A list specifying the rules to run to determine which Fair Scheduler configuration to use. Typically edited using the Rules configuration UI. This configuration only has effect on Impala versions 1.3 or greater.

**Related Name****Default Value****API Name**

impala\_schedule\_rules\_draft

**Required**

false

### Fair Scheduler Allocations (Deployed)

**Description**

JSON representation of all the configurations that the Fair Scheduler can take across all schedules. This configuration has effect only on Impala versions 1.3 or greater.

**Related Name****Default Value**

```
queues: [ name: root, queues: [ name: default, queues: [], schedulablePropertiesList:
[ scheduleName: default ] ], schedulablePropertiesList: [ scheduleName: default ] ], users: []
```

**API Name**

impala\_scheduled\_allocations

**Required**

false

### Fair Scheduler Allocations (Staged)

**Description**

JSON representation of all the configurations that the Fair Scheduler can take across all schedules. Typically edited using the Pools configuration UI. This configuration only has effect on Impala versions 1.3 or greater.

**Related Name****Default Value****API Name**

impala\_scheduled\_allocations\_draft

**Required**

false

### Impala Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

impala_service_env_safety_valve
<b>Required</b>
false

**Impala Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml**

<b>Description</b>
For advanced use only, a string to be inserted into sentry-site.xml. Applies to configurations of all roles in this service except client configuration.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
impalad_sentry_safety_valve
<b>Required</b>
false

**Use HDFS Rules to Map Kerberos Principals to Short Names**

<b>Description</b>
If checked and Impala is using Kerberos, Impala will use the hadoop.security.auth_to_local rules from HDFS configuration. The relevant HDFS configuration is derived from Additional Rules to Map Kerberos Principals to Short Names.
<b>Related Name</b>
load_auth_to_local_rules
<b>Default Value</b>
false
<b>API Name</b>
load_hdfs_auth_to_local_rules
<b>Required</b>
false

**Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties**

<b>Description</b>
For advanced use only, a string to be inserted into the client configuration for navigator.client.properties.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
navigator_client_config_safety_valve
<b>Required</b>
false

**Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties**

<b>Description</b>
For advanced use only, a string to be inserted into the client configuration for navigator.lineage.client.properties.
<b>Related Name</b>

**Default Value**

**API Name**

navigator\_lineage\_client\_config\_safety\_valve

**Required**

false

**Impala System Group (except Llama)**

**Description**

The group that this Impala's processes should run as (except Llama, which has its own group).

**Related Name**

**Default Value**

impala

**API Name**

process\_groupname

**Required**

true

**Impala System User (except Llama)**

**Description**

The user that this Impala's processes should run as (except Llama, which has its own user).

**Related Name**

**Default Value**

impala

**API Name**

process\_username

**Required**

true

**Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-audit.xml**

**Description**

For advanced use only, a string to be inserted into ranger-impala-audit.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name**

**Default Value**

**API Name**

ranger\_audit\_safety\_valve

**Required**

false

**Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-policymgr-ssl.xml**

**Description**

For advanced use only, a string to be inserted into ranger-impala-policymgr-ssl.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name**

<b>Default Value</b>
<b>API Name</b>
ranger_policymgr_ssl_safety_valve
<b>Required</b>
false

**Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-security.xml**

<b>Description</b>
For advanced use only, a string to be inserted into ranger-impala-security.xml. Applies to configurations of all roles in this service except client configuration.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
ranger_security_safety_valve
<b>Required</b>
false

**Use Debug Build**

<b>Description</b>
Use debug build of Impala binaries when starting roles. Useful when performing diagnostic activities to get more information in the stacktrace or core dump.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
use_debug_build
<b>Required</b>
false

**Cloudera Navigator**

**Enable Audit Collection**

<b>Description</b>
Enable collection of audit events from the service's roles.
<b>Related Name</b>
navigator.audit.enabled
<b>Default Value</b>
true
<b>API Name</b>
navigator_audit_enabled
<b>Required</b>
false

**Audit Event Filter**

<b>Description</b>
--------------------

Event filters are defined in a JSON object like the following: { "defaultAction" : ("accept", "discard"), "rules" : [ { "action" : ("accept", "discard"), "fields" : [ { "name" : "fieldName", "match" : "regex" } ] } ] } A filter has a default action and a list of rules, in order of precedence. Each rule defines an action, and a list of fields to match against the audit event. A rule is "accepted" if all the listed field entries match the audit event. At that point, the action declared by the rule is taken. If no rules match the event, the default action is taken. Actions default to "accept" if not defined in the JSON object. The following is the list of fields that can be filtered for Impala events:

- userName: the user performing the action.
- ipAddress: the IP from where the request originated.
- operation: the Impala operation being performed.
- databaseName: the databaseName for the operation.
- tableName: the tableName for the operation.

**Related Name**

navigator.event.filter

**Default Value****API Name**

navigator\_audit\_event\_filter

**Required**

false

**Audit Queue Policy****Description**

Action to take when the audit event queue is full. Drop the event or shutdown the affected process.

**Related Name**

navigator.batch.queue\_policy

**Default Value**

DROP

**API Name**

navigator\_audit\_queue\_policy

**Required**

false

**Audit Event Tracker****Description**

Configures the rules for event tracking and coalescing. This feature is used to define equivalency between different audit events. When events match, according to a set of configurable parameters, only one entry in the audit list is generated for all the matching events. Tracking works by keeping a reference to events when they first appear, and comparing other incoming events against the "tracked" events according to the rules defined here. Event trackers are defined in a JSON object like the following: { "timeToLive" : [integer], "fields" : [ { "type" : [string], "name" : [string] } ] } Where:

- timeToLive: maximum amount of time an event will be tracked, in milliseconds. Must be provided. This defines how long, since it's first seen, an event will be tracked. A value of 0 disables tracking.
- fields: list of fields to compare when matching events against tracked events.

Each field has an evaluator type associated with it. The evaluator defines how the field data is to be compared. The following evaluators are available:

- value: uses the field value for comparison.
- userName: treats the field value as a userName, and ignores any host-specific data. This is useful for environment using Kerberos, so that only the principal name and realm are compared.

The following is the list of fields that can be used to compare Impala events:

- operation: the Impala operation being performed.
- username: the user performing the action.
- ipAddress: the IP from where the request originated.
- allowed: whether the operation was allowed or denied.
- databaseName: the database affected by the operation.
- tableName: the table affected by the operation.
- objectType: the type of object affected by the operation.
- privilege: the privilege associated with the operation.

**Related Name**

navigator\_event\_tracker

**Default Value**
**API Name**

navigator\_event\_tracker

**Required**

false

## Enable Lineage Collection

**Description**

Enable collection of lineage from the service's roles.

**Related Name**
**Default Value**

true

**API Name**

navigator\_lineage\_enabled

**Required**

false

## Monitoring

### Admin Users Query List Visibility Settings

**Description**

Controls which queries admin users can see in the queries list view

**Related Name**
**Default Value**

ALL

**API Name**

admin\_query\_list\_settings

**Required**

true

Enable Service Level Health Alerts

Description	When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

Impala Catalog Server Role Health Test

Description	When computing the overall IMPALA health, consider Impala Catalog Server's health
Related Name	
Default Value	true
API Name	impala_catalogserver_health_enabled
Required	false

Healthy Impala Daemon Monitoring Thresholds

Description	The health test thresholds of the overall Impala Daemon health. The check returns "Concerning" health if the percentage of "Healthy" Impala Daemons falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Impala Daemons falls below the critical threshold.
Related Name	
Default Value	Warning: 95.0 %, Critical: 90.0 %
API Name	

impala_impalads_healthy_thresholds
<b>Required</b>
false

Healthy Impala Llama ApplicationMaster Monitoring Thresholds

<b>Description</b>
The health test thresholds of the overall Impala Llama ApplicationMaster health. The check returns "Concerning" health if the percentage of "Healthy" Impala Llama ApplicationMasters falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Impala Llama ApplicationMasters falls below the critical threshold.
<b>Related Name</b>
<b>Default Value</b>
Warning: 99.0 %, Critical: 51.0 %
<b>API Name</b>
impala_llamas_healthy_thresholds
<b>Required</b>
false

Impala Query Aggregates

<b>Description</b>
Controls the aggregate metrics generated for Impala queries. The structure is a JSON list of the attributes to aggregate and the entities to aggregate to. For example, if the attributeName is 'hdfs_bytes_read' and the aggregationTargets is ['USER'] then the Service Monitor will create the metric 'impala_query_hdfs_bytes_read_rate' and, every ten minutes, will record the total hdfs bytes read for each user across all their Impala queries. By default it will also record the number of queries issues ('num_impala_queries_rate') for both users and pool. For a full list of the supported attributes see the Impala search page. Note that the valid aggregation targets are USER, YARN_POOL, and IMPALA (the service), and that these aggregate metrics can be viewed on both the reports and charts search pages.
<b>Related Name</b>
<b>Default Value</b>
[ attributeName: hdfs_bytes_read, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName: hdfs_bytes_written, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName: thread_cpu_time, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName: bytes_streamed, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName: cm_cpu_milliseconds, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName: query_duration, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName: admission_wait, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName: memory_accrual, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName: thread_cpu_time, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName: memory_spilled, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] ]
<b>API Name</b>
impala_query_aggregates
<b>Required</b>

false

**Impala StateStore Role Health Test****Description**

When computing the overall IMPALA health, consider Impala StateStore's health

**Related Name****Default Value**

true

**API Name**

impala\_statestore\_health\_enabled

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name**

<b>Default Value</b>
<b>API Name</b>
smon_derived_configs_safety_valve
<b>Required</b>
false

