clients and Ozone Recon using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ozone.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Ozone Recon TLS/SSL Server JKS Keystore Key Password****Description**

The password that protects the private key contained in the JKS keystore used when Ozone Recon is acting as a TLS/SSL server.

**Related Name**

ssl.server.keystore.keypassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Ozone Recon TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone Recon is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.server.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Ozone Recon TLS/SSL Server JKS Keystore File Password****Description**

The password for the Ozone Recon JKS keystore file.

**Related Name**

ssl.server.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

#### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Ozone Recon Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Recon Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

### Suppress Parameter Validation: Recon Metadata Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon Metadata Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.metadata.dirs

**Required**

true

### Suppress Parameter Validation: Recon Data Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.db.dir

**Required**

true

### Suppress Parameter Validation: Recon HTTP Bind Hostname

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon HTTP Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.http-bind-host

**Required**

true

### Suppress Parameter Validation: Recon HTTP Web UI Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon HTTP Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.http-port

**Required**

true

**Suppress Parameter Validation: Secure Recon HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Recon HTTPS Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.https-bind-host

**Required**

true

**Suppress Parameter Validation: Secure Recon Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Recon Web UI Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.https-port

**Required**

true

**Suppress Parameter Validation: Recon OzoneManager Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon OzoneManager Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.om.db.dir

**Required**

true

**Suppress Parameter Validation: Recon RPC Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon RPC Port parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_recon\_rpc-port

**Required**

true

**Suppress Parameter Validation: Recon StorageContainerManager Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon StorageContainerManager Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_recon\_scm\_db\_dirs

**Required**

true

**Suppress Parameter Validation: Java Heap Size of Recon****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Recon parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_recon\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Ozone Recon Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_recon\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ozone Recon TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ozone Recon TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ozone Recon TLS/SSL Server JKS Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Ozone Recon TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ozone Recon TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_recon\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_recon\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_recon\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_recon\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_recon\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_recon\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_ozon\_recon\_unexpected\_exits

**Required**

true

## S3 Gateway

### Advanced

#### S3 Gateway Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

#### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

false

**S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

false

**S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

S3\_GATEWAY\_role\_env\_safety\_valve

**Required**

false

### Logs

#### S3 Gateway Log Directory

**Description**

The log directory for log files of the role S3 Gateway.

**Related Name**

log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

log\_dir

**Required**

false

#### S3 Gateway Logging Threshold

**Description**

The minimum log level for S3 Gateway logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**S3 Gateway Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for S3 Gateway logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**S3 Gateway Max Log Size****Description**

The maximum size, in megabytes, per log file for S3 Gateway logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name**

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following

configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more

details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

s3\_gateway\_fd\_thresholds

**Required**

false

### S3 Gateway Host Health Test

**Description**

When computing the overall S3 Gateway health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

s3\_gateway\_host\_health\_enabled

**Required**

false

### S3 Gateway Process Health Test

**Description**

Enables the health test that the S3 Gateway's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

s3\_gateway\_scm\_health\_enabled

**Required**

false

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

### Other

#### Ozone S3 Gateway HTTP Bind Hostname

**Description**

The actual address the S3 Gateway web server will bind to. If this optional address is set, it overrides only the hostname portion of `'ozone.s3g.http-address'`.

**Related Name**

`ozone.s3g.http-bind-host`

**Default Value**

0.0.0.0

**API Name**

`ozone.s3g.http-bind-host`

**Required**

false

#### Secure Ozone S3 Gateway HTTPS Bind Hostname

**Description**

The actual address the S3 Gateway web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of `'ozone.s3g.https-address'`.

**Related Name**

`ozone.s3g.https-bind-host`

**Default Value**

0.0.0.0

**API Name**

ozone.s3g.https-bind-host

**Required**

false

**Java Heap Size of S3 Gateway****Description**

Maximum size for the Java process heap memory.

**Related Name**

ozone\_S3\_gateway\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

ozone\_S3\_gateway\_max\_heap\_size

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Ozone S3 Gateway HTTP Web UI Port****Description**

The base port that the S3 Gateway web user interface listens on. The host name of the S3 Gateway is combined with this port to form the 'ozone.s3g.http-address'.

**Related Name**

ozone.s3g.http-port

**Default Value**

9878

**API Name**

ozone.s3g.http-port

**Required**

true

### Secure Ozone S3 Gateway Web UI Port (TLS/SSL)

**Description**

The base port that the S3 Gateway web user interface listens on when using HTTPS. The host name of the S3 Gateway is combined with this port to form the 'ozone.s3g.https-address'.

**Related Name**

ozone.s3g.https-port

**Default Value**

9879

**API Name**

ozone.s3g.https-port

**Required**

false

### Resource Management

#### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

#### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

#### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

### S3 Gateway TLS/SSL Client Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that S3 Gateway might connect to. This is used when S3 Gateway is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.client.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

### S3 Gateway TLS/SSL Client Trust Store Password

**Description**

The password for the S3 Gateway TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.client.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

### Enable TLS/SSL for S3 Gateway

**Description**

Encrypt communication between clients and S3 Gateway using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ozone.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### S3 Gateway TLS/SSL Server JKS Keystore Key Password

**Description**

The password that protects the private key contained in the JKS keystore used when S3 Gateway is acting as a TLS/SSL server.

**Related Name**

ssl.server.keystore.keypassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

### S3 Gateway TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when S3 Gateway is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.server.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### S3 Gateway TLS/SSL Server JKS Keystore File Password

**Description**

The password for the S3 Gateway JKS keystore file.

**Related Name**

ssl.server.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

## Stacks Collection

### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: S3 Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: S3 Gateway Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone S3 Gateway HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone S3 Gateway HTTP Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.http-bind-host

**Required**

true

**Suppress Parameter Validation: Ozone S3 Gateway HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone S3 Gateway HTTP Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.http-port

**Required**

true

**Suppress Parameter Validation: Secure Ozone S3 Gateway HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone S3 Gateway HTTPS Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.https-bind-host

**Required**

true

### Suppress Parameter Validation: Secure Ozone S3 Gateway Web UI Port (TLS/SSL)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone S3 Gateway Web UI Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.https-port

**Required**

true

### Suppress Parameter Validation: Java Heap Size of S3 Gateway

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of S3 Gateway parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_s3\_gateway\_max\_heap\_size

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_s3\_gateway\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: S3 Gateway TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: S3 Gateway TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: S3 Gateway TLS/SSL Server JKS Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: S3 Gateway TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: S3 Gateway TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozon-site.xml

**Description**

For advanced use only, a string to be inserted into ozone-conf/ozon-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ozone-conf/ozon-site.xml\_service\_safety\_valve

**Required**

false

#### Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

**Description**

For advanced use only, a string to be inserted into ozone-conf/ssl-client.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_service\_safety\_valve

**Required**

false

#### Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

**Description**

For advanced use only, a string to be inserted into ozone-conf/ssl-server.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_service\_safety\_valve

**Required**

false

#### Ozone Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

OZONE\_service\_env\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

hdfs

**API Name**

process\_groupname

**Required**

true

**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**

hdfs

**API Name**

process\_username

**Required**

true

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name**

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

## Other

### HDFS Service

**Description**

Name of the HDFS service that this Ozone service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

false

### Ozone Replication Factor

**Description**

Default replication factor value for keys stored in Ozone. The actual number of replications can be specified when writing the key. The default is used if replication value is not specified. Supported values: 1 and 3.

**Related Name**

ozone.replication

**Default Value**

3

**API Name**

ozone.replication

**Required**

true

### Enable Kerberos Authentication

**Description**

Enables Kerberos authentication for Ozone.

**Related Name**

ozone.security.enabled

**Default Value**

false

**API Name**

ozone.security.enabled

**Required**

false

### Enable Kerberos Authentication for HTTP web consoles

**Description**

Enables Kerberos authentication for Ozone HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled for the Ozone service.

**Related Name**

ozone.security.http.kerberos.enabled

**Default Value**

false

**API Name**

ozone.security.http.kerberos.enabled

**Required**

false

**Ozone Service ID****Description**

A logical name for this Ozone service. Note: No special characters.

**Related Name**

ozone.service.id

**Default Value****API Name**

ozone.service.id

**Required**

true

**Ozone Java Options****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags would be passed here.

**Related Name**

ozone\_java\_opts

**Default Value**

java\_args

**API Name**

ozone\_java\_opts

**Required**

false

**Ranger Ozone Plugin Hdfs Audit Directory****Description**

The DFS path on which Ranger audits are written.

**Related Name**

ranger\_ozone\_plugin\_hdfs\_audit\_directory

**Default Value**

\$ranger\_base\_audit\_url/ozone

**API Name**

ranger\_ozone\_plugin\_hdfs\_audit\_directory

**Required**

false

**RANGER Service****Description**

Name of the RANGER service that this Ozone service instance depends on

**Related Name****Default Value****API Name**

ranger\_service

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Configuration Validator: Datanode Ratis Metadata Directory****Description**

Whether to suppress configuration warnings produced by the Datanode Ratis Metadata Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_dfs.container.ratis.datanode.storage.dir

**Required**

true

### Suppress Configuration Validator: Datanode Data Directory

**Description**

Whether to suppress configuration warnings produced by the Datanode Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.datanode.dir

**Required**

true

### Suppress Configuration Validator: Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Storage Container Manager Log Directory

**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Configuration Validator: Topology Script File Name

**Description**

Whether to suppress configuration warnings produced by the Topology Script File Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_net.topology.script.file.name

**Required**

true

**Suppress Configuration Validator: Java Heap Size of Ozone Manager****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Ozone Manager configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_om\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/dn-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/om-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml****Description**

Whether to suppress configuration warnings produced by the Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-prometheus.yml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/scm-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Datanode HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the Ozone Datanode HTTP Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.http-port

**Required**

true

**Suppress Configuration Validator: Ozone Datanode Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the Ozone Datanode Port (TLS/SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.https-port

**Required**

true

**Suppress Configuration Validator: Ozone Log Directory****Description**

Whether to suppress configuration warnings produced by the Ozone Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

### Suppress Configuration Validator: Storage Container Manager Metadata Directory

**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Metadata Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.metadata.dirs

**Required**

true

### Suppress Configuration Validator: Ozone Manager Data Directory

**Description**

Whether to suppress configuration warnings produced by the Ozone Manager Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.db.dirs

**Required**

true

### Suppress Configuration Validator: Ozone Manager HTTP Bind Hostname

**Description**

Whether to suppress configuration warnings produced by the Ozone Manager HTTP Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.http-bind-host

**Required**

true

### Suppress Configuration Validator: Ozone Manager HTTP Web UI Port

**Description**

Whether to suppress configuration warnings produced by the Ozone Manager HTTP Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ozone.om.http-port`**Required**`true`**Suppress Configuration Validator: Secure Ozone Manager HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Secure Ozone Manager HTTPS Bind Hostname configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.om.https-bind-host`**Required**`true`**Suppress Configuration Validator: Secure Ozone Manager Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the Secure Ozone Manager Web UI Port (TLS/SSL) configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.om.https-port`**Required**`true`**Suppress Configuration Validator: Ozone Manager Ratis port****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Ratis port configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.om.ratis-port`**Required**`true`**Suppress Configuration Validator: Ozone Manager Ratis Storage Directory****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Ratis Storage Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.ratis.storage.dir

**Required**

true

**Suppress Configuration Validator: Ozone Manager RPC port****Description**

Whether to suppress configuration warnings produced by the Ozone Manager RPC port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.rpc-port

**Required**

true

**Suppress Configuration Validator: Prometheus Data Retention time.****Description**

Whether to suppress configuration warnings produced by the Prometheus Data Retention time configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.data.retention.time

**Required**

true

**Suppress Configuration Validator: Prometheus Data Directory****Description**

Whether to suppress configuration warnings produced by the Prometheus Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.db.dir

**Required**

true

**Suppress Configuration Validator: Prometheus server extra flags.****Description**

Whether to suppress configuration warnings produced by the Prometheus server extra flags configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.extra.flags

**Required**

true

**Suppress Configuration Validator: Prometheus HTTP Port****Description**

Whether to suppress configuration warnings produced by the Prometheus HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.http-port

**Required**

true

**Suppress Configuration Validator: Prometheus server log level.****Description**

Whether to suppress configuration warnings produced by the Prometheus server log level configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.log.level

**Required**

true

**Suppress Configuration Validator: Recon Data Directory****Description**

Whether to suppress configuration warnings produced by the Recon Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.db.dir

**Required**

true

**Suppress Configuration Validator: Recon HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Recon HTTP Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.http-bind-host

**Required**

true

**Suppress Configuration Validator: Recon HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the Recon HTTP Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.http-port

**Required**

true

**Suppress Configuration Validator: Secure Recon HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Secure Recon HTTPS Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.https-bind-host

**Required**

true

**Suppress Configuration Validator: Secure Recon Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the Secure Recon Web UI Port (TLS/SSL) configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.https-port

**Required**

true

**Suppress Configuration Validator: Recon OzoneManager Data Directory****Description**

Whether to suppress configuration warnings produced by the Recon OzoneManager Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.om.db.dir

**Required**

true

**Suppress Configuration Validator: Recon RPC Port****Description**

Whether to suppress configuration warnings produced by the Recon RPC Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.rpc-port

**Required**

true

**Suppress Configuration Validator: Recon StorageContainerManager Data Directory****Description**

Whether to suppress configuration warnings produced by the Recon StorageContainerManager Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.scm.db.dirs

**Required**

true

**Suppress Configuration Validator: Ozone S3 Gateway HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Ozone S3 Gateway HTTP Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.http-bind-host

**Required**

true

**Suppress Configuration Validator: Ozone S3 Gateway HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the Ozone S3 Gateway HTTP Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.http-port

**Required**

true

**Suppress Configuration Validator: Secure Ozone S3 Gateway HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Secure Ozone S3 Gateway HTTPS Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.https-bind-host

**Required**

true

**Suppress Configuration Validator: Secure Ozone S3 Gateway Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the Secure Ozone S3 Gateway Web UI Port (TLS/SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.https-port

**Required**

true

### Suppress Configuration Validator: Datanode ID Directory

**Description**

Whether to suppress configuration warnings produced by the Datanode ID Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.datanode.id.dir

**Required**

true

### Suppress Configuration Validator: Storage Container Manager Data Directory

**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.db.dirs

**Required**

true

### Suppress Configuration Validator: Storage Container Manager HTTP Bind Hostname

**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager HTTP Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.http-bind-host

**Required**

true

### Suppress Configuration Validator: Storage Container Manager HTTP Web UI Port

**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager HTTP Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ozone.scm.http-port`**Required**`true`**Suppress Configuration Validator: Secure Storage Container Manager HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Secure Storage Container Manager HTTPS Bind Hostname configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.scm.https-bind-host`**Required**`true`**Suppress Configuration Validator: Secure Storage Container Manager Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the Secure Storage Container Manager Web UI Port (TLS/SSL) configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.scm.https-port`**Required**`true`**Suppress Configuration Validator: Java Heap Size of DataNode****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of DataNode configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone_datanode_heap_size`**Required**`true`**Suppress Configuration Validator: Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_datanode\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Ozone Manager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_manager\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_prometheus\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Java Heap Size of Recon

**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Recon configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_recon\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Ozone Recon Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ozone Recon Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_recon\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Java Heap Size of S3 Gateway****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of S3 Gateway configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_s3\_gateway\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Ranger Ozone Plugin Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Conf Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_conf\_path

**Required**

true

**Suppress Configuration Validator: Ranger Ozone Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Policy Cache Directory Path configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Ozone Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the S3 Gateway Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_s3\_gateway\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Java Heap Size of Storage Container Manager****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Storage Container Manager configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_scm\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Storage Container Manager TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Storage Container Manager TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Storage Container Manager TLS/SSL Server JKS Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server JKS Keystore Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Configuration Validator: Storage Container Manager TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Storage Container Manager TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_storage\_container\_manager\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone-conf/ozone-site.xml\_service\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone-conf/ssl-client.xml\_service\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone-conf/ssl-server.xml\_service\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Service ID

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service ID parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone.service.id

**Required**

true

### Suppress Configuration Validator: Ozone DataNode Count Validator

**Description**

Whether to suppress configuration warnings produced by the Ozone DataNode Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_datanode\_count\_validator

**Required**

true

**Suppress Parameter Validation: Ozone Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Java Options parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_java\_opts

**Required**

true

**Suppress Configuration Validator: Ozone Manager Count Validator****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_manager\_count\_validator

**Required**

true

**Suppress Configuration Validator: Ozone Prometheus Count Validator****Description**

Whether to suppress configuration warnings produced by the Ozone Prometheus Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_prometheus\_count\_validator

**Required**

true

### Suppress Configuration Validator: Ozone Recon Count Validator

**Description**

Whether to suppress configuration warnings produced by the Ozone Recon Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_recon\_count\_validator

**Required**

true

### Suppress Parameter Validation: Ozone Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_service\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Ranger Ozone Plugin Hdfs Audit Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Hdfs Audit Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_ozone\_plugin\_hdfs\_audit\_directory

**Required**

true

**Suppress Configuration Validator: S3 Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the S3 Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_s3\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Count Validator****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_storage\_container\_manager\_count\_validator

**Required**

true

## Storage Container Manager

**Advanced****Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

false

**Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties****Description**

For advanced use only. A string to be inserted into ozone-conf/scm-audit-log4j2.properties for this role only.

**Related Name****Default Value****API Name**

ozone-conf/scm-audit-log4j2.properties\_role\_safety\_valve

**Required**

false

**Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

false

**Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

STORAGE\_CONTAINER\_MANAGER\_role\_env\_safety\_valve

**Required**

false

**Logs****Storage Container Manager Log Directory****Description**

The log directory for log files of the role Storage Container Manager.

**Related Name**

log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

log\_dir

**Required**

false

**Storage Container Manager Logging Threshold****Description**

The minimum log level for Storage Container Manager logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Storage Container Manager Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Storage Container Manager logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Storage Container Manager Max Log Size****Description**

The maximum size, in megabytes, per log file for Storage Container Manager logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

## Log Directory Free Space Monitoring Percentage Thresholds

### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

### Related Name

### Default Value

Warning: Never, Critical: Never

### API Name

log\_directory\_free\_space\_percentage\_thresholds

### Required

false

## Metric Filter

### Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

### Related Name

### Default Value

### API Name

monitoring\_metric\_filter

### Required

false

## Process Swap Memory Thresholds

### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

storage\_container\_manager\_fd\_thresholds

**Required**

false

**Storage Container Manager Host Health Test****Description**

When computing the overall Storage Container Manager health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

storage\_container\_manager\_host\_health\_enabled

**Required**

false

**Storage Container Manager Process Health Test****Description**

Enables the health test that the Storage Container Manager's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

storage\_container\_manager\_scm\_health\_enabled

**Required**

false

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**`unexpected_exits_window`**Required**`false`**Other****Topology Script File Name****Description**

Full path to a custom topology script on the host file system. The topology script is used to determine the rack location of nodes. If left with "`{{DEFAULT_TOPOLOGY_SCRIPT}}`", a topology script will be provided that uses your hosts' rack information, visible in the "Hosts" page.

**Related Name**`net.topology.script.file.name`**Default Value**`DEFAULT_TOPOLOGY_SCRIPT`**API Name**`net.topology.script.file.name`**Required**`false`**Ozone Log Directory****Description**

Directory where Storage Container Manager logs will be written to

**Related Name**`ozone.log.dir`**Default Value**`/var/log/hadoop-ozone`**API Name**`ozone.log.dir`**Required**`false`**Storage Container Manager Metadata Directory****Description**

Determines where on the local filesystem SCM security certificates will be stored.

**Related Name**`ozone.metadata.dirs`**Default Value**`/var/lib/hadoop-ozone/scm/ozone-metadata`**API Name**`ozone.metadata.dirs`**Required**`true`

### Storage Container Manager Data Directory

**Description**

Directory where the StorageContainerManager stores its metadata

**Related Name**

ozone.scm.db.dirs

**Default Value**

/var/lib/hadoop-ozone/scm/data

**API Name**

ozone.scm.db.dirs

**Required**

true

### Storage Container Manager HTTP Bind Hostname

**Description**

The actual address the SCM web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.scm.http-address'.

**Related Name**

ozone.scm.http-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.scm.http-bind-host

**Required**

false

### Secure Storage Container Manager HTTPS Bind Hostname

**Description**

The actual address the SCM web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.scm.https-address'.

**Related Name**

ozone.scm.https-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.scm.https-bind-host

**Required**

false

### Java Heap Size of Storage Container Manager

**Description**

Maximum size for the Java process heap memory.

**Related Name**

scm\_max\_heap\_size

**Default Value**

4 GiB

**API Name**

scm\_max\_heap\_size

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Storage Container Manager HTTP Web UI Port****Description**

The base port that the Storage Container Manager web user interface listens on. The host name of the Storage Container Manager is combined with this port to form the 'ozone.scm.http-address'.

**Related Name**

ozone.scm.http-port

**Default Value**

9876

**API Name**

ozone.scm.http-port

**Required**

true

**Secure Storage Container Manager Web UI Port (TLS/SSL)****Description**

The base port that the Storage Container Manager web user interface listens on when using HTTPS. The host name of the Storage Container Manager is combined with this port to form the 'ozone.scm.https-address'.

**Related Name**

ozone.scm.https-port

**Default Value**

9877

**API Name**

ozone.scm.https-port

**Required**

false

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

#### Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_hard\_limit

#### Required

true

### Cgroup Memory Soft Limit

#### Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.soft\_limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_soft\_limit

#### Required

true

## Security

### Storage Container Manager TLS/SSL Client Trust Store File

#### Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Storage Container Manager might connect to. This is used when Storage Container Manager is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

#### Related Name

ssl.client.truststore.location

#### Default Value

#### API Name

ssl\_client\_truststore\_location

**Required**

false

**Storage Container Manager TLS/SSL Client Trust Store Password****Description**

The password for the Storage Container Manager TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.client.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Storage Container Manager****Description**

Encrypt communication between clients and Storage Container Manager using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ozone.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Storage Container Manager TLS/SSL Server JKS Keystore Key Password****Description**

The password that protects the private key contained in the JKS keystore used when Storage Container Manager is acting as a TLS/SSL server.

**Related Name**

ssl.server.keystore.keypassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Storage Container Manager TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Storage Container Manager is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.server.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### Storage Container Manager TLS/SSL Server JKS Keystore File Password

**Description**

The password for the Storage Container Manager JKS keystore file.

**Related Name**

ssl.server.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions**

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Storage Container Manager Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Topology Script File Name

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Topology Script File Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_net.topology.script.file.name

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/scm-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

### Suppress Parameter Validation: Storage Container Manager Metadata Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Metadata Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone.metadata.dirs

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.db.dirs

**Required**

true

**Suppress Parameter Validation: Storage Container Manager HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager HTTP Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.http-bind-host

**Required**

true

**Suppress Parameter Validation: Storage Container Manager HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager HTTP Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.http-port

**Required**

true

**Suppress Parameter Validation: Secure Storage Container Manager HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Storage Container Manager HTTPS Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.https-bind-host

**Required**

true

**Suppress Parameter Validation: Secure Storage Container Manager Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Storage Container Manager Web UI Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.https-port

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Java Heap Size of Storage Container Manager

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Storage Container Manager parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_scm\_max\_heap\_size

**Required**

true

### Suppress Parameter Validation: Storage Container Manager TLS/SSL Client Trust Store File

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

### Suppress Parameter Validation: Storage Container Manager TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

### Suppress Parameter Validation: Storage Container Manager TLS/SSL Server JKS Keystore Key Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Storage Container Manager TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Storage Container Manager TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Parameter Validation: Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_storage\_container\_manager\_role\_env\_safety\_valve

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_storage\_container\_manager\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_storage\_container\_manager\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_storage\_container\_manager\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_storage\_container\_manager\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_storage\_container\_manager\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_storage\_container\_manager\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozonestorage\_container\_manager\_unexpected\_exits

**Required**

true

## Phoenix Properties in Cloudera Runtime 7.1

Role groups:

### Query Server

#### Advanced

#### Query Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml

**Description**

For advanced use only. A string to be inserted into phoenix-site.xml for this role only.

**Related Name****Default Value****API Name**

phoenix-site.xml\_role\_safety\_valve

**Required**

false

### Query Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

PHOENIX\_QUERY\_SERVER\_role\_env\_safety\_valve

**Required**

false

### Automatically Restart Process

#### Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

#### Related Name

#### Default Value

false

#### API Name

process\_auto\_restart

#### Required

true

### Enable Metric Collection

#### Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

#### Related Name

#### Default Value

true

#### API Name

process\_should\_monitor

#### Required

true

### Process Start Retry Attempts

#### Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

#### Related Name

#### Default Value

3

#### API Name

process\_start\_retries

#### Required

false

### Process Start Wait Timeout

#### Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs****Query Server Log Directory****Description**

The log directory for log files of the role Query Server.

**Related Name**

log\_dir

**Default Value**

/var/log/phoenix

**API Name**

log\_dir

**Required**

false

**Query Server Logging Threshold****Description**

The minimum log level for Query Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Query Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Query Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### Query Server Max Log Size

**Description**

The maximum size, in megabytes, per log file for Query Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

### Monitoring

#### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

#### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

phoenix\_query\_server\_fd\_thresholds

**Required**

false

### Query Server Host Health Test

**Description**

When computing the overall Query Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

phoenix\_query\_server\_host\_health\_enabled

**Required**

false

### Query Server Process Health Test

**Description**

Enables the health test that the Query Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

phoenix\_query\_server\_scm\_health\_enabled

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### Role Triggers

#### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

[]

#### API Name

role\_triggers

#### Required

true

### Unexpected Exits Thresholds

#### Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

#### Related Name

#### Default Value

Warning: Never, Critical: Any

#### API Name

unexpected\_exits\_thresholds

#### Required

false

### Unexpected Exits Monitoring Period

#### Description

The period to review when computing unexpected exits.

#### Related Name

**Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Enable Remote User Extractor****Description**

Boolean which controls if a remote user to impersonate should be extracted from the HTTP request parameter made by that user instead of the HTTP-authenticated user name (which is the default). Required for accessing Phoenix Query Server via Knox.

**Related Name**

phoenix.queryserver.withRemoteUserExtractor

**Default Value**

true

**API Name**

phoenix\_query\_server\_with\_remote\_user\_extractor

**Required**

false

**Additional Phoenix Query Server Options****Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

**Related Name**

phoenix\_queryserver\_java\_opts

**Default Value****API Name**

phoenix\_queryserver\_java\_opts

**Required**

false

**Phoenix Query Server Max Heapsize****Description**

Maximum size for the Phoenix Query Server Java Process heap. Passed to Java -Xmx.

**Related Name**

phoenix\_queryserver\_max\_heap\_size

**Default Value**

2 GiB

**API Name**

phoenix\_queryserver\_max\_heap\_size

**Required**

true

## Performance

### Maximum Process File Descriptors

#### Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

#### Related Name

#### Default Value

#### API Name

rlimit\_fds

#### Required

false

## Ports and Addresses

### Phoenix Query Server Port

#### Description

The port Phoenix Query Server will listen on

#### Related Name

phoenix.queryserver.http.port

#### Default Value

8765

#### API Name

phoenix\_query\_server\_port

#### Required

false

## Resource Management

### Cgroup CPU Shares

#### Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

#### Related Name

cpu.shares

#### Default Value

1024

#### API Name

rm\_cpu\_shares

#### Required

true

### Custom Control Group Resources (overrides Cgroup settings)

#### Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

#### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Query Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Query Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Phoenix Query Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Phoenix Query Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_query\_server\_port

**Required**

true

**Suppress Parameter Validation: Query Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_query\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Additional Phoenix Query Server Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Phoenix Query Server Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_queryserver\_java\_opts

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### Phoenix Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

PHOENIX\_service\_env\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

phoenix

**API Name**

process\_groupname

**Required**

true

**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**

phoenix

**API Name**

process\_username

**Required**

true

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

#### Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

#### Related Name

#### Default Value

false

#### API Name

enable\_config\_alerts

#### Required

false

### Healthy Query Server Monitoring Thresholds

#### Description

The health test thresholds of the overall Query Server health. The check returns "Concerning" health if the percentage of "Healthy" Query Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Query Servers falls below the critical threshold.

#### Related Name

#### Default Value

Warning: 99.0 %, Critical: 90.0 %

#### API Name

PHOENIX\_PHOENIX\_QUERY\_SERVER\_healthy\_thresholds

#### Required

false

### Service Triggers

#### Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

**Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****HBase Service****Description**

Name of the HBase service that this Phoenix service instance depends on

**Related Name****Default Value****API Name**

hbase\_service

**Required**

true

**HDFS Service****Description**

Name of the HDFS service that this Phoenix service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

true

**ZooKeeper Service****Description**

Name of the ZooKeeper service that this Phoenix service instance depends on

**Related Name**

**Default Value****API Name**

zookeeper\_service

**Required**

true

**Security****Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

phoenix

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Query Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Query Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Query Server Log Directory

**Description**

Whether to suppress configuration warnings produced by the Query Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Configuration Validator: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Configuration Validator: Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml

**Description**

Whether to suppress configuration warnings produced by the Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Phoenix Query Server Port

**Description**

Whether to suppress configuration warnings produced by the Phoenix Query Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_query\_server\_port

**Required**

true

**Suppress Configuration Validator: Query Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Query Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_query\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Additional Phoenix Query Server Options****Description**

Whether to suppress configuration warnings produced by the Additional Phoenix Query Server Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_queryserver\_java\_opts

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Configuration Validator: Phoenix HBase Dependency Write-Ahead Log (WAL) Codec Class Validator****Description**

Whether to suppress configuration warnings produced by the Phoenix HBase Dependency Write-Ahead Log (WAL) Codec Class Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_phoenix\_hbase\_regionserver\_wal\_codec\_validator

**Required**

true

### Suppress Configuration Validator: Query Server Count Validator

**Description**

Whether to suppress configuration warnings produced by the Query Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_phoenix\_query\_server\_count\_validator

**Required**

true

### Suppress Parameter Validation: Phoenix Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Phoenix Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_phoenix\_service\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Health Test: Query Server Health****Description**

Whether to suppress the results of the Query Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_phoenix\_phoenix\_query\_server\_healthy

**Required**

true

**Ranger Properties in Cloudera Runtime 7.1**

Role groups:

## Ranger Admin

### Advanced

#### Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml

**Description**

For advanced use only. A string to be inserted into conf/ranger-admin-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-admin-site.xml\_role\_safety\_valve

**Required**

false

#### Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

#### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name**

**Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Role Specific System Group****Description**

The group that this role's processes should run as.

**Related Name****Default Value**

ranger

**API Name**

process\_groupname

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Role Specific System User****Description**

The user that this role's processes should run as.

**Related Name****Default Value**

ranger

**API Name**

process\_username

**Required**

true

**Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

RANGER\_ADMIN\_role\_env\_safety\_valve

**Required**

false

**Logs****Ranger Admin Log Directory****Description**

The log directory for log files of the role Ranger Admin.

**Related Name**

ranger.logs.base.dir

**Default Value**

/var/log/ranger/admin

**API Name**

log\_dir

**Required**

false

**Ranger Admin Logging Threshold****Description**

The minimum log level for Ranger Admin logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Ranger Admin Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Ranger Admin logs. Typically used by log4j or logback.

**Related Name**

**Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Ranger Admin Max Log Size****Description**

The maximum size, in megabytes, per log file for Ranger Admin logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ranger\_admin\_fd\_thresholds

**Required**

false

**Ranger Admin Host Health Test****Description**

When computing the overall Ranger Admin health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ranger\_admin\_host\_health\_enabled

**Required**

false

**Ranger Admin Process Health Test****Description**

Enables the health test that the Ranger Admin's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ranger\_admin\_scm\_health\_enabled

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Ranger Admin Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name****Default Value**

5 minute(s)

**API Name**

csd\_role\_diagnostics\_timeout

**Required**

false

**Exclude Users from Audit Access Tab****Description**

A single user, or a comma-separated list of multiple users that are excluded from Ranger audits when the Exclude Service Users checkbox is selected on the Ranger Audit Access tab in the Ranger Admin Web UI.

**Related Name**

ranger.accesslogs.exclude.users.list

**Default Value**

rangertagsync

**API Name**

ranger.accesslogs.exclude.users.list

**Required**

false

**Kerberos Cookie Path****Description**

Kerberos Cookie path

**Related Name**

ranger.admin.kerberos.cookie.path

**Default Value**

/

**API Name**

ranger.admin.kerberos.cookie.path

**Required**

false

**Kerberos Token Valid Seconds****Description**

Kerberos token validity

**Related Name**

ranger.admin.kerberos.token.valid.seconds

**Default Value**

30

**API Name**

ranger.admin.kerberos.token.valid.seconds

**Required**

false

**Maximum Shards for Solr Collection of Ranger Audits****Description**

Maximum number of shards for the Ranger Audit Solr collection. The recommended value is, number of replica given multiple by number of shards given for the collection.

**Related Name**

ranger.audit.solr.max.shards.per.node

**Default Value**

1

**API Name**

ranger.audit.solr.max.shards.per.node

**Required**

true

**Replicas for Solr Collection of Ranger Audits****Description**

Number of replicas for Ranger Audit Solr collection. The recommended value is, number of Solr servers running in the current cluster divided by number of shards for the collection.

**Related Name**

ranger.audit.solr.no.replica

**Default Value**

1

**API Name**

ranger.audit.solr.no.replica

**Required**

true

**Shards for Solr Collection of Ranger Audits****Description**

Number of shards required for Ranger Audit Solr collection. The recommended number of shards is equal or less than the number of Solr Server running in the current cluster.

**Related Name**

ranger.audit.solr.no.shards

**Default Value**

1

**API Name**

ranger.audit.solr.no.shards

**Required**

true

**Enable Knox Trusted Proxy Support****Description**

Determine if the Ranger service should allow authentication using Knox trusted proxy.

**Related Name**

ranger.authentication.allow.trustedproxy

**Default Value**

true

**API Name**

ranger.authentication.allow.trustedproxy

**Required**

false

**Default Policy Groups****Description**

Single or comma separated list of groups that are required in default policies for Ranger plugin services. The groups will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

**Related Name**

ranger.default.policy.groups

**Default Value****API Name**

ranger.default.policy.groups

**Required**

false

**Default Policy Users****Description**

Single or comma separated list of users that are required in default policies for Ranger plugin services. The users will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

**Related Name**

ranger.default.policy.users

**Default Value****API Name**

ranger.default.policy.users

**Required**

false

**Admin AD Auth Base DN****Description**

This parameter is only used if Authentication method is AD. The Distinguished Name (DN) of the starting point for directory server searches.

**Related Name**

ranger.ldap.ad.base.dn

**Default Value****API Name**

ranger.ldap.ad.base.dn

**Required**

false

**Admin AD Auth Bind DN****Description**

Full distinguished name (DN), including common name (CN), of an AD user account that has privileges to search for users. Only used if Authentication method is AD

**Related Name**

ranger.ldap.ad.bind.dn

**Default Value****API Name**

ranger.ldap.ad.bind.dn

**Required**

false

**Admin AD Auth Domain Name****Description**

AD domain. Only used if Authentication method is AD.

**Related Name**

ranger.ldap.ad.domain

**Default Value****API Name**

ranger.ldap.ad.domain

**Required**

false

### Admin AD Auth Referral

**Description**

This parameter is only used if Authentication method is AD. Set to follow if multiple AD servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed.

**Related Name**

ranger.ldap.ad.referral

**Default Value**

ignore

**API Name**

ranger.ldap.ad.referral

**Required**

false

### Admin AD Auth URL

**Description**

AD URL. Only used if Authentication method is AD

**Related Name**

ranger.ldap.ad.url

**Default Value****API Name**

ranger.ldap.ad.url

**Required**

false

### Admin AD Auth User Search Filter

**Description**

AD user search filter. Only used if Authentication method is AD.

**Related Name**

ranger.ldap.ad.user.searchfilter

**Default Value****API Name**

ranger.ldap.ad.user.searchfilter

**Required**

false

### Admin LDAP Auth Base DN

**Description**

The Distinguished Name (DN) of the starting point for directory server searches. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.base.dn

**Default Value****API Name**

ranger.ldap.base.dn

**Required**

false

**Admin LDAP Auth Bind User****Description**

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search for users. This user is used for searching the users. This could be read-only LDAP user. Example: cn=admin,dc=example,dc=com

**Related Name**

ranger.ldap.bind.dn

**Default Value****API Name**

ranger.ldap.bind.dn

**Required**

false

**Admin LDAP Auth Group Role Attribute****Description**

LDAP group role attribute. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.group.roleattribute

**Default Value****API Name**

ranger.ldap.group.roleattribute

**Required**

false

**Admin LDAP Auth Group Search Base****Description**

LDAP group searchbase. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.group.searchbase

**Default Value****API Name**

ranger.ldap.group.searchbase

**Required**

false

**Admin LDAP Auth Group Search Filter****Description**

LDAP group search filter. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.group.searchfilter

**Default Value****API Name**

ranger.ldap.group.searchfilter

**Required**

false

**Admin LDAP Auth Referral****Description**

This parameter is only used if Authentication method is LDAP. Set to follow if multiple LDAP servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

**Related Name**

ranger.ldap.referral

**Default Value**

ignore

**API Name**

ranger.ldap.referral

**Required**

false

**Admin LDAP Auth URL****Description**

LDAP server URL. Example: value = ldap://localhost:389 or ldaps://localhost:636

**Related Name**

ranger.ldap.url

**Default Value****API Name**

ranger.ldap.url

**Required**

false

**Admin LDAP Auth User DN Pattern****Description**

LDAP user DN. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.user.dnpattern

**Default Value****API Name**

ranger.ldap.user.dnpattern

**Required**

false

**Admin LDAP Auth User Search Filter****Description**

LDAP user search filter. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.user.searchfilter

**Default Value****API Name**

ranger.ldap.user.searchfilter

**Required**

false

### SSO Browser Useragent

**Description**

Comma seperated values of browser agent

**Related Name**

ranger.sso.browser.useragent

**Default Value**

Mozilla, chrome

**API Name**

ranger.sso.browser.useragent

**Required**

false

### Enable Ranger SSO

**Description**

Determine if Ranger is Knox SSO enabled or not ?

**Related Name**

ranger.sso.enabled

**Default Value**

false

**API Name**

ranger.sso.enabled

**Required**

false

### SSO Provider Url

**Description**

SSO provider url Example: https://KNOX\_HOST:KNOX\_PORT/gateway/  
KNOXSSO\_TOPOLOGY\_NAME/api/v1/websso

**Related Name**

ranger.sso.providerurl

**Default Value****API Name**

ranger.sso.providerurl

**Required**

false

### SSO Public Key

**Description**

Public key for SSO cookie verification

**Related Name**

ranger.sso.publicKey

**Default Value****API Name**

ranger.sso.publicKey

**Required**

false

### Enable Auto Create Tag Service

**Description**

Whether to create tag service in Ranger Admin.

**Related Name**

ranger.tagservice.auto.create

**Default Value**

true

**API Name**

ranger.tagservice.auto.create

**Required**

false

### Enable Tag Service Auto Link

**Description**

Whether to link the Tag service set in "Tag Service Name" parameter to all available services in Ranger Admin.

**Related Name**

ranger.tagservice.auto.link

**Default Value**

true

**API Name**

ranger.tagservice.auto.link

**Required**

false

### Tag Service Name

**Description**

Name of the tag service that will be created in Ranger Admin when "Enable Auto Create Tag Service" parameter is enabled.

**Related Name**

ranger.tagservice.auto.name

**Default Value**

cm\_tag

**API Name**

ranger.tagsservice.auto.name

**Required**

false

**Admin UNIX Auth Remote Login****Description**

Whether remote login is enabled. Only used if Authentication method is UNIX.

**Related Name**

ranger.unixauth.remote.login.enabled

**Default Value**

true

**API Name**

ranger.unixauth.remote.login.enabled

**Required**

false

**Admin UNIX Auth Service Hostname****Description**

Host where unix authentication service is running. Only used if Authentication method is UNIX. {{RANGER\_USERSYNC\_HOST}} is a placeholder value which will be replaced with the host where Ranger Usersync will be installed in the current cluster.

**Related Name**

ranger.unixauth.service.hostname

**Default Value**

RANGER\_USERSYNC\_HOST

**API Name**

ranger.unixauth.service.hostname

**Required**

false

**Ranger Admin Conf Path****Description**

Staging directory for Ranger Admin Configuration. This should generally not be changed.

**Related Name**

ranger\_admin\_conf\_path

**Default Value**

/etc/ranger/admin

**API Name**

ranger\_admin\_conf\_path

**Required**

true

**Ranger Admin Max Heapsize****Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

**Related Name**`ranger_admin_max_heap_size`**Default Value**`1 GiB`**API Name**`ranger_admin_max_heap_size`**Required**`true`**Admin Authentication Method****Description**

Authentication Method for login to Ranger Admin.

**Related Name**`ranger.authentication.method`**Default Value**`PAM`**API Name**`ranger_authentication_method`**Required**`false`**Admin AD Auth Bind Password****Description**

Password for the account that can search for users. Only used if Authentication method is AD

**Related Name**`ranger.ldap.ad.bind.password`**Default Value****API Name**`ranger_ldap_ad_bind_password`**Required**`false`**Admin LDAP Auth Bind User Password****Description**

Password for the account that can search for users.

**Related Name**`ranger.ldap.bind.password`**Default Value****API Name**`ranger_ldap_bind_password`**Required**`false`

### Knox Proxy User Groups

**Description**

Accepts a list of group names. The Knox user can impersonate only the users that belong to the groups specified in the list. The wildcard value \* may be used to allow impersonation of any user belonging to any group.

**Related Name**

ranger.proxyuser.knox.groups

**Default Value**

\*

**API Name**

ranger\_proxyuser\_knox\_groups

**Required**

false

### Knox Proxy User Hosts

**Description**

Accepts a list of IP addresses, IP address ranges in CIDR format and/or host names. The Knox user can impersonate only the requests coming from hosts specified in the list. The wildcard value \* may be used to allow impersonation from any host.

**Related Name**

ranger.proxyuser.knox.hosts

**Default Value**

\*

**API Name**

ranger\_proxyuser\_knox\_hosts

**Required**

false

### Knox Proxy User Users

**Description**

Accepts a list of usernames. The Knox user can impersonate only the users specified in the list. The wildcard value \* may be used to allow impersonation of any user.

**Related Name**

ranger.proxyuser.knox.users

**Default Value**

\*

**API Name**

ranger\_proxyuser\_knox\_users

**Required**

false

### Ranger Tomcat Work Dir

**Description**

Tomcat work directory for Ranger Admin. This should generally not be changed.

**Related Name**

ranger\_tomcat\_work\_dir

**Default Value**`/var/lib/ranger/admin`**API Name**`ranger_tomcat_work_dir`**Required**`true`**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**`rlimit_fds`**Required**`false`**Ports and Addresses****Admin Unix Auth Service Port****Description**

Port for unix authentication service. Only used if Authentication method is UNIX.

**Related Name**`ranger.unixauth.service.port`**Default Value**`5151`**API Name**`ranger.unixauth.service.port`**Required**`false`**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**`cpu.shares`**Default Value**`1024`**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Ranger Admin roles.

**Related Name****Default Value**

rangeradmin

**API Name**

kerberos\_role\_princ\_name

**Required**

true

**Ranger Admin TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Admin might connect to. This is used when Ranger Admin is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ranger.truststore.file

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

### Ranger Admin TLS/SSL Client Trust Store Password

#### Description

The password for the Ranger Admin TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

#### Related Name

ranger.truststore.password

#### Default Value

#### API Name

ssl\_client\_truststore\_password

#### Required

false

### Enable TLS/SSL for Ranger Admin

#### Description

Encrypt communication between clients and Ranger Admin using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

#### Related Name

ranger.service.https.attrib.ssl.enabled

#### Default Value

false

#### API Name

ssl\_enabled

#### Required

false

### Ranger Admin TLS/SSL Server JKS Keystore File Location

#### Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Admin is acting as a TLS/SSL server. The keystore must be in JKS format.

#### Related Name

ranger.https.attrib.keystore.file

#### Default Value

#### API Name

ssl\_server\_keystore\_location

#### Required

false

### Ranger Admin TLS/SSL Server JKS Keystore File Password

#### Description

The password for the Ranger Admin JKS keystore file.

#### Related Name

ranger.service.https.attrib.keystore.pass

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Parameter Validation: Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-admin-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Admin Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Role Specific System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: Role Specific System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Exclude Users from Audit Access Tab****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Users from Audit Access Tab parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.accesslogs.exclude.users.list

**Required**

true

**Suppress Parameter Validation: Kerberos Cookie Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Cookie Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.admin.kerberos.cookie.path

**Required**

true

**Suppress Parameter Validation: Default Policy Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Policy Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.default.policy.groups

**Required**

true

**Suppress Parameter Validation: Default Policy Users****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Policy Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.default.policy.users

**Required**

true

**Suppress Parameter Validation: Admin AD Auth Base DN****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Base DN parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.base.dn

**Required**

true

**Suppress Parameter Validation: Admin AD Auth Bind DN****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Bind DN parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.bind.dn

**Required**

true

**Suppress Parameter Validation: Admin AD Auth Domain Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Domain Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.domain

**Required**

true

**Suppress Parameter Validation: Admin AD Auth URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth URL parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.url

**Required**

true

### Suppress Parameter Validation: Admin AD Auth User Search Filter

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth User Search Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.user.searchfilter

**Required**

true

### Suppress Parameter Validation: Admin LDAP Auth Base DN

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Base DN parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.base.dn

**Required**

true

### Suppress Parameter Validation: Admin LDAP Auth Bind User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Bind User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.bind.dn

**Required**

true

### Suppress Parameter Validation: Admin LDAP Auth Group Role Attribute

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Role Attribute parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ranger.ldap.group.roleattribute`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth Group Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Search Base parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.group.searchbase`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth Group Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Search Filter parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.group.searchfilter`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth URL parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.url`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth User DN Pattern****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth User DN Pattern parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.user.dnpattern

**Required**

true

**Suppress Parameter Validation: Admin LDAP Auth User Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth User Search Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.user.searchfilter

**Required**

true

**Suppress Parameter Validation: SSO Browser Useragent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Browser Useragent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.sso.browser.useragent

**Required**

true

**Suppress Parameter Validation: SSO Provider Url****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Provider Url parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.sso.providerurl

**Required**

true

### Suppress Parameter Validation: SSO Public Key

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Public Key parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.sso.publickey

**Required**

true

### Suppress Parameter Validation: Tag Service Name

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tag Service Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.tagservice.auto.name

**Required**

true

### Suppress Parameter Validation: Admin UNIX Auth Service Hostname

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin UNIX Auth Service Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.unixauth.service.hostname

**Required**

true

### Suppress Parameter Validation: Admin Unix Auth Service Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Unix Auth Service Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.unixauth.service.port

**Required**

true

**Suppress Parameter Validation: Ranger Admin Conf Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_conf\_path

**Required**

true

**Suppress Parameter Validation: Ranger Admin Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Admin AD Auth Bind Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Bind Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ldap\_ad\_bind\_password

**Required**

true

**Suppress Parameter Validation: Admin LDAP Auth Bind User Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Bind User Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ldap\_bind\_password

**Required**

true

**Suppress Parameter Validation: Knox Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_proxyuser\_knox\_groups

**Required**

true

**Suppress Parameter Validation: Knox Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_proxyuser\_knox\_hosts

**Required**

true

### Suppress Parameter Validation: Knox Proxy User Users

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_proxyuser\_knox\_users

**Required**

true

### Suppress Parameter Validation: Ranger Tomcat Work Dir

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tomcat Work Dir parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tomcat\_work\_dir

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ranger Admin TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Admin TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ranger Admin TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Admin TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Server JKS Keystore File Password parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_unexpected\_exits

**Required**

true

**Ranger Tagsync****Advanced****Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties****Description**

For advanced use only. A string to be inserted into conf/atlas-application.properties for this role only.

**Related Name****Default Value****API Name**

conf/atlas-application.properties\_role\_safety\_valve

**Required**

false

**Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-tagsync-policymgr-ssl.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-tagsync-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

**Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-tagsync-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-tagsync-site.xml\_role\_safety\_valve

**Required**

false

**Ranger Tagsync Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Role Specific System Group****Description**

The group that this role's processes should run as.

**Related Name****Default Value**

ranger

**API Name**

process\_groupname

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Role Specific System User

**Description**

The user that this role's processes should run as.

**Related Name****Default Value**

ranger

**API Name**

process\_username

**Required**

true

**Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

RANGER\_TAGSYNC\_role\_env\_safety\_valve

**Required**

false

**Logs****Ranger Tagsync Log Directory****Description**

The log directory for log files of the role Ranger Tagsync.

**Related Name**

ranger.tagsync.logdir

**Default Value**

/var/log/ranger/tagsync

**API Name**

log\_dir

**Required**

false

**Ranger Tagsync Logging Threshold****Description**

The minimum log level for Ranger Tagsync logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Ranger Tagsync Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Ranger Tagsync logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Ranger Tagsync Max Log Size****Description**

The maximum size, in megabytes, per log file for Ranger Tagsync logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name**

**Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ranger\_tagsync\_fd\_thresholds

**Required**

false

**Ranger Tagsync Host Health Test****Description**

When computing the overall Ranger Tagsync health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ranger\_tagsync\_host\_health\_enabled

**Required**

false

**Ranger Tagsync Process Health Test****Description**

Enables the health test that the Ranger Tagsync's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ranger\_tagsync\_scm\_health\_enabled

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Atlas Source: Kafka Consumer Group****Description**

Kafka consumer group.

**Related Name**

atlas.kafka.entities.group.id

**Default Value**

ranger\_entities\_consumer

**API Name**

atlas.kafka.entities.group.id

**Required**

false

**Capture Cluster name****Description**

Capture cluster name.

**Related Name**

ranger.tagsync.atlas.default.cluster.name

**Default Value****API Name**

ranger.tagsync.atlas.default.cluster.name

**Required**

false

**Enable Ranger Tagsync Cookie Authentication****Description**

Enable cookie-based authentication for requests going from Ranger Tagsync to Ranger Admin.

**Related Name**

ranger.tagsync.cookie.enabled

**Default Value**

true

**API Name**

ranger.tagsync.cookie.enabled

**Required**

false

### Ranger Tagsync Username

**Description**

Ranger Tagsync username in Ranger Admin.

**Related Name**

ranger.tagsync.dest.ranger.username

**Default Value**

rangertagsync

**API Name**

ranger.tagsync.dest.ranger.username

**Required**

false

### Enable File Tag Source

**Description**

Whether to sync tags from file.

**Related Name**

ranger.tagsync.source.file

**Default Value**

false

**API Name**

ranger.tagsync.source.file

**Required**

false

### File Source: File Update Polling Interval

**Description**

Sync Interval for updating tags from file.

**Related Name**

ranger.tagsync.source.file.check.interval.millis

**Default Value**

1 minute(s)

**API Name**

ranger.tagsync.source.file.check.interval.millis

**Required**

false

### File Source: Filename

**Description**

Filename containing tags.

**Related Name**

ranger.tagsync.source.file.filename

**Default Value****API Name**

ranger.tagsync.source.file.filename

**Required**

false

### Ranger Tagsync Conf Path

**Description**

Staging directory for Ranger Tagsync Configuration. This should generally not be changed.

**Related Name**

ranger\_tagsync\_conf\_path

**Default Value**

/etc/ranger/tagsync

**API Name**

ranger\_tagsync\_conf\_path

**Required**

true

### Ranger Tagsync Max Heapsize

**Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

**Related Name**

ranger\_tagsync\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

ranger\_tagsync\_max\_heap\_size

**Required**

true

### Enable Ranger Tagsync Metrics

**Description**

Controls whether the Ranger Tagsync metrics are enabled.

**Related Name**

ranger.tagsync.metrics.enabled

**Default Value**

true

**API Name**

ranger\_tagsync\_metrics\_enabled

**Required**

false

**Ranger Tagsync Metrics File Name****Description**

File name for the metrics exposed by Ranger Tagsync. The file is updated at the frequency configured by Ranger Tagsync Metrics Frequency.

**Related Name**

ranger.tagsync.metrics.filename

**Default Value**

metrics.json

**API Name**

ranger\_tagsync\_metrics\_filename

**Required**

false

**Ranger Tagsync Metrics File Path****Description**

The location at which the metrics exposed by Ranger Tagsync will be written.

**Related Name**

ranger.tagsync.metrics.filepath

**Default Value**

/var/log/ranger/metrics-tagsync

**API Name**

ranger\_tagsync\_metrics\_filepath

**Required**

false

**Ranger Tagsync Metrics Frequency****Description**

The frequency at which the metrics are logged at Ranger Tagsync Metrics File Path.

**Related Name**

ranger.tagsync.metrics.frequencytimeinmillis

**Default Value**

1 minute(s)

**API Name**

ranger\_tagsync\_metrics\_frequency

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Ranger Tagsync roles.

**Related Name****Default Value**

rangertagsync

**API Name**

kerberos\_role\_princ\_name

**Required**

true

**Ranger Tagsync TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Tagsync might connect to. This is used when Ranger Tagsync is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

xasecure.policymgr.clientssl.truststore

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Ranger Tagsync TLS/SSL Client Trust Store Password****Description**

The password for the Ranger Tagsync TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

xasecure.policymgr.clientssl.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Ranger Tagsync****Description**

Encrypt communication between clients and Ranger Tagsync using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name****Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### Ranger Tagsync TLS/SSL Server JKS Keystore File Location

#### Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Tagsync is acting as a TLS/SSL server. The keystore must be in JKS format.

#### Related Name

xasecure.policymgr.clientssl.keystore

#### Default Value

#### API Name

ssl\_server\_keystore\_location

#### Required

false

### Ranger Tagsync TLS/SSL Server JKS Keystore File Password

#### Description

The password for the Ranger Tagsync JKS keystore file.

#### Related Name

xasecure.policymgr.clientssl.keystore.password

#### Default Value

#### API Name

ssl\_server\_keystore\_password

#### Required

false

### Stacks Collection

#### Stacks Collection Data Retention

##### Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

##### Related Name

stacks\_collection\_data\_retention

##### Default Value

100 MiB

##### API Name

stacks\_collection\_data\_retention

##### Required

false

#### Stacks Collection Directory

##### Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

##### Related Name

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

## Suppressions

### Suppress Parameter Validation: Atlas Source: Kafka Consumer Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Source: Kafka Consumer Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_atlas.kafka.entities.group.id

**Required**

true

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/atlas-application.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-tagsync-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-tagsync-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Tagsync Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Role Specific System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: Role Specific System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_process_username`**Required**`true`**Suppress Parameter Validation: Capture Cluster name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Capture Cluster name parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.tagsync.atlas.default.cluster.name`**Required**`true`**Suppress Parameter Validation: Ranger Tagsync Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Username parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.tagsync.dest.ranger.username`**Required**`true`**Suppress Parameter Validation: File Source: Filename****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the File Source: Filename parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.tagsync.source.file.filename`**Required**`true`**Suppress Parameter Validation: Ranger Tagsync Conf Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_conf\_path

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Metrics File Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Metrics File Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_metrics\_filename

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Metrics File Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Metrics File Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_metrics\_filepath

**Required**

true

### Suppress Parameter Validation: Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Ranger Tagsync TLS/SSL Client Trust Store File

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_unexpected\_exits

**Required**

true

## Ranger Usersync

### Advanced

#### Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml

**Description**

For advanced use only. A string to be inserted into conf/ranger-ugsync-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-ugsync-site.xml\_role\_safety\_valve

**Required**

false

#### Ranger Usersync Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Role Specific System Group****Description**

The group that this role's processes should run as.

**Related Name****Default Value**

ranger

**API Name**

process\_groupname

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Role Specific System User

**Description**

The user that this role's processes should run as.

**Related Name****Default Value**

ranger

**API Name**

process\_username

**Required**

true

### Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

RANGER\_USERSYNC\_role\_env\_safety\_valve

**Required**

false

## Logs

### Ranger Usersync Log Directory

**Description**

The log directory for log files of the role Ranger Usersync.

**Related Name**

ranger.usersync.logdir

**Default Value**

/var/log/ranger/usersync

**API Name**

log\_dir

**Required**

false

### Ranger Usersync Logging Threshold

**Description**

The minimum log level for Ranger Usersync logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Ranger Usersync Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Ranger Usersync logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Ranger Usersync Max Log Size****Description**

The maximum size, in megabytes, per log file for Ranger Usersync logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name**

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following

configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

`ranger_usersync_fd_thresholds`

**Required**

`false`

**Ranger Usersync Host Health Test****Description**

When computing the overall Ranger Usersync health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ranger\_usersync\_host\_health\_enabled

**Required**

false

**Ranger Usersync Process Health Test****Description**

Enables the health test that the Ranger Usersync's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ranger\_usersync\_scm\_health\_enabled

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

### Other

#### Enable Ranger Usersync Cookie Authentication

**Description**

Enable cookie-based authentication for requests going from Ranger Usersync to Ranger Admin.

**Related Name**

`ranger.usersync.cookie.enabled`

**Default Value**

true

**API Name**

`ranger.usersync.cookie.enabled`

**Required**

false

#### Enable User Sync

**Description**

Should users and groups be synchronized to Ranger Database? Required to setup Ranger policies.

**Related Name**

`ranger.usersync.enabled`

**Default Value**

true

**API Name**

ranger.usersync.enabled

**Required**

false

**Usersync Filesource File Name****Description**

Path to the file with the users and groups information. Only used when Usersync Sync Source is set to "org.apache.ranger.unixusersync.process.FileSourceUserGroupBuilder". Example: /tmp/usergroup.json or /tmp/usergroup.csv or /tmp/usergroup.txt

**Related Name**

ranger.usersync.filesource.file

**Default Value****API Name**

ranger.usersync.filesource.file

**Required**

false

**Usersync Filesource Delimiter****Description**

Delimiter used in file, if File based user sync is used

**Related Name**

ranger.usersync.filesource.text.delimiter

**Default Value**

,

**API Name**

ranger.usersync.filesource.text.delimiter

**Required**

false

**Ranger Usersync Group Based Role Assignment Rules****Description**

The parameter is used to assign roles to users and groups synced in Ranger Admin. Based on the given values specified in the above delimiter parameters, Ranger Usersync will parse the value specified in this parameter and sync users and groups along with roles given.

**Related Name**

ranger.usersync.group.based.role.assignment.rules

**Default Value****API Name**

ranger.usersync.group.based.role.assignment.rules

**Required**

false

**Usersync Group Member Attribute****Description**

LDAP group member attribute name. Example: member

**Related Name**

ranger.usersync.group.memberattributename

**Default Value****API Name**

ranger.usersync.group.memberattributename

**Required**

false

**Usersync Group Name Attribute****Description**

LDAP group name attribute. Example: cn

**Related Name**

ranger.usersync.group.nameattribute

**Default Value****API Name**

ranger.usersync.group.nameattribute

**Required**

false

**Usersync Group Object Class****Description**

LDAP Group object class. Example: group

**Related Name**

ranger.usersync.group.objectclass

**Default Value****API Name**

ranger.usersync.group.objectclass

**Required**

false

**Usersync Enable Group Search First****Description**

Enable Group Search First.

**Related Name**

ranger.usersync.group.search.first.enabled

**Default Value**

false

**API Name**

ranger.usersync.group.search.first.enabled

**Required**

false

**Usersync Group Search Base****Description**

Search base for groups. Sample value would be `ou=groups,dc=hadoop,dc=apache,dc=org`. The parameter overrides value specified in `ranger.usersync.ldap.searchBase`, `ranger.usersync.ldap.user.searchbase`. If a value is not specified, takes the value of `ranger.usersync.ldap.searchBase`. If `ranger.usersync.ldap.searchBase` is also not specified, takes the value of `ranger.usersync.ldap.user.searchbase`. Multiple Ous can be configured with ; (semicolon) separated eg: `ou=groups,DC=example,DC=com;ou=group1,ou=group2`

**Related Name**

`ranger.usersync.group.searchbase`

**Default Value****API Name**

`ranger.usersync.group.searchbase`

**Required**

false

### Usersync Enable Group Sync

**Description**

Whether Usersync should use `ldapsearch` to find groups instead of relying on user entry attributes.

**Related Name**

`ranger.usersync.group.searchenabled`

**Default Value**

true

**API Name**

`ranger.usersync.group.searchenabled`

**Required**

false

### Usersync Group Search Filter

**Description**

Optional additional filter constraining the groups selected for syncing. A sample value would be `(dept=eng)`

**Related Name**

`ranger.usersync.group.searchfilter`

**Default Value****API Name**

`ranger.usersync.group.searchfilter`

**Required**

false

### Usersync Group Search Scope

**Description**

Search scope for the groups. Value "base" indicates that only the entry specified as the search base in `ranger.usersync.group.searchbase` should be considered. One "indicates" that only the immediate children of the entry specified as the search base in `ranger.usersync.group.searchbase` should be considered. "Sub" indicates that the entry specified as the search base in `ranger.usersync.group.searchbase`, and all of its subordinates to any depth, should be considered.

**Related Name**

ranger.usersync.group.searchscope

**Default Value**

sub

**API Name**

ranger.usersync.group.searchscope

**Required**

false

### Usersync Group Usermap Sync

**Description**

Whether to sync all groups for a user.

**Related Name**

ranger.usersync.group.usermapsyncenabled

**Default Value**

true

**API Name**

ranger.usersync.group.usermapsyncenabled

**Required**

false

### Usersync Bind User

**Description**

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search for users. This user is used for searching the users. This could be read-only LDAP user. Example: cn=admin,dc=example,dc=com

**Related Name**

ranger.usersync.ldap.binddn

**Default Value****API Name**

ranger.usersync.ldap.binddn

**Required**

false

### Usersync Incremental Sync

**Description**

Enable Incremental Sync.

**Related Name**

ranger.usersync.ldap.deltasync

**Default Value**

true

**API Name**

ranger.usersync.ldap.deltasync

**Required**

false

### Usersync Group Hierarchy Levels

**Description**

Levels of LDAP directory tree where the groups need to be searched.

**Related Name**

ranger.usersync.ldap.grouphierarchylevels

**Default Value**

0

**API Name**

ranger.usersync.ldap.grouphierarchylevels

**Required**

false

### Usersync Groupname Case Conversion

**Description**

Used for converting syncing groups to the selected case conversion.

**Related Name**

ranger.usersync.ldap.groupname.caseconversion

**Default Value**

none

**API Name**

ranger.usersync.ldap.groupname.caseconversion

**Required**

false

### Usersync Referral

**Description**

Set to follow if multiple LDAP/AD servers are configured to return continuation references for results. Set to ignore if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

**Related Name**

ranger.usersync.ldap.referral

**Default Value**

ignore

**API Name**

ranger.usersync.ldap.referral

**Required**

false

### Usersync Search Base

**Description**

Search base for users and groups. Sample value would be dc=hadoop,dc=apache,dc=org. Multiple Ous can be configured with ; (semicolon) separated.

**Related Name**

ranger.usersync.ldap.searchBase

**Default Value**

**API Name**

ranger.usersync.ldap.searchBase

**Required**

false

**Usersync Enable STARTTLS****Description**

Enable LDAP STARTTLS.

**Related Name**

ranger.usersync.ldap.starttls

**Default Value**

false

**API Name**

ranger.usersync.ldap.starttls

**Required**

false

**Usersync LDAP/AD URL****Description**

LDAP server URL. Example: value = ldap://localhost:389 or ldaps://localhost:636

**Related Name**

ranger.usersync.ldap.url

**Default Value****API Name**

ranger.usersync.ldap.url

**Required**

false

**Usersync User Group Name Attribute****Description**

LDAP user group name attribute. Generally it is the same as username attribute. Example: sAMAccountName in AD, uid or cn in OpenLDAP

**Related Name**

ranger.usersync.ldap.user.groupnameattribute

**Default Value****API Name**

ranger.usersync.ldap.user.groupnameattribute

**Required**

false

**Usersync User Name Attribute****Description**

LDAP user name attribute. Example: sAMAccountName in AD, uid or cn in OpenLDAP

**Related Name**

ranger.usersync.ldap.user.nameattribute

**Default Value****API Name**

ranger.usersync.ldap.user.nameattribute

**Required**

false

**Usersync User Object Class****Description**

LDAP User Object Class. Example: person or user

**Related Name**

ranger.usersync.ldap.user.objectclass

**Default Value****API Name**

ranger.usersync.ldap.user.objectclass

**Required**

false

**Usersync User Search Base****Description**

Search base for users. Sample value would be ou=users,dc=hadoop,dc=apache,dc=org. Overrides value specified in ranger.usersync.ldap.searchBase. Multiple Ous can be configured with ; (semicolon) separated eg: cn=users,dc=example,dc=com;ou=example1,ou=example2

**Related Name**

ranger.usersync.ldap.user.searchbase

**Default Value****API Name**

ranger.usersync.ldap.user.searchbase

**Required**

false

**Usersync User Search Filter****Description**

Optional additional filter constraining the users selected for syncing. A sample value would be (dept=eng). Customize the value to suit your deployment.

**Related Name**

ranger.usersync.ldap.user.searchfilter

**Default Value****API Name**

ranger.usersync.ldap.user.searchfilter

**Required**

false

### Usersync User Search Scope

**Description**

Search scope for the users. Value "base" indicates that only the entry specified as the search base in ranger.usersync.ldap.user.searchbase should be considered. "One" indicates that only the immediate children of the entry specified as the search base in ranger.usersync.ldap.user.searchbase should be considered. "Sub" indicates that the entry specified as the search base in ranger.usersync.ldap.user.searchbase, and all of its subordinates to any depth, should be considered.

**Related Name**

ranger.usersync.ldap.user.searchscope

**Default Value**

sub

**API Name**

ranger.usersync.ldap.user.searchscope

**Required**

false

### Usersync Username Case Conversion

**Description**

Used for converting syncing users to the selected case conversion.

**Related Name**

ranger.usersync.ldap.username.caseconversion

**Default Value**

none

**API Name**

ranger.usersync.ldap.username.caseconversion

**Required**

false

### Enable Results to be Paged for User/Group Request

**Description**

Whether results can be paged for User/Group requests.

**Related Name**

ranger.usersync.pagedresultsenabled

**Default Value**

true

**API Name**

ranger.usersync.pagedresultsenabled

**Required**

false

### User/Group Request Page size.

**Description**

Enter Page size for User/Group Request.

**Related Name**

ranger.usersync.pagedresultssize

**Default Value**

500

**API Name**

ranger.usersync.pagedresultssize

**Required**

false

**Maximum Records Per API Call****Description**

Maximum number of records to be returned per API call.

**Related Name**

ranger.usersync.policymanager.maxrecordsperapicall

**Default Value**

1000

**API Name**

ranger.usersync.policymanager.maxrecordsperapicall

**Required**

true

**Ranger Usersync Policymgr Username****Description**

Ranger Usersync username in Ranger Admin.

**Related Name**

ranger.usersync.policymgr.username

**Default Value**

rangerusersync

**API Name**

ranger.usersync.policymgr.username

**Required**

false

**Unix Auth Service Hostname****Description**

Port for Unix authentication service.

**Related Name**

ranger.usersync.port

**Default Value**

5151

**API Name**

ranger.usersync.port

**Required**

true

**Ranger Usersync Role Assignment List Delimiter****Description**

The parameter is used to specify delimiter while syncing roles to users and groups in Ranger Admin. It is a delimiter for roles. Example - "ROLE\_SYS\_ADMIN:u:username1,username2&ROLE\_KEY\_ADMIN:g:groupname1", where ROLE\_SYS\_ADMIN and ROLE\_KEY\_ADMIN are roles in Ranger Admin separated by delimiter &. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

**Related Name**

ranger.usersync.role.assignment.list.delimiter

**Default Value**

&

**API Name**

ranger.usersync.role.assignment.list.delimiter

**Required**

false

**Usersync Sleptime interval****Description**

Sleep time interval between user sync operations in milliseconds.

**Related Name**

ranger.usersync.sleptimeinmillisbetweensynccycle

**Default Value**

1 minute(s)

**API Name**

ranger.usersync.sleptimeinmillisbetweensynccycle

**Required**

false

**Source for Syncing User and Groups****Description**

For syncing from Ldap source, use "org.apache.ranger.ldapusersync.process.LdapUserGroupBuilder". For syncing from Unix source, use "org.apache.ranger.unixusersync.process.UnixUserGroupBuilder". For syncing from File source, use "org.apache.ranger.unixusersync.process.FileSourceUserGroupBuilder"

**Related Name**

ranger.usersync.source.impl.class

**Default Value**

org.apache.ranger.unixusersync.process.UnixUserGroupBuilder

**API Name**

ranger.usersync.source.impl.class

**Required**

true

**Ranger Usersync Unix Backend****Description**

The backend mechanism to read users and groups from a UNIX system. The value is applicable only on UNIX-based systems.

**Related Name**

ranger.usersync.unix.backend

**Default Value**

nss

**API Name**

ranger.usersync.unix.backend

**Required**

false

### Usersync UNIX Minimum User ID

**Description**

Minimum User ID to start syncing. This should be set to avoid syncing of UNIX system-level users in the Ranger Admin.

**Related Name**

ranger.usersync.unix.minUserId

**Default Value**

500

**API Name**

ranger.usersync.unix.minUserId

**Required**

false

### Usersync Enable User Search

**Description**

Enable User Search, when ranger.usersync.group.search.first.enabled is set to true.

**Related Name**

ranger.usersync.user.searchenabled

**Default Value**

false

**API Name**

ranger.usersync.user.searchenabled

**Required**

false

### Ranger Usersync Username Groupname Assignment List Delimiter

**Description**

The parameter is used to specify a delimiter while syncing users and groups in Ranger Admin. Used as a delimiter to differentiate between two or more users and groups. Example - "ROLE\_SYS\_ADMIN:u:username1,username2", where username1 and username2 are separated by ,. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

**Related Name**

ranger.usersync.username.groupname.assignment.list.delimiter

**Default Value**

,

**API Name**

ranger.usersync.username.groupname.assignment.list.delimiter

**Required**

false

**Ranger Usersync User Groups Assignment List Delimiter****Description**

The parameter is used to specify delimiter while syncing users and groups along with specified roles in Ranger Admin. It is a delimiter to differentiate between users and groups from respective roles. Example - "ROLE\_SYS\_ADMIN:u:username1,username2&ROLE\_SYS\_ADMIN:g:groupname1,groupname2", where ROLE\_SYS\_ADMIN is a role. "u" is used to denote the list of users followed by actual usernames which are username1 and username2. While "g" is used to denote the list of groups followed by actual groupnames which are groupname1 and groupname2. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

**Related Name**

ranger.usersync.users.groups.assignment.list.delimiter

**Default Value**

:

**API Name**

ranger.usersync.users.groups.assignment.list.delimiter

**Required**

false

**Ranger Usersync Conf Path****Description**

Staging directory for Ranger Usersync Configuration. This should generally not be changed.

**Related Name**

ranger\_usersync\_conf\_path

**Default Value**

/etc/ranger/usersync

**API Name**

ranger\_usersync\_conf\_path

**Required**

true

**Usersync Bind User Password****Description**

Password for the LDAP bind user used for searching users.

**Related Name**

ranger.usersync.ldap.ldapbindpassword

**Default Value****API Name**`ranger_usersync_ldap_ldapbindpassword`**Required**`false`**Ranger Usersync Max Heapsize****Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

**Related Name**`ranger_usersync_max_heap_size`**Default Value**`1 GiB`**API Name**`ranger_usersync_max_heap_size`**Required**`true`**Enable Ranger Usersync Metrics****Description**

Controls whether the Ranger Usersync metrics are enabled.

**Related Name**`ranger.usersync.metrics.enabled`**Default Value**`true`**API Name**`ranger_usersync_metrics_enabled`**Required**`false`**Ranger Usersync Metrics File Name****Description**

File name for the metrics exposed by Ranger Usersync. The file is updated at the frequency configured by Ranger Usersync Metrics Frequency.

**Related Name**`ranger.usersync.metrics.filename`**Default Value**`metrics.json`**API Name**`ranger_usersync_metrics_filename`**Required**`false`**Ranger Usersync Metrics File Path****Description**

The location at which the metrics exposed by Ranger Usersync will be written.

**Related Name**

ranger.usersync.metrics.filepath

**Default Value**

/var/log/ranger/metrics-usersync

**API Name**

ranger\_usersync\_metrics\_filepath

**Required**

false

### Ranger Usersync Metrics Frequency

**Description**

The frequency at which the metrics are logged at Ranger Usersync Metrics File Path.

**Related Name**

ranger.usersync.metrics.frequencytimeinmillis

**Default Value**

1 minute(s)

**API Name**

ranger\_usersync\_metrics\_frequency

**Required**

false

### Performance

#### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

### Resource Management

#### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

`rm_memory_hard_limit`**Required**`true`**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit`**Required**`true`**Security****Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Ranger Usersync roles.

**Related Name****Default Value**`rangerusersync`**API Name**`kerberos_role_princ_name`**Required**`true`**Ranger Usersync TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Usersync might connect to. This is used when Ranger Usersync is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**`ranger.usersync.truststore.file`**Default Value****API Name**`ssl_client_truststore_location`

**Required**

false

**Ranger Usersync TLS/SSL Client Trust Store Password****Description**

The password for the Ranger Usersync TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ranger.usersync.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-ugsync-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Usersync Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Role Specific System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: Role Specific System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Usersync Filesource File Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Filesource File Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.filesource.file

**Required**

true

**Suppress Parameter Validation: Usersync Filesource Delimiter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Filesource Delimiter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.filesource.text.delimiter

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Group Based Role Assignment Rules****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Group Based Role Assignment Rules parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.based.role.assignment.rules

**Required**

true

**Suppress Parameter Validation: Usersync Group Member Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Member Attribute parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.memberattributename

**Required**

true

**Suppress Parameter Validation: Usersync Group Name Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Name Attribute parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.nameattribute

**Required**

true

**Suppress Parameter Validation: Usersync Group Object Class****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Object Class parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.objectclass

**Required**

true

**Suppress Parameter Validation: Usersync Group Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Search Base parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.searchbase

**Required**

true

**Suppress Parameter Validation: Usersync Group Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Search Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.searchfilter

**Required**

true

**Suppress Parameter Validation: Usersync Bind User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Bind User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.binddn

**Required**

true

**Suppress Parameter Validation: Usersync Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Search Base parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.searchbase

**Required**

true

**Suppress Parameter Validation: Usersync LDAP/AD URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync LDAP/AD URL parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.url

**Required**

true

### Suppress Parameter Validation: Usersync User Group Name Attribute

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Group Name Attribute parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.groupnameattribute

**Required**

true

### Suppress Parameter Validation: Usersync User Name Attribute

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Name Attribute parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.nameattribute

**Required**

true

### Suppress Parameter Validation: Usersync User Object Class

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Object Class parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.objectclass

**Required**

true

### Suppress Parameter Validation: Usersync User Search Base

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Search Base parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ranger.usersync.ldap.user.searchbase`**Required**`true`**Suppress Parameter Validation: Usersync User Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Search Filter parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.ldap.user.searchfilter`**Required**`true`**Suppress Parameter Validation: Ranger Usersync Policymgr Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Policymgr Username parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.policymgr.username`**Required**`true`**Suppress Parameter Validation: Unix Auth Service Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Unix Auth Service Hostname parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.port`**Required**`true`**Suppress Parameter Validation: Ranger Usersync Role Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Role Assignment List Delimiter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.role.assignment.list.delimiter

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Username Groupname Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Username Groupname Assignment List Delimiter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.username.groupname.assignment.list.delimiter

**Required**

true

**Suppress Parameter Validation: Ranger Usersync User Groups Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync User Groups Assignment List Delimiter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.users.groups.assignment.list.delimiter

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Conf Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_conf\_path

**Required**

true

### Suppress Parameter Validation: Usersync Bind User Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Bind User Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_ldap\_ldapbindpassword

**Required**

true

### Suppress Parameter Validation: Ranger Usersync Max Heapsize

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_max\_heap\_size

**Required**

true

### Suppress Parameter Validation: Ranger Usersync Metrics File Name

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Metrics File Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_metrics\_filename

**Required**

true

### Suppress Parameter Validation: Ranger Usersync Metrics File Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Metrics File Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_metrics\_filepath

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ranger Usersync TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Usersync TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_unexpected\_exits

**Required**

true

**Service-Wide****Advanced****Ranger Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

RANGER\_service\_env\_safety\_valve

**Required**

false

**Database****Ranger Database Host****Description**

Hostname of the database used by Ranger Admin. If the port is non-default for your database type, use host:port notation.

**Related Name**

ranger\_database\_host

**Default Value**

localhost

**API Name**

ranger\_database\_host

**Required**

true

**Ranger Database Name****Description**

Name of Ranger Admin database.

**Related Name**

ranger\_database\_name

**Default Value**

ranger

**API Name**

ranger\_database\_name

**Required**

true

**Ranger Database User Password****Description**

Password for Ranger Admin database.

**Related Name**

ranger.jpa.jdbc.password

**Default Value****API Name**

ranger\_database\_password

**Required**

true

**Ranger Database Port****Description**

Port number for Ranger Admin database.

**Related Name**

ranger\_database\_port

**Default Value**

5432

**API Name**

ranger\_database\_port

**Required**

true

### Ranger Database Type

**Description**

Database type to be used.

**Related Name**

ranger\_database\_type

**Default Value**

postgresql

**API Name**

ranger\_database\_type

**Required**

true

### Ranger Database User

**Description**

User for Ranger Admin database.

**Related Name**

ranger.jpa.jdbc.user

**Default Value**

rangeradmin

**API Name**

ranger\_database\_user

**Required**

true

### Monitoring

#### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Healthy Ranger Admin Monitoring Thresholds

**Description**

The health test thresholds of the overall Ranger Admin health. The check returns "Concerning" health if the percentage of "Healthy" Ranger Admins falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger Admins falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 49.0 %

**API Name**

RANGER\_RANGER\_ADMIN\_healthy\_thresholds

**Required**

false

### Ranger Tagsync Role Health Test

**Description**

When computing the overall RANGER health, consider Ranger Tagsync's health

**Related Name****Default Value**

true

**API Name**

RANGER\_RANGER\_TAGSYNC\_health\_enabled

**Required**

false

### Ranger Usersync Role Health Test

**Description**

When computing the overall RANGER health, consider Ranger Usersync's health

**Related Name****Default Value**

true

**API Name**

RANGER\_RANGER\_USERSYNC\_health\_enabled

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****HDFS Service****Description**

Name of the HDFS service that this Ranger service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

true

**Ranger KMS Keyadmin User Initial Password****Description**

Password for the Ranger administrator, whose login name is "keyadmin". The password should be minimum 8 characters long, with at least one alphabetic and one numeric character. The following characters are invalid: "'\`´. Note that this password is only used to setup Ranger in the cluster: any subsequent changes will not be effective. This password can be later changed from the Ranger Admin UI under the user profile page.

**Related Name**

keyadmin\_user\_password

**Default Value****API Name**

keyadmin\_user\_password

**Required**

true

**Load Balancer Address****Description**

Load Balancer Address used by clients to access Ranger Admin. Only required when Ranger Admin is running with High Availability. Example: http://load-balancer-host:load-balancer-port

**Related Name**

ranger.externalurl

**Default Value****API Name**

load\_balancer\_url

**Required**

false

**Ranger Plugin DFS Audit URL****Description**

An absolute URL with no trailing slash should be entered, or leave the value empty. Allows setting up a centralized storage location for Ranger audits. This URL is used as the base for audit directories: all services plugging into Ranger will prepend this URL to their configured path used to store Ranger audits.

**Related Name**

ranger\_plugin\_hdfs\_audit\_url

**Default Value**

/ranger/audit

**API Name**

ranger\_plugin\_hdfs\_audit\_url

**Required**

false

**Ranger Admin User Initial Password****Description**

Password for the Ranger administrator, whose login name is "admin". The password should be minimum 8 characters long, with at least one alphabetic and one numeric character. The following characters are invalid: "'\`´. Note that this password is only used to setup Ranger in the cluster: any subsequent changes will not be effective. This password can be later changed from the Ranger Admin UI under the user profile page.

**Related Name**

rangeradmin\_user\_password

**Default Value****API Name**

rangeradmin\_user\_password

**Required**

true

**Ranger Tagsync User Initial Password****Description**

Password for the Ranger administrator, whose login name is "rangertagsync". The password should be minimum 8 characters long, with at least one alphabetic and one numeric character. The following characters are invalid: "'\`´. Note that this password is only used to setup Ranger in the cluster: any subsequent changes will not be effective. This password can be later changed from the Ranger Admin UI under the user profile page.

**Related Name**

rangertagsync\_user\_password

**Default Value****API Name**

rangertagsync\_user\_password

**Required**

true

**Ranger Usersync User Initial Password****Description**

Password for the Ranger administrator, whose login name is "rangerusersync". The password should be minimum 8 characters long, with at least one alphabetic and one numeric character. The following characters are invalid: "'\`´. Note that this password is only used to setup Ranger in the cluster: any subsequent changes will not be effective. This password can be later changed from the Ranger Admin UI under the user profile page.

**Related Name**

rangerusersync\_user\_password

**Default Value****API Name**

rangerusersync\_user\_password

**Required**

true

**Solr Service****Description**

Name of the Solr service that this Ranger service instance depends on

**Related Name****Default Value****API Name**

solr\_service

**Required**

true

**Ports and Addresses****Admin HTTP Port****Description**

HTTP Port for Ranger Admin.

**Related Name**

ranger.service.http.port

**Default Value**

6080

**API Name**

ranger\_service\_http\_port

**Required**

true

**Admin HTTPS port****Description**

HTTPS Port for Ranger Admin. Only used when SSL is enabled for Ranger Admin.