Non-Admin Users Query List Visibility Settings

<b>Description</b>
Controls which queries a non-admin user can see in the queries list view
<b>Related Name</b>
<b>Default Value</b>
ALL
<b>API Name</b>
user_query_list_settings
<b>Required</b>
true

Other

Atlas Service

<b>Description</b>
Name of the Atlas service that this Impala service instance depends on
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
atlas_service
<b>Required</b>
false

Enable Profile Collection

<b>Description</b>
Enable collection of profile from the service's roles.
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
enable_telepub_profile_collection
<b>Required</b>
false

HBase Service

<b>Description</b>
Name of the HBase service that this Impala service instance depends on
<b>Related Name</b>

<b>Default Value</b>
<b>API Name</b>
hbase_service
<b>Required</b>
false

**HDFS Service**

<b>Description</b>
Name of the HDFS service that this Impala service instance depends on
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
hdfs_service
<b>Required</b>
true

**Hive Service**

<b>Description</b>
Name of the Hive service that this Impala service instance depends on
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
hive_service
<b>Required</b>
true

**Kudu Service**

<b>Description</b>
Name of the Kudu service that this Impala service instance depends on
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
kudu_service
<b>Required</b>
false

**Enable Local Catalog**

<b>Description</b>
With local catalog enabled, the coordinators pull metadata as needed from catalog and cache it locally.
<b>Related Name</b>
<b>Default Value</b>
true

**API Name**

local\_catalog\_enabled

**Required**

false

**Ranger Plugin Trusted Proxy IP Address****Description**

Accepts a list of IP addresses of proxy servers for trusting.

**Related Name**

ranger.plugin.hive.trusted.proxy.ipaddress

**Default Value****API Name**

ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

false

**Ranger Plugin URL Auth Filesystem Schemes****Description**

Set Ranger URL Auth Filesystem Schemes.

**Related Name**

ranger.plugin.hive.urlauth.filesystem.schemes

**Default Value**

hdfs:, file:, wasb:, adl:

**API Name**

ranger\_plugin\_urlauth\_filesystem\_schemes

**Required**

false

**Ranger Plugin Use X-Forwarded for IP Address****Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

**Related Name**

ranger.plugin.hive.use.x-forwarded-for.ipaddress

**Default Value**

false

**API Name**

ranger\_plugin\_use\_x\_forwarded\_for\_ipaddress

**Required**

false

**Ranger Service****Description**

Name of the Ranger service that this Impala service instance depends on

**Related Name**

<b>Default Value</b>
<b>API Name</b>
ranger_service
<b>Required</b>
false

**YARN Service for Resource Management**

<b>Description</b>
Name of YARN service to use for resource management integration between Impala and YARN. This service dependency and the existence of a Llama role is required for using said integration.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
yarn_service
<b>Required</b>
false

**ZooKeeper Service for Llama HA**

<b>Description</b>
Name of the ZooKeeper service to use for leader election and fencing when Llama is configured for high availability. This service dependency is required when more than one Llama role is present.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
zookeeper_service
<b>Required</b>
false

**Performance**

**Enable HDFS Short-Circuit Read**

<b>Description</b>
Enable HDFS short-circuit read. This allows a client colocated with the DataNode to read HDFS file blocks directly. This gives a performance boost to distributed clients that are aware of locality.
<b>Related Name</b>
dfs.client.read.shortcircuit
<b>Default Value</b>
true
<b>API Name</b>
dfs_client_read_shortcircuit
<b>Required</b>
false

### StateStoreSubscriber Timeout

**Description**

Time in seconds before Impala Daemon or Catalog Server times out with the StateStore.

**Related Name**

statestore\_subscriber\_timeout\_seconds

**Default Value**

30 second(s)

**API Name**

statestore\_subscriber\_timeout

**Required**

false

### Security

### Atlas Kafka Messages Spool Directory

**Description**

Spool directory for Atlas Kafka Messages.

**Related Name**

atlas.hook.spool.dir

**Default Value**

/var/log/impala/atlas-spool

**API Name**

atlas\_message\_spool\_path

**Required**

false

### Enable TLS/SSL for Impala

**Description**

Encrypt communication between clients and Impala using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

client\_services\_ssl\_enabled

**Default Value**

false

**API Name**

client\_services\_ssl\_enabled

**Required**

false

### Enable LDAP Authentication

**Description**

When checked, LDAP-based authentication for users is enabled.

**Related Name**

enable\_ldap\_auth

**Default Value**

false

**API Name**

enable\_ldap\_auth

**Required**

false

**Enable LDAP TLS****Description**

If true, attempts to establish a TLS (Transport Layer Security) connection with an LDAP server that was specified with ldap://. Not required when using an LDAP URL with prefix ldaps://, because that already specifies TLS. This option is also known as "Use StartTLS".

**Related Name**

ldap\_tls

**Default Value**

false

**API Name**

enable\_ldap\_tls

**Required**

false

**Enable Kerberos Authentication for HTTP Web-Consoles****Description**

Enables Kerberos authentication for Hadoop HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled.

**Related Name****Default Value**

false

**API Name**

hadoop\_secure\_web\_ui

**Required**

false

**Proxy Group Configuration****Description**

Specifies the set of authorized proxy groups (users who can impersonate other users belonging to the specified groups during authorization) and whom they are allowed to impersonate. Input is a semicolon-separated list of key=value pairs of authorized proxy users to the group(s) they can impersonate. These groups are specified as a comma separated list of groups, or '\*' to indicate all groups. For example: joe=group1,group2;hue=\*;admin=\*. Only valid when Sentry is enabled.

**Related Name**

authorized\_proxy\_group\_config

**Default Value****API Name**

impala\_authorized\_proxy\_group\_config

**Required**

false

### Proxy User Configuration

#### Description

Specifies the set of authorized proxy users (users who can impersonate other users during authorization) and whom they are allowed to impersonate. Input is a semicolon-separated list of key=value pairs of authorized proxy users to the user(s) they can impersonate. These users are specified as a comma separated list of short usernames, or '\*' to indicate all users. For example: joe=alice,bob;hue=\*;admin=\*. Only valid when Sentry is enabled.

#### Related Name

authorized\_proxy\_user\_config

#### Default Value

hue=\*;knox=\*

#### API Name

impala\_authorized\_proxy\_user\_config

#### Required

false

### LDAP URL

#### Description

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps://. The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

#### Related Name

ldap\_uri

#### Default Value

#### API Name

impala\_ldap\_uri

#### Required

false

### impala TLS/SSL Trust Store File

#### Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that impala might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

#### Related Name

#### Default Value

#### API Name

impala\_truststore\_file

#### Required

false

### impala TLS/SSL Trust Store Password

**Description**

The password for the impala TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name****Default Value****API Name**

impala\_truststore\_password

**Required**

false

### Kerberos Principal

**Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

impala

**API Name**

kerberos\_princ\_name

**Required**

true

### Kerberos Re-init Interval

**Description**

Number of minutes between reestablishing our ticket with the Kerberos server.

**Related Name**

kerberos\_reinit\_interval

**Default Value**

1 hour(s)

**API Name**

kerberos\_reinit\_interval

**Required**

false

### LDAP BaseDN

**Description**

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,\*this parameter\*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

**Related Name**

ldap\_baseDN

**Default Value****API Name**

ldap\_baseDN

**Required**

false

**LDAP Pattern****Description**

When set, this parameter allows arbitrary mapping from usernames into a Distinguished Name (DN). The string specified must have a placeholder named "#UID" inside it, and that #UID is replaced with the username. For example, you could mimic the behavior of LDAP BaseDN by specifying "uid=#UID,ou=People,dc=cloudera,dc=com". When the username of "mike" comes in, it replaces the #UID and the result is "uid=mike,ou=People,dc=cloudera,dc=com". This option should be used when more control over the DN is needed. This parameter is mutually exclusive with LDAP Domain and LDAP BaseDN.

**Related Name**

ldap\_bind\_pattern

**Default Value****API Name**

ldap\_bind\_pattern

**Required**

false

**Impala Client LDAP Password****Description**

The password for connecting to Impala when using LDAP authentication. This is used by Cloudera Manager to execute Impala APIs like cancelling a query.

**Related Name**

ldap\_cm\_password

**Default Value****API Name**

ldap\_cm\_password

**Required**

false

**Impala Client LDAP Username****Description**

The username for connecting to Impala when using LDAP authentication. This is used by Cloudera Manager to execute Impala APIs like cancelling a query.

**Related Name**

ldap\_cm\_user

**Default Value****API Name**

ldap\_cm\_user

**Required**

false

**Active Directory Domain****Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

**Related Name**

ldap\_domain

**Default Value****API Name**

ldap\_domain

**Required**

false

**Ranger DFS Audit Path****Description**

The DFS path on which Ranger audits are written. The special placeholder '\${ranger\_base\_audit\_url}' should be used as the prefix, in order to use the centralized location defined in the Ranger service.

**Related Name**

xasecure.audit.destination.hdfs.dir

**Default Value**

\$ranger\_base\_audit\_url/impala

**API Name**

ranger\_audit\_hdfs\_dir

**Required**

false

**Ranger Audit DFS Spool Dir****Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

xasecure.audit.destination.hdfs.batch.filespool.dir

**Default Value**

/var/log/impala/audit/hdfs/spool

**API Name**

ranger\_audit\_hdfs\_spool\_dir

**Required**

false

**Ranger Audit Solr Spool Dir****Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**

xasecure.audit.destination.solr.batch.filespool.dir

**Default Value**

/var/log/impala/audit/solr/spool

**API Name**

ranger\_audit\_solr\_spool\_dir

**Required**

false

### Ranger Policy Cache Directory

**Description**

The directory where Ranger security policies are cached locally.

**Related Name**

ranger.plugin.hive.policy.cache.dir

**Default Value**

/var/lib/ranger/impala/policy-cache

**API Name**

ranger\_policy\_cache\_dir

**Required**

false

### Impala TLS/SSL CA Certificate

**Description**

The location on disk of the certificate, in PEM format, used to confirm the authenticity of SSL/TLS servers that the Impala daemons might connect to. Because the Impala daemons connect to each other, this should also include the CA certificate used to sign all the SSL/TLS Certificates. Without this parameter, SSL/TLS between Impala daemons will not be enabled.

**Related Name**

ssl\_client\_ca\_certificate

**Default Value****API Name**

ssl\_client\_ca\_certificate

**Required**

false

### Impala TLS/SSL Server Private Key File (PEM Format)

**Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Impala is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

ssl\_private\_key

**Default Value****API Name**

ssl\_private\_key

**Required**

false

### Impala TLS/SSL Private Key Password

**Description**

The password for the private key in the Impala TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

**Related Name**

ssl\_private\_key\_password\_cmd

**Default Value****API Name**

ssl\_private\_key\_password

**Required**

false

### Impala TLS/SSL Server Certificate File (PEM Format)

**Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Impala is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

ssl\_server\_certificate

**Default Value****API Name**

ssl\_server\_certificate

**Required**

false

### Suppressions

#### Suppress Configuration Validator: Impala Daemon Audit Log Directory

**Description**

Whether to suppress configuration warnings produced by the Impala Daemon Audit Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_audit\_event\_log\_dir

**Required**

true

#### Suppress Configuration Validator: Impala Daemon Backend Port

**Description**

Whether to suppress configuration warnings produced by the Impala Daemon Backend Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_be\_port

**Required**

true

**Suppress Configuration Validator: Impala Daemon Beeswax Port****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Beeswax Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_beeswax\_port

**Required**

true

**Suppress Configuration Validator: Catalog Server Service Port****Description**

Whether to suppress configuration warnings produced by the Catalog Server Service Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_catalog\_service\_port

**Required**

true

**Suppress Configuration Validator: Catalog Server Command Line Argument Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Catalog Server Command Line Argument Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_catalogd\_cmd\_args\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Impala Catalog Server Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

Whether to suppress configuration warnings produced by the Impala Catalog Server Advanced Configuration Snippet (Safety Valve) for core-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_catalogd\_core\_site\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Catalog Server HBase Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Catalog Server HBase Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_catalogd\_hbase\_conf\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Catalog Server HDFS Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Catalog Server HDFS Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_catalogd\_hdfs\_site\_conf\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Catalog Server Hive Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Catalog Server Hive Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_catalogd_hive_conf_safety_valve
<b>Required</b>
true

**Suppress Configuration Validator: Java Configuration Options for Catalog Server**

<b>Description</b>
Whether to suppress configuration warnings produced by the Java Configuration Options for Catalog Server configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_catalogd_java_opts
<b>Required</b>
true

**Suppress Configuration Validator: Impala Catalog Server Environment Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>
Whether to suppress configuration warnings produced by the Impala Catalog Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_catalogserver_role_env_safety_valve
<b>Required</b>
true

**Suppress Configuration Validator: Catalog Server HTTP Server Port**

<b>Description</b>
Whether to suppress configuration warnings produced by the Catalog Server HTTP Server Port configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_catalogserver_webserver_port
<b>Required</b>
true

**Suppress Configuration Validator: CDH Version Validator**

<b>Description</b>
Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Impala Daemon Core Dump Directory****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Core Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_core\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Impala Daemon Data Cache Directories****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Data Cache Directories configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_datacache\_dirs

**Required**

true

**Suppress Configuration Validator: Impala Daemon Default Memory Limit Validator****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Default Memory Limit Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_default\_impalad\_memory\_limit\_validator

**Required**

true

**Suppress Configuration Validator: Impala Daemon Default Query Options****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Default Query Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_default\_query\_options

**Required**

true

**Suppress Configuration Validator: Impala Daemon HiveServer2 HTTP Port****Description**

Whether to suppress configuration warnings produced by the Impala Daemon HiveServer2 HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hs2\_http\_port

**Required**

true

**Suppress Configuration Validator: Impala Daemon HiveServer2 Port****Description**

Whether to suppress configuration warnings produced by the Impala Daemon HiveServer2 Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hs2\_port

**Required**

true

**Suppress Configuration Validator: Impala Audit Enabled Validator****Description**

Whether to suppress configuration warnings produced by the Impala Audit Enabled Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_impala_audit_enabled_validator
<b>Required</b>
true

**Suppress Configuration Validator: Impala Daemon HDFS Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>
Whether to suppress configuration warnings produced by the Impala Daemon HDFS Advanced Configuration Snippet (Safety Valve) configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_impala_hdfs_site_conf_safety_valve
<b>Required</b>
true

**Suppress Configuration Validator: Impala Daemon Hive Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>
Whether to suppress configuration warnings produced by the Impala Daemon Hive Advanced Configuration Snippet (Safety Valve) configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_impala_hive_conf_safety_valve
<b>Required</b>
true

**Suppress Configuration Validator: Impala Lineage Enabled Validator**

<b>Description</b>
Whether to suppress configuration warnings produced by the Impala Lineage Enabled Validator configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_impala_lineage_enabled_validator
<b>Required</b>
true

**Suppress Configuration Validator: Impala Daemon Llama Site Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>
--------------------

Whether to suppress configuration warnings produced by the Impala Daemon Llama Site Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impala\_llama\_site\_conf\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Impala Daemon Command Line Argument Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Impala Daemon Command Line Argument Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impalad\_cmd\_args\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Impala Daemon Command Line Arguments Safety Valve Validator

**Description**

Whether to suppress configuration warnings produced by the Impala Daemon Command Line Arguments Safety Valve Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impalad\_cmd\_args\_safety\_valve\_validator

**Required**

true

### Suppress Configuration Validator: Impala Daemon Advanced Configuration Snippet (Safety Valve) for core-site.xml

**Description**

Whether to suppress configuration warnings produced by the Impala Daemon Advanced Configuration Snippet (Safety Valve) for core-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impalad\_core\_site\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Impala Daemon****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Impala Daemon configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impalad\_embedded\_java\_opts

**Required**

true

**Suppress Configuration Validator: Impala Daemon Fair Scheduler Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Fair Scheduler Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impalad\_fair\_scheduler\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Impala Daemon HBase Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Impala Daemon HBase Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impalad\_hbase\_conf\_safety\_valve

**Required**

true

**Suppress Configuration Validator: LDAP Server CA Certificate****Description**

Whether to suppress configuration warnings produced by the LDAP Server CA Certificate configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impalad\_ldap\_ca\_certificate

**Required**

true

**Suppress Configuration Validator: Impala Daemons Load Balancer****Description**

Whether to suppress configuration warnings produced by the Impala Daemons Load Balancer configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impalad\_load\_balancer

**Required**

true

**Suppress Configuration Validator: Impala Daemon Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impalad\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Impala Daemon HTTP Server Port****Description**

Whether to suppress configuration warnings produced by the Impala Daemon HTTP Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_impalad\_webserver\_port

<b>Required</b>
true

Suppress Configuration Validator: Impala Daemon KRPC Port

<b>Description</b>
Whether to suppress configuration warnings produced by the Impala Daemon KRPC Port configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_krpc_port
<b>Required</b>
true

Suppress Configuration Validator: Impala Daemon Lineage Log Directory

<b>Description</b>
Whether to suppress configuration warnings produced by the Impala Daemon Lineage Log Directory configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_lineage_event_log_dir
<b>Required</b>
true

Suppress Configuration Validator: Llama Callback Port

<b>Description</b>
Whether to suppress configuration warnings produced by the Llama Callback Port configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_llama_callback_port
<b>Required</b>
true

Suppress Configuration Validator: Local UDF Library Dir

<b>Description</b>
Whether to suppress configuration warnings produced by the Local UDF Library Dir configuration validator.
<b>Related Name</b>
<b>Default Value</b>

false

**API Name**

role\_config\_suppression\_local\_library\_dir

**Required**

true

**Suppress Configuration Validator: Impala Daemon Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Impala Daemon Log Directory****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Impala Daemon Breakpad Dump Directory****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Breakpad Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_minidump\_path

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Impala Daemon Scratch Directories****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Scratch Directories configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_scratch\_dirs

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: StateStore Service Port****Description**

Whether to suppress configuration warnings produced by the StateStore Service Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_state\_store\_port

**Required**

true

**Suppress Configuration Validator: StateStoreSubscriber Service Port****Description**

Whether to suppress configuration warnings produced by the StateStoreSubscriber Service Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_state\_store\_subscriber\_port

**Required**

true

**Suppress Configuration Validator: Statestore Command Line Argument Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Statestore Command Line Argument Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_statestore\_cmd\_args\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Impala StateStore Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Impala StateStore Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_statestore\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: StateStore HTTP Server Port****Description**

Whether to suppress configuration warnings produced by the StateStore HTTP Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_statestore\_webserver\_port

**Required**

true

**Suppress Configuration Validator: Impala Daemon Unlimited Memory Limit Validator****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Unlimited Memory Limit Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_unlimited\_impalad\_memory\_limit\_validator

**Required**

true

**Suppress Configuration Validator: Impala Daemon Webserver TLS/SSL Server Certificate File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Webserver TLS/SSL Server Certificate File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_certificate\_file

**Required**

true

**Suppress Configuration Validator: Impala Daemon Web Server User Password****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Web Server User Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_htpassword\_password

**Required**

true

**Suppress Configuration Validator: Impala Daemon Web Server Username****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Web Server Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_htpassword\_user

**Required**

true

**Suppress Configuration Validator: Impala Daemon Webserver TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Webserver TLS/SSL Server Private Key File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_private\_key\_file