**Related Name**

ranger.service.https.port

**Default Value**

6182

**API Name**

ranger\_service\_https\_port

**Required**

true

**Suppressions****Suppress Configuration Validator: Atlas Source: Kafka Consumer Group****Description**

Whether to suppress configuration warnings produced by the Atlas Source: Kafka Consumer Group configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_atlas.kafka.entities.group.id

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/atlas-application.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-admin-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-tagsync-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-tagsync-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-ugsync-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Configuration Validator: Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Admin Log Directory****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Configuration Validator: Role Specific System Group

**Description**

Whether to suppress configuration warnings produced by the Role Specific System Group configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Configuration Validator: Role Specific System User

**Description**

Whether to suppress configuration warnings produced by the Role Specific System User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_username

**Required**

true

### Suppress Configuration Validator: Exclude Users from Audit Access Tab

**Description**

Whether to suppress configuration warnings produced by the Exclude Users from Audit Access Tab configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.accesslogs.exclude.users.list

**Required**

true

### Suppress Configuration Validator: Kerberos Cookie Path

**Description**

Whether to suppress configuration warnings produced by the Kerberos Cookie Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.admin.kerberos.cookie.path

**Required**

true

**Suppress Configuration Validator: Default Policy Groups****Description**

Whether to suppress configuration warnings produced by the Default Policy Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.default.policy.groups

**Required**

true

**Suppress Configuration Validator: Default Policy Users****Description**

Whether to suppress configuration warnings produced by the Default Policy Users configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.default.policy.users

**Required**

true

**Suppress Configuration Validator: Admin AD Auth Base DN****Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Base DN configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.base.dn

**Required**

true

**Suppress Configuration Validator: Admin AD Auth Bind DN****Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Bind DN configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.bind.dn

**Required**

true

**Suppress Configuration Validator: Admin AD Auth Domain Name****Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Domain Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.domain

**Required**

true

**Suppress Configuration Validator: Admin AD Auth URL****Description**

Whether to suppress configuration warnings produced by the Admin AD Auth URL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.url

**Required**

true

**Suppress Configuration Validator: Admin AD Auth User Search Filter****Description**

Whether to suppress configuration warnings produced by the Admin AD Auth User Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.user.searchfilter

**Required**

true

**Suppress Configuration Validator: Admin LDAP Auth Base DN****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Base DN configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.base.dn

**Required**

true

**Suppress Configuration Validator: Admin LDAP Auth Bind User****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Bind User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.bind.dn

**Required**

true

**Suppress Configuration Validator: Admin LDAP Auth Group Role Attribute****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Role Attribute configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.group.roleattribute

**Required**

true

**Suppress Configuration Validator: Admin LDAP Auth Group Search Base****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Search Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.group.searchbase

**Required**

true

### Suppress Configuration Validator: Admin LDAP Auth Group Search Filter

**Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.group.searchfilter

**Required**

true

### Suppress Configuration Validator: Admin LDAP Auth URL

**Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth URL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.url

**Required**

true

### Suppress Configuration Validator: Admin LDAP Auth User DN Pattern

**Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth User DN Pattern configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.user.dnpattern

**Required**

true

### Suppress Configuration Validator: Admin LDAP Auth User Search Filter

**Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth User Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ranger.ldap.user.searchfilter`**Required**`true`**Suppress Configuration Validator: SSO Browser Useragent****Description**

Whether to suppress configuration warnings produced by the SSO Browser Useragent configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.sso.browser.useragent`**Required**`true`**Suppress Configuration Validator: SSO Provider Url****Description**

Whether to suppress configuration warnings produced by the SSO Provider Url configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.sso.providerurl`**Required**`true`**Suppress Configuration Validator: SSO Public Key****Description**

Whether to suppress configuration warnings produced by the SSO Public Key configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.sso.publickey`**Required**`true`**Suppress Configuration Validator: Tag Service Name****Description**

Whether to suppress configuration warnings produced by the Tag Service Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.tagservice.auto.name

**Required**

true

**Suppress Configuration Validator: Capture Cluster name****Description**

Whether to suppress configuration warnings produced by the Capture Cluster name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.tagsync.atlas.default.cluster.name

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Username****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.tagsync.dest.ranger.username

**Required**

true

**Suppress Configuration Validator: File Source: Filename****Description**

Whether to suppress configuration warnings produced by the File Source: Filename configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.tagsync.source.file.filename

**Required**

true

**Suppress Configuration Validator: Admin UNIX Auth Service Hostname****Description**

Whether to suppress configuration warnings produced by the Admin UNIX Auth Service Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.unixauth.service.hostname

**Required**

true

**Suppress Configuration Validator: Admin Unix Auth Service Port****Description**

Whether to suppress configuration warnings produced by the Admin Unix Auth Service Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.unixauth.service.port

**Required**

true

**Suppress Configuration Validator: Usersync Filesource File Name****Description**

Whether to suppress configuration warnings produced by the Usersync Filesource File Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.filesource.file

**Required**

true

**Suppress Configuration Validator: Usersync Filesource Delimiter****Description**

Whether to suppress configuration warnings produced by the Usersync Filesource Delimiter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.filesource.text.delimiter

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Group Based Role Assignment Rules****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Group Based Role Assignment Rules configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.based.role.assignment.rules

**Required**

true

**Suppress Configuration Validator: Usersync Group Member Attribute****Description**

Whether to suppress configuration warnings produced by the Usersync Group Member Attribute configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.memberattributename

**Required**

true

**Suppress Configuration Validator: Usersync Group Name Attribute****Description**

Whether to suppress configuration warnings produced by the Usersync Group Name Attribute configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.nameattribute

**Required**

true

**Suppress Configuration Validator: Usersync Group Object Class****Description**

Whether to suppress configuration warnings produced by the Usersync Group Object Class configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.objectclass

**Required**

true

**Suppress Configuration Validator: Usersync Group Search Base****Description**

Whether to suppress configuration warnings produced by the Usersync Group Search Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.searchbase

**Required**

true

**Suppress Configuration Validator: Usersync Group Search Filter****Description**

Whether to suppress configuration warnings produced by the Usersync Group Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.searchfilter

**Required**

true

**Suppress Configuration Validator: Usersync Bind User****Description**

Whether to suppress configuration warnings produced by the Usersync Bind User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.binddn

**Required**

true

**Suppress Configuration Validator: Usersync Search Base****Description**

Whether to suppress configuration warnings produced by the Usersync Search Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.searchbase

**Required**

true

**Suppress Configuration Validator: Usersync LDAP/AD URL****Description**

Whether to suppress configuration warnings produced by the Usersync LDAP/AD URL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.url

**Required**

true

**Suppress Configuration Validator: Usersync User Group Name Attribute****Description**

Whether to suppress configuration warnings produced by the Usersync User Group Name Attribute configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.groupnameattribute

**Required**

true

**Suppress Configuration Validator: Usersync User Name Attribute****Description**

Whether to suppress configuration warnings produced by the Usersync User Name Attribute configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.nameattribute

**Required**

true

### Suppress Configuration Validator: Usersync User Object Class

**Description**

Whether to suppress configuration warnings produced by the Usersync User Object Class configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.objectclass

**Required**

true

### Suppress Configuration Validator: Usersync User Search Base

**Description**

Whether to suppress configuration warnings produced by the Usersync User Search Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.searchbase

**Required**

true

### Suppress Configuration Validator: Usersync User Search Filter

**Description**

Whether to suppress configuration warnings produced by the Usersync User Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.searchfilter

**Required**

true

### Suppress Configuration Validator: Ranger Usersync Policymgr Username

**Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Policymgr Username configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ranger.usersync.policymgr.username`**Required**`true`**Suppress Configuration Validator: Unix Auth Service Hostname****Description**

Whether to suppress configuration warnings produced by the Unix Auth Service Hostname configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.port`**Required**`true`**Suppress Configuration Validator: Ranger Usersync Role Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Role Assignment List Delimiter configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.role.assignment.list.delimiter`**Required**`true`**Suppress Configuration Validator: Ranger Usersync Username Groupname Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Username Groupname Assignment List Delimiter configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.username.groupname.assignment.list.delimiter`**Required**`true`**Suppress Configuration Validator: Ranger Usersync User Groups Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync User Groups Assignment List Delimiter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.users.groups.assignment.list.delimiter

**Required**

true

**Suppress Configuration Validator: Ranger Admin Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Conf Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_conf\_path

**Required**

true

**Suppress Configuration Validator: Ranger Admin Max Heapsize****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Admin AD Auth Bind Password****Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Bind Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ldap\_ad\_bind\_password

**Required**

true

**Suppress Configuration Validator: Admin LDAP Auth Bind User Password****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Bind User Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ldap\_bind\_password

**Required**

true

**Suppress Configuration Validator: Knox Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Knox Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_proxyuser\_knox\_groups

**Required**

true

**Suppress Configuration Validator: Knox Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Knox Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_proxyuser\_knox\_hosts

**Required**

true

**Suppress Configuration Validator: Knox Proxy User Users****Description**

Whether to suppress configuration warnings produced by the Knox Proxy User Users configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_proxyuser\_knox\_users

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Conf Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_conf\_path

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Max Heapsize****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Metrics File Name****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Metrics File Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_metrics\_filename

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Metrics File Path****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Metrics File Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_metrics\_filepath

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Tomcat Work Dir****Description**

Whether to suppress configuration warnings produced by the Ranger Tomcat Work Dir configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tomcat\_work\_dir

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Conf Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_conf\_path

**Required**

true

**Suppress Configuration Validator: Usersync Bind User Password****Description**

Whether to suppress configuration warnings produced by the Usersync Bind User Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_ldap\_ldapbindpassword

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Max Heapsize****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Metrics File Name****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Metrics File Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_metrics\_filename

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Metrics File Path****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Metrics File Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_metrics\_filepath

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Ranger Admin TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Ranger Admin TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Ranger Admin TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Ranger Admin TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Ranger KMS Keyadmin User Initial Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Keyadmin User Initial Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keyadmin\_user\_password

**Required**

true

**Suppress Parameter Validation: Load Balancer Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Load Balancer Address parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_load\_balancer\_url

**Required**

true

**Suppress Configuration Validator: Ranger Admin Count Validator****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_admin\_count\_validator

**Required**

true

**Suppress Parameter Validation: Ranger Database Host****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database Host parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_database\_host

**Required**

true

**Suppress Parameter Validation: Ranger Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database Name parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_database\_name

**Required**

true

**Suppress Parameter Validation: Ranger Database User Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database User Password parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_database\_password

**Required**

true

**Suppress Parameter Validation: Ranger Database Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_database\_port

**Required**

true

**Suppress Parameter Validation: Ranger Database User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_database\_user

**Required**

true

**Suppress Parameter Validation: Ranger Plugin DFS Audit URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin DFS Audit URL parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_plugin\_hdfs\_audit\_url

**Required**

true

### Suppress Parameter Validation: Ranger Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_service\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Admin HTTP Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_service\_http\_port

**Required**

true

### Suppress Parameter Validation: Admin HTTPS port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin HTTPS port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_service\_https\_port

**Required**

true

### Suppress Configuration Validator: Ranger Tagsync Count Validator

**Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_tagsync\_count\_validator

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Count Validator****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_usersync\_count\_validator

**Required**

true

**Suppress Parameter Validation: Ranger Admin User Initial Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin User Initial Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_rangeradmin\_user\_password

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync User Initial Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync User Initial Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_rangertagsync\_user\_password

**Required**

true

**Suppress Parameter Validation: Ranger Usersync User Initial Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync User Initial Password parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_rangerusersync\_user\_password

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Health Test: Ranger Admin Health****Description**

Whether to suppress the results of the Ranger Admin Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ranger\_ranger\_admin\_healthy

**Required**

true

### Suppress Health Test: Ranger Tagsync Health

**Description**

Whether to suppress the results of the Ranger Tagsync Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ranger\_ranger\_ranger\_tagsync\_health

**Required**

true

### Suppress Health Test: Ranger Usersync Health

**Description**

Whether to suppress the results of the Ranger Usersync Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ranger\_ranger\_ranger\_usersync\_health

**Required**

true

## S3 Connector Properties in Cloudera Runtime 7.1

Role groups:

### Service-Wide

#### Advanced

#### S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

AWS\_S3\_service\_env\_safety\_valve

**Required**

false

### Default S3 Endpoint

**Description**

Optional, default endpoint used by CDH services accessing S3, indicating the AWS region. To see a list of valid values for this parameter please consult [AWS Regions and Endpoints for S3](#): use one of the values listed in the 'Endpoint' column, eg. 's3.us-east-2.amazonaws.com'. When not specified the endpoint used is s3.amazonaws.com

**Related Name**

fs.s3a.endpoint

**Default Value****API Name**

s3\_endpoint

**Required**

false

### Monitoring

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Other

#### Cloud Account Name

**Description**

Name of an AWS account. The associated AWS keys are emitted to Hue, Impala and the Hive Metastore Server.

**Related Name****Default Value****API Name**

cloud\_account

**Required**

true

### Security

#### Credentials Protection Policy

**Description**

Determines a security policy for the distribution of AWS account credentials to cluster services. 'More Secure': Encrypted at all times and directly available to a limited set of services. 'Less Secure': Credentials may be in plain text in some configuration files for specific services in the

cluster. When IAM profiles are used, credentials are externally managed in AWS and there are no AWS credentials in any configuration files, so this setting is not applicable.

**Related Name****Default Value**

SECURE

**API Name**

key\_distribution\_policy

**Required**

true

**Suppressions****Suppress Parameter Validation: S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_aws\_s3\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Default S3 Endpoint****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default S3 Endpoint parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_s3\_endpoint

**Required**

true

**Suppress Configuration Validator: S3Guard CDH Validator****Description**

Whether to suppress configuration warnings produced by the S3Guard CDH Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

```
service_config_suppression_s3guard_unsupported_cdh_validator
```

**Required**

```
true
```

## Schema Registry Properties in Cloudera Runtime 7.1

Role groups:

### Schema Registry Server

#### Advanced

#### Schema Registry Server XML Override

**Description**

For advanced use only, replace entire XML in the logback configuration file for Schema Registry Server, ignoring all logging configuration.

**Related Name**

```
logback_safety_valve
```

**Default Value****API Name**

```
logback_safety_valve
```

**Required**

```
false
```

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

```
oom_heap_dump_dir
```

**Default Value**

```
/tmp
```

**API Name**

```
oom_heap_dump_dir
```

**Required**

```
false
```

#### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml

**Description**

For advanced use only. A string to be inserted into registry.yaml for this role only.

**Related Name****Default Value****API Name**

registry.yaml\_role\_safety\_valve

**Required**

false

### Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

SCHEMA\_REGISTRY\_SERVER\_role\_env\_safety\_valve

**Required**

false

**Logs****Schema Registry Server Log Directory****Description**

The log directory for log files of the role Schema Registry Server.

**Related Name**

log\_dir

**Default Value**

/var/log/schemaregistry

**API Name**

log\_dir

**Required**

false

**Schema Registry Server Logging Threshold****Description**

The minimum log level for Schema Registry Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Schema Registry Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Schema Registry Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Schema Registry Server Max Log Size****Description**

The maximum size, in megabytes, per log file for Schema Registry Server logs. Typically used by log4j or logback.

**Related Name**

**Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

## Log Directory Free Space Monitoring Percentage Thresholds

### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

### Related Name

### Default Value

Warning: Never, Critical: Never

### API Name

log\_directory\_free\_space\_percentage\_thresholds

### Required

false

## Metric Filter

### Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

### Related Name

### Default Value

### API Name

monitoring\_metric\_filter

### Required

false

## Process Swap Memory Thresholds

### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

schema\_registry\_server\_fd\_thresholds

**Required**

false

**Schema Registry Server Host Health Test****Description**

When computing the overall Schema Registry Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

schema\_registry\_server\_host\_health\_enabled

**Required**

false

**Schema Registry Server Process Health Test****Description**

Enables the health test that the Schema Registry Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

schema\_registry\_server\_scm\_health\_enabled

**Required**

false

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Schema Registry Admin Port****Description**

The admin port for the server.

**Related Name**

schema.registry.adminPort

**Default Value**

7789

**API Name**

schema.registry.adminPort

**Required**

true

**Schema Registry Allowed Resources****Description**

Allowed resources for Schema Registry.

**Related Name**

schema.registry.allowed.resources

**Default Value**

401.html, back-default.png, favicon.ico

**API Name**

schema.registry.allowed.resources

**Required**

false

**Schema Version Cache Expiry Interval****Description**

Schema version cache expiry interval.

**Related Name**

schema.registry.cache.expiry.interval

**Default Value**

3600

**API Name**

schema.registry.cache.expiry.interval

**Required**

true

**Schema Registry Cache Size****Description**

Schema Registry cache size.

**Related Name**

schema.registry.cache.size

**Default Value**

1000

**API Name**

schema.registry.cache.size

**Required**

true

### Password For HTTP Proxy Server Username

**Description**

Password For HTTP Proxy Server Username.

**Related Name**

schema.registry.httpProxyPassword

**Default Value****API Name**

schema.registry.httpProxyPassword

**Required**

false

### HTTP Proxy Server

**Description**

URL for http proxy server. Please enter it in format protocol\_name://host\_name:port\_number.

**Related Name**

schema.registry.httpProxyServer

**Default Value****API Name**

schema.registry.httpProxyServer

**Required**

false

### HTTP Proxy Server Availability

**Description**

Boolean to set if HTTP Proxy Server is available or not.

**Related Name**

schema.registry.httpProxyServer.available

**Default Value**

false

**API Name**

schema.registry.httpProxyServer.available

**Required**

false

### Username For HTTP Proxy Server

**Description**

Username for http proxy server.

**Related Name**

schema.registry.httpProxyUsername

**Default Value****API Name**

schema.registry.httpProxyUsername

**Required**

false

### Schema Registry Jar Storage Directory Path

**Description**

Jar storage directory path.

**Related Name**

schema.registry.jar.storage.directory.path

**Default Value**

/tmp/schema-registry/local-jars

**API Name**

schema.registry.jar.storage.directory.path

**Required**

false

### Schema Registry Jar Storage HDFS URL

**Description**

URL of the directory to be used for storing jars on HDFS when HDFS is not selected as an optional dependency.

**Related Name**

schema.registry.jar.storage.hdfs.url

**Default Value**

hdfs://localhost:8020

**API Name**

schema.registry.jar.storage.hdfs.url

**Required**

false

### Schema Registry Jar Storage Type

**Description**

Jar storage type for storing jars on the local filesystem or on HDFS. If 'hdfs' is set but HDFS is not selected as an optional dependency, please provide a value for the 'Schema Registry Jar Storage HDFS URL' property.

**Related Name**

schema.registry.jar.storage.type

**Default Value**

local

**API Name**`schema.registry.jar.storage.type`**Required**`false`**Java Home Path Override****Description**

Java home path override for Schema Registry.

**Related Name**`schema.registry.jdk.home`**Default Value****API Name**`schema.registry.jdk.home`**Required**`false`**Schema Registry Kerberos Name Rules****Description**

Kerberos name rules for Schema Registry.

**Related Name**`schema.registry.kerberos.name.rules`**Default Value**

```
RULE:[2:$1@$0]([jt]t@.*EXAMPLE.COM)s/.*/$MAPRED_USER/ RULE:[2:$1@$0]
([nd]n@.*EXAMPLE.COM)s/.*/$HDFS_USER/DEFAULT
```

**API Name**`schema.registry.kerberos.name.rules`**Required**`false`**Schema Registry Kerberos Non Browser User Agents****Description**

Non browser user agents if kerberos is enabled.

**Related Name**`schema.registry.kerberos.non.browser.user.agents`**Default Value****API Name**`schema.registry.kerberos.non.browser.user.agents`**Required**`false`**Schema Registry Port****Description**

The port on which server accepts connections.

**Related Name**

schema.registry.port

**Default Value**

7788

**API Name**

schema.registry.port

**Required**

true

### Schema Registry Servlet Filter

**Description**

Schema Registry servlet filter class.

**Related Name**

schema.registry.servlet.filter

**Default Value**

com.hortonworks.registries.auth.server.AuthenticationFilter

**API Name**

schema.registry.servlet.filter

**Required**

true

### Schema Registry Admin Port (SSL)

**Description**

HTTPS admin port Schema Registry node runs on when SSL is enabled.

**Related Name**

schema.registry.ssl.adminPort

**Default Value**

7791

**API Name**

schema.registry.ssl.adminPort

**Required**

false

### SSL Keystore Type

**Description**

The keystore type. It is blank by default but required if schema registry's ssl is enabled. e.g. PKCS12 or JKS.

**Related Name**

schema.registry.ssl.keyStoreType

**Default Value**

jks

**API Name**

schema.registry.ssl.keyStoreType

**Required**

false

### Schema Registry Port (SSL)

**Description**

HTTPS port Schema Registry node runs on when SSL is enabled.

**Related Name**

schema.registry.ssl.port

**Default Value**

7790

**API Name**

schema.registry.ssl.port

**Required**

false

### SSL TrustStore Type

**Description**

The truststore type. It is blank by default but required if schema registry's ssl is enabled. e.g. PKCS12 or JKS.

**Related Name**

schema.registry.ssl.trustStoreType

**Default Value**

jks

**API Name**

schema.registry.ssl.trustStoreType

**Required**

false

### SSL ValidateCerts

**Description**

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates.

**Related Name**

schema.registry.ssl.validateCerts

**Default Value**

false

**API Name**

schema.registry.ssl.validateCerts

**Required**

false

### SSL ValidatePeers

**Description**

Whether or not to validate TLS peer certificates.

**Related Name**

schema.registry.ssl.validatePeers

**Default Value**

false

**API Name**

schema.registry.ssl.validatePeers

**Required**

false

**Schema Registry Query Timeout****Description**

Schema Registry query timeout.

**Related Name**

schema.registry.storage.query.timeout

**Default Value**

30 second(s)

**API Name**

schema.registry.storage.query.timeout

**Required**

true

**Schema Registry Token Validity****Description**

Kerberos token validity for Schema Registry in ms.

**Related Name**

schema.registry.token.validity

**Default Value**

36000

**API Name**

schema.registry.token.validity

**Required**

false

**Schema Registry Log Max Backup Index****Description**

The number of backup files.

**Related Name**

schema\_registry\_log\_maxbackupindex

**Default Value**

20

**API Name**

schema\_registry\_log\_maxbackupindex

**Required**

false

**Schema Registry Log Max File Size****Description**

The maximum size of backup file before the log is rotated.

**Related Name**

schema\_registry\_log\_maxfilesize

**Default Value**

256MB

**API Name**

schema\_registry\_log\_maxfilesize

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Schema Registry Server TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Schema Registry Server might connect to. This is used when Schema Registry Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

schema.registry.ssl.trustStorePath

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Schema Registry Server TLS/SSL Client Trust Store Password****Description**

The password for the Schema Registry Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

schema.registry.ssl.trustStorePassword

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Schema Registry Server****Description**

Encrypt communication between clients and Schema Registry Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl.enable

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Schema Registry Server TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Schema Registry Server is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

schema.registry.ssl.keyStorePath

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Schema Registry Server TLS/SSL Server JKS Keystore File Password****Description**

The password for the Schema Registry Server JKS keystore file.

**Related Name**

schema.registry.ssl.keyStorePassword

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Schema Registry Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Schema Registry Server XML Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server XML Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logback\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_registry.yaml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Schema Registry Admin Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Admin Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.adminport

**Required**

true

### Suppress Parameter Validation: Schema Registry Allowed Resources

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Allowed Resources parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.allowed.resources

**Required**

true

### Suppress Parameter Validation: Password For HTTP Proxy Server Username

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password For HTTP Proxy Server Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.httpproxypassword

**Required**

true

### Suppress Parameter Validation: HTTP Proxy Server

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy Server parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_schema.registry.httpproxyserver`**Required**`true`**Suppress Parameter Validation: Username For HTTP Proxy Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Username For HTTP Proxy Server parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.httpproxyusername`**Required**`true`**Suppress Parameter Validation: Schema Registry Jar Storage Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Jar Storage Directory Path parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.jar.storage.directory.path`**Required**`true`**Suppress Parameter Validation: Schema Registry Jar Storage HDFS URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Jar Storage HDFS URL parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.jar.storage.hdfs.url`**Required**`true`**Suppress Parameter Validation: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.jdk.home

**Required**

true

**Suppress Parameter Validation: Schema Registry Kerberos Name Rules****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Kerberos Name Rules parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.kerberos.name.rules

**Required**

true

**Suppress Parameter Validation: Schema Registry Kerberos Non Browser User Agents****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Kerberos Non Browser User Agents parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.kerberos.non.browser.user.agents

**Required**

true

**Suppress Parameter Validation: Schema Registry Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.port

**Required**

true

### Suppress Parameter Validation: Schema Registry Servlet Filter

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Servlet Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.servlet.filter

**Required**

true

### Suppress Parameter Validation: Schema Registry Admin Port (SSL)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Admin Port (SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.adminport

**Required**

true

### Suppress Parameter Validation: SSL Keystore Type

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.keystoretype

**Required**

true

### Suppress Parameter Validation: Schema Registry Port (SSL)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Port (SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.port

**Required**

true

**Suppress Parameter Validation: SSL TrustStore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.truststoretype

**Required**

true

**Suppress Parameter Validation: SSL ValidateCerts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.validatecerts

**Required**

true

**Suppress Parameter Validation: SSL ValidatePeers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidatePeers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.validatepeers

**Required**

true

**Suppress Parameter Validation: Schema Registry Log Max Backup Index****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Log Max Backup Index parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_schema\_registry\_log\_maxbackupindex

**Required**

true

**Suppress Parameter Validation: Schema Registry Log Max File Size****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Log Max File Size parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema\_registry\_log\_maxfilesize

**Required**

true

**Suppress Parameter Validation: Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema\_registry\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Schema Registry Server TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Schema Registry Server TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Schema Registry Server TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Schema Registry Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### System Group

**Description**

The group that this service's processes should run as.

**Related Name****Default Value**

hadoop

**API Name**

process\_groupname

**Required**

true

#### System User

**Description**

The user that this service's processes should run as.

**Related Name****Default Value**

schemaregistry

**API Name**

process\_username

**Required**

true

#### Schema Registry Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

SCHEMAREGISTRY\_service\_env\_safety\_valve

**Required**

false

### Database

### Schema Registry Database Host

**Description**

Hostname of the database used by Schema Registry. If the port is non-default for your database type, use host:port notation.

**Related Name**

schema.registry.storage.connector.host

**Default Value**

localhost

**API Name**

database\_host

**Required**

true

### Schema Registry Database Name

**Description**

Name of Schema Registry database.

**Related Name**

schema.registry.storage.connector.name

**Default Value**

schemaregistry

**API Name**

database\_name

**Required**

true

### Schema Registry Database User Password

**Description**

Password for Schema Registry database.

**Related Name**

schema.registry.storage.connector.password

**Default Value****API Name**

database\_password

**Required**

true

### Schema Registry Database Port

**Description**

Port for Schema Registry database.

**Related Name**

schema.registry.storage.connector.port

**Default Value**

3306

**API Name**

database\_port

**Required**

true

### Schema Registry Database Type

**Description**

Database type to be used (postgres).

**Related Name**

schema.registry.storage.connector.type

**Default Value**

mysql

**API Name**

database\_type

**Required**

true

### Schema Registry Database User

**Description**

User for Schema Registry database.

**Related Name**

schema.registry.storage.connector.user

**Default Value**

schemaregistry

**API Name**

database\_user

**Required**

true

## Monitoring

### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Healthy Schema Registry Server Monitoring Thresholds****Description**

The health test thresholds of the overall Schema Registry Server health. The check returns "Concerning" health if the percentage of "Healthy" Schema Registry Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Schema Registry Servers falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.99 %, Critical: 49.99 %

**API Name**

SCHEMAREGISTRY\_SCHEMA\_REGISTRY\_SERVER\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****Enable Kerberos Authentication****Description**

Enables Kerberos authentication for this Schema Registry service.

**Related Name**

kerberos.auth.enable

**Default Value**

false

**API Name**

kerberos.auth.enable

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Schema Registry Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Schema Registry Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Schema Registry Server XML Override****Description**

Whether to suppress configuration warnings produced by the Schema Registry Server XML Override configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logback\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml****Description**

Whether to suppress configuration warnings produced by the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_registry.yaml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Schema Registry Admin Port****Description**

Whether to suppress configuration warnings produced by the Schema Registry Admin Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.adminport

**Required**

true

**Suppress Configuration Validator: Schema Registry Allowed Resources****Description**

Whether to suppress configuration warnings produced by the Schema Registry Allowed Resources configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.allowed.resources

**Required**

true

**Suppress Configuration Validator: Password For HTTP Proxy Server Username****Description**

Whether to suppress configuration warnings produced by the Password For HTTP Proxy Server Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.httpproxypassword

**Required**

true

**Suppress Configuration Validator: HTTP Proxy Server****Description**

Whether to suppress configuration warnings produced by the HTTP Proxy Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.httpproxyserver

**Required**

true

**Suppress Configuration Validator: Username For HTTP Proxy Server****Description**

Whether to suppress configuration warnings produced by the Username For HTTP Proxy Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.httpproxyusername

**Required**

true

**Suppress Configuration Validator: Schema Registry Jar Storage Directory Path****Description**

Whether to suppress configuration warnings produced by the Schema Registry Jar Storage Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.jar.storage.directory.path

**Required**

true

**Suppress Configuration Validator: Schema Registry Jar Storage HDFS URL****Description**

Whether to suppress configuration warnings produced by the Schema Registry Jar Storage HDFS URL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.jar.storage.hdfs.url

**Required**

true

**Suppress Configuration Validator: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.jdk.home

**Required**

true

**Suppress Configuration Validator: Schema Registry Kerberos Name Rules****Description**

Whether to suppress configuration warnings produced by the Schema Registry Kerberos Name Rules configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.kerberos.name.rules

**Required**

true

### Suppress Configuration Validator: Schema Registry Kerberos Non Browser User Agents

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Kerberos Non Browser User Agents configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.kerberos.non.browser.user.agents

**Required**

true

### Suppress Configuration Validator: Schema Registry Port

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.port

**Required**

true

### Suppress Configuration Validator: Schema Registry Servlet Filter

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Servlet Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.servlet.filter

**Required**

true

### Suppress Configuration Validator: Schema Registry Admin Port (SSL)

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Admin Port (SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_schema.registry.ssl.adminport`**Required**`true`**Suppress Configuration Validator: SSL Keystore Type****Description**

Whether to suppress configuration warnings produced by the SSL Keystore Type configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.ssl.keystoretype`**Required**`true`**Suppress Configuration Validator: Schema Registry Port (SSL)****Description**

Whether to suppress configuration warnings produced by the Schema Registry Port (SSL) configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.ssl.port`**Required**`true`**Suppress Configuration Validator: SSL TrustStore Type****Description**

Whether to suppress configuration warnings produced by the SSL TrustStore Type configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.ssl.truststoretype`**Required**`true`**Suppress Configuration Validator: SSL ValidateCerts****Description**

Whether to suppress configuration warnings produced by the SSL ValidateCerts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.validatecerts

**Required**

true

**Suppress Configuration Validator: SSL ValidatePeers****Description**

Whether to suppress configuration warnings produced by the SSL ValidatePeers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.validatepeers

**Required**

true

**Suppress Configuration Validator: Schema Registry Log Max Backup Index****Description**

Whether to suppress configuration warnings produced by the Schema Registry Log Max Backup Index configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema\_registry\_log\_maxbackupindex

**Required**

true

**Suppress Configuration Validator: Schema Registry Log Max File Size****Description**

Whether to suppress configuration warnings produced by the Schema Registry Log Max File Size configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema\_registry\_log\_maxfilesize

**Required**

true

### Suppress Configuration Validator: Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema\_registry\_server\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Schema Registry Server TLS/SSL Client Trust Store File

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

### Suppress Configuration Validator: Schema Registry Server TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

### Suppress Configuration Validator: Schema Registry Server TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ssl_server_keystore_location`**Required**`true`**Suppress Configuration Validator: Schema Registry Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ssl_server_keystore_password`**Required**`true`**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Parameter Validation: Schema Registry Database Host****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database Host parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_database_host`**Required**`true`**Suppress Parameter Validation: Schema Registry Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database Name parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_name

**Required**

true

**Suppress Parameter Validation: Schema Registry Database User Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database User Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_password

**Required**

true

**Suppress Parameter Validation: Schema Registry Database Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_port

**Required**

true

**Suppress Parameter Validation: Schema Registry Database User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_user

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

### Suppress Configuration Validator: Schema Registry Server Count Validator

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_schema\_registry\_server\_count\_validator

**Required**

true

### Suppress Parameter Validation: Schema Registry Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_schemaregistry\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Health Test: Schema Registry Server Health****Description**

Whether to suppress the results of the Schema Registry Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_schemaregistry\_schema\_registry\_server\_healthy

**Required**

true

## Solr Properties in Cloudera Runtime 7.1

Role groups:

### Gateway

#### Advanced

##### Deploy Directory

**Description**

The directory where the client configs will be deployed

**Related Name****Default Value**

/etc/solr

**API Name**

client\_config\_root\_dir

**Required**

true

##### Gateway Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Logs

##### Gateway Logging Threshold

**Description**

The minimum log level for Gateway logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### Monitoring

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Other

### Alternatives Priority

**Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

**Related Name****Default Value**

90

**API Name**

client\_config\_priority

**Required**

true

### Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Deploy Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Service-Wide****Advanced****System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

solr

**API Name**

process\_groupname

**Required**

true

**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**

solr

**API Name**

process\_username

**Required**

true

### Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml

**Description**

For advanced use only, a string to be inserted into ranger-solr-audit.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ranger\_audit\_safety\_valve

**Required**

false

### Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-security.xml

**Description**

For advanced use only, a string to be inserted into ranger-solr-security.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ranger\_security\_safety\_valve

**Required**

false

### Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml

**Description**

For advanced use only, a string to be inserted into core-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

solr\_core\_site\_safety\_valve

**Required**

false

### Solr Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

solr\_env\_safety\_valve

**Required**

false

### Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml

**Description**

For advanced use only, a string to be inserted into hdfs-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

solr\_hdfs\_site\_safety\_valve

**Required**

false

### Enable Solrd Watchdog

**Description**

Enable the background watchdog thread that can kill Catalina process if Solr is not responsive.

**Related Name****Default Value**

true

**API Name**

solrd\_enable\_watchdog

**Required**

false

### Monitoring

#### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Healthy Solr Server Monitoring Thresholds****Description**

The health test thresholds of the overall Solr Server health. The check returns "Concerning" health if the percentage of "Healthy" Solr Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Solr Servers falls below the critical threshold.

**Related Name****Default Value**

Warning: 95.0 %, Critical: 90.0 %

**API Name**

solr\_solr\_servers\_healthy\_thresholds

**Required**

false

**Other****HDFS Data Directory****Description**

HDFS directory used for storage by this Solr service.

**Related Name****Default Value**

/solr

**API Name**

hdfs\_data\_dir

**Required**

true

**HDFS Service****Description**

Name of the HDFS service that this Search service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

true

**Ranger Plugin Trusted Proxy IP Address****Description**

Accepts a list of IP addresses of proxy servers for trusting.

**Related Name**

ranger.plugin.solr.trusted.proxy.ipaddress

**Default Value****API Name**

ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

false

### Ranger Plugin Use X-Forwarded for IP Address

**Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

**Related Name**

ranger.plugin.solr.use.x-forwarded-for.ipaddress

**Default Value**

false

**API Name**

ranger\_plugin\_use\_x\_forwarded\_for\_ipaddress

**Required**

false

### Ranger Service

**Description**

Name of the Ranger service that this Solr service instance depends on

**Related Name****Default Value****API Name**

ranger\_service

**Required**

false

### Solr Server for Upgrade

**Description**

Solr server to be used while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7.

**Related Name****Default Value****API Name**

solr\_server\_for\_upgrade

**Required**

false

### Upgrade Backup Directory

**Description**

Directory on the HDFS file system that is used as the backup directory while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7.

**Related Name****Default Value**

/user/solr/upgrade\_backup

**API Name**

solr\_upgrade\_backup\_dir

**Required**

false

### Upgrade Metadata Directory

**Description**

Directory on the local file system containing the migrated configurations and metadata required while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7. Note: This directory should be present in the Solr Server specified in 'Solr Server for Upgrade'.

**Related Name****Default Value**

/var/lib/upgrade/cr7\_config

**API Name**

solr\_upgrade\_metadata\_dir

**Required**

true

### Solr Watchdog Timeout

**Description**

If Solr does not respond on its web URL within this time interval, the Catalina process is killed.

**Related Name****Default Value**

1 minute(s), 10 second(s)

**API Name**

solr\_watchdog\_timeout

**Required**

false

### ZooKeeper Service

**Description**

Name of the ZooKeeper service that this Search service instance depends on

**Related Name****Default Value****API Name**

zookeeper\_service

**Required**

true

### ZooKeeper Znode

**Description**

ZooKeeper znode used to store information about this Solr service.

**Related Name****Default Value**

/solr

**API Name**

zookeeper\_znode

**Required**

true

## Security

### Enable Ranger Authorization for the Infrastructure Solr Service

**Description**

Enable fine-grained security using Ranger for the infrastructure (infra) Solr service. This option is only for the Solr service that the Ranger service is using (for ranger-audits, etc.). No other Solr service can or should enable this option.

**Related Name****Default Value**

false

**API Name**

enable\_ranger\_authorization

**Required**

false

### Kerberos Principal

**Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

solr

**API Name**

kerberos\_princ\_name

**Required**

true

### Active Directory Domain

**Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

**Related Name****Default Value****API Name**

ldap\_domain

**Required**

false

### Ranger DFS Audit Path

**Description**

The DFS path on which Ranger audits are written. The special placeholder '\${ranger\_base\_audit\_url}' should be used as the prefix, in order to use the centralized location defined in the Ranger service.

**Related Name**

xasecure.audit.destination.hdfs.dir

**Default Value**`$ranger_base_audit_url/solr`**API Name**`ranger_audit_hdfs_dir`**Required**`false`**Ranger Audit DFS Spool Dir****Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**`xasecure.audit.destination.hdfs.batch.filespool.dir`**Default Value**`/var/log/solr/audit/hdfs/spool`**API Name**`ranger_audit_hdfs_spool_dir`**Required**`false`**Ranger Audit Solr Spool Dir****Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**`xasecure.audit.destination.solr.batch.filespool.dir`**Default Value**`/var/log/solr/audit/solr/spool`**API Name**`ranger_audit_solr_spool_dir`**Required**`false`**Ranger Policy Cache Directory****Description**

The directory where Ranger security policies are cached locally.

**Related Name**`ranger.plugin.solr.policy.cache.dir`**Default Value**`/var/lib/ranger/solr/policy-cache`**API Name**`ranger_policy_cache_dir`**Required**`false`**Enable LDAP Authentication****Description**

When checked, LDAP-based authentication for users is enabled.

**Related Name****Default Value**

false

**API Name**

solr\_enable\_ldap\_auth

**Required**

false

**Solr TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Solr is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name****Default Value****API Name**

solr\_https\_keystore\_file

**Required**

false

**Solr TLS/SSL Server JKS Keystore File Password****Description**

The password for the Solr JKS keystore file.

**Related Name**

solr.jetty.keystore.password

**Default Value****API Name**

solr\_https\_keystore\_password

**Required**

false

**Solr TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Solr might connect to. This is used when Solr is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name****Default Value****API Name**

solr\_https\_truststore\_file

**Required**

false

### Solr TLS/SSL Client Trust Store Password

**Description**

The password for the Solr TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

solr.jetty.truststore.password

**Default Value****API Name**

solr\_https\_truststore\_password

**Required**

false

### LDAP BaseDN

**Description**

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,*this parameter*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

**Related Name****Default Value****API Name**

solr\_ldap\_basedn

**Required**

false

### Enable LDAP TLS

**Description**

If true, attempts to establish a TLS (Transport Layer Security) connection with an LDAP server that was specified with ldap://. Not required when using an LDAP URL with prefix ldaps://, because that already specifies TLS. This option is also known as "Use StartTLS".

**Related Name****Default Value**

false

**API Name**

solr\_ldap\_enable\_starttls

**Required**

false

### LDAP URL

**Description**

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps://. The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389,

and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

**Related Name****Default Value****API Name**

solr\_ldap\_uri

**Required**

false

### Solr Secure Authentication

**Description**

Choose the authentication mechanism used by Solr.

**Related Name****Default Value**

simple

**API Name**

solr\_security\_authentication

**Required**

false

### Enable TLS/SSL for Solr

**Description**

Encrypt communication between clients and Solr using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)). Additional manual steps must be performed; see [Enabling TLS/SSL for Solr](#).

**Related Name****Default Value**

false

**API Name**

solr\_use\_ssl

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Configuration Validator: Solr Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Solr Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Solr Admin Port****Description**

Whether to suppress configuration warnings produced by the Solr Admin Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_admin\_port

**Required**

true

**Suppress Configuration Validator: Solr Data Directory****Description**

Whether to suppress configuration warnings produced by the Solr Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_data\_dir

**Required**

true

### Suppress Configuration Validator: Solr HTTP Port

**Description**

Whether to suppress configuration warnings produced by the Solr HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_http\_port

**Required**

true

### Suppress Configuration Validator: Solr HTTPS port

**Description**

Whether to suppress configuration warnings produced by the Solr HTTPS port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_https\_port

**Required**

true

### Suppress Configuration Validator: Java Heap Size of Solr Server in Bytes

**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Solr Server in Bytes configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_java\_heapsize

**Required**

true

### Suppress Configuration Validator: Java Configuration Options for Solr Server

**Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Solr Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_java\_opts

**Required**

true

**Suppress Configuration Validator: Solr Load Balancer****Description**

Whether to suppress configuration warnings produced by the Solr Load Balancer configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_load\_balancer

**Required**

true

**Suppress Configuration Validator: Solr Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Solr Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_log\_dir

**Required**

true

**Suppress Configuration Validator: Solr Plugins Directory****Description**

Whether to suppress configuration warnings produced by the Solr Plugins Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_plugins\_dir

**Required**

true

**Suppress Configuration Validator: Solr Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Solr Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: HDFS Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hdfs\_data\_dir

**Required**

true

### Suppress Parameter Validation: Kerberos Principal

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

### Suppress Parameter Validation: Active Directory Domain

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap\_domain

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Ranger DFS Audit Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_hdfs\_dir

**Required**

true

**Suppress Parameter Validation: Ranger Audit DFS Spool Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_hdfs\_spool\_dir

**Required**

true

**Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Audit Solr Spool Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_solr\_spool\_dir

**Required**

true

**Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Parameter Validation: Ranger Policy Cache Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_policy\_cache\_dir

**Required**

true

**Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_security\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Service Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_core\_site\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Solr Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_solr\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_hdfs\_site\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Solr TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_https\_keystore\_file

**Required**

true

**Suppress Parameter Validation: Solr TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_https\_keystore\_password

**Required**

true

### Suppress Parameter Validation: Solr TLS/SSL Client Trust Store File

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_https\_truststore\_file

**Required**

true

### Suppress Parameter Validation: Solr TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_https\_truststore\_password

**Required**

true

### Suppress Parameter Validation: LDAP BaseDN

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_ldap\_basedn

**Required**

true

### Suppress Configuration Validator: LDAP TLS Validator

**Description**

Whether to suppress configuration warnings produced by the LDAP TLS Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_ldap\_tls\_validator

**Required**

true

**Suppress Parameter Validation: LDAP URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_ldap\_uri

**Required**

true

**Suppress Configuration Validator: LDAP Secure URI and Start TLS Validator****Description**

Whether to suppress configuration warnings produced by the LDAP Secure URI and Start TLS Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_ldaps\_or\_tls\_validator

**Required**

true

**Suppress Configuration Validator: Solr Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Solr Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: Upgrade Backup Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Upgrade Backup Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_solr\_upgrade\_backup\_dir

**Required**

true

**Suppress Parameter Validation: Upgrade Metadata Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Upgrade Metadata Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_upgrade\_metadata\_dir

**Required**

true

**Suppress Parameter Validation: Solrd Watchdog Timeout****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solrd Watchdog Timeout parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solrd\_watchdog\_timeout

**Required**

true

**Suppress Parameter Validation: ZooKeeper Znode****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Znode parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper\_znode

**Required**

true

**Suppress Health Test: Solr Server Health****Description**

Whether to suppress the results of the Solr Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_solr\_solr\_servers\_healthy

**Required**

true

## Solr Server

### Advanced

#### Solr Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

#### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name**

**Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Java Configuration Options for Solr Server

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, `{{JAVA_GC_ARGS}}` will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value**

JAVA\_GC\_ARGS

**API Name**

solr\_java\_opts

**Required**

false

### Solr Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name**

**Default Value****API Name**

SOLR\_SERVER\_role\_env\_safety\_valve

**Required**

false

**ZooKeeper Client Timeout****Description**

The time in milliseconds a client is allowed to not talk to ZooKeeper before its session expires.

**Related Name**

zkClientTimeout

**Default Value**

15 second(s)

**API Name**

zookeeper\_client\_timeout

**Required**

true

**Logs****Solr Server Logging Threshold****Description**

The minimum log level for Solr Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Solr Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Solr Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Solr Server Max Log Size****Description**

The maximum size, in megabytes, per log file for Solr Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

### Solr Server Log Directory

**Description**

Directory where Solr Server will place its log files.

**Related Name****Default Value**

/var/log/solr

**API Name**

solr\_log\_dir

**Required**

true

### Monitoring

#### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

#### Related Name

#### Default Value

Warning: 10 GiB, Critical: 5 GiB

#### API Name

heap\_dump\_directory\_free\_space\_absolute\_thresholds

#### Required

false

### Heap Dump Directory Free Space Monitoring Percentage Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

#### Related Name

#### Default Value

Warning: Never, Critical: Never

#### API Name

heap\_dump\_directory\_free\_space\_percentage\_thresholds

#### Required

false

### Log Directory Free Space Monitoring Absolute Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

#### Related Name

#### Default Value

Warning: 10 GiB, Critical: 5 GiB

#### API Name

log\_directory\_free\_space\_absolute\_thresholds

#### Required

false

### Log Directory Free Space Monitoring Percentage Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

#### Related Name

**Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Navigator Audit Failure Thresholds****Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

**Related Name**

`mgmt.navigator.failure.thresholds`

**Default Value**

Warning: Never, Critical: Any

**API Name**

`mgmt_navigator_failure_thresholds`

**Required**

false

**Monitoring Period For Audit Failures****Description**

The period to review when checking if audits are blocked and not getting processed.

**Related Name**

`mgmt.navigator.failure.window`

**Default Value**

20 minute(s)

**API Name**

`mgmt_navigator_failure_window`

**Required**

false

**Navigator Audit Pipeline Health Check****Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

**Related Name**

`mgmt.navigator.status.check.enabled`

**Default Value**

true

**API Name**

`mgmt_navigator_status_check_enabled`

**Required**

false

## Metric Filter

### Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

### Related Name

### Default Value

### API Name

`monitoring_metric_filter`

### Required

false

## Process Swap Memory Thresholds

### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

### Related Name

### Default Value

Warning: 200 B, Critical: Never

### API Name

`process_swap_memory_thresholds`

### Required

false

## Role Triggers

### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Solr Server API Liveness****Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather status of Solr Cores from the Solr Server with a simple API request.

**Related Name****Default Value**

true

**API Name**

solr\_core\_status\_collection\_health\_enabled

**Required**

false

**Solr Server API Liveness Request Duration****Description**

The health test thresholds on the duration of the Solr Server API request.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

solr\_core\_status\_collection\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

solr\_server\_fd\_thresholds

**Required**

false

### Garbage Collection Duration Thresholds

**Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

solr\_server\_gc\_duration\_thresholds

**Required**

false

### Garbage Collection Duration Monitoring Period

**Description**

The period to review when computing the moving average of garbage collection time.

**Related Name****Default Value**

5 minute(s)

**API Name**

solr\_server\_gc\_duration\_window

**Required**

false

### Solr Server Host Health Test

**Description**

When computing the overall Solr Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

solr\_server\_host\_health\_enabled

**Required**

false

### Solr Server Process Health Test

**Description**

Enables the health test that the Solr Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

solr\_server\_scm\_health\_enabled

**Required**

false

### Web Metric Collection

**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

solr\_server\_web\_metric\_collection\_enabled

**Required**

false

### Web Metric Collection Duration

**Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

solr\_server\_web\_metric\_collection\_thresholds

**Required**

false

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Solr Data Directory****Description**

Directory on local file system where Solr Server keeps the configurations for collections.

**Related Name****Default Value**

/var/lib/solr

**API Name**

solr\_data\_dir

**Required**

true

**Graceful Shutdown Timeout****Description**

Timeout (in seconds) for graceful shutdown of this Solr server. Once this timeout is reached, Solr server is abruptly shutdown. A value of 0 means no timeout.

**Related Name****Default Value**

3 minute(s)

**API Name**

solr\_graceful\_stop\_timeout

**Required**

false

**Solr Load Balancer****Description**

Address of the load balancer, specified in host:port format.

**Related Name**

**Default Value****API Name**

solr\_load\_balancer

**Required**

false

**Solr Plugins Directory****Description**

Directory on local file system where Solr Server can find additional JARs. This directory is not monitored for changes during the lifetime of a solr server, and a restart is required to read any updates to the directory contents.

**Related Name****Default Value****API Name**

solr\_plugins\_dir

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Solr Max Connector Threads****Description**

The maximum number of request processing threads to be created by Solr server, which determines the maximum number of simultaneous requests that can be handled.

**Related Name****Default Value**

10000

**API Name**

solr\_max\_connector\_thread

**Required**

true

**Ports and Addresses**

### Solr Admin Port

**Description**

Admin port of the Solr Server.

**Related Name****Default Value**

8984

**API Name**

solr\_admin\_port

**Required**

true

### Solr HTTP Port

**Description**

HTTP port of Solr Server.

**Related Name**

solr\_http\_port

**Default Value**

8983

**API Name**

solr\_http\_port

**Required**

true

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit`**Required**`true`**HDFS Block Cache Blocks per Slab****Description**

Number of blocks per cache slab. The size of the cache is 8 KB (the block size) times the number of blocks per slab times the number of slabs.

**Related Name**`solr.hdfs.blockcache.blocksperbank`**Default Value**`16384`**API Name**`solr_hdfs_blockcache_blocksperbank`**Required**`true`**HDFS Block Cache Off-Heap Memory****Description**

Use off-heap memory when caching HDFS blocks in Solr.

**Related Name**`solr.hdfs.blockcache.direct.memory.allocation`**Default Value**`true`**API Name**`solr_hdfs_blockcache_direct_memory_allocation`**Required**`true`**HDFS Block Cache****Description**

Enable caching of HDFS blocks in Solr. There is one block cache per Solr collection. configured to use off-heap memory, Maximum Off-Heap Memory must be set high enough to account for all block caches.

**Related Name**`solr.hdfs.blockcache.enabled`**Default Value**`true`**API Name**`solr_hdfs_blockcache_enabled`

**Required**

true

**HDFS Block Cache Number of Slabs****Description**

Number of slabs per block cache. The size of the cache is 8 KB (the block size) times the number of blocks per slab times the number of slabs.

**Related Name**

solr.hdfs.blockcache.slab.count

**Default Value**

1

**API Name**

solr\_hdfs\_blockcache\_slab\_count

**Required**

true

**Java Direct Memory Size of Solr Server in Bytes****Description**

Maximum amount of off-heap memory in bytes that may be allocated by the Java process. Passed to Java `-XX:MaxDirectMemorySize`. If unset, defaults to the size of the heap.

**Related Name****Default Value**

1 GiB

**API Name**

solr\_java\_direct\_memory\_size

**Required**

false

**Java Heap Size of Solr Server in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java `-Xmx`.

**Related Name****Default Value**

1 GiB

**API Name**

solr\_java\_heapsize

**Required**

false

**Security****Solr HTTPS port****Description**

HTTPS port of Solr Server.

**Related Name**

solr\_https\_port

**Default Value**

8985

**API Name**

solr\_https\_port

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

#### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

#### Description

The frequency with which stacks are collected.

#### Related Name

stacks\_collection\_frequency

#### Default Value

5.0 second(s)

#### API Name

stacks\_collection\_frequency

#### Required

false

### Stacks Collection Method

#### Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

#### Related Name

stacks\_collection\_method

#### Default Value

jstack

#### API Name

stacks\_collection\_method

#### Required

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

##### Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

##### Related Name

##### Default Value

false

##### API Name

role\_config\_suppression\_cdh\_version\_validator

##### Required

true

#### Suppress Parameter Validation: Solr Server Logging Advanced Configuration Snippet (Safety Valve)

##### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Solr Admin Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Admin Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_admin\_port

**Required**

true

### Suppress Parameter Validation: Solr Data Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_data\_dir

**Required**

true

### Suppress Parameter Validation: Solr HTTP Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_http\_port

**Required**

true

### Suppress Parameter Validation: Solr HTTPS port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr HTTPS port parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_solr_https_port`**Required**`true`**Suppress Parameter Validation: Java Heap Size of Solr Server in Bytes****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Solr Server in Bytes parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_solr_java_heapsize`**Required**`true`**Suppress Parameter Validation: Java Configuration Options for Solr Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Solr Server parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_solr_java_opts`**Required**`true`**Suppress Parameter Validation: Solr Load Balancer****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Load Balancer parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_solr_load_balancer`**Required**`true`**Suppress Parameter Validation: Solr Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_log\_dir

**Required**

true

**Suppress Parameter Validation: Solr Plugins Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Plugins Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_plugins\_dir

**Required**

true

**Suppress Parameter Validation: Solr Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Health Test: Solr Server API Liveness

**Description**

Whether to suppress the results of the Solr Server API Liveness health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_core\_status\_collection\_health

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_file\_descriptor

**Required**

true

### Suppress Health Test: GC Duration

**Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_gc\_duration

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_unexpected\_exits

**Required**

true

### Suppress Health Test: Web Server Status

**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_web\_metric\_collection

**Required**

true

## Spark Properties in Cloudera Runtime 7.1

Role groups:

### Gateway

#### Advanced

#### Deploy Directory

**Description**

The directory where the client configs will be deployed

**Related Name****Default Value**

/etc/spark

**API Name**

client\_config\_root\_dir

**Required**

true

#### Gateway Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf

**Description**

For advanced use only, a string to be inserted into the client configuration for spark-conf/spark-defaults.conf.

**Related Name****Default Value****API Name**

spark-conf/spark-defaults.conf\_client\_config\_safety\_valve

**Required**

false

**Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh****Description**

For advanced use only, a string to be inserted into the client configuration for spark-conf/spark-env.sh.

**Related Name****Default Value****API Name**

spark-conf/spark-env.sh\_client\_config\_safety\_valve

**Required**

false

**Logs****Gateway Logging Threshold****Description**

The minimum log level for Gateway logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Monitoring****Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Other****Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

**Related Name****Default Value**

51

**API Name**

client\_config\_priority

**Required**

true

**Spark Data Serializer****Description**

Name of class implementing org.apache.spark.serializer.Serializer to use in Spark applications.

**Related Name**

spark.serializer

**Default Value**

org.apache.spark.serializer.KryoSerializer

**API Name**

spark\_data\_serializer

**Required**

true

**Default Application Deploy Mode****Description**

Which deploy mode to use by default. Can be overridden by users when launching applications.

**Related Name**

spark\_deploy\_mode

**Default Value**

client

**API Name**

spark\_deploy\_mode

**Required**

false

**Caching Executor Idle Timeout****Description**

When dynamic allocation is enabled, time after which idle executors with cached RDDs blocks will be stopped. By default, they're never stopped.

**Related Name**

spark.dynamicAllocation.cachedExecutorIdleTimeout

**Default Value****API Name**

spark\_dynamic\_allocation\_cached\_idle\_timeout

**Required**

false

### Enable Dynamic Allocation

**Description**

Enable dynamic allocation of executors in Spark applications.

**Related Name**

spark.dynamicAllocation.enabled

**Default Value**

true

**API Name**

spark\_dynamic\_allocation\_enabled

**Required**

false

### Executor Idle Timeout

**Description**

When dynamic allocation is enabled, time after which idle executors will be stopped.

**Related Name**

spark.dynamicAllocation.executorIdleTimeout

**Default Value**

1 minute(s)

**API Name**

spark\_dynamic\_allocation\_idle\_timeout

**Required**

false

### Initial Executor Count

**Description**

When dynamic allocation is enabled, number of executors to allocate when the application starts. By default, this is the same value as the minimum number of executors.

**Related Name**

spark.dynamicAllocation.initialExecutors

**Default Value****API Name**

spark\_dynamic\_allocation\_initial\_executors

**Required**

false

### Maximum Executor Count

**Description**

When dynamic allocation is enabled, maximum number of executors to allocate. By default, Spark relies on YARN to control the maximum number of executors for the application.

**Related Name**

spark.dynamicAllocation.maxExecutors

**Default Value****API Name**

spark\_dynamic\_allocation\_max\_executors

**Required**

false

**Minimum Executor Count****Description**

When dynamic allocation is enabled, minimum number of executors to keep alive while the application is running.

**Related Name**

spark.dynamicAllocation.minExecutors

**Default Value**

0

**API Name**

spark\_dynamic\_allocation\_min\_executors

**Required**

false

**Scheduler Backlog Timeout****Description**

When dynamic allocation is enabled, timeout before requesting new executors when there are backlogged tasks.

**Related Name**

spark.dynamicAllocation.schedulerBacklogTimeout

**Default Value**

1 second(s)

**API Name**

spark\_dynamic\_allocation\_scheduler\_backlog\_timeout

**Required**

false

**Sustained Scheduler Backlog Timeout****Description**

When dynamic allocation is enabled, timeout before requesting new executors after the initial backlog timeout has already expired. By default this is the same value as the initial backlog timeout.

**Related Name**

spark.dynamicAllocation.sustainedSchedulerBacklogTimeout

**Default Value****API Name**

spark\_dynamic\_allocation\_sustained\_scheduler\_backlog\_timeout

**Required**

false

**Shell Logging Threshold****Description**

The minimum log level for the Spark shell.

**Related Name**`spark_gateway_shell_logging_threshold`**Default Value**`WARN`**API Name**`spark_gateway_shell_logging_threshold`**Required**`true`**Enable Kill From UI****Description**

Whether to allow users to kill running stages from the Spark Web UI.

**Related Name**`spark.ui.killEnabled`**Default Value**`true`**API Name**`spark_gateway_ui_kill_enabled`**Required**`true`**Enable History****Description**

Write Spark application history logs to HDFS.

**Related Name**`spark.eventLog.enabled`**Default Value**`true`**API Name**`spark_history_enabled`**Required**`false`**Enable I/O Encryption****Description**

Whether to encrypt temporary shuffle and cache files stored by Spark on the local disks.

**Related Name**`spark.io.encryption.enabled`**Default Value**`false`**API Name**`spark_io_encryption_enabled`**Required**`false`

### Enable Spark Lineage

**Description**

Whether to enable spark lineage support. If enabled, spark lineage is sent to Atlas.

**Related Name**

spark.lineage.enabled

**Default Value**

true

**API Name**

spark\_lineage\_enabled

**Required**

false

### Enable Network Encryption

**Description**

Whether to encrypt communication between Spark processes belonging to the same application. Requires authentication (spark.authenticate) to be enabled.

**Related Name**

spark.network.crypto.enabled

**Default Value**

false

**API Name**

spark\_network\_encryption\_enabled

**Required**

false

### Enable Optimized S3 Committers

**Description**

Whether use optimized committers when writing data to S3.

**Related Name**

spark.cloudera.s3\_committers.enabled

**Default Value**

true

**API Name**

spark\_optimized\_s3\_committers\_enabled

**Required**

false

### Extra Python Path

**Description**

Python library paths to add to PySpark applications.

**Related Name**

spark\_python\_path

**Default Value****API Name**

spark\_python\_path

**Required**

false

**Enable Shuffle Service****Description**

Enables the external shuffle service. The external shuffle service preserves shuffle files written by executors so that the executors can be deallocated without losing work. Must be enabled if Enable Dynamic Allocation is enabled. Recommended and enabled by default.

**Related Name**

spark.shuffle.service.enabled

**Default Value**

true

**API Name**

spark\_shuffle\_service\_enabled

**Required**

true

**Enable Spark Web UI****Description**

Whether to enable the Spark Web UI on individual applications. It's recommended that the UI be disabled in secure clusters.

**Related Name**

spark.ui.enabled

**Default Value**

true

**API Name**

spark\_ui\_enabled

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Deploy Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

### Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark-conf/spark-defaults.conf\_client\_config\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_spark-conf/spark-env.sh\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Spark Data Serializer****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Data Serializer parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark\_data\_serializer

**Required**

true

**Suppress Parameter Validation: Extra Python Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Extra Python Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark\_python\_path

**Required**

true

**History Server****Advanced****History Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

`oom_heap_dump_dir`

**Default Value**

`/tmp`

**API Name**

`oom_heap_dump_dir`

**Required**

`false`

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

`true`

**API Name**

`oom_heap_dump_enabled`

**Required**

`true`

### Kill When Out of Memory

**Description**

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

`true`

**API Name**

`oom_sigkill_enabled`

**Required**

`true`

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name**

**Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

**Description**

For advanced use only. A string to be inserted into spark-conf/spark-env.sh for this role only.

**Related Name****Default Value****API Name**

spark-conf/spark-env.sh\_role\_safety\_valve

**Required**

false

### History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-history-server.conf

**Description**

For advanced use only. A string to be inserted into spark-conf/spark-history-server.conf for this role only.

**Related Name****Default Value****API Name**

spark-conf/spark-history-server.conf\_role\_safety\_valve

**Required**

false

### History Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

SPARK\_YARN\_HISTORY\_SERVER\_role\_env\_safety\_valve

**Required**

false

## Logs

### History Server Log Directory

**Description**

The log directory for log files of the role History Server.

**Related Name**

log\_dir

**Default Value**

/var/log/spark

**API Name**

log\_dir

**Required**

false

**History Server Logging Threshold****Description**

The minimum log level for History Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**History Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for History Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**History Server Max Log Size****Description**

The maximum size, in megabytes, per log file for History Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

#### Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

#### Related Name

#### Default Value

#### API Name

`monitoring_metric_filter`

#### Required

false

### Process Swap Memory Thresholds

#### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

#### Related Name

#### Default Value

Warning: 200 B, Critical: Never

#### API Name

`process_swap_memory_thresholds`

#### Required

false

### Role Triggers

#### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

spark\_yarn\_history\_server\_fd\_thresholds

**Required**

false

**History Server Host Health Test****Description**

When computing the overall History Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

spark\_yarn\_history\_server\_host\_health\_enabled

**Required**

false

### History Server Process Health Test

#### Description

Enables the health test that the History Server's process state is consistent with the role configuration

#### Related Name

#### Default Value

true

#### API Name

spark\_yarn\_history\_server\_scm\_health\_enabled

#### Required

false

### Unexpected Exits Thresholds

#### Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

#### Related Name

#### Default Value

Warning: Never, Critical: Any

#### API Name

unexpected\_exits\_thresholds

#### Required

false

### Unexpected Exits Monitoring Period

#### Description

The period to review when computing unexpected exits.

#### Related Name

#### Default Value

5 minute(s)

#### API Name

unexpected\_exits\_window

#### Required

false

### Other

### Use Local Storage

#### Description

Whether to use local storage for caching application history data, which reduces memory usage and makes service restarts faster.

#### Related Name

enable\_local\_storage

**Default Value**

false

**API Name**

enable\_local\_storage

**Required**

false

**Enable Event Log Cleaner****Description**

Specifies whether the History Server should periodically clean up event logs from storage.

**Related Name**

spark.history.fs.cleaner.enabled

**Default Value**

true

**API Name**

event\_log\_cleaner\_enabled

**Required**

false

**Event Log Cleaner Interval****Description**

How often the History Server will clean up event log files.

**Related Name**

spark.history.fs.cleaner.interval

**Default Value**

1 day(s)

**API Name**

event\_log\_cleaner\_interval

**Required**

false

**Maximum Event Log Age****Description**

Specifies the maximum age of the event logs.

**Related Name**

spark.history.fs.cleaner.maxAge

**Default Value**

7 day(s)

**API Name**

event\_log\_cleaner\_max\_age

**Required**

false

**Admin Users****Description**

Comma-separated list of users who can view all applications when authentication is enabled.

**Related Name**

spark.history.ui.admin.acls

**Default Value**

knox

**API Name**

history\_server\_admin\_users

**Required**

false

**HDFS Polling Interval****Description**

How often to poll HDFS for new applications.

**Related Name**

spark.history.fs.update.interval.seconds

**Default Value**

10 second(s)

**API Name**

history\_server\_fs\_poll\_interval

**Required**

false

**Java Heap Size of History Server in Bytes****Description**

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in bytes.

**Related Name**

history\_server\_max\_heapsize

**Default Value**

512 MiB

**API Name**

history\_server\_max\_heapsize

**Required**

true

**Retained App Count****Description**

Max number of application UIs to keep in the History Server's memory. All applications will still be available, but may take longer to load if they're not in memory.

**Related Name**

spark.history.retainedApplications

**Default Value**

50

**API Name**

history\_server\_retained\_apps

**Required**

false

**Enable User Authentication****Description**

Enables user authentication using SPNEGO (requires Kerberos), and enables access control to application history data.

**Related Name**

history\_server\_spnego\_enabled

**Default Value**

false

**API Name**

history\_server\_spnego\_enabled

**Required**

false

**Local Storage Directory****Description**

Directory where to keep local caches of application history data.

**Related Name**

spark.history.store.path

**Default Value**

/var/lib/spark/history

**API Name**

local\_storage\_dir

**Required**

false

**Max Local Storage Size****Description**

Approximate maximum amount of data to use in local storage for caching application history data.

**Related Name**

spark.history.store.maxDiskUsage

**Default Value**

10 GiB

**API Name**

local\_storage\_max\_usage

**Required**

false

**Enabled SSL/TLS Algorithms****Description**

A comma-separated list of algorithm names to enable when TLS/SSL is enabled. By default, all algorithms supported by the JRE are enabled.

**Related Name**

spark.ssl.historyServer.enabledAlgorithms

**Default Value****API Name**

ssl\_server\_algorithms

**Required**

false

**TLS/SSL Protocol****Description**

The version of the TLS/SSL protocol to use when TLS/SSL is enabled.

**Related Name**

spark.ssl.historyServer.protocol

**Default Value**

TLSv1.2

**API Name**

ssl\_server\_protocol

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****History Server WebUI Port****Description**

The port of the history server WebUI

**Related Name**

spark.history.ui.port

**Default Value**

18088

**API Name**

history\_server\_web\_port

**Required**

true

### TLS/SSL Port Number

**Description**

Port where to listen for TLS/SSL connections. HTTP connections will be redirected to this port when TLS/SSL is enabled.

**Related Name**

spark.ssl.historyServer.port

**Default Value**

18488

**API Name**

ssl\_server\_port

**Required**

false

### Resource Management

#### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

#### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgroup command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

#### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

### Enable TLS/SSL for History Server

**Description**

Encrypt communication between clients and History Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

spark.ssl.historyServer.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### History Server TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when History Server is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

spark.ssl.historyServer.keyStore

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### History Server TLS/SSL Server JKS Keystore File Password

**Description**

The password for the History Server JKS keystore file.

**Related Name****Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Admin Users****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_history\_server\_admin\_users

**Required**

true

**Suppress Parameter Validation: History Server WebUI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server WebUI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_history\_server\_web\_port

**Required**

true

**Suppress Parameter Validation: Local Storage Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Local Storage Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_local\_storage\_dir

**Required**

true

**Suppress Parameter Validation: History Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: History Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark-conf/spark-env.sh\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-history-server.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-history-server.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark-conf/spark-history-server.conf\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: History Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark\_yarn\_history\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Enabled SSL/TLS Algorithms****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Enabled SSL/TLS Algorithms parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_algorithms

**Required**

true

**Suppress Parameter Validation: History Server TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: History Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: TLS/SSL Port Number****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Port Number parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_port

**Required**

true

**Suppress Parameter Validation: TLS/SSL Protocol****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Protocol parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_protocol

**Required**

true

### Suppress Parameter Validation: Stacks Collection Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_spark\_on\_yarn\_spark\_yarn\_history\_server\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_spark\_on\_yarn\_spark\_yarn\_history\_server\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_spark\_on\_yarn\_spark\_yarn\_history\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_spark\_on\_yarn\_spark\_yarn\_history\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_spark\_on\_yarn\_spark\_yarn\_history\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_spark\_on\_yarn\_spark\_yarn\_history\_server\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_spark\_on\_yarn\_spark\_yarn\_history\_server\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### System Group

**Description**

The group that this service's processes should run as.

**Related Name****Default Value**

spark

**API Name**

process\_groupname

**Required**

true

#### System User

**Description**

The user that this service's processes should run as.

**Related Name****Default Value**

spark

**API Name**

process\_username

**Required**

true

### Spark Service Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

**Description**

For advanced use only, a string to be inserted into spark-conf/spark-env.sh. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value**

**API Name**`spark-conf/spark-env.sh_service_safety_valve`**Required**`false`**Spark Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**`SPARK_ON_YARN_service_env_safety_valve`**Required**`false`**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**`true`**API Name**`enable_alerts`**Required**`false`**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**`false`**API Name**`enable_config_alerts`**Required**`false`**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**History Server Role Health Test****Description**

When computing the overall SPARK\_ON\_YARN health, consider History Server's health

**Related Name****Default Value**

true

**API Name**

SPARK\_ON\_YARN\_SPARK\_YARN\_HISTORY\_SERVER\_health\_enabled

**Required**

false

## Other

### Atlas Service

**Description**

Name of the Atlas service that this Spark service instance depends on

**Related Name****Default Value****API Name**

atlas\_service

**Required**

false

### HBase Service

**Description**

Name of the HBase service that this Spark service instance depends on

**Related Name****Default Value****API Name**

hbase\_service

**Required**

false

### Spark Authentication

**Description**

Enable whether the Spark communication protocols do authentication using a shared secret.

**Related Name**

spark.authenticate

**Default Value**

false

**API Name**

spark\_authenticate

**Required**

true

### Spark Driver Log Location (HDFS)

**Description**

The location of Spark driver logs in HDFS when Spark application runs in client mode. Changing this value will not move existing logs to the new location.

**Related Name**

spark.driver.log.dir

**Default Value**

/user/spark/driverLogs

**API Name**

spark\_driver\_log\_dfs\_dir

**Required**

true

**Persist Driver Logs to Dfs****Description**

If enabled, driver logs in YARN client mode will be persisted to the configured Spark Driver Log Location (HDFS)

**Related Name**

spark.driver.log.persistToDfs.enabled

**Default Value**

true

**API Name**

spark\_driver\_log\_persist\_to\_df

**Required**

true

**Spark History Location (HDFS)****Description**

The location of Spark application history logs in HDFS. Changing this value will not move existing logs to the new location.

**Related Name**

spark.eventLog.dir

**Default Value**

/user/spark/applicationHistory

**API Name**

spark\_history\_log\_dir

**Required**

true

**Shuffle Service AES Encryption****Description**

Whether to enable AES-based authentication and encryption in the shuffle service. Requires authentication to be enabled to take effect.

**Related Name**

spark\_shuffle\_aes\_enabled

**Default Value**

true

**API Name**

spark\_shuffle\_aes\_enabled

**Required**

true

**YARN Service****Description**

Name of the YARN service that this Spark service instance depends on

**Related Name****Default Value****API Name**

yarn\_service

**Required**

true

**Ports and Addresses****Spark Shuffle Service Port****Description**

The port the Spark Shuffle Service listens for fetch requests.

**Related Name**

spark.shuffle.service.port

**Default Value**

7337

**API Name**

spark\_shuffle\_service\_port

**Required**

true

**Security****Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

spark

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Configuration Validator: Admin Users****Description**

Whether to suppress configuration warnings produced by the Admin Users configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_history\_server\_admin\_users

**Required**

true

**Suppress Configuration Validator: History Server WebUI Port****Description**

Whether to suppress configuration warnings produced by the History Server WebUI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_history\_server\_web\_port

**Required**

true

**Suppress Configuration Validator: Local Storage Directory****Description**

Whether to suppress configuration warnings produced by the Local Storage Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_local\_storage\_dir

**Required**

true

**Suppress Configuration Validator: History Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the History Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: History Server Log Directory****Description**

Whether to suppress configuration warnings produced by the History Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf****Description**

Whether to suppress configuration warnings produced by the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark-conf/spark-defaults.conf\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh****Description**

Whether to suppress configuration warnings produced by the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark-conf/spark-env.sh\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh****Description**

Whether to suppress configuration warnings produced by the History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark-conf/spark-env.sh\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-history-server.conf****Description**

Whether to suppress configuration warnings produced by the History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-history-server.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark-conf/spark-history-server.conf\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Spark Data Serializer****Description**

Whether to suppress configuration warnings produced by the Spark Data Serializer configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark\_data\_serializer

**Required**

true

**Suppress Configuration Validator: Extra Python Path****Description**

Whether to suppress configuration warnings produced by the Extra Python Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark\_python\_path

**Required**

true

**Suppress Configuration Validator: History Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the History Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_spark\_yarn\_history\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Enabled SSL/TLS Algorithms****Description**

Whether to suppress configuration warnings produced by the Enabled SSL/TLS Algorithms configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_algorithms

**Required**

true

**Suppress Configuration Validator: History Server TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the History Server TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: History Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the History Server TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: TLS/SSL Port Number****Description**

Whether to suppress configuration warnings produced by the TLS/SSL Port Number configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_port

**Required**

true

**Suppress Configuration Validator: TLS/SSL Protocol****Description**

Whether to suppress configuration warnings produced by the TLS/SSL Protocol configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_protocol

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Spark Service Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Service Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_spark-conf/spark-env.sh\_service\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Spark Driver Log Location (HDFS)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Driver Log Location (HDFS) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_spark\_driver\_log\_dfs\_dir

**Required**

true

### Suppress Parameter Validation: Spark History Location (HDFS)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark History Location (HDFS) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_spark\_history\_log\_dir

**Required**

true

### Suppress Configuration Validator: Hive Gateway for Spark Validator

**Description**

Whether to suppress configuration warnings produced by the Hive Gateway for Spark Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_spark\_hive\_gateway\_validator

**Required**

true

### Suppress Parameter Validation: Spark Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_spark\_on\_yarn\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Spark Shuffle Service Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Shuffle Service Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_spark\_shuffle\_service\_port

**Required**

true

**Suppress Configuration Validator: History Server Count Validator****Description**

Whether to suppress configuration warnings produced by the History Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_spark\_yarn\_history\_server\_count\_validator

**Required**

true

**Suppress Health Test: History Server Health****Description**

Whether to suppress the results of the History Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_spark\_on\_yarn\_spark\_on\_yarn\_spark\_yarn\_history\_server\_health

**Required**

true

## Sqoop Properties in Cloudera Runtime 7.1

Role groups:

## Gateway

### Advanced

#### Deploy Directory

**Description**

The directory where the client configs will be deployed

**Related Name****Default Value**

/etc/sqoop

**API Name**

client\_config\_root\_dir

**Required**

true

#### Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/managers.d/cm\_manager\_overrides

**Description**

For advanced use only, a string to be inserted into the client configuration for sqoop-conf/managers.d/cm\_manager\_overrides.

**Related Name****Default Value****API Name**

sqoop-conf/managers.d/cm\_manager\_overrides\_client\_config\_safety\_valve

**Required**

false

#### Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/sqoop-env.sh

**Description**

For advanced use only, a string to be inserted into the client configuration for sqoop-conf/sqoop-env.sh.

**Related Name****Default Value****API Name**

sqoop-conf/sqoop-env.sh\_client\_config\_safety\_valve

**Required**

false

#### Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/sqoop-site.xml

**Description**

For advanced use only, a string to be inserted into the client configuration for sqoop-conf/sqoop-site.xml.

**Related Name****Default Value**

**API Name**

sqoop-conf/sqoop-site.xml\_client\_config\_safety\_valve

**Required**

false

**Monitoring****Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Other****Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

**Related Name****Default Value**

50

**API Name**

client\_config\_priority

**Required**

true

**Sqoop connection factories****Description**

A list of ManagerFactory implementations which are consulted, in order, to instantiate ConnManager instances used to drive connections to databases.

**Related Name**

sqoop.connection.factories

**Default Value****API Name**

sqoop\_connection\_factories

**Required**

false

**Sqoop Tool Plugins****Description**

A list of ToolPlugin implementations which are consulted, in order, to register SqoopTool instances which allow third-party tools to be used.

**Related Name**

sqoop.tool.plugins

**Default Value****API Name**

sqoop\_tool\_plugins

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Parameter Validation: Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/managers.d/cm\_manager\_overrides****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/managers.d/cm\_manager\_overrides parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_sqoop-conf/managers.d/cm\_manager\_overrides\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/sqoop-env.sh****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/sqoop-env.sh parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_sqoop-conf/sqoop-env.sh\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/sqoop-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/sqoop-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_sqoop-conf/sqoop-site.xml\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Sqoop connection factories****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Sqoop connection factories parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_sqoop\_connection\_factories

**Required**

true

### Suppress Parameter Validation: Sqoop Tool Plugins

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Sqoop Tool Plugins parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_sqoop\_tool\_plugins

**Required**

true

## Service-Wide

### Advanced

#### System Group

**Description**

The group that this service's processes should run as.

**Related Name****Default Value**

root

**API Name**

process\_groupname

**Required**

true

#### System User

**Description**

The user that this service's processes should run as.

**Related Name****Default Value**

root

**API Name**

process\_username

**Required**

true

### Sqoop Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value**

**API Name**

SQOOP\_CLIENT\_service\_env\_safety\_valve

**Required**

false

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I`

F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}}See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****Parquet writer implementation****Description**

Configure the library used during parquet jobs for writing and reading data. Possible values: hadoop, kite (legacy).

**Related Name**

parquetjob.configurator.implementation

**Default Value**

hadoop

**API Name**

parquetjob.configurator.implementation

**Required**

false

**Sqoop decimal padding****Description**

Enables padding for fixed point number types (decimal, number, numeric) in case of Avro and Parquet imports.

**Related Name**

sqoop.avro.decimal\_padding.enable

**Default Value**

true

**API Name**

sqoop.avro.decimal\_padding.enable

**Required**

false

**Default precision for logical types****Description**

Specifies the default precision for fixed point number types. This value is only used if the precision was not specified in the source table.

**Related Name**

sqoop.avro.logical\_types.decimal.default.precision

**Default Value**

38

**API Name**

sqoop.avro.logical\_types.decimal.default.precision

**Required**

false

**Default scale for logical types****Description**

Default scale for fixed point number types. This value is only used if the scale was not specified in the source table.

**Related Name**

sqoop.avro.logical\_types.decimal.default.scale

**Default Value**

10

**API Name**

sqoop.avro.logical\_types.decimal.default.scale

**Required**

false

**Enable avro logical types****Description**

Enables the use of logical types in avro files, so that fixed point number types are converted to decimal during an import. Fixed point number types are converted to String if this property is set to false.

**Related Name**

sqoop.avro.logical\_types.decimal.enable

**Default Value**

true

**API Name**

sqoop.avro.logical\_types.decimal.enable

**Required**

false

### Enable parquet logical types

**Description**

Enables the use of logical types in parquet files, so that fixed point number types are converted to decimal during an import. Fixed point number types are converted to String if this property is set to false.

**Related Name**

sqoop.parquet.logical\_types.decimal.enable

**Default Value**

true

**API Name**

sqoop.parquet.logical\_types.decimal.enable

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Configuration Validator: Deploy Directory

**Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

#### Suppress Configuration Validator: Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/managers.d/cm\_manager\_overrides

**Description**

Whether to suppress configuration warnings produced by the Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/managers.d/cm\_manager\_overrides configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_sqoop-conf/managers.d/cm\_manager\_overrides\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/sqoop-env.sh****Description**

Whether to suppress configuration warnings produced by the Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/sqoop-env.sh configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_sqoop-conf/sqoop-env.sh\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/sqoop-site.xml****Description**

Whether to suppress configuration warnings produced by the Sqoop Client Advanced Configuration Snippet (Safety Valve) for sqoop-conf/sqoop-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_sqoop-conf/sqoop-site.xml\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Sqoop connection factories****Description**

Whether to suppress configuration warnings produced by the Sqoop connection factories configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_sqoop\_connection\_factories

**Required**

true

### Suppress Configuration Validator: Sqoop Tool Plugins

**Description**

Whether to suppress configuration warnings produced by the Sqoop Tool Plugins configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_sqoop\_tool\_plugins

**Required**

true

### Suppress Configuration Validator: Gateway Count Validator

**Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

### Suppress Parameter Validation: Parquet writer implementation

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Parquet writer implementation parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_parquetjob.configurator.implementation

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Sqoop Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Sqoop Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_sqoop\_client\_service\_env\_safety\_valve

**Required**

true

## Streams Messaging Manager Properties in Cloudera Runtime 7.1

Role groups:

### Service-Wide

#### Advanced

#### System Group

**Description**

The group that this service's processes should run as.

**Related Name****Default Value**

streamsmgmgr

**API Name**

process\_groupname

**Required**

true

#### System User

**Description**

The user that this service's processes should run as.

**Related Name****Default Value**

streamsmgmgr

**API Name**

process\_username

**Required**

true

#### Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name**

**Default Value****API Name**

STREAMS\_MESSAGING\_MANAGER\_service\_env\_safety\_valve

**Required**

false

**Database****Streams Messaging Manager Database Host****Description**

Hostname of the database used by Streams Messaging Manager. If the port is non-default for your database type, use host:port notation.

**Related Name**

streams.messaging.manager.storage.connector.host

**Default Value**

localhost

**API Name**

smm\_database\_host

**Required**

true

**Streams Messaging Manager Database Name****Description**

Name of Streams Messaging Manager database.

**Related Name**

streams.messaging.manager.storage.connector.name

**Default Value**

streamsmgmr

**API Name**

smm\_database\_name

**Required**

true

**Streams Messaging Manager Database User Password****Description**

Password for Streams Messaging Manager database.

**Related Name**

streams.messaging.manager.storage.connector.password

**Default Value****API Name**

smm\_database\_password

**Required**

true

### Streams Messaging Manager Database Port

**Description**

Port for Streams Messaging Manager database.

**Related Name**

streams.messaging.manager.storage.connector.port

**Default Value**

3306

**API Name**

smm\_database\_port

**Required**

true

### Streams Messaging Manager Database Type

**Description**

Database type to be used (postgres).

**Related Name**

streams.messaging.manager.storage.connector.type

**Default Value**

mysql

**API Name**

smm\_database\_type

**Required**

true

### Streams Messaging Manager Database User

**Description**

User for Streams Messaging Manager database.

**Related Name**

streams.messaging.manager.storage.connector.user

**Default Value**

streamsmgmgr

**API Name**

smm\_database\_user

**Required**

true

### Monitoring

#### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Streams Messaging Manager Rest Admin Server Role Health Test****Description**

When computing the overall STREAMS\_MESSAGING\_MANAGER health, consider Streams Messaging Manager Rest Admin Server's health

**Related Name****Default Value**

true

**API Name**

STREAMS\_MESSAGING\_MANAGER\_STREAMS\_MESSAGING\_MANAGER\_SERVER\_health\_enabled

**Required**

false

**Streams Messaging Manager UI Server Role Health Test****Description**

When computing the overall STREAMS\_MESSAGING\_MANAGER health, consider Streams Messaging Manager UI Server's health

**Related Name****Default Value**

true

**API Name**

STREAMS\_MESSAGING\_MANAGER\_STREAMS\_MESSAGING\_MANAGER\_UI\_health\_enabled

**Required**

false

**Other****Kafka Service****Description**

Name of the Kafka service that this Streams Messaging Manager service instance depends on

**Related Name****Default Value****API Name**

kafka\_service

**Required**

true

**Enable Kerberos Authentication****Description**

Enables Kerberos authentication for this Streams Messaging Manager.

**Related Name**

kerberos.auth.enable

**Default Value**

false

**API Name**

kerberos.auth.enable

**Required**

false

**Sentry Service****Description**

Name of the Sentry service that this Streams Messaging Manager service instance depends on

**Related Name****Default Value****API Name**

sentry\_service

**Required**

false

**Streams Messaging Manager Port****Description**

The port on which server accepts connections.

**Related Name**

streams.messaging.manager.port

**Default Value**

8585

**API Name**

streams.messaging.manager.port

**Required**

true

**Streams Messaging Manager port (SSL)****Description**

HTTPS port Streams Messaging Manager rest server runs on when SSL is enabled.

**Related Name**

streams.messaging.manager.ssl.port

**Default Value**

8587

**API Name**

streams.messaging.manager.ssl.port

**Required**

false

**ZooKeeper Service****Description**

Name of the ZooKeeper service that this Streams Messaging Manager service instance depends on

**Related Name****Default Value****API Name**

zookeeper\_service

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Cloudera Manager Service Monitor Port****Description**

Whether to suppress configuration warnings produced by the Cloudera Manager Service Monitor Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cm.metrics.service.monitor.port

**Required**

true

**Suppress Configuration Validator: Cloudera Manager Metrics TrustStore Type****Description**

Whether to suppress configuration warnings produced by the Cloudera Manager Metrics TrustStore Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cm.metrics.truststore.type

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_config.json\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: consumer.group.refresh.interval.ms****Description**

Whether to suppress configuration warnings produced by the consumer.group.refresh.interval.ms configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_consumer.group.refresh.interval.ms

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_env.sh\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Inactive Group Timeout

**Description**

Whether to suppress configuration warnings produced by the Inactive Group Timeout configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_inactive.group.timeout.ms

**Required**

true

### Suppress Configuration Validator: inactive.producer.timeout.ms

**Description**

Whether to suppress configuration warnings produced by the inactive.producer.timeout.ms configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_inactive.producer.timeout.ms

**Required**

true

### Suppress Configuration Validator: LatencyMetricsConfig Metrics 15m Ttl Secs

**Description**

Whether to suppress configuration warnings produced by the LatencyMetricsConfig Metrics 15m Ttl Secs configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_latencymetricsconfig.metrics.15m.ttl.secs

**Required**

true

### Suppress Configuration Validator: LatencyMetricsConfig Metrics Clean Frequency ms

**Description**

Whether to suppress configuration warnings produced by the LatencyMetricsConfig Metrics Clean Frequency ms configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_latencymetricsconfig.metrics.clean.frequency.ms`**Required**`true`**Suppress Configuration Validator: Latency Metrics Data Storage Path****Description**

Whether to suppress configuration warnings produced by the Latency Metrics Data Storage Path configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_latencymetricsconfig.metrics.storage`**Required**`true`**Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Log Directory configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_log_dir`**Required**`true`**Suppress Configuration Validator: Metrics Cache Refresh Interval ms****Description**

Whether to suppress configuration warnings produced by the Metrics Cache Refresh Interval ms configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_metrics.cache.refresh.interval.ms`**Required**`true`**Suppress Configuration Validator: Metrics Fetcher Class****Description**

Whether to suppress configuration warnings produced by the Metrics Fetcher Class configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics.fetcher.class

**Required**

true

**Suppress Configuration Validator: Number of Metrics Fetcher Threads****Description**

Whether to suppress configuration warnings produced by the Number of Metrics Fetcher Threads configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics.fetcher.threads

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Configuration Validator: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Configuration Validator: Java Heap Size of SMM

**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of SMM configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_smm\_heap\_size

**Required**

true

### Suppress Configuration Validator: SMM\_JMX\_OPTS

**Description**

Whether to suppress configuration warnings produced by the SMM\_JMX\_OPTS configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_smm\_jmx\_opts

**Required**

true

### Suppress Configuration Validator: SMM\_JVM\_PERF\_OPTS

**Description**

Whether to suppress configuration warnings produced by the SMM\_JVM\_PERF\_OPTS configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_smm\_jvm\_perf\_opts

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

### Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore Key Password

**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

### Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Private Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams-messaging-manager.yaml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager Admin Port****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Admin Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.adminport

**Required**

true

**Suppress Configuration Validator: Allow All Alert Notifications****Description**

Whether to suppress configuration warnings produced by the Allow All Alert Notifications configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.allow.all.alert.notifications

**Required**

true

**Suppress Configuration Validator: Allowed resources****Description**

Whether to suppress configuration warnings produced by the Allowed resources configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.allowed.resources

**Required**

true

**Suppress Configuration Validator: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.jdk.home

**Required**

true

**Suppress Configuration Validator: Kafka Alert Notification Topic****Description**

Whether to suppress configuration warnings produced by the Kafka Alert Notification Topic configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.kafka.alert.notifications.topic

**Required**

true

**Suppress Configuration Validator: Kafka Cache Refresh Interval ms****Description**

Whether to suppress configuration warnings produced by the Kafka Cache Refresh Interval ms configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.kafka.cache.refresh.interval.ms

**Required**

true

**Suppress Configuration Validator: Kerberos Name Rules****Description**

Whether to suppress configuration warnings produced by the Kerberos Name Rules configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.kerberos.name.rules

**Required**

true

**Suppress Configuration Validator: Kerberos Non Browser User Agents****Description**

Whether to suppress configuration warnings produced by the Kerberos Non Browser User Agents configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.kerberos.non.browser.user.agents

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager Log Max Backup Index****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Log Max Backup Index configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.log.maxbackupindex

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager Log Max File Size****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Log Max File Size configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.log.maxfilesize

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager NotifierProviders Config Classes****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager NotifierProviders Config Classes configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.providerclasses

**Required**

true

**Suppress Configuration Validator: Save Notification Read Status Per User****Description**

Whether to suppress configuration warnings produced by the Save Notification Read Status Per User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.save.notification.read.status.per.user

**Required**

true

**Suppress Configuration Validator: Schema Registry API url****Description**

Whether to suppress configuration warnings produced by the Schema Registry API url configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.schema.registry.url

**Required**

true

**Suppress Configuration Validator: Servlet filter****Description**

Whether to suppress configuration warnings produced by the Servlet filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.servlet.filter

**Required**

true

### Suppress Configuration Validator: Streams Messaging Manager Admin Port (SSL)

**Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Admin Port (SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ssl.adminport

**Required**

true

### Suppress Configuration Validator: SSL Keystore Type

**Description**

Whether to suppress configuration warnings produced by the SSL Keystore Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ssl.keystoretype

**Required**

true

### Suppress Configuration Validator: SSL TrustStore Type

**Description**

Whether to suppress configuration warnings produced by the SSL TrustStore Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ssl.truststoretype

**Required**

true

### Suppress Configuration Validator: SSL ValidateCerts

**Description**

Whether to suppress configuration warnings produced by the SSL ValidateCerts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ssl.validatecerts

**Required**

true

**Suppress Configuration Validator: SSL validatePeers****Description**

Whether to suppress configuration warnings produced by the SSL validatePeers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ssl.validatepeers

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager UI Port****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ui.port

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager Configuration Directory****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Configuration Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.working.directory

**Required**

true

**Suppress Configuration Validator: Streams Replication Manager Rest Host****Description**

Whether to suppress configuration warnings produced by the Streams Replication Manager Rest Host configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.host

**Required**

true

**Suppress Configuration Validator: Streams Replication Manager Rest Port****Description**

Whether to suppress configuration warnings produced by the Streams Replication Manager Rest Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.port

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams\_messaging\_manager\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams\_messaging\_manager\_ui\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

### Suppress Parameter Validation: Service Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager Database Host

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database Host parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smm\_database\_host

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database Name parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smm\_database\_name

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager Database User Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database User Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smm\_database\_password

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager Database Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smm\_database\_port

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager Database User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database User parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_smm\_database\_user

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_streams.messaging.manager.port

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager port (SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager port (SSL) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_streams.messaging.manager.ssl.port

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_streams\_messaging\_manager\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_streams\_messaging\_manager\_service\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Streams Messaging Manager UI Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_streams\_messaging\_manager\_ui\_count\_validator

**Required**

true

**Suppress Health Test: Streams Messaging Manager Rest Admin Server Health****Description**

Whether to suppress the results of the Streams Messaging Manager Rest Admin Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_streams\_messaging\_manager\_server\_health

**Required**

true

**Suppress Health Test: Streams Messaging Manager UI Server Health****Description**

Whether to suppress the results of the Streams Messaging Manager UI Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_streams\_messaging\_manager\_ui\_health

**Required**

true

**Streams Messaging Manager Rest Admin Server****Advanced****Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh****Description**

For advanced use only. A string to be inserted into env.sh for this role only.