**Required**

true

**Suppress Configuration Validator: Impala Daemon Webserver TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Webserver TLS/SSL Private Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_private\_key\_password\_cmd

**Required**

true

**Suppress Parameter Validation: Impala Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_application\_properties\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Atlas Kafka Messages Spool Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Kafka Messages Spool Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_atlas\_message\_spool\_path

**Required**

true

**Suppress Configuration Validator: Impala Catalog Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Impala Catalog Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_catalogserver\_count\_validator

**Required**

true

**Suppress Configuration Validator: Secure Web UI Validator****Description**

Whether to suppress configuration warnings produced by the Secure Web UI Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hadoop\_secure\_web\_ui

**Required**

true

**Suppress Configuration Validator: Ranger Plugin Url Auth Validator for filesystem schemes****Description**

Whether to suppress configuration warnings produced by the Ranger Plugin Url Auth Validator for filesystem schemes configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hive\_ranger\_url\_auth\_validator

**Required**

true

**Suppress Parameter Validation: Proxy Group Configuration****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy Group Configuration parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_authorized\_proxy\_group\_config

**Required**

true

**Suppress Parameter Validation: Proxy User Configuration****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Proxy User Configuration parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_authorized\_proxy\_user\_config

**Required**

true

**Suppress Configuration Validator: Bypass Hive Metastore Validator****Description**

Whether to suppress configuration warnings produced by the Bypass Hive Metastore Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_bypass\_hms\_validator

**Required**

true

**Suppress Parameter Validation: Impala Command Line Argument Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Command Line Argument Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_cmd\_args\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Impala Command Line Arguments Safety Valve Validator****Description**

Whether to suppress configuration warnings produced by the Impala Command Line Arguments Safety Valve Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_cmd\_args\_safety\_valve\_validator

**Required**

true

**Suppress Configuration Validator: Impala Short-Circuit Read Validator****Description**

Whether to suppress configuration warnings produced by the Impala Short-Circuit Read Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_dfs\_client\_read\_shortcircuit\_validator

**Required**

true

**Suppress Configuration Validator: Enable HDFS Block Metadata API Configuration Validator****Description**

Whether to suppress configuration warnings produced by the Enable HDFS Block Metadata API Configuration Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_hdfs\_dfs\_datanode\_hdfs\_blocks\_metadata\_enabled\_set\_validator

**Required**

true

**Suppress Parameter Validation: LDAP URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_ldap\_uri

**Required**

true

**Suppress Configuration Validator: LDAP Configuration Validator****Description**

Whether to suppress configuration warnings produced by the LDAP Configuration Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_ldap\_validator

**Required**

true

**Suppress Configuration Validator: Impala Llama Supported Validator****Description**

Whether to suppress configuration warnings produced by the Impala Llama Supported Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_llama\_supported\_validator

**Required**

true

**Suppress Parameter Validation: Impala Query Aggregates****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Query Aggregates parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_query\_aggregates

**Required**

true

**Suppress Parameter Validation: Impala Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_service\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Impala Specialization Validator****Description**

Whether to suppress configuration warnings produced by the Impala Specialization Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_specialization\_validator

**Required**

true

**Suppress Parameter Validation: impala TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the impala TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_truststore\_file

**Required**

true

**Suppress Parameter Validation: impala TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the impala TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impala\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Impala Daemon Count Validator****Description**

Whether to suppress configuration warnings produced by the Impala Daemon Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impalad\_count\_validator

**Required**

true

**Suppress Parameter Validation: Impala Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_impalad\_sentry\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: LDAP BaseDN****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap\_basedn

**Required**

true

**Suppress Parameter Validation: LDAP Pattern****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Pattern parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap\_bind\_pattern

**Required**

true

**Suppress Parameter Validation: Impala Client LDAP Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Client LDAP Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap\_cm\_password

**Required**

true

**Suppress Parameter Validation: Impala Client LDAP Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Client LDAP Username parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap\_cm\_user

**Required**

true

**Suppress Parameter Validation: Active Directory Domain****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap\_domain

**Required**

true

**Suppress Parameter Validation: Audit Event Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Filter parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_navigator\_audit\_event\_filter

**Required**

true

**Suppress Parameter Validation: Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_navigator\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Audit Event Tracker****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Tracker parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_navigator\_event\_tracker

**Required**

true

**Suppress Parameter Validation: Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_navigator\_lineage\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: CA Certificate File Validator****Description**

Whether to suppress configuration warnings produced by the CA Certificate File Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_pem\_ca\_cert\_recommended\_for\_ssl

**Required**

true

**Suppress Parameter Validation: Impala System Group (except Llama)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala System Group (except Llama) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: Impala System User (except Llama)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala System User (except Llama) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Ranger DFS Audit Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_hdfs\_dir

**Required**

true

**Suppress Parameter Validation: Ranger Audit DFS Spool Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_hdfs\_spool\_dir

**Required**

true

**Suppress Parameter Validation: Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Audit Solr Spool Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_solr\_spool\_dir

**Required**

true

**Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Parameter Validation: Ranger Plugin URL Auth Filesystem Schemes****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin URL Auth Filesystem Schemes parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_plugin\_urlauth\_filesystem\_schemes

**Required**

true

**Suppress Parameter Validation: Ranger Policy Cache Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_policy\_cache\_dir

**Required**

true

**Suppress Parameter Validation: Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_policymgr\_ssl\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_security\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Configuration Validator: Short-Circuit Read Enabled Validator****Description**

Whether to suppress configuration warnings produced by the Short-Circuit Read Enabled Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_short\_circuit\_read\_validator

**Required**

true

**Suppress Configuration Validator: Short-Circuit Read Permissions Validator****Description**

Whether to suppress configuration warnings produced by the Short-Circuit Read Permissions Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_short\_circuit\_reads\_data\_directory\_permissions\_validator

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Impala TLS/SSL CA Certificate****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL CA Certificate parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_client\_ca\_certificate

**Required**

true

**Suppress Parameter Validation: Impala TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL Server Private Key File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_private\_key

**Required**

true

**Suppress Parameter Validation: Impala TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_private\_key\_password

**Required**

true

**Suppress Parameter Validation: Impala TLS/SSL Server Certificate File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL Server Certificate File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ssl\_server\_certificate

**Required**

true

**Suppress Configuration Validator: Impala StateStore Count Validator****Description**

Whether to suppress configuration warnings produced by the Impala StateStore Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_statestore\_count\_validator

**Required**

true

**Suppress Health Test: Impala Catalog Server Health****Description**

Whether to suppress the results of the Impala Catalog Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_impala\_catalogserver\_health

**Required**

true

**Suppress Health Test: Impala Daemon Health****Description**

Whether to suppress the results of the Impala Daemon Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_impala\_impalads\_healthy

**Required**

true

**Suppress Health Test: Impala Llama ApplicationMaster Health****Description**

Whether to suppress the results of the Impala Llama ApplicationMaster Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_impala\_llamas\_healthy

**Required**

true

**Suppress Health Test: Impala StateStore Health****Description**

Whether to suppress the results of the Impala StateStore Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

<b>API Name</b>	service_health_suppression_impala_statestore_health
<b>Required</b>	true

Java KeyStore KMS Properties in Cloudera Runtime 7.2.16

Role groups:

Key Management Server

Advanced

Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml

<b>Description</b>	For advanced use only. A string to be inserted into core-site.xml for this role only.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	core-site.xml_role_safety_valve
<b>Required</b>	false

Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-acls.xml

<b>Description</b>	For advanced use only. A string to be inserted into kms-acls.xml for this role only.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	kms-acls.xml_role_safety_valve
<b>Required</b>	false

Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-site.xml

<b>Description</b>	For advanced use only. A string to be inserted into kms-site.xml for this role only.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	kms-site.xml_role_safety_valve
<b>Required</b>	false

**Key Management Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KMS\_role\_env\_safety\_valve

**Required**

false

**Key Management Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Key Management Server Advanced Configuration Snippet (Safety Valve) for ssl-server.xml****Description**

For advanced use only. A string to be inserted into ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ssl-server.xml\_role\_safety\_valve

**Required**

false

Logs

Key Management Server Log Directory

Description	The log directory for log files of the role Key Management Server.
Related Name	log.dir
Default Value	/var/log/hadoop-kms
API Name	log_dir
Required	false

Key Management Server Logging Threshold

Description	The minimum log level for Key Management Server logs
Related Name	
Default Value	INFO
API Name	log_threshold
Required	false

Key Management Server Maximum Log File Backups

Description	The maximum number of rolled log files to keep for Key Management Server logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

Key Management Server Max Log Size

Description	The maximum size, in megabytes, per log file for Key Management Server logs. Typically used by log4j or logback.
Related Name	
Default Value	

	200 MiB
API Name	
	max_log_size
Required	
	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

File Descriptor Monitoring Thresholds

Description	The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.
Related Name	
Default Value	Warning: 50.0 %, Critical: 70.0 %
API Name	kms_fd_thresholds
Required	false

Key Management Server Host Health Test

Description	
-------------	--

When computing the overall Key Management Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

kms\_host\_health\_enabled

**Required**

false

### Key Management Server Process Health Test

**Description**

Enables the health test that the Key Management Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

kms\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

<b>Required</b>
true

Unexpected Exits Thresholds

<b>Description</b>
The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.
<b>Related Name</b>
<b>Default Value</b>
Warning: Never, Critical: Any
<b>API Name</b>
unexpected_exits_thresholds
<b>Required</b>
false

Unexpected Exits Monitoring Period

<b>Description</b>
The period to review when computing unexpected exits.
<b>Related Name</b>
<b>Default Value</b>
5 minute(s)
<b>API Name</b>
unexpected_exits_window
<b>Required</b>
false

Other

Flume Proxy User Groups

<b>Description</b>
Allows the flume superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.
<b>Related Name</b>
hadoop.kms.proxyuser.flume.groups
<b>Default Value</b>
*
<b>API Name</b>
hadoop_kms_proxyuser_flume_groups
<b>Required</b>
false

Flume Proxy User Hosts

<b>Description</b>
--------------------

Comma-delimited list of hosts where you want to allow the flume user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.flume.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_flume\_hosts

**Required**

false

**HDFS Proxy User Groups****Description**

Allows the hdfs superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.hdfs.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hdfs\_groups

**Required**

false

**HDFS Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the hdfs user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.hdfs.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hdfs\_hosts

**Required**

false

**Hive Proxy User Groups****Description**

Allows the hive superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

	hadoop.kms.proxyuser.hive.groups
Default Value	*
API Name	
	hadoop_kms_proxyuser_hive_groups
Required	false

Hive Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the hive user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
Related Name	hadoop.kms.proxyuser.hive.hosts
Default Value	*
API Name	
	hadoop_kms_proxyuser_hive_hosts
Required	false

HTTP Proxy User Groups

Description	Allows the HTTP superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.
Related Name	hadoop.kms.proxyuser.HTTP.groups
Default Value	*
API Name	
	hadoop_kms_proxyuser_HTTP_groups
Required	false

HTTP Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
Related Name	hadoop.kms.proxyuser.HTTP.hosts
Default Value	*

**API Name**

hadoop\_kms\_proxyuser\_HTTP\_hosts

**Required**

false

**HttpFS Proxy User Groups****Description**

Allows the httpfs superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.httpfs.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_httpfs\_groups

**Required**

false

**HttpFS Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the httpfs user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

hadoop.kms.proxyuser.httpfs.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_httpfs\_hosts

**Required**

false

**Hue Proxy User Groups****Description**

Allows the hue superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.hue.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hue\_groups

**Required**

false

**Hue Proxy User Hosts**

<b>Description</b>	Comma-delimited list of hosts where you want to allow the hue user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
<b>Related Name</b>	hadoop.kms.proxyuser.hue.hosts
<b>Default Value</b>	*
<b>API Name</b>	hadoop_kms_proxyuser_hue_hosts
<b>Required</b>	false

**Mapred Proxy User Groups**

<b>Description</b>	Allows the mapred superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.
<b>Related Name</b>	hadoop.kms.proxyuser.mapred.groups
<b>Default Value</b>	*
<b>API Name</b>	hadoop_kms_proxyuser_mapred_groups
<b>Required</b>	false

**Mapred Proxy User Hosts**

<b>Description</b>	Comma-delimited list of hosts where you want to allow the mapred user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
<b>Related Name</b>	hadoop.kms.proxyuser.mapred.hosts
<b>Default Value</b>	*
<b>API Name</b>	hadoop_kms_proxyuser_mapred_hosts
<b>Required</b>	false

**Oozie Proxy User Groups**

<b>Description</b>	
--------------------	--

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.oozie.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_oozie\_groups

**Required**

false

### Oozie Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

hadoop.kms.proxyuser.oozie.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_oozie\_hosts

**Required**

false

### YARN Proxy User Groups

**Description**

Allows the yarn superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.yarn.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_yarn\_groups

**Required**

false

### YARN Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the yarn user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

	hadoop.kms.proxyuser.yarn.hosts
Default Value	*
API Name	
	hadoop_kms_proxyuser_yarn_hosts
Required	false

JavaKeyStoreProvider Directory

Description	Directory of the keystore file kms.keystore used by JavaKeyStoreProvider that backs the KMS.
Related Name	
	hadoop.kms.key.provider.uri
Default Value	/var/lib/kms
API Name	
	hadoop_security_key_provider_dir
Required	true

KMS Accept Count

Description	The maximum queue length for incoming connection requests when all possible request processing threads are in use. Any requests received when the queue is full will be refused.This configuration is only supported in CDH 5.11 and up.
Related Name	
	hadoop.http.accept.queue.size
Default Value	500
API Name	
	kms_accept_count
Required	false

KMS Blacklist Users

Description	A comma-separated list of users (no spaces) for whom to disallow access to key material. These users can still fetch key metadata and create encrypted encryption keys, but are unable to do any other KMS operations. Typically, HDFS superusers will be specified here.
Related Name	
	kms_blacklist_users
Default Value	
API Name	
	kms_blacklist_users
Required	

false

**KMS Heap Size**

**Description**

Maximum heap size of the KMS.

**Related Name**

kms\_heap\_size

**Default Value**

1 GiB

**API Name**

kms\_heap\_size

**Required**

true

**Additional Java Configuration Options for KMS**

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

**Related Name**

kms\_java\_opts

**Default Value**

**API Name**

kms\_java\_opts

**Required**

false

**KMS Max Threads**

**Description**

Maximum number of threads used to handle KMS requests.

**Related Name**

hadoop.http.max.threads

**Default Value**

250

**API Name**

kms\_max\_threads

**Required**

false

**Performance**

**Maximum Process File Descriptors**

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name**

**Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****KMS HTTP Port****Description**

Port used by clients to interact with the KMS.

**Related Name**

hadoop.kms.http.port

**Default Value**

16000

**API Name**

kms\_http\_port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value**

**API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB
<b>API Name</b>
rm_memory_soft_limit
<b>Required</b>
true

Security

Key Management Server TLS/SSL Trust Store File

<b>Description</b>
The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Key Management Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.
<b>Related Name</b>
ssl.server.truststore.location
<b>Default Value</b>
<b>API Name</b>
ssl_client_truststore_location
<b>Required</b>
false

Key Management Server TLS/SSL Trust Store Password

<b>Description</b>
The password for the Key Management Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.
<b>Related Name</b>
ssl.server.truststore.password
<b>Default Value</b>
<b>API Name</b>
ssl_client_truststore_password
<b>Required</b>
false

Enable TLS/SSL for Key Management Server

<b>Description</b>
Encrypt communication between clients and Key Management Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).
<b>Related Name</b>
hadoop.kms.ssl.enabled
<b>Default Value</b>
false
<b>API Name</b>
ssl_enabled

<b>Required</b>
false

**Key Management Server TLS/SSL Server Keystore Key Password**

<b>Description</b>
The password that protects the private key contained in the keystore used when Key Management Server is acting as a TLS/SSL server.
<b>Related Name</b>
ssl.server.keystore.keypassword
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_keypassword
<b>Required</b>
false

**Key Management Server TLS/SSL Server Keystore File Location**

<b>Description</b>
The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Key Management Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.
<b>Related Name</b>
ssl.server.keystore.location
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_location
<b>Required</b>
false

**Key Management Server TLS/SSL Server Keystore File Password**

<b>Description</b>
The password for the Key Management Server keystore file.
<b>Related Name</b>
ssl.server.keystore.password
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_password
<b>Required</b>
false

**Stacks Collection**

**Stacks Collection Data Retention**

<b>Description</b>
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>

	stacks_collection_data_retention
Default Value	100 MiB
API Name	stacks_collection_data_retention
Required	false

Stacks Collection Directory

Description	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
Related Name	stacks_collection_directory
Default Value	
API Name	stacks_collection_directory
Required	false

Stacks Collection Enabled

Description	Whether or not periodic stacks collection is enabled.
Related Name	stacks_collection_enabled
Default Value	false
API Name	stacks_collection_enabled
Required	true

Stacks Collection Frequency

Description	The frequency with which stacks are collected.
Related Name	stacks_collection_frequency
Default Value	5.0 second(s)
API Name	stacks_collection_frequency
Required	false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Parameter Validation: Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_core-site.xml\_role\_safety\_valve

**Required**

true

#### Suppress Parameter Validation: Flume Proxy User Groups

**Description**

	Whether to suppress configuration warnings produced by the built-in parameter validation for the Flume Proxy User Groups parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hadoop_kms_proxyuser_flume_groups
Required	true

Suppress Parameter Validation: Flume Proxy User Hosts

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Flume Proxy User Hosts parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hadoop_kms_proxyuser_flume_hosts
Required	true

Suppress Parameter Validation: HDFS Proxy User Groups

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Proxy User Groups parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hadoop_kms_proxyuser_hdfs_groups
Required	true

Suppress Parameter Validation: HDFS Proxy User Hosts

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Proxy User Hosts parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hadoop_kms_proxyuser_hdfs_hosts
Required	

true

Suppress Parameter Validation: Hive Proxy User Groups

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Groups parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hadoop_kms_proxyuser_hive_groups
Required	true

Suppress Parameter Validation: Hive Proxy User Hosts

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Hosts parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hadoop_kms_proxyuser_hive_hosts
Required	true

Suppress Parameter Validation: HTTP Proxy User Groups

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy User Groups parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hadoop_kms_proxyuser_http_groups
Required	true

Suppress Parameter Validation: HTTP Proxy User Hosts

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy User Hosts parameter.
Related Name	
Default Value	false

**API Name**`role_config_suppression_hadoop_kms_proxyuser_http_hosts`**Required**`true`**Suppress Parameter Validation: HttpFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Proxy User Groups parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_httpfs_groups`**Required**`true`**Suppress Parameter Validation: HttpFS Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Proxy User Hosts parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_httpfs_hosts`**Required**`true`**Suppress Parameter Validation: Hue Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Groups parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_hue_groups`**Required**`true`**Suppress Parameter Validation: Hue Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_hosts

**Required**

true

**Suppress Parameter Validation: Mapred Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Mapred Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_mapred\_groups

**Required**

true

**Suppress Parameter Validation: Mapred Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Mapred Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_mapred\_hosts

**Required**

true

**Suppress Parameter Validation: Oozie Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_groups

**Required**

true

**Suppress Parameter Validation: Oozie Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_hosts

**Required**

true

**Suppress Parameter Validation: YARN Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_groups

**Required**

true

**Suppress Parameter Validation: YARN Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_hosts

**Required**

true

**Suppress Parameter Validation: JavaKeyStoreProvider Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JavaKeyStoreProvider Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_key\_provider\_dir

**Required**

true

**Suppress Parameter Validation: Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-acls.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-acls.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms-acls.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: KMS Blacklist Users****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KMS Blacklist Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_blacklist\_users

**Required**

true

**Suppress Parameter Validation: KMS HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the KMS HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_http\_port

**Required**

true

**Suppress Parameter Validation: Additional Java Configuration Options for KMS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Java Configuration Options for KMS parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_java\_opts

**Required**

true

**Suppress Parameter Validation: Key Management Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Management Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Management Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Key Management Server Advanced Configuration Snippet (Safety Valve) for ssl-server.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Advanced Configuration Snippet (Safety Valve) for ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl-server.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Management Server TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Key Management Server TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Key Management Server TLS/SSL Server Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server TLS/SSL Server Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Key Management Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Key Management Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kms\_kms\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kms\_kms\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kms\_kms\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kms\_kms\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kms\_kms\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kms\_kms\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kms\_kms\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kms\_kms\_unexpected\_exits

**Required**

true

**Service-Wide****Advanced****Java KeyStore KMS Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

KMS\_service\_env\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

kms

**API Name**

process\_groupname

**Required**

true

System User

Description

The user that this service's processes should run as.