**Related Name****Default Value****API Name**

env.sh\_role\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml

**Description**

For advanced use only. A string to be inserted into streams-messaging-manager.yaml for this role only.

**Related Name****Default Value****API Name**

streams-messaging-manager.yaml\_role\_safety\_valve

**Required**

false

**Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

STREAMS\_MESSAGING\_MANAGER\_SERVER\_role\_env\_safety\_valve

**Required**

false

**Logs****Streams Messaging Manager Rest Admin Server Log Directory****Description**

The log directory for log files of the role Streams Messaging Manager Rest Admin Server.

**Related Name**

log\_dir

**Default Value**

/var/log/streams-messaging-manager

**API Name**

log\_dir

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO`

health:bad", "streamThreshold": 0, "enabled": "true"}}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

streams\_messaging\_manager\_server\_fd\_thresholds

**Required**

false

**Streams Messaging Manager Rest Admin Server Host Health Test****Description**

When computing the overall Streams Messaging Manager Rest Admin Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

streams\_messaging\_manager\_server\_host\_health\_enabled

**Required**

false

**Streams Messaging Manager Rest Admin Server Process Health Test****Description**

Enables the health test that the Streams Messaging Manager Rest Admin Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

streams\_messaging\_manager\_server\_scm\_health\_enabled

**Required**

false

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Cloudera Manager Service Monitor Port****Description**

Port of Cloudera Manager's Service Monitor.

**Related Name**

cm.metrics.service.monitor.port

**Default Value**

9997

**API Name**

cm.metrics.service.monitor.port

**Required**

true

**Cloudera Manager Metrics TrustStore Type****Description**

Cloudera Manager's truststore type.

**Related Name**

cm.metrics.truststore.type

**Default Value**

jks

**API Name**

cm.metrics.truststore.type

**Required**

true

**consumer.group.refresh.interval.ms****Description**

Refresh interval for consumer group's consumption.

**Related Name**

consumer.group.refresh.interval.ms

**Default Value**

50000

**API Name**

consumer.group.refresh.interval.ms

**Required**

true

**Graceful Shutdown Timeout****Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

**Related Name****Default Value**

30 second(s)

**API Name**

graceful\_stop\_timeout

**Required**

false

**Inactive Group Timeout****Description**

Timeout in ms for inactive group.

**Related Name**

inactive.group.timeout.ms

**Default Value**

1800000

**API Name**

inactive.group.timeout.ms

**Required**

true

**inactive.producer.timeout.ms****Description**

Timeout in ms for Inactive producer.

**Related Name**

inactive.producer.timeout.ms

**Default Value**

1800000

**API Name**

inactive.producer.timeout.ms

**Required**

true

### Enable Latency Metrics Processing

**Description**

To enable Latency Metrics Processing and Servicing, SMM will launch a service which continuously processes metrics received from producers and consumers and be able to provide responses to queries.

**Related Name**

latencyMetricsConfig.enable.latency.metrics.processing

**Default Value**

true

**API Name**

latencyMetricsConfig.enable.latency.metrics.processing

**Required**

true

### LatencyMetricsConfig Metrics 15m Ttl Secs

**Description**

Determines the default TTL (Time To Live) for 15m granularity metrics (metrics are queryable in 15m).

**Related Name**

latencyMetricsConfig.metrics.15m.ttl.secs

**Default Value**

1209600

**API Name**

latencyMetricsConfig.metrics.15m.ttl.secs

**Required**

false

### LatencyMetricsConfig Metrics Clean Frequency ms

**Description**

Frequency with which the metrics are cleaned from the above store in ms.

**Related Name**

latencyMetricsConfig.metrics.clean.frequency.ms

**Default Value**

21600000

**API Name**

latencyMetricsConfig.metrics.clean.frequency.ms

**Required**

false

**Latency Metrics Data Storage Path****Description**

Path to store latency metrics data.

**Related Name**

latencyMetricsConfig.metrics.storage

**Default Value**

/var/lib/streamsmgmr/latencymetrics/data

**API Name**

latencyMetricsConfig.metrics.storage

**Required**

false

**logging threshold for logger appenders****Description**

logging threshold for logger appenders

**Related Name**

loggers.appenders.threshold

**Default Value**

TRACE

**API Name**

loggers.appenders.threshold

**Required**

false

**logging level of all loggers****Description**

logging level of all loggers

**Related Name**

logging.level

**Default Value**

INFO

**API Name**

logging.level

**Required**

false

**Logger org.apache.kafka Logging Level****Description**

Logger org.apache.kafka logging level.

**Related Name**

logging.org.apache.kafka.level

**Default Value**

INFO

**API Name**

logging.org.apache.kafka.level

**Required**

false

**Logger `smm.kafka.webservice.common` Logging Level****Description**Logger `smm.kafka.webservice.common` logging level.**Related Name**

logging.smm.kafka.webservice.common.level

**Default Value**

DEBUG

**API Name**

logging.smm.kafka.webservice.common.level

**Required**

false

**Metrics Cache Refresh Interval ms****Description**

Refresh interval for data collection from CM Metrics's Collector cache.

**Related Name**

metrics.cache.refresh.interval.ms

**Default Value**

50000

**API Name**

metrics.cache.refresh.interval.ms

**Required**

true

**Metrics Fetcher Class****Description**

SMM's kafka metrics fetcher class.

**Related Name**

metrics.fetcher.class

**Default Value**

com.hortonworks.smm.kafka.services.metric.cm.CMMetricsFetcher

**API Name**

metrics.fetcher.class

**Required**

true

**Number of Metrics Fetcher Threads****Description**

Number of metrics fetcher threads.

**Related Name**

metrics.fetcher.threads

**Default Value**

25

**API Name**

metrics.fetcher.threads

**Required**

true

**Java Heap Size of SMM****Description**

Maximum size for the SMM Java process heap memory. Passed to Java -Xmx. Measured in megabytes.

**Related Name**

SMM\_HEAP\_SIZE

**Default Value**

6 GiB

**API Name**

SMM\_HEAP\_SIZE

**Required**

false

**SMM\_JMX\_OPTS****Description**

Change parameters to setup jmxremote.

**Related Name**

SMM\_JMX\_OPTS

**Default Value**

-Dcom.sun.management.jmxremote -Dcom.sun.management.jmxremote.authenticate=false -Dcom.sun.management.jmxremote.ssl=false

**API Name**

SMM\_JMX\_OPTS

**Required**

false

**SMM\_JVM\_PERF\_OPTS****Description**

SMM JVM perf and gc opts.

**Related Name**

SMM\_JVM\_PERF\_OPTS

**Default Value**

-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -XX:+ExplicitGCInvokesConcurrent -Djava.awt.headless=true

**API Name**

SMM\_JVM\_PERF\_OPTS

**Required**

false

**Streams Messaging Manager Admin Port****Description**

The admin port for the server.

**Related Name**

streams.messaging.manager.adminPort

**Default Value**

8586

**API Name**

streams.messaging.manager.adminPort

**Required**

true

**AlertTopicConsumerConfig Poll Timeout ms****Description**

Alert topic Consumer config poll timeout in ms.

**Related Name**

streams.messaging.manager.alertTopicConsumerConfig.poll.timeout.ms

**Default Value**

1 second(s)

**API Name**

streams.messaging.manager.alertTopicConsumerConfig.poll.timeout.ms

**Required**

false

**Allow All Alert Notifications****Description**

Whether to send the alert notifications periodically.

**Related Name**

streams.messaging.manager.allow.all.alert.notifications

**Default Value**

true

**API Name**

streams.messaging.manager.allow.all.alert.notifications

**Required**

false

**Allowed resources****Description**

Allowed resources for Streams Messaging Manager.

**Related Name**

streams.messaging.manager.allowed.resources

**Default Value**

401.html, back-default.png, favicon.ico

**API Name**

streams.messaging.manager.allowed.resources

**Required**

false

**Streams Messaging Manager Executor Thread Count****Description**

Alerts config executor thread count.

**Related Name**

streams.messaging.manager.executor.thread.count

**Default Value**

30

**API Name**

streams.messaging.manager.executor.thread.count

**Required**

true

**Streams Messaging Manager Executor Thread Pool Size****Description**

NotifierProviders executor thread pool size.

**Related Name**

streams.messaging.manager.executor.thread.pool.size

**Default Value**

16

**API Name**

streams.messaging.manager.executor.thread.pool.size

**Required**

true

**Java Home Path Override****Description**

Java Home Path Override for Streams Messaging Manager

**Related Name**

streams.messaging.manager.jdk.home

**Default Value****API Name**

streams.messaging.manager.jdk.home

**Required**

false

**Kafka Alert Notification Topic****Description**

Kafka alert notification topic name.

**Related Name**

streams.messaging.manager.kafka.alert.notifications.topic

**Default Value**

\_\_smm\_alert\_notifications

**API Name**

streams.messaging.manager.kafka.alert.notifications.topic

**Required**

true

**Kafka Cache Refresh Interval ms****Description**

SMM's cache refresh interval in ms for kafka.

**Related Name**

streams.messaging.manager.kafka.cache.refresh.interval.ms

**Default Value**

60000

**API Name**

streams.messaging.manager.kafka.cache.refresh.interval.ms

**Required**

false

**Kafka Client Security Protocol****Description**

Protocol to be used for communicating with Kafka, INFERRED setup assumes that Kafka service is set up the same as SMM regarding kerberos and ssl.

**Related Name**

streams.messaging.manager.kafka.client.security.protocol

**Default Value**

INFERRED

**API Name**

streams.messaging.manager.kafka.client.security.protocol

**Required**

false

**Streams Messaging Manager KafkaConsumerClient Poll Timeout ms****Description**

SMM's Kafka Consumer Client poll timeout in ms.

**Related Name**

streams.messaging.manager.kafkaConsumerClient.poll.timeout.ms

**Default Value**

1 second(s)

**API Name**

streams.messaging.manager.kafkaConsumerClient.poll.timeout.ms

**Required**

false

**Kerberos Name Rules****Description**

Kerberos name rules for Streams Messaging Manager.

**Related Name**

streams.messaging.manager.kerberos.name.rules

**Default Value**

RULE:[2:\$1@\$0]([jt]t@.\*EXAMPLE.COM)s/\*/\$MAPRED\_USER/ RULE:[2:\$1@\$0]  
([nd]n@.\*EXAMPLE.COM)s/\*/\$HDFS\_USER/DEFAULT

**API Name**

streams.messaging.manager.kerberos.name.rules

**Required**

false

**Kerberos Non Browser User Agents****Description**

Non browser user agents if kerberos is enabled.

**Related Name**

streams.messaging.manager.kerberos.non.browser.user.agents

**Default Value****API Name**

streams.messaging.manager.kerberos.non.browser.user.agents

**Required**

false

**Streams Messaging Manager Log Max Backup Index****Description**

The number of backup files

**Related Name**

streams.messaging.manager.log.maxbackupindex

**Default Value**

20

**API Name**

streams.messaging.manager.log.maxbackupindex

**Required**

false

**Streams Messaging Manager Log Max File Size****Description**

The maximum size of backup file before the log is rotated

**Related Name**

streams.messaging.manager.log.maxfilesize

**Default Value**

256MB

**API Name**

streams.messaging.manager.log.maxfilesize

**Required**

false

**Streams Messaging Manager NotifierProviders Config Classes****Description**

NotifierProviders config classes in list format.

**Related Name**

streams.messaging.manager.providerClasses

**Default Value**[com.hortonworks.smm.notifier.http.HttpNotifierProvider,  
com.hortonworks.smm.notifier.email.EmailNotifierProvider]**API Name**

streams.messaging.manager.providerClasses

**Required**

true

**Save Notification Read Status Per User****Description**

Alert notification save status flag per user.

**Related Name**

streams.messaging.manager.save.notification.read.status.per.user

**Default Value**

true

**API Name**

streams.messaging.manager.save.notification.read.status.per.user

**Required**

false

**Schema Registry API url****Description**Provide API URL for Schema Registry. e.g http://SR\_HOST:7788/api/v1 or https://  
SR\_HOST:7790/api/v1**Related Name**

streams.messaging.manager.schema.registry.url

**Default Value****API Name**

streams.messaging.manager.schema.registry.url

**Required**

false

**Servlet filter****Description**

Streams Messaging Manager servlet filter class.

**Related Name**

streams.messaging.manager.servlet.filter

**Default Value**

com.hortonworks.registries.auth.server.AuthenticationFilter

**API Name**

streams.messaging.manager.servlet.filter

**Required**

true

**Streams Messaging Manager Admin Port (SSL)****Description**

HTTPS admin port Streams Messaging Manager rest server runs on when SSL is enabled.

**Related Name**

streams.messaging.manager.ssl.adminPort

**Default Value**

8588

**API Name**

streams.messaging.manager.ssl.adminPort

**Required**

false

**SSL Keystore Type****Description**

The keystore type. Required if Streams Messaging Manager rest server's SSL is enabled. e.g. PKCS12 or JKS.

**Related Name**

streams.messaging.manager.ssl.keyStoreType

**Default Value**

jks

**API Name**

streams.messaging.manager.ssl.keyStoreType

**Required**

false

**SSL TrustStore Type****Description**

The truststore type. Required if streams messaging manager's ssl is enabled. e.g. PKCS12 or JKS.

**Related Name**

streams.messaging.manager.ssl.trustStoreType

**Default Value**

jks

**API Name**

streams.messaging.manager.ssl.trustStoreType

**Required**

false

**SSL ValidateCerts****Description**

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates.

**Related Name**

streams.messaging.manager.ssl.validateCerts

**Default Value**

false

**API Name**

streams.messaging.manager.ssl.validateCerts

**Required**

false

**SSL validatePeers****Description**

Whether or not to validate TLS peer certificates.

**Related Name**

streams.messaging.manager.ssl.validatePeers

**Default Value**

false

**API Name**

streams.messaging.manager.ssl.validatePeers

**Required**

false

**Streams Messaging Manager Query Timeout****Description**

Streams Messaging Manager query timeout.

**Related Name**

streams.messaging.manager.storage.query.timeout

**Default Value**

30 millisecond(s)

**API Name**

streams.messaging.manager.storage.query.timeout

**Required**

true

**Token validity****Description**

Kerberos token validity for Streams Messaging Manager in ms.

**Related Name**

streams.messaging.manager.token.validity

**Default Value**

36000

**API Name**

streams.messaging.manager.token.validity

**Required**

false

**Streams Messaging Manager Configuration Directory****Description**

Directory to Streams messaging manager additional libs, jars, isos, etc.

**Related Name**

streams.messaging.manager.working.directory

**Default Value**

/var/lib/streamsmgmr

**API Name**

streams.messaging.manager.working.directory

**Required**

false

**Configure Streams Replication Manager****Description**

Configure Streams Replication Manager.

**Related Name**

streams.replication.manager.configure

**Default Value**

false

**API Name**

streams.replication.manager.configure

**Required**

false

**Streams Replication Manager Rest Host****Description**

Streams Replication Manager rest host.

**Related Name**

streams.replication.manager.host

**Default Value****API Name**

streams.replication.manager.host

**Required**

false

**Streams Replication Manager Rest Port****Description**

Streams Replication Manager rest port.

**Related Name**

streams.replication.manager.port

**Default Value**

6670

**API Name**

streams.replication.manager.port

**Required**

false

### Streams Replication Manager Rest Protocol

**Description**

Streams Replication Manager rest protocol.

**Related Name**

streams.replication.manager.protocol

**Default Value**

http

**API Name**

streams.replication.manager.protocol

**Required**

false

### Performance

#### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

### Resource Management

#### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`  
 \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Streams Messaging Manager Rest Admin Server might connect to. This is used when Streams Messaging Manager Rest Admin Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

streams.messaging.manager.ssl.trustStorePath

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store Password****Description**

The password for the Streams Messaging Manager Rest Admin Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name****Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Streams Messaging Manager Rest Admin Server****Description**

Encrypt communication between clients and Streams Messaging Manager Rest Admin Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl.enable

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore Key Password****Description**

The password that protects the private key contained in the JKS keystore used when Streams Messaging Manager Rest Admin Server is acting as a TLS/SSL server.

**Related Name****Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Streams Messaging Manager Rest Admin Server is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

streams.messaging.manager.ssl.keyStorePath

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Password****Description**

The password for the Streams Messaging Manager Rest Admin Server JKS keystore file.

**Related Name**

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Parameter Validation: Cloudera Manager Service Monitor Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Service Monitor Port parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_cm.metrics.service.monitor.port

**Required**

true

**Suppress Parameter Validation: Cloudera Manager Metrics TrustStore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Metrics TrustStore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cm.metrics.truststore.type

**Required**

true

**Suppress Parameter Validation: consumer.group.refresh.interval.ms****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the consumer.group.refresh.interval.ms parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_consumer.group.refresh.interval.ms

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_env.sh\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Inactive Group Timeout

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Inactive Group Timeout parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_inactive.group.timeout.ms

**Required**

true

### Suppress Parameter Validation: inactive.producer.timeout.ms

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the inactive.producer.timeout.ms parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_inactive.producer.timeout.ms

**Required**

true

### Suppress Parameter Validation: LatencyMetricsConfig Metrics 15m Ttl Secs

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LatencyMetricsConfig Metrics 15m Ttl Secs parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_latencymetricsconfig.metrics.15m.ttl.secs

**Required**

true

### Suppress Parameter Validation: LatencyMetricsConfig Metrics Clean Frequency ms

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LatencyMetricsConfig Metrics Clean Frequency ms parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_latencymetricsconfig.metrics.clean.frequency.ms

**Required**

true

**Suppress Parameter Validation: Latency Metrics Data Storage Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Latency Metrics Data Storage Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_latencymetricsconfig.metrics.storage

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Metrics Cache Refresh Interval ms****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Cache Refresh Interval ms parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics.cache.refresh.interval.ms

**Required**

true

**Suppress Parameter Validation: Metrics Fetcher Class****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Fetcher Class parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_metrics.fetcher.class

**Required**

true

**Suppress Parameter Validation: Number of Metrics Fetcher Threads****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Metrics Fetcher Threads parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics.fetcher.threads

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Java Heap Size of SMM****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of SMM parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_smm\_heap\_size

**Required**

true

**Suppress Parameter Validation: SMM\_JMX\_OPTS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SMM\_JMX\_OPTS parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_smm\_jmx\_opts

**Required**

true

**Suppress Parameter Validation: SMM\_JVM\_PERF\_OPTS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SMM\_JVM\_PERF\_OPTS parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_smm\_jvm\_perf\_opts

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store File

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore Key Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

### Suppress Parameter Validation: Stacks Collection Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams-messaging-manager.yaml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager Admin Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Admin Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.adminport

**Required**

true

**Suppress Parameter Validation: Allow All Alert Notifications****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allow All Alert Notifications parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.allow.all.alert.notifications

**Required**

true

**Suppress Parameter Validation: Allowed resources****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed resources parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.allowed.resources

**Required**

true

**Suppress Parameter Validation: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.jdk.home

**Required**

true

**Suppress Parameter Validation: Kafka Alert Notification Topic****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Alert Notification Topic parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.kafka.alert.notifications.topic

**Required**

true

**Suppress Parameter Validation: Kafka Cache Refresh Interval ms****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Cache Refresh Interval ms parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.kafka.cache.refresh.interval.ms

**Required**

true

**Suppress Parameter Validation: Kerberos Name Rules****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Name Rules parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.kerberos.name.rules

**Required**

true

### Suppress Parameter Validation: Kerberos Non Browser User Agents

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Non Browser User Agents parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.kerberos.non.browser.user.agents

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager Log Max Backup Index

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Log Max Backup Index parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.log.maxbackupindex

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager Log Max File Size

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Log Max File Size parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.log.maxfilesize

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager NotifierProviders Config Classes

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager NotifierProviders Config Classes parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_streams.messaging.manager.providerclasses`**Required**`true`**Suppress Parameter Validation: Save Notification Read Status Per User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Save Notification Read Status Per User parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_streams.messaging.manager.save.notification.read.status.per.user`**Required**`true`**Suppress Parameter Validation: Schema Registry API url****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry API url parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_streams.messaging.manager.schema.registry.url`**Required**`true`**Suppress Parameter Validation: Servlet filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Servlet filter parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_streams.messaging.manager.servlet.filter`**Required**`true`**Suppress Parameter Validation: Streams Messaging Manager Admin Port (SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Admin Port (SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ssl.adminport

**Required**

true

**Suppress Parameter Validation: SSL Keystore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ssl.keystoretype

**Required**

true

**Suppress Parameter Validation: SSL TrustStore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ssl.truststoretype

**Required**

true

**Suppress Parameter Validation: SSL ValidateCerts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ssl.validatecerts

**Required**

true

### Suppress Parameter Validation: SSL validatePeers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL validatePeers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ssl.validatepeers

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager Configuration Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Configuration Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.working.directory

**Required**

true

### Suppress Parameter Validation: Streams Replication Manager Rest Host

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Rest Host parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.host

**Required**

true

### Suppress Parameter Validation: Streams Replication Manager Rest Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Rest Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.port

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams\_messaging\_manager\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_server\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_server\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_server\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_server\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_server\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_server\_unexpected\_exits

**Required**

true

## Streams Messaging Manager UI Server

### Advanced

#### Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json

**Description**

For advanced use only. A string to be inserted into config.json for this role only.

**Related Name****Default Value****API Name**

config.json\_role\_safety\_valve

**Required**

false

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name**

**Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

STREAMS\_MESSAGING\_MANAGER\_UI\_role\_env\_safety\_valve

**Required**

false

### Logs

#### Streams Messaging Manager UI Server Log Directory

**Description**

The log directory for log files of the role Streams Messaging Manager UI Server.

**Related Name**

log\_dir

**Default Value**

/var/log/streams-messaging-manager

**API Name**

log\_dir

**Required**

false

### Monitoring

#### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name**

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following

configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more

details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

streams\_messaging\_manager\_ui\_fd\_thresholds

**Required**

false

### Streams Messaging Manager UI Server Host Health Test

**Description**

When computing the overall Streams Messaging Manager UI Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

streams\_messaging\_manager\_ui\_host\_health\_enabled

**Required**

false

### Streams Messaging Manager UI Server Process Health Test

**Description**

Enables the health test that the Streams Messaging Manager UI Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

streams\_messaging\_manager\_ui\_scm\_health\_enabled

**Required**

false

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

### Other

#### Graceful Shutdown Timeout

**Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

**Related Name****Default Value**

30 second(s)

**API Name**

`graceful_stop_timeout`

**Required**

false

#### Streams Messaging Manager UI Port

**Description**

The port on which server accepts connections.

**Related Name**

`streams.messaging.manager.ui.port`

**Default Value**

9991

**API Name**

streams.messaging.manager.ui.port

**Required**

true

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'  
 \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

`rm_memory_soft_limit`**Required**`true`**Security****Streams Messaging Manager UI Server TLS/SSL Certificate Trust Store File****Description**

The location on disk of the trust store, in .pem format, used to confirm the authenticity of TLS/SSL servers that Streams Messaging Manager UI Server might connect to. This is used when Streams Messaging Manager UI Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**`streams.messaging.manager.ui.ssl.trust.store.location`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Enable TLS/SSL for Streams Messaging Manager UI Server****Description**

Encrypt communication between clients and Streams Messaging Manager UI Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**`streams.messaging.manager.ui.ssl.enable`**Default Value**`false`**API Name**`ssl_enabled`**Required**`false`**Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format)****Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

**Related Name**`streams.messaging.manager.ui.ssl.ca.cert.location`**Default Value****API Name**`ssl_server_ca_certificate_location`**Required**

false

### Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format)

#### Description

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

#### Related Name

streams.messaging.manager.ui.ssl.cert.location

#### Default Value

#### API Name

ssl\_server\_certificate\_location

#### Required

false

### Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format)

#### Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

#### Related Name

streams.messaging.manager.ui.ssl.private.key.location

#### Default Value

#### API Name

ssl\_server\_privatekey\_location

#### Required

false

### Streams Messaging Manager UI Server TLS/SSL Private Key Password

#### Description

The password for the private key in the Streams Messaging Manager UI Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

#### Related Name

#### Default Value

#### API Name

ssl\_server\_privatekey\_password

#### Required

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

#### Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

#### Related Name

**Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_config.json\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager UI Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager UI Server TLS/SSL Certificate Trust Store File

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server TLS/SSL Certificate Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager UI Server TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server TLS/SSL Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Parameter Validation: Streams Messaging Manager UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.messaging.manager.ui.port

**Required**

true

### Suppress Parameter Validation: Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams\_messaging\_manager\_ui\_role\_env\_safety\_valve

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_ui\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_ui\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_ui\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_ui\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_ui\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_ui\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_messaging\_manager\_streams\_messaging\_manager\_ui\_unexpected\_exits

**Required**

true

## Streams Replication Manager Properties in Cloudera Runtime 7.1

Role groups:

### Service-Wide

#### Advanced

#### System Group

**Description**

The group that this service's processes should run as.

**Related Name****Default Value**

streamsrepmgr

**API Name**

process\_groupname

**Required**

true

#### System User

**Description**

The user that this service's processes should run as.

**Related Name**

**Default Value**

streamsrepmgr

**API Name**

process\_username

**Required**

true

**Streams Replication Manager Service Advanced Configuration Snippet (Safety Valve) for srm.properties****Description**

For advanced use only, a string to be inserted into srm.properties. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

srm.properties\_service\_safety\_valve

**Required**

false

**Streams Replication Manager Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

STREAMS\_REPLICATION\_MANAGER\_service\_env\_safety\_valve

**Required**

false

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Service Triggers

**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

### Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value**

**API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**SRM Driver Role Health Test****Description**

When computing the overall STREAMS\_REPLICATION\_MANAGER health, consider SRM Driver's health

**Related Name****Default Value**

true

**API Name**

STREAMS\_REPLICATION\_MANAGER\_STREAMS\_REPLICATION\_MANAGER\_DRIVER\_health\_enabled

**Required**

false

**SRM Service Role Health Test****Description**

When computing the overall STREAMS\_REPLICATION\_MANAGER health, consider SRM Service's health

**Related Name****Default Value**

true

**API Name**

STREAMS\_REPLICATION\_MANAGER\_STREAMS\_REPLICATION\_MANAGER\_SERVICE\_health\_enabled

**Required**

false

**Other****Streams Replication Manager Cluster alias****Description**

Specifies cluster aliases for the clusters SRM is connecting to. Cluster aliases are comma delimited. For example, 'primary, backup'.

**Related Name**

clusters

**Default Value****API Name**

clusters

**Required**

true

### Emit Checkpoints Interval Seconds

**Description**

The interval at which SRM emits checkpoint information.

**Related Name**

emit.checkpoints.interval.seconds

**Default Value**

5 second(s)

**API Name**

emit.checkpoints.interval.seconds

**Required**

true

### Kafka Service

**Description**

Name of the Kafka service that this Streams Replication Manager service instance depends on

**Related Name****Default Value****API Name**

kafka\_service

**Required**

false

### Enable Kerberos Authentication

**Description**

Enables Kerberos authentication for this Streams Replication Manager.

**Related Name**

kerberos.auth.enable

**Default Value**

false

**API Name**

kerberos.auth.enable

**Required**

false

### Replication Factor for Metrics Topics

**Description**

Replication factor for all metrics topics.

**Related Name**

metrics.topic.replication.factor

**Default Value**

3

**API Name**

metrics.topic.replication.factor

**Required**

false

### Refresh Groups Interval Seconds

**Description**

The interval at which SRM looks for new consumer groups on source clusters.

**Related Name**

refresh.groups.interval.seconds

**Default Value**

10 minute(s)

**API Name**

refresh.groups.interval.seconds

**Required**

true

### Refresh Topics Interval Seconds

**Description**

The interval at which SRM looks for new topics on source clusters.

**Related Name**

refresh.topics.interval.seconds

**Default Value**

10 minute(s)

**API Name**

refresh.topics.interval.seconds

**Required**

true

### SRM\_HEAP\_OPTS

**Description**

Memory heap params.

**Related Name**

SRM\_HEAP\_OPTS

**Default Value**

-Xmx8G -Xms1G

**API Name**

SRM\_HEAP\_OPTS

**Required**

false

### SRM\_JMX\_OPTS

**Description**

Change parameters to setup jmxremote.

**Related Name**

SRM\_JMX\_OPTS

**Default Value**

```
-Dcom.sun.management.jmxremote -Dcom.sun.management.jmxremote.authenticate=false -
Dcom.sun.management.jmxremote.ssl=false
```

**API Name**

SRM\_JMX\_OPTS

**Required**

false

**SRM\_JVM\_PERF\_OPTS****Description**

SRM JVM perf and gc opts.

**Related Name**

SRM\_JVM\_PERF\_OPTS

**Default Value**

```
-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -
XX:+ExplicitGCInvokesConcurrent -Djava.awt.headless=true
```

**API Name**

SRM\_JVM\_PERF\_OPTS

**Required**

false

**Streams Replication Manager's Replication Configs****Description**

Specifies cluster bootstrap server information and cluster replication pairs. Bootstrap information for each alias defined in the clusters property has to be added as follows: 'primary.bootstrap.servers=mycluster1.example.com:9092,primary.bootstrap.servers=mycluster2.example.com:9092'.. Each cluster has to be added in a new line, if cluster has multiple nodes, add all nodes to the same line and delimit each with a comma. Cluster replication pairs can be defined as follows: 'primary->backup.enabled=true'.. Each unique replication pair has to be added in a new line.

**Related Name**

streams.replication.manager.config

**Default Value****API Name**

streams.replication.manager.config

**Required**

true

**Sync Topic Acls Enabled****Description**

Enables the monitoring of the source cluster for ACL changes.

**Related Name**

sync.topic.acls.enabled

**Default Value**

false

**API Name**

sync.topic.acls.enabled

**Required**

true

**Sync Topic Acls Interval Seconds****Description**

The interval at which SRM checks the source cluster for ACL changes.

**Related Name**

sync.topic.acls.interval.seconds

**Default Value**

30 second(s)

**API Name**

sync.topic.acls.interval.seconds

**Required**

true

**Sync Topic Configs Interval Seconds****Description**

The interval at which SRM checks the source cluster for configuration changes.

**Related Name**

sync.topic.configs.interval.seconds

**Default Value**

10 minute(s)

**API Name**

sync.topic.configs.interval.seconds

**Required**

true

**Tasks Max****Description**

Maximum number of tasks for replication between clusters.

**Related Name**

tasks.max

**Default Value**

3

**API Name**

tasks.max

**Required**

true

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: SRM Driver Log Directory****Description**

Whether to suppress configuration warnings produced by the SRM Driver Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: SRM Driver XML Override****Description**

Whether to suppress configuration warnings produced by the SRM Driver XML Override configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logback\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml****Description**

Whether to suppress configuration warnings produced by the SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_srm-service.yaml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties****Description**

Whether to suppress configuration warnings produced by the SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_srm.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: SRM Driver TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the SRM Driver TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: SRM Driver TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the SRM Driver TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: SRM Driver TLS/SSL Server JKS Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the SRM Driver TLS/SSL Server JKS Keystore Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Configuration Validator: SRM Driver TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the SRM Driver TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: SRM Driver TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the SRM Driver TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Streams Replication Manager Driver Target Cluster****Description**

Whether to suppress configuration warnings produced by the Streams Replication Manager Driver Target Cluster configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.driver.target.cluster

**Required**

true

**Suppress Configuration Validator: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.jdk.home

**Required**

true

**Suppress Configuration Validator: Log Format****Description**

Whether to suppress configuration warnings produced by the Log Format configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.log.format

**Required**

true

**Suppress Configuration Validator: SRM Service Port****Description**

Whether to suppress configuration warnings produced by the SRM Service Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.service.port

**Required**

true

**Suppress Configuration Validator: SRM Service Rpc Port****Description**

Whether to suppress configuration warnings produced by the SRM Service Rpc Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.service.rpcport

**Required**

true

### Suppress Configuration Validator: SRM Service Https Port

**Description**

Whether to suppress configuration warnings produced by the SRM Service Https Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.service.ssl.port

**Required**

true

### Suppress Configuration Validator: Streams Replication Manager Service Target Cluster

**Description**

Whether to suppress configuration warnings produced by the Streams Replication Manager Service Target Cluster configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.service.target.cluster

**Required**

true

### Suppress Configuration Validator: SSL Keystore Type

**Description**

Whether to suppress configuration warnings produced by the SSL Keystore Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.ssl.keystoretype

**Required**

true

### Suppress Configuration Validator: SSL TrustStore Type

**Description**

Whether to suppress configuration warnings produced by the SSL TrustStore Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.ssl.truststoretype

**Required**

true

**Suppress Configuration Validator: SSL ValidateCerts****Description**

Whether to suppress configuration warnings produced by the SSL ValidateCerts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.ssl.validatecerts

**Required**

true

**Suppress Configuration Validator: SSL ValidatePeers****Description**

Whether to suppress configuration warnings produced by the SSL ValidatePeers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.ssl.validatepeers

**Required**

true

**Suppress Configuration Validator: SRM Driver Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the SRM Driver Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams\_replication\_manager\_driver\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: SRM Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the SRM Service Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams\_replication\_manager\_service\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Streams Replication Manager Cluster alias****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Cluster alias parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_clusters

**Required**

true

**Suppress Parameter Validation: Replication Factor for Metrics Topics****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replication Factor for Metrics Topics parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_metrics.topic.replication.factor

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

### Suppress Parameter Validation: Service Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Streams Replication Manager Service Advanced Configuration Snippet (Safety Valve) for srm.properties

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Service Advanced Configuration Snippet (Safety Valve) for srm.properties parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_srm.properties\_service\_safety\_valve

**Required**

true

**Suppress Parameter Validation: SRM\_HEAP\_OPTS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM\_HEAP\_OPTS parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_srm\_heap\_opts

**Required**

true

**Suppress Parameter Validation: SRM\_JMX\_OPTS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM\_JMX\_OPTS parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_srm\_jmx\_opts

**Required**

true

**Suppress Parameter Validation: SRM\_JVM\_PERF\_OPTS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM\_JVM\_PERF\_OPTS parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_srm\_jvm\_perf\_opts

**Required**

true

### Suppress Parameter Validation: Streams Replication Manager's Replication Configs

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager's Replication Configs parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_streams.replication.manager.config

**Required**

true

### Suppress Configuration Validator: SRM Driver Count Validator

**Description**

Whether to suppress configuration warnings produced by the SRM Driver Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_streams.replication.manager.driver.count.validator

**Required**

true

### Suppress Configuration Validator: SRM Service Count Validator

**Description**

Whether to suppress configuration warnings produced by the SRM Service Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_streams.replication.manager.service.count.validator

**Required**

true

### Suppress Parameter Validation: Streams Replication Manager Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_streams\_replication\_manager\_service\_env\_safety\_valve

**Required**

true

**Suppress Health Test: SRM Driver Health****Description**

Whether to suppress the results of the SRM Driver Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_streams\_replication\_manager\_driver\_health

**Required**

true

**Suppress Health Test: SRM Service Health****Description**

Whether to suppress the results of the SRM Service Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_streams\_replication\_manager\_service\_health

**Required**

true

**SRM Driver****Advanced****SRM Driver XML Override****Description**

For advanced use only, replace entire XML in the logback configuration file for SRM Driver, ignoring all logging configuration.

**Related Name**

logback\_safety\_valve

**Default Value****API Name**

logback\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties****Description**

For advanced use only. A string to be inserted into srm.properties for this role only.

**Related Name****Default Value****API Name**

srm.properties\_role\_safety\_valve

**Required**

false

**SRM Driver Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

STREAMS\_REPLICATION\_MANAGER\_DRIVER\_role\_env\_safety\_valve

**Required**

false

**Logs****SRM Driver Log Directory****Description**

The log directory for log files of the role SRM Driver.

**Related Name**

log\_dir

**Default Value**

/var/log/streams-replication-manager

**API Name**

log\_dir

**Required**

false

**SRM Driver Logging Threshold****Description**

The minimum log level for SRM Driver logs

**Related Name**

**Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**SRM Driver Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for SRM Driver logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**SRM Driver Max Log Size****Description**

The maximum size, in megabytes, per log file for SRM Driver logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

streams\_replication\_manager\_driver\_fd\_thresholds

**Required**

false

**SRM Driver Host Health Test****Description**

When computing the overall SRM Driver health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

streams\_replication\_manager\_driver\_host\_health\_enabled

**Required**

false

**SRM Driver Process Health Test****Description**

Enables the health test that the SRM Driver's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

streams\_replication\_manager\_driver\_scm\_health\_enabled

**Required**

false

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Streams Replication Manager Driver Target Cluster****Description**

Target cluster aliases for the srm-driver. When set, the srm-driver will collect data from all clusters, but will only write to the clusters specified here. Cluster aliases are comma separated.

**Related Name**

streams.replication.manager.driver.target.cluster

**Default Value****API Name**

streams.replication.manager.driver.target.cluster

**Required**

false

**Java Home Path Override****Description**

Java Home Path Override for Streams Replication Manager. If left empty, the java shipped with CM is used.

**Related Name**

streams.replication.manager.jdk.home

**Default Value****API Name**

streams.replication.manager.jdk.home

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****SRM Driver TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that SRM Driver might connect to. This is used when SRM Driver is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**SRM Driver TLS/SSL Client Trust Store Password****Description**

The password for the SRM Driver TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for SRM Driver****Description**

Encrypt communication between clients and SRM Driver using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**SRM Driver TLS/SSL Server JKS Keystore Key Password****Description**

The password that protects the private key contained in the JKS keystore used when SRM Driver is acting as a TLS/SSL server.

**Related Name**

ssl.key.password

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**SRM Driver TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when SRM Driver is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**SRM Driver TLS/SSL Server JKS Keystore File Password****Description**

The password for the SRM Driver JKS keystore file.

**Related Name**

ssl.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection**

### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: SRM Driver Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: SRM Driver XML Override

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver XML Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logback\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_srm.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: SRM Driver TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: SRM Driver TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: SRM Driver TLS/SSL Server JKS Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: SRM Driver TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: SRM Driver TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Parameter Validation: Streams Replication Manager Driver Target Cluster

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Driver Target Cluster parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.driver.target.cluster

**Required**

true

### Suppress Parameter Validation: Java Home Path Override

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.jdk.home

**Required**

true

### Suppress Parameter Validation: SRM Driver Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams\_replication\_manager\_driver\_role\_env\_safety\_valve

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_driver\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_driver\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_driver\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_driver\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

#### Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_driver\_s  
cm\_health

#### Required

true

### Suppress Health Test: Swap Memory Usage

#### Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_driver\_swap\_  
memory\_usage

#### Required

true

### Suppress Health Test: Unexpected Exits

#### Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_driver\_unexp  
ected\_exits

#### Required

true

## SRM Service

## Advanced

### SRM Service XML Override

**Description**

For advanced use only, replace entire XML in the logback configuration file for SRM Service, ignoring all logging configuration.

**Related Name**

logback\_safety\_valve

**Default Value****API Name**

logback\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

#### Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

#### Related Name

#### Default Value

20

#### API Name

process\_start\_secs

#### Required

false

### SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml

#### Description

For advanced use only. A string to be inserted into srm-service.yaml for this role only.

#### Related Name

#### Default Value

#### API Name

srm-service.yaml\_role\_safety\_valve

#### Required

false

### SRM Service Advanced Configuration Snippet (Safety Valve) for srm.properties

#### Description

For advanced use only. A string to be inserted into srm.properties for this role only.

#### Related Name

#### Default Value

#### API Name

srm.properties\_role\_safety\_valve

#### Required

false

### SRM Service Environment Advanced Configuration Snippet (Safety Valve)

#### Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

#### Related Name

#### Default Value

#### API Name

STREAMS\_REPLICATION\_MANAGER\_SERVICE\_role\_env\_safety\_valve

#### Required

false

## Logs

### SRM Service Log Directory

**Description**

The log directory for log files of the role SRM Service.

**Related Name**

log\_dir

**Default Value**

/var/log/streams-replication-manager

**API Name**

log\_dir

**Required**

false

### SRM Service Logging Threshold

**Description**

The minimum log level for SRM Service logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### SRM Service Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for SRM Service logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### SRM Service Max Log Size

**Description**

The maximum size, in megabytes, per log file for SRM Service logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

streams\_replication\_manager\_service\_fd\_thresholds

**Required**

false

### SRM Service Host Health Test

**Description**

When computing the overall SRM Service health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

streams\_replication\_manager\_service\_host\_health\_enabled

**Required**

false

### SRM Service Process Health Test

**Description**

Enables the health test that the SRM Service's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

streams\_replication\_manager\_service\_scm\_health\_enabled

**Required**

false

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

## Other

### Log Format

**Description**

Format of the messages output by logger.

**Related Name**

streams.replication.manager.log.format

**Default Value**

%dISO8601 %p %c: %m%n%rEx

**API Name**

streams.replication.manager.log.format

**Required**

false

### SRM Service Port

**Description**

SRM Service port.

**Related Name**

streams.replication.manager.service.port

**Default Value**

6670

**API Name**

streams.replication.manager.service.port

**Required**

true

### SRM Service Rpc Port

**Description**

SRM Service rpc port.

**Related Name**

streams.replication.manager.service.rpcPort

**Default Value**

6670

**API Name**

streams.replication.manager.service.rpcPort

**Required**

true

### SRM Service Https Port

**Description**

SRM Service https port.

**Related Name**

streams.replication.manager.service.ssl.port

**Default Value**

6671

**API Name**`streams.replication.manager.service.ssl.port`**Required**`true`**Streams Replication Manager Service Target Cluster****Description**

Target cluster from which the SRM Service collects data.

**Related Name**`streams.replication.manager.service.target.cluster`**Default Value****API Name**`streams.replication.manager.service.target.cluster`**Required**`true`**SSL Keystore Type****Description**

The keystore type. Required if SSL is enabled for the SRM Service. For example, PKCS12 or JKS.

**Related Name**`streams.replication.manager.ssl.keyStoreType`**Default Value**`JKS`**API Name**`streams.replication.manager.ssl.keyStoreType`**Required**`false`**SSL TrustStore Type****Description**

The truststore type. Required if SSL is enabled for the SRM Service. For example, PKCS12 or JKS.

**Related Name**`streams.replication.manager.ssl.trustStoreType`**Default Value**`JKS`**API Name**`streams.replication.manager.ssl.trustStoreType`**Required**`false`**SSL ValidateCerts****Description**

Whether or not to validate TLS certificates before starting. If enabled, SRM will not start with expired or otherwise invalid certificates.

**Related Name**

streams.replication.manager.ssl.validateCerts

**Default Value**

false

**API Name**

streams.replication.manager.ssl.validateCerts

**Required**

false

**SSL ValidatePeers****Description**

Whether or not to validate TLS peer certificates.

**Related Name**

streams.replication.manager.ssl.validatePeers

**Default Value**

false

**API Name**

streams.replication.manager.ssl.validatePeers

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

#### Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.soft\_limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_soft\_limit

#### Required

true

### Security

#### SRM Service TLS/SSL Client Trust Store File

##### Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that SRM Service might connect to. This is used when SRM Service is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

##### Related Name

ssl.truststore.location

##### Default Value

##### API Name

ssl\_client\_truststore\_location

##### Required

false

#### SRM Service TLS/SSL Client Trust Store Password

##### Description

The password for the SRM Service TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

##### Related Name

ssl.truststore.password

##### Default Value

##### API Name

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for SRM Service****Description**

Encrypt communication between clients and SRM Service using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**SRM Service TLS/SSL Server JKS Keystore Key Password****Description**

The password that protects the private key contained in the JKS keystore used when SRM Service is acting as a TLS/SSL server.

**Related Name**

ssl.key.password

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**SRM Service TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when SRM Service is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

ssl.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**SRM Service TLS/SSL Server JKS Keystore File Password****Description**

The password for the SRM Service JKS keystore file.

**Related Name**

ssl.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Parameter Validation: SRM Service Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Log Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: SRM Service XML Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service XML Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logback\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_srm-service.yaml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: SRM Service Advanced Configuration Snippet (Safety Valve) for srm.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Advanced Configuration Snippet (Safety Valve) for srm.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_srm.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: SRM Service TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: SRM Service TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: SRM Service TLS/SSL Server JKS Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: SRM Service TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: SRM Service TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Log Format****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Log Format parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.log.format

**Required**

true

**Suppress Parameter Validation: SRM Service Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.service.port

**Required**

true

**Suppress Parameter Validation: SRM Service Rpc Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Rpc Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.service.rpcport

**Required**

true

**Suppress Parameter Validation: SRM Service Https Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Https Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.service.ssl.port

**Required**

true

**Suppress Parameter Validation: Streams Replication Manager Service Target Cluster****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Service Target Cluster parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.service.target.cluster

**Required**

true

**Suppress Parameter Validation: SSL Keystore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.ssl.keystoretype

**Required**

true

### Suppress Parameter Validation: SSL TrustStore Type

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.ssl.truststoretype

**Required**

true

### Suppress Parameter Validation: SSL ValidateCerts

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.ssl.validatecerts

**Required**

true

### Suppress Parameter Validation: SSL ValidatePeers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidatePeers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams.replication.manager.ssl.validatepeers

**Required**

true

### Suppress Parameter Validation: SRM Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_streams\_replication\_manager\_service\_role\_env\_safety\_valve

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_service\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_service\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_service\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_service\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_service\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_service\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_streams\_replication\_manager\_streams\_replication\_manager\_service\_unexpected\_exits

**Required**

true

## Tez Properties in Cloudera Runtime 7.1

Role groups:

### Gateway

#### Advanced

#### Deploy Directory

**Description**

The directory where the client configs will be deployed

**Related Name****Default Value**

/etc/tez

**API Name**

client\_config\_root\_dir

**Required**

true

#### Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml

**Description**

For advanced use only, a string to be inserted into the client configuration for tez-conf/tez-site.xml.

**Related Name****Default Value****API Name**

tez-conf/tez-site.xml\_client\_config\_safety\_valve

**Required**

false

### Monitoring

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Other

#### Alternatives Priority

**Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

**Related Name****Default Value**

50

**API Name**

client\_config\_priority

**Required**

true

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Parameter Validation: Deploy Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Parameter Validation: Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_tez-conf/tez-site.xml\_client\_config\_safety\_valve

**Required**

true

**Service-Wide****Advanced****System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

hadoop

**API Name**

process\_groupname

**Required**

true

**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**

tez

**API Name**

process\_username

**Required**

true

### Tez Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

TEZ\_service\_env\_safety\_valve

**Required**

false

### Monitoring

#### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Service Triggers

**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

`service_triggers`

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

`smon_derived_configs_safety_valve`

**Required**

false

**Other****Maximum Heartbeat Interval****Description**

The maximum heartbeat interval between the Application Master and RM in milliseconds.

**Related Name**

`tez.am.am-rm.heartbeat.interval-ms.max`

**Default Value**

250 millisecond(s)

**API Name**

`tez.am.am-rm.heartbeat.interval-ms.max`

**Required**

true

### Maximum Timeout to Hold Idle Containers

**Description**

The maximum amount of time to hold on to a container if no task can be assigned to it immediately. Only active when reuse is enabled.

**Related Name**

tez.am.container.idle.release-timeout-max.millis

**Default Value**

20 second(s)

**API Name**

tez.am.container.idle.release-timeout-max.millis

**Required**

true

### Minimum Timeout to Hold Idle Containers

**Description**

The minimum amount of time to hold on to a container that is idle. Only active when reuse is enabled.

**Related Name**

tez.am.container.idle.release-timeout-min.millis

**Default Value**

10 second(s)

**API Name**

tez.am.container.idle.release-timeout-min.millis

**Required**

true

### Enable Container Reuse

**Description**

Configuration to specify whether container should be reused.

**Related Name**

tez.am.container.reuse.enabled

**Default Value**

true

**API Name**

tez.am.container.reuse.enabled

**Required**

true

### Timeout Before Container Reuse

**Description**

The amount of time to wait before assigning a container to the next level of locality. NODE > RACK > NON\_LOCAL

**Related Name**

tez.am.container.reuse.locality.delay-allocation-millis

**Default Value**

250 millisecond(s)

**API Name**

tez.am.container.reuse.locality.delay-allocation-millis

**Required**

true

**Enable Container Reuse for Non-Local Tasks****Description**

Whether to reuse containers for non-local tasks. Active only if reuse is enabled.

**Related Name**

tez.am.container.reuse.non-local-fallback.enabled

**Default Value**

false

**API Name**

tez.am.container.reuse.non-local-fallback.enabled

**Required**

true

**Enable Container Reuse for Rack Local Tasks****Description**

Whether to reuse containers for rack local tasks. Active only if reuse is enabled.

**Related Name**

tez.am.container.reuse.rack-fallback.enabled

**Default Value**

true

**API Name**

tez.am.container.reuse.rack-fallback.enabled

**Required**

true

**Tez Application Master Default Command Line Options****Description**

Cluster default Java options for the Tez Application Master process. These will be prepended to the properties specified via tez.am.launch.cmd-opts.

**Related Name**

tez.am.launch.cluster-default.cmd-opts

**Default Value**

-server -Djava.net.preferIPv4Stack=true

**API Name**

tez.am.launch.cluster-default.cmd-opts

**Required**

true

**Tez Application Master Command Line Options****Description**

Java options for the Tez Application Master process. The Xmx value is derived based on `tez.am.resource.memory.mb` and is 80% of the value by default. Used only if the value is not specified explicitly by the DAG definition.

**Related Name**

`tez.am.launch.cmd-opts`

**Default Value**

`-XX:+PrintGCDetails -verbose:gc -XX:+UseNUMA -XX:+UseG1GC -XX:+ResizeTLAB -XX:+HeapDumpOnOutOfMemoryError -XX:HeapDumpPath=/tmp`

**API Name**

`tez.am.launch.cmd-opts`

**Required**

`true`

### Tez Application Master Environment Settings

**Description**

Additional execution environment entries for tez. This is not an additive property. You must preserve the original value if you want to have access to native libraries. Used only if the value is not specified explicitly by the DAG definition.

**Related Name**

`tez.am.launch.env`

**Default Value**

`LD_LIBRARY_PATH=/opt/cloudera/parcels/CDH/lib/hadoop/lib/native`

**API Name**

`tez.am.launch.env`

**Required**

`true`

### Log level for Application Masters

**Description**

Root Logging level passed to the Tez Application Master.

**Related Name**

`tez.am.log.level`

**Default Value**

`INFO`

**API Name**

`tez.am.log.level`

**Required**

`true`

### Number of Recovery Runs

**Description**

Specifies the total number of time the Application Master will run in case recovery is triggered.

**Related Name**

`tez.am.max.app.attempts`

**Default Value**

2

**API Name**

tez.am.max.app.attempts

**Required**

true

**Maximum Task Attempts****Description**

The maximum number of allowed task attempt failures on a node before it gets marked as blacklisted.

**Related Name**

tez.am.maxtaskfailures.per.node

**Default Value**

10

**API Name**

tez.am.maxtaskfailures.per.node

**Required**

true

**Tez Application Master Memory****Description**

The amount of memory to be used by the Application Master. Used only if the value is not specified explicitly by the DAG definition.

**Related Name**

tez.am.resource.memory.mb

**Default Value**

2 GiB

**API Name**

tez.am.resource.memory.mb

**Required**

true

**History URL Template****Description**

Template to generate the History URL for a particular Tez Application. Template replaces `__APPLICATION_ID__` with the actual applicationId and `__HISTORY_URL_BASE__` with the value from the `tez.tez-ui.history-url.base` config property

**Related Name**

tez.am.tez-ui.history-url.template

**Default Value**

`__HISTORY_URL_BASE__?viewPath=%2F%23%2Ftez-app%2F__APPLICATION_ID__`

**API Name**

tez.am.tez-ui.history-url.template

**Required**

true

### Tez Application Master View ACLs

**Description**

Application Master view ACLs. This allows the specified users/groups to view the status of the Application Master and all DAGs that run within this Application Master. Value format: Comma separated list of users, followed by whitespace, followed by a comma separated list of groups.

**Related Name**

tez.am.view-acls

**Default Value**

\*

**API Name**

tez.am.view-acls

**Required**

false

### Tez Additional Classpath

**Description**

Specify additional classpath information to be used for Tez AM and all containers.

**Related Name**

tez.cluster.additional.classpath.prefix

**Default Value****API Name**

tez.cluster.additional.classpath.prefix

**Required**

false

### Maximum Number of Counters

**Description**

The number of allowed counters for the executing DAG.

**Related Name**

tez.counters.max

**Default Value**

10000

**API Name**

tez.counters.max

**Required**

true

### Maximum Counter Groups

**Description**

The number of allowed counter groups for the executing DAG.

**Related Name**

tez.counters.max.groups

**Default Value**

3000

**API Name**

tez.counters.max.groups

**Required**

true

**Whether to generate debug artifacts****Description**

Generate debug artifacts such as a text representation of the submitted DAG plan.

**Related Name**

tez.generate.debug.artifacts

**Default Value**

false

**API Name**

tez.generate.debug.artifacts

**Required**

true

**Grouped Split Maximum Size****Description**

Upper bound on the size (in bytes) of a grouped split, to avoid generating excessively large split.

**Related Name**

tez.grouping.max-size

**Default Value**

1 GiB

**API Name**

tez.grouping.max-size

**Required**

true

**Grouped Split Minimum Size****Description**

Lower bound on the size (in bytes) of a grouped split, to avoid generating too many splits.

**Related Name**

tez.grouping.min-size

**Default Value**

16 MiB

**API Name**

tez.grouping.min-size

**Required**

true

**Queue Capacity Multiplier****Description**

The multiplier for available queue capacity when determining number of tasks for a Vertex. 1.7 with 100% queue available implies generating a number of tasks roughly equal to 170% of the available containers on the queue.

**Related Name**`tez.grouping.split-waves`**Default Value**`1.7`**API Name**`tez.grouping.split-waves`**Required**`true`**Tez history events directory****Description**

Directory where proto logger writes the history events, should generally be sys.db database directory.

**Related Name**`tez.history.logging.proto-base-dir`**Default Value**`/warehouse/tablespace/managed/hive/sys.db`**API Name**`tez.history.logging.proto-base-dir`**Required**`true`**DAGs per Group****Description**

DAGs per group.

**Related Name**`tez.history.logging.timeline-cache-plugin.old-num-dags-per-group`**Default Value**`5`**API Name**`tez.history.logging.timeline-cache-plugin.old-num-dags-per-group`**Required**`true`**Enable Intermediate Data Compression****Description**

Whether intermediate data should be compressed or not.

**Related Name**`tez.runtime.compress`**Default Value**`true`**API Name**`tez.runtime.compress`**Required**

true

### Codec for Compressing Intermediate Data

**Description**

The codec to be used if compressing intermediate data. Only applicable if `tez.runtime.compress` is enabled.

**Related Name**

`tez.runtime.compress.codec`

**Default Value**

`org.apache.hadoop.io.compress.SnappyCodec`

**API Name**

`tez.runtime.compress.codec`

**Required**

true

### Publish Configuration Information

**Description**

Whether to publish configuration information to History logger.

**Related Name**

`tez.runtime.convert.user-payload.to.history-text`

**Default Value**

false

**API Name**

`tez.runtime.convert.user-payload.to.history-text`

**Required**

true

### Sort Buffer Size

**Description**

The size of the sort buffer when output needs to be sorted.

**Related Name**

`tez.runtime.io.sort.mb`

**Default Value**

272 MiB

**API Name**

`tez.runtime.io.sort.mb`

**Required**

true

### Enable Accessing the Local Files Directly

**Description**

If the shuffle input is on the local host bypass the http fetch and access the files directly.

**Related Name**

`tez.runtime.optimize.local.fetch`

**Default Value**

true

**API Name**

tez.runtime.optimize.local.fetch

**Required**

true

**Pipeline Sorter Sort Threads****Description**

Tez runtime pipelined sorter sort threads.

**Related Name**

tez.runtime.pipelined.sorter.sort.threads

**Default Value**

2

**API Name**

tez.runtime.pipelined.sorter.sort.threads

**Required**

true

**Fraction of Memory to Retain Shuffled Data****Description**

Fraction (0-1) of the available memory which can be used to retain shuffled data.

**Related Name**

tez.runtime.shuffle.fetch.buffer.percent

**Default Value**

0.6

**API Name**

tez.runtime.shuffle.fetch.buffer.percent

**Required**

true

**Keep the Shuffle Connection Alive****Description**

This property determines if the shuffle connection should be kept alive. If not, then the connection needs to be reestablished.

**Related Name**

tez.runtime.shuffle.keep-alive.enabled

**Default Value**

true

**API Name**

tez.runtime.shuffle.keep-alive.enabled

**Required**

true

**Maximum Percent of Shuffle Segment****Description**

This property determines the maximum size of a shuffle segment which can be fetched to memory. Fraction (0-1) of shuffle memory (after applying `tez.runtime.shuffle.fetch.buffer.percent`).

**Related Name**

`tez.runtime.shuffle.memory.limit.percent`

**Default Value**

0.25

**API Name**

`tez.runtime.shuffle.memory.limit.percent`

**Required**

true

**Buffer Size for Unordered Output****Description**

The size of the buffer when output does not require to be sorted.

**Related Name**

`tez.runtime.unordered.output.buffer.size-mb`

**Default Value**

100 MiB

**API Name**

`tez.runtime.unordered.output.buffer.size-mb`

**Required**

true

**Timeout for Application Master for a Task****Description**

Time (in seconds) for which the Tez Application Master should wait for a DAG to be submitted before shutting down.

**Related Name**

`tez.session.am.dag.submit.timeout.secs`

**Default Value**

5 minute(s)

**API Name**

`tez.session.am.dag.submit.timeout.secs`

**Required**

true

**Timeout for Application Master to Come up****Description**

Time (in seconds) to wait for Application Master to come up when trying to submit a DAG from the client.

**Related Name**

`tez.session.client.timeout.secs`

**Default Value**

-1 second(s)

**API Name**

tez.session.client.timeout.secs

**Required**

true

**ScatterGather Connection Maximum Fraction of Tasks****Description**

In case of a ScatterGather connection, once this fraction of source tasks have completed, all tasks on the current vertex can be scheduled. Number of tasks ready for scheduling on the current vertex scales linearly between min-fraction and max-fraction.

**Related Name**

tez.shuffle-vertex-manager.max-src-fraction

**Default Value**

0.4

**API Name**

tez.shuffle-vertex-manager.max-src-fraction

**Required**

true

**ScatterGather Connection Minimum Fraction of Tasks****Description**

In case of a ScatterGather connection, the fraction of source tasks which should complete before tasks for the current vertex are schedule.

**Related Name**

tez.shuffle-vertex-manager.min-src-fraction

**Default Value**

0.2

**API Name**

tez.shuffle-vertex-manager.min-src-fraction

**Required**

true

**TEZ Staging directory****Description**

The staging dir used while submitting DAGs.

**Related Name**

tez.staging-dir

**Default Value**

/tmp/\$user.name/staging

**API Name**

tez.staging-dir

**Required**

true

**Heartbeat Interval****Description**

Time interval at which task counters are sent to the Application Master.

**Related Name**

tez.task.am.heartbeat.counter.interval-ms.max

**Default Value**

4 second(s)

**API Name**

tez.task.am.heartbeat.counter.interval-ms.max

**Required**

true

### Generate Counters on a Per-Edge Basis

**Description**

Whether to generate counters on a per-edge basis for a Tez DAG. Helpful for in-depth analysis.

**Related Name**

tez.task.generate.counters.per.io

**Default Value**

true

**API Name**

tez.task.generate.counters.per.io

**Required**

true

### Maximum Time Between Tasks

**Description**

The maximum amount of time, in seconds, to wait before a task asks an Application Master for another task.

**Related Name**

tez.task.get-task.sleep.interval-ms.max

**Default Value**

200 millisecond(s)

**API Name**

tez.task.get-task.sleep.interval-ms.max

**Required**

true

### Tez Task Default Command Line Options

**Description**

Cluster default Java options for tasks. These will be prepended to the properties specified via tez.task.launch.cmd-opts.

**Related Name**

tez.task.launch.cluster-default.cmd-opts

**Default Value**

-server -Djava.net.preferIPv4Stack=true

**API Name**

tez.task.launch.cluster-default.cmd-opts

**Required**

true

**Tez Task Command Line Options****Description**

Java options for tasks. The Xmx value is derived based on `tez.task.resource.memory.mb` and is 80% of this value by default. Used only if the value is not specified explicitly by the DAG definition.

**Related Name**`tez.task.launch.cmd-opts`**Default Value**`-XX:+PrintGCDetails -verbose:gc -XX:+UseNUMA -XX:+UseG1GC -XX:+ResizeTLAB -XX:+HeapDumpOnOutOfMemoryError -XX:HeapDumpPath=/tmp`**API Name**`tez.task.launch.cmd-opts`**Required**

true

**Tez Task Environment Settings****Description**

Additional execution environment entries for tez. This is not an additive property. You must preserve the original value if you want to have access to native libraries. Used only if the value is not specified explicitly by the DAG definition.

**Related Name**`tez.task.launch.env`**Default Value**`LD_LIBRARY_PATH=/opt/cloudera/parcels/CDH/lib/hadoop/lib/native`**API Name**`tez.task.launch.env`**Required**

true

**Maximum Number of Events in a Heartbeat****Description**

Maximum number of events to fetch from the Application Master by the tasks in a single heartbeat.

**Related Name**`tez.task.max-events-per-heartbeat`**Default Value**

500

**API Name**`tez.task.max-events-per-heartbeat`**Required**

true

**Tez Task Memory****Description**

The amount of memory to be used by launched tasks. Used only if the value is not specified explicitly by the DAG definition.

**Related Name**

tez.task.resource.memory.mb

**Default Value**

1536 MiB

**API Name**

tez.task.resource.memory.mb

**Required**

true

**Tez UI URL Base****Description**

The base of the Tez UI URL.

**Related Name**

tez.tez-ui.history-url.base

**Default Value****API Name**

tez.tez-ui.history-url.base

**Required**

false

**Use Hadoop Libs****Description**

This being true implies that the deployment is relying on hadoop jars being available on the cluster on all nodes.

**Related Name**

tez.use.cluster.hadoop-libs

**Default Value**

false

**API Name**

tez.use.cluster.hadoop-libs

**Required**

true

**Enable Yarn Timeline-Service****Description**

Timeline service version we're currently using.

**Related Name**

yarn.timeline-service.enabled

**Default Value**

false

**API Name**

yarn.timeline-service.enabled

**Required**

true

**YARN Service****Description**

Name of the YARN service that this Tez service instance depends on

**Related Name****Default Value****API Name**

yarn\_service

**Required**

true

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Configuration Validator: Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml****Description**

Whether to suppress configuration warnings produced by the Tez Client Advanced Configuration Snippet (Safety Valve) for tez-conf/tez-site.xml configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_tez-conf/tez-site.xml\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Tez Application Master Default Command Line Options

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master Default Command Line Options parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.am.launch.cluster-default.cmd-opts

**Required**

true

### Suppress Parameter Validation: Tez Application Master Command Line Options

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master Command Line Options parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.am.launch.cmd-opts

**Required**

true

**Suppress Parameter Validation: Tez Application Master Environment Settings****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master Environment Settings parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.am.launch.env

**Required**

true

**Suppress Parameter Validation: Number of Recovery Runs****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Recovery Runs parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.am.max.app.attempts

**Required**

true

**Suppress Parameter Validation: History URL Template****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the History URL Template parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.am.tez-ui.history-url.template

**Required**

true

**Suppress Parameter Validation: Tez Application Master View ACLs****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Application Master View ACLs parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.am.view-acls

**Required**

true

**Suppress Parameter Validation: Tez Additional Classpath****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Additional Classpath parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.cluster.additional.classpath.prefix

**Required**

true

**Suppress Parameter Validation: Tez history events directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez history events directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.history.logging.proto-base-dir

**Required**

true

**Suppress Parameter Validation: DAGs per Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the DAGs per Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.history.logging.timeline-cache-plugin.old-num-dags-per-group

**Required**

true

**Suppress Parameter Validation: Codec for Compressing Intermediate Data****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Codec for Compressing Intermediate Data parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.runtime.compress.codec

**Required**

true

**Suppress Parameter Validation: TEZ Staging directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TEZ Staging directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.staging-dir

**Required**

true

**Suppress Parameter Validation: Tez Task Default Command Line Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Task Default Command Line Options parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.task.launch.cluster-default.cmd-opts

**Required**

true

**Suppress Parameter Validation: Tez Task Command Line Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Task Command Line Options parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.task.launch.cmd-opts

**Required**

true

### Suppress Parameter Validation: Tez Task Environment Settings

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Task Environment Settings parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.task.launch.env

**Required**

true

### Suppress Parameter Validation: Tez UI URL Base

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez UI URL Base parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez.tez-ui.history-url.base

**Required**

true

### Suppress Parameter Validation: Tez Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tez Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_tez\_service\_env\_safety\_valve

**Required**

true

## YARN Properties in Cloudera Runtime 7.1

Role groups:

### Gateway

## Advanced

### Deploy Directory

**Description**

The directory where the client configs will be deployed

**Related Name****Default Value**

/etc/hadoop

**API Name**

client\_config\_root\_dir

**Required**

true

### Gateway Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

**Description**

For advanced use only, a string to be inserted into the client configuration for mapred-site.xml.

**Related Name****Default Value****API Name**

mapreduce\_client\_config\_safety\_valve

**Required**

false

### Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into the client configuration for hadoop-env.sh

**Related Name****Default Value****API Name**

mapreduce\_client\_env\_safety\_valve

**Required**

false

### Client Java Configuration Options

**Description**

These are Java command-line arguments. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

**Related Name****Default Value**

-Djava.net.preferIPv4Stack=true

**API Name**

mapreduce\_client\_java\_opts

**Required**

false

### YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

**Description**

For advanced use only, a string to be inserted into the client configuration for yarn-site.xml.

**Related Name****Default Value****API Name**

yarn\_client\_config\_safety\_valve

**Required**

false

### Compression

#### Compression Level of Codecs

**Description**

Compression level for the codec used to compress MapReduce outputs. Default compression is a balance between speed and compression ratio.

**Related Name**

zlib.compress.level

**Default Value**

DEFAULT\_COMPRESSION

**API Name**

zlib\_compress\_level

**Required**

false

### Logs

#### Gateway Logging Threshold

**Description**

The minimum log level for Gateway logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Monitoring****Enable Log Event Capture****Description**

When set, each role identifies important log events and forwards them to Cloudera Manager.

**Related Name****Default Value**

true

**API Name**

catch\_events

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Other****Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

**Related Name****Default Value**

92

**API Name**

client\_config\_priority

**Required**

true

**Client Failover Sleep Base Time****Description**

Base sleep time between failover attempts. Used only if RM HA is enabled.

**Related Name**

yarn.client.failover-sleep-base-ms

**Default Value**

100 millisecond(s)

**API Name**

client\_failover\_sleep\_base

**Required**

false

### Client Failover Sleep Max Time

**Description**

Maximum sleep time between failover attempts. Used only if RM HA is enabled.

**Related Name**

yarn.client.failover-sleep-max-ms

**Default Value**

2 second(s)

**API Name**

client\_failover\_sleep\_max

**Required**

false

### Running Job History Location

**Description**

Location to store the job history files of running jobs. This is a path on the host where the JobTracker is running.

**Related Name**

hadoop.job.history.location

**Default Value**

/var/log/hadoop-mapreduce/history

**API Name**

hadoop\_job\_history\_dir

**Required**

false

### SequenceFile I/O Buffer Size

**Description**

Size of buffer for read and write operations of SequenceFiles.

**Related Name**

io.file.buffer.size

**Default Value**

64 KiB

**API Name**

io\_file\_buffer\_size

**Required**

false

**I/O Sort Factor****Description**

The number of streams to merge at the same time while sorting files. That is, the number of sort heads to use during the merge sort on the reducer side. This determines the number of open file handles. Merging more files in parallel reduces merge sort iterations and improves run time by eliminating disk I/O. Note that merging more files in parallel uses more memory. If 'io.sort.factor' is set too high or the maximum JVM heap is set too low, excessive garbage collection will occur. The Hadoop default is 10, but Cloudera recommends a higher value. Will be part of generated client configuration.

**Related Name**

mapreduce.task.io.sort.factor

**Default Value**

64

**API Name**

io\_sort\_factor

**Required**

false

**I/O Sort Memory Buffer (MiB)****Description**

The total amount of memory buffer, in megabytes, to use while sorting files. Note that this memory comes out of the user JVM heap size (meaning total user JVM heap - this amount of memory = total user usable heap space). Note that Cloudera's default differs from Hadoop's default; Cloudera uses a bigger buffer by default because modern machines often have more RAM. The smallest value across all TaskTrackers will be part of generated client configuration.

**Related Name**

mapreduce.task.io.sort.mb

**Default Value**

256 MiB

**API Name**

io\_sort\_mb

**Required**

false

**I/O Sort Spill Percent****Description**

The soft limit in either the buffer or record collection buffers. When this limit is reached, a thread will begin to spill the contents to disk in the background. Note that this does not imply any chunking of data to the spill. A value less than 0.5 is not recommended. The syntax is in decimal units; the default is 80% and is formatted 0.8. Will be part of generated client configuration.

**Related Name**

mapreduce.map.sort.spill.percent

**Default Value**

0.8

**API Name**`io_sort_spill_percent`**Required**`false`**Use Compression on Map Outputs****Description**

If enabled, uses compression on the map outputs before they are sent across the network. Will be part of generated client configuration.

**Related Name**`mapreduce.map.output.compress`**Default Value**`true`**API Name**`mapred_compress_map_output`**Required**`false`**Compression Codec of MapReduce Map Output****Description**

For MapReduce map outputs that are compressed, specify the compression codec to use. Will be part of generated client configuration.

**Related Name**`mapreduce.map.output.compress.codec`**Default Value**`org.apache.hadoop.io.compress.SnappyCodec`**API Name**`mapred_map_output_compression_codec`**Required**`false`**Map Tasks Speculative Execution****Description**

If enabled, multiple instances of some map tasks may be executed in parallel.

**Related Name**`mapreduce.map.speculative`**Default Value**`false`**API Name**`mapred_map_tasks_speculative_execution`**Required**`false`**Compress MapReduce Job Output****Description**

Compress the output of MapReduce jobs. Will be part of generated client configuration.

**Related Name**

mapreduce.output.fileoutputformat.compress

**Default Value**

false

**API Name**

mapred\_output\_compress

**Required**

false

### Compression Codec of MapReduce Job Output

**Description**

For MapReduce job outputs that are compressed, specify the compression codec to use. Will be part of generated client configuration.

**Related Name**

mapreduce.output.fileoutputformat.compress.codec

**Default Value**

org.apache.hadoop.io.compress.DefaultCodec

**API Name**

mapred\_output\_compression\_codec

**Required**

false

### Compression Type of MapReduce Job Output

**Description**

For MapReduce job outputs that are compressed as SequenceFiles, you can select one of these compression type options: NONE, RECORD or BLOCK. Cloudera recommends BLOCK. Will be part of generated client configuration.

**Related Name**

mapreduce.output.fileoutputformat.compress.type

**Default Value**

BLOCK

**API Name**

mapred\_output\_compression\_type

**Required**

false

### Default Number of Parallel Transfers During Shuffle

**Description**

The default number of parallel transfers run by reduce during the copy (shuffle) phase. This number is calculated by the following formula:  $\min(\text{number\_of\_nodes}, n * \min(\text{number\_of\_cores\_per\_node}, \text{number\_of\_spindles\_per\_node}))$  where the  $n$  represents how many streams you want to run per core/spindle. A value of 10 for  $n$  is appropriate in most cases. Will be part of generated client configuration.

**Related Name**

mapreduce.reduce.shuffle.parallelcopies

**Default Value**

10

**API Name**

mapred\_reduce\_parallel\_copies

**Required**

false

**Number of Map Tasks to Complete Before Reduce Tasks****Description**

Fraction of the number of map tasks in the job which should be completed before reduce tasks are scheduled for the job.

**Related Name**

mapreduce.job.reduce.slowstart.completedmaps

**Default Value**

0.8

**API Name**

mapred\_reduce\_slowstart\_completed\_maps

**Required**

false

**Default Number of Reduce Tasks per Job****Description**

The default number of reduce tasks per job. Will be part of generated client configuration.

**Related Name**

mapreduce.job.reduces

**Default Value**

1

**API Name**

mapred\_reduce\_tasks

**Required**

false

**Reduce Tasks Speculative Execution****Description**

If enabled, multiple instances of some reduce tasks may be executed in parallel.

**Related Name**

mapreduce.reduce.speculative

**Default Value**

false

**API Name**

mapred\_reduce\_tasks\_speculative\_execution

**Required**

false

### Mapreduce Submit Replication

**Description**

The replication level for submitted job files.

**Related Name**

mapreduce.client.submit.file.replication

**Default Value**

10

**API Name**

mapred\_submit\_replication

**Required**

false

### Mapreduce Task Timeout

**Description**

The number of milliseconds before a task will be terminated if it neither reads an input, writes an output, nor updates its status string.

**Related Name**

mapreduce.task.timeout

**Default Value**

10 minute(s)

**API Name**

mapred\_task\_timeout

**Required**

false

### MR Application Environment

**Description**

Additional execution environment entries for map and reduce task processes.

**Related Name**

mapreduce.admin.user.env

**Default Value**

LD\_LIBRARY\_PATH=\$HADOOP\_COMMON\_HOME/lib/native:\$JAVA\_LIBRARY\_PATH

**API Name**

mapreduce\_admin\_user\_env

**Required**

false

### Maximum Number of Attempts for MapReduce Jobs

**Description**

The maximum number of application attempts for MapReduce jobs. The value of this parameter overrides ApplicationMaster Maximum Attempts for MapReduce jobs.

**Related Name**

mapreduce.am.max-attempts

**Default Value**

2

**API Name**

mapreduce\_am\_max\_attempts

**Required**

false

**MR Application Classpath****Description**

Classpaths to include for MapReduce applications. During evaluation, the string '{version}' in the value of this parameter will be replaced by the actual MapReduce version.

**Related Name**

mapreduce.application.classpath

**Default Value**

\$SHADOOP\_CLIENT\_CONF\_DIR \$PWD/mr-framework/\* \$MR2\_CLASSPATH

**API Name**

mapreduce\_application\_classpath

**Required**

false

**MR Application Framework Path****Description**

Path for MapReduce application framework. During evaluation, the string '{version}' in the value of this parameter will be replaced by the actual MapReduce version.

**Related Name**

mapreduce.application.framework.path

**Default Value**

/user/yarn/mapreduce/mr-framework/version-mr-framework.tar.gz#mr-framework

**API Name**

mapreduce\_application\_framework\_path

**Required**

false

**Application Framework****Description**

The application framework to run jobs with. If not set, jobs will be run with the local job runner.

**Related Name**

mapreduce.framework.name

**Default Value**

yarn

**API Name**

mapreduce\_framework\_name

**Required**

false

**ACL For Modifying A Job****Description**

Specifies a list of users and/or groups that are allowed to modify job operations. For specifying a list of users and groups the format to use is "user1,user2 group1,group". If set to '\*', it allows all users/groups to modify this job. If set to ' '(i.e. space), it allows none. Irrespective of this ACL configuration, (a) job-owner, (b) the user who started the cluster, (c) members of an admin configured supergroup configured via `mapreduce.cluster.permissions.supergroup` and (d) queue administrators of the queue to which this job was submitted to configured via `acl-administer-jobs` for the specific queue in `mapred-queues.xml` can do all the modification operations on a job. Ignored unless `mapreduce.clouster.acls.enabled` is true.

**Related Name**

`mapreduce.job.acl-modify-job`

**Default Value****API Name**

`mapreduce_job_acl_modify_job`

**Required**

false

**ACL For Viewing A Job****Description**

Specifies a list of users and/or groups that are allowed to view private job details. For specifying a list of users and groups the format to use is "user1,user2 group1,group". If set to '\*', it allows all users/groups to modify this job. If set to ' '(i.e. space), it allows none. Irrespective of this ACL configuration, (a) job-owner, (b) the user who started the cluster, (c) members of an admin configured supergroup configured via `mapreduce.cluster.permissions.supergroup` and (d) queue administrators of the queue to which this job was submitted to configured via `acl-administer-jobs` for the specific queue in `mapred-queues.xml` can do all the view operations on a job. Ignored unless `mapreduce.cluster.acls.enabled` is true.

**Related Name**

`mapreduce.job.acl-view-job`

**Default Value****API Name**

`mapreduce_job_acl_view_job`

**Required**

false

**Redacted MapReduce Job Properties****Description**

A comma-separated list of job properties to redact in MapReduce.

**Related Name**

`mapreduce.job.redacted-properties`

**Default Value**

`fs.s3a.access.key fs.s3a.secret.key fs.adl.oauth2.credential dfs.adls.oauth2.credential fs.azure.account.oauth2.client.secret`

**API Name**

`mapreduce_job_redacted_properties`

**Required**

false

### JobTracker MetaInfo Maxsize

**Description**

The maximum permissible size of the split metainfo file. The JobTracker won't attempt to read split metainfo files bigger than the configured value. No limits if set to -1.

**Related Name**

mapreduce.job.split.metainfo.maxsize

**Default Value**

10000000

**API Name**

mapreduce\_jobtracker\_split\_metainfo\_maxsize

**Required**

false

### Map Task Java Opts Base

**Description**

Java opts for the map processes. The following symbol, if present, will be interpolated: @taskid@ is replaced by current TaskID. Any other occurrences of '@' will go unchanged. For example, to enable verbose gc logging to a file named for the taskid in /tmp pass a value of: "-verbose:gc -Xloggc:/tmp/@taskid@.gc". The configuration variable 'Map Task Memory' can be used to control the maximum memory of the map processes.

**Related Name**

mapreduce.map.java.opts

**Default Value**

-Djava.net.preferIPv4Stack=true

**API Name**

mapreduce\_map\_java\_opts

**Required**

false

### Reduce Task Java Opts Base

**Description**

Java opts for the reduce processes. The following symbol, if present, will be interpolated: @taskid@ is replaced by current TaskID. Any other occurrences of '@' will go unchanged. For example, to enable verbose gc logging to a file named for the taskid in /tmp pass a value of: "-verbose:gc -Xloggc:/tmp/@taskid@.gc". The configuration variable 'Reduce Task Memory' can be used to control the maximum memory of the reduce processes.

**Related Name**

mapreduce.reduce.java.opts

**Default Value**

-Djava.net.preferIPv4Stack=true

**API Name**

mapreduce\_reduce\_java\_opts

**Required**

false

### ApplicationMaster Environment

**Description**

Environment variables for the MapReduce ApplicationMaster. These settings can be overridden in the ApplicationMaster User Environment (yarn.app.mapreduce.am.env).

**Related Name**

yarn.app.mapreduce.am.admin.user.env

**Default Value**

LD\_LIBRARY\_PATH=\$HADOOP\_COMMON\_HOME/lib/native:\$JAVA\_LIBRARY\_PATH

**API Name**

yarn\_app\_mapreduce\_am\_admin\_user\_env

**Required**

false

### ApplicationMaster Java Opts Base

**Description**

Java command line arguments passed to the MapReduce ApplicationMaster.

**Related Name**

yarn.app.mapreduce.am.command-opts

**Default Value**

-Djava.net.preferIPv4Stack=true

**API Name**

yarn\_app\_mapreduce\_am\_command\_opts

**Required**

false

### Performance

#### JHist File Format

**Description**

File format the AM will use when generating the .jhist file. Valid values are "json" for text output and "binary" for faster parsing.

**Related Name**

mapreduce.jobhistory.jhist.format

**Default Value**

binary

**API Name**

mapred\_jobhistory\_jhist\_format

**Required**

false

#### Enable Optimized Map-side Output Collector

**Description**

Whether map tasks should attempt to use the optimized native implementation of the map-side output collector. This can improve performance of many jobs that are shuffle-intensive. Experimental in CDH 5.2.

**Related Name****Default Value**

false

**API Name**

mapreduce\_enable\_native\_map\_output\_collector

**Required**

false

**Job Counter Groups Limit****Description**

Limit on the number of counter groups allowed per job.

**Related Name**

mapreduce.job.counters.groups.max

**Default Value**

50

**API Name**

mapreduce\_job\_counter\_groups\_limit

**Required**

false

**Job Counters Limit****Description**

Limit on the number of counters allowed per job.

**Related Name**

mapreduce.job.counters.max

**Default Value**

120

**API Name**

mapreduce\_job\_counters\_limit

**Required**

false

**Enable Ubertask Optimization****Description**

Whether to enable ubertask optimization, which runs "sufficiently small" jobs sequentially within a single JVM. "Small" is defined by the `mapreduce.job.ubertask.maxmaps`, `mapreduce.job.ubertask.maxreduces`, and `mapreduce.job.ubertask.maxbytes` settings.

**Related Name**

mapreduce.job.ubertask.enable

**Default Value**

false

**API Name**

mapreduce\_job\_ubertask\_enabled

**Required**

false

### Ubertask Maximum Job Size

**Description**

Threshold for number of input bytes, beyond which a job is considered too big for ubertask optimization. If no value is specified, dfs.block.size is used as a default.

**Related Name**

mapreduce.job.ubertask.maxbytes

**Default Value****API Name**

mapreduce\_job\_ubertask\_maxbytes

**Required**

false

### Ubertask Maximum Maps

**Description**

Threshold for number of maps, beyond which a job is considered too big for ubertask optimization.

**Related Name**

mapreduce.job.ubertask.maxmaps

**Default Value**

9

**API Name**

mapreduce\_job\_ubertask\_maxmaps

**Required**

false

### Ubertask Maximum Reduces

**Description**

Threshold for number of reduces, beyond which a job is considered too big for ubertask optimization. Note: As of CDH 5, MR2 does not support more than one reduce in an ubertask. (Zero is valid.)

**Related Name**

mapreduce.job.ubertask.maxreduces

**Default Value**

1

**API Name**

mapreduce\_job\_ubertask\_maxreduces

**Required**

false

## Resource Management

### Client Java Heap Size in Bytes

**Description**

Maximum size in bytes for the Java process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

825955249 B

**API Name**

mapreduce\_client\_java\_heapsize

**Required**

false

**Heap to Container Size Ratio****Description**

The ratio of heap size to container size for both map and reduce tasks. The heap should be smaller than the container size to allow for some overhead of the JVM.

**Related Name**

mapreduce.job.heap.memory-mb.ratio

**Default Value**

0.8

**API Name**

mapreduce\_job\_heap\_memory\_mb\_ratio

**Required**

false

**Map Task CPU Virtual Cores****Description**

The number of virtual CPU cores allocated for each map task of a job. This parameter has no effect prior to CDH 4.4.