Related Name

Default Value

kms

API Name

process\_username

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

Related Name

Default Value

true

API Name

enable\_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable\_config\_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

`service_triggers`

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

`smon_derived_configs_safety_valve`

**Required**

false

**Other****Authentication Type****Description**

Authentication type for the KMS. Can either be "simple" or "kerberos".

**Related Name**

`hadoop.kms.authentication.type`

**Default Value**

simple

**API Name**

`hadoop_kms_authentication_type`

**Required**

true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Configuration Validator: Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description	Whether to suppress configuration warnings produced by the Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_core-site.xml_role_safety_valve
Required	true

Suppress Configuration Validator: Flume Proxy User Groups

Description	Whether to suppress configuration warnings produced by the Flume Proxy User Groups configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_hadoop_kms_proxyuser_flume_groups
Required	true

Suppress Configuration Validator: Flume Proxy User Hosts

Description	Whether to suppress configuration warnings produced by the Flume Proxy User Hosts configuration validator.
Related Name	
Default Value	

	false
API Name	
	role_config_suppression_hadoop_kms_proxyuser_flume_hosts
Required	
	true

Suppress Configuration Validator: HDFS Proxy User Groups

Description	Whether to suppress configuration warnings produced by the HDFS Proxy User Groups configuration validator.
Related Name	
Default Value	false
API Name	
	role_config_suppression_hadoop_kms_proxyuser_hdfs_groups
Required	
	true

Suppress Configuration Validator: HDFS Proxy User Hosts

Description	Whether to suppress configuration warnings produced by the HDFS Proxy User Hosts configuration validator.
Related Name	
Default Value	false
API Name	
	role_config_suppression_hadoop_kms_proxyuser_hdfs_hosts
Required	
	true

Suppress Configuration Validator: Hive Proxy User Groups

Description	Whether to suppress configuration warnings produced by the Hive Proxy User Groups configuration validator.
Related Name	
Default Value	false
API Name	
	role_config_suppression_hadoop_kms_proxyuser_hive_groups
Required	
	true

Suppress Configuration Validator: Hive Proxy User Hosts

Description	
-------------	--

Whether to suppress configuration warnings produced by the Hive Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_hosts

**Required**

true

**Suppress Configuration Validator: HTTP Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the HTTP Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_groups

**Required**

true

**Suppress Configuration Validator: HTTP Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the HTTP Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_hosts

**Required**

true

**Suppress Configuration Validator: HttpFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the HttpFS Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_httpfs\_groups

**Required**

true

### Suppress Configuration Validator: HttpFS Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the HttpFS Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_httpfs\_hosts

**Required**

true

### Suppress Configuration Validator: Hue Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_groups

**Required**

true

### Suppress Configuration Validator: Hue Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_hosts

**Required**

true

### Suppress Configuration Validator: Mapred Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the Mapred Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_hadoop_kms_proxyuser_mapred_groups`**Required**`true`**Suppress Configuration Validator: Mapred Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Mapred Proxy User Hosts configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_mapred_hosts`**Required**`true`**Suppress Configuration Validator: Oozie Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Oozie Proxy User Groups configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_oozie_groups`**Required**`true`**Suppress Configuration Validator: Oozie Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Oozie Proxy User Hosts configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_oozie_hosts`**Required**`true`**Suppress Configuration Validator: YARN Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the YARN Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_groups

**Required**

true

**Suppress Configuration Validator: YARN Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the YARN Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_hosts

**Required**

true

**Suppress Configuration Validator: JavaKeyStoreProvider Directory****Description**

Whether to suppress configuration warnings produced by the JavaKeyStoreProvider Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_key\_provider\_dir

**Required**

true

**Suppress Configuration Validator: Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-acls.xml****Description**

Whether to suppress configuration warnings produced by the Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-acls.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms-acls.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-site.xml

**Description**

Whether to suppress configuration warnings produced by the Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: KMS Blacklist Users

**Description**

Whether to suppress configuration warnings produced by the KMS Blacklist Users configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_blacklist\_users

**Required**

true

### Suppress Configuration Validator: KMS HTTP Port

**Description**

Whether to suppress configuration warnings produced by the KMS HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_http\_port

**Required**

true

### Suppress Configuration Validator: Additional Java Configuration Options for KMS

**Description**

Whether to suppress configuration warnings produced by the Additional Java Configuration Options for KMS configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_java\_opts

**Required**

true

**Suppress Configuration Validator: Key Management Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Key Management Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Key Management Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Key Management Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Key Management Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Key Management Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Key Management Server Advanced Configuration Snippet (Safety Valve) for ssl-server.xml****Description**

Whether to suppress configuration warnings produced by the Key Management Server Advanced Configuration Snippet (Safety Valve) for ssl-server.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl-server.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Key Management Server TLS/SSL Trust Store File

#### Description

Whether to suppress configuration warnings produced by the Key Management Server TLS/SSL Trust Store File configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_client\_truststore\_location

#### Required

true

### Suppress Configuration Validator: Key Management Server TLS/SSL Trust Store Password

#### Description

Whether to suppress configuration warnings produced by the Key Management Server TLS/SSL Trust Store Password configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_client\_truststore\_password

#### Required

true

### Suppress Configuration Validator: Key Management Server TLS/SSL Server Keystore Key Password

#### Description

Whether to suppress configuration warnings produced by the Key Management Server TLS/SSL Server Keystore Key Password configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

#### Required

true

### Suppress Configuration Validator: Key Management Server TLS/SSL Server Keystore File Location

#### Description

Whether to suppress configuration warnings produced by the Key Management Server TLS/SSL Server Keystore File Location configuration validator.

#### Related Name

#### Default Value

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Key Management Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Key Management Server TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Key Management Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Key Management Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kms\_count\_validator

**Required**

true

### Suppress Parameter Validation: Java KeyStore KMS Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java KeyStore KMS Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kms\_service\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

### Suppress Parameter Validation: Service Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

## Kafka Properties in Cloudera Runtime 7.2.16

Role groups:

### Gateway

#### Advanced

#### Deploy Directory

**Description**

The directory where the client configs will be deployed

**Related Name****Default Value**

/etc/kafka

**API Name**

client\_config\_root\_dir

**Required**

true

#### Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf

**Description**

For advanced use only, a string to be inserted into the client configuration for kafka-conf/kafka-client.conf.

**Related Name****Default Value****API Name**

kafka-conf/kafka-client.conf\_client\_config\_safety\_valve

<b>Required</b>
false

**Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties**

<b>Description</b>
For advanced use only, a string to be inserted into the client configuration for kafka-conf/kafka-ranger-repo.properties.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
kafka-conf/kafka-ranger-repo.properties_client_config_safety_valve
<b>Required</b>
false

**Gateway Logging Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>
For advanced use only, a string to be inserted into log4j.properties for this role only.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
log4j_safety_valve
<b>Required</b>
false

**Logs**

**Gateway Logging Threshold**

<b>Description</b>
The minimum log level for Gateway logs
<b>Related Name</b>
<b>Default Value</b>
INFO
<b>API Name</b>
log_threshold
<b>Required</b>
false

**Monitoring**

**Enable Configuration Change Alerts**

<b>Description</b>
When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>
<b>Default Value</b>

	false
API Name	
	enable_config_alerts
Required	
	false

Other

Alternatives Priority

Description	The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.
Related Name	
Default Value	50
API Name	client_config_priority
Required	true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Deploy Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_client_config_root_dir
Required	true

**Suppress Parameter Validation: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka-conf/kafka-client.conf\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka-conf/kafka-ranger-repo.properties\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Kafka Broker****Advanced****Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties****Description**

For advanced use only. A string to be inserted into atlas-application.properties for this role only.

**Related Name****Default Value****API Name**

atlas-application.properties\_role\_safety\_valve

**Required**

false

**Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties****Description**

For advanced use only. A string to be inserted into kafka-monitoring.properties for this role only.

**Related Name****Default Value****API Name**

kafka-monitoring.properties\_role\_safety\_valve

**Required**

false

**Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties****Description**

For advanced use only. A string to be inserted into kafka.properties for this role only.

**Related Name****Default Value****API Name**

kafka.properties\_role\_safety\_valve

**Required**

false

**Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KAFKA\_BROKER\_role\_env\_safety\_valve

**Required**

false

**Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name**

**Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml****Description**

For advanced use only. A string to be inserted into ranger-kafka-audit.xml for this role only.