**Related Name**

mapreduce.map.cpu.vcores

**Default Value**

1

**API Name**

mapreduce\_map\_cpu\_vcores

**Required**

false

**Map Task Maximum Heap Size****Description**

The maximum Java heap size, in bytes, of the map processes. This number will be formatted and concatenated with 'Map Task Java Opts Base' to pass to Hadoop.

**Related Name****Default Value**

0 B

**API Name**

mapreduce\_map\_java\_opts\_max\_heap

**Required**

false

### Map Task Memory

**Description**

The amount of physical memory, in MiB, allocated for each map task of a job. For versions before CDH 5.5, if not specified, by default it is set to 1024. For CDH 5.5 and higher, a value less than 128 is not supported but if it is specified as 0, the amount of physical memory to request is inferred from Map Task Maximum Heap Size and Heap to Container Size Ratio. If Map Task Maximum Heap Size is not specified, by default the amount of physical memory to request is set to 1024.

**Related Name**

mapreduce.map.memory.mb

**Default Value**

0 B

**API Name**

mapreduce\_map\_memory\_mb

**Required**

false

### Reduce Task CPU Virtual Cores

**Description**

The number of virtual CPU cores for each reduce task of a job.

**Related Name**

mapreduce.reduce.cpu.vcores

**Default Value**

1

**API Name**

mapreduce\_reduce\_cpu\_vcores

**Required**

false

### Reduce Task Maximum Heap Size

**Description**

The maximum Java heap size, in bytes, of the reduce processes. This number will be formatted and concatenated with 'Reduce Task Java Opts Base' to pass to Hadoop.

**Related Name****Default Value**

0 B

**API Name**

mapreduce\_reduce\_java\_opts\_max\_heap

**Required**

false

### Reduce Task Memory

**Description**

The amount of physical memory, in MiB, allocated for each reduce task of a job. For versions before CDH 5.5, if not specified, by default it is set to 1024. For CDH 5.5 and higher, a value less than 128 is not supported but if it is specified as 0, the amount of physical memory to request is inferred from Reduce Task Maximum Heap Size and Heap to Container Size Ratio. If Reduce Task

Maximum Heap Size is not specified, by default the amount of physical memory to request is set to 1024. This parameter has no effect prior to CDH 4.4.

**Related Name**

mapreduce.reduce.memory.mb

**Default Value**

0 B

**API Name**

mapreduce\_reduce\_memory\_mb

**Required**

false

### ApplicationMaster Java Maximum Heap Size

**Description**

The maximum heap size, in bytes, of the Java MapReduce ApplicationMaster. This number will be formatted and concatenated with 'ApplicationMaster Java Opts Base' to pass to Hadoop.

**Related Name****Default Value**

825955249 B

**API Name**

yarn\_app\_mapreduce\_am\_max\_heap

**Required**

false

### ApplicationMaster Virtual CPU Cores

**Description**

The virtual CPU cores requirement, for the ApplicationMaster. This parameter has no effect prior to CDH 4.4.

**Related Name**

yarn.app.mapreduce.am.resource.cpu-vcores

**Default Value**

1

**API Name**

yarn\_app\_mapreduce\_am\_resource\_cpu\_vcores

**Required**

false

### ApplicationMaster Memory

**Description**

The physical memory requirement, in MiB, for the ApplicationMaster.

**Related Name**

yarn.app.mapreduce.am.resource.mb

**Default Value**

1 GiB

**API Name**

yarn\_app\_mapreduce\_am\_resource\_mb

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Parameter Validation: Running Job History Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Running Job History Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_job\_history\_dir

**Required**

true

**Suppress Parameter Validation: I/O Sort Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the I/O Sort Factor parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_io\_sort\_factor

**Required**

true

**Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Compression Codec of MapReduce Map Output****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Compression Codec of MapReduce Map Output parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapred\_map\_output\_compression\_codec

**Required**

true

**Suppress Parameter Validation: Compression Codec of MapReduce Job Output****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Compression Codec of MapReduce Job Output parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapred\_output\_compression\_codec

**Required**

true

### Suppress Parameter Validation: MR Application Environment

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MR Application Environment parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_admin\_user\_env

**Required**

true

### Suppress Parameter Validation: Maximum Number of Attempts for MapReduce Jobs

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Number of Attempts for MapReduce Jobs parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_am\_max\_attempts

**Required**

true

### Suppress Parameter Validation: MR Application Classpath

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MR Application Classpath parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_application\_classpath

**Required**

true

### Suppress Parameter Validation: MR Application Framework Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MR Application Framework Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_application\_framework\_path

**Required**

true

**Suppress Parameter Validation: MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_client\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Client Java Configuration Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Client Java Configuration Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_client\_java\_opts

**Required**

true

**Suppress Parameter Validation: ACL For Modifying A Job****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ACL For Modifying A Job parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_job\_acl\_modify\_job

**Required**

true

**Suppress Parameter Validation: ACL For Viewing A Job****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ACL For Viewing A Job parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_job\_acl\_view\_job

**Required**

true

**Suppress Parameter Validation: Redacted MapReduce Job Properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Redacted MapReduce Job Properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_job\_redacted\_properties

**Required**

true

**Suppress Parameter Validation: Map Task Java Opts Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Map Task Java Opts Base parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_map\_java\_opts

**Required**

true

### Suppress Configuration Validator: Map Task Maximum Heap Size Validator

**Description**

Whether to suppress configuration warnings produced by the Map Task Maximum Heap Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_map\_java\_opts\_max\_heap\_mapreduce\_map\_memory\_mb\_validator

**Required**

true

### Suppress Parameter Validation: Reduce Task Java Opts Base

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reduce Task Java Opts Base parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_reduce\_java\_opts

**Required**

true

### Suppress Configuration Validator: Reduce Task Maximum Heap Size Validator

**Description**

Whether to suppress configuration warnings produced by the Reduce Task Maximum Heap Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_reduce\_java\_opts\_max\_heap\_mapreduce\_reduce\_memory\_mb\_validator

**Required**

true

### Suppress Configuration Validator: Job Submit Replication Validator

**Description**

Whether to suppress configuration warnings produced by the Job Submit Replication Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_replication\_validator

**Required**

true

**Suppress Parameter Validation: ApplicationMaster Environment****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ApplicationMaster Environment parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_app\_mapreduce\_am\_admin\_user\_env

**Required**

true

**Suppress Parameter Validation: ApplicationMaster Java Opts Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ApplicationMaster Java Opts Base parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_app\_mapreduce\_am\_command\_opts

**Required**

true

**Suppress Configuration Validator: ApplicationMaster Java Maximum Heap Size Validator****Description**

Whether to suppress configuration warnings produced by the ApplicationMaster Java Maximum Heap Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_app\_mapreduce\_am\_max\_heap\_yarn\_app\_mapreduce\_am\_resource\_mb\_validator

**Required**

true

### Suppress Parameter Validation: YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_client\_config\_safety\_valve

**Required**

true

## JobHistory Server

### Advanced

#### Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)

**Description**

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into hadoop-metrics2.properties.

**Related Name****Default Value****API Name**

hadoop\_metrics2\_safety\_valve

**Required**

false

### System Group

**Description**

The group that the JobHistory Server process should run as.

**Related Name****Default Value**

hadoop

**API Name**

history\_process\_groupname

**Required**

true

### System User

**Description**

The user that the JobHistory Server process should run as.

**Related Name****Default Value**

mapred

**API Name**

history\_process\_username

**Required**

true

**JobHistory Server Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

For advanced use only. A string to be inserted into yarn-site.xml for this role only.

**Related Name****Default Value****API Name**

jobhistory\_config\_safety\_valve

**Required**

false

**JobHistory Server Advanced Configuration Snippet (Safety Valve) for mapred-site.xml****Description**

For advanced use only. A string to be inserted into mapred-site.xml for this role only.

**Related Name****Default Value****API Name**

jobhistory\_mapred\_safety\_valve

**Required**

false

**JobHistory Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

JOBHISTORY\_role\_env\_safety\_valve

**Required**

false

**JobHistory Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Java Configuration Options for JobHistory Server****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value**

JAVA\_GC\_ARGS -Dlibrary.leveldbjni.path=CMF\_CONF\_DIR

**API Name**

mr2\_jobhistory\_java\_opts

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs****JobHistory Server Logging Threshold****Description**

The minimum log level for JobHistory Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**JobHistory Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for JobHistory Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### JobHistory Server Max Log Size

**Description**

The maximum size, in megabytes, per log file for JobHistory Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

### JobHistory Server Log Directory

**Description**

Directory where JobHistory Server will place its log files.

**Related Name**

hadoop.log.dir

**Default Value**

/var/log/hadoop-mapreduce

**API Name**

mr2\_jobhistory\_log\_dir

**Required**

false

## Monitoring

### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Heap Dump Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Heap Dump Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

jobhistory\_fd\_thresholds

**Required**

false

**Garbage Collection Duration Thresholds****Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

jobhistory\_gc\_duration\_thresholds

**Required**

false

**Garbage Collection Duration Monitoring Period****Description**

The period to review when computing the moving average of garbage collection time.

**Related Name****Default Value**

5 minute(s)

**API Name**

jobhistory\_gc\_duration\_window

**Required**

false

**JobHistory Server Host Health Test****Description**

When computing the overall JobHistory Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

jobhistory\_host\_health\_enabled

**Required**

false

**JobHistory Server Process Health Test****Description**

Enables the health test that the JobHistory Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

jobhistory\_scm\_health\_enabled

**Required**

false

**Web Metric Collection****Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

jobhistory\_web\_metric\_collection\_enabled

**Required**

false

### Web Metric Collection Duration

**Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

jobhistory\_web\_metric\_collection\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

## Rules to Extract Events from Log Files

### Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

### Related Name

### Default Value

version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Instead, use .\* , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Use .\* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .\* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]

### API Name

log\_event\_whitelist

### Required

false

## Metric Filter

### Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.
- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Enable Job ACL****Description**

Specifies whether ACLs should be checked for authorization when users perform various operations. If enabled, access control checks are made by MapReduce when requests are made by users for queue operations and job operations. Queue operations include submitting job to a queue

or killing a job in the queue. Job operations include viewing the job-details (See `mapreduce.job.acl-view-job`), or modifying a job (See `mapreduce.job.acl-modify-job`).

**Related Name**

`mapreduce.cluster.acls.enabled`

**Default Value**

false

**API Name**

`mapreduce_cluster_acls_enabled`

**Required**

false

**Job History Files Cleaner Interval****Description**

Time interval for history cleaner to check for files to delete. Files are only deleted if they are older than `mapreduce.jobhistory.max-age-ms`.

**Related Name**

`mapreduce.jobhistory.cleaner.interval`

**Default Value**

1 day(s)

**API Name**

`mapreduce_jobhistory_cleaner_interval`

**Required**

false

**Job History Files Maximum Age****Description**

Job history files older than this time duration will be deleted when the history cleaner runs.

**Related Name**

`mapreduce.jobhistory.max-age-ms`

**Default Value**

7 day(s)

**API Name**

`mapreduce_jobhistory_max_age_ms`

**Required**

false

**Max Shuffle Connections****Description**

Maximum allowed connections for the shuffle. Set to 0 (zero) to indicate no limit on the number of connections.

**Related Name**

`mapreduce.jobhistory.loadedjob.tasks.max`

**Default Value**

-1

**API Name**

mapreduce\_shuffle\_max\_connections

**Required**

false

**MapReduce ApplicationMaster Staging Root Directory****Description**

The root HDFS directory of the staging area for users' MR2 jobs; for example /user. The staging directories are always named after the user.

**Related Name**

yarn.app.mapreduce.am.staging-dir

**Default Value**

/user

**API Name**

yarn\_app\_mapreduce\_am\_staging\_dir

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****MapReduce JobHistory Server Port****Description**

The port of the MapReduce JobHistory Server. Together with the hostname of the JobHistory role, forms the address.

**Related Name**

mapreduce.jobhistory.address

**Default Value**

10020

**API Name**

mapreduce\_jobhistory\_address

**Required**

false

### MapReduce JobHistory Server Admin Interface Port

**Description**

The port of the MapReduce JobHistory Server administrative interface. Together with the host name of the JobHistory role forms the address.

**Related Name**

mapreduce.jobhistory.admin.address

**Default Value**

10033

**API Name**

mapreduce\_jobhistory\_admin\_address

**Required**

false

### MapReduce JobHistory Web Application HTTP Port

**Description**

The HTTP port of the MapReduce JobHistory Server web application. Together with the host name of the JobHistory role forms the address.

**Related Name**

mapreduce.jobhistory.webapp.address

**Default Value**

19888

**API Name**

mapreduce\_jobhistory\_webapp\_address

**Required**

false

### MapReduce JobHistory Web Application HTTPS Port (TLS/SSL)

**Description**

The HTTPS port of the MapReduce JobHistory Server web application. Together with the host name of the JobHistory role forms the address.

**Related Name**

mapreduce.jobhistory.webapp.https.address

**Default Value**

19890

**API Name**

mapreduce\_jobhistory\_webapp\_https\_address

**Required**

false

### Bind JobHistory Server to Wildcard Address

**Description**

If enabled, the JobHistory Server binds to the wildcard address ("0.0.0.0") on all of its ports.

**Related Name****Default Value**

false

**API Name**

yarn\_jobhistory\_bind\_wildcard

**Required**

false

**Resource Management****Java Heap Size of JobHistory Server in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

mr2\_jobhistory\_java\_heapsize

**Required**

false

**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

## Security

### Role-Specific Kerberos Principal

**Description**

Kerberos principal used by the JobHistory Server roles.

**Related Name****Default Value**

mapred

**API Name**

kerberos\_role\_princ\_name

**Required**

true

## Stacks Collection

### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_metrics2\_safety\_valve

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_history\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_history\_process\_username

**Required**

true

**Suppress Parameter Validation: JobHistory Server Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_jobhistory\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: JobHistory Server Advanced Configuration Snippet (Safety Valve) for mapred-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jobhistory\_mapred\_safety\_valve

**Required**

true

**Suppress Parameter Validation: JobHistory Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jobhistory\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

### Suppress Parameter Validation: JobHistory Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Rules to Extract Events from Log Files

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

### Suppress Parameter Validation: MapReduce JobHistory Server Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_jobhistory\_address

**Required**

true

### Suppress Parameter Validation: MapReduce JobHistory Server Admin Interface Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Server Admin Interface Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_jobhistory\_admin\_address

**Required**

true

**Suppress Parameter Validation: MapReduce JobHistory Web Application HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Web Application HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_jobhistory\_webapp\_address

**Required**

true

**Suppress Parameter Validation: MapReduce JobHistory Web Application HTTPS Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce JobHistory Web Application HTTPS Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_jobhistory\_webapp\_https\_address

**Required**

true

**Suppress Parameter Validation: Java Configuration Options for JobHistory Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for JobHistory Server parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mr2\_jobhistory\_java\_opts

**Required**

true

**Suppress Parameter Validation: JobHistory Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JobHistory Server Log Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_mr2\_jobhistory\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Parameter Validation: MapReduce ApplicationMaster Staging Root Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MapReduce ApplicationMaster Staging Root Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_app\_mapreduce\_am\_staging\_dir

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_jobhistory\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_jobhistory\_file\_descriptor

**Required**

true

**Suppress Health Test: GC Duration****Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_jobhistory\_gc\_duration

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_jobhistory\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_jobhistory\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_jobhistory\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_jobhistory\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_jobhistory\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_jobhistory\_unexpected\_exits

**Required**

true

**Suppress Health Test: Web Server Status****Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_jobhistory\_web\_metric\_collection

**Required**

true

**NodeManager****Advanced****Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)****Description**

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into hadoop-metrics2.properties.

**Related Name****Default Value****API Name**

hadoop\_metrics2\_safety\_valve

**Required**

false

**CGroups Hierarchy****Description**

Path (rooted in the cgroups hierarchy on the machine) where to place YARN-managed cgroups.

**Related Name**

yarn.nodemanager.linux-container-executor.cgroups.hierarchy

**Default Value**

/hadoop-yarn

**API Name**

linux\_container\_executor\_cgroups\_hierarchy

**Required**

false

### NodeManager Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Healthchecker Script Arguments

**Description**

Comma-separated list of arguments which are to be passed to node health script when it is being launched.

**Related Name**

yarn.nodemanager.health-checker.script.opts

**Default Value****API Name**

mapred\_healthchecker\_script\_args

**Required**

false

### Healthchecker Script Path

**Description**

Absolute path to the script which is periodically run by the node health monitoring service to determine if the node is healthy or not. If the value of this key is empty or the file does not exist in the location configured here, the node health monitoring service is not started.

**Related Name**

yarn.nodemanager.health-checker.script.path

**Default Value****API Name**

mapred\_healthchecker\_script\_path

**Required**

false

### Java Configuration Options for NodeManager

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value**

JAVA\_GC\_ARGS -Dlibrary.leveldbjni.path=CMF\_CONF\_DIR

**API Name**

node\_manager\_java\_opts

**Required**

false

**NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

For advanced use only. A string to be inserted into yarn-site.xml for this role only.

**Related Name****Default Value****API Name**

nodemanager\_config\_safety\_valve

**Required**

false

**Enable Container Launch Debug Information****Description**

Generate additional logs about container launches for e.g. a copy of the launch script and lists the directory contents of the container work dir also following symlinks to a max-depth of 5.

**Related Name**

yarn.nodemanager.log-container-debug-info.enabled

**Default Value**

false

**API Name**

nodemanager\_log\_container\_debug\_info\_enabled

**Required**

false

**NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml****Description**

For advanced use only. A string to be inserted into mapred-site.xml for this role only.

**Related Name****Default Value****API Name**

nodemanager\_mapred\_safety\_valve

**Required**

false

**NodeManager Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

NODEMANAGER\_role\_env\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Localized Dir Deletion Delay****Description**

Number of seconds after an application finishes before the NodeManager's DeletionService will delete the application's localized file and log directory. To diagnose YARN application problems, set this property's value large enough (for example, to 600 = 10 minutes) to permit examination of these directories.

**Related Name**

yarn.nodemanager.delete.debug-delay-sec

**Default Value**

0

**API Name**

yarn\_nodemanager\_delete\_debug\_delay\_sec

**Required**

false

**Disk Health Checker Disk Utilization Watermark Low Threshold Percentage****Description**

The low threshold percentage of disk space used when a bad disk is marked as good. Values can range from 0.0 to 100.0. This applies to yarn.nodemanager.local-dirs and yarn.nodemanager.log-dirs. Note that if its value is more than yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-percentage or not set, it will be set to the same value as yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-percentage.

**Related Name**

yarn.nodemanager.disk-health-checker.disk-utilization-watermark-low-per-disk-percentage

**Default Value****API Name**

yarn\_nodemanager\_disk\_health\_checker\_disk\_utilization\_watermark\_low\_per\_disk\_percentage

**Required**

false

**Disk Health Checker Frequency****Description**

Frequency, in milliseconds, of running disk health checker.

**Related Name**

yarn.nodemanager.disk-health-checker.interval-ms

**Default Value**

2 minute(s)

**API Name**

yarn\_nodemanager\_disk\_health\_checker\_interval\_ms

**Required**

false

### Dish Health Checker Max Disk Utilization Percent

**Description**

The maximum percentage of disk space utilization allowed after which a disk is marked as bad. Values can range from 0.0 to 100.0. If the value is greater than or equal to 100, the NodeManager will check for full disk. This applies to local directories and log directories.

**Related Name**

yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-percentage

**Default Value**

90.0 %

**API Name**

yarn\_nodemanager\_disk\_health\_checker\_max\_disk\_utilization\_per\_disk\_percentage

**Required**

false

### Disk Health Checker Minimum Health Disk Space

**Description**

The minimum space that must be available on a disk for it to be used. This applies to local directories and log directories.

**Related Name**

yarn.nodemanager.disk-health-checker.min-free-space-per-disk-mb

**Default Value**

0 B

**API Name**

yarn\_nodemanager\_disk\_health\_checker\_min\_free\_space\_per\_disk\_mb

**Required**

false

### Disk Health Checker Minimum Health Disks Fraction

**Description**

The minimum fraction of number of disks to be healthy for the NodeManager to launch new containers. This correspond to both local directories and log directories; that is, if there are fewer healthy local directories (or log directories) available, then new containers will not be launched on this node.

**Related Name**

yarn.nodemanager.disk-health-checker.min-healthy-disks

**Default Value**

0.25

**API Name**

yarn\_nodemanager\_disk\_health\_checker\_min\_healthy\_disks

**Required**

false

## Docker on YARN

### Enable Docker Containers

**Description**

Specifies if Docker containers in YARN are enabled.

**Related Name****Default Value**

false

**API Name**

docker\_on\_yarn\_enabled

**Required**

false

### Allowed Devices for Docker Containers

**Description**

Specifies the devices that Docker containers are allowed to mount. By default, no devices are allowed to be mounted.

**Related Name**

docker.allowed.devices

**Default Value****API Name**

yarn\_docker\_allowed\_devices

**Required**

false

### Allowed Read-Only Mounts for Docker Containers

**Description**

Specifies the directories that Docker containers are allowed to mount in read-only mode. NodeManager Local Directories and Cgroups root are always added to this list. Ensure that any additional default read-only mounts are also added here.

**Related Name**

docker.allowed.ro-mounts

**Default Value****API Name**

yarn\_docker\_allowed\_ro\_mounts

**Required**

false

### Allowed Read-Write Mounts for Docker Containers

**Description**

Specifies the directories that Docker containers are allowed to mount in read-write mode. NodeManager Local Directories and NodeManager Container Log Directories are always added to this list. Ensure that any additional default read-write mounts are also added here.

**Related Name**

docker.allowed.rw-mounts

**Default Value****API Name**

yarn\_docker\_allowed\_rw\_mounts

**Required**

false

**Allowed Volume Drivers for Docker Containers****Description**

Specifies the volume drivers which are allowed to be used with Docker. By default, no volume drivers are allowed.

**Related Name**

docker.allowed.volume-drivers

**Default Value****API Name**

yarn\_docker\_allowed\_volume\_drivers

**Required**

false

**Docker Binary Path****Description**

Specifies the path of the binary in the hosts that is used to launch Docker containers. Its default value is /usr/bin/docker.

**Related Name**

docker.binary

**Default Value**

/usr/bin/docker

**API Name**

yarn\_docker\_binary

**Required**

false

**Enable No-new-privileges Flag for Docker Containers****Description**

Specifies if the no-new-privileges flag for docker run is enabled. The no-new-privileges flag ensures that the process or its children processes do not gain any additional privileges. Set to 'true' to enable.

**Related Name**

docker.no-new-privileges.enabled

**Default Value**

false

**API Name**

yarn\_docker\_no\_new\_privileges\_enabled

**Required**

false

**Trusted Registries for Docker Containers****Description**

Specifies the list of trusted docker registries for running trusted docker containers. By default, no registries are defined.

**Related Name**`docker.trusted.registries`**Default Value****API Name**`yarn_docker_trusted_registries`**Required**`false`**Allowed Docker Container Networks****Description**

Specifies the networks that are allowed for Docker containers. Valid values are determined by Docker networks available from the `docker network ls` command.

**Related Name**`yarn.nodemanager.runtime.linux.docker.allowed-container-networks`**Default Value**`host none bridge`**API Name**`yarn_nodemanager_runtime_linux_docker_allowed_container_networks`**Required**`false`**Docker Capabilities****Description**

Specifies the capabilities assigned to Docker containers when they are launched. The values may not be case-sensitive from a docker perspective, but Cloudera recommends to keep them uppercase.

**Related Name**`yarn.nodemanager.runtime.linux.docker.capabilities`**Default Value**`CHOWN, DAC_OVERRIDE, FSETID, FOWNER, MKNOD, NET_RAW, SETGID, SETUID, SETFCAP, SETPCAP, NET_BIND_SERVICE, SYS_CHROOT, KILL, AUDIT_WRITE`**API Name**`yarn_nodemanager_runtime_linux_docker_capabilities`**Required**`false`**Default Docker Container Network****Description**

Specifies which allowed network is used when launching Docker containers but no network is specified in the request. This network must be added to `yarn.nodemanager.runtime.linux.docker.allowed-container-networks`.

**Related Name**`yarn.nodemanager.runtime.linux.docker.default-container-network`**Default Value**`host`**API Name**

yarn\_nodemanager\_runtime\_linux\_docker\_default\_container\_network

**Required**

false

**Default Read-Only Mounts for Docker Containers****Description**

A list that specifies the default read-only mounts to be bind-mounted into all Docker containers that use DockerContainerRuntime. NodeManager Local Directories and Cgroups root are always added to this list. Ensure that any additional default read-only mounts are also added to the Allowed Read-Only Mounts list.

**Related Name**

yarn.nodemanager.runtime.linux.docker.default-ro-mounts

**Default Value****API Name**

yarn\_nodemanager\_runtime\_linux\_docker\_default\_ro\_mounts

**Required**

false

**Default Read-Write Mounts for Docker Containers****Description**

A list that specifies the default read-write mounts to be bind-mounted into all Docker containers that use DockerContainerRuntime. NodeManager Local Directories and NodeManager Container Log Directories are always added to this list. Ensure that any additional default read-write mounts are also added to the Allowed Read-Write Mounts list.

**Related Name**

yarn.nodemanager.runtime.linux.docker.default-rw-mounts

**Default Value****API Name**

yarn\_nodemanager\_runtime\_linux\_docker\_default\_rw\_mounts

**Required**

false

**Default Tempfs Mounts for Docker Containers****Description**

Specifies the directories in tmpfs that Docker containers are allowed to mount. By default, no directories are allowed in tmpfs to be mounted.

**Related Name**

yarn.nodemanager.runtime.linux.docker.default-tmpfs-mounts

**Default Value****API Name**

yarn\_nodemanager\_runtime\_linux\_docker\_default\_tmpfs\_mounts

**Required**

false

**Allow Delayed Removal of Docker Containers****Description**

Specifies if Debug Deletion Delay is used for Docker containers. Debug Deletion Delay is useful for troubleshooting Docker container related launch failures. For more information, see `yarn.nodemanager.delete.debug-delay-sec`.

**Related Name**

`yarn.nodemanager.runtime.linux.docker.delayed-removal.allowed`

**Default Value**

false

**API Name**

`yarn_nodemanager_runtime_linux_docker_delayed_removal_allowed`

**Required**

false

### Enable User Remapping for Docker Containers

**Description**

Specifies if Docker containers can run with the UID (User Identifier) and GID (Group Identifier) of the calling user.

**Related Name**

`yarn.nodemanager.runtime.linux.docker.enable-userremapping.allowed`

**Default Value**

true

**API Name**

`yarn_nodemanager_runtime_linux_docker_enable_userremapping_allowed`

**Required**

false

### Allow Using Host PID Namespace for Docker Containers

**Description**

Specifies if Docker containers are allowed to use the host PID namespace.

**Related Name**

`yarn.nodemanager.runtime.linux.docker.host-pid-namespace.allowed`

**Default Value**

false

**API Name**

`yarn_nodemanager_runtime_linux_docker_host_pid_namespace_allowed`

**Required**

false

### ACL for Privileged Docker Containers

**Description**

A comma-separated list that specifies the users who can request privileged Docker containers if privileged Docker containers are allowed.

**Related Name**

`yarn.nodemanager.runtime.linux.docker.privileged-containers.acl`

**Default Value****API Name**

yarn\_nodemanager\_runtime\_linux\_docker\_privileged\_containers\_acl

**Required**

false

### Allow Privileged Docker Containers

**Description**

Specifies if applications are allowed to run in privileged containers. Privileged containers are granted the complete set of capabilities and are not subject to the limitations imposed by the device cgroup controller. Use with extreme care!

**Related Name**

yarn.nodemanager.runtime.linux.docker.privileged-containers.allowed

**Default Value**

false

**API Name**

yarn\_nodemanager\_runtime\_linux\_docker\_privileged\_containers\_allowed

**Required**

false

### User Remapping GID Threshold for Docker Containers

**Description**

Specifies the minimum GID (Group Identifier) for a remapped user. Users with GIDs lower than this minimum value are not allowed to launch Docker containers when user remapping (yarn.nodemanager.runtime.linux.docker.enable-userremapping.allowed) is enabled.

**Related Name**

yarn.nodemanager.runtime.linux.docker.userremapping-gid-threshold

**Default Value**

1

**API Name**

yarn\_nodemanager\_runtime\_linux\_docker\_userremapping\_gid\_threshold

**Required**

false

### User Remapping UID Threshold for Docker Containers

**Description**

Specifies the minimum UID (User Identifier) for a remapped user. Users with UIDs lower than this minimum value are not allowed to launch Docker containers when user remapping (yarn.nodemanager.runtime.linux.docker.enable-userremapping.allowed) is enabled.

**Related Name**

yarn.nodemanager.runtime.linux.docker.userremapping-uid-threshold

**Default Value**

1

**API Name**

yarn\_nodemanager\_runtime\_linux\_docker\_userremapping\_uid\_threshold

**Required**

false

## GPU Management

### Enable GPU Usage

**Description**

Allows NodeManagers to provide GPU devices to YARN applications that request them.

**Related Name****Default Value**

false

**API Name**

gpu\_enabled

**Required**

false

### NodeManager GPU Devices Allowed

**Description**

Specifies GPU devices which can be managed by YARN NodeManager (comma-separated). Manually specify GPU devices if auto detection of GPU devices failed or you only want a subset of GPU devices to be managed by YARN. A GPU device is identified by the minor device number and index: An example of manual specification is "0:0,1:1,2:2,3:4" to allow YARN NodeManager to manage GPU devices with indices 0/1/2/3 and minor number 0/1/2/4 numbers.

**Related Name**

yarn.nodemanager.resource-plugins.gpu.allowed-gpu-devices

**Default Value**

auto

**API Name**

gpu\_plugin\_allowed\_devices

**Required**

false

### NodeManager GPU Detection Executable

**Description**

Path to the executable program which YARN runs to get GPU-related information. When this value is empty (default), YARN NodeManager will try to locate the executable itself. An example value is: /usr/local/bin/nvidia-smi

**Related Name**

yarn.nodemanager.resource-plugins.gpu.path-to-discovery-executables

**Default Value****API Name**

gpu\_plugin\_detector\_path

**Required**

false

## Log Aggregation

### Log Aggregation Policy

**Description**

Specifies the types of container logs that are uploaded during the log aggregation.

**Related Name**

yarn.nodemanager.log-aggregation.policy.class

**Default Value**

org.apache.hadoop.yarn.server.nodemanager.containermanager.logaggregation.AllContainerLogAggregationPolicy

**API Name**

yarn\_nodemanager\_log\_aggregation\_policy\_class

**Required**

false

### Log Aggregation Roll Monitoring Interval

**Description**

Defines how often NodeManagers wake up to upload log files. If this value is 0 or less than 0, the logs are uploaded when the application is completed.

**Related Name**

yarn.nodemanager.log-aggregation.roll-monitoring-interval-seconds

**Default Value**

-1 second(s)

**API Name**

yarn\_nodemanager\_log\_aggregation\_roll\_monitoring\_interval\_seconds

**Required**

false

### Minimum Hard Limit for Log Aggregation Roll Monitoring Interval

**Description**

Defines the hard minimum value for yarn.nodemanager.log-aggregation.roll-monitoring-interval-seconds, if Log Aggregation Roll Monitoring Interval has been set to a positive value.

**Related Name**

yarn.nodemanager.log-aggregation.roll-monitoring-interval-seconds.min

**Default Value**

1 hour(s)

**API Name**

yarn\_nodemanager\_log\_aggregation\_roll\_monitoring\_interval\_seconds\_min

**Required**

false

### Remote App Log Directory

**Description**

Specifies the path of the directory where application logs are stored after an application is completed.

**Related Name**

yarn.nodemanager.remote-app-log-dir

**Default Value**

/tmp/logs

**API Name**

yarn\_nodemanager\_remote\_app\_log\_dir

**Required**

false

**Remote App Log Directory Suffix****Description**

The remote log directory is created at {yarn.nodemanager.remote-app-log-dir}/{user}/{thisParam}

**Related Name**

yarn.nodemanager.remote-app-log-dir-suffix

**Default Value**

logs

**API Name**

yarn\_nodemanager\_remote\_app\_log\_dir\_suffix

**Required**

false

**Logs****NodeManager Logging Threshold****Description**

The minimum log level for NodeManager logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**NodeManager Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for NodeManager logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**NodeManager Max Log Size****Description**

The maximum size, in megabytes, per log file for NodeManager logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**NodeManager Log Directory****Description**

Directory where NodeManager will place its log files.

**Related Name**

hadoop.log.dir

**Default Value**

/var/log/hadoop-yarn

**API Name**

node\_manager\_log\_dir

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Heap Dump Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Rules to Extract Events from Log Files****Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used. Each rule has some or all of the following fields:

- alert - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- rate (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- periodminutes - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- threshold - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- content - match only those messages for which contents match this regular expression.
- exceptiontype - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

**Related Name****Default Value**

version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Instead, use .\* , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Use .\* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .\* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]

**API Name**

log\_event\_whitelist

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**NodeManager Connectivity Health Check****Description**

Enables the health check that verifies the NodeManager is connected to the ResourceManager.

**Related Name****Default Value**

`true`

**API Name**

`nodemanager_connectivity_health_enabled`

**Required**

`false`

**NodeManager Connectivity Tolerance at Startup****Description**

The amount of time to wait for the NodeManager to fully start up and connect to the ResourceManager before enforcing the connectivity check.

**Related Name****Default Value**

`3 minute(s)`

**API Name**

`nodemanager_connectivity_tolerance_seconds`

**Required**

false

### File Descriptor Monitoring Thresholds

#### Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

#### Related Name

#### Default Value

Warning: 50.0 %, Critical: 70.0 %

#### API Name

nodemanager\_fd\_thresholds

#### Required

false

### Garbage Collection Duration Thresholds

#### Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

#### Related Name

#### Default Value

Warning: 30.0, Critical: 60.0

#### API Name

nodemanager\_gc\_duration\_thresholds

#### Required

false

### Garbage Collection Duration Monitoring Period

#### Description

The period to review when computing the moving average of garbage collection time.

#### Related Name

#### Default Value

5 minute(s)

#### API Name

nodemanager\_gc\_duration\_window

#### Required

false

### NodeManager Health Checker Health Check

#### Description

Enables the health check that verifies the NodeManager is seen as healthy by the ResourceManager.

#### Related Name

#### Default Value

true

#### API Name

nodemanager\_health\_checker\_health\_enabled

**Required**

false

**NodeManager Host Health Test****Description**

When computing the overall NodeManager health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

nodemanager\_host\_health\_enabled

**Required**

false

**NodeManager Local Directories Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Local Directories.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

nodemanager\_local\_data\_directories\_free\_space\_absolute\_thresholds

**Required**

false

**NodeManager Local Directories Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Local Directories. Specified as a percentage of the capacity on that filesystem. This setting is not used if a NodeManager Local Directories Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

nodemanager\_local\_data\_directories\_free\_space\_percentage\_thresholds

**Required**

false

**NodeManager Container Log Directories Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Container Log Directories.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

nodemanager\_log\_directories\_free\_space\_absolute\_thresholds

**Required**

false

**NodeManager Container Log Directories Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Container Log Directories. Specified as a percentage of the capacity on that filesystem. This setting is not used if a NodeManager Container Log Directories Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

nodemanager\_log\_directories\_free\_space\_percentage\_thresholds

**Required**

false

**NodeManager Recovery Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Recovery Directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

nodemanager\_recovery\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**NodeManager Recovery Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's NodeManager Recovery Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a NodeManager Recovery Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

nodemanager\_recovery\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**NodeManager Process Health Test****Description**

Enables the health test that the NodeManager's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

nodemanager\_scm\_health\_enabled

**Required**

false

**Web Metric Collection****Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

nodemanager\_web\_metric\_collection\_enabled

**Required**

false

**Web Metric Collection Duration****Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

nodemanager\_web\_metric\_collection\_thresholds

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### Other

### Enable Shuffle Auxiliary Service

**Description**

If enabled, adds 'org.apache.hadoop.mapred.ShuffleHandler' to the NodeManager auxiliary services. This is required for MapReduce applications.

**Related Name****Default Value**

true

**API Name**

mapreduce\_aux\_service

**Required**

false

### Max Shuffle Connections

**Description**

Maximum allowed connections for the shuffle. Set to 0 (zero) to indicate no limit on the number of connections.

**Related Name**

mapreduce.shuffle.max.connections

**Default Value**

0

**API Name**

mapreduce\_shuffle\_max\_connections

**Required**

false

### Containers Environment Variable

**Description**

Environment variables that should be forwarded from the NodeManager's environment to the container's.

**Related Name**

yarn.nodemanager.admin-env

**Default Value**

MALLOC\_ARENA\_MAX=\$MALLOC\_ARENA\_MAX

**API Name**

yarn\_nodemanager\_admin\_env

**Required**

false

**Container Manager Thread Count****Description**

Number of threads container manager uses.

**Related Name**

yarn.nodemanager.container-manager.thread-count

**Default Value**

20

**API Name**

yarn\_nodemanager\_container\_manager\_thread\_count

**Required**

false

**Cleanup Thread Count****Description**

Number of threads used in cleanup.

**Related Name**

yarn.nodemanager.delete.thread-count

**Default Value**

4

**API Name**

yarn\_nodemanager\_delete\_thread\_count

**Required**

false

**Containers Environment Variables Whitelist****Description**

Environment variables that containers may override rather than use NodeManager's default.

**Related Name**

yarn.nodemanager.env-whitelist

**Default Value**

JAVA\_HOME, HADOOP\_COMMON\_HOME, HADOOP\_HDFS\_HOME,  
HADOOP\_CLIENT\_CONF\_DIR, HADOOP\_YARN\_HOME, HADOOP\_MAPRED\_HOME,  
MR2\_CLASSPATH, JAVA\_LIBRARY\_PATH, HADOOP\_HOME, PATH, LANG, TZ

**API Name**

yarn\_nodemanager\_env\_whitelist

**Required**

false

### Heartbeat Interval

**Description**

Heartbeat interval to ResourceManager

**Related Name**

yarn.resourcemanager.nodemangers.heartbeat-interval-ms

**Default Value**

1 second(s)

**API Name**

yarn\_nodemanager\_heartbeat\_interval\_ms

**Required**

false

### NodeManager Local Directories

**Description**

List of directories on the local filesystem where a NodeManager stores intermediate data files.

**Related Name**

yarn.nodemanager.local-dirs

**Default Value****API Name**

yarn\_nodemanager\_local\_dirs

**Required**

true

### Localizer Cache Cleanup Interval

**Description**

Address where the localizer IPC is.

**Related Name**

yarn.nodemanager.localizer.cache.cleanup.interval-ms

**Default Value**

10 minute(s)

**API Name**

yarn\_nodemanager\_localizer\_cache\_cleanup\_interval\_ms

**Required**

false

### Localizer Cache Target Size

**Description**

Target size of localizer cache in MB, per local directory.

**Related Name**

yarn.nodemanager.localizer.cache.target-size-mb

**Default Value**

10 GiB

**API Name**

yarn\_nodemanager\_localizer\_cache\_target\_size\_mb

**Required**

false

**Localizer Client Thread Count****Description**

Number of threads to handle localization requests.

**Related Name**

yarn.nodemanager.localizer.client.thread-count

**Default Value**

5

**API Name**

yarn\_nodemanager\_localizer\_client\_thread\_count

**Required**

false

**Localizer Fetch Thread Count****Description**

Number of threads to use for localization fetching.

**Related Name**

yarn.nodemanager.localizer.fetch.thread-count

**Default Value**

4

**API Name**

yarn\_nodemanager\_localizer\_fetch\_thread\_count

**Required**

false

**NodeManager Container Log Directories****Description**

List of directories on the local filesystem where a NodeManager stores container log files.

**Related Name**

yarn.nodemanager.log-dirs

**Default Value**

/var/log/hadoop-yarn/container

**API Name**

yarn\_nodemanager\_log\_dirs

**Required**

true

**Log Retain Duration****Description**

Time in seconds to retain user logs. Only applicable if log aggregation is disabled.

**Related Name**

yarn.nodemanager.log.retain-seconds

**Default Value**

3 hour(s)

**API Name**

yarn\_nodemanager\_log\_retain\_seconds

**Required**

false

### NodeManager Recovery Directory

**Description**

The local filesystem directory in which the NodeManager stores state when recovery is enabled. Recovery is enabled by default.

**Related Name**

yarn.nodemanager.recovery.dir

**Default Value**

/var/lib/hadoop-yarn/yarn-nm-recovery

**API Name**

yarn\_nodemanager\_recovery\_dir

**Required**

false

### Allowed Linux Runtimes

**Description**

Specifies the runtimes that are allowed when LinuxContainerExecutor is used.

**Related Name**

yarn.nodemanager.runtime.linux.allowed-runtimes

**Default Value**

default

**API Name**

yarn\_nodemanager\_runtime\_linux\_allowed\_runtimes

**Required**

false

### Sleep Delay Before SIGKILL

**Description**

Specifies the time in milliseconds between sending a SIGTERM and a SIGKILL signal to a running container.

**Related Name**

yarn.nodemanager.sleep-delay-before-sigkill.ms

**Default Value**

10 second(s)

**API Name**

yarn\_nodemanager\_sleep\_delay\_before\_sigkill\_ms

**Required**

false

### Performance

### Max Shuffle Threads

**Description**

Maximum allowed threads for serving shuffle connections. Set to zero to indicate the default of 2 times the number of available processors.

**Related Name**

mapreduce.shuffle.max.threads

**Default Value**

80

**API Name**

mapreduce\_shuffle\_max\_threads

**Required**

false

### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

### Ports and Addresses

#### NodeManager Web Application HTTPS Port (TLS/SSL)

**Description**

The HTTPS port of the NodeManager web application.

**Related Name**

yarn.nodemanager.webapp.https.address

**Default Value**

8044

**API Name**

nodemanager\_webserver\_https\_port

**Required**

false

#### NodeManager Web Application HTTP Port

**Description**

The HTTP Port of the NodeManager web application.

**Related Name**

yarn.nodemanager.webapp.address

**Default Value**

8042

**API Name**

nodemanager\_webserver\_port

**Required**

false

**NodeManager IPC Address****Description**

The address of the NodeManager IPC.

**Related Name**

yarn.nodemanager.address

**Default Value**

8041

**API Name**

yarn\_nodemanager\_address

**Required**

false

**Localizer Port****Description**

Address where the localizer IPC is.

**Related Name**

yarn.nodemanager.localizer.address

**Default Value**

8040

**API Name**

yarn\_nodemanager\_localizer\_address

**Required**

false

**Resource Management****Java Heap Size of NodeManager in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

node\_manager\_java\_heapsize

**Required**

false

**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the

value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Strict CGroup Resource Usage****Description**

CGROUPS allows cpu usage limits to be hard or soft. When this setting is true, containers cannot use more CPU usage than allocated even if spare CPU is available. This ensures that containers can only use CPU that they were allocated. When set to false, containers can use spare CPU if available. It should be noted that irrespective of whether set to true or false, at no time can the combined CPU usage of all containers exceed the value specified in Containers CPU Limit Percentage.

**Related Name**

yarn.nodemanager.linux-container-executor.cgroups.strict-resource-usage

**Default Value**

false

**API Name**

yarn\_nodemanager\_linux\_container\_executor\_cgroups\_strict\_resource\_usage

**Required**

false

**Container Virtual CPU Cores****Description**

Number of virtual CPU cores that can be allocated for containers. This parameter has no effect prior to CDH 4.4.

**Related Name**

yarn.nodemanager.resource.cpu-vcores

**Default Value**

8

**API Name**

yarn\_nodemanager\_resource\_cpu\_vcores

**Required**

true

### Container Memory

**Description**

Amount of physical memory, in MiB, that can be allocated for containers.

**Related Name**

yarn.nodemanager.resource.memory-mb

**Default Value**

8 GiB

**API Name**

yarn\_nodemanager\_resource\_memory\_mb

**Required**

true

### Containers CPU Limit Percentage

**Description**

Amount of CPU reserved for all the containers on each node.

**Related Name**

yarn.nodemanager.resource.percentage-physical-cpu-limit

**Default Value**

100

**API Name**

yarn\_nodemanager\_resource\_percentage\_physical\_cpu\_limit

**Required**

false

### Enable Virtual Memory Check

**Description**

Enforce virtual memory limit on containers, given as a ratio to physical memory.

**Related Name**

yarn.nodemanager.vmem-check-enabled

**Default Value**

false

**API Name**

yarn\_nodemanager\_vmem\_check\_enabled

**Required**

false

**Virtual Memory to Physical Memory Ratio****Description**

Ratio between virtual memory to physical memory when setting `yarn.nodemanager.vmem-check-enabled` to true. Container allocations are expressed in terms of physical memory, and virtual memory usage is allowed to exceed this allocation by this ratio. At least 2.1 is suggested to be set.

**Related Name**`yarn.nodemanager.vmem-pmem-ratio`**Default Value**

2.1

**API Name**`yarn_nodemanager_vmem_pmem_ratio`**Required**

false

**Resource Types****Resource Allocations****Description**

Each NodeManager can independently define the resources that are available from that node.

**Related Name****Default Value****API Name**`resource_allocations`**Required**

false

**Security****Allowed System Users****Description**

List of users explicitly whitelisted to be allowed to run containers. Users with IDs lower than the "Minimum User Id" setting may be whitelisted by using this setting.

**Related Name**`allowed.system.users`**Default Value**`nobody impala hive llama hbase`**API Name**`container_executor_allowed_system_users`**Required**

false

**Banned System Users****Description**

List of users banned from running containers.

**Related Name**

banned.users

**Default Value**

hdfs yarn mapred bin

**API Name**

container\_executor\_banned\_users

**Required**

false

### Container Executor Group

**Description**

The system group that owns the container-executor binary. This does not need to be changed unless the ownership of the binary is explicitly changed.

**Related Name**

yarn.nodemanager.linux-container-executor.group

**Default Value**

yarn

**API Name**

container\_executor\_group

**Required**

false

### Minimum User ID

**Description**

The minimum Linux user ID allowed. Used to prevent other super users.

**Related Name**

min.user.id

**Default Value**

1000

**API Name**

container\_executor\_min\_user\_id

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that

have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Allowed System Users****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed System Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_container\_executor\_allowed\_system\_users

**Required**

true

**Suppress Parameter Validation: Banned System Users****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Banned System Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_container\_executor\_banned\_users

**Required**

true

**Suppress Parameter Validation: Container Executor Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Executor Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_container\_executor\_group

**Required**

true

**Suppress Parameter Validation: NodeManager GPU Devices Allowed****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager GPU Devices Allowed parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gpu\_plugin\_allowed\_devices

**Required**

true

**Suppress Parameter Validation: NodeManager GPU Detection Executable****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager GPU Detection Executable parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gpu\_plugin\_detector\_path

**Required**

true

**Suppress Parameter Validation: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_metrics2\_safety\_valve

**Required**

true

**Suppress Parameter Validation: CGroups Hierarchy****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the CGroups Hierarchy parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_linux\_container\_executor\_cgroups\_hierarchy

**Required**

true

**Suppress Parameter Validation: NodeManager Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Rules to Extract Events from Log Files****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

### Suppress Parameter Validation: Healthchecker Script Arguments

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Healthchecker Script Arguments parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapred\_healthchecker\_script\_args

**Required**

true

### Suppress Parameter Validation: Healthchecker Script Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Healthchecker Script Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapred\_healthchecker\_script\_path

**Required**

true

### Suppress Parameter Validation: Java Configuration Options for NodeManager

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for NodeManager parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_node\_manager\_java\_opts

**Required**

true

### Suppress Parameter Validation: NodeManager Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_node\_manager\_log\_dir

**Required**

true

**Suppress Parameter Validation: NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nodemanager\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nodemanager\_mapred\_safety\_valve

**Required**

true

**Suppress Parameter Validation: NodeManager Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nodemanager\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: NodeManager Web Application HTTPS Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Web Application HTTPS Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nodemanager\_webserver\_https\_port

**Required**

true

**Suppress Parameter Validation: NodeManager Web Application HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Web Application HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nodemanager\_webserver\_port

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Stacks Collection Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Parameter Validation: Allowed Devices for Docker Containers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Devices for Docker Containers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_docker\_allowed\_devices

**Required**

true

### Suppress Parameter Validation: Allowed Read-Only Mounts for Docker Containers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Read-Only Mounts for Docker Containers parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_yarn_docker_allowed_ro_mounts`**Required**`true`**Suppress Parameter Validation: Allowed Read-Write Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Read-Write Mounts for Docker Containers parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_yarn_docker_allowed_rw_mounts`**Required**`true`**Suppress Parameter Validation: Allowed Volume Drivers for Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Volume Drivers for Docker Containers parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_yarn_docker_allowed_volume_drivers`**Required**`true`**Suppress Parameter Validation: Docker Binary Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Docker Binary Path parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_yarn_docker_binary`**Required**`true`**Suppress Configuration Validator: Validates configuration of YARN NodeManagers when Docker on YARN feature is enabled.****Description**

Whether to suppress configuration warnings produced by the Validates configuration of YARN NodeManagers when Docker on YARN feature is enabled. configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_docker\_on\_yarn\_validator

**Required**

true

**Suppress Parameter Validation: Trusted Registries for Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Trusted Registries for Docker Containers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_docker\_trusted\_registries

**Required**

true

**Suppress Configuration Validator: YARN GPU Resources Validator****Description**

Whether to suppress configuration warnings produced by the YARN GPU Resources Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_gpu\_validator

**Required**

true

**Suppress Parameter Validation: NodeManager IPC Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager IPC Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_address

**Required**

true

### Suppress Parameter Validation: Containers Environment Variable

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Containers Environment Variable parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_admin\_env

**Required**

true

### Suppress Parameter Validation: Containers Environment Variables Whitelist

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Containers Environment Variables Whitelist parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_env\_whitelist

**Required**

true

### Suppress Parameter Validation: NodeManager Local Directories

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Local Directories parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_local\_dirs

**Required**

true

### Suppress Parameter Validation: Localizer Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Localizer Port parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_yarn_nodemanager_localizer_address`**Required**`true`**Suppress Parameter Validation: Minimum Hard Limit for Log Aggregation Roll Monitoring Interval****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Minimum Hard Limit for Log Aggregation Roll Monitoring Interval parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_log_aggregation_roll_monitoring_interval_seconds_min`**Required**`true`**Suppress Configuration Validator: Log Aggregation Roll Monitoring Interval Minimum Validator****Description**

Whether to suppress configuration warnings produced by the Log Aggregation Roll Monitoring Interval Minimum Validator configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_log_aggregation_roll_monitoring_interval_seconds_minimum_validator`**Required**`true`**Suppress Parameter Validation: NodeManager Container Log Directories****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Container Log Directories parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_log_dirs`**Required**`true`**Suppress Parameter Validation: NodeManager Recovery Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the NodeManager Recovery Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_recovery\_dir

**Required**

true

**Suppress Parameter Validation: Remote App Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_remote\_app\_log\_dir

**Required**

true

**Suppress Parameter Validation: Remote App Log Directory Suffix****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory Suffix parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_remote\_app\_log\_dir\_suffix

**Required**

true

**Suppress Parameter Validation: Allowed Linux Runtimes****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Linux Runtimes parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_allowed\_runtimes

**Required**

true

### Suppress Parameter Validation: Allowed Docker Container Networks

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Docker Container Networks parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_docker\_allowed\_container\_networks

**Required**

true

### Suppress Parameter Validation: Docker Capabilities

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Docker Capabilities parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_docker\_capabilities

**Required**

true

### Suppress Parameter Validation: Default Docker Container Network

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Docker Container Network parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_docker\_default\_container\_network

**Required**

true

### Suppress Parameter Validation: Default Read-Only Mounts for Docker Containers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Read-Only Mounts for Docker Containers parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_ro_mounts`**Required**`true`**Suppress Parameter Validation: Default Read-Write Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Read-Write Mounts for Docker Containers parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_rw_mounts`**Required**`true`**Suppress Parameter Validation: Default Tempfs Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Tempfs Mounts for Docker Containers parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_runtime_linux_docker_default_tmpfs_mounts`**Required**`true`**Suppress Parameter Validation: ACL for Privileged Docker Containers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ACL for Privileged Docker Containers parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_yarn_nodemanager_runtime_linux_docker_privileged_containers_acl`**Required**`true`**Suppress Configuration Validator: YARN Resource Types Validator****Description**

Whether to suppress configuration warnings produced by the YARN Resource Types Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resources\_validator

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_node\_manager\_audit\_health

**Required**

true

**Suppress Health Test: ResourceManager Connectivity****Description**

Whether to suppress the results of the ResourceManager Connectivity health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_node\_manager\_connectivity

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_node\_manager\_file\_descriptor

**Required**

true

### Suppress Health Test: GC Duration

#### Description

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_node\_manager\_gc\_duration

#### Required

true

### Suppress Health Test: NodeManager Health Checker

#### Description

Whether to suppress the results of the NodeManager Health Checker health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_node\_manager\_health\_checker

#### Required

true

### Suppress Health Test: Heap Dump Directory Free Space

#### Description

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_node\_manager\_heap\_dump\_directory\_free\_space

#### Required

true

### Suppress Health Test: Host Health

#### Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_node\_manager\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_node\_manager\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_node\_manager\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_node\_manager\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_node\_manager\_unexpected\_exits

**Required**

true

### Suppress Health Test: Web Server Status

**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_node\_manager\_web\_metric\_collection

**Required**

true

### Suppress Health Test: NodeManager Local Directories Free Space

**Description**

Whether to suppress the results of the NodeManager Local Directories Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_nodemanager\_local\_data\_directories\_free\_space

**Required**

true

### Suppress Health Test: NodeManager Container Log Directories Free Space

**Description**

Whether to suppress the results of the NodeManager Container Log Directories Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_nodemanager\_log\_directories\_free\_space

**Required**

true

**Suppress Health Test: NodeManager Recovery Directory Free Space****Description**

Whether to suppress the results of the NodeManager Recovery Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_nodemanager\_recovery\_directory\_free\_space

**Required**

true

**ResourceManager****Advanced****Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)****Description**

Advanced Configuration Snippet (Safety Valve) for Hadoop Metrics2. Properties will be inserted into hadoop-metrics2.properties.

**Related Name****Default Value****API Name**

hadoop\_metrics2\_safety\_valve

**Required**

false

**ResourceManager Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Heap Dump Directory

#### Description

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

#### Related Name

`oom_heap_dump_dir`

#### Default Value

`/tmp`

#### API Name

`oom_heap_dump_dir`

#### Required

false

### Dump Heap When Out of Memory

#### Description

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

#### Related Name

#### Default Value

true

#### API Name

`oom_heap_dump_enabled`

#### Required

true

### Kill When Out of Memory

#### Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

#### Related Name

#### Default Value

true

#### API Name

`oom_sigkill_enabled`

#### Required

true

### Automatically Restart Process

#### Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Java Configuration Options for ResourceManager****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value**

JAVA\_GC\_ARGS -Dlibrary.leveldbjni.path=CMF\_CONF\_DIR

**API Name**

resource\_manager\_java\_opts

**Required**

false

**ResourceManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

For advanced use only. A string to be inserted into yarn-site.xml for this role only.

**Related Name****Default Value****API Name**

resourcemanager\_config\_safety\_valve

**Required**

false

**ResourceManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml****Description**

For advanced use only. A string to be inserted into mapred-site.xml for this role only.

**Related Name****Default Value****API Name**

resourcemanager\_mapred\_safety\_valve

**Required**

false

**ResourceManager Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

RESOURCEMANAGER\_role\_env\_safety\_valve

**Required**

false

**ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes\_allow.txt****Description**

For advanced use only. A string to be inserted into nodes\_allow.txt for this role only.

**Related Name****Default Value****API Name**

rm\_hosts\_allow\_safety\_valve

**Required**

false

**ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes\_exclude.txt****Description**

For advanced use only. A string to be inserted into nodes\_exclude.txt for this role only.

**Related Name****Default Value****API Name**

rm\_hosts\_exclude\_safety\_valve

**Required**

false

**Logs****ResourceManager Logging Threshold****Description**

The minimum log level for ResourceManager logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**ResourceManager Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for ResourceManager logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**ResourceManager Max Log Size****Description**

The maximum size, in megabytes, per log file for ResourceManager logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**ResourceManager Log Directory****Description**

Directory where ResourceManager will place its log files.

**Related Name**

hadoop.log.dir

**Default Value**

/var/log/hadoop-yarn

**API Name**

resource\_manager\_log\_dir

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Heap Dump Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

#### Related Name

#### Default Value

Warning: Never, Critical: Never

#### API Name

log\_directory\_free\_space\_percentage\_thresholds

#### Required

false

### Rules to Extract Events from Log Files

#### Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- alert - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- rate (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- periodminutes - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- threshold - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- content - match only those messages for which contents match this regular expression.
- exceptiontype - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

#### Related Name

#### Default Value

version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Instead, use .\*, alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Use .\* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .\*, alert: false, rate: 1, periodminutes: 1, threshold: WARN ]

**API Name**

log\_event\_whitelist

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

resourcemanager\_fd\_thresholds

**Required**

false

### Garbage Collection Duration Thresholds

**Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

resourcemanager\_gc\_duration\_thresholds

**Required**

false

### Garbage Collection Duration Monitoring Period

**Description**

The period to review when computing the moving average of garbage collection time.

**Related Name****Default Value**

5 minute(s)

**API Name**

resourcemanager\_gc\_duration\_window

**Required**

false

### ResourceManager Host Health Test

**Description**

When computing the overall ResourceManager health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

resourcemanager\_host\_health\_enabled

**Required**

false

### ResourceManager Process Health Test

**Description**

Enables the health test that the ResourceManager's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

resourcemanager\_scm\_health\_enabled

**Required**

false

### Health Test Startup Tolerance

**Description**

The amount of time allowed after this role is started that failures of health tests that rely on communication with this role will be tolerated.

**Related Name****Default Value**

5 minute(s)

**API Name**

resourcemanager\_startup\_tolerance\_minutes

**Required**

false

### Web Metric Collection

**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

resourcemanager\_web\_metric\_collection\_enabled

**Required**

false

### Web Metric Collection Duration

**Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

resourcemanager\_web\_metric\_collection\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAM and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### Other

### Capacity Scheduler Configuration Advanced Configuration Snippet (Safety Valve)

**Description**

Enter an XML string that represents the Capacity Scheduler configuration.

**Related Name****Default Value**

```
<configuration> <property> <name>yarn.scheduler.capacity.root.queues</name> <value>default</value> </property> <property>
<name>yarn.scheduler.capacity.root.capacity</name> <value>100</value> </property> <property>
<name>yarn.scheduler.capacity.root.default.capacity</name> <value>100</value> </property>
<property> <name>yarn.scheduler.capacity.root.default.maximum-am-resource-percent</name> <value>0.2</value> </property> <property> <name>yarn.scheduler.capacity.schedule-
asynchronously.enable</name> <value>true</value> </property> </configuration>
```

**API Name**

resourcemanager\_capacity\_scheduler\_configuration

**Required**

true

### Fair Scheduler Assign Multiple Tasks

**Description**

Enables multiple Fair Scheduler container assignments in one heartbeat, which improves cluster throughput when there are many small tasks to run.

**Related Name**

yarn.scheduler.fair.assignmultiple

**Default Value**

true

**API Name**

resourcemanager\_fair\_scheduler\_assign\_multiple

**Required**

true

### Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)

**Description**

An XML string that will be inserted verbatim into the Fair Scheduler allocations file. For CDH 5, overrides the configuration set using the Pools configuration UI. For CDH 4, this is the only way to configure the Fair Scheduler for YARN.

**Related Name****Default Value****API Name**

resourcemanager\_fair\_scheduler\_configuration

**Required**

false

**Fair Scheduler Dynamic Max Assign****Description**

During node heartbeat, the ResourceManager will allocate up to half the available resources on a node. Only valid if yarn.scheduler.fair.assignmultiple is set to true.

**Related Name**

yarn.scheduler.fair.dynamicmaxassign

**Default Value**

true

**API Name**

resourcemanager\_fair\_scheduler\_dynamic\_max\_assign

**Required**

false

**Fair Scheduler Max Assign****Description**

Limit the number of containers allocated by the ResourceManager with each node heartbeat. -1 is equivalent to unlimited. Only valid if yarn.scheduler.fair.assignmultiple is true and yarn.scheduler.fair.dynamic.max.assign is false.

**Related Name**

yarn.scheduler.fair.maxassign

**Default Value**

-1

**API Name**

resourcemanager\_fair\_scheduler\_max\_assign

**Required**

false

**Enable Fair Scheduler Preemption****Description**

When enabled, if a pool's minimum share is not met for some period of time, the Fair Scheduler preempts applications in other pools. Preemption guarantees that production applications are not starved while also allowing the cluster to be used for experimental and research applications. To minimize wasted computation, the Fair Scheduler preempts the most recently launched applications.

**Related Name**

yarn.scheduler.fair.preemption

**Default Value**

false

**API Name**

resourcemanager\_fair\_scheduler\_preemption

**Required**

true

**Fair Scheduler Size-Based Weight****Description**

When enabled, the Fair Scheduler will assign shares to individual apps based on their size, rather than providing an equal share to all apps regardless of size.

**Related Name**

yarn.scheduler.fair.sizebasedweight

**Default Value**

false

**API Name**

resourcemanager\_fair\_scheduler\_size\_based\_weight

**Required**

true

**Fair Scheduler User As Default Queue****Description**

When set to true, the Fair Scheduler uses the username as the default pool name, in the event that a pool name is not specified. When set to false, all applications are run in a shared pool, called default.

**Related Name**

yarn.scheduler.fair.user-as-default-queue

**Default Value**

true

**API Name**

resourcemanager\_fair\_scheduler\_user\_as\_default\_queue

**Required**

true

**ApplicationMaster Monitor Expiry****Description**

The expiry interval to wait until an ApplicationMaster is considered dead.

**Related Name**

yarn.am.liveness-monitor.expiry-interval-ms

**Default Value**

10 minute(s)

**API Name**

yarn\_am\_liveness\_monitor\_expiry\_interval\_ms

**Required**

false

### NodeManager Monitor Expiry

**Description**

The expiry interval to wait until a NodeManager is considered dead.

**Related Name**

yarn.nm.liveness-monitor.expiry-interval-ms

**Default Value**

10 minute(s)

**API Name**

yarn\_nm\_liveness\_monitor\_expiry\_interval\_ms

**Required**

false

### Admin Client Thread Count

**Description**

Number of threads used to handle the ResourceManager admin interface.

**Related Name**

yarn.resourcemanager.admin.client.thread-count

**Default Value**

1

**API Name**

yarn\_resourcemanager\_admin\_client\_thread\_count

**Required**

false

### ApplicationMaster Maximum Attempts

**Description**

The maximum number of application attempts. This is a global setting for all ApplicationMasters.. Each ApplicationMaster can specify its individual maximum through the API, but if the individual maximum is more than the global maximum, the ResourceManager overrides it.

**Related Name**

yarn.resourcemanager.am.max-attempts

**Default Value**

2

**API Name**

yarn\_resourcemanager\_am\_max\_retries

**Required**

false

### ApplicationMaster Monitor Interval

**Description**

The periodic interval that the ResourceManager will check whether ApplicationMasters is still alive.

**Related Name**

yarn.resourcemanager.amliveness-monitor.interval-ms

**Default Value**

1 second(s)

**API Name**`yarn_resourcemanager_amliveliness_monitor_interval_ms`**Required**`false`**Client Thread Count****Description**

The number of threads used to handle applications manager requests.

**Related Name**`yarn.resourcemanager.client.thread-count`**Default Value**`50`**API Name**`yarn_resourcemanager_client_thread_count`**Required**`false`**Container Monitor Interval****Description**

The periodic interval that the ResourceManager will check whether containers are still alive.

**Related Name**`yarn_resourcemanager_container_liveness_monitor_interval_ms`**Default Value**`10 minute(s)`**API Name**`yarn_resourcemanager_container_liveness_monitor_interval_ms`**Required**`false`**Max Completed Applications****Description**

The maximum number of completed applications that the ResourceManager keeps.

**Related Name**`yarn_resourcemanager_max_completed_applications`**Default Value**`10000`**API Name**`yarn_resourcemanager_max_completed_applications`**Required**`false`**NodeManager Monitor Interval****Description**

The periodic interval that the ResourceManager will check whether NodeManagers are still alive.

**Related Name**

yarn.resourcemanager.nm.liveness-monitor.interval-ms

**Default Value**

1 second(s)

**API Name**

yarn\_resourcemanager\_nm\_liveness\_monitor\_interval\_ms

**Required**

false

**Enable ResourceManager Proxy User Privileges****Description**

When enabled, ResourceManager has proxy user privileges.

**Related Name**

yarn.resourcemanager.proxy-user-privileges.enabled

**Default Value**

true

**API Name**

yarn\_resourcemanager\_proxy\_user\_privileges\_enabled

**Required**

false

**Enable ResourceManager Recovery****Description**

When enabled, any applications that were running on the cluster when the ResourceManager died will be recovered when the ResourceManager next starts. Note: If RM-HA is enabled, then this configuration is always enabled.

**Related Name**

yarn.resourcemanager.recovery.enabled

**Default Value**

true

**API Name**

yarn\_resourcemanager\_recovery\_enabled

**Required**

false

**Resource Tracker Thread Count****Description**

Number of threads to handle resource tracker calls.

**Related Name**

yarn.resourcemanager.resource-tracker.client.thread-count

**Default Value**

50

**API Name**

yarn\_resourcemanager\_resource\_tracker\_client\_thread\_count

**Required**

false

### Scheduler Class

**Description**

The class to use as the resource scheduler. FairScheduler is only supported in CDH 4.2.1 and later.

**Related Name**

yarn.resourcemanager.scheduler.class

**Default Value**

org.apache.hadoop.yarn.server.resourcemanager.scheduler.capacity.CapacityScheduler

**API Name**

yarn\_resourcemanager\_scheduler\_class

**Required**

false

### Scheduler Thread Count

**Description**

The number of threads used to handle requests through the scheduler interface.

**Related Name**

yarn.resourcemanager.scheduler.client.thread-count

**Default Value**

50

**API Name**

yarn\_resourcemanager\_scheduler\_client\_thread\_count

**Required**

false

### ZooKeeper Session Timeout

**Description**

The timeout for the ResourceManager session with ZooKeeper. The session expires if the ZooKeeper ensemble does not hear from the ResourceManager within the specified timeout period (no heartbeat). Session expiration is managed by the ZooKeeper ensemble, not by the ResourceManager.

**Related Name**

yarn.resourcemanager.zk-timeout-ms

**Default Value**

1 minute(s)

**API Name**

yarn\_resourcemanager\_zk\_timeout\_ms

**Required**

false

### Resource Calculator Class

**Description**

The Resource Calculator implementation to be used to compare Resources in the scheduler. The DefaultResourceCalculator only uses Memory while DominantResourceCalculator uses Dominant-resource to compare multi-dimensional resources such as Memory, CPU etc.

**Related Name**

yarn.scheduler.capacity.resource-calculator

**Default Value**

org.apache.hadoop.yarn.util.resource.DominantResourceCalculator

**API Name**

yarn\_scheduler\_capacity\_resource\_calculator

**Required**

false

**Fair Scheduler Preemption Utilization Threshold****Description**

The utilization threshold after which preemption kicks in. The utilization is computed as the maximum ratio of usage to capacity among all resources.

**Related Name**

yarn.scheduler.fair.preemption.cluster-utilization-threshold

**Default Value**

0.8

**API Name**

yarn\_scheduler\_fair\_preemption\_cluster\_utilization\_threshold

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****ResourceManager Web Application HTTPS Port (TLS/SSL)****Description**

The HTTPS port of the ResourceManager web application.

**Related Name**

yarn.resourcemanager.webapp.https.address

**Default Value**

8090

**API Name**

resourcemanager\_webserver\_https\_port

**Required**

false

### ResourceManager Web Application HTTP Port

**Description**

The HTTP port of the ResourceManager web application.

**Related Name**

yarn.resourcemanager.webapp.address

**Default Value**

8088

**API Name**

resourcemanager\_webserver\_port

**Required**

false

### ResourceManager Address

**Description**

The address of the applications manager interface in the ResourceManager.

**Related Name**

yarn.resourcemanager.address

**Default Value**

8032

**API Name**

yarn\_resourcemanager\_address

**Required**

false

### Administration Address

**Description**

The address of the admin interface in the ResourceManager.

**Related Name**

yarn.resourcemanager.admin.address

**Default Value**

8033

**API Name**

yarn\_resourcemanager\_admin\_address

**Required**

false

### Resource Tracker Address

**Description**

The address of the resource tracker interface in the ResourceManager.

**Related Name**

yarn.resourcemanager.resource-tracker.address

**Default Value**

8031

**API Name**`yarn_resourcemanager_resource_tracker_address`**Required**`false`**Scheduler Address****Description**

The address of the scheduler interface in the ResourceManager.

**Related Name**`yarn.resourcemanager.scheduler.address`**Default Value**`8030`**API Name**`yarn_resourcemanager_scheduler_address`**Required**`false`**Bind ResourceManager to Wildcard Address****Description**

If enabled, the ResourceManager binds to the wildcard address ("0.0.0.0") on all of its ports.

**Related Name****Default Value**`false`**API Name**`yarn_rm_bind_wildcard`**Required**`false`**Resource Management****Java Heap Size of ResourceManager in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**`1 GiB`**API Name**`resource_manager_java_heapsize`**Required**`false`**Fair Scheduler Node Locality Threshold****Description**

For applications that request containers on particular nodes, the number of scheduling opportunities since the last container assignment to wait before accepting a placement on another node. Expressed

as a float between 0 and 1, which, as a fraction of the cluster size, is the number of scheduling opportunities to pass up. If not set, this means don't pass up any scheduling opportunities. Requires Fair Scheduler continuous scheduling to be disabled. If continuous scheduling is enabled, `yarn.scheduler.fair.locality-delay-node-ms` should be used instead.

**Related Name**

`yarn.scheduler.fair.locality.threshold.node`

**Default Value****API Name**

`resourcemanager_fair_scheduler_locality_threshold_node`

**Required**

false

### Fair Scheduler Rack Locality Threshold

**Description**

For applications that request containers on particular racks, the number of scheduling opportunities since the last container assignment to wait before accepting a placement on another rack. Expressed as a float between 0 and 1, which, as a fraction of the cluster size, is the number of scheduling opportunities to pass up. If not set, this means don't pass up any scheduling opportunities. Requires Fair Scheduler continuous scheduling to be disabled. If continuous scheduling is enabled, `yarn.scheduler.fair.locality-delay-rack-ms` should be used instead.

**Related Name**

`yarn.scheduler.fair.locality.threshold.rack`

**Default Value****API Name**

`resourcemanager_fair_scheduler_locality_threshold_rack`

**Required**

false

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

`cpu.shares`

**Default Value**

1024

**API Name**

`rm_cpu_shares`

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command:

resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'  
 \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not

managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Enable Fair Scheduler Continuous Scheduling****Description**

Enable continuous scheduling in the Fair Scheduler. When enabled, scheduling decisions are decoupled from NodeManager heartbeats, leading to faster resource allocations.

**Related Name**

yarn.scheduler.fair.continuous-scheduling-enabled

**Default Value**

false

**API Name**

yarn\_scheduler\_fair\_continuous\_scheduling\_enabled

**Required**

false

**Fair Scheduler Node Locality Delay****Description**

For applications that request containers on particular nodes, the minimum time in milliseconds the Fair Scheduler waits before accepting a placement on another node. Requires Fair Scheduler continuous scheduling to be enabled. If continuous scheduling is disabled, yarn.scheduler.fair.locality.threshold.node should be used instead.

**Related Name**

yarn.scheduler.fair.locality-delay-node-ms

**Default Value**

2 second(s)

**API Name**

yarn\_scheduler\_fair\_locality\_delay\_node\_ms

**Required**

false

**Fair Scheduler Rack Locality Delay****Description**

For applications that request containers on particular racks, the minimum time in milliseconds the Fair Scheduler waits before accepting a placement on another rack. Requires Fair Scheduler continuous scheduling to be enabled. If continuous scheduling is disabled, yarn.scheduler.fair.locality.threshold.rack should be used instead.

**Related Name**

yarn.scheduler.fair.locality-delay-rack-ms

**Default Value**

4 second(s)

**API Name**

yarn\_scheduler\_fair\_locality\_delay\_rack\_ms

**Required**

false

**Container Memory Increment****Description**

If using the Fair Scheduler, memory requests will be rounded up to the nearest multiple of this number. This parameter has no effect prior to CDH 5.

**Related Name**

yarn.scheduler.increment-allocation-mb

**Default Value**

512 MiB

**API Name**

yarn\_scheduler\_increment\_allocation\_mb

**Required**

true

**Container Virtual CPU Cores Increment****Description**

If using the Fair Scheduler, virtual core requests will be rounded up to the nearest multiple of this number. This parameter has no effect prior to CDH 5.

**Related Name**

yarn.scheduler.increment-allocation-vcores

**Default Value**

1

**API Name**

yarn\_scheduler\_increment\_allocation\_vcores

**Required**

true

**Container Memory Maximum****Description**

The largest amount of physical memory, in MiB, that can be requested for a container.

**Related Name**

yarn.scheduler.maximum-allocation-mb

**Default Value**

64 GiB

**API Name**

yarn\_scheduler\_maximum\_allocation\_mb

**Required**

true

### Container Virtual CPU Cores Maximum

**Description**

The largest number of virtual CPU cores that can be requested for a container. This parameter has no effect prior to CDH 4.4.

**Related Name**

yarn.scheduler.maximum-allocation-vcores

**Default Value**

32

**API Name**

yarn\_scheduler\_maximum\_allocation\_vcores

**Required**

true

### Container Memory Minimum

**Description**

The smallest amount of physical memory, in MiB, that can be requested for a container. If using the Capacity or FIFO scheduler (or any scheduler, prior to CDH 5), memory requests will be rounded up to the nearest multiple of this number.

**Related Name**

yarn.scheduler.minimum-allocation-mb

**Default Value**

1 GiB

**API Name**

yarn\_scheduler\_minimum\_allocation\_mb

**Required**

true

### Container Virtual CPU Cores Minimum

**Description**

The smallest number of virtual CPU cores that can be requested for a container. If using the Capacity or FIFO scheduler (or any scheduler, prior to CDH 5), virtual core requests will be rounded up to the nearest multiple of this number. This parameter has no effect prior to CDH 4.4.

**Related Name**

yarn.scheduler.minimum-allocation-vcores

**Default Value**

1

**API Name**

yarn\_scheduler\_minimum\_allocation\_vcores

**Required**

true

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_metrics2\_safety\_valve

**Required**

true

### Suppress Parameter Validation: ResourceManager Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Rules to Extract Events from Log Files

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Java Configuration Options for ResourceManager

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for ResourceManager parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resource\_manager\_java\_opts

**Required**

true

**Suppress Parameter Validation: ResourceManager Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resource\_manager\_log\_dir

**Required**

true

**Suppress Parameter Validation: Capacity Scheduler Configuration Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Capacity Scheduler Configuration Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_capacity\_scheduler\_configuration

**Required**

true

**Suppress Parameter Validation: ResourceManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Fair Scheduler XML Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_fair\_scheduler\_configuration

**Required**

true

### Suppress Parameter Validation: ResourceManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_mapred\_safety\_valve

**Required**

true

### Suppress Parameter Validation: ResourceManager Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: ResourceManager Web Application HTTPS Port (TLS/SSL)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Web Application HTTPS Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_webserver\_https\_port

**Required**

true

**Suppress Parameter Validation: ResourceManager Web Application HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Web Application HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_webserver\_port

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes\_allow.txt****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes\_allow.txt parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_hosts\_allow\_safety\_valve

**Required**

true

**Suppress Parameter Validation: ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes\_exclude.txt****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes\_exclude.txt parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_hosts\_exclude\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: ResourceManager Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ResourceManager Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resourcemanager\_address

**Required**

true

### Suppress Parameter Validation: Administration Address

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Administration Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resourcemanager\_admin\_address

**Required**

true

### Suppress Parameter Validation: ApplicationMaster Maximum Attempts

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ApplicationMaster Maximum Attempts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resourcemanager\_am\_max\_retries

**Required**

true

### Suppress Parameter Validation: Resource Tracker Address

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Resource Tracker Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resourcemanager\_resource\_tracker\_address

**Required**

true

### Suppress Parameter Validation: Scheduler Address

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Scheduler Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resourcemanager\_scheduler\_address

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_resource\_manager\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_resource\_manager\_file\_descriptor

**Required**

true

**Suppress Health Test: GC Duration****Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_resource\_manager\_gc\_duration

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_resource\_manager\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_resource\_manager\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_resource\_manager\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_resource\_manager\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_resource\_manager\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_resource\_manager\_unexpected\_exits

**Required**

true

**Suppress Health Test: Web Server Status****Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_resource\_manager\_web\_metric\_collection

**Required**

true

**Service-Wide**

## Advanced

### System User's Home Directory

**Description**

The home directory of the system user on the local filesystem. This setting must reflect the system's configured value - only changing it here will not change the actual home directory.

**Related Name****Default Value**

/var/lib/hadoop-yarn

**API Name**

hdfs\_user\_home\_dir

**Required**

true

### HDFS Replication Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

**Description**

For advanced use only, a string to be inserted into mapred-site.xml. Applies to all HDFS Replication jobs.

**Related Name****Default Value****API Name**

mapreduce\_service\_replication\_config\_safety\_valve

**Required**

false

### System Group

**Description**

The group that this service's processes should run as. (Except the Job History Server, which has its own group.)

**Related Name****Default Value**

hadoop

**API Name**

process\_groupname

**Required**

true

### System User

**Description**

The user that this service's processes should run as. (Except the Job History Server, which has its own user)

**Related Name****Default Value**

yarn

**API Name**

process\_username

**Required**

true

**YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-audit.xml****Description**

For advanced use only, a string to be inserted into ranger-yarn-audit.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ranger\_audit\_safety\_valve

**Required**

false

**YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-security.xml****Description**

For advanced use only, a string to be inserted into ranger-yarn-security.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ranger\_security\_safety\_valve

**Required**

false

**YARN Application Classpath****Description**

Entries to add to the classpaths of YARN applications.

**Related Name**

yarn.application.classpath

**Default Value**

```
$SHADOOP_CLIENT_CONF_DIR $SHADOOP_COMMON_HOME/*
$SHADOOP_COMMON_HOME/lib/* $SHADOOP_HDFS_HOME/* $SHADOOP_HDFS_HOME/
lib/* $SHADOOP_YARN_HOME/* $SHADOOP_YARN_HOME/lib/*
```

**API Name**

yarn\_application\_classpath

**Required**

false

**YARN Service Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

For advanced use only, a string to be inserted into core-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

yarn\_core\_site\_safety\_valve

**Required**

false

**Fair Scheduler Configuration Rules (Deployed)****Description**

A list specifying the rules to run to determine which Fair Scheduler configuration to use.

**Related Name****Default Value**

[]

**API Name**

yarn\_fs\_schedule\_rules

**Required**

false

**Fair Scheduler Configuration Rules (Staged)****Description**

A list specifying the rules to run to determine which Fair Scheduler configuration to use. Typically edited using the Rules configuration UI.

**Related Name****Default Value****API Name**

yarn\_fs\_schedule\_rules\_draft

**Required**

false

**Fair Scheduler Allocations (Deployed)****Description**

JSON representation of all the configurations that the Fair Scheduler can take on across all schedules.

**Related Name****Default Value**

```
queuePlacementRules: [ create: true, name: specified , name: nestedUserQueue, rules:
[ name: default, queue: users ] ], queues: [ name: root, queues: [ name: default, queues: [],
schedulablePropertiesList: [ scheduleName: default ], schedulingPolicy: drf , name: users, queues:
[], schedulablePropertiesList: [ scheduleName: default ], schedulingPolicy: drf, type: parent ],
schedulablePropertiesList: [ scheduleName: default ], schedulingPolicy: drf ], users: []
```

**API Name**

yarn\_fs\_scheduled\_allocations

**Required**

false

### Fair Scheduler Allocations (Staged)

**Description**

JSON representation of all the configurations that the Fair Scheduler can take on across all schedules. Typically edited using the Pools configuration UI.

**Related Name****Default Value****API Name**

yarn\_fs\_scheduled\_allocations\_draft

**Required**

false

### YARN Service Advanced Configuration Snippet (Safety Valve) for hadoop-policy.xml

**Description**

For advanced use only, a string to be inserted into hadoop-policy.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

yarn\_hadoop\_policy\_config\_safety\_valve

**Required**

false

### YARN Service Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

**Description**

For advanced use only, a string to be inserted into yarn-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

yarn\_service\_config\_safety\_valve

**Required**

false

### YARN Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

yarn\_service\_env\_safety\_valve

**Required**

false

### YARN Service MapReduce Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into mapred-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

yarn\_service\_mapred\_safety\_valve

**Required**

false

### HDFS Replication Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

**Description**

For advanced use only, a string to be inserted into yarn-site.xml. Applies to all HDFS Replication jobs.

**Related Name****Default Value****API Name**

yarn\_service\_replication\_config\_safety\_valve

**Required**

false

### YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml

**Description**

For advanced use only, a string to be inserted into ssl-client.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

yarn\_ssl\_client\_safety\_valve

**Required**

false

### YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml

**Description**

For advanced use only, a string to be inserted into ssl-server.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

yarn\_ssl\_server\_safety\_valve

**Required**

false

## Log Aggregation

### Enable Log Aggregation

**Description**

Specifies if log aggregation is enabled.

**Related Name**

yarn.log-aggregation-enable

**Default Value**

true

**API Name**

yarn\_log\_aggregation\_enable

**Required**

false

### Supported Log Aggregation File Formats

**Description**

Specifies which log file formats are supported. The first file format in the list is used to write the aggregated logs. TFile format is always added to support backward compatibility.

**Related Name**

yarn.log-aggregation.file-formats

**Default Value**

IFile TFile

**API Name**

yarn\_log\_aggregation\_file\_formats

**Required**

false

### Remote App Log Directory for IFile Format

**Description**

Specifies the path of the directory where application logs are stored after an application is completed if IFile format is given as the file format for writing. This configuration overwrites the one given in NodeManager level (yarn.nodemanager.remote-app-log-dir).

**Related Name**

yarn.log-aggregation.IFile.remote-app-log-dir

**Default Value**

/tmp/logs

**API Name**

yarn\_log\_aggregation\_IFile\_remote\_app\_log\_dir

**Required**

false

### Remote App Log Directory Suffix for IFile Format

**Description**

The remote log directory is created at {remote-app-log-dir}/\${user}/{thisParam} if IFile format is selected for writing. This configuration overwrites the one given in NodeManager level (yarn.nodemanager.remote-app-log-dir-suffix).

**Related Name**`yarn.log-aggregation.IFile.remote-app-log-dir-suffix`**Default Value**`ifile`**API Name**`yarn_log_aggregation_IFile_remote_app_log_dir_suffix`**Required**`false`**Log Aggregation Retention Period****Description**

Specifies how long aggregation logs are kept before they are deleted.

**Related Name**`yarn.log-aggregation.retain-seconds`**Default Value**`7 day(s)`**API Name**`yarn_log_aggregation_retain_seconds`**Required**`false`**Log Aggregation Status Timeout****Description**

Specifies the maximum amount of time that the NodeManager has for reporting a container's log aggregation status. If no log aggregation status is sent by the NodeManager within the allotted time, the ResourceManager reports a TIME\_OUT log aggregation status for that container.

**Related Name**`yarn.log-aggregation-status.time-out.ms`**Default Value**`10 minute(s)`**API Name**`yarn_log_aggregation_status_time_out_ms`**Required**`false`**Remote App Log Directory for TFile Format****Description**

Specifies the path of the directory where application logs are stored after an application is completed if TFile format is selected for writing. This configuration overwrites the one given in NodeManager level (`yarn.nodemanager.remote-app-log-dir`).

**Related Name**`yarn.log-aggregation.TFile.remote-app-log-dir`**Default Value****API Name**`yarn_log_aggregation_TFile_remote_app_log_dir`

**Required**

false

**Remote App Log Directory Suffix for TFile Format****Description**

The remote log directory is created at {remote-app-log-dir}/{user}/{thisParam} if TFile format is selected for writing. This configuration overwrites the one given in NodeManager level (yarn.nodemanager.remote-app-log-dir-suffix).

**Related Name**

yarn.log-aggregation.TFile.remote-app-log-dir-suffix

**Default Value****API Name**

yarn\_log\_aggregation\_TFile\_remote\_app\_log\_dir\_suffix

**Required**

false

**Log Aggregation Compression Type****Description**

Specifies the TFile compression type used to compress aggregated logs.

**Related Name**

yarn.nodemanager.log-aggregation.compression-type

**Default Value**

none

**API Name**

yarn\_nodemanager\_log\_aggregation\_compression\_type

**Required**

false

**Monitoring****Admin Users Applications List Visibility Settings****Description**

Controls which applications an admin user can see in the applications list view

**Related Name****Default Value**

ALL

**API Name**

admin\_application\_list\_settings

**Required**

true

**Enable Log Event Capture****Description**

When set, each role identifies important log events and forwards them to Cloudera Manager.

**Related Name**

**Default Value**

true

**API Name**

catch\_events

**Required**

false

**Cloudera Manager Container Usage Metrics Directory****Description**

DFS directory where the container usage metrics from Cloudera Manager sink are stored by YARN NodeManagers. Cloudera Service Monitor will read the container usage metrics and aggregate them for generating usage reports. Note: If you change this, you will need to re-run the Create YARN Container Usage Metrics Dir command.

**Related Name****Default Value**

/tmp/cmYarnContainerMetrics

**API Name**

cm\_yarn\_container\_usage\_input\_dir

**Required**

true

**Maximum Hours to Aggregate Usage Metrics****Description**

Maximum number of hours in the past for which container usage aggregation is performed by Cloudera Service Monitor.

**Related Name****Default Value**

6

**API Name**

cm\_yarn\_container\_usage\_job\_go\_back\_window\_hours

**Required**

true

**Reduce Tasks for Container Usage MapReduce Job****Description**

Number of reduce tasks to use for the MapReduce job to aggregate container usage metrics.

**Related Name****Default Value**

1

**API Name**

cm\_yarn\_container\_usage\_job\_num\_reduce\_tasks

**Required**

true

### Container Usage MapReduce Job Pool

**Description**

YARN pool which is used to submit the job to aggregate container usage metrics.

**Related Name****Default Value****API Name**

cm\_yarn\_container\_usage\_job\_pool

**Required**

false

### Container Usage MapReduce Job User

**Description**

User that Cloudera Service Monitor uses to run the MapReduce job to aggregate container usage metrics. Note: If you change this user, you need to change the owner of the existing Container Usage Metrics and Output Directories.

**Related Name****Default Value****API Name**

cm\_yarn\_container\_usage\_job\_user

**Required**

false

### Container Usage Output Directory

**Description**

DFS directory where the aggregated container usage metrics are stored by Cloudera Service Monitor. This directory is created by Cloudera Service Monitor before running the usage aggregation MapReduce job for the first time.

**Related Name****Default Value**

/tmp/cmYarnContainerMetricsAggregate

**API Name**

cm\_yarn\_container\_usage\_output\_dir

**Required**

true

### Enable Container Usage Metrics Collection

**Description**

Enables storing YARN container usage metrics in HDFS and periodically running a MapReduce job from Cloudera Service Monitor to aggregate them into per-application metrics. This is required for YARN usage reporting to work.

**Related Name****Default Value**

false

**API Name**

cm\_yarn\_enable\_container\_usage\_aggregation

**Required**

true

**Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Event Retry Frequency****Description**

The frequency in which the log4j event publication appender will retry sending undelivered log events to the Event server, in seconds

**Related Name****Default Value**

30

**API Name**

log\_event\_retry\_frequency

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Client Config Overrides****Description**

For advanced use only, a list of configuration properties that will be used by the Service Monitor instead of the current client configuration for the service.

**Related Name****Default Value**

```
<property> <name>mapreduce.output.fileoutputformat.compress</name> <value>>false</value> </property> <property> <name>mapreduce.output.fileoutputformat.compress.codec</name> <value>org.apache.hadoop.io.compress.DefaultCodec</value> </property> <property> <name>io.compression.codecs</name> <value>org.apache.hadoop.io.compress.DefaultCodec, org.apache.hadoop.io.compress.GzipCodec, org.apache.hadoop.io.compress.BZip2Codec, org.apache.hadoop.io.compress.DeflateCodec, org.apache.hadoop.io.compress.SnappyCodec, org.apache.hadoop.io.compress.Lz4Codec</value> </property>
```

**API Name**

smon\_client\_config\_overrides

**Required**

false

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value**

**API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Non-Admin Users Applications List Visibility Settings****Description**

Controls which applications non-admin users can see in the applications list view

**Related Name****Default Value**

ALL

**API Name**

user\_application\_list\_settings

**Required**

true

**Active ResourceManager Detection Window****Description**

The tolerance window used in YARN service tests that depend on detection of the active ResourceManager.

**Related Name****Default Value**

3 minute(s)

**API Name**

yarn\_active\_resourcemanager\_detection\_window

**Required**

false

**YARN Application Aggregates****Description**

Controls the aggregate metrics generated for YARN applications. The structure is a JSON list of the attributes to aggregate and the entities to aggregate to. For example, if the attributeName is 'maps\_completed' and the aggregationTargets is ['USER'] then the Service Monitor will create the metric 'yarn\_application\_maps\_completed\_rate' and, every ten minutes, will record the total maps completed for each user across all their YARN applications. By default it will also record the number of applications submitted ('apps\_submitted\_rate') for both users and pool. For a full list of the supported attributes see the YARN search page. Note that the valid aggregation targets are USER, YARN\_POOL, and YARN (the service), and that these aggregate metrics can be viewed on both the reports and charts search pages.

**Related Name****Default Value**

```
[ attributeName: maps_total, aggregationTargets: [USER, YARN_POOL_USER,
YARN_POOL, YARN, CLUSTER] , attributeName: reduces_total, aggregationTargets: [USER,
YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName: cpu_milliseconds,
aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] ,
attributeName: mb_millis_maps, aggregationTargets: [USER, YARN_POOL_USER,
YARN_POOL, YARN, CLUSTER] , attributeName: mb_millis_reduces, aggregationTargets:
```

```
[USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName:
vcores_millis_maps, aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL,
YARN, CLUSTER] , attributeName: vcores_millis_reduces, aggregationTargets: [USER,
YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName: file_bytes_read,
aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] ,
attributeName: file_bytes_written, aggregationTargets: [USER, YARN_POOL_USER,
YARN_POOL, YARN, CLUSTER] , attributeName: hdfs_bytes_read, aggregationTargets:
[USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName:
hdfs_bytes_written, aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL,
YARN, CLUSTER] , attributeName: cm_cpu_milliseconds, aggregationTargets: [USER,
YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName: application_duration,
aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] ,
attributeName: s3a_bytes_read, aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL,
YARN, CLUSTER] , attributeName: s3a_bytes_written, aggregationTargets: [USER,
YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] , attributeName: adl_bytes_read,
aggregationTargets: [USER, YARN_POOL_USER, YARN_POOL, YARN, CLUSTER] ,
attributeName: adl_bytes_written, aggregationTargets: [USER, YARN_POOL_USER,
YARN_POOL, YARN, CLUSTER] ]
```

**API Name**

yarn\_application\_aggregates

**Required**

false

**Container Metrics Sampling Interval****Description**

Interval at which YARN container usage metrics are sampled. Increasing this configuration can reduce the accuracy of container usage metrics, whereas setting it too low will increase the resources used to compute container usage.

**Related Name**

yarn.nodemanager.container-monitor.interval-ms

**Default Value**

3 second(s)

**API Name**

yarn\_container\_seconds\_per\_sample

**Required**

true

**JobHistory Server Role Health Test****Description**

When computing the overall YARN health, consider JobHistory Server's health

**Related Name****Default Value**

true

**API Name**

yarn\_jobhistoryserver\_health\_enabled

**Required**

false

### Healthy NodeManager Monitoring Thresholds

**Description**

The health test thresholds of the overall NodeManager health. The check returns "Concerning" health if the percentage of "Healthy" NodeManagers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" NodeManagers falls below the critical threshold.

**Related Name****Default Value**

Warning: 95.0 %, Critical: 90.0 %

**API Name**

yarn\_nodemangers\_healthy\_thresholds

**Required**

false

### ResourceManager Activation Startup Tolerance

**Description**

The amount of time after ResourceManager(s) start that the lack of an active ResourceManager will be tolerated. This is an advanced option that does not often need to be changed.

**Related Name****Default Value**

3 minute(s)

**API Name**

yarn\_resourcemanager\_activation\_startup\_tolerance

**Required**

false

### Active ResourceManager Role Health Check

**Description**

When computing the overall YARN service health, whether to consider the active ResourceManager's health.

**Related Name****Default Value**

true

**API Name**

yarn\_resourcemanagers\_health\_enabled

**Required**

false

### Standby ResourceManager Health Check

**Description**

When computing the overall YARN service health, whether to consider the health of the standby ResourceManager.

**Related Name****Default Value**

true

**API Name**`yarn_standby_resourcemanager_health_enabled`**Required**`false`**Other****HDFS Service****Description**

Name of the HDFS service that this YARN service instance depends on

**Related Name****Default Value****API Name**`hdfs_service`**Required**`true`**Serve logs over HTTP****Description**

Whether to serve logs over HTTP from YARN web servers. This includes listing the logs directory at the /logs endpoint, which may be a security concern.

**Related Name**`hadoop.http.logs.enabled`**Default Value**`true`**API Name**`http_logs_enabled`**Required**`false`**Queue Manager Service****Description**

Name of the Queue Manager service that this YARN service instance depends on

**Related Name****Default Value****API Name**`queuemanager_service`**Required**`false`**Ranger Plugin Trusted Proxy IP Address****Description**

Accepts a list of IP addresses of proxy servers for trusting.

**Related Name**`ranger.plugin.yarn.trusted.proxy.ipaddress`

**Default Value****API Name**`ranger_plugin_trusted_proxy_ipaddress`**Required**`false`**Ranger Plugin Use X-Forwarded for IP Address****Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

**Related Name**`ranger.plugin.yarn.use.x-forwarded-for.ipaddress`**Default Value**`false`**API Name**`ranger_plugin_use_x_forwarded_for_ipaddress`**Required**`false`**Ranger Service****Description**

Name of the Ranger service that this Yarn service instance depends on

**Related Name****Default Value****API Name**`ranger_service`**Required**`false`**Enable ResourceManager ACLs****Description**

Whether users and groups specified in Admin ACL should be checked for authorization to perform admin operations.

**Related Name**`yarn.acl.enable`**Default Value**`true`**API Name**`yarn_acl_enable`**Required**`false`**Admin ACL****Description**

ACL that determines which users and groups can submit and kill applications in any pool, and can issue commands on ResourceManager roles.

**Related Name**

yarn.admin.acl

**Default Value**

yarn

**API Name**

yarn\_admin\_acl

**Required**

false

**Node Labels****Description**

Enable YARN Node Labels.

**Related Name**

yarn.node-labels.enabled

**Default Value**

true

**API Name**

yarn\_node\_labels\_enabled

**Required**

false

**Node Manager Graceful Decommission Timeout****Description**

This is the maximum time to wait for running containers and applications to complete before transition a DECOMMISSIONING node into DECOMMISSIONED. (-1 indicates infinite timeout, 0 indicates non-graceful)

**Related Name**

yarn.resourcemanager.nodemanager-graceful-decommission-timeout-secs

**Default Value**

0 second(s)

**API Name**

yarn\_resourcemanager\_nodemanager\_graceful\_decommission\_timeout\_secs

**Required**

false

**Preemption****Description**

Enables Preemption for ResourceManager Capacity Scheduler.

**Related Name**

yarn.resourcemanager.scheduler.monitor.enable

**Default Value**

true

**API Name**

yarn\_resourcemanager\_scheduler\_monitor\_enable

**Required**

false

**RM-HA Cluster ID****Description**

Cluster ID used when ResourceManager is Highly Available.

**Related Name**

yarn.resourcemanager.cluster-id

**Default Value**

yarnRM

**API Name**

yarn\_rm\_ha\_cluster\_id

**Required**

false

**ZooKeeper Service****Description**

Name of the ZooKeeper service that this YARN service instance depends on

**Related Name****Default Value****API Name**

zookeeper\_service

**Required**

false

**Proxy****Llama Proxy User Groups****Description**

Comma-delimited list of groups that you want to allow the Llama (AM for Impala) user to impersonate. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.proxyuser.llama.groups

**Default Value**

\*

**API Name**

llama\_proxy\_user\_groups\_list

**Required**

false

**Llama Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the Llama (AM for Impala) user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.proxyuser.llama.hosts

**Default Value**

\*

**API Name**

llama\_proxy\_user\_hosts\_list

**Required**

false

## Resource Management

### Limit Nonsecure Container Executor Users

**Description**

This determines the user Linux container executor should run as on a non-secure cluster. If this value is set to true, then all containers will be launched as the user specified in `yarn.nodemanager.linux-container-executor.nonsecure-mode.local-user`. If this value is set to false, then containers will run as the user who submitted the application.

**Related Name****Default Value**

true

**API Name**

yarn\_nodemanager\_linux\_container\_executor\_nonsecure\_mode\_limit\_users

**Required**

false

### UNIX User for Nonsecure Mode with Linux Container Executor

**Description**

UNIX user that containers run as when Linux-container-executor is used in nonsecure mode.

**Related Name**

yarn.nodemanager.linux-container-executor.nonsecure-mode.local-user

**Default Value**

nobody

**API Name**

yarn\_nodemanager\_linux\_container\_executor\_nonsecure\_mode\_local\_user

**Required**

false

### Allow Undeclared Pools

**Description**

When set to true, pools specified in applications but not explicitly configured, are created at runtime with default settings. When set to false, applications specifying pools not explicitly configured run in a pool named default. This setting applies when an application explicitly specifies a pool and when the application runs in a pool named with the username associated with the application.

**Related Name**`yarn.scheduler.fair.allow-undeclared-pools`**Default Value**`true`**API Name**`yarn_scheduler_fair_allow_undeclared_pools`**Required**`false`**Use CGroups for Resource Management****Description**

Whether YARN creates a cgroup per container, thereby isolating the CPU usage of containers. When set, `yarn.nodemanager.linux-container-executor.resources-handler.class` is configured to `org.apache.hadoop.yarn.server.nodemanager.util.CgroupsLCEResourcesHandler`. The host (in Cloudera Manager) must have cgroups enabled. The number of shares allocated to all YARN containers is configured by adjusting the CPU shares value of the Node Manager in the Resource Management configuration group.

**Related Name**`yarn.nodemanager.linux-container-executor.resources-handler.class`**Default Value**`false`**API Name**`yarn_service_cgroups`**Required**`false`**Always Use Linux Container Executor****Description**

Whether YARN uses the Linux Container Executor both in secure (Kerberos) and insecure (not Kerberos) environments. Cgroups enforcement only works when the Linux Container Executor is used.

**Related Name**`yarn.nodemanager.container-executor.class`**Default Value**`false`**API Name**`yarn_service_lce_always`**Required**`false`**Resource Types****Resource Types****Description**

Resource definition can be extended to include arbitrary countable resources. A countable resource is a resource that is consumed while a container is running, but is released afterwards. CPU, memory and GPU are countable resources.

**Related Name****Default Value****API Name**

resource\_types

**Required**

false

**Security****Enable Kerberos Authentication for HTTP Web-Consoles****Description**

Enables Kerberos authentication for Hadoop HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled for the HDFS service.

**Related Name****Default Value**

false

**API Name**

hadoop\_secure\_web\_ui

**Required**

false

**Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

yarn

**API Name**

kerberos\_princ\_name

**Required**

true

**Hive LLAP Kerberos Conf Staging Path****Description**

Staging directory for Hive LLAP Kerberos Configuration. This should generally not be changed.

**Related Name**

hive\_llap\_kerberos\_staging\_path

**Default Value**

/var/lib/hadoop-yarn

**API Name**

llap\_kerberos\_staging\_path

**Required**

false

### Ranger DFS Audit Path

**Description**

The DFS path on which Ranger audits are written. The special placeholder `'${ranger_base_audit_url}'` should be used as the prefix, in order to use the centralized location defined in the Ranger service.

**Related Name**

`xasecure.audit.destination.hdfs.dir`

**Default Value**

`$ranger_base_audit_url/yarn`

**API Name**

`ranger_audit_hdfs_dir`

**Required**

`false`

### Ranger Audit DFS Spool Dir

**Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

`xasecure.audit.destination.hdfs.batch.filespool.dir`

**Default Value**

`/var/log/yarn/audit/hdfs/spool`

**API Name**

`ranger_audit_hdfs_spool_dir`

**Required**

`false`

### Ranger Audit Solr Spool Dir

**Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**

`xasecure.audit.destination.solr.batch.filespool.dir`

**Default Value**

`/var/log/yarn/audit/solr/spool`

**API Name**

`ranger_audit_solr_spool_dir`

**Required**

`false`

### Ranger Policy Cache Directory

**Description**

The directory where Ranger security policies are cached locally.

**Related Name**

`ranger.plugin.yarn.policy.cache.dir`

**Default Value**

`/var/lib/ranger/yarn/policy-cache`

**API Name**

ranger\_policy\_cache\_dir

**Required**

false

**TLS/SSL Client Truststore File Location****Description**

Path to the truststore file used when roles of this service act as TLS/SSL clients. Overrides the cluster-wide default truststore location set in HDFS. This truststore must be in JKS format. The truststore contains certificates of trusted servers, or of Certificate Authorities trusted to identify servers. The contents of the truststore can be modified without restarting any roles. By default, changes to its contents are picked up within ten seconds. If not set, the default Java truststore is used to verify certificates.

**Related Name**

ssl.client.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**TLS/SSL Client Truststore File Password****Description**

Password for the TLS/SSL client truststore. Overrides the cluster-wide default truststore password set in HDFS.

**Related Name**

ssl.client.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Hadoop TLS/SSL Server Keystore Key Password****Description**

Password that protects the private key contained in the server keystore used for encrypted shuffle and encrypted web UIs. Applies to all configurations of daemon roles of this service.

**Related Name**

ssl.server.keystore.keypassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

### Hadoop TLS/SSL Server Keystore File Location

**Description**

Path to the keystore file containing the server certificate and private key used for encrypted shuffle and encrypted web UIs. Applies to configurations of all daemon roles of this service.

**Related Name**

ssl.server.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### Hadoop TLS/SSL Server Keystore File Password

**Description**

Password for the server keystore file used for encrypted shuffle and encrypted web UIs. Applies to configurations of all daemon roles of this service.

**Related Name**

ssl.server.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### SSL/TLS Cipher Suite

**Description**

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

**Related Name**

ssl.server.exclude.cipher.list

**Default Value**

modern2018

**API Name**

tls\_ciphers

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Configuration Validator: Allowed System Users****Description**

Whether to suppress configuration warnings produced by the Allowed System Users configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_container\_executor\_allowed\_system\_users

**Required**

true

**Suppress Configuration Validator: Banned System Users****Description**

Whether to suppress configuration warnings produced by the Banned System Users configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_container\_executor\_banned\_users

**Required**

true

### Suppress Configuration Validator: Container Executor Group

**Description**

Whether to suppress configuration warnings produced by the Container Executor Group configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_container\_executor\_group

**Required**

true

### Suppress Configuration Validator: NodeManager GPU Devices Allowed

**Description**

Whether to suppress configuration warnings produced by the NodeManager GPU Devices Allowed configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gpu\_plugin\_allowed\_devices

**Required**

true

### Suppress Configuration Validator: NodeManager GPU Detection Executable

**Description**

Whether to suppress configuration warnings produced by the NodeManager GPU Detection Executable configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gpu\_plugin\_detector\_path

**Required**

true

### Suppress Configuration Validator: Running Job History Location

**Description**

Whether to suppress configuration warnings produced by the Running Job History Location configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_hadoop_job_history_dir`**Required**`true`**Suppress Configuration Validator: Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Hadoop Metrics2 Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_metrics2_safety_valve`**Required**`true`**Suppress Configuration Validator: System Group****Description**

Whether to suppress configuration warnings produced by the System Group configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_history_process_groupname`**Required**`true`**Suppress Configuration Validator: System User****Description**

Whether to suppress configuration warnings produced by the System User configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_history_process_username`**Required**`true`**Suppress Configuration Validator: I/O Sort Factor****Description**

Whether to suppress configuration warnings produced by the I/O Sort Factor configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_io\_sort\_factor

**Required**

true

**Suppress Configuration Validator: JobHistory Server Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

Whether to suppress configuration warnings produced by the JobHistory Server Advanced Configuration Snippet (Safety Valve) for yarn-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jobhistory\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: JobHistory Server Advanced Configuration Snippet (Safety Valve) for mapred-site.xml****Description**

Whether to suppress configuration warnings produced by the JobHistory Server Advanced Configuration Snippet (Safety Valve) for mapred-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jobhistory\_mapred\_safety\_valve

**Required**

true

**Suppress Configuration Validator: JobHistory Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the JobHistory Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jobhistory\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Role-Specific Kerberos Principal

**Description**

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

### Suppress Configuration Validator: CGroups Hierarchy

**Description**

Whether to suppress configuration warnings produced by the CGroups Hierarchy configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_linux\_container\_executor\_cgroups\_hierarchy

**Required**

true

### Suppress Configuration Validator: ResourceManager Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the ResourceManager Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Rules to Extract Events from Log Files

**Description**

Whether to suppress configuration warnings produced by the Rules to Extract Events from Log Files configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

**Suppress Configuration Validator: Healthchecker Script Arguments****Description**

Whether to suppress configuration warnings produced by the Healthchecker Script Arguments configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapred\_healthchecker\_script\_args

**Required**

true

**Suppress Configuration Validator: Healthchecker Script Path****Description**

Whether to suppress configuration warnings produced by the Healthchecker Script Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapred\_healthchecker\_script\_path

**Required**

true

**Suppress Configuration Validator: Compression Codec of MapReduce Map Output****Description**

Whether to suppress configuration warnings produced by the Compression Codec of MapReduce Map Output configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapred\_map\_output\_compression\_codec

**Required**

true

**Suppress Configuration Validator: Compression Codec of MapReduce Job Output****Description**

Whether to suppress configuration warnings produced by the Compression Codec of MapReduce Job Output configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_mapred\_output\_compression\_codec

**Required**

true

**Suppress Configuration Validator: MR Application Environment****Description**

Whether to suppress configuration warnings produced by the MR Application Environment configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_admin\_user\_env

**Required**

true

**Suppress Configuration Validator: Maximum Number of Attempts for MapReduce Jobs****Description**

Whether to suppress configuration warnings produced by the Maximum Number of Attempts for MapReduce Jobs configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_am\_max\_attempts

**Required**

true

**Suppress Configuration Validator: MR Application Classpath****Description**

Whether to suppress configuration warnings produced by the MR Application Classpath configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_application\_classpath

**Required**

true

**Suppress Configuration Validator: MR Application Framework Path****Description**

Whether to suppress configuration warnings produced by the MR Application Framework Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_application\_framework\_path

**Required**

true

### Suppress Configuration Validator: MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

**Description**

Whether to suppress configuration warnings produced by the MapReduce Client Advanced Configuration Snippet (Safety Valve) for mapred-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_client\_config\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh

**Description**

Whether to suppress configuration warnings produced by the Gateway Client Environment Advanced Configuration Snippet (Safety Valve) for hadoop-env.sh configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_client\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Client Java Configuration Options

**Description**

Whether to suppress configuration warnings produced by the Client Java Configuration Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_client\_java\_opts

**Required**

true

**Suppress Configuration Validator: ACL For Modifying A Job****Description**

Whether to suppress configuration warnings produced by the ACL For Modifying A Job configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_job\_acl\_modify\_job

**Required**

true

**Suppress Configuration Validator: ACL For Viewing A Job****Description**

Whether to suppress configuration warnings produced by the ACL For Viewing A Job configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_job\_acl\_view\_job

**Required**

true

**Suppress Configuration Validator: Redacted MapReduce Job Properties****Description**

Whether to suppress configuration warnings produced by the Redacted MapReduce Job Properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_job\_redacted\_properties

**Required**

true

**Suppress Configuration Validator: MapReduce JobHistory Server Port****Description**

Whether to suppress configuration warnings produced by the MapReduce JobHistory Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_jobhistory\_address

**Required**

true

**Suppress Configuration Validator: MapReduce JobHistory Server Admin Interface Port****Description**

Whether to suppress configuration warnings produced by the MapReduce JobHistory Server Admin Interface Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_jobhistory\_admin\_address

**Required**

true

**Suppress Configuration Validator: MapReduce JobHistory Web Application HTTP Port****Description**

Whether to suppress configuration warnings produced by the MapReduce JobHistory Web Application HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_jobhistory\_webapp\_address

**Required**

true

**Suppress Configuration Validator: MapReduce JobHistory Web Application HTTPS Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the MapReduce JobHistory Web Application HTTPS Port (TLS/SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_jobhistory\_webapp\_https\_address

**Required**

true

**Suppress Configuration Validator: Map Task Java Opts Base****Description**

Whether to suppress configuration warnings produced by the Map Task Java Opts Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_map\_java\_opts

**Required**

true

**Suppress Configuration Validator: Map Task Maximum Heap Size Validator****Description**

Whether to suppress configuration warnings produced by the Map Task Maximum Heap Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_map\_java\_opts\_max\_heap\_mapreduce\_map\_memory\_mb\_validator

**Required**

true

**Suppress Configuration Validator: Reduce Task Java Opts Base****Description**

Whether to suppress configuration warnings produced by the Reduce Task Java Opts Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_reduce\_java\_opts

**Required**

true

**Suppress Configuration Validator: Reduce Task Maximum Heap Size Validator****Description**

Whether to suppress configuration warnings produced by the Reduce Task Maximum Heap Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_reduce\_java\_opts\_max\_heap\_mapreduce\_reduce\_memory\_mb\_validator

**Required**

true

**Suppress Configuration Validator: Job Submit Replication Validator****Description**

Whether to suppress configuration warnings produced by the Job Submit Replication Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mapreduce\_replication\_validator

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for JobHistory Server****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for JobHistory Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mr2\_jobhistory\_java\_opts

**Required**

true

**Suppress Configuration Validator: JobHistory Server Log Directory****Description**

Whether to suppress configuration warnings produced by the JobHistory Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mr2\_jobhistory\_log\_dir

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for NodeManager****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for NodeManager configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_node\_manager\_java\_opts

**Required**

true

**Suppress Configuration Validator: NodeManager Log Directory****Description**

Whether to suppress configuration warnings produced by the NodeManager Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_node\_manager\_log\_dir

**Required**

true

**Suppress Configuration Validator: NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

Whether to suppress configuration warnings produced by the NodeManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nodemanager\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml****Description**

Whether to suppress configuration warnings produced by the NodeManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nodemanager\_mapred\_safety\_valve

**Required**

true

### Suppress Configuration Validator: NodeManager Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the NodeManager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nodemanager\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: NodeManager Web Application HTTPS Port (TLS/SSL)

**Description**

Whether to suppress configuration warnings produced by the NodeManager Web Application HTTPS Port (TLS/SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nodemanager\_webserver\_https\_port

**Required**

true

### Suppress Configuration Validator: NodeManager Web Application HTTP Port

**Description**

Whether to suppress configuration warnings produced by the NodeManager Web Application HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nodemanager\_webserver\_port

**Required**

true

### Suppress Configuration Validator: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for ResourceManager****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for ResourceManager configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resource\_manager\_java\_opts

**Required**

true

**Suppress Configuration Validator: ResourceManager Log Directory****Description**

Whether to suppress configuration warnings produced by the ResourceManager Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resource\_manager\_log\_dir

**Required**

true

**Suppress Configuration Validator: Capacity Scheduler Configuration Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Capacity Scheduler Configuration Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_capacity\_scheduler\_configuration

**Required**

true

**Suppress Configuration Validator: ResourceManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

Whether to suppress configuration warnings produced by the ResourceManager Advanced Configuration Snippet (Safety Valve) for yarn-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Fair Scheduler XML Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Fair Scheduler XML Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_fair\_scheduler\_configuration

**Required**

true

**Suppress Configuration Validator: ResourceManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml****Description**

Whether to suppress configuration warnings produced by the ResourceManager Advanced Configuration Snippet (Safety Valve) for mapred-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_mapred\_safety\_valve

**Required**

true

**Suppress Configuration Validator: ResourceManager Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the ResourceManager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: ResourceManager Web Application HTTPS Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the ResourceManager Web Application HTTPS Port (TLS/SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_webserver\_https\_port

**Required**

true

**Suppress Configuration Validator: ResourceManager Web Application HTTP Port****Description**

Whether to suppress configuration warnings produced by the ResourceManager Web Application HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_resourcemanager\_webserver\_port

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes\_allow.txt****Description**

Whether to suppress configuration warnings produced by the ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes\_allow.txt configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_hosts\_allow\_safety\_valve

**Required**

true

**Suppress Configuration Validator: ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes\_exclude.txt****Description**

Whether to suppress configuration warnings produced by the ResourceManager Advanced Configuration Snippet (Safety Valve) for nodes\_exclude.txt configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_hosts\_exclude\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Configuration Validator: ApplicationMaster Environment

**Description**

Whether to suppress configuration warnings produced by the ApplicationMaster Environment configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_app\_mapreduce\_am\_admin\_user\_env

**Required**

true

### Suppress Configuration Validator: ApplicationMaster Java Opts Base

**Description**

Whether to suppress configuration warnings produced by the ApplicationMaster Java Opts Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_app\_mapreduce\_am\_command\_opts

**Required**

true

### Suppress Configuration Validator: ApplicationMaster Java Maximum Heap Size Validator

**Description**

Whether to suppress configuration warnings produced by the ApplicationMaster Java Maximum Heap Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_app\_mapreduce\_am\_max\_heap\_yarn\_app\_mapreduce\_am\_resource\_mb\_validator

**Required**

true

### Suppress Configuration Validator: MapReduce ApplicationMaster Staging Root Directory

**Description**

Whether to suppress configuration warnings produced by the MapReduce ApplicationMaster Staging Root Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_app\_mapreduce\_am\_staging\_dir

**Required**

true

**Suppress Configuration Validator: YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

Whether to suppress configuration warnings produced by the YARN Client Advanced Configuration Snippet (Safety Valve) for yarn-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Allowed Devices for Docker Containers****Description**

Whether to suppress configuration warnings produced by the Allowed Devices for Docker Containers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_docker\_allowed\_devices

**Required**

true

**Suppress Configuration Validator: Allowed Read-Only Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the Allowed Read-Only Mounts for Docker Containers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_docker\_allowed\_ro\_mounts

**Required**

true

**Suppress Configuration Validator: Allowed Read-Write Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the Allowed Read-Write Mounts for Docker Containers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_docker\_allowed\_rw\_mounts

**Required**

true

**Suppress Configuration Validator: Allowed Volume Drivers for Docker Containers****Description**

Whether to suppress configuration warnings produced by the Allowed Volume Drivers for Docker Containers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_docker\_allowed\_volume\_drivers

**Required**

true

**Suppress Configuration Validator: Docker Binary Path****Description**

Whether to suppress configuration warnings produced by the Docker Binary Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_docker\_binary

**Required**

true

**Suppress Configuration Validator: Validates configuration of YARN NodeManagers when Docker on YARN feature is enabled.****Description**

Whether to suppress configuration warnings produced by the Validates configuration of YARN NodeManagers when Docker on YARN feature is enabled. configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_docker\_on\_yarn\_validator

**Required**

true

### Suppress Configuration Validator: Trusted Registries for Docker Containers

**Description**

Whether to suppress configuration warnings produced by the Trusted Registries for Docker Containers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_docker\_trusted\_registries

**Required**

true

### Suppress Configuration Validator: YARN GPU Resources Validator

**Description**

Whether to suppress configuration warnings produced by the YARN GPU Resources Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_gpu\_validator

**Required**

true

### Suppress Configuration Validator: NodeManager IPC Address

**Description**

Whether to suppress configuration warnings produced by the NodeManager IPC Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_address

**Required**

true

### Suppress Configuration Validator: Containers Environment Variable

**Description**

Whether to suppress configuration warnings produced by the Containers Environment Variable configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_admin\_env

**Required**

true

**Suppress Configuration Validator: Containers Environment Variables Whitelist****Description**

Whether to suppress configuration warnings produced by the Containers Environment Variables Whitelist configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_env\_whitelist

**Required**

true

**Suppress Configuration Validator: NodeManager Local Directories****Description**

Whether to suppress configuration warnings produced by the NodeManager Local Directories configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_local\_dirs

**Required**

true

**Suppress Configuration Validator: Localizer Port****Description**

Whether to suppress configuration warnings produced by the Localizer Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_localizer\_address

**Required**

true

**Suppress Configuration Validator: Minimum Hard Limit for Log Aggregation Roll Monitoring Interval****Description**

Whether to suppress configuration warnings produced by the Minimum Hard Limit for Log Aggregation Roll Monitoring Interval configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_log\_aggregation\_roll\_monitoring\_interval\_seconds\_min

**Required**

true

**Suppress Configuration Validator: Log Aggregation Roll Monitoring Interval Minimum Validator****Description**

Whether to suppress configuration warnings produced by the Log Aggregation Roll Monitoring Interval Minimum Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_log\_aggregation\_roll\_monitoring\_interval\_seconds\_minimum\_validator

**Required**

true

**Suppress Configuration Validator: NodeManager Container Log Directories****Description**

Whether to suppress configuration warnings produced by the NodeManager Container Log Directories configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_log\_dirs

**Required**

true

**Suppress Configuration Validator: NodeManager Recovery Directory****Description**

Whether to suppress configuration warnings produced by the NodeManager Recovery Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_recovery\_dir

**Required**

true

### Suppress Configuration Validator: Remote App Log Directory

**Description**

Whether to suppress configuration warnings produced by the Remote App Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_remote\_app\_log\_dir

**Required**

true

### Suppress Configuration Validator: Remote App Log Directory Suffix

**Description**

Whether to suppress configuration warnings produced by the Remote App Log Directory Suffix configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_remote\_app\_log\_dir\_suffix

**Required**

true

### Suppress Configuration Validator: Allowed Linux Runtimes

**Description**

Whether to suppress configuration warnings produced by the Allowed Linux Runtimes configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_allowed\_runtimes

**Required**

true

### Suppress Configuration Validator: Allowed Docker Container Networks

**Description**

Whether to suppress configuration warnings produced by the Allowed Docker Container Networks configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_docker\_allowed\_container\_networks

**Required**

true

**Suppress Configuration Validator: Docker Capabilities****Description**

Whether to suppress configuration warnings produced by the Docker Capabilities configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_docker\_capabilities

**Required**

true

**Suppress Configuration Validator: Default Docker Container Network****Description**

Whether to suppress configuration warnings produced by the Default Docker Container Network configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_docker\_default\_container\_network

**Required**

true

**Suppress Configuration Validator: Default Read-Only Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the Default Read-Only Mounts for Docker Containers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_docker\_default\_ro\_mounts

**Required**

true

**Suppress Configuration Validator: Default Read-Write Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the Default Read-Write Mounts for Docker Containers configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_docker\_default\_rw\_mounts

**Required**

true

**Suppress Configuration Validator: Default Tempfs Mounts for Docker Containers****Description**

Whether to suppress configuration warnings produced by the Default Tempfs Mounts for Docker Containers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_docker\_default\_tmpfs\_mounts

**Required**

true

**Suppress Configuration Validator: ACL for Privileged Docker Containers****Description**

Whether to suppress configuration warnings produced by the ACL for Privileged Docker Containers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_nodemanager\_runtime\_linux\_docker\_privileged\_containers\_acl

**Required**

true

**Suppress Configuration Validator: ResourceManager Address****Description**

Whether to suppress configuration warnings produced by the ResourceManager Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resourcemanager\_address

**Required**

true

**Suppress Configuration Validator: Administration Address****Description**

Whether to suppress configuration warnings produced by the Administration Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resourcemanager\_admin\_address

**Required**

true

**Suppress Configuration Validator: ApplicationMaster Maximum Attempts****Description**

Whether to suppress configuration warnings produced by the ApplicationMaster Maximum Attempts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resourcemanager\_am\_max\_retries

**Required**

true

**Suppress Configuration Validator: Resource Tracker Address****Description**

Whether to suppress configuration warnings produced by the Resource Tracker Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resourcemanager\_resource\_tracker\_address

**Required**

true

**Suppress Configuration Validator: Scheduler Address****Description**

Whether to suppress configuration warnings produced by the Scheduler Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resourcemanager\_scheduler\_address

**Required**

true

### Suppress Configuration Validator: YARN Resource Types Validator

**Description**

Whether to suppress configuration warnings produced by the YARN Resource Types Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_resources\_validator

**Required**

true

### Suppress Parameter Validation: Cloudera Manager Container Usage Metrics Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Container Usage Metrics Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_cm\_yarn\_container\_usage\_input\_dir

**Required**

true

### Suppress Parameter Validation: Container Usage MapReduce Job Pool

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Usage MapReduce Job Pool parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_cm\_yarn\_container\_usage\_job\_pool

**Required**

true

### Suppress Parameter Validation: Container Usage MapReduce Job User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Usage MapReduce Job User parameter.

**Related Name****Default Value**

false

**API Name**`service_config_suppression_cm_yarn_container_usage_job_user`**Required**`true`**Suppress Parameter Validation: Container Usage Output Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Usage Output Directory parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_cm_yarn_container_usage_output_dir`**Required**`true`**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_gateway_count_validator`**Required**`true`**Suppress Configuration Validator: Secure Web UI Validator****Description**

Whether to suppress configuration warnings produced by the Secure Web UI Validator configuration validator.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_hadoop_secure_web_ui`**Required**`true`**Suppress Configuration Validator: Hadoop TLS/SSL Validator****Description**

Whether to suppress configuration warnings produced by the Hadoop TLS/SSL Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hadoop\_ssl\_validator

**Required**

true

**Suppress Parameter Validation: System User's Home Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User's Home Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hdfs\_user\_home\_dir

**Required**

true

**Suppress Configuration Validator: JobHistory Server Count Validator****Description**

Whether to suppress configuration warnings produced by the JobHistory Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_jobhistory\_count\_validator

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

### Suppress Parameter Validation: Llama Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Llama Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_llama\_proxy\_user\_groups\_list

**Required**

true

### Suppress Parameter Validation: Llama Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Llama Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_llama\_proxy\_user\_hosts\_list

**Required**

true

### Suppress Parameter Validation: Hive LLAP Kerberos Conf Staging Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive LLAP Kerberos Conf Staging Path parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_llap\_kerberos\_staging\_path

**Required**

true

### Suppress Parameter Validation: HDFS Replication Advanced Configuration Snippet (Safety Valve) for mapred-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Replication Advanced Configuration Snippet (Safety Valve) for mapred-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_mapreduce\_service\_replication\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: NodeManager Count Validator****Description**

Whether to suppress configuration warnings produced by the NodeManager Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_nodemanager\_count\_validator

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Ranger DFS Audit Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_hdfs\_dir

**Required**

true

**Suppress Parameter Validation: Ranger Audit DFS Spool Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_hdfs\_spool\_dir

**Required**

true

**Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Audit Solr Spool Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_solr\_spool\_dir

**Required**

true

### Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

### Suppress Parameter Validation: Ranger Policy Cache Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_policy\_cache\_dir

**Required**

true

### Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-security.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for ranger-yarn-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_security\_safety\_valve

**Required**

true

### Suppress Configuration Validator: ResourceManager Count Validator

**Description**

Whether to suppress configuration warnings produced by the ResourceManager Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_resource\_manager\_count\_validator

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Client Config Overrides****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Client Config Overrides parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_client\_config\_overrides

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: TLS/SSL Client Truststore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Client Truststore File Location parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: TLS/SSL Client Truststore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Client Truststore File Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Hadoop TLS/SSL Server Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop TLS/SSL Server Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Hadoop TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Parameter Validation: Hadoop TLS/SSL Server Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

### Suppress Parameter Validation: Admin ACL

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin ACL parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_admin\_acl

**Required**

true

### Suppress Parameter Validation: YARN Application Aggregates

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Application Aggregates parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_application\_aggregates

**Required**

true

### Suppress Parameter Validation: YARN Application Classpath

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Application Classpath parameter.

**Related Name****Default Value**

false

**API Name**`service_config_suppression_yarn_application_classpath`**Required**`true`**Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_yarn_core_site_safety_valve`**Required**`true`**Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for hadoop-policy.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for hadoop-policy.xml parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_yarn_hadoop_policy_config_safety_valve`**Required**`true`**Suppress Parameter Validation: Supported Log Aggregation File Formats****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Supported Log Aggregation File Formats parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_yarn_log_aggregation_file_formats`**Required**`true`**Suppress Parameter Validation: Remote App Log Directory for IFile Format****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory for IFile Format parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_log\_aggregation\_ifile\_remote\_app\_log\_dir

**Required**

true

**Suppress Parameter Validation: Remote App Log Directory Suffix for IFile Format****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory Suffix for IFile Format parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_log\_aggregation\_ifile\_remote\_app\_log\_dir\_suffix

**Required**

true

**Suppress Parameter Validation: Remote App Log Directory for TFile Format****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory for TFile Format parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_log\_aggregation\_tfile\_remote\_app\_log\_dir

**Required**

true

**Suppress Parameter Validation: Remote App Log Directory Suffix for TFile Format****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote App Log Directory Suffix for TFile Format parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_log\_aggregation\_tfile\_remote\_app\_log\_dir\_suffix

**Required**

true

### Suppress Parameter Validation: UNIX User for Nonsecure Mode with Linux Container Executor

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the UNIX User for Nonsecure Mode with Linux Container Executor parameter.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_yarn\_nodemanager\_linux\_container\_executor\_nonsecure\_mode\_local\_user

#### Required

true

### Suppress Configuration Validator: Yarn Queue Manager Validator

#### Description

Whether to suppress configuration warnings produced by the Yarn Queue Manager Validator configuration validator.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_yarn\_queue\_manager\_validator

#### Required

true

### Suppress Configuration Validator: YARN Resource Types Validator

#### Description

Whether to suppress configuration warnings produced by the YARN Resource Types Validator configuration validator.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_yarn\_resources\_validator

#### Required

true

### Suppress Parameter Validation: RM-HA Cluster ID

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the RM-HA Cluster ID parameter.

#### Related Name

#### Default Value

false

**API Name**

service\_config\_suppression\_yarn\_rm\_ha\_cluster\_id

**Required**

true

**Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for yarn-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_service\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: YARN Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: YARN Service MapReduce Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service MapReduce Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_service\_mapred\_safety\_valve

**Required**

true

### Suppress Parameter Validation: HDFS Replication Advanced Configuration Snippet (Safety Valve) for yarn-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Replication Advanced Configuration Snippet (Safety Valve) for yarn-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_service\_replication\_config\_safety\_valve

**Required**

true

### Suppress Parameter Validation: YARN Services Dependencies Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Services Dependencies Path parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_services\_framework\_path

**Required**

true

### Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_ssl\_client\_safety\_valve

**Required**

true

### Suppress Parameter Validation: YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Service Advanced Configuration Snippet (Safety Valve) for ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_yarn\_ssl\_server\_safety\_valve

**Required**

true

**Suppress Health Test: JobHistory Server Health****Description**

Whether to suppress the results of the JobHistory Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_yarn\_jobhistory\_health

**Required**

true

**Suppress Health Test: NodeManager Health****Description**

Whether to suppress the results of the NodeManager Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_yarn\_node\_managers\_healthy

**Required**

true

**Suppress Health Test: ResourceManager Health****Description**

Whether to suppress the results of the ResourceManager Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_yarn\_resourcemangers\_health

**Required**

true

### Suppress Health Test: YARN Container Usage Aggregation

**Description**

Whether to suppress the results of the YARN Container Usage Aggregation health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_yarn\_usage\_aggregation\_health

**Required**

true

### YARN Services Management

#### Enable YARN Services

**Description**

Configure YARN to support yarn managed services, enabling this will allow users to create long running YARN services like LLAP.

**Related Name****Default Value**

true

**API Name**

yarn\_services\_enabled

**Required**

false

#### YARN Services Dependencies Path

**Description**

This is the path where the YARN services dependencies tarball should be uploaded.

**Related Name**

yarn.service.framework.path

**Default Value**

/user/yarn/services/service-framework/\${cdhVersion}/service-dep.tar.gz

**API Name**

yarn\_services\_framework\_path

**Required**

false

## YARN Queue Manager Properties in Cloudera Runtime 7.1

Role groups:

### Service-Wide

## Advanced

### YARN Queue Manager Service Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties

**Description**

For advanced use only, a string to be inserted into conf/webapp.properties. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

conf/webapp.properties\_service\_safety\_valve

**Required**

false

### System Group

**Description**

The group that this service's processes should run as.

**Related Name****Default Value**

hadoop

**API Name**

process\_groupname

**Required**

true

### System User

**Description**

The user that this service's processes should run as.

**Related Name****Default Value**

yarn

**API Name**

process\_username

**Required**

true

### YARN Queue Manager Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

QUEUEMANAGER\_service\_env\_safety\_valve

**Required**

false

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on

how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

### Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

### Other

#### Enable Kerberos Authentication

**Description**

Specifies that the Hadoop cluster is secured using Kerberos authentication.

**Related Name**

kerberos.auth.enabled

**Default Value**

false

**API Name**

kerberos.auth.enabled

**Required**

false

#### ZooKeeper Service

**Description**

Name of the ZooKeeper service that this YARN Queue Manager service instance depends on

**Related Name****Default Value****API Name**

zookeeper\_service

**Required**

true

## Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Configuration Validator: YARN Queue Manager Webapp Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties

**Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/webapp.properties\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: YARN Queue Manager Webapp Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: YARN Queue Manager Webapp Log Directory

**Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp Log Directory configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Existing Cloudera Manager API Client Username****Description**

Whether to suppress configuration warnings produced by the Existing Cloudera Manager API Client Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_queuemanager\_cm\_api\_client\_login\_name

**Required**

true

**Suppress Configuration Validator: Existing Cloudera Manager API Client Password****Description**

Whether to suppress configuration warnings produced by the Existing Cloudera Manager API Client Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_queuemanager\_cm\_api\_client\_login\_password

**Required**

true

### Suppress Configuration Validator: YARN Queue Manager Store Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Store Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_queuemanager\_store\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: YARN Queue Manager Webapp Port

**Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_queuemanager\_webapp\_port

**Required**

true

### Suppress Configuration Validator: YARN Queue Manager Webapp Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_queuemanager\_webapp\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: YARN Queue Manager Webapp TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: YARN Queue Manager Webapp TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Configuration Validator: YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

### Suppress Configuration Validator: Stacks Collection Directory

**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Parameter Validation: YARN Queue Manager Service Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Service Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_conf/webapp.properties\_service\_safety\_valve

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_queuemanager\_service\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: YARN Queue Manager Store Count Validator****Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Store Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_queuemanager\_store\_count\_validator

**Required**

true

**Suppress Configuration Validator: YARN Queue Manager Webapp Count Validator****Description**

Whether to suppress configuration warnings produced by the YARN Queue Manager Webapp Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_queuemanager\_webapp\_count\_validator

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

## YARN Queue Manager Store

### Advanced

#### YARN Queue Manager Store Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties

**Description**

For advanced use only. A string to be inserted into conf/webapp.properties for this role only.

**Related Name****Default Value****API Name**

conf/webapp.properties\_role\_safety\_valve

**Required**

false

#### YARN Queue Manager Store Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

## Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**YARN Queue Manager Store Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

QUEUEMANAGER\_STORE\_role\_env\_safety\_valve

**Required**

false

**Logs****YARN Queue Manager Store Log Directory****Description**

The log directory for log files of the role YARN Queue Manager Store.

**Related Name**

yarn\_queuemanager\_store\_log\_dir

**Default Value**

/var/log/yarn/queuemanager

**API Name**

log\_dir

**Required**

false

**YARN Queue Manager Store Logging Threshold****Description**

The minimum log level for YARN Queue Manager Store logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**YARN Queue Manager Store Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for YARN Queue Manager Store logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**YARN Queue Manager Store Max Log Size****Description**

The maximum size, in megabytes, per log file for YARN Queue Manager Store logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

## Monitoring

### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

queuemanager\_store\_fd\_thresholds

**Required**

false

### YARN Queue Manager Store Host Health Test

**Description**

When computing the overall YARN Queue Manager Store health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

queuemanager\_store\_host\_health\_enabled

**Required**

false

### YARN Queue Manager Store Process Health Test

**Description**

Enables the health test that the YARN Queue Manager Store's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

queuemanager\_store\_scm\_health\_enabled

**Required**

false

### Role Triggers

**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Performance**

### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

### Resource Management

#### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

#### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

#### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

### Enable TLS/SSL for YARN Queue Manager Store

**Description**

Encrypt communication between clients and YARN Queue Manager Store using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

queuemanager\_store\_ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### YARN Queue Manager Store TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when YARN Queue Manager Store is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

queuemanager\_store\_keystore\_file

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### YARN Queue Manager Store TLS/SSL Server JKS Keystore File Password

**Description**

The password for the YARN Queue Manager Store JKS keystore file.

**Related Name**

queuemanager\_store\_password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Store Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/webapp.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Store Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Store Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Store Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_queuemanager\_store\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: YARN Queue Manager Store TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Parameter Validation: YARN Queue Manager Store TLS/SSL Server JKS Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Store TLS/SSL Server JKS Keystore File Password parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_store\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_store\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_store\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_store\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_store\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_store\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_store\_unexpected\_exits

**Required**

true

**YARN Queue Manager Webapp****Advanced****YARN Queue Manager Webapp Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties****Description**

For advanced use only. A string to be inserted into conf/webapp.properties for this role only.

**Related Name****Default Value****API Name**

conf/webapp.properties\_role\_safety\_valve

**Required**

false

**YARN Queue Manager Webapp Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

`oom_heap_dump_dir`

**Default Value**

`/tmp`

**API Name**

`oom_heap_dump_dir`

**Required**

`false`

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

`true`

**API Name**

`oom_heap_dump_enabled`

**Required**

`true`

### Kill When Out of Memory

**Description**

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

`true`

**API Name**

`oom_sigkill_enabled`

**Required**

`true`

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name**

**Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### YARN Queue Manager Webapp Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

QUEUEMANAGER\_WEBAPP\_role\_env\_safety\_valve

**Required**

false

### Logs

### YARN Queue Manager Webapp Log Directory

**Description**

The log directory for log files of the role YARN Queue Manager Webapp.

**Related Name**

yarn\_queuemanager\_webapp\_log\_dir

**Default Value**

/var/log/yarn/queuemanager

**API Name**

log\_dir

**Required**

false

### YARN Queue Manager Webapp Logging Threshold

**Description**

The minimum log level for YARN Queue Manager Webapp logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### YARN Queue Manager Webapp Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for YARN Queue Manager Webapp logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**YARN Queue Manager Webapp Max Log Size****Description**

The maximum size, in megabytes, per log file for YARN Queue Manager Webapp logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name**

**Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

queuemanager\_webapp\_fd\_thresholds

**Required**

false

**YARN Queue Manager Webapp Host Health Test****Description**

When computing the overall YARN Queue Manager Webapp health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

queuemanager\_webapp\_host\_health\_enabled

**Required**

false

**YARN Queue Manager Webapp Process Health Test****Description**

Enables the health test that the YARN Queue Manager Webapp's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

queuemanager\_webapp\_scm\_health\_enabled

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Existing Cloudera Manager API Client Username****Description**

An existing user that can make configuration changes via the Cloudera Manager API from YARN Queue Manager.

**Related Name**

queuemanager\_cm\_api\_client\_login\_name

**Default Value****API Name**

queuemanager\_cm\_api\_client\_login\_name

**Required**

true

**Existing Cloudera Manager API Client Password****Description**

Login credentials of the user who can make configuration changes via the Cloudera Manager API from YARN Queue Manager.

**Related Name**

queuemanager\_cm\_api\_client\_login\_password

**Default Value****API Name**

queuemanager\_cm\_api\_client\_login\_password

**Required**

true

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Ports and Addresses

### YARN Queue Manager Webapp Port

**Description**

The port that the YARN Queue Manager Webapp user interface listens on.

**Related Name**

queuemanager\_webapp\_port

**Default Value**

8082

**API Name**

queuemanager\_webapp\_port

**Required**

true

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path'  
\*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****YARN Queue Manager Webapp TLS/SSL Client Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that YARN Queue Manager Webapp might connect to. This is used when YARN Queue Manager Webapp is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

queuemanager.webapp.ssl.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**YARN Queue Manager Webapp TLS/SSL Client Trust Store Password****Description**

The password for the YARN Queue Manager Webapp TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

queuemanager.webapp.ssl.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for YARN Queue Manager Webapp****Description**

Encrypt communication between clients and YARN Queue Manager Webapp using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

queuemanager\_webapp\_ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when YARN Queue Manager Webapp is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

queuemanager\_webapp\_keystore\_file

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Password****Description**

The password for the YARN Queue Manager Webapp JKS keystore file.

**Related Name**

queuemanager\_keystore\_password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Webapp Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Webapp Advanced Configuration Snippet (Safety Valve) for conf/webapp.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/webapp.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Webapp Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Webapp Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: YARN Queue Manager Webapp Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Webapp Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Existing Cloudera Manager API Client Username

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Existing Cloudera Manager API Client Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_queuemanager\_cm\_api\_client\_login\_name

**Required**

true

### Suppress Parameter Validation: Existing Cloudera Manager API Client Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Existing Cloudera Manager API Client Password parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_queuemanager_cm_api_client_login_password`**Required**`true`**Suppress Parameter Validation: YARN Queue Manager Webapp Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Webapp Port parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_queuemanager_webapp_port`**Required**`true`**Suppress Parameter Validation: YARN Queue Manager Webapp Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Webapp Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_queuemanager_webapp_role_env_safety_valve`**Required**`true`**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_rm_custom_resources`**Required**`true`**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Webapp TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Webapp TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Webapp TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Webapp TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Queue Manager Webapp TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_webapp\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_webapp\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_webapp\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_webapp\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_webapp\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_webapp\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_queuemanager\_queuemanager\_webapp\_unexpected\_exits

**Required**

true

**Zeppelin Properties in Cloudera Runtime 7.1**

Role groups:

**Service-Wide****Advanced****System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

zeppelin

**API Name**

process\_groupname

**Required**

true

### System User

**Description**

The user that this service's processes should run as.

**Related Name****Default Value**

zeppelin

**API Name**

process\_username

**Required**

true

### Zeppelin Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ZEPPELIN\_service\_env\_safety\_valve

**Required**

false

### Monitoring

#### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Zeppelin Server Role Health Test****Description**

When computing the overall ZEPPELIN health, consider Zeppelin Server's health

**Related Name****Default Value**

true

**API Name**

ZEPPELIN\_ZEPPELIN\_SERVER\_health\_enabled

**Required**

false

**Other****HDFS Service****Description**

Name of the HDFS service that this Zeppelin service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

true

**Knox Service****Description**

Name of the Knox service that this Zeppelin service instance depends on

**Related Name****Default Value****API Name**

knox\_service

**Required**

false

**Livy Service****Description**

Name of the Livy service that this Zeppelin service instance depends on

**Related Name****Default Value****API Name**

livy\_service

**Required**

false

**Spark Service****Description**

Name of the Spark service that this Zeppelin service instance depends on

**Related Name****Default Value****API Name**

spark\_on\_yarn\_service

**Required**

true

**YARN Service****Description**

Name of the YARN service that this Zeppelin service instance depends on

**Related Name****Default Value****API Name**

yarn\_service

**Required**

true

**Zeppelin Authentication Method****Description**

Indicates whether Kerberos is enabled.

**Related Name**

zeppelin.authentication.method.kerberos

**Default Value**

false

**API Name**

zeppelin.authentication.method.kerberos

**Required**

false

**Security****Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

zeppelin

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions**

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Configuration Validator: Zeppelin Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Zeppelin Server Log Directory

**Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Configuration Validator: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Zeppelin Server TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Zeppelin Server TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server TLS/SSL Client Trust Store Password configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Zeppelin Server TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Zeppelin Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-env.sh****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-env.sh configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin-conf/zeppelin-env.sh\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-site.xml****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin-conf/zeppelin-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Admin Group****Description**

Whether to suppress configuration warnings produced by the Admin Group configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.admin.group

**Required**

true

**Suppress Configuration Validator: Zeppelin anonymous****Description**

Whether to suppress configuration warnings produced by the Zeppelin anonymous configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.anonymous.allowed

**Required**

true

**Suppress Configuration Validator: Zeppelin interpreter config location****Description**

Whether to suppress configuration warnings produced by the Zeppelin interpreter config location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.config.fs.dir

**Required**

true

**Suppress Configuration Validator: Zeppelin config storage class****Description**

Whether to suppress configuration warnings produced by the Zeppelin config storage class configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.config.storage.class

**Required**

true

**Suppress Configuration Validator: Zeppelin Local repository location****Description**

Whether to suppress configuration warnings produced by the Zeppelin Local repository location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.dep.localrepo

**Required**

true

**Suppress Configuration Validator: Zeppelin interpreter group order****Description**

Whether to suppress configuration warnings produced by the Zeppelin interpreter group order configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.interpreter.group.order

**Required**

true

**Suppress Configuration Validator: Zeppelin Local repository location****Description**

Whether to suppress configuration warnings produced by the Zeppelin Local repository location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.interpreter.localrepo

**Required**

true

**Suppress Configuration Validator: Zeppelin notebook location****Description**

Whether to suppress configuration warnings produced by the Zeppelin notebook location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.notebook.dir

**Required**

true

**Suppress Configuration Validator: Zeppelin notebook storage class****Description**

Whether to suppress configuration warnings produced by the Zeppelin notebook storage class configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.notebook.storage

**Required**

true

**Suppress Configuration Validator: Zeppelin Server Bind Address****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Bind Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.server.addr

**Required**

true

**Suppress Configuration Validator: Zeppelin shiro Knox main block****Description**

Whether to suppress configuration warnings produced by the Zeppelin shiro Knox main block configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.shiro.knox.main.block

**Required**

true

**Suppress Configuration Validator: Zeppelin shiro main block****Description**

Whether to suppress configuration warnings produced by the Zeppelin shiro main block configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.shiro.main.block

**Required**

true

**Suppress Configuration Validator: Zeppelin shiro main session block****Description**

Whether to suppress configuration warnings produced by the Zeppelin shiro main session block configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.shiro.main.session.block

**Required**

true

### Suppress Configuration Validator: Zeppelin shiro roles block

**Description**

Whether to suppress configuration warnings produced by the Zeppelin shiro roles block configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.shiro.roles.block

**Required**

true

### Suppress Configuration Validator: Zeppelin shiro urls block

**Description**

Whether to suppress configuration warnings produced by the Zeppelin shiro urls block configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.shiro.urls.block

**Required**

true

### Suppress Configuration Validator: Zeppelin shiro user block

**Description**

Whether to suppress configuration warnings produced by the Zeppelin shiro user block configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.shiro.user.block

**Required**

true

### Suppress Configuration Validator: Zeppelin ssl client auth

**Description**

Whether to suppress configuration warnings produced by the Zeppelin ssl client auth configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.ssl.client.auth

**Required**

true

**Suppress Configuration Validator: Zeppelin ssl keystore type****Description**

Whether to suppress configuration warnings produced by the Zeppelin ssl keystore type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.ssl.keystore.type

**Required**

true

**Suppress Configuration Validator: Zeppelin ssl truststore type****Description**

Whether to suppress configuration warnings produced by the Zeppelin ssl truststore type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.ssl.truststore.type

**Required**

true

**Suppress Configuration Validator: Zeppelin temp webapps directory****Description**

Whether to suppress configuration warnings produced by the Zeppelin temp webapps directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.war.tempdir

**Required**

true

**Suppress Configuration Validator: Zeppelin websocket text size****Description**

Whether to suppress configuration warnings produced by the Zeppelin websocket text size configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.websocket.max.text.message.size

**Required**

true

**Suppress Configuration Validator: Zeppelin Server Port****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin\_server\_port

**Required**

true

**Suppress Configuration Validator: Zeppelin Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Zeppelin Server SSL Port****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server SSL Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin\_server\_ssl\_port

**Required**

true

### Suppress Parameter Validation: Kerberos Principal

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

### Suppress Parameter Validation: Service Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Zeppelin Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Zeppelin Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zeppelin\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: Zeppelin Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zeppelin\_service\_env\_safety\_valve

**Required**

true

**Suppress Health Test: Zeppelin Server Health****Description**

Whether to suppress the results of the Zeppelin Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_zeppelin\_zeppelin\_zeppelin\_server\_health

**Required**

true

## Zeppelin Server

### Advanced

#### Zeppelin Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

#### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name**

**Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-env.sh

**Description**

For advanced use only. A string to be inserted into zeppelin-conf/zeppelin-env.sh for this role only.

**Related Name****Default Value****API Name**

zeppelin-conf/zeppelin-env.sh\_role\_safety\_valve

**Required**

false

### Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-site.xml

**Description**

For advanced use only. A string to be inserted into zeppelin-conf/zeppelin-site.xml for this role only.

**Related Name****Default Value****API Name**

zeppelin-conf/zeppelin-site.xml\_role\_safety\_valve

**Required**

false

**Zeppelin Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

ZEPPELIN\_SERVER\_role\_env\_safety\_valve

**Required**

false

**Logs****Zeppelin Server Log Directory****Description**

The log directory for log files of the role Zeppelin Server.

**Related Name**

log\_dir

**Default Value**

/var/log/zeppelin

**API Name**

log\_dir

**Required**

false

**Zeppelin Server Logging Threshold****Description**

The minimum log level for Zeppelin Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Zeppelin Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Zeppelin Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Zeppelin Server Max Log Size****Description**

The maximum size, in megabytes, per log file for Zeppelin Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name**

**Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

`zeppelin_server_fd_thresholds`

**Required**

false

### Zeppelin Server Host Health Test

**Description**

When computing the overall Zeppelin Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

`zeppelin_server_host_health_enabled`

**Required**

false

### Zeppelin Server Process Health Test

**Description**

Enables the health test that the Zeppelin Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

zeppelin\_server\_scm\_health\_enabled

**Required**

false

### Other

#### Admin Group

**Description**

Admin group for Zeppelin

**Related Name**

zeppelin.admin.group

**Default Value**

admins

**API Name**

zeppelin.admin.group

**Required**

false

#### Zeppelin anonymous

**Description**

Anonymous user allowed by default

**Related Name**

zeppelin.anonymous.allowed

**Default Value**

false

**API Name**

zeppelin.anonymous.allowed

**Required**

false

#### Zeppelin interpreter config location

**Description**

location of config file

**Related Name**

zeppelin.config.fs.dir

**Default Value**

file:///var/lib/zeppelin/conf

**API Name**

zeppelin.config.fs.dir

**Required**

false

**Zeppelin config storage class****Description**

config persistence layer implementation

**Related Name**

zeppelin.config.storage.class

**Default Value**

org.apache.zeppelin.storage.FileSystemConfigStorage

**API Name**

zeppelin.config.storage.class

**Required**

false

**Zeppelin Local repository location****Description**

Local repository for dependency loader

**Related Name**

zeppelin.dep.localrepo

**Default Value**

/var/lib/zeppelin/local-repo

**API Name**

zeppelin.dep.localrepo

**Required**

false

**Zeppelin interpreter group order****Description**

Zeppelin interpreter group order

**Related Name**

zeppelin.interpreter.group.order

**Default Value**

livy, md, angular, sh, jdbc, spark

**API Name**

zeppelin.interpreter.group.order

**Required**

false

**Zeppelin Local repository location****Description**

Local repository for interpreter's additional dependency loading

**Related Name**

zeppelin.interpreter.localRepo

**Default Value**

/var/lib/zeppelin/local-repo

**API Name**

zeppelin.interpreter.localRepo

**Required**

false

### Zeppelin notebook location

**Description**

path or URI for notebook persist

**Related Name**

zeppelin.notebook.dir

**Default Value**

file:///var/lib/zeppelin/notebook

**API Name**

zeppelin.notebook.dir

**Required**

false

### Zeppelin notebook public access

**Description**

Make notebook public by default when created, private otherwise

**Related Name**

zeppelin.notebook.public

**Default Value**

false

**API Name**

zeppelin.notebook.public

**Required**

false

### Zeppelin notebook storage class

**Description**

versioned notebook persistence layer implementation

**Related Name**

zeppelin.notebook.storage

**Default Value**

org.apache.zeppelin.notebook.repo.FileSystemNotebookRepo

**API Name**

zeppelin.notebook.storage

**Required**

false

**Zeppelin Server Bind Address****Description**

Zeppelin Server Bind Address

**Related Name**

zeppelin.server.addr

**Default Value**

0.0.0.0

**API Name**

zeppelin.server.addr

**Required**

false

**Zeppelin shiro Knox main block****Description**

Content of shiro Knox main block

**Related Name**

zeppelin.shiro.knox.main.block

**Default Value**

```
krbRealm = org.apache.zeppelin.realm.kerberos.KerberosRealm
krbRealm.principal=SPNEGO_PRINCIPAL krbRealm.keytab=KEYTAB_FILE
krbRealm.nameRules=DEFAULT krbRealm.signatureSecretFile=CONF_DIR/http_secret
krbRealm.tokenValidity=36000 krbRealm.cookieDomain=DOMAIN krbRealm.cookiePath=/ authc
= org.apache.zeppelin.realm.kerberos.KerberosAuthenticationFilter
```

**API Name**

zeppelin.shiro.knox.main.block

**Required**

false

**Zeppelin shiro main block****Description**

Content of main block

**Related Name**

zeppelin.shiro.main.block

**Default Value**

pamRealm=org.apache.zeppelin.realm.PamRealm pamRealm.service=sshd

**API Name**

zeppelin.shiro.main.block

**Required**

false

**Zeppelin shiro main session block****Description**

Content of main session block

**Related Name**

zeppelin.shiro.main.session.block

**Default Value**

sessionManager = org.apache.shiro.web.session.mgt.DefaultWebSessionManager cookie = org.apache.shiro.web.servlet.SimpleCookie cookie.name = JSESSIONID cookie.httpOnly = true sessionManager.sessionIdCookie = \$cookie securityManager.sessionManager = \$sessionManager securityManager.sessionManager.globalSessionTimeout = 86400000 shiro.loginUrl = /api/login

**API Name**

zeppelin.shiro.main.session.block

**Required**

false

**Zeppelin shiro roles block****Description**

Content of roles block

**Related Name**

zeppelin.shiro.roles.block

**Default Value****API Name**

zeppelin.shiro.roles.block

**Required**

false

**Zeppelin shiro urls block****Description**

Content of urls block

**Related Name**

zeppelin.shiro.urls.block

**Default Value**

/api/version = anon /api/interpreter/setting/restart/\*\* = authc /api/interpreter/\*\* = authc, roles[zeppelin\_admin\_group] /api/notebook-repositories/\*\* = authc, roles[zeppelin\_admin\_group] /api/configurations/\*\* = authc, roles[zeppelin\_admin\_group] /api/credential/\*\* = authc, roles[zeppelin\_admin\_group] /api/admin/\*\* = authc, roles[zeppelin\_admin\_group] /\*\* = authc

**API Name**

zeppelin.shiro.urls.block

**Required**

false

**Zeppelin shiro user block****Description**

Content of user block

**Related Name**

zeppelin.shiro.user.block

**Default Value****API Name**

zeppelin.shiro.user.block

**Required**

false

**Zeppelin ssl client auth****Description**

Should client authentication be used for SSL connections?

**Related Name**

zeppelin.ssl.client.auth

**Default Value**

false

**API Name**

zeppelin.ssl.client.auth

**Required**

false

**Zeppelin ssl keystore type****Description**

The format of the given keystore (e.g. JKS or PKCS12)

**Related Name**

zeppelin.ssl.keystore.type

**Default Value**

jks

**API Name**

zeppelin.ssl.keystore.type

**Required**

false

**Zeppelin ssl truststore type****Description**

The format of the given truststore (e.g. JKS or PKCS12). Defaults to the same type as the keystore type

**Related Name**

zeppelin.ssl.truststore.type

**Default Value**

jks

**API Name**

zeppelin.ssl.truststore.type

**Required**

false

**Zeppelin temp webapps directory****Description**

Location of jetty temporary directory

**Related Name**

zeppelin.war.tempdir

**Default Value**`/var/lib/zeppelin/webapps`**API Name**`zeppelin.war.tempdir`**Required**`false`**Zeppelin websocket text size****Description**

Size in characters of the maximum text message to be received by websocket. Defaults to 1024000

**Related Name**`zeppelin.websocket.max.text.message.size`**Default Value**`1024000`**API Name**`zeppelin.websocket.max.text.message.size`**Required**`false`**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**`rlimit_fds`**Required**`false`**Ports and Addresses****Zeppelin Server Port****Description**

The port of the Zeppelin server

**Related Name**`zeppelin.server.port`**Default Value**`8885`**API Name**`zeppelin_server_port`**Required**`false`

### Zeppelin Server SSL Port

**Description**

The SSL port of the Zeppelin server

**Related Name**

zeppelin.server.ssl.port

**Default Value**

8886

**API Name**

zeppelin\_server\_ssl\_port

**Required**

false

### Resource Management

#### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

#### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

#### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

### Zeppelin Server TLS/SSL Client Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Zeppelin Server might connect to. This is used when Zeppelin Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

zeppelin.ssl.truststore.path

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

### Zeppelin Server TLS/SSL Client Trust Store Password

**Description**

The password for the Zeppelin Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

zeppelin.ssl.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

### Enable TLS/SSL for Zeppelin Server

**Description**

Encrypt communication between clients and Zeppelin Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

zeppelin.ssl

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### Zeppelin Server TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Zeppelin Server is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

zeppelin.ssl.keystore.path

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### Zeppelin Server TLS/SSL Server JKS Keystore File Password

**Description**

The password for the Zeppelin Server JKS keystore file.

**Related Name**

zeppelin.ssl.keystore.password

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions**

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Zeppelin Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Zeppelin Server Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Zeppelin Server TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Zeppelin Server TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server TLS/SSL Client Trust Store Password parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Zeppelin Server TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Zeppelin Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

### Suppress Parameter Validation: Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-env.sh

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-env.sh parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin-conf/zeppelin-env.sh\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Advanced Configuration Snippet (Safety Valve) for zeppelin-conf/zeppelin-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin-conf/zeppelin-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Admin Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.admin.group

**Required**

true

### Suppress Parameter Validation: Zeppelin anonymous

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin anonymous parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.anonymous.allowed

**Required**

true

**Suppress Parameter Validation: Zeppelin interpreter config location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin interpreter config location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.config.fs.dir

**Required**

true

**Suppress Parameter Validation: Zeppelin config storage class****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin config storage class parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.config.storage.class

**Required**

true

**Suppress Parameter Validation: Zeppelin Local repository location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Local repository location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.dep.localrepo

**Required**

true

**Suppress Parameter Validation: Zeppelin interpreter group order****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin interpreter group order parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.interpreter.group.order

**Required**

true

**Suppress Parameter Validation: Zeppelin Local repository location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Local repository location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.interpreter.localrepo

**Required**

true

**Suppress Parameter Validation: Zeppelin notebook location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin notebook location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.notebook.dir

**Required**

true

**Suppress Parameter Validation: Zeppelin notebook storage class****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin notebook storage class parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.notebook.storage

**Required**

true

### Suppress Parameter Validation: Zeppelin Server Bind Address

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Bind Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.server.addr

**Required**

true

### Suppress Parameter Validation: Zeppelin shiro Knox main block

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro Knox main block parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.shiro.knox.main.block

**Required**

true

### Suppress Parameter Validation: Zeppelin shiro main block

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro main block parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.shiro.main.block

**Required**

true

### Suppress Parameter Validation: Zeppelin shiro main session block

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro main session block parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_zeppelin.shiro.main.session.block`**Required**`true`**Suppress Parameter Validation: Zeppelin shiro roles block****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro roles block parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_zeppelin.shiro.roles.block`**Required**`true`**Suppress Parameter Validation: Zeppelin shiro urls block****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro urls block parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_zeppelin.shiro.urls.block`**Required**`true`**Suppress Parameter Validation: Zeppelin shiro user block****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin shiro user block parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_zeppelin.shiro.user.block`**Required**`true`**Suppress Parameter Validation: Zeppelin ssl client auth****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin ssl client auth parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.ssl.client.auth

**Required**

true

**Suppress Parameter Validation: Zeppelin ssl keystore type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin ssl keystore type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.ssl.keystore.type

**Required**

true

**Suppress Parameter Validation: Zeppelin ssl truststore type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin ssl truststore type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.ssl.truststore.type

**Required**

true

**Suppress Parameter Validation: Zeppelin temp webapps directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin temp webapps directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.war.tempdir

**Required**

true

### Suppress Parameter Validation: Zeppelin websocket text size

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin websocket text size parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin.websocket.max.text.message.size

**Required**

true

### Suppress Parameter Validation: Zeppelin Server Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin\_server\_port

**Required**

true

### Suppress Parameter Validation: Zeppelin Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin\_server\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Zeppelin Server SSL Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Server SSL Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zeppelin\_server\_ssl\_port

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zeppelin\_zeppelin\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zeppelin\_zeppelin\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zeppelin\_zeppelin\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zeppelin\_zeppelin\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zeppelin\_zeppelin\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zeppelin\_zeppelin\_server\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zeppelin\_zeppelin\_server\_unexpected\_exits

**Required**

true

## ZooKeeper Properties in Cloudera Runtime 7.1

Role groups:

### Server

#### Advanced

#### ZooKeeper 'Four Letter Word' Command Whitelist

**Description**

ZooKeeper responds to specific Four-Letter-Word diagnostic telnet commands on its client port. Here you can configure which commands should be accepted by the server. Use asterisk ('\*') to enable all of them.

**Related Name**

4lw.commands.whitelist

**Default Value**

conf cons crst dirs dump envi gtmk ruok stmk srst srvr stat wchs mntr isro

**API Name**

4lw\_commands\_whitelist

**Required**

false

#### Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name**

**Default Value****API Name**

SERVER\_role\_env\_safety\_valve

**Required**

false

**Java Configuration Options for Zookeeper Server****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value****API Name**

zk\_server\_java\_opts

**Required**

false

**Server Advanced Configuration Snippet (Safety Valve) for zoo.cfg****Description**

For advanced use only. A string to be inserted into zoo.cfg for this role only.

**Related Name****Default Value****API Name**

zookeeper\_config\_safety\_valve

**Required**

false

**Logs****Server Logging Threshold****Description**

The minimum log level for Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### Server Max Log Size

**Description**

The maximum size, in megabytes, per log file for Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

### ZooKeeper Log Directory

**Description**

Directory where ZooKeeper will place its log files.

**Related Name****Default Value**

/var/log/zookeeper

**API Name**

zk\_server\_log\_dir

**Required**

false

### Monitoring

#### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Heap Dump Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Rules to Extract Events from Log Files****Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used. Each rule has some or all of the following fields:

- alert - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- rate (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- periodminutes - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- threshold - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- content - match only those messages for which contents match this regular expression.
- exceptiontype - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

**Related Name****Default Value**

```
version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0,
threshold: WARN, content: .* is deprecated. Instead, use .* , alert: false, rate: 0, threshold: WARN,
content: .* is deprecated. Use .* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* ,
alert: false, rate: 1, periodminutes: 1, threshold: WARN ]
```

**API Name**

log\_event\_whitelist

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### ZooKeeper Server Connection Count Thresholds

**Description**

The health check thresholds of the weighted average size of the ZooKeeper Server connection count over a recent period. See ZooKeeper Server Connection Count Monitoring Period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

zookeeper\_server\_connection\_count\_thresholds

**Required**

false

### ZooKeeper Server Connection Count Monitoring Period

**Description**

The period to review when computing the moving average of the connection count. Specified in minutes.

**Related Name****Default Value**

3 minute(s)

**API Name**

zookeeper\_server\_connection\_count\_window

**Required**

false

### Data Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Data Directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

zookeeper\_server\_data\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Data Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Data Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Data Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

zookeeper\_server\_data\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Transaction Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Transaction Log Directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

zookeeper\_server\_data\_log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Transaction Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Transaction Log Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Transaction Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

zookeeper\_server\_data\_log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

zookeeper\_server\_fd\_thresholds

**Required**

false

**Garbage Collection Duration Thresholds****Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

zookeeper\_server\_gc\_duration\_thresholds

**Required**

false

**Garbage Collection Duration Monitoring Period****Description**

The period to review when computing the moving average of garbage collection time.

**Related Name****Default Value**

5 minute(s)

**API Name**

zookeeper\_server\_gc\_duration\_window

**Required**

false

**Server Host Health Test****Description**

When computing the overall Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

zookeeper\_server\_host\_health\_enabled

**Required**

false

**Maximum Latency Monitoring Thresholds****Description**

The percentage thresholds of the ratio of the maximum request latency to the maximum client-negotiable session timeout since the server was started.

**Related Name****Default Value**

Warning: 75.0 %, Critical: 100.0 %

**API Name**

zookeeper\_server\_max\_latency\_thresholds

**Required**

false

**ZooKeeper Server Outstanding Requests Thresholds****Description**

The health check thresholds of the weighted average size of the ZooKeeper Server outstanding requests queue over a recent period. See ZooKeeper Server Outstanding Requests Monitoring Period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

zookeeper\_server\_outstanding\_requests\_thresholds

**Required**

false

**ZooKeeper Server Outstanding Requests Monitoring Period****Description**

The period to review when computing the moving average of the outstanding requests queue size. Specified in minutes.

**Related Name****Default Value**

3 minute(s)

**API Name**

zookeeper\_server\_outstanding\_requests\_window

**Required**

false

**Quorum Membership Detection Window****Description**

The tolerance window that will be used in the detection of a ZooKeeper server's membership in a quorum. Specified in minutes.

**Related Name****Default Value**

3 minute(s)

**API Name**

zookeeper\_server\_quorum\_membership\_detection\_window

**Required**

false

### Enable the Quorum Membership Check

**Description**

Enables the quorum membership check for this ZooKeeper Server.

**Related Name****Default Value**

true

**API Name**

zookeeper\_server\_quorum\_membership\_enabled

**Required**

false

### Server Process Health Test

**Description**

Enables the health test that the Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

zookeeper\_server\_scm\_health\_enabled

**Required**

false

### Other

#### Client Port Address

**Description**

The address (IPv4, IPv6, or hostname) to monitor for client connections. This is the address that clients attempt to connect to. This setting is optional, because by default, ZooKeeper binds in such a way that any connection to the client port for any address/interface/NIC on the server will be accepted.

**Related Name**

clientPortAddress

**Default Value****API Name**

clientPortAddress

**Required**

false

#### Data Directory

**Description**

The disk location that ZooKeeper will use to store its database snapshots.

**Related Name**

dataDir

**Default Value**

/var/lib/zookeeper

**API Name**

dataDir

**Required**

false

**Transaction Log Directory****Description**

The disk location that ZooKeeper will use to store its transaction logs.

**Related Name**

dataLogDir

**Default Value**

/var/lib/zookeeper

**API Name**

dataLogDir

**Required**

false

**Enable JMX Agent****Description**

Enables the JMX agent on the ZooKeeper server. Turning this off on any of the ZooKeeper servers that are part of a service will prevent Cloudera Manager from being able to monitor that server and may affect the monitoring provided on the entire service.

**Related Name****Default Value**

true

**API Name**

enable\_jmx\_agent

**Required**

false

**Enable Authenticated Communication with the JMX Agent****Description**

Enables authentication when interacting with the JMX agent on the ZooKeeper server.

**Related Name****Default Value**

false

**API Name**

enable\_jmx\_authentication

**Required**

false

**Enable ZooKeeper Admin Server****Description**

The AdminServer is an embedded HTTP server that provides a REST interface for different diagnostics commands in ZooKeeper. The results of the commands are returned in JSON. The

AdminServer is optional to enable, you should consider it as an alternative to the 'Four-Letter-Word' telnet interface.

**Related Name**

admin.enableServer

**Default Value**

false

**API Name**

enable\_zookeeper\_admin\_server

**Required**

false

**Name of User with Read-Only access to the JMX Agent****Description**

Specifies the name of the user that has read-only privileges when using password file based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name****Default Value**

monitorRole

**API Name**

jmx\_passwd\_file\_readonly\_user

**Required**

false

**Password of User with Read-Only Access to the JMX agent****Description**

Specifies the password of the user that has read-only privileges when using password file based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name****Default Value**

\*\*\*\*\*

**API Name**

jmx\_passwd\_file\_readonly\_user\_password

**Required**

false

**Name of User with Read-Write Access to the JMX Agent****Description**

Specifies the name of the user that has read-write privileges when using password file based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name****Default Value**

controlRole

**API Name**

jmx\_passwd\_file\_readwrite\_user

**Required**

false

**Password of user with read-write access to the JMX agent****Description**

Specifies the password of the user that has read-write privileges when using password file based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name****Default Value**

\*\*\*\*\*

**API Name**

jmx\_passwd\_file\_readwrite\_user\_password

**Required**

false

**Maximum Client Connections****Description**

The maximum number of concurrent connections (at the socket level) that a single client, identified by the IP address, may make to a single member of the ZooKeeper ensemble. This setting is used to prevent certain classes of DoS attacks, including file descriptor exhaustion. To remove the limit on concurrent connections, set this value to 0.

**Related Name**

maxClientCnxns

**Default Value**

60

**API Name**

maxClientCnxns

**Required**

false

**Maximum Session Timeout****Description**

The maximum session timeout, in milliseconds, that the ZooKeeper Server will allow the client to negotiate

**Related Name**

maxSessionTimeout

**Default Value**

40000

**API Name**

maxSessionTimeout

**Required**

false

**Minimum Session Timeout****Description**

The minimum session timeout, in milliseconds, that the ZooKeeper Server will allow the client to negotiate

**Related Name**

minSessionTimeout

**Default Value**

4000

**API Name**

minSessionTimeout

**Required**

false

### ZooKeeper Server ID

**Description**

Unique identifier for each ZooKeeper server, typically starts at 1

**Related Name**

myid

**Default Value****API Name**

serverId

**Required**

false

### Performance

#### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

### Ports and Addresses

#### Client Port

**Description**

The port to monitor for client connections. This is the port that clients attempt to connect to.

**Related Name**

clientPort

**Default Value**

2181

**API Name**

clientPort

**Required**

false

**Election Port****Description**

The port to monitor for leadership election

**Related Name****Default Value**

4181

**API Name**

electionPort

**Required**

false

**Quorum Port****Description**

The port to monitor for inter-server communication

**Related Name****Default Value**

3181

**API Name**

quorumPort

**Required**

false

**JMX Remote Port****Description**

The port used by the ZooKeeper Server's RMI registry. This is required to enable JMX access through RMI which is required for Cloudera Manager ZooKeeper monitoring. This is added as "-Dcom.sun.management.jmxremote.port" to the ZooKeeper Server's JVM command line.

**Related Name****Default Value**

9010

**API Name**

server\_jmx\_agent\_port

**Required**

false

**JMX RMI Server Port****Description**

The port used by the ZooKeeper Server's RMI server to handle JMX RMI requests. This is added as "-Dcom.sun.management.jmxremote.rmi.port=*port*" to the ZooKeeper Server's JVM command line. This has an effect only in Oracle JDK 7u4 and higher. If the setting is left blank, the JMX Remote

Port value is used. If set to 0 or -1, this setting is ignored. When this setting is not in effect, the JVM uses a random port for the RMI server.

**Related Name****Default Value****API Name**

server\_jmx\_rmi\_port

**Required**

false

### Admin Server Port

**Description**

Port number for the REST Admin Server embedded in ZooKeeper.

**Related Name**

admin.serverPort

**Default Value**

5181

**API Name**

zookeeper\_admin\_server\_port

**Required**

false

### Secure Client Port

**Description**

The port used in ZooKeeper to accept TLS/SSL connections from clients. You need to select 'Enable TLS/SSL for ZooKeeper' in order to have this port open. Any client that connects to this port must use TLS/SSL.

**Related Name**

secureClientPort

**Default Value**

2182

**API Name**

zookeeper\_secure\_client\_port

**Required**

false

### Resource Management

#### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Java Heap Size of ZooKeeper Server in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

zookeeper\_server\_java\_heapsize

**Required**

false

**Security****Enable TLS client authentication for JMX port****Description**

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the ZooKeeper JMX TLS/SSL Server Trust Store File or the global trust store.

**Related Name****Default Value**

false

**API Name**

jmx\_tls\_client\_auth\_enabled

**Required**

false

### Enable TLS/SSL for ZooKeeper JMX

**Description**

Encrypt communication between clients and ZooKeeper JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name****Default Value**

false

**API Name**

jmx\_tls\_enabled

**Required**

false

### ZooKeeper JMX TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when ZooKeeper JMX is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name****Default Value****API Name**

jmx\_tls\_keystore

**Required**

false

### ZooKeeper JMX TLS/SSL Server JKS Keystore File Password

**Description**

The password for the ZooKeeper JMX JKS keystore file.