**Related Name****Default Value****API Name**

ranger-kafka-audit.xml\_role\_safety\_valve

**Required**

false

**Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml****Description**

For advanced use only. A string to be inserted into ranger-kafka-policymgr-ssl.xml for this role only.

**Related Name****Default Value****API Name**

ranger-kafka-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

**Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml****Description**

For advanced use only. A string to be inserted into ranger-kafka-security.xml for this role only.

**Related Name**

**Default Value****API Name**`ranger-kafka-security.xml_role_safety_valve`**Required**`false`**Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

For advanced use only. A string to be inserted into ssl.properties for this role only.

**Related Name****Default Value****API Name**`ssl.properties_role_safety_valve`**Required**`false`**Kafka Broker Advanced Configuration Snippet (Safety Valve) for zookeeper-ssl.properties****Description**

For advanced use only. A string to be inserted into zookeeper-ssl.properties for this role only.

**Related Name****Default Value****API Name**`zookeeper-ssl.properties_role_safety_valve`**Required**`false`**Logs****Kafka Broker Log Directory****Description**

The log directory for log files of the role Kafka Broker.

**Related Name**`kafka.log4j.dir`**Default Value**`/var/log/kafka`**API Name**`log_dir`**Required**`false`**Kafka Broker Logging Threshold****Description**

The minimum log level for Kafka Broker logs

**Related Name**

**Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Kafka Broker Maximum Log File Backups**

**Description**

The maximum number of rolled log files to keep for Kafka Broker logs. Typically used by log4j or logback.

**Related Name**

**Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Kafka Broker Max Log Size**

**Description**

The maximum size, in megabytes, per log file for Kafka Broker logs. Typically used by log4j or logback.

**Related Name**

**Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring**

**Enable Health Alerts for this Role**

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name**

**Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Enable Lagging Replicas Test****Description**

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

**Related Name****Default Value**

true

**API Name**

KAFKA-KAFKA\_BROKER-7.2.0-LAGGING\_REPLICAS\_test\_enable

**Required**

false

**Enable Network Processor Capacity Test****Description**

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

**Related Name****Default Value**

true

**API Name**

KAFKA-KAFKA\_BROKER-7.2.0-NETWORK\_PROCESSOR\_CAPACITY\_test\_enable

**Required**

false

**Enable Offline Directory Test****Description**

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

**Related Name****Default Value**

true

**API Name**

KAFKA-KAFKA\_BROKER-7.2.0-OFFLINE\_DIRECTORIES\_test\_enable

**Required**

false

**Enable Offline Partitions Test****Description**

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

**Related Name****Default Value**

true

**API Name**

KAFKA-KAFKA\_BROKER-7.2.0-OFFLINE\_PARTITIONS\_test\_enable

**Required**

false

**Enable Request Handler Capacity Test****Description**

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

**Related Name****Default Value**

true

**API Name**

KAFKA-KAFKA\_BROKER-7.2.0-REQUEST\_HANDLER\_CAPACITY\_test\_enable

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

kafka\_broker\_fd\_thresholds

**Required**

false

**Kafka Broker Host Health Test****Description**

When computing the overall Kafka Broker health, consider the host's health.

**Related Name****Default Value**

	true
API Name	kafka_broker_host_health_enabled
Required	false

**Kafka Broker Process Health Test**

Description	Enables the health test that the Kafka Broker's process state is consistent with the role configuration
Related Name	
Default Value	true
API Name	kafka_broker_scm_health_enabled
Required	false

**Log Directory Free Space Monitoring Absolute Thresholds**

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
Related Name	
Default Value	Warning: 10 GiB, Critical: 5 GiB
API Name	log_directory_free_space_absolute_thresholds
Required	false

**Log Directory Free Space Monitoring Percentage Thresholds**

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.
Related Name	
Default Value	Warning: Never, Critical: Never
API Name	log_directory_free_space_percentage_thresholds
Required	false

**Metric Filter**

Description	
-------------	--

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.
- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

#### Related Name

#### Default Value

#### API Name

`monitoring_metric_filter`

#### Required

false

### Swap Memory Usage Rate Thresholds

#### Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

#### Related Name

#### Default Value

Warning: Never, Critical: Never

#### API Name

`process_swap_memory_rate_thresholds`

#### Required

false

### Swap Memory Usage Rate Window

#### Description

The period to review when computing unexpected swap memory usage change of the process.

#### Related Name

`common.process.swap_memory_rate_window`

#### Default Value

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

### Other

#### Advertised Host

**Description**

If set, this is the hostname given out to producers, consumers, and other brokers to use in establishing connections. Never set this property at the group level; it should always be overridden on instance level.

**Related Name**

`advertised.host.name`

**Default Value****API Name**

`advertised.host.name`

**Required**

false

#### Enable Auditing to Atlas

**Description**

When enabled, Kafka will audit Kafka Topics, Producers and Consumers to Atlas

**Related Name**

`atlas.audit.enabled`

**Default Value**

false

**API Name**

atlas.audit.enabled

**Required**

false

**Authenticate Zookeeper Connection****Description**

Enables authentication of SASL connections with zookeeper, if Kerberos authentication is enabled. It also allows a broker to set SASL ACL on zookeeper nodes, which locks these nodes down so that only a Kafka broker can modify it.

**Related Name**

authenticate.zookeeper.connection

**Default Value**

true

**API Name**

authenticate.zookeeper.connection

**Required**

false

**Broker ID****Description**

ID uniquely identifying each broker. Never set this property at the group level; it should always be overridden on instance level.

**Related Name**

broker.id

**Default Value****API Name**

broker.id

**Required**

false

**Additional Broker Java Options****Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

**Related Name**

broker\_java\_opts

**Default Value**

```
-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35
-XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -
XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC -Djava.awt.headless=true -
Djava.net.preferIPv4Stack=true -Dcom.sun.management.jmxremote.host=127.0.0.1 -
Dcom.sun.management.jmxremote.local.only=true -Djava.rmi.server.hostname=127.0.0.1
```

**API Name**

broker\_java\_opts

**Required**

false

Java Heap Size of Broker

Description

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in megabytes. Kafka does not generally require setting large heap sizes. It is better to let the file system cache utilize the available memory.

Related Name

broker\_max\_heap\_size

Default Value

1 GiB

API Name

broker\_max\_heap\_size

Required

false

Kafka Broker Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

5 minute(s)

API Name

csd\_role\_diagnostics\_timeout

Required

false

Enable Rack Awareness

Description

Enable rack awareness. If it is enabled, broker.rack property is set for each broker according to rack settings for the hosts in CM.

Related Name

enable.rack.awareness

Default Value

false

API Name

enable.rack.awareness

Required

false

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name

Default Value

2 minute(s)

**API Name**

graceful\_stop\_timeout

**Required**

false

**Enable Authenticated Communication with the JMX Agent****Description**

Enables Authenticated Communication with the JMX Agent.

**Related Name**

jmx.auth.enabled

**Default Value**

false

**API Name**

jmx.auth.enabled

**Required**

false

**Name of User with Read-Write Access to the JMX Agent****Description**

Specifies the name of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.control.user

**Default Value**

controlRole

**API Name**

jmx.control.user

**Required**

false

**Password of user with read-write access to the JMX agent****Description**

Specifies the password of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.control.user.passwd

**Default Value****API Name**

jmx.control.user.passwd

**Required**

false

**Name of User with read-only access to the JMX Agent****Description**

Specifies the name of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.monitor.user

**Default Value**

monitorRole

**API Name**

jmx.monitor.user

**Required**

false

**Password of User with read-only Access to the JMX agent****Description**

Specifies the password of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.monitor.user.passwd

**Default Value****API Name**

jmx.monitor.user.passwd

**Required**

false

**Enable TLS client authentication for JMX port****Description**

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the Kafka JMX TLS/SSL Server Trust Store file or the global trust store.

**Related Name**

jmx.ssl.client.auth.enabled

**Default Value**

false

**API Name**

jmx.ssl.client.auth.enabled

**Required**

false

**Enable TLS/SSL for Kafka JMX****Description**

Encrypt communication between clients and Kafka JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

jmx.ssl.enabled

**Default Value**

false

**API Name**

jmx.ssl.enabled

**Required**

false

**Enable HTTP Metric Report Basic Authentication****Description**

Enable Basic Authentication for Kafka Metric HTTP Endpoint.

**Related Name**

kafka.http.metrics.authentication.enabled

**Default Value**

false

**API Name**

kafka.http.metrics.authentication.enabled

**Required**

false

**HTTP Metric Report Host****Description**

The host that the HTTP metric reporter binds to.

**Related Name**

kafka.http.metrics.host

**Default Value**

0.0.0.0

**API Name**

kafka.http.metrics.host

**Required**

false

**HTTP Metric Report Password****Description**

The password used for Basic Authentication.

**Related Name**

kafka.http.metrics.password

**Default Value****API Name**

kafka.http.metrics.password

**Required**

false

**SSL Encryption For HTTP Metric Reporter****Description**

Enable SSL Encryption for HTTP Metrics Endpoint. IMPORTANT: SSL encryption will be enabled if ssl\_enabled config is enabled as well!

**Related Name**

`kafka.http.metrics.ssl.enabled`**Default Value**`false`**API Name**`kafka.http.metrics.ssl.enabled`**Required**`false`**HTTP Metric Report User****Description**

The username used for Basic Authentication.

**Related Name**`kafka.http.metrics.user`**Default Value****API Name**`kafka.http.metrics.user`**Required**`false`**Data Directories****Description**

A list of one or more directories in which Kafka data is stored.. Each new partition created is placed in the directory that currently has the least amount of partitions.. Each directory should be on its own separate drive.