**Related Name****Default Value****API Name**

jmx\_tls\_keystore\_password

**Required**

false

### ZooKeeper JMX TLS/SSL Server Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that ZooKeeper JMX might connect to. This is used when ZooKeeper JMX is the server in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name****Default Value**

**API Name**

jmx\_tls\_truststore

**Required**

false

**ZooKeeper JMX TLS/SSL Server Trust Store Password****Description**

The password for the ZooKeeper JMX TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name****Default Value****API Name**

jmx\_tls\_truststore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Parameter Validation: ZooKeeper 'Four Letter Word' Command Whitelist

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper 'Four Letter Word' Command Whitelist parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_4lw\_commands\_whitelist

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Client Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Client Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_clientport

**Required**

true

**Suppress Parameter Validation: Client Port Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Client Port Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_clientportaddress

**Required**

true

**Suppress Parameter Validation: Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_datadir

**Required**

true

**Suppress Parameter Validation: Transaction Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Transaction Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_data\_logdir

**Required**

true

**Suppress Parameter Validation: Election Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Election Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_electionport

**Required**

true

**Suppress Parameter Validation: Name of User with Read-Only access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Only access to the JMX Agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_passwd\_file\_readonly\_user

**Required**

true

### Suppress Parameter Validation: Password of User with Read-Only Access to the JMX agent

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with Read-Only Access to the JMX agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_passwd\_file\_readonly\_user\_password

**Required**

true

### Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_passwd\_file\_readwrite\_user

**Required**

true

### Suppress Parameter Validation: Password of user with read-write access to the JMX agent

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_passwd\_file\_readwrite\_user\_password

**Required**

true

### Suppress Parameter Validation: ZooKeeper JMX TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper JMX TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_tls\_keystore

**Required**

true

**Suppress Parameter Validation: ZooKeeper JMX TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper JMX TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_tls\_keystore\_password

**Required**

true

**Suppress Parameter Validation: ZooKeeper JMX TLS/SSL Server Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper JMX TLS/SSL Server Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_tls\_truststore

**Required**

true

**Suppress Parameter Validation: ZooKeeper JMX TLS/SSL Server Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper JMX TLS/SSL Server Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_tls\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Rules to Extract Events from Log Files****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Quorum Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Quorum Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_quorumport

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: JMX Remote Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Remote Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_server\_jmx\_agent\_port

**Required**

true

**Suppress Parameter Validation: JMX RMI Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX RMI Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_server\_jmx\_rmi\_port

**Required**

true

**Suppress Parameter Validation: Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Java Configuration Options for Zookeeper Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Zookeeper Server parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zk\_server\_java\_opts

**Required**

true

**Suppress Parameter Validation: ZooKeeper Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zk\_server\_log\_dir

**Required**

true

**Suppress Parameter Validation: Admin Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zookeeper\_admin\_server\_port

**Required**

true

**Suppress Parameter Validation: Server Advanced Configuration Snippet (Safety Valve) for zoo.cfg****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server Advanced Configuration Snippet (Safety Valve) for zoo.cfg parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zookeeper\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Secure Client Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Client Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zookeeper\_secure\_client\_port

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_audit\_health

**Required**

true

### Suppress Health Test: Connection Count

**Description**

Whether to suppress the results of the Connection Count health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_connection\_count

**Required**

true

### Suppress Health Test: Data Directory Free Space

**Description**

Whether to suppress the results of the Data Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_data\_directory\_free\_space

**Required**

true

### Suppress Health Test: Transaction Log Directory Free Space

**Description**

Whether to suppress the results of the Transaction Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_data\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: GC Duration****Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_gc\_duration

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_heap\_dump\_directory\_free\_space

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Maximum Request Latency

**Description**

Whether to suppress the results of the Maximum Request Latency health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_max\_latency

**Required**

true

### Suppress Health Test: Outstanding Requests

**Description**

Whether to suppress the results of the Outstanding Requests health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_outstanding\_requests

**Required**

true

**Suppress Health Test: Quorum Membership****Description**

Whether to suppress the results of the Quorum Membership health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_quorum\_membership

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_zookeeper\_server\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### Auto Purge Time Interval

**Description**

The time interval in hours for which the purge task has to be triggered. Set to a positive integer (1 and above) to enable the auto purging. Defaults to 24.

**Related Name**

autopurge.purgeInterval

**Default Value**

1 day(s)

**API Name**

autopurgeInterval

**Required**

false

#### Auto Purge Snapshots Retain Count

**Description**

When enabled, ZooKeeper auto purge feature retains this many most recent snapshots and the corresponding transaction logs in the dataDir and dataLogDir respectively and deletes the rest. Defaults to 5. Minimum value is 3.

**Related Name**

autopurge.snapRetainCount

**Default Value**

5

**API Name**

autopurgeSnapRetainCount

**Required**

false

### System Group

**Description**

The group that this service's processes should run as.

**Related Name****Default Value**

zookeeper

**API Name**

process\_groupname

**Required**

true

**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**

zookeeper

**API Name**

process\_username

**Required**

true

**Enable auto-creation of data directories****Description**

Automatically create data directories at startup, if they do not exist. Enabling this configuration should be used with care as it will suppress any errors in setup of data directories.

**Related Name****Default Value**

false

**API Name**

zookeeper\_datadir\_autocreate

**Required**

false

**ZooKeeper Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

zookeeper\_env\_safety\_valve

**Required**

false

**Monitoring**

### Enable Log Event Capture

**Description**

When set, each role identifies important log events and forwards them to Cloudera Manager.

**Related Name****Default Value**

true

**API Name**

catch\_events

**Required**

false

### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Log Event Retry Frequency

**Description**

The frequency in which the log4j event publication appender will retry sending undelivered log events to the Event server, in seconds

**Related Name****Default Value**

30

**API Name**

log\_event\_retry\_frequency

**Required**

false

### Service Triggers

#### Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

[]

#### API Name

service\_triggers

#### Required

true

### Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

#### Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

#### Related Name

#### Default Value

#### API Name

smon\_derived\_configs\_safety\_valve

#### Required

false

### ZooKeeper Canary Connection Timeout

#### Description

Configures the timeout used by the canary for connection establishment with ZooKeeper servers

#### Related Name

#### Default Value

10 second(s)

**API Name**

zookeeper\_canary\_connection\_timeout

**Required**

false

**ZooKeeper Canary Health Check****Description**

Enables the health check that a client can connect to ZooKeeper and perform basic operations

**Related Name****Default Value**

true

**API Name**

zookeeper\_canary\_health\_enabled

**Required**

false

**ZooKeeper Canary Operation Timeout****Description**

Configures the timeout used by the canary for ZooKeeper operations

**Related Name****Default Value**

30 second(s)

**API Name**

zookeeper\_canary\_operation\_timeout

**Required**

false

**ZooKeeper Canary Root Znode Path****Description**

Configures the path of the root znode under which all canary updates are performed

**Related Name****Default Value**

/cloudera\_manager\_zookeeper\_canary

**API Name**

zookeeper\_canary\_root\_path

**Required**

false

**ZooKeeper Canary Session Timeout****Description**

Configures the timeout used by the canary sessions with ZooKeeper servers

**Related Name****Default Value**

30 second(s)

**API Name**

zookeeper\_canary\_session\_timeout

**Required**

false

**Healthy Server Monitoring Thresholds****Description**

The health test thresholds of the overall Server health. The check returns "Concerning" health if the percentage of "Healthy" Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Servers falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 51.0 %

**API Name**

zookeeper\_servers\_healthy\_thresholds

**Required**

false

**Other****Cleanup Retain Count****Description**

The number of snapshot files and corresponding transaction logs to keep when running the Cleanup command.

**Related Name****Default Value**

5

**API Name**

cleanupRetainCount

**Required**

false

**Initialization Limit****Description**

Amount of time, in ticks, to allow followers to connect and sync to a leader. Increase this value as needed, if the amount of data managed by ZooKeeper is large.

**Related Name**

initLimit

**Default Value**

10

**API Name**

initLimit

**Required**

false

### Jute Max Buffer

**Description**

The maximum size of the data that can be stored in a znode in bytes.

**Related Name**

jute.maxbuffer

**Default Value**

4 MiB

**API Name**

jute\_maxbuffer

**Required**

false

### Leader Serves

**Description**

Whether the leader accepts client connections.

**Related Name**

leaderServes

**Default Value**

yes

**API Name**

leaderServes

**Required**

false

### Quorum Connection Manager Thread Pool Size

**Description**

Size of the thread pool quorum connection manager uses to manage connections between quorum servers. Only applies when ZooKeeper Server to Server SASL Authentication is enabled.

**Related Name**

quorum.cnxn.threads.size

**Default Value**

20

**API Name**

quorum\_cnxn\_threads\_size

**Required**

false

### Synchronization Limit

**Description**

Amount of time, in ticks, to allow followers to sync with ZooKeeper. If followers fall too far behind a leader, they are dropped.

**Related Name**

syncLimit

**Default Value**

5

**API Name**

syncLimit

**Required**

false

**Tick Time****Description**

The length of time, in milliseconds, of a single tick, which is the basic time unit used by ZooKeeper. A tick is used to regulate heartbeats and timeouts.

**Related Name**

tickTime

**Default Value**

2000

**API Name**

tickTime

**Required**

false

**Security****Enable Kerberos Authentication****Description**

Enable Kerberos authentication for ZooKeeper.

**Related Name**

enableSecurity

**Default Value**

false

**API Name**

enableSecurity

**Required**

false

**Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

zookeeper

**API Name**

kerberos\_princ\_name

**Required**

true

**Enable Server to Server SASL Authentication****Description**

Enables SASL authentication between ZooKeeper servers. Only applies when ZooKeeper Kerberos Authentication is enabled.

**Related Name**

quorum.auth.enableSasl

**Default Value**

false

**API Name**

quorum\_auth\_enable\_sasl

**Required**

false

### Enable TLS/SSL for ZooKeeper

**Description**

Encrypt ZooKeeper communication using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)). This option will encrypt all internal communication between ZooKeeper servers (this feature is called QuorumSSL in ZooKeeper). Additionally, choosing this option will also encrypt the communication between ZooKeeper servers and all ZooKeeper client services that support TLS/SSL connections.

**Related Name**

zookeeper\_tls\_enabled

**Default Value**

false

**API Name**

zookeeper\_tls\_enabled

**Required**

false

### ZooKeeper TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when ZooKeeper is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

zookeeper\_tls\_keystore

**Default Value****API Name**

zookeeper\_tls\_keystore

**Required**

false

### ZooKeeper TLS/SSL Server JKS Keystore File Password

**Description**

The password for the ZooKeeper JKS keystore file.

**Related Name**

zookeeper\_tls\_keystore\_password

**Default Value****API Name**

zookeeper\_tls\_keystore\_password

**Required**

false

**ZooKeeper TLS/SSL Server Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that ZooKeeper might connect to. This is used when ZooKeeper is the server in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

zookeeper\_tls\_truststore

**Default Value****API Name**

zookeeper\_tls\_truststore

**Required**

false

**ZooKeeper TLS/SSL Server Trust Store Password****Description**

The password for the ZooKeeper TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

zookeeper\_tls\_truststore\_password

**Default Value****API Name**

zookeeper\_tls\_truststore\_password

**Required**

false

**Suppressions****Suppress Configuration Validator: ZooKeeper 'Four Letter Word' Command Whitelist****Description**

Whether to suppress configuration warnings produced by the ZooKeeper 'Four Letter Word' Command Whitelist configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_4lw\_commands\_whitelist

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Client Port****Description**

Whether to suppress configuration warnings produced by the Client Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_clientport

**Required**

true

**Suppress Configuration Validator: Client Port Address****Description**

Whether to suppress configuration warnings produced by the Client Port Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_clientportaddress

**Required**

true

**Suppress Configuration Validator: Data Directory****Description**

Whether to suppress configuration warnings produced by the Data Directory configuration validator.

**Related Name****Default Value**

	false
<b>API Name</b>	role_config_suppression_datadir
<b>Required</b>	true

### Suppress Configuration Validator: Transaction Log Directory

#### Description

Whether to suppress configuration warnings produced by the Transaction Log Directory configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_datalogdir

#### Required

true

### Suppress Configuration Validator: Election Port

#### Description

Whether to suppress configuration warnings produced by the Election Port configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_electionport

#### Required

true

### Suppress Configuration Validator: Name of User with Read-Only access to the JMX Agent

#### Description

Whether to suppress configuration warnings produced by the Name of User with Read-Only access to the JMX Agent configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_jmx\_passwd\_file\_readonly\_user

#### Required

true

### Suppress Configuration Validator: Password of User with Read-Only Access to the JMX agent

#### Description

Whether to suppress configuration warnings produced by the Password of User with Read-Only Access to the JMX agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_passwd\_file\_readonly\_user\_password

**Required**

true

**Suppress Configuration Validator: Name of User with Read-Write Access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the Name of User with Read-Write Access to the JMX Agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_passwd\_file\_readwrite\_user

**Required**

true

**Suppress Configuration Validator: Password of user with read-write access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the Password of user with read-write access to the JMX agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_passwd\_file\_readwrite\_user\_password

**Required**

true

**Suppress Configuration Validator: ZooKeeper JMX TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the ZooKeeper JMX TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_tls\_keystore

**Required**

true

**Suppress Configuration Validator: ZooKeeper JMX TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the ZooKeeper JMX TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_tls\_keystore\_password

**Required**

true

**Suppress Configuration Validator: ZooKeeper JMX TLS/SSL Server Trust Store File****Description**

Whether to suppress configuration warnings produced by the ZooKeeper JMX TLS/SSL Server Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_tls\_truststore

**Required**

true

**Suppress Configuration Validator: ZooKeeper JMX TLS/SSL Server Trust Store Password****Description**

Whether to suppress configuration warnings produced by the ZooKeeper JMX TLS/SSL Server Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_tls\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Rules to Extract Events from Log Files****Description**

Whether to suppress configuration warnings produced by the Rules to Extract Events from Log Files configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Quorum Port****Description**

Whether to suppress configuration warnings produced by the Quorum Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_quorumport

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: JMX Remote Port****Description**

Whether to suppress configuration warnings produced by the JMX Remote Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_server\_jmx\_agent\_port

**Required**

true

**Suppress Configuration Validator: JMX RMI Server Port****Description**

Whether to suppress configuration warnings produced by the JMX RMI Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_server\_jmx\_rmi\_port

**Required**

true

**Suppress Configuration Validator: Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Zookeeper Server****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Zookeeper Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zk\_server\_java\_opts

**Required**

true

**Suppress Configuration Validator: ZooKeeper Log Directory****Description**

Whether to suppress configuration warnings produced by the ZooKeeper Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zk\_server\_log\_dir

**Required**

true

### Suppress Configuration Validator: Admin Server Port

**Description**

Whether to suppress configuration warnings produced by the Admin Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zookeeper\_admin\_server\_port

**Required**

true

### Suppress Configuration Validator: Server Advanced Configuration Snippet (Safety Valve) for zoo.cfg

**Description**

Whether to suppress configuration warnings produced by the Server Advanced Configuration Snippet (Safety Valve) for zoo.cfg configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zookeeper\_config\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Secure Client Port

**Description**

Whether to suppress configuration warnings produced by the Secure Client Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zookeeper\_secure\_client\_port

**Required**

true

### Suppress Parameter Validation: Kerberos Principal

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos Princ\_name

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Configuration Validator: Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

### Suppress Parameter Validation: ZooKeeper Canary Root Znode Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Canary Root Znode Path parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper\_canary\_root\_path

**Required**

true

### Suppress Parameter Validation: ZooKeeper Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: ZooKeeper Server Count Validator****Description**

Whether to suppress configuration warnings produced by the ZooKeeper Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper\_odd\_number\_of\_servers\_validator

**Required**

true

**Suppress Configuration Validator: ZooKeeper Server-to-Server Authentication Validation****Description**

Whether to suppress configuration warnings produced by the ZooKeeper Server-to-Server Authentication Validation configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper\_server\_to\_server\_authentication\_validator

**Required**

true

**Suppress Parameter Validation: ZooKeeper TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper\_tls\_keystore

**Required**

true

**Suppress Parameter Validation: ZooKeeper TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper\_tls\_keystore\_password

**Required**

true

**Suppress Parameter Validation: ZooKeeper TLS/SSL Server Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper TLS/SSL Server Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper\_tls\_truststore

**Required**

true

**Suppress Parameter Validation: ZooKeeper TLS/SSL Server Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper TLS/SSL Server Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper\_tls\_truststore\_password

**Required**

true

**Suppress Health Test: ZooKeeper Canary****Description**

Whether to suppress the results of the ZooKeeper Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_zookeeper\_canary\_health

**Required**

true

**Suppress Health Test: Server Health****Description**

Whether to suppress the results of the Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_zookeeper\_servers\_healthy

**Required**

true

## Host Configuration Properties

### Advanced

#### P2P Parcel Distribution Port

**Description**

TCP port (on each cluster host) to be used for P2P Parcel Distribution. Set to 0 to disable P2P Parcel Distribution. This setting should only be modified when no parcels are being distributed.

**Related Name****Default Value**

7191

**API Name**

flood\_torrent\_port

**Required**

false

#### Cloudera Manager Agent Monitoring Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) used by Cloudera Manager Agent.

**Related Name****Default Value****API Name**

host\_agent\_safety\_valve

**Required**

false

#### Java Home Directory

**Description**

Explicitly set the value of JAVA\_HOME for all processes. This will override the auto-detection logic that is normally used.

**Related Name**

**Default Value****API Name**

java\_home

**Required**

false

**Host Upgrade Domain****Description**

For advanced use only, the HDFS Upgrade Domain that a host belongs to. Only applies to DataNode hosts. Any DataNode hosts without an Upgrade Domain set will default to using the rack assignment of the host. This setting is not used if the Upgrade Domains block placement policy is not enabled for HDFS.

**Related Name**

upgrade\_domain

**Default Value****API Name**

upgrade\_domain

**Required**

false

## Monitoring

**Enable Health Alerts for This Host****Description**

When set, Cloudera Manager will send alerts when the health of this host reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

false

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Cloudera Manager Agent TLS Certificate Expiry Thresholds

**Description**

The health test thresholds for monitoring the certificate of Cloudera Manager Agent.

**Related Name****Default Value**

Warning: 60 day(s), Critical: 7 day(s)

**API Name**

host\_agent\_certificate\_expiry\_thresholds

**Required**

false

### Cloudera Manager Agent Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's log directory.

**Related Name****Default Value**

Warning: 2 GiB, Critical: 1 GiB

**API Name**

host\_agent\_log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Cloudera Manager Agent Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Cloudera Manager Agent Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

host\_agent\_log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Cloudera Manager Agent Parcel Directory Free Space Monitoring Absolute Thresholds

**Description**

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's parcel directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

host\_agent\_parcel\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Cloudera Manager Agent Parcel Directory Free Space Monitoring Percentage Thresholds****Description**

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's parcel directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Cloudera Manager Agent Parcel Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

host\_agent\_parcel\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Cloudera Manager Agent Process Directory Free Space Monitoring Absolute Thresholds****Description**

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's process directory.

**Related Name****Default Value**

Warning: 200 MiB, Critical: 100 MiB

**API Name**

host\_agent\_process\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Cloudera Manager Agent Process Directory Free Space Monitoring Percentage Thresholds****Description**

The health check thresholds for monitoring of free space on the filesystem that contains the Cloudera Manager Agent's process directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Cloudera Manager Agent Process Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

host\_agent\_process\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Host Entropy Thresholds

**Description**

The health check thresholds for the available entropy on the host.

**Related Name****Default Value**

Warning: 100.0, Critical: 50.0

**API Name**

host\_available\_entropy\_thresholds

**Required**

false

### Host Clock Offset Thresholds

**Description**

The thresholds for the host clock offset health test. The test compares this threshold against the absolute value of the clock offset reported by the host's NTP service from the 'ntpd -np' or 'chronyc sources' command. Setting both the warning and critical threshold values to never turns off collection of the clock offset by the Cloudera Manager Agent. If no time synchronization is in use, both threshold values should be set to never. Cloudera recommends using NTP for time synchronization of Hadoop clusters.

**Related Name****Default Value**

Warning: 3 second(s), Critical: 10 second(s)

**API Name**

host\_clock\_offset\_thresholds

**Required**

false

### Default Process Swap Memory Thresholds

**Description**

The default health test thresholds on the swap memory usage of the processes on the host. This value is used if process level threshold is equal to the default.

**Related Name****Default Value**

Warning: 200.0 page(s), Critical: Never

**API Name**

host\_default\_proc\_memswap\_thresholds

**Required**

false

### Disk Device Collection Exclusion Regex

**Description**

The regular expression used to filter monitored disk devices and partitions. Disk device (for example, sda) and partition (for example, sda2) names that match this pattern will be excluded from metric collection.

**Related Name**

**Default Value**

^\$

**API Name**

host\_disk\_collection\_filter

**Required**

false

**Host DNS Resolution Duration Thresholds****Description**

The health check thresholds for the host DNS resolution duration.

**Related Name****Default Value**

Warning: 1 second(s), Critical: Never

**API Name**

host\_dns\_resolution\_duration\_thresholds

**Required**

false

**Hostname and Canonical Name Health Check****Description**

Whether the hostname and canonical names for this host are consistent when checked from a Java process.

**Related Name****Default Value**

true

**API Name**

host\_dns\_resolution\_enabled

**Required**

false

**Filesystem Collection Exclusion Regex****Description**

The regular expression used to filter monitored filesystems. Mountpoints for filesystems (for example, /data/1) that match this pattern will be excluded from metric collection.

**Related Name****Default Value**

^\$

**API Name**

host\_fs\_collection\_filter

**Required**

false

**Host Memory Swapping Thresholds****Description**

The health test thresholds of the number of pages swapped out on the host in the last 15 minutes

**Related Name****Default Value**

Warning: 200.0 page(s), Critical: Never

**API Name**

host\_memswap\_thresholds

**Required**

false

### Host Memory Swapping Check Window

**Description**

The amount of time over which the memory swapping test checks for pages swapped.

**Related Name****Default Value**

15 minute(s)

**API Name**

host\_memswap\_window

**Required**

false

### Host Network Frame Error Test Minimum Required Packets

**Description**

The minimum number of received packets that must be received within the test window for this test to return "Bad" health. If less than this number of packets is received during the test window, the health check will never return "Bad" health.

**Related Name****Default Value**

0

**API Name**

host\_network\_frame\_errors\_floor

**Required**

false

### Host Network Frame Error Percentage Thresholds

**Description**

The health check thresholds for the percentage of received packets that are frame errors.

**Related Name****Default Value**

Warning: Any, Critical: 0.5 %

**API Name**

host\_network\_frame\_errors\_thresholds

**Required**

false

### Host Network Frame Error Check Window

**Description**

The amount of time over which the host frame error checks for frame errors.

**Related Name****Default Value**

15 minute(s)

**API Name**

host\_network\_frame\_errors\_window

**Required**

false

### Network Interface Collection Exclusion Regex

**Description**

The regular expression used to filter monitored network interfaces. Network interfaces that match this pattern will be excluded from metric collection.

**Related Name****Default Value**

^lo\$

**API Name**

host\_network\_interface\_collection\_filter

**Required**

false

### Host's Network Interfaces Slow Link Modes Thresholds

**Description**

The thresholds for the health check of the number of network interfaces that appear to be operating at less than full speed.

**Related Name****Default Value**

Warning: Any, Critical: Never

**API Name**

host\_network\_interfaces\_slow\_mode\_thresholds

**Required**

false

### Network Interface Expected Duplex Mode

**Description**

The expected duplex mode for network interfaces.

**Related Name****Default Value**

Full

**API Name**

host\_nic\_expected\_duplex\_mode

**Required**

false

### Network Interface Expected Link Speed

**Description**

The expected network interface link speed.

**Related Name****Default Value**

1000

**API Name**

host\_nic\_expected\_speed

**Required**

false

### Host Process Health Test

**Description**

Enables the health test that the host's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

host\_scm\_health\_enabled

**Required**

false

### Host Triggers

**Description**

The configured triggers for this host. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific host.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if the host wait time exceeds 500 ms: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (select await_time where hostname=$HOSTNAME and last(await_time) > 500ms) DO health:concerning", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

	[]
<b>API Name</b>	host_triggers
<b>Required</b>	true

## Parcels

### Parcel Directory

#### Description

The directory that parcels will be installed into on the host(s). The download 'parcel-cache' directory will be placed next to this directory on the filesystem. If the 'parcel\_dir' variable is set in the Agent's config.ini file, it will override this value.

#### Related Name

#### Default Value

/opt/cloudera/parcels

#### API Name

parcels\_directory

#### Required

true

## Resource Management

### Memory Overcommit Validation Threshold

#### Description

Threshold used when validating the allocation of RAM on a host. 0 means all of the memory is reserved for the system. 1 means none is reserved. Values can range from 0 to 1.

#### Related Name

#### Default Value

0.8

#### API Name

memory\_overcommit\_threshold

#### Required

false

### Enable Cgroup-based Resource Management

#### Description

Enables resource management using control groups (cgroups). When toggled, roles on the host must be restarted for cgroups to be enabled or disabled. Per-resource controls are found in the configuration pages of role configuration groups and individual roles. Control groups are a feature of the Linux kernel, and support varies by distribution; see the Cloudera Manager documentation for details.

#### Related Name

**Default Value**

false

**API Name**

rm\_enabled

**Required**

true

## Suppressions

### Suppress Configuration Validator: Cloudera Manager Agent User and Group Validator

**Description**

Whether to suppress configuration warnings produced by the Cloudera Manager Agent User and Group Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_agent\_system\_user\_group\_validator

**Required**

true

### Suppress Configuration Validator: CGroups Disabled Validator

**Description**

Whether to suppress configuration warnings produced by the CGroups Disabled Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_cgroups\_disabled\_validator

**Required**

true

### Suppress Parameter Validation: P2P Parcel Distribution Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the P2P Parcel Distribution Port parameter.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_flood\_torrent\_port

**Required**

true

### Suppress Parameter Validation: Cloudera Manager Agent Monitoring Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Agent Monitoring Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_host\_agent\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Disk Device Collection Exclusion Regex

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Disk Device Collection Exclusion Regex parameter.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_host\_disk\_collection\_filter

**Required**

true

### Suppress Parameter Validation: Filesystem Collection Exclusion Regex

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Filesystem Collection Exclusion Regex parameter.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_host\_fs\_collection\_filter

**Required**

true

### Suppress Parameter Validation: Network Interface Collection Exclusion Regex

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Network Interface Collection Exclusion Regex parameter.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_host\_network\_interface\_collection\_filter

**Required**

true

**Suppress Parameter Validation: Host Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Triggers parameter.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_host\_triggers

**Required**

true

**Suppress Parameter Validation: Java Home Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Directory parameter.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_java\_home

**Required**

true

**Suppress Configuration Validator: Java Version Validator****Description**

Whether to suppress configuration warnings produced by the Java Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_java\_version\_required\_for\_cdh\_validator

**Required**

true

**Suppress Configuration Validator: Memory Overcommitted Validator****Description**

Whether to suppress configuration warnings produced by the Memory Overcommitted Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_memory\_overcommitted\_validator

**Required**

true

**Suppress Parameter Validation: Parcel Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Parcel Directory parameter.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_parcel\_directory

**Required**

true

**Suppress Configuration Validator: Rack Diversity Validator****Description**

Whether to suppress configuration warnings produced by the Rack Diversity Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_rack\_diversity\_validator

**Required**

true

**Suppress Configuration Validator: Supervisord Version Validator****Description**

Whether to suppress configuration warnings produced by the Supervisord Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

host\_config\_suppression\_supervisord\_version\_matched\_with\_cm\_validator

**Required**

true

### Suppress Parameter Validation: Host Upgrade Domain

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Upgrade Domain parameter.

#### Related Name

#### Default Value

false

#### API Name

host\_config\_suppression\_upgrade\_domain

#### Required

true

### Suppress Health Test: Certificate Expiration

#### Description

Whether to suppress the results of the Certificate Expiration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

host\_health\_suppression\_host\_agent\_certificate\_expiry

#### Required

true

### Suppress Health Test: Agent Log Directory

#### Description

Whether to suppress the results of the Agent Log Directory health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

host\_health\_suppression\_host\_agent\_log\_directory\_free\_space

#### Required

true

### Suppress Health Test: Agent Parcel Directory

#### Description

Whether to suppress the results of the Agent Parcel Directory health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

**Default Value**

false

**API Name**

host\_health\_suppression\_host\_agent\_parcel\_directory\_free\_space

**Required**

true

**Suppress Health Test: Agent Process Directory****Description**

Whether to suppress the results of the Agent Process Directory health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

host\_health\_suppression\_host\_agent\_process\_directory\_free\_space

**Required**

true

**Suppress Health Test: Entropy****Description**

Whether to suppress the results of the Entropy health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

host\_health\_suppression\_host\_available\_entropy

**Required**

true

**Suppress Health Test: Clock Offset****Description**

Whether to suppress the results of the Clock Offset health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

host\_health\_suppression\_host\_clock\_offset

**Required**

true

### Suppress Health Test: DNS Resolution

**Description**

Whether to suppress the results of the DNS Resolution health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

host\_health\_suppression\_host\_dns\_resolution

**Required**

true

### Suppress Health Test: Swapping

**Description**

Whether to suppress the results of the Swapping health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

host\_health\_suppression\_host\_memory\_swapping

**Required**

true

### Suppress Health Test: Frame Errors

**Description**

Whether to suppress the results of the Frame Errors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

host\_health\_suppression\_host\_network\_frame\_errors

**Required**

true

### Suppress Health Test: Network Interface Speed

**Description**

Whether to suppress the results of the Network Interface Speed health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

host\_health\_suppression\_host\_network\_interfaces\_slow\_mode

**Required**

true

**Suppress Health Test: Agent Status****Description**

Whether to suppress the results of the Agent Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

host\_health\_suppression\_host\_scm\_health

**Required**

true

## Cloudera Manager Server Properties

### Advanced

**Command Eviction Age****Description**

Length of time after which inactive commands are evicted from the database. Default is two years.

**Related Name****Default Value**

730 day(s)

**API Name**

command\_eviction\_age\_hours

**Required**

true

**Cloudera Manager Server Local Data Storage Directory****Description**

Local path used by Cloudera Manager for storing data, including command result files. Note that changes to this configuration will only apply to commands started after the change. It is highly recommended that existing data be migrated over to the new location for the data to be accessible via and managed by Cloudera Manager.

**Related Name**

**Default Value**`/var/lib/cloudera-scm-server`**API Name**`command_storage_path`**Required**`false`**Enable Debugging of API****Description**

When enabled, the server log will contain traces of all API calls.

**Related Name****Default Value**`false`**API Name**`enable_api_debug`**Required**`true`**Extra JVM arguments for Java-based services****Description**

A list of extra JVM arguments that Cloudera Manager will append to the command line for Java-based services.

**Related Name****Default Value****API Name**`extra_jvm_opts`**Required**`false`**Agent Heartbeat Logging Directory****Description**

Specifies the location where Agent heartbeat requests and responses should be logged, for debugging purposes. If empty, logging is disabled.

**Related Name****Default Value****API Name**`heartbeat_logging_dir`**Required**`false`**Offline Command Timeout****Description**

The amount of time (in seconds) to wait for all requested hosts to be offlined. If all requested hosts are not transitioned to offline in this interval, the command fails. If timeout occurs, hosts that

transitioned to maintenance stay in maintenance, and those that failed to transition are returned to the normal state.

**Related Name****Default Value**

10 minute(s)

**API Name**

offline\_default\_timeout

**Required**

false

### Cloudera Manager Descriptor Fetch Timeout

**Description**

Timeout for Cloudera Management Service roles to fetch deployment descriptor from Cloudera Manager service. This may need to be increased for larger deployments where Management roles are timing out trying to fetch the descriptor.

**Related Name**

scm.server.proxy.timeout

**Default Value**

10 second(s)

**API Name**

scm\_proxy\_timeout

**Required**

true

### Tags Limit

**Description**

The maximum number of tags that can be created globally. Note that creating more tags than are allowed by the default limit may lead to decreased performance of Cloudera Manager.

**Related Name****Default Value**

100000

**API Name**

tags\_limit

**Required**

false

### Maximum Number of Time-Series Streams Returned Per Heatmap

**Description**

The maximum number of time-series streams returned by a single time-series heatmap query. The default is 10,000 streams. This value can be set higher, but increasing it may negatively impact chart performance and may require more resources be given to the Cloudera Manager Server, Host Monitor, and Service Monitor.

**Related Name****Default Value**

10000

**API Name**

tsquery\_heatmap\_streams\_limit

**Required**

true

**Time-Series Request Timeout****Description**

Timeout for requests to Service and Host Monitor.

**Related Name****Default Value**

20 second(s)

**API Name**

tsquery\_request\_timeout

**Required**

true

**Maximum Number of Time-Series Streams Returned Per Scatter Plot****Description**

The maximum number of time-series streams returned by a single time-series scatter plot. The default is 1000 streams. This value can be set higher, but increasing it may negatively impact chart performance and may require more resources be given to the Cloudera Manager Server, Host Monitor, and Service Monitor.

**Related Name****Default Value**

1000

**API Name**

tsquery\_scatter\_streams\_limit

**Required**

true

**Maximum Number Of Time-Series Streams Returned Per Line-Based Chart****Description**

The maximum number of time-series streams that will be returned by a single time-series query. The default is 250 streams. This value can be set higher, but increasing it may negatively impact chart performance and may require more resources be given to the Cloudera Manager Server, Host Monitor, and Service Monitor.

**Related Name****Default Value**

250

**API Name**

tsquery\_streams\_limit

**Required**

true

### Maximum Number of Time-Series Streams Returned Per Table

**Description**

The maximum number of time-series streams returned in a single time-series table. The default is 2000 streams. This value can be set higher, but increasing it may negatively impact chart performance and may require more resources be given to the Cloudera Manager Server, Host Monitor, and Service Monitor.

**Related Name****Default Value**

2000

**API Name**

tsquery\_table\_streams\_limit

**Required**

true

## Altus

### Telemetry Altus Account

**Description**

The account to use for data collection to Altus. This by itself does not enable telemetry. Telemetry needs to be explicitly enabled for specific services.

**Related Name****Default Value****API Name**

telemetry\_altus\_account

**Required**

false

## Custom Service Descriptors

### Enable Local Descriptor Repository

**Description**

When enabled, the server will read custom service descriptors from the local filesystem.

**Related Name****Default Value**

true

**API Name**

csd\_repo\_enabled

**Required**

true

### Local Descriptor Repository Path

**Description**

Path to the local repository where custom service descriptors are located.

**Related Name****Default Value**`/opt/cloudera/csd`**API Name**`csd_repo_path`**Required**`true`

## External Authentication

### Authentication Backend Order

**Description**

The order in which authentication back ends are used for authenticating a user. Emergency Administrator Access allows Full and User Administrators in the local database to authenticate if external authentication is not functioning.

**Related Name****Default Value**`DB_ONLY`**API Name**`auth_backend_order`**Required**`true`

### External Authentication Program Path

**Description**

An external script (or binary) to use to authenticate users. Username is passed as the first command line argument. The password is passed over stdin. You can configure the return codes for the external script on the Roles page. A negative return value indicates a failure. A failure description can be printed to stderr.

**Related Name****Default Value****API Name**`auth_script`**Required**`false`

### Authorization Backend Order.

**Description**

The order in which authorization back ends are used for authorizing a user. This determines where a user's roles come from. If "Database and External" is chosen, then the union of all roles is used.

**Related Name****Default Value**`EXTERNAL_AND_DB`

**API Name**

authorization\_backend\_order

**Required**

true

**Enable SPNEGO/Kerberos Authentication for the Admin Console and API****Description**

When enabled, you can authenticate to the Cloudera Manager Admin Console and API using Kerberos via the SPNEGO protocol. If you have not imported Kerberos admin credentials, you must also specify the Kerberos principal for SPNEGO authentication and Kerberos keytab file for SPNEGO authentication. This method of authentication is in addition to the configured external authentication methods.

**Related Name****Default Value**

false

**API Name**

krb\_auth\_enable

**Required**

true

**Exclude Users for SPNEGO/Kerberos Authentication****Description**

Users in this list will not be allowed to authenticate to Cloudera Manager using SPNEGO/Kerberos. They can still authenticate using other methods.

**Related Name****Default Value**

admin

**API Name**

krb\_auth\_exclude\_users

**Required**

false

**Keytab File for SPNEGO Authentication Override****Description**

This is a path to the keytab file that Cloudera Manager will use for SPNEGO/Kerberos authentication. You can leave this blank to have Cloudera Manager automatically generate this keytab.

**Related Name****Default Value****API Name**

krb\_auth\_keytab

**Required**

false

### Kerberos Principal for SPNEGO Authentication Override

**Description**

This is the full name of the service principal that Cloudera Manager will use for SPNEGO/Kerberos authentication. It is usually "HTTP/fqdn@REALM" where "fqdn" is the Cloudera Manager host and "REALM" is the Kerberos domain. The Kerberos keytab file for SPNEGO authentication must contain an entry for this principal. You can leave this blank to have Cloudera Manager automatically generate this principal.

**Related Name****Default Value****API Name**

krb\_auth\_principal

**Required**

false

### LDAP Bind User Distinguished Name

**Description**

Distinguished name of the user to bind to AD as for user authentication search/bind and group lookup for role authorization. For openLDAP based directories this should be a DN string, for Active Directory this can be just a username, combined with the "Active Directory Domain" value for login. For example username in the field and example.com in the active directory domain will result in the User Principal Name value of username@example.com being used to bind. If you put a UPN value here, do not over-configure the "active directory domain" field otherwise you will end up presenting username@example.com@example.com for binds. AD will accept a UPN value or the DN value as a valid Bind DN; An example of a Distinguished Name (DN): CN=cdh admin,OU=svcaccount,DC=example,DC=com An example of a UPN value: cdhadmin@example.com

**Related Name****Default Value****API Name**

ldap\_bind\_dn

**Required**

false

### LDAP Bind Distinguished Name for Monitoring

**Description**

Distinguished name of the user to bind as for LDAP monitoring purposes. Enter a name that is compliant with [RFC 2253](#), e.g. CN=example,OU=users,DC=example,DC=com.

**Related Name****Default Value****API Name**

ldap\_bind\_dn\_monitoring

**Required**

false

### LDAP Bind Password

**Description**

The password of the bind user.

**Related Name****Default Value****API Name**

ldap\_bind\_pw

**Required**

false

**LDAP Bind Password for Monitoring****Description**

Password of the bind user used for LDAP monitoring purposes. If empty, the password of the authentication bind user will be used.

**Related Name****Default Value****API Name**

ldap\_bind\_pw\_monitoring

**Required**

false

**LDAP Distinguished Name Pattern****Description**

This setting is deprecated and soon to be removed, do not use LDAP Distinguished Name Pattern for configuration moving forward. It is not necessary to use and deprecated as a configuration approach for LDAP and AD in general.

**Related Name****Default Value****API Name**

ldap\_dn\_pattern

**Required**

false

**LDAP Group Search Base****Description**

The distinguished name indicating the path within the directory information tree to begin user searches from. For example in AD it would be cn=groups,dc=example,dc=com. Or in an openLDAP compatible situation it would be something like ou=groups,dc=example,dc=com. Check with your directory administration team on the proper search base to configure for your environment.

**Related Name****Default Value****API Name**

ldap\_group\_search\_base

**Required**

false

### LDAP Group Search Filter

**Description**

The search filter to use for finding groups for authorization of authenticated users for their Cloudera Manager role. For Active Directory and openLDAP compatible directories this will usually be (member={0}), where {0} will be replaced by DN string for a successfully authenticated user through the search/bind process. This requires configuration of the LDAP Bind User Distinguished Name field.

**Related Name****Default Value****API Name**

ldap\_group\_search\_filter

**Required**

false

### External Authentication Type

**Description**

The type of external authentication to use.

**Related Name****Default Value**

ACTIVE\_DIRECTORY

**API Name**

ldap\_type

**Required**

true

### LDAP URL

**Description**

The URL of the LDAP server. The URL must be prefixed with ldap:// or ldaps://. The URL can optionally specify a custom port, for example: ldaps://ldap\_server.example.com:1636. Note that usernames and passwords will be transmitted in the clear unless either an ldaps:// URL is used, or "Enable LDAP TLS" is turned on (where available). Also note that encryption must be in use between the client and this service for the same reason. For more detail on the LDAP URL format, see [RFC 2255](#)

**Related Name****Default Value****API Name**

ldap\_url

**Required**

false

### LDAP User Search Base

**Description**

The distinguished name indicating the path within the directory information tree to begin user searches from. For example in AD it would be cn=users,dc=example,dc=com. Or in an openLDAP compatible situation it would be something like ou=people,dc=example,dc=com. Check with your directory administration team on the proper user search base to configure for your environment.

**Related Name****Default Value****API Name**

ldap\_user\_search\_base

**Required**

false

**LDAP User Search Filter****Description**

The search filter to use for finding users. For AD configuration it will be (sAMAccountName={0}) and for openLDAP compatible directories it will usually be (uid={0}). Note that a custom attribute can also be used if the directory is configured differently for user names. The {0} expands the currently authenticating user's name entered in the login form for the query.

**Related Name****Default Value****API Name**

ldap\_user\_search\_filter

**Required**

false

**Active Directory Domain****Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

**Related Name****Default Value****API Name**

nt\_domain

**Required**

false

**Allowed Groups for Knox Proxy****Description**

When Apache Knox makes a proxy request to Cloudera Manager, the proxied user must belong to one of these LDAP groups. This configuration is only used if LDAP authentication is enabled and the Authorization Backend Order is not Database Only. A wildcard "\*" entry allows any group.

**Related Name****Default Value****API Name**

proxyuser\_knox\_groups

**Required**

false

### Allowed Hosts for Knox Proxy

**Description**

When Apache Knox makes a proxy request to Cloudera Manager, the request must come from one of these hosts. You can specify either an IP address or a fully-qualified domain name. If using multiple Knox gateways, make sure that all gateway hosts are listed here. A wildcard "\*" entry allows any host.

**Related Name****Default Value****API Name**

proxyuser\_knox\_hosts

**Required**

false

### Knox Proxy Principal

**Description**

This is the service name of the Kerberos principal that Apache Knox will use to authenticate to Cloudera Manager when making proxy requests. Usually, this should be set to "knox" when using Knox to proxy to Cloudera Manager. If empty, Cloudera Manager will not accept proxy requests from any principal. The service name does not have to be a valid user.

**Related Name****Default Value****API Name**

proxyuser\_knox\_principal

**Required**

false

### Allowed Users for Knox Proxy

**Description**

When Apache Knox makes a proxy request to Cloudera Manager, the proxied user must be one of these users. A wildcard "\*" entry allows any user.

**Related Name****Default Value****API Name**

proxyuser\_knox\_users

**Required**

false

### SAML Entity Alias

**Description**

Unique alias used to identify the selected instance of local service provider based on used URL.

**Related Name****Default Value**

clouderaManager

**API Name**

saml\_entity\_alias

**Required**

false

**SAML Entity Base URL****Description**

The Base URL used to construct redirect URLs reported in this server's SP metadata. Leave this blank to let the server calculate the base URL itself.

**Related Name****Default Value****API Name**

saml\_entity\_base\_url

**Required**

false

**SAML Entity ID****Description**

The ID that Cloudera Manager will use to identify itself to the IDP. This value should be unique to this Cloudera Manager installation.

**Related Name****Default Value**

clouderaManager

**API Name**

saml\_entity\_id

**Required**

true

**Alias of SAML Sign/Encrypt Private Key****Description**

The alias used to identify the sign/encrypt private key in the SAML keystore.

**Related Name****Default Value****API Name**

saml\_key\_alias

**Required**

false

**SAML Sign/Encrypt Private Key Password****Description**

The password for the sign/encrypt private key in the SAML keystore.

**Related Name****Default Value****API Name**

saml\_key\_password

**Required**

false

**SAML Keystore Password****Description**

The password for the SAML keystore.

**Related Name****Default Value****API Name**

saml\_keystore\_password

**Required**

false

**Path to SAML Keystore File****Description**

The filesystem path to the keystore file containing the SP private key and any necessary public certificates to validate the IDP.

**Related Name****Default Value****API Name**

saml\_keystore\_path

**Required**

false

**SAML Login URL****Description**

If your IDP does not support SP-initiated SSO (very uncommon), you use a separate login URL, outside of Cloudera Manager. Provide that URL here so that Cloudera Manager can use it when a user needs to log in.

**Related Name****Default Value****API Name**

saml\_login\_url

**Required**

false

**Path to SAML IDP Metadata File****Description**

The filesystem path to the IDP metadata XML file.

**Related Name****Default Value****API Name**

saml\_metadata\_path

**Required**

false

**SAML Attribute Identifier for User Role****Description**

The URN OID that will identify the user's role in the SAML attributes. Only has an effect when 'Attribute' based role assignment is used.

**Related Name****Default Value**

urn:oid:2.5.4.11

**API Name**

saml\_oid\_role

**Required**

true

**SAML Attribute Identifier for User ID****Description**

The URN OID that will identify the user's ID in the SAML attributes.

**Related Name****Default Value**

urn:oid:0.9.2342.19200300.100.1.1

**API Name**

saml\_oid\_user

**Required**

true

**SAML Response Binding****Description**

The SAML Binding format that the IDP is asked to use when sending authentication responses.

**Related Name****Default Value**

ARTIFACT

**API Name**

saml\_response\_binding

**Required**

true

**SAML Role Assignment Mechanism****Description**

The mechanism to use for assigning roles to users. 'Attribute' assigns roles based on a SAML attribute. 'Script' assigns roles based on the result of an external script.

**Related Name****Default Value**

ATTRIBUTE

**API Name**

saml\_role\_mapper

**Required**

true

**Path to SAML Role Assignment Script****Description**

An external script (or binary) to use to assign roles to SAML users. The username is passed as the first command-line argument. You can configure the return codes for the external script on the Roles page. A negative return value indicates a failure.

**Related Name****Default Value****API Name**

saml\_role\_script

**Required**

false

**Source of User ID in SAML Response****Description**

Whether the user ID should be obtained from the SAML response's NameID field or from an attribute

**Related Name****Default Value**

ATTRIBUTE

**API Name**

saml\_user\_source

**Required**

true

## Kerberos

**Active Directory Account Prefix****Description**

Prefix used in names while creating accounts in Active Directory. The prefix can be up to 10 characters long and can be set to identify accounts used for authentication by CDH processes. Used only if Active Directory KDC is used for authentication.

**Related Name****Default Value****API Name**

ad\_account\_prefix

**Required**

false

### Active Directory Account Properties

**Description**

Active Directory account properties used in credential generation. Used only if Active Directory KDC is being used for authentication.

**Related Name****Default Value**

accountExpires=0, objectClass=top, objectClass=person, objectClass=organizationalPerson, objectClass=user

**API Name**

ad\_account\_properties

**Required**

false

### Active Directory Delete Accounts on Credential Regeneration

**Description**

Set this option to true if regeneration of credentials should automatically delete the associated Active Directory accounts. Used only if Active Directory KDC is used for authentication.

**Related Name****Default Value**

false

**API Name**

ad\_delete\_on\_regenerate

**Required**

false

### Active Directory Suffix

**Description**

Active Directory suffix where all the accounts used by CDH daemons will be created. Used only if Active Directory KDC is being used for authentication.

**Related Name****Default Value**

ou=hadoop, DC=hadoop, DC=com

**API Name**

ad\_kdc\_domain

**Required**

true

### Active Directory LDAP Port

**Description**

Port to use for LDAP when using Active Directory for authentication. This port is going to transmit encrypted information protected by Kerberos SASL.

**Related Name****Default Value**

389

**API Name**

ad\_ldap\_port

**Required**

true

**Active Directory LDAPS Port****Description**

Port to use for LDAP over TLS/SSL when using Active Directory for authentication.

**Related Name****Default Value**

636

**API Name**

ad\_ldaps\_port

**Required**

true

**Active Directory Password Properties****Description**

Active Directory password properties used in password generation. Used only if Active Directory KDC is being used for authentication.

**Related Name****Default Value**

length=12, minLowerCaseLetters=2, minUpperCaseLetters=2, minDigits=2, minSpaces=0, minSpecialChars=0, specialChars=?.!\$%^\*()-\_+=~

**API Name**

ad\_password\_properties

**Required**

false

**Active Directory Set Encryption Types****Description**

Set this option to true if creation of Active Directory accounts should automatically turn on the associated encryption types represented by the msDS-EncryptionTypes field. Used only if Active Directory KDC is used for authentication.

**Related Name****Default Value**

false

**API Name**

ad\_set\_encryption\_types

**Required**

false

**Custom Kerberos Keytab Retrieval Script****Description**

Specify the path to a custom script (or executable) to retrieve a Kerberos keytab. The script should take two arguments: a destination file to write the keytab to, and the full principal name to retrieve

the key for. If this property is specified, Cloudera Manager ignores all other properties specified for Kerberos setup.

**Related Name****Default Value****API Name**

gen\_keytab\_script

**Required**

false

### Active Directory Domain Controller Override

**Description**

If multiple Active Directory Domain Controllers are behind a load-balancer, Cloudera Manager should be provided with the address of one of them. Cloudera Manager then sends commands to create accounts to that Domain Controller only. Note: This setting is used only while creating accounts. CDH services use the value entered in the KDC Server Host field only while authenticating.

**Related Name****Default Value****API Name**

kdc\_account\_creation\_host\_override

**Required**

false

### KDC Admin Server Host

**Description**

Host where the KDC Admin server is located. Port number is optional and can be provided as hostname[:port]

**Related Name**

admin\_server

**Default Value****API Name**

kdc\_admin\_host

**Required**

false

### KDC Server Host

**Description**

Host where the KDC server is located. Port number is optional and can be provided as hostname[:port]

**Related Name**

kdc

**Default Value****API Name**

kdc\_host

**Required**

false

**KDC Type****Description**

Type of KDC used for authentication in CDH clusters

**Related Name****Default Value**

MIT KDC

**API Name**

kdc\_type

**Required**

true

**DNS Lookup KDC****Description**

Indicate whether DNS SRV records should be used to locate the KDCs and other servers for a realm, if they are not listed in the krb5.conf information for the realm.

**Related Name**

dns\_lookup\_kdc

**Default Value**

false

**API Name**

krb\_dns\_lookup\_kdc

**Required**

true

**Domain Name(s)****Description**

Domain(s) which are mapped to this Kerberos Realm. This is used to generate [domain\_realm] section. Also, the first domain is used as default\_domain in [realms] section

**Related Name****Default Value****API Name**

krb\_domain

**Required**

false

**Kerberos Encryption Types****Description**Encryption types supported by KDC. Note: To use AES encryption, make sure you have deployed JCE Unlimited Strength Policy File by following the instructions [here](#).**Related Name****Default Value**

rc4-hmac

**API Name**

krb\_enc\_types

**Required**

false

**Forwardable Tickets****Description**

If this flag is true, initial tickets will be forwardable by default, if allowed by the KDC.

**Related Name**

forwardable

**Default Value**

true

**API Name**

krb\_forwardable

**Required**

true

**KDC Timeout****Description**

The maximum time to wait for a reply from the KDC. A time of 0 seconds means "use the client's default".

**Related Name**

kdc\_timeout

**Default Value**

3 second(s)

**API Name**

krb\_kdc\_timeout

**Required**

false

**Advanced Configuration Snippet (Safety Valve) for [libdefaults] section of krb5.conf****Description**

For advanced use only. Any text here will be emitted verbatim in the [libdefaults] section of krb5.conf.

**Related Name****Default Value****API Name**

krb\_libdefaults\_safety\_valve

**Required**

false

**Manage krb5.conf through Cloudera Manager****Description**

Whether Cloudera Manager should configure and deploy krb5.conf on secure clusters. If this property is not checked, then you must ensure that krb5.conf is deployed on hosts in a secure cluster as well as on Cloudera Manager Server's host.

**Related Name****Default Value**

false

**API Name**

krb\_manage\_krb5\_conf

**Required**

false

**Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf****Description**

For advanced use only. Cloudera Manager configures the [libdefaults], [realms] and [domain\_realm] section of krb5.conf. Any text here will be emitted verbatim after them in krb5.conf.

**Related Name****Default Value****API Name**

krb\_other\_safety\_valve

**Required**

false

**Advanced Configuration Snippet (Safety Valve) for the Default Realm in krb5.conf****Description**

For advanced use only. Any text here will be emitted verbatim in the [realms] section of krb5.conf for the specified security realm. If you want to add realms besides the default one, configure them using Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf.

**Related Name****Default Value****API Name**

krb\_realms\_safety\_valve

**Required**

false

**Kerberos Renewable Lifetime****Description**

Default renewable lifetime for initial ticket requests.

**Related Name**

renew\_lifetime

**Default Value**

7 day(s)

**API Name**

krb\_renew\_lifetime

**Required**

true

**Kerberos Ticket Lifetime****Description**

Default lifetime for initial ticket requests.

**Related Name**

ticket\_lifetime

**Default Value**

1 day(s)

**API Name**

krb\_ticket\_lifetime

**Required**

true

**Maximum Renewable Life for Principals****Description**

Maximum renewable lifetime for Kerberos principals generated by Cloudera Manager. This property is used only if MIT KDC is used. Set this property to zero if the KDC should provide the maximum renewable lifetime. Note: Principals with non-renewable tickets are not recommended because they can prevent Hadoop services from functioning.

**Related Name****Default Value**

5 day(s)

**API Name**

max\_renew\_life

**Required**

true

**Kerberos Security Realm****Description**

The realm to use for Kerberos security. Note: Changing this setting would clear up all existing credentials and keytabs from Cloudera Manager.

**Related Name**

default\_realm

**Default Value**

HADOOP.COM

**API Name**

security\_realm

**Required**

true

**Kerberos Trusted Realms****Description**

List of Kerberos realms that all services on this Cloudera Manager should trust. This parameter is used to configure and verify krb5.conf file. The parameter is auto-configured while adding a peer, but it is recommended that users ensure the values are correct.

**Related Name**

trusted\_realms

**Default Value****API Name**

trusted\_realms

**Required**

false

## Monitoring

### Cross Entity Aggregate Generation Filters

**Description**

Specifies two filters, an allowlist (whitelist) and a denylist (blacklist), that impact cross-entity aggregates generated by the Cloudera Manager monitoring system. By default, cross-entity aggregates are generated for all types. The denylist entries can be used to disable generation of cross-entity aggregates, and allowlist entries can be used to force their creation. The JSON structure of this field is as follows:

- blacklist - A filter that when matched will prevent cross-entity aggregate creation. The structure of the filter is outlined below.
- whitelist - A filter that when matched will force cross-entity aggregate creation. The structure of the filter is outlined below. This filter takes precedence over the denylist filter, so if both are matched, an aggregate will be generated.

The JSON structure of either filter is as follows:

- types - A list of entries in the following format sourceType::targetType::aggregateMetricType, e.g. DATANODE::RACK::STATISTICAL.
- streams - A list of entries in the following format sourceType::targetType::metricName::aggregateMetricType, e.g. HOST::CLUSTER::fd\_open::TOTAL.

In the above filters the source and target types are entity type strings used within the metric system. ROLE, SERVICE and ALL are wildcards that match all role types, service types and all types respectively. Metrics are referred to by their user facing names, so counter-based metrics will be in \_rate form. The two types of aggregate metrics are TOTAL and STATISTICAL. After making changes to this field, both the Cloudera Manager Server and the Service and Host Monitors should be restarted. For advanced use only. You could break Cloudera Manager charting and health functionality by editing this field.

**Related Name****Default Value**

blacklist: streams : [ ], types : [ KUDU\_REPLICA::KUDU\_TABLET::STATISTICAL ] , whitelist: streams : [ ], types : [ ]

**API Name**

cross\_entity\_aggregate\_filters

**Required**

false

### Set health status to Bad if the Agent heartbeats fail

**Description**

If an Agent fails to send this number of expected consecutive heartbeats to the Server, a "Bad" health status is assigned to that Agent.

**Related Name****Default Value**

10 time(s)

**API Name**

missed\_hb\_bad

**Required**

true

### Set health status to Concerning if the Agent heartbeats fail

**Description**

If an Agent fails to send this number of expected consecutive heartbeats to the Server, a "Concerning" health status is assigned to that Agent.

**Related Name****Default Value**

5 time(s)

**API Name**

missed\_hb\_concerning

**Required**

true

## Network

### Proxy Password

**Description**

The basic authentication password for the proxy.

**Related Name****Default Value****API Name**

parcel\_proxy\_password

**Required**

false

### Proxy Port

**Description**

The port for the proxy server to be used when the Cloudera Manager Server accesses the Internet, such as when downloading parcels and uploading diagnostic data.

**Related Name****Default Value****API Name**

parcel\_proxy\_port

**Required**

false

**Proxy Protocol****Description**

The protocol to use for the proxy server when the Cloudera Manager Server accesses the Internet, such as when downloading parcels and uploading diagnostic data.

**Related Name****Default Value**

HTTP

**API Name**

parcel\_proxy\_protocol

**Required**

true

**Proxy Server****Description**

The proxy server to be used when the Cloudera Manager Server accesses the Internet, such as when downloading parcels and uploading diagnostic data.

**Related Name****Default Value****API Name**

parcel\_proxy\_server

**Required**

false

**Proxy User****Description**

The basic authentication user name for the proxy.

**Related Name****Default Value****API Name**

parcel\_proxy\_user

**Required**

false

**Enable Automatic Authentication for Cloudera Repositories****Description**

You must enable this option if you are accessing Cloudera Repositories that require authentication. Cloudera Manager will use the configured HTTP authentication override username and password if configured, or the information from the installed license. You can disable this option if you are using local repository mirrors, if you have an internal alias or mirror to archive.cloudera.com, or if you are only using the public Cloudera Repositories that do not require authentication.

**Related Name**

**Default Value**

true

**API Name**

remote\_repo\_auth

**Required**

false

**HTTP authentication password override for Cloudera Repositories****Description**

Use this only in consultation with Cloudera Support. Specify an override password for HTTP authentication for Cloudera Repositories. You must also specify HTTP authentication override username.

**Related Name****Default Value****API Name**

remote\_repo\_override\_password

**Required**

false

**HTTP authentication username override for Cloudera Repositories****Description**

Use this only in consultation with Cloudera Support. Specify an override username for HTTP authentication for Cloudera Repositories. You must also specify an HTTP authentication override password.

**Related Name****Default Value****API Name**

remote\_repo\_override\_user

**Required**

false

## Other

**Allow Usage Data Collection****Description**

Allows Cloudera to collect usage data, including the use of Google Analytics.

**Related Name****Default Value**

true

**API Name**

allow\_usage\_data

**Required**

true

### CDP Private Cloud Repository URLs

**Description**

URLs of the remote repositories where Cloudera Manager can download the CDP Private Cloud installer. There should be a manifest.json under these URLs. If you are using local mirror repositories, do not delete these local mirrors until after the corresponding CDP Private Cloud deployment has been upgraded or uninstalled.

**Related Name****Default Value**

https://archive.cloudera.com/p/cdp-pvc/latest

**API Name**

cdppc\_repo\_urls

**Required**

false

### Custom Banner Text

**Description**

The custom banner is used to display customer specific text in the header area.

**Related Name****Default Value****API Name**

custom\_banner\_html

**Required**

false

### Custom Header Color

**Description**

The custom header color is used to distinguish different instances of Cloudera Manager.

**Related Name****Default Value**

BLACK

**API Name**

custom\_header\_color

**Required**

true

### Custom Information Assurance Policy Text

**Description**

An information assurance policy statement that must be agreed to in order for a user to login.

**Related Name****Default Value****API Name**

custom\_ia\_policy

**Required**

false

### Enable Embedded Database Check

**Description**

When this option is unchecked, warnings about the embedded PostgreSQL database are suppressed.

**Related Name****Default Value**

true

**API Name**

enable\_embedded\_db\_check

**Required**

false

### Enable Events Widget Auto-Search

**Description**

When enabled, the Events widget at the bottom of many pages will auto-fire its default search on page load.

**Related Name****Default Value**

true

**API Name**

events\_widget\_search\_on\_load

**Required**

true

### Maximum Cluster Count Shown In Full

**Description**

When the number of clusters exceeds this number, only the cluster summary information will be shown on the home page.

**Related Name****Default Value**

2

**API Name**

home\_page\_full\_limit

**Required**

true

### System Identifier

**Description**

An identifier for this system, to be included with diagnostic data bundles.

**Related Name****Default Value**

default

**API Name**

system\_identifier

**Required**

true

## Parcels

### Automatically Distribute Available Parcels

**Description**

Whether available parcels should be automatically distributed to any cluster that already has parcels of the same product.

**Related Name****Default Value**

false

**API Name**

distribute\_parcels\_automatically

**Required**

true

### Automatically Download New Parcels

**Description**

Whether new parcels discovered on the remote parcel repository should be automatically downloaded.

**Related Name****Default Value**

false

**API Name**

download\_parcels\_automatically

**Required**

true

### Cloudera Manager Manages Parcels

**Description**

Whether Cloudera Manager should manage which parcels should be present on all managed hosts.

**Related Name****Default Value**

true

**API Name**

manages\_parcels

**Required**

true

### Automatically Downloaded Products

**Description**

If automatic parcel downloading is enabled, the list of products that will be downloaded.

**Related Name**

**Default Value**

CDH

**API Name**

parcel\_autodownload\_products

**Required**

false

**Automatically Remove Old Parcels****Description**

Whether parcels for old versions of an activated product should be removed from a cluster when they are no longer in use.

**Related Name****Default Value**

false

**API Name**

parcel\_cleanup\_automatically

**Required**

true

**Number of Old Parcel Versions to Retain****Description**

If automatic removal of old parcels is enabled, the number of old parcels to keep. Any old parcels beyond this value will any be removed. If this is set to zero, no old parcels will be retained.

**Related Name****Default Value**

3

**API Name**

parcel\_cleanup\_threshold

**Required**

true

**Parcel Distribution Rate Limit****Description**

Per-second rate limit for parcel distribution. The default of 50MiB/second allows for parcel distribution to saturate about half of a Gigabit link.

**Related Name****Default Value**

50 MiB

**API Name**

parcel\_distribute\_rate\_limit\_kbs\_per\_second

**Required**

true

**Maximum Parcel Uploads****Description**

Maximum number of concurrent uploads allowed to distribute parcels to individual hosts. The maximum allowed number of concurrent uploads is 50.

**Related Name****Default Value**

10

**API Name**

parcel\_max\_upload

**Required**

true

### Validate Parcel Relations

**Description**

Enforce that parcel dependencies are satisfied and conflicts are prevented when activating parcels. Parcel relations (Depends, Conflicts, and Replaces) can be defined the manifests of parcel repositories. Cloudera Manager can also enforce some default relations if none are defined in the manifest.

**Related Name****Default Value**

true

**API Name**

parcel\_relation\_validation

**Required**

true

### Local Parcel Repository Path

**Description**

Path to the local package parcel repository from which binaries are served to the Agents.

**Related Name****Default Value**

/opt/cloudera/parcel-repo

**API Name**

parcel\_repo\_path

**Required**

true

### Create System-Wide Symlinks for Active Parcels

**Description**

Whether system-wide symlinks should be created for the active parcels (for example, /usr/bin/hadoop).

**Related Name****Default Value**

true

**API Name**

parcel\_symlinks

**Required**

true

**Parcel Update Frequency****Description**

How often to check local and remote parcel repositories for new parcels and if any old parcels should be cleaned up. Setting a value of 0 disables the parcel check.

**Related Name****Default Value**

1 hour(s)

**API Name**

parcel\_update\_freq

**Required**

true

**Create Users and Groups, and Apply File Permissions for Parcels****Description**

Whether a parcel's specified users, groups and file permissions should be applied. This may not be desired if custom users and groups are being used, or if they have to be created externally (eg: in LDAP)

**Related Name****Default Value**

true

**API Name**

parcel\_users\_groups\_permissions

**Required**

true

**Remote Parcel Repository URLs****Description**

URLs of the remote parcel repositories where Cloudera Manager checks for new parcels. When checking for new parcels, Cloudera Manager sends the ID of the server and the server version to the repository host. The special variable {latest\_supported} is replaced with the latest version of CDH that Cloudera Manager supports when checks are made.

**Related Name****Default Value**

https://archive.cloudera.com/p/cdh7/latest\_supported/parcels/ https://archive.cloudera.com/cdh7/latest\_supported/parcels/ https://archive.cloudera.com/p/cdh6/latest\_supported/parcels/ https://archive.cloudera.com/cdh6/latest\_supported/parcels/ https://archive.cloudera.com/p/cdh5/parcels/latest https://archive.cloudera.com/cdh5/parcels/5.16/ https://parcels.repos.intel.com/mkl/latest

**API Name**

remote\_parcel\_repo\_urls

**Required**

false

### Retain Downloaded Parcel Files

**Description**

Whether downloaded parcel files be kept by Agents after they have been unpacked. Keeping the parcel files consumes additional disk space but allows downloads to be avoided if the parcel ever needs to be unpacked again.

**Related Name****Default Value**

true

**API Name**

retain\_parcels\_in\_cache

**Required**

true

## Performance

### Send Agent heartbeat every

**Description**

The interval between each heartbeat that is sent from Agents to the server

**Related Name****Default Value**

15 second(s)

**API Name**

heartbeat\_interval

**Required**

true

### Agent heartbeat requester

**Description**

Whether heartbeat request must be made on-demand instead of relying on the next periodic heartbeat. System property setting "cmf.heartbeat.enableExplicit=false" takes precedence over this configuration.

**Related Name****Default Value**

true

**API Name**

heartbeat\_requester

**Required**

true

## Ports and Addresses

### Agent Port to connect to Server

**Description**

Specify the port for Agents to use to connect to the Server. Must be 1024 or higher.

**Related Name****Default Value**

7182

**API Name**

agent\_port

**Required**

true

### Cloudera Manager Hostname Override

**Description**

Override to use for Cloudera Manager's hostname. Normally this is determined automatically, but this can be used if `InetAddress.getLocalhost()` is returning the loopback address.

**Related Name****Default Value****API Name**

cm\_host\_name

**Required**

false

### Cloudera Manager Frontend URL

**Description**

If you are using a proxy such as Knox or a load balancer to access Cloudera Manager, specify the frontend URL of that proxy here. This will be used as a prefix for generating URLs and quick links. This should be in the form of `https://server:port` and should not contain any path information starting at `/cmf`. After making a change, restart the Alert Publisher role to ensure all emails are generated using this url.

**Related Name**

frontend\_url

**Default Value****API Name**

frontend\_url

**Required**

false

### HTTP Port for Admin Console

**Description**

Specify the HTTP port to use to access the Server via the Admin Console. Must be 1024 or higher.

**Related Name****Default Value**

7180

**API Name**

http\_port

**Required**

true

### HTTPS Port for Admin Console

**Description**

Specify the HTTPS port to use to access the Server via the Admin Console. Must be 1024 or higher.

**Related Name****Default Value**

7183

**API Name**

https\_port

**Required**

true

## Replication

### Custom Kerberos Keytab Location (to be used for replication for secure clusters on this Cloudera Manager)

**Description**

Define a custom Kerberos keytab location on the Cloudera Manager host to use for replication. If this configuration is specified, the "Custom Kerberos Principal Name" must also be specified. The keytab should be owned by the user running the Cloudera Manager server process (typically "cloudera-scm") and should be configured with a filesystem access control of "0400".

**Related Name****Default Value****API Name**

bdr\_replication\_kerberos\_keytab\_location

**Required**

false

### Custom Kerberos Principal Name (to be used for replication for secure clusters on this Cloudera Manager)

**Description**

Define a custom Kerberos principal name with an entry in the custom keytab defined in "Custom Kerberos Keytab Location". The principal should be a fully qualified name of an existing principal (eg. adminuser@MY.COMPANY.COM) and the principal must have an entry in the keytab specified in "Custom Kerberos Keytab Location". The principal should also be a superuser in all distributed file system services on secure clusters in this Cloudera Manager.

**Related Name****Default Value****API Name**

bdr\_replication\_kerberos\_principal\_name

**Required**

false

## Reports

### Report Configurations

**Description**

List of configurations for the Cluster Utilization Report.

**Related Name****Default Value**

[ name: Default, tenantType: POOL, daysOfWeek: [], isAllDay: true, startHourOfDay: 0, endHourOfDay: 23 , name: Weekdays, tenantType: POOL, daysOfWeek: [1, 2, 3, 4, 5], isAllDay: true, startHourOfDay: 0, endHourOfDay: 23 ]

**API Name**

report\_configurations

**Required**

true

## Security

### Use TLS Encryption for Agents

**Description**

Select this option to enable TLS encryption between the Server and Agents.

**Related Name****Default Value**

false

**API Name**

agent\_tls

**Required**

false

### JKS Keystore File Password for Automatic TLS configuration

**Description**

The password for JKS keystore file used for automatic TLS configuration of Cloudera Manager server, agent and services.

**Related Name****Default Value****API Name**

auto\_tls\_keystore\_password

**Required**

false

### JKS Truststore File Password for Automatic TLS configuration

**Description**

The password for JKS truststore file used for automatic TLS configuration of Cloudera Manager server, agent and services.

**Related Name****Default Value****API Name**

auto\_tls\_truststore\_password

**Required**

false

**Automatic configuration of TLS for services****Description**

Allows automatic configuration of TLS for services using Cloudera Manager's TLS configuration without specifying TLS related settings like keystore path, password etc. for each service.

**Related Name****Default Value**

NONE

**API Name**

auto\_tls\_type

**Required**

false

**Redaction Parameters for Diagnostic Bundles****Description**

Note: Do not edit this property in the classic layout. Switch to the new layout to edit and test your rules inline. Use this property to define a list of rules to be followed for redacting sensitive information from diagnostic bundles. Click + to add a new redaction rule. You can choose one of the preconfigured rules or add a custom rule. When specifying a custom rule, the Search field should contain a regular expression to be matched against the data. If a match is found, it is replaced by the contents of the Replace field. Trigger is an optional field. It can be used to specify a simple string to be searched in the data. If the string is found, the redactor attempts to find a match for the Search regex. If no trigger is specified, redaction occurs by matching the Search regular expression. Use the Trigger field to enhance performance: simple string matching is faster than regular expression matching. Test your rules by entering sample text into the Test Redaction Rules text box and clicking Test Redaction. If no rules match, the text you entered is returned unchanged.

**Related Name****Default Value**

version: 1, rules: [ description: Redact passwords from json files, caseSensitive: false, trigger: password, search: \password\[ ]\*:[ ]\*\[^\]\+, replace: \password\:\ BUNDLE-REDACTED \, description: Redact password= and password:, caseSensitive: false, trigger: password, search: password[:]=\[^\ \]\+, replace: password=BUNDLE-REDACTED , description: Redact passwd= and passwd:, caseSensitive: false, trigger: passwd, search: passwd[:]=\[^\ \]\+, replace: passwd=BUNDLE-REDACTED , description: Redact pass= and pass:, caseSensitive: false, trigger: pass, search: pass[:]=\[^\ \]\+, replace: pass=BUNDLE-REDACTED , description: Redact PASSWORD, , caseSensitive: false, trigger: PASSWORD, , search: PASSWORD, \[^\ \]\+, replace: PASSWORD, BUNDLE-REDACTED , description: Redact key= and key:, caseSensitive: false, trigger: key, search: key[:]=\[^\ \]\+, replace: key=BUNDLE-REDACTED , description: Redact secret= and secret:, caseSensitive: false, trigger: secret, search: secret[:]=\[^\ \]\+, replace: secret=BUNDLE-REDACTED , description: Redact credential= and credential:, caseSensitive:

false, trigger: credential, search: credential[:=][^ \\\\]+, replace: credential=BUNDLE-REDACTED , description: Redact token= and token:, caseSensitive: false, trigger: token, search: token[:=][^ \\\\]+, replace: token=BUNDLE-REDACTED , description: Redact keyid= and keyid:, caseSensitive: false, trigger: keyid, search: keyid[:=][^ \\\\]+, replace: keyid=BUNDLE-REDACTED ]

**API Name**

diag\_bundle\_redaction\_policy

**Required**

false

**Host certificate generator command.****Description**

Utility to be executed on CM server host to generate certificates for a new host. Host name will be passed as the sole positional argument. The process is expected to write to stdout a zip file containing keys/certificates.

**Related Name****Default Value****API Name**

host\_cert\_generator

**Required**

false

**Cloudera Manager TLS/SSL Server JKS Keystore File Password****Description**

The password for the Cloudera Manager JKS keystore file.

**Related Name****Default Value****API Name**

keystore\_password

**Required**

false

**Cloudera Manager TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Cloudera Manager is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name****Default Value****API Name**

keystore\_path

**Required**

false

### Last login audit

**Description**

Enable audit for last login of current user.

**Related Name****Default Value**

true

**API Name**

last\_login\_enabled

**Required**

false

### Verify Agent Hostname Against Certificate

**Description**

Select this option to verify that agent hostnames must match their TLS client certificates.

**Related Name****Default Value**

true

**API Name**

need\_agent\_hostname\_validation

**Required**

true

### Use TLS Authentication of Agents to Server

**Description**

Select this option to enable TLS Authentication of Agents to the Server.

**Related Name****Default Value**

false

**API Name**

need\_agent\_validation

**Required**

true

### Minimum password length

**Description**

Minimum number of characters, including letters, digits, and special characters required in the password for local Cloudera Manager users.

**Related Name****Default Value**

0

**API Name**

password\_min\_length

**Required**

false

### Minimum number of digits required in password

**Description**

Specifies the minimum number of digits required in the password.

**Related Name****Default Value**

0

**API Name**

password\_min\_no\_of\_digits

**Required**

false

### Minimum number of letters required in password

**Description**

Specifies the minimum number of letters required in the password.

**Related Name****Default Value**

0

**API Name**

password\_min\_no\_of\_letters

**Required**

false

### Minimum number of special characters required in password

**Description**

Specifies the minimum number of non-alphanumeric characters required in the password.

**Related Name****Default Value**

0

**API Name**

password\_min\_no\_of\_special\_chars

**Required**

false

### HTTP Referer Check

**Description**

Whether to verify "Referer" in HTTP header for state changing requests. This protects against cross-site request forgery, but may need to be turned off if browsers or proxies in your environment do not specify the header.

**Related Name****Default Value**

true

**API Name**

referer\_check

**Required**

true

### Maximum Number of Active User Sessions

#### Description

Restrict users to a certain number of active sessions at a time. If set, a user is limited to the specified number of sessions, and the oldest session is terminated if the user logs in somewhere else. If not set, users can be logged in from as many places as they choose. If the user has 'Remember Me' turned on, or SAML is used for authentication, the user is automatically logged back in each time the session is ended. '0' means no limit is applied.

#### Related Name

#### Default Value

0

#### API Name

session\_limit\_concurrency

#### Required

true

### Allow 'Remember Me' Option

#### Description

Whether to allow a user to select 'Remember Me' when logging in. If this is set, the user will not need to log in again for two weeks (unless the server is restarted during that time). If the user chooses 'Remember Me', then the session timeout is ignored.

#### Related Name

#### Default Value

true

#### API Name

session\_remember\_me

#### Required

true

### Session Timeout

#### Description

The length of time a user's session can be idle for before the user must log in again.

#### Related Name

#### Default Value

30 minute(s)

#### API Name

session\_timeout

#### Required

true

### Show Stacktraces On Error Pages

#### Description

Control whether stacktraces are shown on error pages. While stacktraces help with debugging, they can sometimes expose sensitive information to a potentially malicious user.

#### Related Name

**Default Value**

false

**API Name**

show\_stacktraces

**Required**

true

**Server SSL Certificate Host Name.****Description**

Host name associated with CM Server SSL certificate to be passed to configuration of newly added host as the host agents are to connect to.

**Related Name****Default Value****API Name**

ssl\_certificate\_hostname

**Required**

false

**Supported SSL/TLS versions****Description**

The SSL/TLS protocol versions to accept HTTPS connections from. Note that the available cipher suites also affect which protocol versions can be negotiated, and some cipher suites are only available in higher versions.

**Related Name****Default Value**

SSLv2Hello, TLSv1.2

**API Name**

supported\_tls\_versions

**Required**

true

**Cloudera Manager TLS/SSL Client Trust Store Password****Description**

The password for the Cloudera Manager TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name****Default Value****API Name**

truststore\_password

**Required**

false

### Cloudera Manager TLS/SSL Client Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Cloudera Manager might connect to. This is used when Cloudera Manager is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name****Default Value****API Name**

truststore\_path

**Required**

false

### Use TLS Encryption for Admin Console

**Description**

Enable TLS encryption (HTTPS) between the user and the Cloudera Manager Admin Console. When checked, the HTTPS port will be used.

**Related Name****Default Value**

false

**API Name**

web\_tls

**Required**

false

## Support

### Audit Records Eviction Frequency

**Description**

Frequency (in minutes) to remove records from Cloudera Manager Audit table. Setting it to 0 will disable this function.

**Related Name****Default Value**

30 minute(s)

**API Name**

audit\_records\_evict\_frequency

**Required**

false

### Audit Records batch eviction size

**Description**

Audit records are removed in batches. This field configures the size of the batch.

**Related Name**

**Default Value**

0

**API Name**

audit\_records\_evict\_no\_of\_records

**Required**

false

**Audit Records Eviction Control****Description**

Enable removal of records from Cloudera Manager Audit table. None means stop removing audit records.

**Related Name****Default Value**

MINUTE

**API Name**

audit\_records\_evit\_schedule

**Required**

true

**Audit Records Life Time****Description**

Remove Audit Records older than the configured date

**Related Name****Default Value****API Name**

audit\_records\_life\_time

**Required**

false

**Number of Diagnostic Bundles to Keep****Description**

The maximum number of command results to keep before deleting them from local storage. This property is used for the commands that generate large result files. A value of -1 indicates no limit.

**Related Name****Default Value**

10

**API Name**

cluster\_stats\_count

**Required**

false

**Scheduled Diagnostic Data Size (MB)****Description**

Approximate size in MB of scheduled diagnostic data bundle

**Related Name****Default Value**

100

**API Name**

cluster\_stats\_default\_size\_mb

**Required**

false

**Use HTTPS to Upload Diagnostic Data****Description**

Whether to use HTTPS to upload diagnostic data bundles instead of the now-deprecated SFTP. Uses proxy settings from the network setting.

**Related Name****Default Value**

true

**API Name**

cluster\_stats\_https

**Required**

true

**Diagnostic Data Bundle Directory****Description**

Local directory to store diagnostic data bundles. Leave blank to store bundles for 24 hours. This directory must be writable by the cloudera-scm user.

**Related Name****Default Value****API Name**

cluster\_stats\_path

**Required**

false

**Scheduled Diagnostic Data Collection Frequency****Description**

Frequency of automatically collecting diagnostic data and sending to Cloudera support.

**Related Name****Default Value**

WEEKLY

**API Name**

cluster\_stats\_schedule

**Required**

true

**Scheduled Diagnostic Data Collection Time****Description**

Time of day to collect and send diagnostic data to Cloudera

**Related Name****Default Value****API Name**

cluster\_stats\_start

**Required**

false

### Diagnostic Data Temp Directory

**Description**

Local path to assemble diagnostic data bundles. Leave blank to assemble these bundles in your JVM temp directory. Set this value if you run out of disk space while collecting diagnostic data.

**Related Name****Default Value****API Name**

cluster\_stats\_tmp\_path

**Required**

false

### Diagnostic Bundle Collection Thread Pool Size

**Description**

Maximum limit of threads used by Cloudera Manager during diagnostic bundle

**Related Name****Default Value**

128

**API Name**

diag\_bundle\_max\_threads

**Required**

false

### Diagnostic Bundle Scale Factor

**Description**

Scaling factor is directly proportional to the time taken to collect diagnostic bundle. Increase this value to reduce the timeouts during data collection

**Related Name****Default Value**

0.133

**API Name**

diag\_bundle\_scale\_out\_factor

**Required**

false

### Send Diagnostic Data to Cloudera Automatically

**Description**

Allows the Server to automatically send diagnostic data when a collection is triggered.

**Related Name****Default Value**

true

**API Name**

phone\_home

**Required**

true

**Stale Process Threshold Days****Description**

Stale processes are ones that have been stopped. Cloudera Manager removes information about these stale processes from the Cloudera Manager Database after a configurable number of days. This field allows changing that number of days.

**Related Name****Default Value**

1 day(s)

**API Name**

stale\_process\_threshold

**Required**

false

## Suppressions

**Suppress Parameter Validation: Active Directory Account Prefix****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Account Prefix parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ad\_account\_prefix

**Required**

true

**Suppress Parameter Validation: Active Directory Suffix****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Suffix parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ad\_kdc\_domain

**Required**

true

**Suppress Parameter Validation: Active Directory LDAP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory LDAP Port parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ad\_ldap\_port

**Required**

true

**Suppress Parameter Validation: Active Directory LDAPS Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory LDAPS Port parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ad\_ldaps\_port

**Required**

true

**Suppress Parameter Validation: Agent Port to connect to Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Agent Port to connect to Server parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_agent\_port

**Required**

true

**Suppress Parameter Validation: External Authentication Program Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the External Authentication Program Path parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_auth\_script

**Required**

true

**Suppress Parameter Validation: JKS Keystore File Password for Automatic TLS configuration****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JKS Keystore File Password for Automatic TLS configuration parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_auto\_tls\_keystore\_password

**Required**

true

**Suppress Parameter Validation: JKS Truststore File Password for Automatic TLS configuration****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JKS Truststore File Password for Automatic TLS configuration parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_auto\_tls\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Custom Kerberos Keytab Location (to be used for replication for secure clusters on this Cloudera Manager)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Kerberos Keytab Location (to be used for replication for secure clusters on this Cloudera Manager) parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_bdr\_replication\_kerberos\_keytab\_location

**Required**

true

### Suppress Parameter Validation: Custom Kerberos Principal Name (to be used for replication for secure clusters on this Cloudera Manager)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Kerberos Principal Name (to be used for replication for secure clusters on this Cloudera Manager) parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_bdr\_replication\_kerberos\_principal\_name

**Required**

true

### Suppress Parameter Validation: CDP Private Cloud Repository URLs

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the CDP Private Cloud Repository URLs parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_cdppc\_repo\_urls

**Required**

true

### Suppress Parameter Validation: Diagnostic Data Bundle Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Diagnostic Data Bundle Directory parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_cluster\_stats\_path

**Required**

true

### Suppress Parameter Validation: Diagnostic Data Temp Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Diagnostic Data Temp Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

scm\_config\_suppression\_cluster\_stats\_tmp\_path

**Required**

true

**Suppress Parameter Validation: Cloudera Manager Hostname Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Hostname Override parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_cm\_host\_name

**Required**

true

**Suppress Parameter Validation: Cloudera Manager Server Local Data Storage Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Server Local Data Storage Directory parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_command\_storage\_path

**Required**

true

**Suppress Parameter Validation: Cross Entity Aggregate Generation Filters****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cross Entity Aggregate Generation Filters parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_cross\_entity\_aggregate\_filters

**Required**

true

**Suppress Parameter Validation: Local Descriptor Repository Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Local Descriptor Repository Path parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_csd\_repo\_path

**Required**

true

**Suppress Parameter Validation: Custom Banner Text****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Banner Text parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_custom\_banner\_html

**Required**

true

**Suppress Parameter Validation: Custom Information Assurance Policy Text****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Information Assurance Policy Text parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_custom\_ia\_policy

**Required**

true

**Suppress Parameter Validation: Redaction Parameters for Diagnostic Bundles****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Redaction Parameters for Diagnostic Bundles parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_diag\_bundle\_redaction\_policy

**Required**

true

### Suppress Parameter Validation: Extra JVM arguments for Java-based services

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Extra JVM arguments for Java-based services parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_extra\_jvm\_opts

**Required**

true

### Suppress Parameter Validation: Cloudera Manager Frontend URL

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Frontend URL parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_frontend\_url

**Required**

true

### Suppress Parameter Validation: Custom Kerberos Keytab Retrieval Script

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Kerberos Keytab Retrieval Script parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_gen\_keytab\_script

**Required**

true

### Suppress Parameter Validation: Agent Heartbeat Logging Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Agent Heartbeat Logging Directory parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_heartbeat\_logging\_dir

**Required**

true

**Suppress Parameter Validation: Host certificate generator command.****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host certificate generator command. parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_host\_cert\_generator

**Required**

true

**Suppress Parameter Validation: HTTP Port for Admin Console****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Port for Admin Console parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_http\_port

**Required**

true

**Suppress Parameter Validation: HTTPS Port for Admin Console****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTPS Port for Admin Console parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_https\_port

**Required**

true

**Suppress Parameter Validation: Active Directory Domain Controller Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain Controller Override parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_kdc\_account\_creation\_host\_override

**Required**

true

**Suppress Parameter Validation: KDC Admin Server Host****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KDC Admin Server Host parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_kdc\_admin\_host

**Required**

true

**Suppress Parameter Validation: KDC Server Host****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KDC Server Host parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_kdc\_host

**Required**

true

**Suppress Parameter Validation: Cloudera Manager TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Cloudera Manager TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_keystore\_path

**Required**

true

**Suppress Parameter Validation: Exclude Users for SPNEGO/Kerberos Authentication****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Users for SPNEGO/Kerberos Authentication parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_auth\_exclude\_users

**Required**

true

**Suppress Parameter Validation: Keytab File for SPNEGO Authentication Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Keytab File for SPNEGO Authentication Override parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_auth\_keytab

**Required**

true

**Suppress Parameter Validation: Kerberos Principal for SPNEGO Authentication Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal for SPNEGO Authentication Override parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_auth\_principal

**Required**

true

**Suppress Parameter Validation: Domain Name(s)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Domain Name(s) parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_domain

**Required**

true

**Suppress Configuration Validator: Validator for Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf****Description**

Whether to suppress configuration warnings produced by the Validator for Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_domain\_realm

**Required**

true

**Suppress Parameter Validation: Kerberos Encryption Types****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Encryption Types parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_enc\_types

**Required**

true

**Suppress Parameter Validation: KDC Timeout****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KDC Timeout parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_kdc\_timeout

**Required**

true

**Suppress Parameter Validation: Advanced Configuration Snippet (Safety Valve) for [libdefaults] section of krb5.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advanced Configuration Snippet (Safety Valve) for [libdefaults] section of krb5.conf parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_libdefaults\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advanced Configuration Snippet (Safety Valve) for remaining krb5.conf parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_other\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Advanced Configuration Snippet (Safety Valve) for the Default Realm in krb5.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advanced Configuration Snippet (Safety Valve) for the Default Realm in krb5.conf parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_realms\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Kerberos Renewable Lifetime

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Renewable Lifetime parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_renew\_lifetime

**Required**

true

### Suppress Parameter Validation: Kerberos Ticket Lifetime

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Ticket Lifetime parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_krb\_ticket\_lifetime

**Required**

true

### Suppress Parameter Validation: LDAP Bind User Distinguished Name

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind User Distinguished Name parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ldap\_bind\_dn

**Required**

true

### Suppress Parameter Validation: LDAP Bind Distinguished Name for Monitoring

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind Distinguished Name for Monitoring parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ldap\_bind\_dn\_monitoring

**Required**

true

**Suppress Parameter Validation: LDAP Bind Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind Password parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ldap\_bind\_pw

**Required**

true

**Suppress Parameter Validation: LDAP Bind Password for Monitoring****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind Password for Monitoring parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ldap\_bind\_pw\_monitoring

**Required**

true

**Suppress Parameter Validation: LDAP Distinguished Name Pattern****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Distinguished Name Pattern parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ldap\_dn\_pattern

**Required**

true

**Suppress Parameter Validation: LDAP Group Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Search Base parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ldap\_group\_search\_base

**Required**

true

**Suppress Parameter Validation: LDAP Group Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Search Filter parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ldap\_group\_search\_filter

**Required**

true

**Suppress Parameter Validation: LDAP URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ldap\_url

**Required**

true

**Suppress Parameter Validation: LDAP User Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User Search Base parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ldap\_user\_search\_base

**Required**

true

### Suppress Parameter Validation: LDAP User Search Filter

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User Search Filter parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ldap\_user\_search\_filter

**Required**

true

### Suppress Configuration Validator: Mixed Packages And Parcels

**Description**

Whether to suppress configuration warnings produced by the Mixed Packages And Parcels configuration validator.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_mixed\_packages\_and\_parcels

**Required**

true

### Suppress Parameter Validation: Active Directory Domain

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_nt\_domain

**Required**

true

### Suppress Parameter Validation: Automatically Downloaded Products

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Automatically Downloaded Products parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_parcel\_autodownload\_products

**Required**

true

**Suppress Parameter Validation: Proxy Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Password parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_parcel\_proxy\_password

**Required**

true

**Suppress Parameter Validation: Proxy Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Port parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_parcel\_proxy\_port

**Required**

true

**Suppress Parameter Validation: Proxy Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Server parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_parcel\_proxy\_server

**Required**

true

**Suppress Parameter Validation: Proxy User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy User parameter.

**Related Name**

**Default Value**

false

**API Name**

scm\_config\_suppression\_parcel\_proxy\_user

**Required**

true

**Suppress Parameter Validation: Local Parcel Repository Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Local Parcel Repository Path parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_parcel\_repo\_path

**Required**

true

**Suppress Parameter Validation: Allowed Groups for Knox Proxy****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Groups for Knox Proxy parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_proxyuser\_knox\_groups

**Required**

true

**Suppress Parameter Validation: Allowed Hosts for Knox Proxy****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Hosts for Knox Proxy parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_proxyuser\_knox\_hosts

**Required**

true

**Suppress Parameter Validation: Knox Proxy Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy Principal parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_proxyuser\_knox\_principal

**Required**

true

**Suppress Parameter Validation: Allowed Users for Knox Proxy****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Allowed Users for Knox Proxy parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_proxyuser\_knox\_users

**Required**

true

**Suppress Parameter Validation: Remote Parcel Repository URLs****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Remote Parcel Repository URLs parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_remote\_parcel\_repo\_urls

**Required**

true

**Suppress Parameter Validation: HTTP authentication password override for Cloudera Repositories****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP authentication password override for Cloudera Repositories parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_remote\_repo\_override\_password

**Required**

true

### Suppress Parameter Validation: HTTP authentication username override for Cloudera Repositories

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP authentication username override for Cloudera Repositories parameter.

#### Related Name

#### Default Value

false

#### API Name

scm\_config\_suppression\_remote\_repo\_override\_user

#### Required

true

### Suppress Parameter Validation: Report Configurations

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Report Configurations parameter.

#### Related Name

#### Default Value

false

#### API Name

scm\_config\_suppression\_report\_configurations

#### Required

true

### Suppress Parameter Validation: SAML Entity Alias

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Entity Alias parameter.

#### Related Name

#### Default Value

false

#### API Name

scm\_config\_suppression\_saml\_entity\_alias

#### Required

true

### Suppress Parameter Validation: SAML Entity Base URL

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Entity Base URL parameter.

#### Related Name

#### Default Value

false

**API Name**

scm\_config\_suppression\_saml\_entity\_base\_url

**Required**

true

**Suppress Parameter Validation: SAML Entity ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Entity ID parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_saml\_entity\_id

**Required**

true

**Suppress Parameter Validation: Alias of SAML Sign/Encrypt Private Key****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alias of SAML Sign/Encrypt Private Key parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_saml\_key\_alias

**Required**

true

**Suppress Parameter Validation: SAML Sign/Encrypt Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Sign/Encrypt Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_saml\_key\_password

**Required**

true

**Suppress Parameter Validation: SAML Keystore Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Keystore Password parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_saml\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Path to SAML Keystore File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Path to SAML Keystore File parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_saml\_keystore\_path

**Required**

true

**Suppress Parameter Validation: SAML Login URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Login URL parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_saml\_login\_url

**Required**

true

**Suppress Parameter Validation: Path to SAML IDP Metadata File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Path to SAML IDP Metadata File parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_saml\_metadata\_path

**Required**

true

**Suppress Parameter Validation: SAML Attribute Identifier for User Role****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Attribute Identifier for User Role parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_saml\_oid\_role

**Required**

true

**Suppress Parameter Validation: SAML Attribute Identifier for User ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Attribute Identifier for User ID parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_saml\_oid\_user

**Required**

true

**Suppress Parameter Validation: Path to SAML Role Assignment Script****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Path to SAML Role Assignment Script parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_saml\_role\_script

**Required**

true

**Suppress Configuration Validator: Cloudera Manager Server Restart****Description**

Whether to suppress configuration warnings produced by the Cloudera Manager Server Restart configuration validator.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_scm\_server\_restart

**Required**

true

**Suppress Parameter Validation: Kerberos Security Realm****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Security Realm parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_security\_realm

**Required**

true

**Suppress Parameter Validation: Server SSL Certificate Host Name.****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Server SSL Certificate Host Name. parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_ssl\_certificate\_hostname

**Required**

true

**Suppress Parameter Validation: System Identifier****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Identifier parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_system\_identifier

**Required**

true

**Suppress Configuration Validator: Tags Limit Validator****Description**

Whether to suppress configuration warnings produced by the Tags Limit Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

scm\_config\_suppression\_tags\_limit

**Required**

true

**Suppress Configuration Validator: TLS With Kerberos Validator****Description**

Whether to suppress configuration warnings produced by the TLS With Kerberos Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_tls\_with\_kerberos\_validator

**Required**

true

**Suppress Parameter Validation: Kerberos Trusted Realms****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Trusted Realms parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_trusted\_realms

**Required**

true

**Suppress Parameter Validation: Cloudera Manager TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Cloudera Manager TLS/SSL Client Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

scm\_config\_suppression\_truststore\_path

**Required**

true

## Cloudera Management Service

Role groups:

### Activity Monitor

#### Advanced

##### Activity Monitor Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

ACTIVITYMONITOR\_role\_env\_safety\_valve

**Required**

false

##### Event Publication Maximum Queue Size

**Description**

The maximum size of the queue in which events published from this role will be buffered. If this queue becomes full (for example, due to an outage), subsequent events will be dropped.

**Related Name**

activityevents.event.publish.queue.max

**Default Value**

20000

**API Name**

actmon\_event\_publication\_queue\_size\_max

**Required**

true

### Event Publication Retry Period

**Description**

If an event cannot be delivered immediately by this role, this value controls how long to wait before Event Publisher retries delivery.

**Related Name**

activityevents.event.publish.retry.ms

**Default Value**

5000

**API Name**

actmon\_event\_publication\_retry\_period

**Required**

true

### Java Configuration Options for Activity Monitor

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value****API Name**

firehose\_java\_opts

**Required**

false

### Activity Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf

**Description**

For advanced use only. A string to be inserted into cmon.conf for this role only.

**Related Name****Default Value****API Name**

firehose\_safety\_valve

**Required**

false

### Activity Monitor Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Heap Dump Directory

#### Description

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

#### Related Name

oom\_heap\_dump\_dir

#### Default Value

/tmp

#### API Name

oom\_heap\_dump\_dir

#### Required

false

### Dump Heap When Out of Memory

#### Description

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

#### Related Name

#### Default Value

true

#### API Name

oom\_heap\_dump\_enabled

#### Required

true

### Kill When Out of Memory

#### Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

#### Related Name

#### Default Value

true

#### API Name

oom\_sigkill\_enabled

#### Required

true

### Automatically Restart Process

#### Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Database****Activity Monitor Database Hostname****Description**

Name of host where Activity Monitor's database is running. It is highly recommended that this database is on the same host as the Activity Monitor. If the database is not running on its default port, specify the port number using this syntax: 'host:port'

**Related Name****Default Value**

localhost

**API Name**

firehose\_database\_host

**Required**

false

**Activity Monitor Database Name****Description**

Name of the Activity Monitor's database.

**Related Name****Default Value**

firehose

**API Name**

firehose\_database\_name

**Required**

true

**Activity Monitor Database Password****Description**

Password for logging in to the Activity Monitor database

**Related Name**

db.hibernate.connection.password

**Default Value****API Name**

firehose\_database\_password

**Required**

false

**Activity Monitor Database Type****Description**

Type of database to use for Activity Monitor.

**Related Name**

**Default Value**

mysql

**API Name**

firehose\_database\_type

**Required**

false

**Activity Monitor Database Username****Description**

Username for logging in to the Activity Monitor database.

**Related Name**

db.hibernate.connection.username

**Default Value**

firehose

**API Name**

firehose\_database\_user

**Required**

true

## Logs

**Activity Monitor Logging Threshold****Description**

The minimum log level for Activity Monitor logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Activity Monitor Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Activity Monitor logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### Activity Monitor Max Log Size

**Description**

The maximum size, in megabytes, per log file for Activity Monitor logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

### Activity Monitor Log Directory

**Description**

Location of log files for Activity Monitor

**Related Name****Default Value**

/var/log/cloudera-scm-firehose

**API Name**

mgmt\_log\_dir

**Required**

false

## Monitoring

### Activity Monitor Activity Monitor Pipeline Monitoring Thresholds

**Description**

The health test thresholds for monitoring the Activity Monitor activity monitor pipeline. This specifies the number of dropped messages that will be tolerated over the monitoring time period.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

activitymonitor\_activity\_monitor\_pipeline\_thresholds

**Required**

false

### Activity Monitor Activity Monitor Pipeline Monitoring Time Period

**Description**

The time period over which the Activity Monitor activity monitor pipeline will be monitored for dropped messages.

**Related Name****Default Value**

5 minute(s)

**API Name**

activitymonitor\_activity\_monitor\_pipeline\_window

**Required**

false

**Activity Monitor Activity Tree Pipeline Monitoring Thresholds****Description**

The health test thresholds for monitoring the Activity Monitor activity tree pipeline. This specifies the number of dropped messages that will be tolerated over the monitoring time period.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

activitymonitor\_activity\_tree\_pipeline\_thresholds

**Required**

false

**Activity Monitor Activity Tree Pipeline Monitoring Time Period****Description**

The time period over which the Activity Monitor activity tree pipeline will be monitored for dropped messages.

**Related Name****Default Value**

5 minute(s)

**API Name**

activitymonitor\_activity\_tree\_pipeline\_window

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

activitymonitor\_fd\_thresholds

**Required**

false

**Activity Monitor Host Health Test****Description**

When computing the overall Activity Monitor health, consider the host's health.

**Related Name**

**Default Value**

true

**API Name**

activitymonitor\_host\_health\_enabled

**Required**

false

**Pause Duration Thresholds****Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

activitymonitor\_pause\_duration\_thresholds

**Required**

false

**Pause Duration Monitoring Period****Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

**Related Name****Default Value**

5 minute(s)

**API Name**

activitymonitor\_pause\_duration\_window

**Required**

false

**Activity Monitor Process Health Test****Description**

Enables the health test that the Activity Monitor's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

activitymonitor\_scm\_health\_enabled

**Required**

false

### Web Metric Collection

**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

activitymonitor\_web\_metric\_collection\_enabled

**Required**

false

### Web Metric Collection Duration

**Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

activitymonitor\_web\_metric\_collection\_thresholds

**Required**

false

### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

#### Related Name

#### Default Value

Warning: 10 GiB, Critical: 5 GiB

#### API Name

heap\_dump\_directory\_free\_space\_absolute\_thresholds

#### Required

false

### Heap Dump Directory Free Space Monitoring Percentage Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

#### Related Name

#### Default Value

Warning: Never, Critical: Never

#### API Name

heap\_dump\_directory\_free\_space\_percentage\_thresholds

#### Required

false

### Log Directory Free Space Monitoring Absolute Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

#### Related Name

#### Default Value

Warning: 10 GiB, Critical: 5 GiB

#### API Name

log\_directory\_free\_space\_absolute\_thresholds

#### Required

false

### Log Directory Free Space Monitoring Percentage Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

#### Related Name

**Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Rules to Extract Events from Log Files****Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used. Each rule has some or all of the following fields:

- alert - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- rate (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- periodminutes - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- threshold - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- content - match only those messages for which contents match this regular expression.
- exceptiontype - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

**Related Name****Default Value**

```
version: 0, rules: [ alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Instead, use .*,
alert: false, rate: 0, threshold: WARN, content: .* is deprecated. Use .* instead, alert: false, rate: 1,
periodminutes: 1, threshold: FATAL, alert: false, rate: 1, periodminutes: 2, exceptiontype: .*, alert:
false, rate: 1, periodminutes: 1, threshold: WARN ]
```

**API Name**

log\_event\_whitelist

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

#### Related Name

#### Default Value

#### API Name

monitoring\_metric\_filter

#### Required

false

### Process Swap Memory Thresholds

#### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

#### Related Name

#### Default Value

Warning: 200 B, Critical: Never

#### API Name

process\_swap\_memory\_thresholds

#### Required

false

### Role Triggers

#### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.

- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAM and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Cloudera Manager Descriptor Age Thresholds****Description**

The health test thresholds for monitoring the time since the Cloudera Manager descriptor was last refreshed.

**Related Name****Default Value**

Warning: 60000.0, Critical: 120000.0

**API Name**

scm\_descriptor\_age\_thresholds

**Required**

false

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

## Other

### Event Publication Log Quiet Time Period

**Description**

To avoid producing excessive amounts of log output, the Event Publisher component of this role is limited to emitting one message per time period. This value controls the size of that time period.

**Related Name**

activityevents.event.publish.log.suppress.window.ms

**Default Value**

1 minute(s)

**API Name**

actmon\_event\_publication\_log\_suppress\_window

**Required**

true

### Use the Authentication Service to enable Single Sign On

**Description**

Use the Authentication Service to enable Single Sign On for the Firehose debug servers. Requires a running Authentication Service.

**Related Name**

debug.servlet.auth.enabled

**Default Value**

false

**API Name**

debug\_servlet\_auth\_enabled

**Required**

false

### Purge Activities Data at This Age

**Description**

In Activity Monitor, purge data about MapReduce jobs and aggregate activities when the data reaches this age in hours. By default, Activity Monitor keeps data about activities for 336 hours (14 days).

**Related Name**

firehose.activity.purge.duration.hours

**Default Value**

14 day(s)

**API Name**

firehose\_activity\_purge\_duration\_hours

**Required**

false

### Purge Attempts Data at This Age

**Description**

In the Activity Monitor, purge data about MapReduce attempts when the data reaches this age in hours. Because attempt data may consume large amounts of database space, you may wish to purge it more frequently than activity data. By default, Activity Monitor keeps data about attempts for 336 hours (14 days).

**Related Name**

firehose.attempt.purge.duration.hours

**Default Value**

14 day(s)

**API Name**

firehose\_attempt\_purge\_duration\_hours

**Required**

false

### Starting Interval for Descriptor Fetch Attempts

**Description**

The starting interval between fetch attempts for the SCM descriptor when Cloudera Management Service roles are starting. The interval is increased by an additional one second with each failed fetch attempt.

**Related Name**

mgmt.descriptor.fetch.frequency

**Default Value**

2 second(s)

**API Name**

mgmt\_descriptor\_fetch\_frequency

**Required**

true

### Descriptor Fetch Max Attempts

**Description**

Maximum number of attempts to fetch the SCM descriptor when Cloudera Management Service roles are starting. If the roles are not able to get the descriptor in this number of attempts, then the roles exit.

**Related Name**

mgmt.num.descriptor.fetch.tries

**Default Value**

10

**API Name**

mgmt\_num\_descriptor\_fetch\_tries

**Required**

true

**Purge MapReduce Service Data at This Age****Description**

The number of hours of past service-level data to keep in the Activity Monitor database, such as total slots running. The default is to keep data for 336 hours (14 days).

**Related Name**

timeseries.expiration.hours

**Default Value**

14 day(s)

**API Name**

timeseries\_expiration\_hours

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Bind Activity Monitor to Wildcard Address****Description**

If enabled, the Activity Monitor binds to the wildcard address ("0.0.0.0") on all of its ports.

**Related Name****Default Value**

false

**API Name**

amon\_bind\_wildcard

**Required**

false

### Activity Monitor Web UI Port

**Description**

Port for Activity Monitor's Debug page. Set to -1 to disable the debug server.

**Related Name**

debug.servlet.port

**Default Value**

8087

**API Name**

firehose\_debug\_port

**Required**

false

### Activity Monitor Web UI HTTPS Port

**Description**

Port for Activity Monitor's HTTPS Debug page.

**Related Name**

debug.servlet.https.port

**Default Value**

9087

**API Name**

firehose\_debug\_tls\_port

**Required**

false

### Activity Monitor Listen Port

**Description**

Port where Activity Monitor is listening for agent messages.

**Related Name**

firehose.server.port

**Default Value**

9999

**API Name**

firehose\_listen\_port

**Required**

false

### Activity Monitor Nozzle Port

**Description**

Port where Activity Monitor's query API is exposed.

**Related Name**

nozzle.server.port

**Default Value**

9998

**API Name**

```
firehose_nozzle_port
```

**Required**

```
false
```

## Resource Management

### Java Heap Size of Activity Monitor in Bytes

**Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

```
1 GiB
```

**API Name**

```
firehose_heapsize
```

**Required**

```
false
```

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

```
cpu.shares
```

**Default Value**

```
1024
```

**API Name**

```
rm_cpu_shares
```

**Required**

```
true
```

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

```
custom.cgroups
```

**Default Value****API Name**

```
rm_custom_resources
```

**Required**

```
false
```

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

## Security

### Activity Monitor Kerberos Principal

**Description**

Kerberos principal used by the Activity Monitor. Note: Activity Monitoring should always use the principal used by Hue service.

**Related Name****Default Value**

hue

**API Name**

kerberos\_role\_princ\_name

**Required**

true

### Enable TLS/SSL for Firehose Debug Server

**Description**

Encrypt communication between clients and Firehose Debug Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

debug.servlet.https.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### Firehose Debug Server TLS/SSL Server JKS Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Firehose Debug Server is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

debug.servlet.https.keystorePath

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### Firehose Debug Server TLS/SSL Server JKS Keystore File Password

**Description**

The password for the Firehose Debug Server JKS keystore file.

**Related Name**

debug.servlet.https.keystorePassword

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

## Stacks Collection

### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

## Suppressions

### Suppress Parameter Validation: Activity Monitor Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_activitymonitor\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Activity Monitor Database Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Database Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_database\_host

**Required**

true

**Suppress Parameter Validation: Activity Monitor Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Database Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_database\_name

**Required**

true

**Suppress Parameter Validation: Activity Monitor Database Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Database Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_database\_password

**Required**

true

### Suppress Parameter Validation: Activity Monitor Database Username

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Database Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_database\_user

**Required**

true

### Suppress Parameter Validation: Activity Monitor Web UI Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_debug\_port

**Required**

true

### Suppress Parameter Validation: Activity Monitor Web UI HTTPS Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Web UI HTTPS Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_debug\_tls\_port

**Required**

true

### Suppress Parameter Validation: Java Configuration Options for Activity Monitor

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Activity Monitor parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_java\_opts

**Required**

true

**Suppress Parameter Validation: Activity Monitor Listen Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Listen Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_listen\_port

**Required**

true

**Suppress Parameter Validation: Activity Monitor Nozzle Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Nozzle Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_nozzle\_port

**Required**

true

**Suppress Parameter Validation: Activity Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Activity Monitor Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Activity Monitor Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Rules to Extract Events from Log Files****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

**Suppress Parameter Validation: Activity Monitor Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Activity Monitor Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Firehose Debug Server TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Firehose Debug Server TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Firehose Debug Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Firehose Debug Server TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Activity Monitor Pipeline****Description**

Whether to suppress the results of the Activity Monitor Pipeline health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_activity\_monitor\_activity\_monitor\_pipeline

**Required**

true

**Suppress Health Test: Activity Tree Pipeline****Description**

Whether to suppress the results of the Activity Tree Pipeline health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_activity\_monitor\_activity\_tree\_pipeline

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_activity\_monitor\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_activity\_monitor\_file\_descriptor

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**`role_health_suppression_activity_monitor_heap_dump_directory_free_space`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_activity_monitor_host_health`**Required**`true`**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_activity_monitor_log_directory_free_space`**Required**`true`**Suppress Health Test: Pause Duration****Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_activity_monitor_pause_duration`**Required**`true`

### Suppress Health Test: Cloudera Manager Descriptor Age

**Description**

Whether to suppress the results of the Cloudera Manager Descriptor Age health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_activity\_monitor\_scm\_descriptor\_fetch

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_activity\_monitor\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_activity\_monitor\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_activity\_monitor\_unexpected\_exits

**Required**

true

**Suppress Health Test: Web Server Status****Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_activity\_monitor\_web\_metric\_collection

**Required**

true

## Alert Publisher

### Advanced

**Java Configuration Options for Alert Publisher****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, `{{JAVA_GC_ARGS}}` will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value****API Name**

alertpublisher\_java\_opts

**Required**

false

**Alert Publisher Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

ALERTPUBLISHER\_role\_env\_safety\_valve

**Required**

false

**Alert Publisher Advanced Configuration Snippet (Safety Valve) for alertpublisher.conf****Description**

For advanced use only. A string to be inserted into alertpublisher.conf for this role only.

**Related Name****Default Value****API Name**

alertpublisher\_safety\_valve

**Required**

false

**Alert Publisher Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name**

**Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

## Logs

### Alert Publisher Logging Threshold

**Description**

The minimum log level for Alert Publisher logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### Alert Publisher Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for Alert Publisher logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Alert Publisher Max Log Size****Description**

The maximum size, in megabytes, per log file for Alert Publisher logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Alert Publisher Log Directory****Description**

Directory where Alert Publisher will place its log files.

**Related Name****Default Value**

/var/log/cloudera-scm-alertpublisher

**API Name**

mgmt\_log\_dir

**Required**

false

**Monitoring****File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

alertpublisher\_fd\_thresholds

**Required**

false

**Alert Publisher Host Health Test****Description**

When computing the overall Alert Publisher health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

alertpublisher\_host\_health\_enabled

**Required**

false

### Alert Publisher Process Health Test

**Description**

Enables the health test that the Alert Publisher's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

alertpublisher\_scm\_health\_enabled

**Required**

false

### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Heap Dump Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Rules to Extract Events from Log Files****Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

**Related Name****Default Value**

```
version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]
```

**API Name**

log\_event\_whitelist

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other**

### Alerts: Enable Email Alerts

**Description**

This setting allows you to turn email alert delivery on and off.

**Related Name**

mailserver.enabled

**Default Value**

true

**API Name**

alert\_mailserver\_enabled

**Required**

false

### Alert: Mail From Address

**Description**

The 'From' address to use for alert emails

**Related Name****Default Value**

noreply@localhost

**API Name**

alert\_mailserver\_from\_address

**Required**

false

### Alerts: Mail Server Hostname

**Description**

The IP address or hostname of the mail server to send alerts to

**Related Name****Default Value**

localhost

**API Name**

alert\_mailserver\_hostname

**Required**

true

### Alerts: Mail Server Password

**Description**

The password to use to log into the mail server. Warning: this password will be sent over the network to the Alert Publisher host in clear text. In addition, the password will be stored in a plain text file on the Alert Publisher host with restrictive file system permissions.

**Related Name****Default Value****API Name**

alert\_mailserver\_password

**Required**

false

### Alerts: Mail Server Protocol

**Description**

The protocol to use for sending email alerts.

**Related Name****Default Value**

smtp

**API Name**

alert\_mailserver\_protocol

**Required**

true

### Alerts: Mail Message Recipients

**Description**

A comma-separated list of email addresses to send alerts to

**Related Name****Default Value**

root@localhost

**API Name**

alert\_mailserver\_recipients

**Required**

true

### Alerts: Mail Server Username

**Description**

The username to use to log into the mail server

**Related Name****Default Value****API Name**

alert\_mailserver\_username

**Required**

false

### Custom Alert Script

**Description**

If configured, this script is invoked on the machine hosting the alert publisher role. The script must be readable and executable by the cloudera-scm user. The script is passed, as a single argument, a path to a UTF-8 JSON file containing a list of alerts. Alerts are, by default, batched over time, and the batch size and the batch interval are configurable with the "Alert Publisher: Maximum Batch Size" and "Alert Publisher: Maximum Batch Interval" configuration options. The alerts file is deleted when the script finishes executing. Only one instance of this script is invoked at any given time, and the script must terminate. The standard out and standard error messages from this script are logged to the alert publisher role's log file.

**Related Name**

alert.script.path

**Default Value****API Name**

alert\_script\_path

**Required**

false

**Alert Publisher: Maximum Batch Size****Description**

The Alert Publisher can be configured to batch multiple alerts into a single email. This setting specifies the maximum number of alerts that will be batched into a single email (regardless of the batch interval).

**Related Name**

alert.aggregate.maxSize

**Default Value**

32

**API Name**

alertpublisher\_aggregate\_max\_size

**Required**

false

**Alert Publisher: Maximum Batch Interval****Description**

The Alert Publisher can be configured to batch multiple alerts into a single email. This setting specifies the maximum amount of time (in milliseconds) that the Alert Publisher waits before sending an email of the current batch.

**Related Name**

alert.aggregate.timeout.millis

**Default Value**

1 minute(s)

**API Name**

alertpublisher\_aggregate\_timeout

**Required**

false

**Alerts: Email footer****Description**

Optional. If not empty, the text entered here will be inserted verbatim as a footer in HTML and plain-text emails.

**Related Name**

alert.email.footer

**Default Value****API Name**

alertpublisher\_email\_footer

**Required**

false

### Alerts: Email header

#### Description

Optional. If not empty, the text entered here will be inserted verbatim as a header in HTML and plain-text emails.

#### Related Name

alert.email.header

#### Default Value

#### API Name

alertpublisher\_email\_header

#### Required

false

### Alerts: Mail Message Format

#### Description

The format of the email alert message. The 'JSON' format is easy for scripts/programs to parse. The 'HTML' and 'text' formats are designed to be easily read by people.

#### Related Name

mail.format

#### Default Value

html

#### API Name

mail\_format

#### Required

true

## Performance

### Maximum Process File Descriptors

#### Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

#### Related Name

#### Default Value

#### API Name

rlimit\_fds

#### Required

false

## Ports and Addresses

### Alerts: Mail Server TCP Port

#### Description

Optional. The TCP port where the mail server is listening. If not specified, defaults to 25 if SMTP is selected, or 465 if SMTPS is selected.

**Related Name****Default Value****API Name**

alert\_mailserver\_port

**Required**

false

**Alerts: Listen Port****Description**

Port where the Alert Publisher listens for internal API requests.

**Related Name**

alertpublisher.internalapi.port

**Default Value**

10101

**API Name**

alertpublisher\_internalapi\_port

**Required**

false

## Resource Management

**Java Heap Size of Alert Publisher in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

256 MiB

**API Name**

alert\_heapsize

**Required**

false

**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**SNMP****SNMP Authentication Protocol Pass Phrase****Description**

Pass phrase to use for SNMP authentication protocol

**Related Name**

alert.snmp.auth.password

**Default Value****API Name**

alert\_snmp\_auth\_password

**Required**

false

**SNMP Authentication Protocol****Description**

Authentication algorithm to use for authentication

**Related Name**

alert.snmp.auth.protocol

**Default Value**

SHA

**API Name**

alert\_snmp\_auth\_protocol

**Required**

false

### SNMPv2 Community String

**Description**

Community string to use to identify this service. Generated SNMPv2 traps will use this string for authentication purpose.

**Related Name**

alert.snmp.community

**Default Value****API Name**

alert\_snmp\_community

**Required**

false

### SNMP Retry Count

**Description**

Number of time to try before trap is timed out. If this value is set to '0' the trap will be sent only once.

**Related Name**

alert.snmp.retries

**Default Value**

0

**API Name**

alert\_snmp\_retries

**Required**

true

### SNMP Server Engine Id

**Description**

Engine Id to use for authentication and privacy. Engine Id is normally a hexadecimal number (e.g. 8000173e03a0c095f80c68). Engine Id along with pass phrases are used to generate keys for authentication and privacy protocols.

**Related Name**

alert.snmp.security.engineid

**Default Value****API Name**

alert\_snmp\_security\_engineid

**Required**

false

### SNMP Security Level

**Description**

Level of security to use for SNMP v3 protocol. Currently only 'no authentication' and 'authentication with no privacy' is supported. Select 'SNMPv2' to use 'Community String' based SNMPv2 authentication.

**Related Name**

alert.snmp.security.level

**Default Value**

SNMPv2

**API Name**

alert\_snmp\_security\_level

**Required**

true

**SNMP NMS Hostname****Description**

Hostname of the SNMP NMS (network management software). It can be a DNS name or IP address of the host listening for SNMP traps and notifications. For reference, here is Cloudera Manager [SNMP Mib](#) .

**Related Name**

alert.snmp.server.hostname

**Default Value****API Name**

alert\_snmp\_server\_hostname

**Required**

false

**SNMP Server Port****Description**

Port number on which SNMP server is listening.

**Related Name**

alert.snmp.server.port

**Default Value**

162

**API Name**

alert\_snmp\_server\_port

**Required**

true

**SNMP Timeout****Description**

Time to wait before an SNMP trap is resent or timed out.

**Related Name**

alert.snmp.timeout

**Default Value**

5 second(s)

**API Name**

alert\_snmp\_timeout

**Required**

true

### SNMP Security UserName

**Description**

Name of a user to use for SNMP security.

**Related Name**

alert.snmp.username

**Default Value****API Name**

alert\_snmp\_username

**Required**

false

## Stacks Collection

### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Parameter Validation: Alert: Mail From Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alert: Mail From Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_from\_address

**Required**

true

### Suppress Parameter Validation: Alerts: Mail Server Hostname

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Mail Server Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_hostname

**Required**

true

### Suppress Parameter Validation: Alerts: Mail Server Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Mail Server Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_password

**Required**

true

### Suppress Parameter Validation: Alerts: Mail Server TCP Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Mail Server TCP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_port

**Required**

true

### Suppress Parameter Validation: Alerts: Mail Message Recipients

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Mail Message Recipients parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_recipients

**Required**

true

**Suppress Parameter Validation: Alerts: Mail Server Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Mail Server Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_username

**Required**

true

**Suppress Parameter Validation: Custom Alert Script****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Alert Script parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_script\_path

**Required**

true

**Suppress Parameter Validation: SNMP Authentication Protocol Pass Phrase****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMP Authentication Protocol Pass Phrase parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_auth\_password

**Required**

true

**Suppress Parameter Validation: SNMPv2 Community String****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMPv2 Community String parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_community

**Required**

true

**Suppress Parameter Validation: SNMP Server Engine Id****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMP Server Engine Id parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_security\_engineid

**Required**

true

**Suppress Parameter Validation: SNMP NMS Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMP NMS Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_server\_hostname

**Required**

true

**Suppress Parameter Validation: SNMP Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMP Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_server\_port

**Required**

true

**Suppress Parameter Validation: SNMP Security UserName****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SNMP Security UserName parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_username

**Required**

true

**Suppress Parameter Validation: Alerts: Email footer****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Email footer parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_email\_footer

**Required**

true

**Suppress Parameter Validation: Alerts: Email header****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Email header parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_email\_header

**Required**

true

**Suppress Parameter Validation: Alerts: Listen Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alerts: Listen Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_internalapi\_port

**Required**

true

### Suppress Parameter Validation: Java Configuration Options for Alert Publisher

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Alert Publisher parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_java\_opts

**Required**

true

### Suppress Parameter Validation: Alert Publisher Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alert Publisher Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Alert Publisher Advanced Configuration Snippet (Safety Valve) for alertpublisher.conf

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alert Publisher Advanced Configuration Snippet (Safety Valve) for alertpublisher.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_safety\_valve

**Required**

true

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Alert Publisher Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alert Publisher Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Rules to Extract Events from Log Files****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

**Suppress Parameter Validation: Alert Publisher Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alert Publisher Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Configuration Validator: SNMP Validator

**Description**

Whether to suppress configuration warnings produced by the SNMP Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_snmp\_validator

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_alert\_publisher\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_alert\_publisher\_file\_descriptor

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_alert\_publisher\_heap\_dump\_directory\_free\_space

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_alert\_publisher\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_alert\_publisher\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_alert\_publisher\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_alert\_publisher\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_alert\_publisher\_unexpected\_exits

**Required**

true

## Event Server

### Advanced

**Java Configuration Options for Event Server****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, `{{JAVA_GC_ARGS}}` will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value****API Name**

eventserver\_java\_opts

**Required**

false

**Maximum Number of Events Returned by Any Query****Description**

The maximum number of events that any query can return. Note: A high value can increase the amount of memory required by Event Server, as well as affect query response times.

**Related Name**

eventcatcher.max.query.events

**Default Value**

10000

**API Name**

eventserver\_max\_query\_events

**Required**

true

**Maximum Write Queue Length****Description**

The maximum number of events that can be queued for write before further requests are rejected

**Related Name**

eventcatcher.ingest.pipeline.max

**Default Value**

10000

**API Name**

eventserver\_max\_write\_queue\_size

**Required**

true

**Number of Core Event Writer Threads****Description**

The number of threads that Event Server will use to write events to its store concurrently

**Related Name**

eventcatcher.num.ingest.threads

**Default Value**

2

**API Name**

eventserver\_num\_pipeline\_threads

**Required**

true

**Event Server Query Timeout****Description**

The amount of time, in milliseconds, that Cloudera Manager and the Alert Publisher will wait for the Event Server to respond to a query.

**Related Name**

eventserver.query.timeout

**Default Value**

60000

**API Name**

eventserver\_query\_timeout

**Required**

false

**Event Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

EVENTSERVER\_role\_env\_safety\_valve

**Required**

false

**Event Server Advanced Configuration Snippet (Safety Valve) for eventserver.conf****Description**

For advanced use only. A string to be inserted into eventserver.conf for this role only.

**Related Name****Default Value****API Name**

eventserver\_safety\_valve

**Required**

false

**Event Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists,

role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs**

### Event Server Logging Threshold

**Description**

The minimum log level for Event Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### Event Server Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for Event Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### Event Server Max Log Size

**Description**

The maximum size, in megabytes, per log file for Event Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

### Event Server Log Directory

**Description**

Directory where Event Server will place its log files.

**Related Name****Default Value**

/var/log/cloudera-scm-eventserver

**API Name**

mgmt\_log\_dir

**Required**

false

## Monitoring

### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Event Store Capacity Monitoring Thresholds

**Description**

The health test thresholds on the number of events in the event store. Specified as a percentage of the maximum number of events in Event Server store.

**Related Name****Default Value**

Warning: 115.0 %, Critical: 130.0 %

**API Name**

eventserver\_capacity\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

eventserver\_fd\_thresholds

**Required**

false

**Garbage Collection Duration Thresholds****Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

eventserver\_gc\_duration\_thresholds

**Required**

false

**Garbage Collection Duration Monitoring Period****Description**

The period to review when computing the moving average of garbage collection time.

**Related Name****Default Value**

5 minute(s)

**API Name**

eventserver\_gc\_duration\_window

**Required**

false

**Event Server Host Health Test****Description**

When computing the overall Event Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

eventserver\_host\_health\_enabled

**Required**

false

**Event Server Index Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Event Server Index Directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

eventserver\_index\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Event Server Index Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Event Server Index Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Event Server Index Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

eventserver\_index\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Event Server Process Health Test****Description**

Enables the health test that the Event Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

eventserver\_scm\_health\_enabled

**Required**

false

**Web Metric Collection****Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

eventserver\_web\_metric\_collection\_enabled

**Required**

false

### Web Metric Collection Duration

**Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

eventserver\_web\_metric\_collection\_thresholds

**Required**

false

### Event Server Write Pipeline Monitoring Thresholds

**Description**

The health test thresholds for monitoring the Event Server write pipeline. This specifies the number of dropped messages that will be tolerated over the monitoring time period.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

eventserver\_write\_pipeline\_thresholds

**Required**

false

### Event Server Write Pipeline Monitoring Time Period

**Description**

The time period over which the Event Server write pipeline will be monitored for dropped messages.

**Related Name****Default Value**

5 minute(s)

**API Name**

eventserver\_write\_pipeline\_window

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Heap Dump Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Rules to Extract Events from Log Files****Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for

that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- alert - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- rate (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- periodminutes - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- threshold - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- content - match only those messages for which contents match this regular expression.
- exceptiontype - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

#### Related Name

#### Default Value

version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .\* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]

#### API Name

log\_event\_whitelist

#### Required

false

### Metric Filter

#### Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_use\_d\_mb metric:

- Include only Health Test Metric Set: Selected.

- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Cloudera Manager Descriptor Age Thresholds****Description**

The health test thresholds for monitoring the time since the Cloudera Manager descriptor was last refreshed.

**Related Name****Default Value**

Warning: 60000.0, Critical: 120000.0

**API Name**

scm\_descriptor\_age\_thresholds

**Required**

false

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Alert On Transitions Out of Alerting Health****Description**

If set, the health events for transitions out of an alertable health level will also be considered an alert. For example, consider an entity that is configured to alert when it has bad health. If that entity's health becomes bad, an alert will be generated. If this setting is enabled, an alert will also be generated when it returns to good health. If this setting is disabled, then no alert will be generated when it returns to good health. Note that an entity must have `enable_alerts` set to true for health alerts to be generated for it. And make sure to reference the per-entity setting to turn on health alerts.

**Related Name****Default Value**

false

**API Name**

eventserver\_alert\_on\_transition\_out\_of\_alerting\_health\_enabled

**Required**

false

**Health Alert Threshold****Description**

Threshold at which a health event will be considered an alert. Note that an entity must have `enable_alerts` set to true for health alerts to be generated for it. And make sure to reference the per-entity setting to turn on health alerts.

**Related Name****Default Value**

Bad

**API Name**

eventserver\_health\_events\_alert\_threshold

**Required**

false

**Event Server Index Directory****Description**

Location of the Lucene index for Event Server

**Related Name**

eventcatcher.server.lucenidir

**Default Value**

/var/lib/cloudera-scm-eventserver

**API Name**

eventserver\_index\_dir

**Required**

false

**Maximum Number of Events in the Event Server Store****Description**

The maximum size of the Event Server store, in events. Once this size is exceeded, events is deleted started with the oldest first until the size of the store returns below this threshold

**Related Name**

eventcatcher.event.capacity

**Default Value**

5000000

**API Name**

eventserver\_max\_index\_size

**Required**

true

**Starting Interval for Descriptor Fetch Attempts****Description**

The starting interval between fetch attempts for the SCM descriptor when Cloudera Management Service roles are starting. The interval is increased by an additional one second with each failed fetch attempt.

**Related Name**

mgmt.descriptor.fetch.frequency

**Default Value**

2 second(s)

**API Name**

mgmt\_descriptor\_fetch\_frequency

**Required**

true

**Descriptor Fetch Max Attempts****Description**

Maximum number of attempts to fetch the SCM descriptor when Cloudera Management Service roles are starting. If the roles are not able to get the descriptor in this number of attempts, then the roles exit.

**Related Name**

mgmt.num.descriptor.fetch.tries

**Default Value**

10

**API Name**

mgmt\_num\_descriptor\_fetch\_tries

**Required**

true

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Ports and Addresses

### Event Server Web UI Port

**Description**

Port for the Event Server's Debug page. Set to -1 to disable debug server.

**Related Name**

eventcatcher.server.debug.port

**Default Value**

8084

**API Name**

eventserver\_debug\_port

**Required**

false

### Event Query Port

**Description**

Port on which the Event Server listens for queries for events.

**Related Name**

eventcatcher.server.httpport

**Default Value**

7185

**API Name**

eventserver\_http\_port

**Required**

false

### Event Publish Port

**Description**

Port on which the Event Server listens for the publication of events.

**Related Name**

eventcatcher.server.port

**Default Value**

7184

**API Name**

eventserver\_listen\_port

**Required**

false

## Resource Management

### Java Heap Size of EventServer in Bytes

**Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

event\_server\_heapsize

**Required**

false

**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

## Stacks Collection Method

### Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

### Related Name

stacks\_collection\_method

### Default Value

jstack

### API Name

stacks\_collection\_method

### Required

false

## Suppressions

### Suppress Configuration Validator: CDH Version Validator

#### Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_cdh\_version\_validator

#### Required

true

### Suppress Parameter Validation: Event Server Web UI Port

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Event Server Web UI Port parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_eventserver\_debug\_port

#### Required

true

### Suppress Parameter Validation: Event Query Port

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Event Query Port parameter.

#### Related Name

**Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_http\_port

**Required**

true

**Suppress Parameter Validation: Event Server Index Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Event Server Index Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_index\_dir

**Required**

true

**Suppress Parameter Validation: Java Configuration Options for Event Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Event Server parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_java\_opts

**Required**

true

**Suppress Parameter Validation: Event Publish Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Event Publish Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_listen\_port

**Required**

true

### Suppress Parameter Validation: Event Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Event Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Event Server Advanced Configuration Snippet (Safety Valve) for eventserver.conf

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Event Server Advanced Configuration Snippet (Safety Valve) for eventserver.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Event Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Event Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Rules to Extract Events from Log Files

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

**Suppress Parameter Validation: Event Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Event Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_audit\_health

**Required**

true

**Suppress Health Test: Event Store Size****Description**

Whether to suppress the results of the Event Store Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_event\_store\_size

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: GC Duration****Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_gc\_duration

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_host\_health

**Required**

true

**Suppress Health Test: Event Server Index Directory Free Space****Description**

Whether to suppress the results of the Event Server Index Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_index\_directory\_free\_space

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Cloudera Manager Descriptor Age****Description**

Whether to suppress the results of the Cloudera Manager Descriptor Age health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_scm\_descriptor\_fetch

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_unexpected\_exits

**Required**

true

### Suppress Health Test: Web Server Status

**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_web\_metric\_collection

**Required**

true

### Suppress Health Test: Write Pipeline

**Description**

Whether to suppress the results of the Write Pipeline health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_event\_server\_write\_pipeline

**Required**

true

## Host Monitor

### Advanced

#### Java Configuration Options for Host Monitor

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value****API Name**

firehose\_java\_opts

**Required**

false

### Host Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf

**Description**

For advanced use only. A string to be inserted into cmon.conf for this role only.

**Related Name****Default Value****API Name**

firehose\_safety\_valve

**Required**

false

### Host Monitor Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

HOSTMONITOR\_role\_env\_safety\_valve

**Required**

false

### Host Monitor Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Event Publication Maximum Queue Size****Description**

The maximum size of the queue in which events published from this role will be buffered. If this queue becomes full (for example, due to an outage), subsequent events will be dropped.

**Related Name**

health.event.publish.queue.max

**Default Value**

20000

**API Name**

svcmmon\_event\_publication\_queue\_size\_max

**Required**

true

### Event Publication Retry Period

#### Description

If an event cannot be delivered immediately by this role, this value controls how long to wait before Event Publisher retries delivery.

#### Related Name

health.event.publish.retry.ms

#### Default Value

5000

#### API Name

svcmon\_event\_publication\_retry\_period

#### Required

true

## Logs

### Host Monitor Logging Threshold

#### Description

The minimum log level for Host Monitor logs

#### Related Name

#### Default Value

INFO

#### API Name

log\_threshold

#### Required

false

### Host Monitor Maximum Log File Backups

#### Description

The maximum number of rolled log files to keep for Host Monitor logs. Typically used by log4j or logback.

#### Related Name

#### Default Value

10

#### API Name

max\_log\_backup\_index

#### Required

false

### Host Monitor Max Log Size

#### Description

The maximum size, in megabytes, per log file for Host Monitor logs. Typically used by log4j or logback.

#### Related Name

**Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Host Monitor Log Directory****Description**

Location of log files for Host Monitor

**Related Name****Default Value**

/var/log/cloudera-scm-firehose

**API Name**

mgmt\_log\_dir

**Required**

false

## Monitoring

**Metrics Aggregation Run Duration Thresholds****Description**

The health test thresholds for monitoring the metrics aggregation run duration.

**Related Name****Default Value**

Warning: 10 second(s), Critical: 30 second(s)

**API Name**

aggregation\_run\_duration\_thresholds

**Required**

false

**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Host Monitor Storage Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Host Monitor Storage Directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

firehose\_storage\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Host Monitor Storage Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Host Monitor Storage Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Host Monitor Storage Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

firehose\_storage\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Heap Dump Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

hostmonitor\_fd\_thresholds

**Required**

false

**Host Monitor Host Health Test****Description**

When computing the overall Host Monitor health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

hostmonitor\_host\_health\_enabled

**Required**

false

**Host Monitor Host Pipeline Monitoring Thresholds****Description**

The health test thresholds for monitoring the Host Monitor host pipeline. This specifies the number of dropped messages that will be tolerated over the monitoring time period.

**Related Name**

**Default Value**

Warning: Never, Critical: Any

**API Name**

hostmonitor\_host\_pipeline\_thresholds

**Required**

false

**Host Monitor Host Pipeline Monitoring Time Period****Description**

The time period over which the Host Monitor host pipeline will be monitored for dropped messages.

**Related Name****Default Value**

5 minute(s)

**API Name**

hostmonitor\_host\_pipeline\_window

**Required**

false

**Pause Duration Thresholds****Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

hostmonitor\_pause\_duration\_thresholds

**Required**

false

**Pause Duration Monitoring Period****Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

**Related Name****Default Value**

5 minute(s)

**API Name**

hostmonitor\_pause\_duration\_window

**Required**

false

**Host Monitor Process Health Test****Description**

Enables the health test that the Host Monitor's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

hostmonitor\_scm\_health\_enabled

**Required**

false

### Web Metric Collection

**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

hostmonitor\_web\_metric\_collection\_enabled

**Required**

false

### Web Metric Collection Duration

**Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

hostmonitor\_web\_metric\_collection\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

## Log Directory Free Space Monitoring Percentage Thresholds

### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

### Related Name

### Default Value

Warning: Never, Critical: Never

### API Name

log\_directory\_free\_space\_percentage\_thresholds

### Required

false

## Rules to Extract Events from Log Files

### Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

### Related Name

### Default Value

version: 0, rules: [ alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Instead, use .\* , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Use .\* instead , alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .\* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]

### API Name

log\_event\_whitelist

**Required**

false

**Cloudera Manager Metric Schema Age Thresholds****Description**

The health test thresholds for monitoring the time since the Cloudera Manager metric schema was last refreshed.

**Related Name****Default Value**

Warning: 60000.0, Critical: 120000.0

**API Name**

metric\_schema\_age\_thresholds\_name

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

### Process Swap Memory Thresholds

#### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

#### Related Name

#### Default Value

Warning: 200 B, Critical: Never

#### API Name

process\_swap\_memory\_thresholds

#### Required

false

### Role Triggers

#### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

[]

#### API Name

role\_triggers

#### Required

true

### Cloudera Manager Descriptor Age Thresholds

#### Description

The health test thresholds for monitoring the time since the Cloudera Manager descriptor was last refreshed.

#### Related Name

#### Default Value

Warning: 60000.0, Critical: 120000.0

**API Name**

scm\_descriptor\_age\_thresholds

**Required**

false

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

## Other

### Use the Authentication Service to enable Single Sign On

**Description**

Use the Authentication Service to enable Single Sign On for the Firehose debug servers. Requires a running Authentication Service.

**Related Name**

debug.servlet.auth.enabled

**Default Value**

false

**API Name**

debug\_servlet\_auth\_enabled

**Required**

false

### Host Monitor Storage Directory

**Description**

The directory where Host Monitor data is stored. The Host Monitor stores metric time series and health information.

**Related Name**

firehose.storage.base.directory

**Default Value**

/var/lib/cloudera-host-monitor

**API Name**

firehose\_storage\_dir

**Required**

true

### Time-Series Storage

**Description**

The approximate amount of disk space dedicated to storing time series and health data. Once the store has reached its maximum size, older data is deleted to make room for newer data. The disk usage is approximate because data is deleted only when the limit is reached. Note that Cloudera Manager stores time-series data at a number of different data granularities, and these granularities have different effective retention periods. Specifically, Cloudera Manager stores metric data as both raw data points and ten-minutely, hourly, six-hourly, daily, and weekly summary data points. Raw data consumes the bulk of the allocated storage space, weekly summaries the least. As such, raw data is retained for the shortest amount of time, while weekly summary points are unlikely to ever be deleted. See the "Storage" tab on the 'Host Monitor' -> 'Charts Library' -> 'Host Monitor Storage' page for more information on how space is consumed within the Host Monitor. This tab also shows information about the amount of data retained and time window covered by each data granularity.

**Related Name**

firehose\_time\_series\_storage\_bytes

**Default Value**

10 GiB

**API Name**

firehose\_time\_series\_storage\_bytes

**Required**

false

### Health Event Startup Policy

**Description**

This setting controls whether health events are emitted when this monitoring role is started. If set to "none", then no health events are emitted. If set to "bad" then health events are emitted for subjects with bad or concerning health. If set to "all" then health events are emitted for all subjects for all health values. The default is "bad".

**Related Name**

health.event.publish.startup.policy

**Default Value**

bad

**API Name**

health\_event\_publish\_startup\_policy

**Required**

false

**Starting Interval for Descriptor Fetch Attempts****Description**

The starting interval between fetch attempts for the SCM descriptor when Cloudera Management Service roles are starting. The interval is increased by an additional one second with each failed fetch attempt.

**Related Name**

mgmt.descriptor.fetch.frequency

**Default Value**

2 second(s)

**API Name**

mgmt\_descriptor\_fetch\_frequency

**Required**

true

**Descriptor Fetch Max Attempts****Description**

Maximum number of attempts to fetch the SCM descriptor when Cloudera Management Service roles are starting. If the roles are not able to get the descriptor in this number of attempts, then the roles exit.

**Related Name**

mgmt.num.descriptor.fetch.tries

**Default Value**

10

**API Name**

mgmt\_num\_descriptor\_fetch\_tries

**Required**

true

**Event Publication Log Quiet Time Period****Description**

To avoid producing excessive amounts of log output, the Event Publisher component of this role is limited to emitting one message per time period. This value controls the size of that time period.

**Related Name**

health.event.publish.log.suppress.window.ms

**Default Value**

1 minute(s)

**API Name**

svcmon\_event\_publication\_log\_suppress\_window

**Required**

true

**Performance**

### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Ports and Addresses

### Host Monitor Web UI Port

**Description**

Port for Host Monitor's Debug page. Set to -1 to disable the debug server.

**Related Name**

debug.servlet.port

**Default Value**

8091

**API Name**

firehose\_debug\_port

**Required**

false

### Host Monitor Web UI HTTPS Port

**Description**

Port for Host Monitor's HTTPS Debug page.

**Related Name**

debug.servlet.https.port

**Default Value**

9091

**API Name**

firehose\_debug\_tls\_port

**Required**

false

### Host Monitor Listen Port

**Description**

Port where Host Monitor is listening for agent messages.

**Related Name**

firehose.server.port

**Default Value**

9995

**API Name**

firehose\_listen\_port

**Required**

false

**Host Monitor Nozzle Port****Description**

Port where Host Monitor's query API is exposed.

**Related Name**

nozzle.server.port

**Default Value**

9994

**API Name**

firehose\_nozzle\_port

**Required**

false

**Bind Host Monitor to Wildcard Address****Description**

If enabled, the Host Monitor binds to the wildcard address ("0.0.0.0") on all of its ports.

**Related Name****Default Value**

false

**API Name**

hmon\_bind\_wildcard

**Required**

false

**Resource Management****Java Heap Size of Host Monitor in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

firehose\_heapsize

**Required**

false

**Maximum Non-Java Memory of Host Monitor****Description**

The amount of memory the Host Monitor can use off of the Java heap.

**Related Name**

firehose\_non\_java\_memory\_bytes

**Default Value**

2 GiB

**API Name**

firehose\_non\_java\_memory\_bytes

**Required**

false

**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Enable TLS/SSL for Firehose Debug Server****Description**

Encrypt communication between clients and Firehose Debug Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

debug.servlet.https.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Firehose Debug Server TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Firehose Debug Server is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

debug.servlet.https.keystorePath

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Firehose Debug Server TLS/SSL Server JKS Keystore File Password****Description**

The password for the Firehose Debug Server JKS keystore file.

**Related Name**

debug.servlet.https.keystorePassword

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

## Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Host Monitor Web UI Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Monitor Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_debug\_port

**Required**

true

### Suppress Parameter Validation: Host Monitor Web UI HTTPS Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Monitor Web UI HTTPS Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_debug\_tls\_port

**Required**

true

**Suppress Configuration Validator: Host Monitor Heap Size Validator****Description**

Whether to suppress configuration warnings produced by the Host Monitor Heap Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_host\_monitor\_heap\_role\_validator

**Required**

true

**Suppress Configuration Validator: Host Monitor Off Heap Memory Size Validator****Description**

Whether to suppress configuration warnings produced by the Host Monitor Off Heap Memory Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_host\_monitor\_non\_java\_memory\_role\_validator

**Required**

true

**Suppress Parameter Validation: Java Configuration Options for Host Monitor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Host Monitor parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_java\_opts

**Required**

true

**Suppress Parameter Validation: Host Monitor Listen Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Monitor Listen Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_listen\_port

**Required**

true

**Suppress Parameter Validation: Host Monitor Nozzle Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Monitor Nozzle Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_nozzle\_port

**Required**

true

**Suppress Parameter Validation: Host Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Host Monitor Storage Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Monitor Storage Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_storage\_dir

**Required**

true

### Suppress Parameter Validation: Host Monitor Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Monitor Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hostmonitor\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Host Monitor Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Monitor Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Rules to Extract Events from Log Files

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

### Suppress Parameter Validation: Host Monitor Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Host Monitor Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Firehose Debug Server TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Firehose Debug Server TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Firehose Debug Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Firehose Debug Server TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Metrics Aggregation Run Duration Test****Description**

Whether to suppress the results of the Metrics Aggregation Run Duration Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_host\_monitor\_aggregation\_run\_duration

**Required**

true

### Suppress Health Test: Audit Pipeline Test

#### Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_host\_monitor\_audit\_health

#### Required

true

### Suppress Health Test: File Descriptors

#### Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_host\_monitor\_file\_descriptor

#### Required

true

### Suppress Health Test: Heap Dump Directory Free Space

#### Description

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_host\_monitor\_heap\_dump\_directory\_free\_space

#### Required

true

### Suppress Health Test: Host Health

#### Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_host\_monitor\_host\_health

**Required**

true

**Suppress Health Test: Host Pipeline****Description**

Whether to suppress the results of the Host Pipeline health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_host\_monitor\_host\_pipeline

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_host\_monitor\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Cloudera Manager Metric Schema Age****Description**

Whether to suppress the results of the Cloudera Manager Metric Schema Age health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_host\_monitor\_metric\_schema\_fetch

**Required**

true

### Suppress Health Test: Pause Duration

#### Description

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_host\_monitor\_pause\_duration

#### Required

true

### Suppress Health Test: Cloudera Manager Descriptor Age

#### Description

Whether to suppress the results of the Cloudera Manager Descriptor Age health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_host\_monitor\_scm\_descriptor\_fetch

#### Required

true

### Suppress Health Test: Process Status

#### Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_host\_monitor\_scm\_health

#### Required

true

### Suppress Health Test: Host Monitor Storage Directory Free Space

#### Description

Whether to suppress the results of the Host Monitor Storage Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_host\_monitor\_storage\_directory\_free\_space

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_host\_monitor\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_host\_monitor\_unexpected\_exits

**Required**

true

**Suppress Health Test: Web Server Status****Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_host\_monitor\_web\_metric\_collection

**Required**

```
true
```

## Navigator Audit Server

### Advanced

#### Navigator Audit Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

```
log4j_safety_valve
```

**Required**

```
false
```

#### Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for db.navigator.properties

**Description**

For advanced use only. A string to be inserted into db.navigator.properties for this role only.

**Related Name****Default Value****API Name**

```
navigator_db_safety_valve
```

**Required**

```
false
```

#### Java Configuration Options for Navigator Audit

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value****API Name**

```
navigator_java_opts
```

**Required**

```
false
```

#### Navigator Audit Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

NAVIGATOR\_role\_env\_safety\_valve

**Required**

false

**Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties****Description**

For advanced use only. A string to be inserted into cloudera-navigator.properties for this role only.

**Related Name****Default Value****API Name**

navigator\_server\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### PII Masking Regular Expression

**Description**

Regular expression that identifies the strings to be masked. Changing this expression does not mask the strings in previous entries. Leave blank to bypass masking. This feature is superseded by cluster-wide redaction of logs and SQL queries, as an HDFS service-wide configuration parameter.

**Related Name**

navigator.pii.masking.regex

**Default Value**

```
(4[0-9]12(?:[0-9]3?))(5[1-5][0-9]14)(3[47][0-9]13)(3(?:0[0-5][68][0-9])[0-9]11)(6(?:011|5[0-9]2)[0-9]12)((?:2131|1800|35\d3)\d11)
```

**API Name**

pii\_masking\_regex

**Required**

false

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

## Database

### Navigator Audit Server Database Hostname

**Description**

Name of the host where Navigator Audit Server's database is running. It is highly recommended that this database is on the same host as Navigator Audit Server. If the database is not running on its default port, specify the port number using this syntax: 'host:port'

**Related Name**

navigator.db.host

**Default Value**

localhost

**API Name**

navigator\_database\_host

**Required**

false

**Navigator Audit Server Database Name****Description**

The name of the Navigator Audit Server's database.

**Related Name**

navigator.db.name

**Default Value**

nav

**API Name**

navigator\_database\_name

**Required**

true

**Navigator Audit Server Database Password****Description**

The password for Navigator Audit Server's database user account.

**Related Name**

navigator.db.password

**Default Value****API Name**

navigator\_database\_password

**Required**

false

**Navigator Audit Server Database Type****Description**

Type of database used for Navigator Audit Server.

**Related Name**

navigator.db.type

**Default Value**

mysql

**API Name**

navigator\_database\_type

**Required**

false

**Navigator Audit Server Database Username****Description**

The username to use to log into Navigator Audit Server's database.

**Related Name**

navigator.db.user

**Default Value**

nav

**API Name**

navigator\_database\_user

**Required**

true

## Logs

### Navigator Audit Server Logging Threshold

**Description**

The minimum log level for Navigator Audit Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### Navigator Audit Server Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for Navigator Audit Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

### Navigator Audit Server Max Log Size

**Description**

The maximum size, in megabytes, per log file for Navigator Audit Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Navigator Audit Server Log Directory****Description**

Directory where Navigator Audit Server will place its log files.

**Related Name****Default Value**

/var/log/cloudera-scm-navigator

**API Name**

mgmt\_log\_dir

**Required**

false

## Monitoring

**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Heap Dump Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name**

**Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Heap Dump Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

## Rules to Extract Events from Log Files

### Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

### Related Name

### Default Value

version: 0, rules: [ alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Instead, use .\* , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Use .\* instead , alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .\* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]

### API Name

log\_event\_whitelist

### Required

false

## Metric Filter

### Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.
- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.

- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

`navigator_fd_thresholds`

**Required**

`false`

**Garbage Collection Duration Thresholds****Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

`navigator_gc_duration_thresholds`

**Required**

`false`

**Garbage Collection Duration Monitoring Period****Description**

The period to review when computing the moving average of garbage collection time.

**Related Name****Default Value**

5 minute(s)

**API Name**

navigator\_gc\_duration\_window

**Required**

false

**Navigator Audit Server Host Health Test****Description**

When computing the overall Navigator Audit Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

navigator\_host\_health\_enabled

**Required**

false

**Navigator Audit Server Process Health Test****Description**

Enables the health test that the Navigator Audit Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

navigator\_scm\_health\_enabled

**Required**

false

**Web Metric Collection****Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

navigator\_web\_metric\_collection\_enabled

**Required**

false

### Web Metric Collection Duration

#### Description

The health test thresholds on the duration of the metrics request to the web server.

#### Related Name

#### Default Value

Warning: 10 second(s), Critical: Never

#### API Name

navigator\_web\_metric\_collection\_thresholds

#### Required

false

### Process Swap Memory Thresholds

#### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

#### Related Name

#### Default Value

Warning: 200 B, Critical: Never

#### API Name

process\_swap\_memory\_thresholds

#### Required

false

### Role Triggers

#### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Navigator Audit Server Data Expiration Period****Description**

The number of hours of past audit events to keep in the Navigator Audit Server database. This will affect the size of the database.

**Related Name**

navigator.db.hours.retained

**Default Value**

90 day(s)

**API Name**

hours\_retained

**Required**

false

**Performance**

### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Ports and Addresses

### Navigator Audit Server Web UI Port

**Description**

The port where Navigator Audit Server starts a debug web server. Set to -1 to disable debug server.

**Related Name**

navigator.server.debug.port

**Default Value**

8089

**API Name**

navigator\_debug\_port

**Required**

false

### Navigator Audit Server Port

**Description**

The port where Navigator Audit Server listens for requests

**Related Name**

navigator.server.port

**Default Value**

7186

**API Name**

navigator\_server\_port

**Required**

false

## Publishing

### Kafka Topic

**Description**

The name of the Kafka topic where Navigator will publish audit events.

**Related Name****Default Value**

	NavigatorAuditEvents
<b>API Name</b>	navigator_kafka_publishing_topic
<b>Required</b>	false

## Resource Management

### Java Heap Size of Auditing Server in Bytes

#### Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

#### Related Name

#### Default Value

1 GiB

#### API Name

navigator\_heapsize

#### Required

false

### Cgroup CPU Shares

#### Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

#### Related Name

cpu.shares

#### Default Value

1024

#### API Name

rm\_cpu\_shares

#### Required

true

### Custom Control Group Resources (overrides Cgroup settings)

#### Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

#### Related Name

custom.cgroups

#### Default Value

#### API Name

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

## Security

### Navigator Kerberos Principal

**Description**

Kerberos principal used by Navigator to authenticate to all services except HDFS. Note: Navigator should use the principal used by Hue service if you are using MapReduce1 service in any cluster.

**Related Name****Default Value**

hue

**API Name**

kerberos\_role\_princ\_name

**Required**

true

### Navigator TLS/SSL Client Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Navigator might connect to. This is used when Navigator is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name****Default Value****API Name**

navigator\_truststore\_file

**Required**

false

### Navigator TLS/SSL Client Trust Store Password

**Description**

The password for the Navigator TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name****Default Value****API Name**

navigator\_truststore\_password

**Required**

false

### Enable TLS/SSL for NAVIGATOR

**Description**

Encrypt communication between clients and NAVIGATOR using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

nav.http.enable\_ssl

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### TLS/SSL Keystore Key Password

**Description**

The password that protects the private key contained in the JKS keystore used when NAVIGATOR is acting as a TLS/SSL server.

**Related Name**

nav.ssl.keyManagerPassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

### TLS/SSL Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when NAVIGATOR is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

nav.ssl.keyStorePath

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### TLS/SSL Keystore File Password

**Description**

The password for the NAVIGATOR JKS keystore file.

**Related Name**

nav.ssl.keyStorePassword

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

## Stacks Collection

### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

## Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Navigator Kerberos Principal

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Navigator Audit Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Rules to Extract Events from Log Files****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

**Suppress Parameter Validation: Navigator Audit Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_log\_dir

**Required**

true

**Suppress Parameter Validation: Navigator Audit Server Database Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Database Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_database\_host

**Required**

true

**Suppress Parameter Validation: Navigator Audit Server Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Database Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_database\_name

**Required**

true

**Suppress Parameter Validation: Navigator Audit Server Database Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Database Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_database\_password

**Required**

true

**Suppress Parameter Validation: Navigator Audit Server Database Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Database Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_database\_user

**Required**

true

### Suppress Parameter Validation: Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for db.navigator.properties

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for db.navigator.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_db\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Navigator Audit Server Web UI Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_debug\_port

**Required**

true

### Suppress Parameter Validation: Java Configuration Options for Navigator Audit

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Navigator Audit parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_java\_opts

**Required**

true

### Suppress Parameter Validation: Kafka Topic

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Topic parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_kafka\_publishing\_topic

**Required**

true

**Suppress Parameter Validation: Navigator Audit Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Navigator Audit Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_server\_port

**Required**

true

**Suppress Parameter Validation: Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_server\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Navigator TLS/SSL Client Trust Store File

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator TLS/SSL Client Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_truststore\_file

**Required**

true

### Suppress Parameter Validation: Navigator TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_truststore\_password

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: PII Masking Regular Expression

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the PII Masking Regular Expression parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_pii\_masking\_regex

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: TLS/SSL Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: TLS/SSL Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Keystore File Location parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: TLS/SSL Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigator\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigator\_file\_descriptor

**Required**

true

### Suppress Health Test: GC Duration

**Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigator\_gc\_duration

**Required**

true

### Suppress Health Test: Heap Dump Directory Free Space

**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigator\_heap\_dump\_directory\_free\_space

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_navigator\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigator\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigator\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigator\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigator\_unexpected\_exits

**Required**

true

### Suppress Health Test: Web Server Status

**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigator\_web\_metric\_collection

**Required**

true

## Navigator Metadata Server

### Advanced

#### Allow Usage Data Collection

**Description**

Allows Cloudera to collect usage data, including the use of Google Analytics.

**Related Name**

nav.allow\_usage\_data

**Default Value**

true

**API Name**

allow\_usage\_data

**Required**

true

#### Navigator Metadata Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Navigator Metadata Server Install Dir

**Description**

The directory where Navigator Metadata Server is installed. This allows overriding the version packaged with the Cloudera Manager Server.

**Related Name****Default Value****API Name**

nav\_install\_dir

**Required**

false

### Navigator Metadata Server Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties

**Description**

For advanced use only, a string to be inserted into the client configuration for navigator.client.properties.

**Related Name****Default Value****API Name**

navigator\_client\_config\_safety\_valve

**Required**

false

### Java Configuration Options for Navigator Metadata Server

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value****API Name**

navigator\_java\_opts

**Required**

false

### Navigator Metadata Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties

**Description**

For advanced use only. A string to be inserted into cloudera-navigator.properties for this role only.

**Related Name****Default Value****API Name**

navigator\_safety\_valve

**Required**

false

### Navigator Metadata Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

NAVIGATORMETASERVER\_role\_env\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Cloudera Navigator****Enable Audit Collection****Description**

Enable collection of audit events from the service's roles.

**Related Name**

navigator.audit.enabled

**Default Value**

true

**API Name**

navigator\_audit\_enabled

**Required**

false

**Audit Event Filter****Description**

Event filters are defined in a JSON object like the following: { "defaultAction": ("accept", "discard"), "rules": [ { "action": ("accept", "discard"), "fields": [ { "name": "fieldName", "match": "regex" } ] } ] } A filter has a default action and a list of rules, in order of precedence. Each rule defines an action, and a list of fields to match against the audit event. A rule is "accepted" if all the listed field entries match the audit event. At that point, the action declared by the rule is taken. If

no rules match the event, the default action is taken. Actions default to "accept" if not defined in the JSON object. The following is the list of fields that can be filtered for NAVMS events:

- operation: Navigator operation performed e.g. auditReport, savedSearch etc.
- username: the user performing the action.
- ipAddress: the IP from where the request originated.
- allowed: whether the operation was allowed or denied.

**Related Name**

navigator.event.filter

**Default Value****API Name**

navigator\_audit\_event\_filter

**Required**

false

## Database

### Navigator Metadata Server Database Hostname

**Description**

Name of the host where the Navigator Metaserver database is running. If the database is not running on its default port, specify the port number using this syntax: 'host:port'.

**Related Name**

navms.db.host

**Default Value**

localhost

**API Name**

nav\_metaserver\_database\_host

**Required**

false

### Navigator Metadata Server Database Name

**Description**

The name of the Navigator Metadata Server database.

**Related Name**

navms.db.name

**Default Value**

navms

**API Name**

nav\_metaserver\_database\_name

**Required**

true

### Navigator Metadata Server Database Password

**Description**

The password for Navigator Metadata Server database user account.

**Related Name**

navms.db.password

**Default Value****API Name**

nav\_metaserver\_database\_password

**Required**

false

**Navigator Metadata Server Database Type****Description**

Type of database used for Navigator Metadata Server.

**Related Name**

navms.db.type

**Default Value**

mysql

**API Name**

nav\_metaserver\_database\_type

**Required**

false

**Navigator Metadata Server Database Username****Description**

The username to use to log into the Navigator Metadata Server database.

**Related Name**

navms.db.user

**Default Value**

navms

**API Name**

nav\_metaserver\_database\_user

**Required**

true

**External Authentication****Authentication Backend Order****Description**

The order in which authentication backends are used for authenticating a user. For Cloudera Manager authentication, only users with role 'Full Administrator' and 'Navigator Administrator' are allowed. In addition, users authenticated by Cloudera Manager using external authentication mechanism are not allowed. Navigator will authenticate external users itself and will not rely on Cloudera Manager.

**Related Name**

nav.auth.backend.order

**Default Value**

CM\_ONLY

**API Name**

auth\_backend\_order

**Required**

true

**External Authentication Type****Description**

The type of external authentication system to use.

**Related Name**

nav.external.auth.type

**Default Value**

LDAP

**API Name**

external\_auth\_type

**Required**

true

**Cloudera Navigator S3 Lineage AWS Credentials****Description**

Enable Cloudera Navigator to extract metadata and lineage for data that is written to S3 buckets in this account.

**Related Name****Default Value****API Name**

nav\_extraction\_external\_account

**Required**

false

**LDAP Bind User Distinguished Name****Description**

Distinguished name of the user to bind to AD as for user authentication search/bind and group lookup for role authorization. For openLDAP based directories this should be a DN string, for Active Directory this can be just a username, combined with the "Active Directory Domain" value for login. For example username in the field and example.com in the active directory domain will result in the User Principal Name value of username@example.com being used to bind. If you put a UPN value here, do not over-configure the "active directory domain" field otherwise you will end up presenting username@example.com@example.com for binds. AD will accept a UPN value or the DN value as a valid Bind DN; An example of a Distinguished Name (DN): CN=cdh admin,OU=svcaccount,DC=example,DC=com An example of a UPN value: cdhadmin@example.com

**Related Name**

nav.ldap.bind.dn

**Default Value****API Name**

nav\_ldap\_bind\_dn

**Required**

false

### LDAP Bind Password

**Description**

The password of the bind user.

**Related Name**

nav.ldap.bind.pw

**Default Value****API Name**

nav\_ldap\_bind\_pw

**Required**

false

### LDAP Distinguished Name Pattern

**Description**

This setting is deprecated and soon to be removed, do not use LDAP Distinguished Name Pattern for configuration moving forward. It is not necessary to use and deprecated as a configuration approach for LDAP and AD in general.

**Related Name**

nav.ldap.dn.pattern

**Default Value****API Name**

nav\_ldap\_dn\_pattern

**Required**

false

### LDAP Group Search Base

**Description**

The distinguished name indicating the path within the directory information tree to begin group searches from. For example in AD it would be cn=groups,dc=example,dc=com. Or in an openLDAP compatible situation it would be something like ou=groups,dc=example,dc=com. Check with your directory administration team on the proper search base to configure for your environment.

**Related Name**

nav.ldap.group.search.base

**Default Value****API Name**

nav\_ldap\_group\_search\_base

**Required**

false

### LDAP Group Search Filter For Logged In User

**Description**

A search filter for finding groups that the logged-in user belongs to. Typically, this is (member={0}), where {0} is replaced by the DN of a successfully authenticated user.

**Related Name**

nav.ldap.group.search.filter

**Default Value****API Name**

nav\_ldap\_group\_search\_filter

**Required**

false

**LDAP Groups Search Filter****Description**

The search filter to use for finding groups for authorization of authenticated users for their cloudera manager role. For Active Directory and openLDAP compatible directories this will usually be (member={0}), where {0} will be replaced by DN string for a successfully authenticated user through the search/bind process. This requires configuration of the LDAP Bind User Distinguished Name field.

**Related Name**

nav.ldap.groups.search.filter

**Default Value**

(&amp;(objectClass=groupOfNames)(cn=\*0\*))

**API Name**

nav\_ldap\_groups\_search\_filter

**Required**

false

**LDAP URL****Description**

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

**Related Name**

nav.ldap.url

**Default Value****API Name**

nav\_ldap\_url

**Required**

false

**LDAP User Search Base****Description**

The distinguished name indicating the path within the directory information tree to begin user searches from. For example in AD it would be cn=users,dc=example,dc=com. Or in an openLDAP compatible situation it would be something like ou=people,dc=example,dc=com. Check with your directory administration team on the proper user search base to configure for your environment.

**Related Name**

nav.ldap.user.search.base

**Default Value**

**API Name**

nav\_ldap\_user\_search\_base

**Required**

false

**LDAP User Search Filter****Description**

The search filter to use for finding users. For AD configuration it will be (sAMAccountName={0}) and for openLDAP compatible directories it will usually be (uid={0}). Note that a custom attribute can also be used if the directory is configured differently for user names. The {0} expands the currently authenticating user's name entered in the login form for the query.

**Related Name**

nav.ldap.user.search.filter

**Default Value****API Name**

nav\_ldap\_user\_search\_filter

**Required**

false

**Active Directory Domain****Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

**Related Name**

nav.nt\_domain

**Default Value****API Name**

nav\_nt\_domain

**Required**

false

**SAML Entity Base URL****Description**

The Base URL used to construct redirect URLs reported in this server's SP metadata. Leave this blank to let the server calculate the base URL.

**Related Name**

nav.saml.entity.base\_url

**Default Value****API Name**

nav\_saml\_entity\_base\_url

**Required**

false

### SAML Entity ID

**Description**

The ID that Navigator Metadata Server uses to identify itself to the IDP. This value should be unique to this Navigator Metadata Server installation.

**Related Name**

nav.saml.entity.id

**Default Value**

clouderaNavigator

**API Name**

nav\_saml\_entity\_id

**Required**

true

### Alias of SAML Sign/Encrypt Private Key

**Description**

The alias used to identify the sign/encrypt private key in the SAML keystore.

**Related Name**

nav.saml.key.alias

**Default Value****API Name**

nav\_saml\_key\_alias

**Required**

false

### SAML Sign/Encrypt Private Key Password

**Description**

The password for the sign/encrypt private key in the SAML keystore.

**Related Name**

nav.saml.key.password

**Default Value****API Name**

nav\_saml\_key\_password

**Required**

false

### SAML Keystore Password

**Description**

The password for the SAML keystore.

**Related Name**

nav.saml.keystore.password

**Default Value****API Name**

nav\_saml\_keystore\_password

**Required**

false

### Path to SAML Keystore File

#### Description

The filesystem path to the keystore file containing the SP private key and any necessary public certificates to validate the IDP.

#### Related Name

nav.saml.keystore.path

#### Default Value

#### API Name

nav\_saml\_keystore\_path

#### Required

false

### SAML Login URL

#### Description

If your IDP does not support SP-initiated SSO (very uncommon), you use a separate login URL, outside of Navigator Metadata Server. Provide that URL here so that Navigator Metadata Server can use it when a user needs to log in.

#### Related Name

nav.saml.login.url

#### Default Value

#### API Name

nav\_saml\_login\_url

#### Required

false

### Path to SAML IDP Metadata File

#### Description

The filesystem path to the IDP metadata XML file.

#### Related Name

nav.saml.metadata.path

#### Default Value

#### API Name

nav\_saml\_metadata\_path

#### Required

false

### SAML Attribute Identifier for User Role

#### Description

The URN OID that identifies the user role in the SAML attributes. Only has an effect when 'Attribute'-based role assignment is used.

#### Related Name

nav.saml.oid.role

#### Default Value

urn:oid:2.5.4.11

**API Name**

nav\_saml\_oid\_role

**Required**

true

**SAML Attribute Identifier for User ID****Description**

The URN OID that identifies the user ID in the SAML attributes.

**Related Name**

nav.saml.oid.user

**Default Value**

urn:oid:0.9.2342.19200300.100.1.1

**API Name**

nav\_saml\_oid\_user

**Required**

true

**SAML Response Binding****Description**

The SAML binding format that the IDP is asked to use when sending authentication responses.

**Related Name**

nav.saml.response.binding

**Default Value**

ARTIFACT

**API Name**

nav\_saml\_response\_binding

**Required**

true

**SAML Attribute Values for Roles****Description**

The values that appear in the SAML role attribute for each Navigator Metadata Server role. The first value corresponds to the Full Administrator role. The second value corresponds to the User Administrator role. The third value corresponds to the Auditing Viewer role. The fourth value corresponds to the Lineage Viewer role. The fifth value corresponds to the Metadata Administrator role. The sixth value corresponds to the Policy Viewer role. The seventh value corresponds to the Policy Administrator role. To assign more than one role, the attribute can return values separated by a comma, like "role1, role2".

**Related Name**

nav.saml.role.map

**Default Value**

admin useradmin auditingviewer lineageviewer metadataadmin policyviewer policyadmin

**API Name**

nav\_saml\_role\_map

**Required**

true

**SAML Role Assignment Mechanism****Description**

The mechanism to use for assigning roles to users. 'Attribute' assigns roles based on a SAML attribute. 'Script' assigns roles based on the result of an external script.

**Related Name**

nav.saml.role.mapper

**Default Value**

ATTRIBUTE

**API Name**

nav\_saml\_role\_mapper

**Required**

true

**Path to SAML Role Assignment Script****Description**

An external script (or binary) to use to assign roles to SAML users. The username is passed as the first command-line argument. You can configure the return codes for the external script on the Roles page. A negative return value indicates a failure.

**Related Name**

nav.saml.role.script

**Default Value****API Name**

nav\_saml\_role\_script

**Required**

false

**Source of User ID in SAML Response****Description**

Whether the user ID should be obtained from the SAML response NameID field or from an attribute

**Related Name**

nav.saml.user.source

**Default Value**

ATTRIBUTE

**API Name**

nav\_saml\_user\_source

**Required**

true

**Cloudera Telemetry Publisher S3 Bucket****Description**

The name of the S3 bucket where Cloudera Telemetry Publisher from remote clusters will upload metadata to for Cloudera Navigator.

**Related Name**

nav\_telemetry\_bucket\_name

**Default Value****API Name**

nav\_telemetry\_bucket\_name

**Required**

false

**Cloudera Telemetry Publisher AWS Credentials****Description**

Enable Cloudera Navigator to extract metadata and lineage from other clusters (e.g., Cloudera Altus) collected via Cloudera Telemetry Publisher.

**Related Name****Default Value****API Name**

nav\_telemetry\_external\_account

**Required**

false

**Extractor Filter****HDFS Filter Enable****Description**

Enable HDFS Filtering. When Enabled, filters out the extraction of the items in the denylist.

**Related Name**

nav.filter.hdfs.enable

**Default Value**

false

**API Name**

nav\_filter\_hdfs\_enable

**Required**

false

**HDFS Filter Blacklist****Description**

List of paths to be filtered out. The paths can be regular expressions.

**Related Name**

nav.filter.hdfs.blacklist

**Default Value****API Name**

nav\_filter\_hdfs\_rules

**Required**

false

### S3 Filter Default Action

**Description**

Set to Accept to extract all S3 buckets except for the excluded ones. Set to Discard to extract only the buckets that are included.

**Related Name**

nav.filter.s3.default.action

**Default Value**

ACCEPT

**API Name**

nav\_filter\_s3\_default\_action

**Required**

false

### S3 Filter Enable

**Description**

Enable S3 Filtering

**Related Name**

nav.filter.s3.enable

**Default Value**

false

**API Name**

nav\_filter\_s3\_enable

**Required**

false

### S3 Filter list

**Description**

List of S3 buckets to be whitelisted or blacklisted. The strings can be regular expressions.

**Related Name**

nav.filter.s3.list

**Default Value****API Name**

nav\_filter\_s3\_rules

**Required**

false

## Logs

### Audit Log Directory

**Description**

Path to the directory where audit logs will be written. The directory will be created if it doesn't exist.

**Related Name**

audit\_event\_log\_dir

**Default Value**

/var/log/cloudera-scm-navigator/audit

**API Name**

audit\_event\_log\_dir

**Required**

false

**Navigator Metadata Server Logging Threshold****Description**

The minimum log level for Navigator Metadata Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Navigator Metadata Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Navigator Metadata Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Navigator Metadata Server Max Log Size****Description**

The maximum size, in megabytes, per log file for Navigator Metadata Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Navigator Metadata Server Log Directory****Description**

Directory where Navigator Metadata Server will place its log files.

**Related Name**

**Default Value**

/var/log/cloudera-scm-navigator

**API Name**

mgmt\_log\_dir

**Required**

false

**Maximum Audit Log File Size****Description**

Maximum size of audit log file in MB before it is rolled over.

**Related Name**

navigator.audit\_log\_max\_file\_size

**Default Value**

100 MiB

**API Name**

navigator\_audit\_log\_max\_file\_size

**Required**

false

## Monitoring

**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Heap Dump Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Rules to Extract Events from Log Files****Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used. Each rule has some or all of the following fields:

- alert - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- rate (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- periodminutes - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- threshold - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- content - match only those messages for which contents match this regular expression.
- exceptiontype - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

**Related Name****Default Value**

version: 0, rules: [ alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Instead, use .\* , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Use .\* instead , alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 1, periodminutes: 2, exceptiontype: .\* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]

**API Name**

log\_event\_whitelist

**Required**

false

**Navigator Audit Failure Thresholds****Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt\_navigator\_failure\_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

**Related Name**

mgmt.navigator.failure.thresholds

**Default Value**

Warning: Never, Critical: Any

**API Name**

mgmt\_navigator\_failure\_thresholds

**Required**

false

**Monitoring Period For Audit Failures****Description**

The period to review when checking if audits are blocked and not getting processed.

**Related Name**

mgmt.navigator.failure.window

**Default Value**

20 minute(s)

**API Name**

mgmt\_navigator\_failure\_window

**Required**

false

**Navigator Audit Pipeline Health Check****Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

**Related Name**

mgmt.navigator.status.check.enabled

**Default Value**

true

**API Name**

mgmt\_navigator\_status\_check\_enabled

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Audit Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Audit Log Directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

`navigatormetaserver_audit_event_log_directory_free_space_absolute_thresholds`

**Required**

`false`

**Audit Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Audit Log Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Audit Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

`navigatormetaserver_audit_event_log_directory_free_space_percentage_thresholds`

**Required**

`false`

**Navigator Metadata Server Storage Dir Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Navigator Metadata Server Storage Dir.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

navigatormetaserver\_data\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Navigator Metadata Server Storage Dir Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Navigator Metadata Server Storage Dir. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Navigator Metadata Server Storage Dir Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

navigatormetaserver\_data\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

navigatormetaserver\_fd\_thresholds

**Required**

false

### Navigator Metadata Server Host Health Test

**Description**

When computing the overall Navigator Metadata Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

navigatormetaserver\_host\_health\_enabled

**Required**

false

**Navigator Metadata Server Process Health Test****Description**

Enables the health test that the Navigator Metadata Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

navigatormetaserver\_scm\_health\_enabled

**Required**

false

**Solr Element Count Threshold****Description**

Threshold for throwing alert when the Solr Element Count reaches

**Related Name****Default Value**

Warning: 5.0E8, Critical: 1.0E9

**API Name**

navigatormetaserver\_solr\_element\_count\_threshold

**Required**

false

**Solr Relation Count Threshold****Description**

Threshold for throwing alert when the Solr Relation Count reaches

**Related Name****Default Value**

Warning: 5.0E8, Critical: 1.0E9

**API Name**

navigatormetaserver\_solr\_relation\_count\_threshold

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAM and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

#### Description

The period to review when computing unexpected exits.

#### Related Name

#### Default Value

5 minute(s)

#### API Name

unexpected\_exits\_window

#### Required

false

## Other

### Navigator Metadata Server Storage Dir

#### Description

The directory where Navigator Metadata Server data is stored. Note that changing this location does not migrate existing data.

#### Related Name

nav.data.dir

#### Default Value

/var/lib/cloudera-scm-navigator

#### API Name

data\_dir

#### Required

false

### Default Facets

#### Description

List of metadata properties used by default for Navigator search facets. If no facets are listed, the facets used are some system properties such as "sourceType", "type", "owner", "clusterTemplate", "tags", "deleted". Your entries here replace these system facets. For example, to include some of the system properties and a managed property "region" in the "sales" namespace, include entries such as "type", "owner", and "sales.region".

#### Related Name

nav.search.default\_facets

#### Default Value

#### API Name

nav\_search\_default\_facets

#### Required

false

## Performance

### Maximum Process File Descriptors

#### Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Policies

### Enable Expression Input

**Description**

Allows policy properties to be specified using Java expressions.

**Related Name**

nav.policy.expression.enable

**Default Value**

false

**API Name**

nav\_policies\_expression\_input

**Required**

false

### JMS Password

**Description**

The password of the JMS user to which notifications of changes to entities affected by policies are sent.

**Related Name**

navms.jms.password

**Default Value**

\*\*\*\*\*

**API Name**

nav\_policies\_jms\_password

**Required**

false

### JMS Queue

**Description**

The JMS queue to which notifications of changes to entities affected by policies are sent.

**Related Name**

navms.jms.queue

**Default Value**

Navigator

**API Name**

nav\_policies\_jms\_queue

**Required**

false

**JMS URL****Description**

The URL of the JMS server to which notifications of changes to entities affected by policies are sent.

**Related Name**

navms.jms.url

**Default Value**

tcp://localhost:61616

**API Name**

nav\_policies\_jms\_url

**Required**

false

**JMS User****Description**

The JMS user to which notifications of changes to entities affected by policies are sent.

**Related Name**

navms.jms.user

**Default Value**

admin

**API Name**

nav\_policies\_jms\_user

**Required**

false

## Ports and Addresses

**Navigator Metadata Server Port****Description**

The port where Navigator Metadata Server listens for requests

**Related Name**

nav.http.port

**Default Value**

7187

**API Name**

navigator\_server\_port

**Required**

false

## Resource Management

### Java Heap Size of Navigator Metadata Server in Bytes

**Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

2 GiB

**API Name**

navigator\_heapsize

**Required**

false

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

	blkio.weight
<b>Default Value</b>	500
<b>API Name</b>	rm_io_weight
<b>Required</b>	true

### Cgroup Memory Hard Limit

#### Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_hard\_limit

#### Required

true

### Cgroup Memory Soft Limit

#### Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.soft\_limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_soft\_limit

#### Required

true

## Security

### Navigator Kerberos Principal

#### Description

Kerberos principal used by Navigator to authenticate to all services except HDFS. Note: Navigator should use the principal used by Hue service if you are using MapReduce1 service in any of the clusters.

**Related Name****Default Value**

hue

**API Name**

kerberos\_role\_princ\_name

**Required**

true

### Navigator Kerberos Principal for HDFS

**Description**

Kerberos principal used by Navigator to authenticate to HDFS services. Note: This principal must have administrator and superuser privileges on all HDFS services.

**Related Name****Default Value**

hdfs

**API Name**

nav\_hdfs\_kerberos\_princ

**Required**

true

### Enable TLS/SSL for Navigator Metadata Server

**Description**

Encrypt communication between clients and Navigator Metadata Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

nav.http.enable\_ssl

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### TLS/SSL Keystore Key Password

**Description**

The password that protects the private key contained in the JKS keystore used when Navigator Metadata Server is acting as a TLS/SSL server.

**Related Name**

nav.ssl.keyManagerPassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**TLS/SSL Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Navigator Metadata Server is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

nav.ssl.keyStorePath

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**TLS/SSL Keystore File Password****Description**

The password for the Navigator Metadata Server JKS keystore file.

**Related Name**

nav.ssl.keyStorePassword

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

## Suppressions

### Suppress Parameter Validation: Audit Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_audit\_event\_log\_dir

**Required**

true

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Navigator Metadata Server Storage Dir

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Storage Dir parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_data\_dir

**Required**

true

### Suppress Parameter Validation: Navigator Kerberos Principal

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

### Suppress Parameter Validation: Navigator Metadata Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Rules to Extract Events from Log Files

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

### Suppress Parameter Validation: Navigator Metadata Server Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_log\_dir

**Required**

true

**Suppress Parameter Validation: HDFS Filter Blacklist****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Filter Blacklist parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_filter\_hdfs\_rules

**Required**

true

**Suppress Parameter Validation: S3 Filter list****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Filter list parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_filter\_s3\_rules

**Required**

true

**Suppress Parameter Validation: Navigator Kerberos Principal for HDFS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Kerberos Principal for HDFS parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_hdfs\_kerberos\_princ

**Required**

true

**Suppress Parameter Validation: Navigator Metadata Server Install Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Install Dir parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_install\_dir

**Required**

true

**Suppress Parameter Validation: LDAP Bind User Distinguished Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind User Distinguished Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_bind\_dn

**Required**

true

**Suppress Parameter Validation: LDAP Bind Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_bind\_pw

**Required**

true

**Suppress Parameter Validation: LDAP Distinguished Name Pattern****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Distinguished Name Pattern parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_dn\_pattern

**Required**

true

**Suppress Parameter Validation: LDAP Group Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Search Base parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_group\_search\_base

**Required**

true

**Suppress Parameter Validation: LDAP Group Search Filter For Logged In User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Search Filter For Logged In User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_group\_search\_filter

**Required**

true

**Suppress Parameter Validation: LDAP Groups Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Groups Search Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_groups\_search\_filter

**Required**

true

**Suppress Parameter Validation: LDAP URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_url

**Required**

true

### Suppress Parameter Validation: LDAP User Search Base

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User Search Base parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_user\_search\_base

**Required**

true

### Suppress Parameter Validation: LDAP User Search Filter

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User Search Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_user\_search\_filter

**Required**

true

### Suppress Parameter Validation: Navigator Metadata Server Database Hostname

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Database Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_metaserver\_database\_host

**Required**

true

### Suppress Parameter Validation: Navigator Metadata Server Database Name

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Database Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_metaserver\_database\_name

**Required**

true

**Suppress Parameter Validation: Navigator Metadata Server Database Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Database Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_metaserver\_database\_password

**Required**

true

**Suppress Parameter Validation: Navigator Metadata Server Database Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Database Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_metaserver\_database\_user

**Required**

true

**Suppress Parameter Validation: Active Directory Domain****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_nt\_domain

**Required**

true

**Suppress Parameter Validation: JMS Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMS Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_policies\_jms\_password

**Required**

true

**Suppress Parameter Validation: JMS Queue****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMS Queue parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_policies\_jms\_queue

**Required**

true

**Suppress Parameter Validation: JMS URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMS URL parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_policies\_jms\_url

**Required**

true

**Suppress Parameter Validation: JMS User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMS User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_policies\_jms\_user

**Required**

true

### Suppress Parameter Validation: SAML Entity Base URL

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Entity Base URL parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_entity\_base\_url

**Required**

true

### Suppress Parameter Validation: SAML Entity ID

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Entity ID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_entity\_id

**Required**

true

### Suppress Parameter Validation: Alias of SAML Sign/Encrypt Private Key

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Alias of SAML Sign/Encrypt Private Key parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_key\_alias

**Required**

true

### Suppress Parameter Validation: SAML Sign/Encrypt Private Key Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Sign/Encrypt Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_key\_password

**Required**

true

**Suppress Parameter Validation: SAML Keystore Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Keystore Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Path to SAML Keystore File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Path to SAML Keystore File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_keystore\_path

**Required**

true

**Suppress Parameter Validation: SAML Login URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Login URL parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_login\_url

**Required**

true

**Suppress Parameter Validation: Path to SAML IDP Metadata File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Path to SAML IDP Metadata File parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_metadata\_path

**Required**

true

**Suppress Parameter Validation: SAML Attribute Identifier for User Role****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Attribute Identifier for User Role parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_oid\_role

**Required**

true

**Suppress Parameter Validation: SAML Attribute Identifier for User ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Attribute Identifier for User ID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_oid\_user

**Required**

true

**Suppress Parameter Validation: SAML Attribute Values for Roles****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SAML Attribute Values for Roles parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_role\_map

**Required**

true

**Suppress Parameter Validation: Path to SAML Role Assignment Script****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Path to SAML Role Assignment Script parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_role\_script

**Required**

true

**Suppress Parameter Validation: Default Facets****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Facets parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_search\_default\_facets

**Required**

true

**Suppress Parameter Validation: Cloudera Telemetry Publisher S3 Bucket****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Telemetry Publisher S3 Bucket parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_telemetry\_bucket\_name

**Required**

true

**Suppress Parameter Validation: Audit Event Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_audit\_event\_filter

**Required**

true

### Suppress Parameter Validation: Navigator Metadata Server Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_navigator\_client\_config\_safety\_valve

#### Required

true

### Suppress Parameter Validation: Java Configuration Options for Navigator Metadata Server

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Navigator Metadata Server parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_navigator\_java\_opts

#### Required

true

### Suppress Parameter Validation: Navigator Metadata Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_navigator\_safety\_valve

#### Required

true

### Suppress Parameter Validation: Navigator Metadata Server Port

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_server\_port

**Required**

true

**Suppress Parameter Validation: Navigator Metadata Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Navigator Metadata Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigatormetaserver\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: TLS/SSL Keystore Key Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

### Suppress Parameter Validation: TLS/SSL Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Parameter Validation: TLS/SSL Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Log Directory Free Space****Description**

Whether to suppress the results of the Audit Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigatormetaserver\_audit\_event\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigatormetaserver\_audit\_health

**Required**

true

**Suppress Health Test: Navigator Metadata Server Storage Dir Free Space****Description**

Whether to suppress the results of the Navigator Metadata Server Storage Dir Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigatormetaserver\_data\_directory\_free\_space

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigatormetaserver\_file\_descriptor

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigatormetaserver\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigatormetaserver\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigatormetaserver\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigatormetaserver\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigatormetaserver\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_navigatormetaserver\_unexpected\_exits

**Required**

true

### Suppress Health Test: Solr Element Count Threshold Test

**Description**

Whether to suppress the results of the Solr Element Count Threshold Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_nms\_solr\_element\_count

**Required**

true

### Suppress Health Test: Solr Relation Count Threshold Test

**Description**

Whether to suppress the results of the Solr Relation Count Threshold Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_nms\_solr\_relation\_count

**Required**

true

## Reports Manager

### Advanced

### Extra Space Ratio for Indexing

**Description**

Reports Manager uses an array to store HDFS directory tree during indexing. The size of this array is  $3 * \text{number of filesystem objects in HDFS} * (1 + \text{extra space ratio})$ . Increasing this ratio allows Reports Manager to create the directory tree faster, but consumes more memory. Also, extra space ratio must be set to a small enough value so that size of the array is below the maximum allowed in Java, which is  $2^{31} - 1$ .

**Related Name**

index.space.extra.ratio

**Default Value**

0.2

**API Name**

headlamp\_index\_space\_extra\_ratio

**Required**

false

### Index Writer Thread Pool Queue Size

**Description**

Size of the queue to use for holding index writer tasks before they are executed. For faster indexing performance, consider increasing this to a small multiple of the Maximum Index Writer Threads configured value.

**Related Name**

index.writer.max.queue.size

**Default Value**

4

**API Name**

headlamp\_index\_writer\_max\_queue\_size

**Required**

false

### Maximum Index Writer Threads

**Description**

Maximum number of concurrent threads to use when writing the index. For faster indexing performance, consider increasing it to a small multiple of the number of cores on the Reports Manager host.

**Related Name**

index.writer.num.threads

**Default Value**

2

**API Name**

headlamp\_index\_writer\_num\_threads

**Required**

false

### Java Configuration Options for Reports Manager

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, `{{JAVA_GC_ARGS}}` will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value****API Name**

headlamp\_java\_opts

**Required**

false

**Maximum Document Buffer Size****Description**

Amount of memory that can be used for buffering documents before they are flushed to the index. For faster indexing performance, consider increasing this value.

**Related Name**

lucene.max.buffer.size.mb

**Default Value**

32 MiB

**API Name**

headlamp\_lucene\_max\_buffer\_size\_mb

**Required**

false

**Index Merge Factor****Description**

Reports Manager index is built in sections that are merged as the build progresses. This configuration determines how often index sections are merged. With smaller values, less memory is used while indexing, but indexing speed is slower. For faster indexing performance, consider increasing this value.

**Related Name**

lucene.merge.factor

**Default Value**

100

**API Name**

headlamp\_lucene\_merge\_factor

**Required**

false

**Publish HBase Space Usage****Description**

When set, publishes HBase space usage metrics to support HBase usage reporting. This feature is only supported for the HBase service in CDH 5 and higher.

**Related Name**

publish.hbase.space

**Default Value**

true

**API Name**

headlamp\_publish\_hbase\_metrics

**Required**

false

**Reports Manager Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.db.properties****Description**

For advanced use only. A string to be inserted into headlamp.db.properties for this role only.

**Related Name****Default Value****API Name**

reportsmanager\_db\_safety\_valve

**Required**

false

**Reports Manager Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

REPORTSMANAGER\_role\_env\_safety\_valve

**Required**

false

**Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.conf****Description**

For advanced use only. A string to be inserted into headlamp.conf for this role only.

**Related Name**

**Default Value****API Name**

reportsmanager\_safety\_valve

**Required**

false

## Database

### Reports Manager Database Hostname

**Description**

Name of the host where Reports Manager's database is running. It is highly recommended that this database is on the same host as Reports Manager. If the database is not running on its default port, specify the port number using this syntax: 'host:port'

**Related Name**

com.cloudera.headlamp.db.host

**Default Value**

localhost

**API Name**

headlamp\_database\_host

**Required**

false

### Reports Manager Database Name

**Description**

The name of the Reports Manager's database.

**Related Name**

com.cloudera.headlamp.db.name

**Default Value**

headlamp

**API Name**

headlamp\_database\_name

**Required**

true

### Reports Manager Database Password

**Description**

The password for Reports Manager's database user account.

**Related Name**

com.cloudera.headlamp.db.password

**Default Value****API Name**

headlamp\_database\_password

**Required**

false

### Reports Manager Database Type

**Description**

Type of database used for Reports Manager.

**Related Name**

com.cloudera.headlamp.db.type

**Default Value**

mysql

**API Name**

headlamp\_database\_type

**Required**

false

### Reports Manager Database Username

**Description**

The username to use to log into Reports Manager's database.

**Related Name**

com.cloudera.headlamp.db.user

**Default Value**

headlamp

**API Name**

headlamp\_database\_user

**Required**

true

## Logs

### Reports Manager Logging Threshold

**Description**

The minimum log level for Reports Manager logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

### Reports Manager Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for Reports Manager logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Reports Manager Max Log Size****Description**

The maximum size, in megabytes, per log file for Reports Manager logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Reports Manager Log Directory****Description**

Directory where Reports Manager will place its log files.

**Related Name****Default Value**

/var/log/cloudera-scm-headlamp

**API Name**

mgmt\_log\_dir

**Required**

false

## Monitoring

**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Heap Dump Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Heap Dump Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

## Log Directory Free Space Monitoring Percentage Thresholds

### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

### Related Name

### Default Value

Warning: Never, Critical: Never

### API Name

log\_directory\_free\_space\_percentage\_thresholds

### Required

false

## Rules to Extract Events from Log Files

### Description

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

### Related Name

### Default Value

version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Instead, use .\* , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Use .\* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .\* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]

### API Name

log\_event\_whitelist

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

reportsmanager\_fd\_thresholds

**Required**

false

### Reports Manager Host Health Test

**Description**

When computing the overall Reports Manager health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

reportsmanager\_host\_health\_enabled

**Required**

false

### Pause Duration Thresholds

**Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

reportsmanager\_pause\_duration\_thresholds

**Required**

false

### Pause Duration Monitoring Period

**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

**Related Name****Default Value**

5 minute(s)

**API Name**

reportsmanager\_pause\_duration\_window

**Required**

false

**Reports Manager Process Health Test****Description**

Enables the health test that the Reports Manager's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

reportsmanager\_scm\_health\_enabled

**Required**

false

**Reports Manager Working Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Reports Manager Working Directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

reportsmanager\_scratch\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Reports Manager Working Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Reports Manager Working Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Reports Manager Working Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

reportsmanager\_scratch\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Cloudera Manager Descriptor Age Thresholds****Description**

The health test thresholds for monitoring the time since the Cloudera Manager descriptor was last refreshed.

**Related Name****Default Value**

Warning: 60000.0, Critical: 120000.0

**API Name**

scm\_descriptor\_age\_thresholds

**Required**

false

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Reports Manager Working Directory****Description**

Directory for Reports Manager to use for its working files

**Related Name**

scratch.dir

**Default Value**

/var/lib/cloudera-scm-headlamp

**API Name**

headlamp\_scratch\_dir

**Required**

false

**Reports Manager Update Frequency****Description**

Frequency in which Reports Manager refreshes its view of HDFS.

**Related Name**

update.frequency.seconds

**Default Value**

1 hour(s)

**API Name**

headlamp\_update\_frequency\_seconds

**Required**

false

**Starting Interval for Descriptor Fetch Attempts****Description**

The starting interval between fetch attempts for the SCM descriptor when Cloudera Management Service roles are starting. The interval is increased by an additional one second with each failed fetch attempt.

**Related Name**

mgmt.descriptor.fetch.frequency

**Default Value**

2 second(s)

**API Name**

mgmt\_descriptor\_fetch\_frequency

**Required**

true

**Descriptor Fetch Max Attempts****Description**

Maximum number of attempts to fetch the SCM descriptor when Cloudera Management Service roles are starting. If the roles are not able to get the descriptor in this number of attempts, then the roles exit.

**Related Name**

mgmt.num.descriptor.fetch.tries

**Default Value**

10

**API Name**

mgmt\_num\_descriptor\_fetch\_tries

**Required**

true

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Bind Reports Manager to Wildcard Address****Description**

If enabled, the Reports Manager binds to the wildcard address ("0.0.0.0") on all of its ports.

**Related Name****Default Value**

false

**API Name**

headlamp\_bind\_wildcard

**Required**

false

**Reports Manager Web UI Port****Description**

The port where Reports Manager starts a debug web server. Set to -1 to disable debug server.

**Related Name**

debug.server.port

**Default Value**

8083

**API Name**

headlamp\_debug\_port

**Required**

false

**Reports Manager Server Port****Description**

The port where Reports Manager listens for requests

**Related Name**

server.port

**Default Value**

5678

**API Name**

headlamp\_server\_port

**Required**

false

**Resource Management****Java Heap Size of Reports Manager in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

headlamp\_heapsize

**Required**

false

**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the

value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Reports Manager Kerberos Principal****Description**

Kerberos principal used by Reports Manager. Note: This principal must have administrator and superuser privileges on all HDFS services.

**Related Name****Default Value**

hdfs

**API Name**

kerberos\_role\_princ\_name

**Required**

true

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Reports Manager Database Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Database Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_database\_host

**Required**

true

**Suppress Parameter Validation: Reports Manager Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Database Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_database\_name

**Required**

true

**Suppress Parameter Validation: Reports Manager Database Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Database Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_database\_password

**Required**

true

**Suppress Parameter Validation: Reports Manager Database Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Database Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_database\_user

**Required**

true

**Suppress Parameter Validation: Reports Manager Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_debug\_port

**Required**

true

### Suppress Parameter Validation: Java Configuration Options for Reports Manager

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Reports Manager parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_java\_opts

**Required**

true

### Suppress Parameter Validation: Reports Manager Working Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Working Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_scratch\_dir

**Required**

true

### Suppress Parameter Validation: Reports Manager Server Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_server\_port

**Required**

true

### Suppress Parameter Validation: Reports Manager Kerberos Principal

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Reports Manager Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Rules to Extract Events from Log Files****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

**Suppress Parameter Validation: Reports Manager Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.db.properties

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.db.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_reportsmanager\_db\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Reports Manager Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_reportsmanager\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.conf

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_reportsmanager\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_file\_descriptor

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Pause Duration****Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_pause\_duration

**Required**

true

**Suppress Health Test: Cloudera Manager Descriptor Age****Description**

Whether to suppress the results of the Cloudera Manager Descriptor Age health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_scm\_descriptor\_fetch

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_scm\_health

**Required**

true

### Suppress Health Test: Reports Manager Working Directory Free Space

**Description**

Whether to suppress the results of the Reports Manager Working Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_scratch\_directory\_free\_space

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_reports\_manager\_unexpected\_exits

**Required**

true

## Service Monitor

### Advanced

#### Java Configuration Options for Service Monitor

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value****API Name**

firehose\_java\_opts

**Required**

false

#### Service Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf

**Description**

For advanced use only. A string to be inserted into cmon.conf for this role only.

**Related Name****Default Value****API Name**

firehose\_safety\_valve

**Required**

false

#### Service Monitor Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

`oom_heap_dump_dir`

**Default Value**

`/tmp`

**API Name**

`oom_heap_dump_dir`

**Required**

`false`

### Dump Heap When Out of Memory

**Description**

When set, generates heap dump file when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

`true`

**API Name**

`oom_heap_dump_enabled`

**Required**

`true`

### Kill When Out of Memory

**Description**

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

`true`

**API Name**

`oom_sigkill_enabled`

**Required**

`true`

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name**

**Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Service Monitor Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

SERVICEMONITOR\_role\_env\_safety\_valve

**Required**

false

### Event Publication Maximum Queue Size

**Description**

The maximum size of the queue in which events published from this role will be buffered. If this queue becomes full (for example, due to an outage), subsequent events will be dropped.

**Related Name**

health.event.publish.queue.max

**Default Value**

20000

**API Name**

svcmon\_event\_publication\_queue\_size\_max

**Required**

true

### Event Publication Retry Period

**Description**

If an event cannot be delivered immediately by this role, this value controls how long to wait before Event Publisher retries delivery.

**Related Name**

health.event.publish.retry.ms

**Default Value**

5000

**API Name**

svcmon\_event\_publication\_retry\_period

**Required**

true

## Logs

### Service Monitor Logging Threshold

**Description**

The minimum log level for Service Monitor logs

**Related Name**

**Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Service Monitor Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Service Monitor logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Service Monitor Max Log Size****Description**

The maximum size, in megabytes, per log file for Service Monitor logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Service Monitor Log Directory****Description**

Location of log files for Service Monitor

**Related Name****Default Value**

/var/log/cloudera-scm-firehose

**API Name**

mgmt\_log\_dir

**Required**

false

**Monitoring**

### Metrics Aggregation Run Duration Thresholds

**Description**

The health test thresholds for monitoring the metrics aggregation run duration.

**Related Name****Default Value**

Warning: 10 second(s), Critical: 30 second(s)

**API Name**

aggregation\_run\_duration\_thresholds

**Required**

false

### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Service Monitor Storage Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Service Monitor Storage Directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

firehose\_storage\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Service Monitor Storage Directory Free Space Monitoring Percentage Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Service Monitor Storage Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Service Monitor Storage Directory Free Space Monitoring Absolute Thresholds setting is configured.

#### Related Name

#### Default Value

Warning: Never, Critical: Never

#### API Name

firehose\_storage\_directory\_free\_space\_percentage\_thresholds

#### Required

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

#### Related Name

#### Default Value

Warning: 10 GiB, Critical: 5 GiB

#### API Name

heap\_dump\_directory\_free\_space\_absolute\_thresholds

#### Required

false

### Heap Dump Directory Free Space Monitoring Percentage Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

#### Related Name

#### Default Value

Warning: Never, Critical: Never

#### API Name

heap\_dump\_directory\_free\_space\_percentage\_thresholds

#### Required

false

### Log Directory Free Space Monitoring Absolute Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

#### Related Name

**Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Rules to Extract Events from Log Files****Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used.. Each rule has some or all of the following fields:

- alert - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- rate (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- periodminutes - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- threshold - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- content - match only those messages for which contents match this regular expression.
- exceptiontype - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

**Related Name****Default Value**

version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Instead, use .\* , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Use .\* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .\* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]

**API Name**

log\_event\_whitelist

**Required**

false

**Cloudera Manager Metric Schema Age Thresholds****Description**

The health test thresholds for monitoring the time since the Cloudera Manager metric schema was last refreshed.

**Related Name****Default Value**

Warning: 60000.0, Critical: 120000.0

**API Name**

metric\_schema\_age\_thresholds\_name

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name**

**Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

### Cloudera Manager Descriptor Age Thresholds

**Description**

The health test thresholds for monitoring the time since the Cloudera Manager descriptor was last refreshed.

**Related Name****Default Value**

Warning: 60000.0, Critical: 120000.0

**API Name**

scm\_descriptor\_age\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

servicemonitor\_fd\_thresholds

**Required**

false

### Heap Size Thresholds

**Description**

The health test thresholds for the heap used.

**Related Name****Default Value**

Warning: 90.0 %, Critical: 95.0 %

**API Name**

servicemonitor\_heap\_size\_thresholds

**Required**

false

### Service Monitor Host Health Test

**Description**

When computing the overall Service Monitor health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

servicemonitor\_host\_health\_enabled

**Required**

false

### Pause Duration Thresholds

#### Description

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

#### Related Name

#### Default Value

Warning: 30.0, Critical: 60.0

#### API Name

servicemonitor\_pause\_duration\_thresholds

#### Required

false

### Pause Duration Monitoring Period

#### Description

The period to review when computing the moving average of extra time the pause monitor spent paused.

#### Related Name

#### Default Value

5 minute(s)

#### API Name

servicemonitor\_pause\_duration\_window

#### Required

false

### Service Monitor Role Pipeline Monitoring Thresholds

#### Description

The health test thresholds for monitoring the Service Monitor role pipeline. This specifies the number of dropped messages that will be tolerated over the monitoring time period.

#### Related Name

#### Default Value

Warning: Never, Critical: Any

#### API Name

servicemonitor\_role\_pipeline\_thresholds

#### Required

false

### Service Monitor Role Pipeline Monitoring Time Period

#### Description

The time period over which the Service Monitor role pipeline will be monitored for dropped messages.

#### Related Name

#### Default Value

5 minute(s)

**API Name**

servicemonitor\_role\_pipeline\_window

**Required**

false

**Service Monitor Process Health Test****Description**

Enables the health test that the Service Monitor's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

servicemonitor\_scm\_health\_enabled

**Required**

false

**Web Metric Collection****Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

servicemonitor\_web\_metric\_collection\_enabled

**Required**

false

**Web Metric Collection Duration****Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

servicemonitor\_web\_metric\_collection\_thresholds

**Required**

false

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name**

**Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**YARN MapReduce Counter Descriptions****Description**

This JSON document contains metadata that is used by the Service Monitor's YARN application monitoring feature for YARN-based MapReduce counter handling. Each counter description has the following fields:

- name (mandatory) - the name of the counter, for example, org.apache.hadoop.mapreduce.filesystemcounter.file\_bytes\_read.
- units (mandatory) - the units of the counter.
- attributeName (optional) - the attribute name to use for the counter within Cloudera Manager, this name will be used to identify the counter within the YARN Application Monitoring feature and in the Cloudera Manager API. If not specified the portion of the counter name after the last period will be used.
- displayName (optional) - a display name for the counter. If not specified the full counter name will be used.
- description (optional) - a description of the counter. If not specified the full counter name will be used.

**Related Name****Default Value**

**API Name**

yarn\_application\_mapreduce\_counters

**Required**

false

**Other****Use the Authentication Service to enable Single Sign On****Description**

Use the Authentication Service to enable Single Sign On for the Firehose debug servers. Requires a running Authentication Service.

**Related Name**

debug.servlet.auth.enabled

**Default Value**

false

**API Name**

debug\_servlet\_auth\_enabled

**Required**

false

### Impala Storage

**Description**

The approximate amount of disk space dedicated to storing Impala query data. Once the store has reached its maximum size, older data is deleted to make room for newer queries. The disk usage is approximate because data is deleted only when the limit is reached.

**Related Name**

firehose\_impala\_storage\_bytes

**Default Value**

1 GiB

**API Name**

firehose\_impala\_storage\_bytes

**Required**

false

### Reports Time-series Storage

**Description**

The approximate amount of disk space dedicated to storing time series for reporting data. Once the store has reached its maximum size, older data is deleted to make room for newer data. The disk usage is approximate because data is deleted only when the limit is reached. See the "Disk Usage" tab on the Service Monitor page for more information on how space is consumed in the Service Monitor. This tab also shows information about the amount of data retained and the time window covered by each data granularity.

**Related Name**

firehose\_reports\_storage\_bytes

**Default Value**

1 GiB

**API Name**

firehose\_reports\_storage\_bytes

**Required**

false

### Service Monitor Storage Directory

**Description**

The directory where Service Monitor data is stored. The Service Monitor stores metric time series and health information, as well as Impala query and YARN application metadata if Impala and/or YARN are configured.

**Related Name**

firehose.storage.base.directory

**Default Value**

/var/lib/cloudera-service-monitor

**API Name**

firehose\_storage\_dir

**Required**

true

**Time-Series Storage****Description**

The approximate amount of disk space dedicated to storing time series and health data. Once the store has reached its maximum size, older data is deleted to make room for newer data. The disk usage is approximate because data is deleted only when the limit is reached. Note that Cloudera Manager stores time-series data at a number of different data granularities, and these granularities have different effective retention periods. Specifically, Cloudera Manager stores metric data as both raw data points and ten-minutely, hourly, six-hourly, daily, and weekly summary data points. Raw data consumes the bulk of the allocated storage space, weekly summaries the least. As such, raw data is retained for the shortest amount of time, while weekly summary points are unlikely to ever be deleted. See the "Storage" tab on the 'Service Monitor' -> 'Charts Library' -> 'Service Monitor Storage' page for more information on how space is consumed within the Service Monitor. This tab also shows information about the amount of data retained and time window covered by each data granularity.

**Related Name**

firehose\_time\_series\_storage\_bytes

**Default Value**

10 GiB

**API Name**

firehose\_time\_series\_storage\_bytes

**Required**

false

**YARN Storage****Description**

The approximate amount of disk space dedicated to storing YARN application data. Once the store has reached its maximum size, older data is deleted to make room for newer applications. The disk usage is approximate because data is deleted only when the limit is reached.

**Related Name**

firehose\_yarn\_storage\_bytes

**Default Value**

1 GiB

**API Name**

firehose\_yarn\_storage\_bytes

**Required**

false

### Health Event Startup Policy

**Description**

This setting controls whether health events are emitted when this monitoring role is started. If set to "none", then no health events are emitted. If set to "bad" then health events are emitted for subjects with bad or concerning health. If set to "all" then health events are emitted for all subjects for all health values. The default is "bad".

**Related Name**

health.event.publish.startup.policy

**Default Value**

bad

**API Name**

health\_event\_publish\_startup\_policy

**Required**

false

### Starting Interval for Descriptor Fetch Attempts

**Description**

The starting interval between fetch attempts for the SCM descriptor when Cloudera Management Service roles are starting. The interval is increased by an additional one second with each failed fetch attempt.

**Related Name**

mgmt.descriptor.fetch.frequency

**Default Value**

2 second(s)

**API Name**

mgmt\_descriptor\_fetch\_frequency

**Required**

true

### Descriptor Fetch Max Attempts

**Description**

Maximum number of attempts to fetch the SCM descriptor when Cloudera Management Service roles are starting. If the roles are not able to get the descriptor in this number of attempts, then the roles exit.

**Related Name**

mgmt.num.descriptor.fetch.tries

**Default Value**

10

**API Name**

mgmt\_num\_descriptor\_fetch\_tries

**Required**

true

### Event Publication Log Quiet Time Period

**Description**

To avoid producing excessive amounts of log output, the Event Publisher component of this role is limited to emitting one message per time period. This value controls the size of that time period.

**Related Name**

health.event.publish.log.suppress.window.ms

**Default Value**

1 minute(s)

**API Name**

svcmon\_event\_publication\_log\_suppress\_window

**Required**

true

## Performance

### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Ports and Addresses

### Service Monitor Web UI Port

**Description**

Port for Service Monitor's Debug page. Set to -1 to disable the debug server.

**Related Name**

debug.servlet.port

**Default Value**

8086

**API Name**

firehose\_debug\_port

**Required**

false

### Service Monitor Web UI HTTPS Port

**Description**

Port for Service Monitor's HTTPS Debug page.

**Related Name**

debug.servlet.https.port

**Default Value**

9086

**API Name**

firehose\_debug\_tls\_port

**Required**

false

**Service Monitor Listen Port****Description**

Port where Service Monitor is listening for agent messages.

**Related Name**

firehose.server.port

**Default Value**

9997

**API Name**

firehose\_listen\_port

**Required**

false

**Service Monitor Nozzle Port****Description**

Port where Service Monitor's query API is exposed.

**Related Name**

nozzle.server.port

**Default Value**

9996

**API Name**

firehose\_nozzle\_port

**Required**

false

**Bind Service Monitor to Wildcard Address****Description**

If enabled, the Service Monitor binds to the wildcard address ("0.0.0.0") on all of its ports.

**Related Name****Default Value**

false

**API Name**

smon\_bind\_wildcard

**Required**

false

**Resource Management****Java Heap Size of Service Monitor in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

firehose\_heapsize

**Required**

false

**Maximum Non-Java Memory of Service Monitor****Description**

The amount of memory the Service Monitor can use off of the Java heap.

**Related Name**

firehose\_non\_java\_memory\_bytes

**Default Value**

2 GiB

**API Name**

firehose\_non\_java\_memory\_bytes

**Required**

false

**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value**

**API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

	-1 MiB
<b>API Name</b>	
	rm_memory_soft_limit
<b>Required</b>	
	true

## Security

### Role-Specific Kerberos Principal

<b>Description</b>	Kerberos principal used by the Service Monitor roles.
<b>Related Name</b>	
<b>Default Value</b>	hue
<b>API Name</b>	kerberos_role_princ_name
<b>Required</b>	true

### Enable TLS/SSL for Firehose Debug Server

<b>Description</b>	Encrypt communication between clients and Firehose Debug Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).
<b>Related Name</b>	debug.servlet.https.enabled
<b>Default Value</b>	false
<b>API Name</b>	ssl_enabled
<b>Required</b>	false

### Firehose Debug Server TLS/SSL Server JKS Keystore File Location

<b>Description</b>	The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Firehose Debug Server is acting as a TLS/SSL server. The keystore must be in JKS format.
<b>Related Name</b>	debug.servlet.https.keystorePath
<b>Default Value</b>	
<b>API Name</b>	ssl_server_keystore_location
<b>Required</b>	false

### Firehose Debug Server TLS/SSL Server JKS Keystore File Password

**Description**

The password for the Firehose Debug Server JKS keystore file.

**Related Name**

debug.servlet.https.keystorePassword

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

## Stacks Collection

### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Service Monitor Web UI Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_debug\_port

**Required**

true

### Suppress Parameter Validation: Service Monitor Web UI HTTPS Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Web UI HTTPS Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_debug\_tls\_port

**Required**

true

### Suppress Parameter Validation: Java Configuration Options for Service Monitor

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Service Monitor parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_java\_opts

**Required**

true

### Suppress Parameter Validation: Service Monitor Listen Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Listen Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_listen\_port

**Required**

true

**Suppress Parameter Validation: Service Monitor Nozzle Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Nozzle Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_nozzle\_port

**Required**

true

**Suppress Parameter Validation: Service Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Service Monitor Heap Size Validator****Description**

Whether to suppress configuration warnings produced by the Service Monitor Heap Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_service\_monitor\_heap\_role\_validator

**Required**

true

**Suppress Configuration Validator: Service Monitor Off Heap Memory Size Validator****Description**

Whether to suppress configuration warnings produced by the Service Monitor Off Heap Memory Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_service\_monitor\_non\_java\_memory\_role\_validator

**Required**

true

**Suppress Parameter Validation: Service Monitor Storage Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Storage Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_storage\_dir

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Service Monitor Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Rules to Extract Events from Log Files

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

### Suppress Parameter Validation: Service Monitor Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_log\_dir

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_servicemonitor\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Firehose Debug Server TLS/SSL Server JKS Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Firehose Debug Server TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Firehose Debug Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Firehose Debug Server TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: YARN MapReduce Counter Descriptions****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN MapReduce Counter Descriptions parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_application\_mapreduce\_counters

**Required**

true

**Suppress Health Test: Metrics Aggregation Run Duration Test****Description**

Whether to suppress the results of the Metrics Aggregation Run Duration Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_aggregation\_run\_duration

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_file\_descriptor

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Heap Size****Description**

Whether to suppress the results of the Heap Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_heap\_size

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Cloudera Manager Metric Schema Age

**Description**

Whether to suppress the results of the Cloudera Manager Metric Schema Age health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_metric\_schema\_fetch

**Required**

true

**Suppress Health Test: Pause Duration****Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_pause\_duration

**Required**

true

**Suppress Health Test: Role Pipeline****Description**

Whether to suppress the results of the Role Pipeline health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_role\_pipeline

**Required**

true

**Suppress Health Test: Cloudera Manager Descriptor Age****Description**

Whether to suppress the results of the Cloudera Manager Descriptor Age health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_scm\_descriptor\_fetch

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_scm\_health

**Required**

true

### Suppress Health Test: Service Monitor Storage Directory Free Space

**Description**

Whether to suppress the results of the Service Monitor Storage Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_storage\_directory\_free\_space

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_unexpected\_exits

**Required**

true

**Suppress Health Test: Web Server Status****Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_service\_monitor\_web\_metric\_collection

**Required**

true

## Service-Wide

### Advanced

**Cloudera Management Service Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

mgmt\_service\_env\_safety\_valve

**Required**

false

**Cloudera Management Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml****Description**

For advanced use only, a string to be inserted into ssl-client.xml. This setting currently applies to the Reports Manager only.

**Related Name****Default Value****API Name**

mgmt\_ssl\_client\_safety\_valve

**Required**

false

**Small Files Reporting: HDFS Service for Data Staging****Description**

Data collection for small files analysis requires a data staging area in HDFS. If you enable data collection for small files reporting, this property sets which HDFS service stages the data.

**Related Name**

nav.smallfiles.hdfs.staging.service.name

**Default Value****API Name**

navigator\_small\_files\_staging\_hdfs\_service\_name

**Required**

false

**Small Files Reporting: Enable Data Collection****Description**

When Small Files Reporting is enabled, Navigator passes additional metadata to the Telemetry Publisher so the data can be used by Cloudera Workload XM (WXM). This additional data allows WXM to identify Impala query performance issues caused when data is organized into small files in HDFS. Enable this option only when Telemetry Publisher is enabled.

**Related Name**

nav.smallfiles.reporting.enabled

**Default Value**

false

**API Name**

navigator\_smallfiles\_enabled

**Required**

true

**Small Files Reporting: HDFS Staging Location****Description**

Data collection for small files analysis requires a data staging area in HDFS. If you enable data collection for small files reporting, this property sets the HDFS location where Small Files Reporting data is staged. If the directory doesn't already exist, Navigator creates it using the same credentials it uses for HDFS extraction from this service.

**Related Name**

nav.smallfiles.hdfs.staging.root.path

**Default Value**

/user/cloudera/navigator/smallfiles

**API Name**

navigator\_smallfiles\_hdfs\_path

**Required**

false

### System Group

**Description**

The group that this service's processes should run as.

**Related Name****Default Value**

cloudera-scm

**API Name**

process\_groupname

**Required**

true

### System User

**Description**

The user that this service's processes should run as.

**Related Name****Default Value**

cloudera-scm

**API Name**

process\_username

**Required**

true

## Monitoring

### Enable Log Event Capture

**Description**

When set, each role identifies important log events and forwards them to Cloudera Manager.

**Related Name****Default Value**

true

**API Name**

catch\_events

**Required**

false

### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

false

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Cloudera Manager KDC Server Connection Health Thresholds****Description**

The health test thresholds for monitoring the KDC Server connection health by login time.

**Related Name****Default Value**

Warning: 500 millisecond(s), Critical: 1 second(s)

**API Name**

kdc\_availability\_thresholds

**Required**

false

**Cloudera Manager LDAP Server Connection Health Thresholds****Description**

The health test thresholds for monitoring the LDAP Server connection health by login time.

**Related Name****Default Value**

Warning: 500 millisecond(s), Critical: 1 second(s)

**API Name**

ldap\_availability\_thresholds

**Required**

false

**Log Event Retry Frequency****Description**

The frequency in which the log4j event publication appender will retry sending undelivered log events to the Event server, in seconds

**Related Name****Default Value**

30

**API Name**

log\_event\_retry\_frequency

**Required**

false

**Activity Monitor Role Health Test****Description**

When computing the overall MGMT health, consider Activity Monitor's health

**Related Name****Default Value**

true

**API Name**

mgmt\_activitymonitor\_health\_enabled

**Required**

false

**Alert Publisher Role Health Test****Description**

When computing the overall MGMT health, consider Alert Publisher's health

**Related Name****Default Value**

true

**API Name**

mgmt\_alertpublisher\_health\_enabled

**Required**

false

**Cloudera Manager TLS Certificate Expiry Thresholds****Description**

The health test thresholds for monitoring the certificate of Cloudera Manager Server.

**Related Name****Default Value**

Warning: 60 day(s), Critical: 7 day(s)

**API Name**

mgmt\_certificate\_expiry\_thresholds

**Required**

false

**Cloudera Manager Server Clock Offset Thresholds****Description**

The health test thresholds for monitoring the clock offset between the Cloudera Manager Server and the Service Monitor.

**Related Name****Default Value**

Warning: 30 second(s), Critical: 1 minute(s)

**API Name**

mgmt\_clock\_offset\_with\_smon\_thresholds

**Required**

false

**Command Storage Directory Free Space Monitoring Thresholds****Description**

The health test thresholds for monitoring the free space on the filesystem that contains the Cloudera Manager Server command storage directory.

**Related Name****Default Value**

Warning: 2 GiB, Critical: 1 GiB

**API Name**

mgmt\_command\_storage\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Embedded Database Free Space Monitoring Thresholds****Description**

The health test thresholds for monitoring the free space on the volume for the embedded PostgreSQL database optionally running on the Cloudera Manager Server. If the embedded database is not in use, this has no effect.

**Related Name****Default Value**

Warning: 2 GiB, Critical: 1 GiB

**API Name**

mgmt\_embedded\_database\_free\_space\_absolute\_thresholds

**Required**

false

**Event Server Role Health Test****Description**

When computing the overall MGMT health, consider Event Server's health

**Related Name****Default Value**

true

**API Name**

mgmt\_eventserver\_health\_enabled

**Required**

false

**Host Monitor Role Health Test****Description**

When computing the overall MGMT health, consider Host Monitor's health

**Related Name**

**Default Value**

true

**API Name**

mgmt\_hostmonitor\_health\_enabled

**Required**

false

**Navigator Audit Server Role Health Test****Description**

When computing the overall MGMT health, consider Navigator Audit Server's health

**Related Name****Default Value**

true

**API Name**

mgmt\_navigator\_health\_enabled

**Required**

false

**Navigator Metadata Server Role Health Test****Description**

When computing the overall MGMT health, consider Navigator Metadata Server's health

**Related Name****Default Value**

true

**API Name**

mgmt\_navigatormetaserver\_health\_enabled

**Required**

false

**Reports Manager Role Health Test****Description**

When computing the overall MGMT health, consider Reports Manager's health

**Related Name****Default Value**

true

**API Name**

mgmt\_reportsmanager\_health\_enabled

**Required**

false

**Service Monitor Role Health Test****Description**

When computing the overall MGMT health, consider Service Monitor's health

**Related Name**

**Default Value**

true

**API Name**

mgmt\_servicemonitor\_health\_enabled

**Required**

false

**Telemetry Publisher Role Health Test****Description**

When computing the overall MGMT health, consider Telemetry Publisher's health

**Related Name****Default Value**

true

**API Name**

mgmt\_telemetrypublisher\_health\_enabled

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

### Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

## Other

### Emit Sensitive Data In Stderr

**Description**

If set, sensitive data, like passwords, are emitted to stderr.

**Related Name****Default Value**

false

**API Name**

mgmt\_emit\_sensitive\_data\_in\_stderr

**Required**

true

### Minimum Kerberos Ticket Validity Period

**Description**

The minimum Kerberos ticket validity period. The Cloudera Management Services attempt to log in again only after this minimum period of time has elapsed.

**Related Name**

tgt.login.validity.period

**Default Value**

1 hour(s)

**API Name**

tgt\_login\_validity\_period

**Required**

false

## Publishing

### Kafka Service

**Description**

The Kafka service where Navigator will publish audit events.

**Related Name****Default Value**

**API Name**

navigator\_kafka\_publishing\_service

**Required**

false

## Security

### TLS/SSL Client Truststore File Location

**Description**

Path to the client truststore file used in HTTPS communication. This truststore contains certificates of trusted servers, or of Certificate Authorities trusted to identify servers. If set, this is used to verify certificates in HTTPS communication with CDH services and the Cloudera Manager Server. If not set, the default Java truststore is used to verify certificates. The contents of this truststore can be modified without restarting the Cloudera Management Service roles. By default, changes to its contents are picked up within ten seconds.

**Related Name**

ssl.client.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

### Cloudera Manager Server TLS/SSL Client Trust Store Password

**Description**

The password for the Cloudera Manager Server TLS/SSL Certificate Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.client.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

## Suppressions

### Suppress Configuration Validator: Activity Monitor Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Activity Monitor Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_activitymonitor\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Alert: Mail From Address****Description**

Whether to suppress configuration warnings produced by the Alert: Mail From Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_from\_address

**Required**

true

**Suppress Configuration Validator: Alerts: Mail Server Hostname****Description**

Whether to suppress configuration warnings produced by the Alerts: Mail Server Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_hostname

**Required**

true

**Suppress Configuration Validator: Alerts: Mail Server Password****Description**

Whether to suppress configuration warnings produced by the Alerts: Mail Server Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_password

**Required**

true

**Suppress Configuration Validator: Alerts: Mail Server TCP Port****Description**

Whether to suppress configuration warnings produced by the Alerts: Mail Server TCP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_port

**Required**

true

**Suppress Configuration Validator: Alerts: Mail Message Recipients****Description**

Whether to suppress configuration warnings produced by the Alerts: Mail Message Recipients configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_recipients

**Required**

true

**Suppress Configuration Validator: Alerts: Mail Server Username****Description**

Whether to suppress configuration warnings produced by the Alerts: Mail Server Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_mailserver\_username

**Required**

true

**Suppress Configuration Validator: Custom Alert Script****Description**

Whether to suppress configuration warnings produced by the Custom Alert Script configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_script\_path

**Required**

true

### Suppress Configuration Validator: SNMP Authentication Protocol Pass Phrase

**Description**

Whether to suppress configuration warnings produced by the SNMP Authentication Protocol Pass Phrase configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_auth\_password

**Required**

true

### Suppress Configuration Validator: SNMPv2 Community String

**Description**

Whether to suppress configuration warnings produced by the SNMPv2 Community String configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_community

**Required**

true

### Suppress Configuration Validator: SNMP Server Engine Id

**Description**

Whether to suppress configuration warnings produced by the SNMP Server Engine Id configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_security\_engineid

**Required**

true

### Suppress Configuration Validator: SNMP NMS Hostname

**Description**

Whether to suppress configuration warnings produced by the SNMP NMS Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_server\_hostname

**Required**

true

**Suppress Configuration Validator: SNMP Server Port****Description**

Whether to suppress configuration warnings produced by the SNMP Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_server\_port

**Required**

true

**Suppress Configuration Validator: SNMP Security UserName****Description**

Whether to suppress configuration warnings produced by the SNMP Security UserName configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alert\_snmp\_username

**Required**

true

**Suppress Configuration Validator: Alerts: Email footer****Description**

Whether to suppress configuration warnings produced by the Alerts: Email footer configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_email\_footer

**Required**

true

**Suppress Configuration Validator: Alerts: Email header****Description**

Whether to suppress configuration warnings produced by the Alerts: Email header configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_email\_header

**Required**

true

**Suppress Configuration Validator: Alerts: Listen Port****Description**

Whether to suppress configuration warnings produced by the Alerts: Listen Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_internalapi\_port

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Alert Publisher****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Alert Publisher configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_java\_opts

**Required**

true

**Suppress Configuration Validator: Alert Publisher Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Alert Publisher Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Alert Publisher Advanced Configuration Snippet (Safety Valve) for alertpublisher.conf

**Description**

Whether to suppress configuration warnings produced by the Alert Publisher Advanced Configuration Snippet (Safety Valve) for alertpublisher.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_alertpublisher\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Audit Log Directory

**Description**

Whether to suppress configuration warnings produced by the Audit Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_audit\_event\_log\_dir

**Required**

true

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Configuration Validator: Navigator Metadata Server Storage Dir

**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Storage Dir configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_data\_dir

**Required**

true

**Suppress Configuration Validator: Event Server Web UI Port****Description**

Whether to suppress configuration warnings produced by the Event Server Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_debug\_port

**Required**

true

**Suppress Configuration Validator: Event Query Port****Description**

Whether to suppress configuration warnings produced by the Event Query Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_http\_port

**Required**

true

**Suppress Configuration Validator: Event Server Index Directory****Description**

Whether to suppress configuration warnings produced by the Event Server Index Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_index\_dir

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Event Server****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Event Server configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_java\_opts

**Required**

true

**Suppress Configuration Validator: Event Publish Port****Description**

Whether to suppress configuration warnings produced by the Event Publish Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_listen\_port

**Required**

true

**Suppress Configuration Validator: Event Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Event Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Event Server Advanced Configuration Snippet (Safety Valve) for eventserver.conf****Description**

Whether to suppress configuration warnings produced by the Event Server Advanced Configuration Snippet (Safety Valve) for eventserver.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_eventserver\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Activity Monitor Database Hostname

**Description**

Whether to suppress configuration warnings produced by the Activity Monitor Database Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_database\_host

**Required**

true

### Suppress Configuration Validator: Activity Monitor Database Name

**Description**

Whether to suppress configuration warnings produced by the Activity Monitor Database Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_database\_name

**Required**

true

### Suppress Configuration Validator: Activity Monitor Database Password

**Description**

Whether to suppress configuration warnings produced by the Activity Monitor Database Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_database\_password

**Required**

true

### Suppress Configuration Validator: Activity Monitor Database Username

**Description**

Whether to suppress configuration warnings produced by the Activity Monitor Database Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_database\_user

**Required**

true

**Suppress Configuration Validator: Service Monitor Web UI Port****Description**

Whether to suppress configuration warnings produced by the Service Monitor Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_debug\_port

**Required**

true

**Suppress Configuration Validator: Service Monitor Web UI HTTPS Port****Description**

Whether to suppress configuration warnings produced by the Service Monitor Web UI HTTPS Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_debug\_tls\_port

**Required**

true

**Suppress Configuration Validator: Host Monitor Heap Size Validator****Description**

Whether to suppress configuration warnings produced by the Host Monitor Heap Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_host\_monitor\_heap\_role\_validator

**Required**

true

**Suppress Configuration Validator: Host Monitor Off Heap Memory Size Validator****Description**

Whether to suppress configuration warnings produced by the Host Monitor Off Heap Memory Size Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_host\_monitor\_non\_java\_memory\_role\_validator

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Service Monitor****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Service Monitor configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_java\_opts

**Required**

true

**Suppress Configuration Validator: Service Monitor Listen Port****Description**

Whether to suppress configuration warnings produced by the Service Monitor Listen Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_listen\_port

**Required**

true

**Suppress Configuration Validator: Service Monitor Nozzle Port****Description**

Whether to suppress configuration warnings produced by the Service Monitor Nozzle Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_nozzle\_port

**Required**

true

### Suppress Configuration Validator: Service Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf

**Description**

Whether to suppress configuration warnings produced by the Service Monitor Advanced Configuration Snippet (Safety Valve) for cmon.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Service Monitor Heap Size Validator

**Description**

Whether to suppress configuration warnings produced by the Service Monitor Heap Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_service\_monitor\_heap\_role\_validator

**Required**

true

### Suppress Configuration Validator: Service Monitor Off Heap Memory Size Validator

**Description**

Whether to suppress configuration warnings produced by the Service Monitor Off Heap Memory Size Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_service\_monitor\_non\_java\_memory\_role\_validator

**Required**

true

### Suppress Configuration Validator: Service Monitor Storage Directory

**Description**

Whether to suppress configuration warnings produced by the Service Monitor Storage Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_firehose\_storage\_dir

**Required**

true

**Suppress Configuration Validator: Reports Manager Database Hostname****Description**

Whether to suppress configuration warnings produced by the Reports Manager Database Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_database\_host

**Required**

true

**Suppress Configuration Validator: Reports Manager Database Name****Description**

Whether to suppress configuration warnings produced by the Reports Manager Database Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_database\_name

**Required**

true

**Suppress Configuration Validator: Reports Manager Database Password****Description**

Whether to suppress configuration warnings produced by the Reports Manager Database Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_database\_password

**Required**

true

**Suppress Configuration Validator: Reports Manager Database Username****Description**

Whether to suppress configuration warnings produced by the Reports Manager Database Username configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_database\_user

**Required**

true

**Suppress Configuration Validator: Reports Manager Web UI Port****Description**

Whether to suppress configuration warnings produced by the Reports Manager Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_debug\_port

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Reports Manager****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Reports Manager configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_java\_opts

**Required**

true

**Suppress Configuration Validator: Reports Manager Working Directory****Description**

Whether to suppress configuration warnings produced by the Reports Manager Working Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_scratch\_dir

**Required**

true

**Suppress Configuration Validator: Reports Manager Server Port****Description**

Whether to suppress configuration warnings produced by the Reports Manager Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_headlamp\_server\_port

**Required**

true

### Suppress Configuration Validator: Host Monitor Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Host Monitor Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hostmonitor\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Role-Specific Kerberos Principal

**Description**

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

### Suppress Configuration Validator: Service Monitor Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Service Monitor Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Rules to Extract Events from Log Files****Description**

Whether to suppress configuration warnings produced by the Rules to Extract Events from Log Files configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

**Suppress Configuration Validator: Telemetry Publisher Data Directory****Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_data\_dir

**Required**

true

**Suppress Configuration Validator: Service Monitor Log Directory****Description**

Whether to suppress configuration warnings produced by the Service Monitor Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_log\_dir

**Required**

true

**Suppress Configuration Validator: HDFS Filter Blacklist****Description**

Whether to suppress configuration warnings produced by the HDFS Filter Blacklist configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_filter\_hdfs\_rules

**Required**

true

**Suppress Configuration Validator: S3 Filter list****Description**

Whether to suppress configuration warnings produced by the S3 Filter list configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_filter\_s3\_rules

**Required**

true

**Suppress Configuration Validator: Navigator Kerberos Principal for HDFS****Description**

Whether to suppress configuration warnings produced by the Navigator Kerberos Principal for HDFS configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_hdfs\_kerberos\_princ

**Required**

true

**Suppress Configuration Validator: Navigator Metadata Server Install Dir****Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Install Dir configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_install\_dir

**Required**

true

**Suppress Configuration Validator: LDAP Bind User Distinguished Name****Description**

Whether to suppress configuration warnings produced by the LDAP Bind User Distinguished Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_bind\_dn

**Required**

true

**Suppress Configuration Validator: LDAP Bind Password****Description**

Whether to suppress configuration warnings produced by the LDAP Bind Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_bind\_pw

**Required**

true

**Suppress Configuration Validator: LDAP Distinguished Name Pattern****Description**

Whether to suppress configuration warnings produced by the LDAP Distinguished Name Pattern configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_dn\_pattern

**Required**

true

**Suppress Configuration Validator: LDAP Group Search Base****Description**

Whether to suppress configuration warnings produced by the LDAP Group Search Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_group\_search\_base

**Required**

true

### Suppress Configuration Validator: LDAP Group Search Filter For Logged In User

**Description**

Whether to suppress configuration warnings produced by the LDAP Group Search Filter For Logged In User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_group\_search\_filter

**Required**

true

### Suppress Configuration Validator: LDAP Groups Search Filter

**Description**

Whether to suppress configuration warnings produced by the LDAP Groups Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_groups\_search\_filter

**Required**

true

### Suppress Configuration Validator: LDAP URL

**Description**

Whether to suppress configuration warnings produced by the LDAP URL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_url

**Required**

true

### Suppress Configuration Validator: LDAP User Search Base

**Description**

Whether to suppress configuration warnings produced by the LDAP User Search Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_user\_search\_base

**Required**

true

**Suppress Configuration Validator: LDAP User Search Filter****Description**

Whether to suppress configuration warnings produced by the LDAP User Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_ldap\_user\_search\_filter

**Required**

true

**Suppress Configuration Validator: Navigator Metadata Server Database Hostname****Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Database Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_metaserver\_database\_host

**Required**

true

**Suppress Configuration Validator: Navigator Metadata Server Database Name****Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Database Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_metaserver\_database\_name

**Required**

true

**Suppress Configuration Validator: Navigator Metadata Server Database Password****Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Database Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_metaserver\_database\_password

**Required**

true

**Suppress Configuration Validator: Navigator Metadata Server Database Username****Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Database Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_metaserver\_database\_user

**Required**

true

**Suppress Configuration Validator: Active Directory Domain****Description**

Whether to suppress configuration warnings produced by the Active Directory Domain configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_nt\_domain

**Required**

true

**Suppress Configuration Validator: JMS Password****Description**

Whether to suppress configuration warnings produced by the JMS Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_policies\_jms\_password

**Required**

true

**Suppress Configuration Validator: JMS Queue****Description**

Whether to suppress configuration warnings produced by the JMS Queue configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_policies\_jms\_queue

**Required**

true

**Suppress Configuration Validator: JMS URL****Description**

Whether to suppress configuration warnings produced by the JMS URL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_policies\_jms\_url

**Required**

true

**Suppress Configuration Validator: JMS User****Description**

Whether to suppress configuration warnings produced by the JMS User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_policies\_jms\_user

**Required**

true

**Suppress Configuration Validator: SAML Entity Base URL****Description**

Whether to suppress configuration warnings produced by the SAML Entity Base URL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_entity\_base\_url

**Required**

true

**Suppress Configuration Validator: SAML Entity ID****Description**

Whether to suppress configuration warnings produced by the SAML Entity ID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_entity\_id

**Required**

true

**Suppress Configuration Validator: Alias of SAML Sign/Encrypt Private Key****Description**

Whether to suppress configuration warnings produced by the Alias of SAML Sign/Encrypt Private Key configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_key\_alias

**Required**

true

**Suppress Configuration Validator: SAML Sign/Encrypt Private Key Password****Description**

Whether to suppress configuration warnings produced by the SAML Sign/Encrypt Private Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_key\_password

**Required**

true

**Suppress Configuration Validator: SAML Keystore Password****Description**

Whether to suppress configuration warnings produced by the SAML Keystore Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_keystore\_password

**Required**

true

### Suppress Configuration Validator: Path to SAML Keystore File

**Description**

Whether to suppress configuration warnings produced by the Path to SAML Keystore File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_keystore\_path

**Required**

true

### Suppress Configuration Validator: SAML Login URL

**Description**

Whether to suppress configuration warnings produced by the SAML Login URL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_login\_url

**Required**

true

### Suppress Configuration Validator: Path to SAML IDP Metadata File

**Description**

Whether to suppress configuration warnings produced by the Path to SAML IDP Metadata File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_metadata\_path

**Required**

true

### Suppress Configuration Validator: SAML Attribute Identifier for User Role

**Description**

Whether to suppress configuration warnings produced by the SAML Attribute Identifier for User Role configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_oid\_role

**Required**

true

**Suppress Configuration Validator: SAML Attribute Identifier for User ID****Description**

Whether to suppress configuration warnings produced by the SAML Attribute Identifier for User ID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_oid\_user

**Required**

true

**Suppress Configuration Validator: SAML Attribute Values for Roles****Description**

Whether to suppress configuration warnings produced by the SAML Attribute Values for Roles configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_role\_map

**Required**

true

**Suppress Configuration Validator: Path to SAML Role Assignment Script****Description**

Whether to suppress configuration warnings produced by the Path to SAML Role Assignment Script configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_saml\_role\_script

**Required**

true

**Suppress Configuration Validator: Default Facets****Description**

Whether to suppress configuration warnings produced by the Default Facets configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_nav\_search\_default\_facets

**Required**

true

**Suppress Configuration Validator: Cloudera Telemetry Publisher S3 Bucket****Description**

Whether to suppress configuration warnings produced by the Cloudera Telemetry Publisher S3 Bucket configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_nav\_telemetry\_bucket\_name

**Required**

true

**Suppress Configuration Validator: Audit Event Filter****Description**

Whether to suppress configuration warnings produced by the Audit Event Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_audit\_event\_filter

**Required**

true

**Suppress Configuration Validator: Navigator Metadata Server Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties****Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_client\_config\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Navigator Audit Server Database Hostname

**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Database Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_database\_host

**Required**

true

### Suppress Configuration Validator: Navigator Audit Server Database Name

**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Database Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_database\_name

**Required**

true

### Suppress Configuration Validator: Navigator Audit Server Database Password

**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Database Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_database\_password

**Required**

true

### Suppress Configuration Validator: Navigator Audit Server Database Username

**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Database Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_database\_user

**Required**

true

**Suppress Configuration Validator: Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for db.navigator.properties****Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for db.navigator.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_db\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Navigator Audit Server Web UI Port****Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_debug\_port

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Navigator Audit****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Navigator Audit configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_java\_opts

**Required**

true

**Suppress Configuration Validator: Kafka Topic****Description**

Whether to suppress configuration warnings produced by the Kafka Topic configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_kafka\_publishing\_topic

**Required**

true

**Suppress Configuration Validator: Navigator Audit Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Navigator Metadata Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties****Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Navigator Audit Server Port****Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_server\_port

**Required**

true

### Suppress Configuration Validator: Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties

**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Advanced Configuration Snippet (Safety Valve) for cloudera-navigator.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_server\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Navigator TLS/SSL Client Trust Store File

**Description**

Whether to suppress configuration warnings produced by the Navigator TLS/SSL Client Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_truststore\_file

**Required**

true

### Suppress Configuration Validator: Navigator TLS/SSL Client Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the Navigator TLS/SSL Client Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigator\_truststore\_password

**Required**

true

### Suppress Configuration Validator: Navigator Metadata Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_navigatormetaserver\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: PII Masking Regular Expression****Description**

Whether to suppress configuration warnings produced by the PII Masking Regular Expression configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_pii\_masking\_regex

**Required**

true

**Suppress Configuration Validator: Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.db.properties****Description**

Whether to suppress configuration warnings produced by the Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.db.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_reportsmanager\_db\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Reports Manager Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Reports Manager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_reportsmanager\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.conf

**Description**

Whether to suppress configuration warnings produced by the Reports Manager Advanced Configuration Snippet (Safety Valve) for headlamp.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_reportsmanager\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Configuration Validator: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Configuration Validator: Service Monitor Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Service Monitor Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_servicemonitor\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: SNMP Validator

**Description**

Whether to suppress configuration warnings produced by the SNMP Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_snmp\_validator

**Required**

true

### Suppress Configuration Validator: TLS/SSL Keystore Key Password

**Description**

Whether to suppress configuration warnings produced by the TLS/SSL Keystore Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

### Suppress Configuration Validator: Firehose Debug Server TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the Firehose Debug Server TLS/SSL Server JKS Keystore File Location configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Firehose Debug Server TLS/SSL Server JKS Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Firehose Debug Server TLS/SSL Server JKS Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Telemetry Publisher Web UI Port.****Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Web UI Port. configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetry\_publisher\_debug\_port

**Required**

true

**Suppress Configuration Validator: Telemetry Publisher Web UI IPAddress.****Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Web UI IPAddress. configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetry\_publisher\_debug\_server\_interface

**Required**

true

**Suppress Configuration Validator: Telemetry Publisher Server Port****Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetry\_publisher\_server\_port

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Telemetry Publisher****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Telemetry Publisher configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_java\_opts

**Required**

true

**Suppress Configuration Validator: Proxy Password****Description**

Whether to suppress configuration warnings produced by the Proxy Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_proxy\_password

**Required**

true

**Suppress Configuration Validator: Proxy Port****Description**

Whether to suppress configuration warnings produced by the Proxy Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_proxy\_port

**Required**

true

**Suppress Configuration Validator: Proxy Server****Description**

Whether to suppress configuration warnings produced by the Proxy Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_proxy\_server

**Required**

true

**Suppress Configuration Validator: Proxy User****Description**

Whether to suppress configuration warnings produced by the Proxy User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_proxy\_user

**Required**

true

**Suppress Configuration Validator: Telemetry Publisher Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Telemetry Publisher Advanced Configuration Snippet (Safety Valve) for telemetrypublisher.conf****Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Advanced Configuration Snippet (Safety Valve) for telemetrypublisher.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Telemetry Kerberos Principal for HDFS****Description**

Whether to suppress configuration warnings produced by the Telemetry Kerberos Principal for HDFS configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_tp\_hdfs\_kerberos\_princ

**Required**

true

**Suppress Configuration Validator: YARN MapReduce Counter Descriptions****Description**

Whether to suppress configuration warnings produced by the YARN MapReduce Counter Descriptions configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_yarn\_application\_mapreduce\_counters

**Required**

true

**Suppress Configuration Validator: Activity Monitor Count Validator****Description**

Whether to suppress configuration warnings produced by the Activity Monitor Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_activitymonitor\_count\_validator

**Required**

true

**Suppress Configuration Validator: Alert Publisher Count Validator****Description**

Whether to suppress configuration warnings produced by the Alert Publisher Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_alertpublisher\_count\_validator

**Required**

true

**Suppress Configuration Validator: Event Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Event Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_eventserver\_count\_validator

**Required**

true

**Suppress Configuration Validator: Host Monitor Count Validator****Description**

Whether to suppress configuration warnings produced by the Host Monitor Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hostmonitor\_count\_validator

**Required**

true

### Suppress Configuration Validator: Cloudera Management Service Host Colocation Validator

**Description**

Whether to suppress configuration warnings produced by the Cloudera Management Service Host Colocation Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_mgmt\_colocation\_validator

**Required**

true

### Suppress Parameter Validation: Cloudera Management Service Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Management Service Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_mgmt\_service\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Cloudera Management Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Management Service Advanced Configuration Snippet (Safety Valve) for ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_mgmt\_ssl\_client\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Navigator Audit Server Count Validator

**Description**

Whether to suppress configuration warnings produced by the Navigator Audit Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_navigator\_count\_validator

**Required**

true

**Suppress Parameter Validation: Small Files Reporting: HDFS Staging Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Small Files Reporting: HDFS Staging Location parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_navigator\_smallfiles\_hdfs\_path

**Required**

true

**Suppress Configuration Validator: Navigator Metadata Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Navigator Metadata Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_navigatormetaserver\_count\_validator

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

### Suppress Configuration Validator: Reports Manager Count Validator

**Description**

Whether to suppress configuration warnings produced by the Reports Manager Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_reportsmanager\_count\_validator

**Required**

true

### Suppress Parameter Validation: Service Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Configuration Validator: Service Monitor Count Validator

**Description**

Whether to suppress configuration warnings produced by the Service Monitor Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_servicemonitor\_count\_validator

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: TLS/SSL Client Truststore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Client Truststore File Location parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Cloudera Manager Server TLS/SSL Client Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Server TLS/SSL Client Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Telemetry Publisher Count Validator****Description**

Whether to suppress configuration warnings produced by the Telemetry Publisher Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_telemetrypublisher\_count\_validator

**Required**

true

**Suppress Health Test: KDC Server Connection Health****Description**

Whether to suppress the results of the KDC Server Connection Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_kdc\_availability

**Required**

true

**Suppress Health Test: LDAP Server Connection Health****Description**

Whether to suppress the results of the LDAP Server Connection Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ldap\_availability

**Required**

true

**Suppress Health Test: Activity Monitor Health****Description**

Whether to suppress the results of the Activity Monitor Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_mgmt\_activity\_monitor\_health

**Required**

true

### Suppress Health Test: Alert Publisher Health

**Description**

Whether to suppress the results of the Alert Publisher Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_mgmt\_alert\_publisher\_health

**Required**

true

### Suppress Health Test: Certificate Expiration

**Description**

Whether to suppress the results of the Certificate Expiration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_mgmt\_certificates\_expiry

**Required**

true

### Suppress Health Test: Cloudera Manager Server Clock Offset

**Description**

Whether to suppress the results of the Cloudera Manager Server Clock Offset health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_mgmt\_clock\_offset\_with\_smon

**Required**

true

### Suppress Health Test: Command Storage Directory Free Space

**Description**

Whether to suppress the results of the Command Storage Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_mgmt\_command\_storage\_directory\_free\_space

**Required**

true

**Suppress Health Test: Embedded Database Free Space****Description**

Whether to suppress the results of the Embedded Database Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_mgmt\_embedded\_db\_free\_space

**Required**

true

**Suppress Health Test: Event Server Health****Description**

Whether to suppress the results of the Event Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_mgmt\_event\_server\_health

**Required**

true

**Suppress Health Test: Host Monitor Health****Description**

Whether to suppress the results of the Host Monitor Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_mgmt\_host\_monitor\_health

**Required**

true

### Suppress Health Test: Navigator Audit Server Health

#### Description

Whether to suppress the results of the Navigator Audit Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

service\_health\_suppression\_mgmt\_navigator\_health

#### Required

true

### Suppress Health Test: Navigator Metadata Server Health

#### Description

Whether to suppress the results of the Navigator Metadata Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

service\_health\_suppression\_mgmt\_navigatormetaserver\_health

#### Required

true

### Suppress Health Test: Reports Manager Health

#### Description

Whether to suppress the results of the Reports Manager Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

service\_health\_suppression\_mgmt\_reports\_manager\_health

#### Required

true

### Suppress Health Test: Service Monitor Health

#### Description

Whether to suppress the results of the Service Monitor Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_mgmt\_service\_monitor\_health

**Required**

true

**Suppress Health Test: Telemetry Publisher Health****Description**

Whether to suppress the results of the Telemetry Publisher Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_mgmt\_telemetrypublisher\_health

**Required**

true

## Telemetry Publisher

### Advanced

**Telemetry Publisher Export Period****Description**

The export period in seconds.

**Related Name**

export.period

**Default Value**

1 minute(s)

**API Name**

export\_period

**Required**

true

**Telemetry Publisher Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Telemetry Publisher Data Directory****Description**

Storage for tracking persistent state of the role.

**Related Name**

data.dir

**Default Value**

/var/lib/cloudera-scm-telemetrypublisher

**API Name**

mgmt\_data\_dir

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, role user must have write access to this directory. If this directory is shared among multiple roles, it should have 1777 permissions. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates heap dump file when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Telemetry Publisher Polling Period

**Description**

The extractor polling period in seconds.

**Related Name**

extractor.poll\_period

**Default Value**

1 minute(s)

**API Name**

poll\_period

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

true

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Java Configuration Options for Telemetry Publisher****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value****API Name**

telemetrypublisher\_java\_opts

**Required**

false

**Log and Query Redaction****Description**

Telemetry Publisher recommends and by default requires that Log and Query Redaction be enabled for all CDH clusters. If disabled for any cluster, an alert will be raised during role start. Disable this setting to allow running without redaction.

**Related Name**

log\_query\_redaction

**Default Value**

true

**API Name**

telemetrypublisher\_log\_query\_redaction

**Required**

true

**Proxy Support for Telemetry Publisher****Description**

When set, Telemetry Publisher sends telemetry through a proxy server.

**Related Name**

telemetrypublisher.proxy.enabled

**Default Value**

false

**API Name**

telemetrypublisher\_proxy\_enabled

**Required**

false

**Proxy Password****Description**

Proxy Server Password. This configuration is used only when proxy support is enabled for Telemetry Publisher.

**Related Name**

telemetrypublisher.proxy.password

**Default Value****API Name**

telemetrypublisher\_proxy\_password

**Required**

false

**Proxy Port****Description**

Proxy Server Port. This configuration is used only when proxy support is enabled for Telemetry Publisher.

**Related Name**

telemetrypublisher.proxy.port

**Default Value****API Name**

telemetrypublisher\_proxy\_port

**Required**

false

**Proxy Server****Description**

Proxy Server Hostname. This configuration is used only when proxy support is enabled for Telemetry Publisher.

**Related Name**

telemetrypublisher.proxy.server

**Default Value****API Name**

telemetrypublisher\_proxy\_server

**Required**

false

**Proxy User****Description**

Proxy Server User. This configuration is used only when proxy support is enabled for Telemetry Publisher.

**Related Name**

telemetrypublisher.proxy.user

**Default Value****API Name**

telemetrypublisher\_proxy\_user

**Required**

false

**Telemetry Publisher Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

TELEMETRYPUBLISHER\_role\_env\_safety\_valve

**Required**

false

**Telemetry Publisher Advanced Configuration Snippet (Safety Valve) for telemetrypublisher.conf****Description**

For advanced use only. A string to be inserted into telemetrypublisher.conf for this role only.

**Related Name****Default Value****API Name**

telemetrypublisher\_safety\_valve

**Required**

false

**Telemetry Publisher Thread Pool Size****Description**

The number of parallel threads used for extractor task execution.

**Related Name**

extractor.thread\_pool\_size

**Default Value**

10

**API Name**

thread\_pool\_size

**Required**

true

**Logs****Telemetry Publisher Logging Threshold****Description**

The minimum log level for Telemetry Publisher logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Telemetry Publisher Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Telemetry Publisher logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Telemetry Publisher Max Log Size****Description**

The maximum size, in megabytes, per log file for Telemetry Publisher logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Telemetry Publisher Log Directory****Description**

Directory where Telemetry Publisher will place its log files.

**Related Name****Default Value**

/var/log/cloudera-scm-telemetrypublisher

**API Name**

mgmt\_log\_dir

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Heap Dump Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Heap Dump Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Rules to Extract Events from Log Files****Description**

This file contains the rules that govern how log messages are turned into events by the custom log4j appender that this role loads. It is in JSON format, and is composed of a list of rules. Every log message is evaluated against each of these rules in turn to decide whether or not to send an event for that message. If a log message matches multiple rules, the first matching rule is used. Each rule has some or all of the following fields:

- **alert** - whether or not events generated from this rule should be promoted to alerts. A value of "true" will cause alerts to be generated. If not specified, the default is "false".
- **rate** (mandatory) - the maximum number of log messages matching this rule that can be sent as events every minute. If more than rate matching log messages are received in a single minute, the extra messages are ignored. If rate is less than 0, the number of messages per minute is unlimited.
- **periodminutes** - the number of minutes during which the publisher will only publish rate events or fewer. If not specified, the default is one minute
- **threshold** - apply this rule only to messages with this log4j severity level or above. An example is "WARN" for warning level messages or higher.
- **content** - match only those messages for which contents match this regular expression.
- **exceptiontype** - match only those messages that are part of an exception message. The exception type must match this regular expression.

Example:

- {"alert": false, "rate": 10, "exceptiontype": "java.lang.StringIndexOutOfBoundsException"} This rule sends events to Cloudera Manager for every StringIndexOutOfBoundsException, up to a maximum of 10 every minute.
- {"alert": false, "rate": 1, "periodminutes": 1, "exceptiontype": ".\*"}, {"alert": true, "rate": 1, "periodminutes": 1, "threshold": "ERROR"} In this example, an event generated may not be promoted to alert if an exception is in the ERROR log message, because the first rule with alert = false will match.

**Related Name****Default Value**

version: 0, rules: [ alert: false, rate: 1, periodminutes: 1, threshold: FATAL , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Instead, use .\* , alert: false, rate: 0, threshold: WARN, content: .\* is deprecated. Use .\* instead , alert: false, rate: 1, periodminutes: 2, exceptiontype: .\* , alert: false, rate: 1, periodminutes: 1, threshold: WARN ]

**API Name**

log\_event\_whitelist

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

`process_swap_memory_thresholds`

**Required**

`false`

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName (mandatory)** - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression (mandatory)** - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Telemetry Publisher Data Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Telemetry Publisher Data Directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

telemetrypublisher\_data\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Telemetry Publisher Data Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Telemetry Publisher Data Directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Telemetry Publisher Data Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

telemetrypublisher\_data\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metrics Data Export Failure Thresholds

**Description**

The health test thresholds for monitoring the data export failure count.

**Related Name****Default Value**

Warning: 3.0 time(s), Critical: 5.0 time(s)

**API Name**

telemetrypublisher\_data\_export\_failure\_thresholds

**Required**

true

### Telemetry Publisher Data Export Monitoring Time Period

**Description**

The time period over which the telemetry publisher data export for streams will be monitored for failed export.

**Related Name****Default Value**

5 minute(s)

**API Name**

telemetrypublisher\_data\_export\_failure\_window

**Required**

true

### Metrics Data Ingest Failure Thresholds

**Description**

The health test thresholds for monitoring the data ingest failure count.

**Related Name****Default Value**

Warning: 3.0 time(s), Critical: 5.0 time(s)

**API Name**

telemetrypublisher\_data\_ingest\_failure\_thresholds

**Required**

true

### Telemetry Publisher Data Ingest Monitoring Time Period

**Description**

The time period over which the telemetry publisher data ingest for streams will be monitored for failed ingest.

**Related Name****Default Value**

5 minute(s)

**API Name**

telemetrypublisher\_data\_ingest\_failure\_window

**Required**

true

### File Descriptor Monitoring Thresholds

#### Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

#### Related Name

#### Default Value

Warning: 50.0 %, Critical: 70.0 %

#### API Name

telemetrypublisher\_fd\_thresholds

#### Required

false

### Garbage Collection Duration Thresholds

#### Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

#### Related Name

#### Default Value

Warning: 30.0, Critical: 60.0

#### API Name

telemetrypublisher\_gc\_duration\_thresholds

#### Required

false

### Garbage Collection Duration Monitoring Period

#### Description

The period to review when computing the moving average of garbage collection time.

#### Related Name

#### Default Value

5 minute(s)

#### API Name

telemetrypublisher\_gc\_duration\_window

#### Required

false

### Telemetry Publisher Host Health Test

#### Description

When computing the overall Telemetry Publisher health, consider the host's health.

#### Related Name

#### Default Value

true

#### API Name

telemetrypublisher\_host\_health\_enabled

**Required**

false

**Telemetry Publisher Process Health Test****Description**

Enables the health test that the Telemetry Publisher's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

telemetrypublisher\_scm\_health\_enabled

**Required**

false

**Web Metric Collection****Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

telemetrypublisher\_web\_metric\_collection\_enabled

**Required**

false

**Web Metric Collection Duration****Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

telemetrypublisher\_web\_metric\_collection\_thresholds

**Required**

false

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name**

**Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Telemetry Publisher Web UI IPAddress.****Description**

The IP where Telemetry Publisher starts a debug web server.

**Related Name**

telemetry\_publisher.debug.server.interface

**Default Value**

0.0.0.0

**API Name**

telemetry\_publisher\_debug\_server\_interface

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Ports and Addresses

### Telemetry Publisher Web UI Port.

**Description**

The port where Telemetry Publisher starts a debug web server. Set to -1 to disable debug server.

**Related Name**

telemetry\_publisher.debug.port

**Default Value**

10111

**API Name**

telemetry\_publisher\_debug\_port

**Required**

false

### Telemetry Publisher Server Port

**Description**

The port where Telemetry Publisher listens for requests

**Related Name**

telemetry\_publisher.server.port

**Default Value**

10110

**API Name**

telemetry\_publisher\_server\_port

**Required**

false

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Java Heap Size of TelemetryPublisher in Bytes

**Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

telemetry\_publisher\_heapsize

**Required**

false

## Security

### Telemetry Kerberos Principal

**Description**

Kerberos principal used by Telemetry Publisher to authenticate to all services except HDFS. Note: Telemetry should use the principal used by Hue service if you are using MapReduce1 service in any of the clusters.

**Related Name****Default Value**

hue

**API Name**

kerberos\_role\_princ\_name

**Required**

true

### Enable TLS/SSL for Telemetry Publisher

**Description**

Encrypt communication between clients and Telemetry Publisher using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

telemetrypublisher.http.enable\_ssl

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Telemetry Publisher TLS/SSL Server JKS Keystore Key Password****Description**

The password that protects the private key contained in the JKS keystore used when Telemetry Publisher is acting as a TLS/SSL server.

**Related Name**

telemetrypublisher.ssl.keyManagerPassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Telemetry Publisher TLS/SSL Server JKS Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Telemetry Publisher is acting as a TLS/SSL server. The keystore must be in JKS format.

**Related Name**

telemetrypublisher.ssl.keyStorePath

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Telemetry Publisher TLS/SSL Server JKS Keystore File Password****Description**

The password for the Telemetry Publisher JKS keystore file.

**Related Name**

telemetrypublisher.ssl.keyStorePassword

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Telemetry Kerberos Principal for HDFS

**Description**

Kerberos principal used by Telemetry Publisher to authenticate to HDFS services. Note: This principal must be in the same groups as the principals used by Job History and Spark History Servers.

**Related Name**

telemetrypublisher.dfs.user

**Default Value**

hdfs

**API Name**

tp\_hdfs\_kerberos\_princ

**Required**

true

## Stacks Collection

### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

## Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Telemetry Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Telemetry Publisher Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Rules to Extract Events from Log Files****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rules to Extract Events from Log Files parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_event\_whitelist

**Required**

true

**Suppress Parameter Validation: Telemetry Publisher Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_data\_dir

**Required**

true

**Suppress Parameter Validation: Telemetry Publisher Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mgmt\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

### Suppress Parameter Validation: Role Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

### Suppress Parameter Validation: Telemetry Publisher TLS/SSL Server JKS Keystore Key Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher TLS/SSL Server JKS Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

### Suppress Parameter Validation: Telemetry Publisher TLS/SSL Server JKS Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher TLS/SSL Server JKS Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Parameter Validation: Telemetry Publisher TLS/SSL Server JKS Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher TLS/SSL Server JKS Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Telemetry Publisher Web UI Port.****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Web UI Port. parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetry\_publisher\_debug\_port

**Required**

true

**Suppress Parameter Validation: Telemetry Publisher Web UI IPAddress.****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Web UI IPAddress. parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetry\_publisher\_debug\_server\_interface

**Required**

true

**Suppress Parameter Validation: Telemetry Publisher Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Server Port parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_telemetry\_publisher\_server\_port

**Required**

true

**Suppress Parameter Validation: Java Configuration Options for Telemetry Publisher****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Telemetry Publisher parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_java\_opts

**Required**

true

**Suppress Parameter Validation: Proxy Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_proxy\_password

**Required**

true

**Suppress Parameter Validation: Proxy Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_proxy\_port

**Required**

true

**Suppress Parameter Validation: Proxy Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Server parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_proxy\_server

**Required**

true

**Suppress Parameter Validation: Proxy User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_proxy\_user

**Required**

true

**Suppress Parameter Validation: Telemetry Publisher Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Telemetry Publisher Advanced Configuration Snippet (Safety Valve) for telemetrypublisher.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Publisher Advanced Configuration Snippet (Safety Valve) for telemetrypublisher.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_telemetrypublisher\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Telemetry Kerberos Principal for HDFS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Telemetry Kerberos Principal for HDFS parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_tp\_hdfs\_kerberos\_princ

**Required**

true

**Suppress Health Test: Data Export Test For Stream Hive-Query-Audits****Description**

Whether to suppress the results of the Data Export Test For Stream Hive-Query-Audits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hive\_\_query\_\_audits\_data\_export\_failure

**Required**

true

**Suppress Health Test: Data Ingest Test For Stream Hive-Query-Audits****Description**

Whether to suppress the results of the Data Ingest Test For Stream Hive-Query-Audits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hive\_\_query\_\_audits\_data\_ingest\_failure

**Required**

true

**Suppress Health Test: Data Export Test For Stream Hive-Tez-App****Description**

Whether to suppress the results of the Data Export Test For Stream Hive-Tez-App health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hive\_\_tez\_\_app\_data\_export\_failure

**Required**

true

**Suppress Health Test: Data Ingest Test For Stream Hive-Tez-App****Description**

Whether to suppress the results of the Data Ingest Test For Stream Hive-Tez-App health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hive\_\_tez\_\_app\_data\_ingest\_failure

**Required**

true

**Suppress Health Test: Data Export Test For Stream Impala-Query-Profile****Description**

Whether to suppress the results of the Data Export Test For Stream Impala-Query-Profile health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_impala\_\_query\_\_profile\_data\_export\_failure

**Required**

true

**Suppress Health Test: Data Ingest Test For Stream Impala-Query-Profile****Description**

Whether to suppress the results of the Data Ingest Test For Stream Impala-Query-Profile health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_impala\_\_query\_\_profile\_data\_ingest\_failure

**Required**

true

**Suppress Health Test: Data Export Test For Stream Oozie-Workflows****Description**

Whether to suppress the results of the Data Export Test For Stream Oozie-Workflows health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_\_workflows\_data\_export\_failure

**Required**

true

**Suppress Health Test: Data Ingest Test For Stream Oozie-Workflows****Description**

Whether to suppress the results of the Data Ingest Test For Stream Oozie-Workflows health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_\_workflows\_data\_ingest\_failure

**Required**

true

**Suppress Health Test: Data Export Test For Stream Spark2\_on\_yarn-Event-Log****Description**

Whether to suppress the results of the Data Export Test For Stream Spark2\_on\_yarn-Event-Log health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_spark2\_on\_yarn\_\_event\_\_log\_data\_export\_failure

**Required**

true

### Suppress Health Test: Data Ingest Test For Stream Spark2\_on\_yarn-Event-Log

**Description**

Whether to suppress the results of the Data Ingest Test For Stream Spark2\_on\_yarn-Event-Log health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_spark2\_on\_yarn\_\_event\_\_log\_data\_ingest\_failure

**Required**

true

### Suppress Health Test: Audit Pipeline Test

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_audit\_health

**Required**

true

### Suppress Health Test: Telemetry Publisher Data Directory Free Space

**Description**

Whether to suppress the results of the Telemetry Publisher Data Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_data\_directory\_free\_space

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_file\_descriptor

**Required**

true

**Suppress Health Test: GC Duration****Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_gc\_duration

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_unexpected\_exits

**Required**

true

**Suppress Health Test: Web Server Status****Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_telemetrypublisher\_web\_metric\_collection

**Required**

true

**Suppress Health Test: Data Export Test For Stream Yarn-Apps****Description**

Whether to suppress the results of the Data Export Test For Stream Yarn-Apps health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_yarn\_\_apps\_data\_export\_failure

**Required**

true

**Suppress Health Test: Data Ingest Test For Stream Yarn-Apps****Description**

Whether to suppress the results of the Data Ingest Test For Stream Yarn-Apps health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_yarn\_\_apps\_data\_ingest\_failure

**Required**

true

**Suppress Health Test: Data Export Test For Stream Yarn-Jhist****Description**

Whether to suppress the results of the Data Export Test For Stream Yarn-Jhist health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_yarn\_\_jhist\_data\_export\_failure

**Required**

true

**Suppress Health Test: Data Ingest Test For Stream Yarn-Jhist****Description**

Whether to suppress the results of the Data Ingest Test For Stream Yarn-Jhist health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_yarn\_\_jhist\_data\_ingest\_failure

**Required**

true