**Related Name**`log.dirs`**Default Value**`/var/local/kafka/data`**API Name**`log.dirs`**Required**`true`**Data Retention Size****Description**

The amount of data to retain in the log for each topic-partition. This is the limit per partition. Multiply it by the number of partitions to get the total amount of data retained for the topic. This property can take -1 as a value, which is interpreted as unlimited. If both `log.retention.ms` and `log.retention.bytes` are set, a segment is deleted when either limit is exceeded.

**Related Name**`log.retention.bytes`**Default Value**`-1 B`**API Name**`log.retention.bytes`

<b>Required</b>
false

Data Retention Check Interval

<b>Description</b>
The frequency, in milliseconds, that the log cleaner checks whether any log segment is eligible for deletion, per retention policies.
<b>Related Name</b>
log.retention.check.interval.ms
<b>Default Value</b>
5 minute(s)
<b>API Name</b>
log.retention.check.interval.ms
<b>Required</b>
false

Data Retention Time

<b>Description</b>
The maximum time before a new log segment is rolled out. If both log.retention.ms and log.retention.bytes are set, a segment is deleted when either limit is exceeded. This property can take -1 as a value, which is interpreted as unlimited.
<b>Related Name</b>
log.retention.ms
<b>Default Value</b>
7 day(s)
<b>API Name</b>
log.retention.ms
<b>Required</b>
true

Data Log Roll Time

<b>Description</b>
The maximum time before a new log segment is rolled out.
<b>Related Name</b>
log.roll.ms
<b>Default Value</b>
<b>API Name</b>
log.roll.ms
<b>Required</b>
false

Segment File Size

<b>Description</b>
The log for a topic partition is stored as a directory of segment files. This setting controls the size to which a segment file can grow before a new segment is rolled over in the log. This value has to be larger than message.max.bytes.

**Related Name**

log.segment.bytes

**Default Value**

1 GiB

**API Name**

log.segment.bytes

**Required**

false

**Maximum Connections per IP Address****Description**

Maximum number of connections allowed from each IP address.

**Related Name**

max.connections.per.ip

**Default Value****API Name**

max.connections.per.ip

**Required**

false

**Number of I/O Threads****Description**

The number of I/O threads that the server uses for executing requests. You should have at least as many threads as you have disks.

**Related Name**

num.io.threads

**Default Value**

8

**API Name**

num.io.threads

**Required**

false

**Number of Network Threads****Description**

Number of threads that the server uses to handle incoming requests and outgoing responses.

**Related Name**

num.network.threads

**Default Value**

8

**API Name**

num.network.threads

**Required**

false

### Number of Recovery Threads per data directory

**Description**

Number of threads per data directory that the server uses for log recovery during startup and log flushing during shutdown. Increasing this value may improve broker startup performance if you have a high number of segments. The total number of recovery threads (number of threads per data dir \* number of data dirs) should not exceed the number of CPU cores. The default value is 1.

**Related Name**

num.recovery.threads.per.data.dir

**Default Value**

1

**API Name**

num.recovery.threads.per.data.dir

**Required**

false

### Number of Alter Log Dir Threads

**Description**

Number of threads that the server uses to move data between log directories. The default value of this property is the same as the number of log directories.

**Related Name**

num.replica.alter.log.dirs.threads

**Default Value****API Name**

num.replica.alter.log.dirs.threads

**Required**

false

### Ranger Kafka Plugin Conf Path

**Description**

Staging directory for Ranger Kafka Plugin Configuration. This should generally not be changed.

**Related Name**

ranger\_kafka\_plugin\_conf\_path

**Default Value**

/etc/ranger/kafka-plugin

**API Name**

ranger\_kafka\_plugin\_conf\_path

**Required**

true

### Ranger Kafka Plugin Audit Hdfs Spool Directory Path

**Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

xasecure.audit.destination.hdfs.batch.filespool.dir

**Default Value**

/var/log/kafka/audit/hdfs/spool

**API Name**

ranger\_kafka\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Ranger Kafka Plugin Policy Cache Directory Path****Description**

The directory where Ranger security policies are cached locally.

**Related Name**

ranger.plugin.kafka.policy.cache.dir

**Default Value**

/var/lib/ranger/kafka/policy-cache

**API Name**

ranger\_kafka\_plugin\_policy\_cache\_directory

**Required**

true

**Ranger Kafka Plugin Audit Solr Spool Directory Path****Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**

xasecure.audit.destination.solr.batch.filespool.dir

**Default Value**

/var/log/kafka/audit/solr/spool

**API Name**

ranger\_kafka\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Ranger Plugin Trusted Proxy IP Address****Description**

Accepts a list of IP addresses of proxy servers for trusting.

**Related Name**

ranger.plugin.kafka.trusted.proxy.ipaddress

**Default Value****API Name**

ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

false

**Ranger Plugin Use X-Forwarded For IP Address****Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

**Related Name**

ranger.plugin.kafka.use.x-forwarded-for.ipaddress

**Default Value**

false

**API Name**

ranger\_plugin\_use\_x\_forwarded\_for\_ipaddress

**Required**

false

**Inter Broker Protocol****Description**

Protocol to be used for inter-broker communication. INFERRED uses the same protocol that is configured for external clients.

**Related Name**

security.inter.broker.protocol

**Default Value**

INFERRED

**API Name**

security.inter.broker.protocol

**Required**

false

**Socket receive buffer size.****Description**

The SO\_RCVBUF buffer of the socket server sockets. If the value is -1, the OS default will be used.

**Related Name**

socket.receive.buffer.bytes

**Default Value**

100 KiB

**API Name**

socket.receive.buffer.bytes

**Required**

false

**Socket receive buffer size.****Description**

The maximum number of bytes in a socket request

**Related Name**

socket.request.max.bytes

**Default Value**

100 MiB

**API Name**

socket.request.max.bytes

**Required**

false

Socket send buffer size.

Description

The SO\_SNDBUF buffer of the socket server sockets. If the value is -1, the OS default will be used.

Related Name

socket.send.buffer.bytes

Default Value

100 KiB

API Name

socket.send.buffer.bytes

Required

false

SSL Client Authentication

Description

Client authentication mode for SSL connections. This configuration has three valid values, "required", "requested" and "none". If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

Related Name

ssl.client.auth

Default Value

none

API Name

ssl.client.auth

Required

false

Enable Zookeeper ACL

Description

Enables brokers to set SASL ACL on zookeeper nodes if authenticate.zookeeper.connection is enabled.

Related Name

zookeeper.set.acl

Default Value

true

API Name

zookeeper.set.acl

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Ports and Addresses

### Advertised Port

**Description**

The port to give out to producers, consumers, and other brokers to use in establishing connections. This only needs to be set if this port is different from the port the server should bind to.

**Related Name**

advertised.port

**Default Value****API Name**

advertised.port

**Required**

false

### JMX Port

**Description**

Port for JMX.

**Related Name**

jmx\_port

**Default Value**

9393

**API Name**

jmx\_port

**Required**

false

### HTTP Metric Report Port

**Description**

The port that the HTTP metric reporter listens on.

**Related Name**

kafka.http.metrics.port

**Default Value**

24042

**API Name**

kafka.http.metrics.port

<b>Required</b>
false

TCP Port

<b>Description</b>
Kafka broker port.
<b>Related Name</b>
port
<b>Default Value</b>
9092
<b>API Name</b>
port
<b>Required</b>
false

TLS/SSL Port

<b>Description</b>
Kafka broker secure port.
<b>Related Name</b>
ssl_port
<b>Default Value</b>
9093
<b>API Name</b>
ssl_port
<b>Required</b>
false

Resource Management

Cgroup CPU Shares

<b>Description</b>
Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.
<b>Related Name</b>
cpu.shares
<b>Default Value</b>
1024
<b>API Name</b>
rm_cpu_shares
<b>Required</b>
true

Custom Control Group Resources (overrides Cgroup settings)

<b>Description</b>
--------------------

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`  
 \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

`custom.cgroups`

**Default Value****API Name**

`rm_custom_resources`

**Required**

`false`

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

`blkio.weight`

**Default Value**

`500`

**API Name**

`rm_io_weight`

**Required**

`true`

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

`memory.limit_in_bytes`

**Default Value**

`-1 MiB`

**API Name**

`rm_memory_hard_limit`

**Required**

`true`

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Kafka Broker TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka Broker might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Kafka Broker TLS/SSL Trust Store Password****Description**

The password for the Kafka Broker TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.truststore.password.generator

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Kafka Broker****Description**

Encrypt communication between clients and Kafka Broker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).
<b>Related Name</b>
ssl_enabled
<b>Default Value</b>
false
<b>API Name</b>
ssl_enabled
<b>Required</b>
false

**Kafka Broker TLS/SSL Server Keystore Key Password**

<b>Description</b>
The password that protects the private key contained in the keystore used when Kafka Broker is acting as a TLS/SSL server.
<b>Related Name</b>
ssl.key.password.generator
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_keypassword
<b>Required</b>
false

**Kafka Broker TLS/SSL Server Keystore File Location**

<b>Description</b>
The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka Broker is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.
<b>Related Name</b>
ssl.keystore.location
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_location
<b>Required</b>
false

**Kafka Broker TLS/SSL Server Keystore File Password**

<b>Description</b>
The password for the Kafka Broker keystore file.
<b>Related Name</b>
ssl.keystore.password.generator
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_password

<b>Required</b>
false

Stacks Collection

Stacks Collection Data Retention

<b>Description</b>
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>
stacks_collection_data_retention
<b>Default Value</b>
100 MiB
<b>API Name</b>
stacks_collection_data_retention
<b>Required</b>
false

Stacks Collection Directory

<b>Description</b>
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>
stacks_collection_directory
<b>Default Value</b>
<b>API Name</b>
stacks_collection_directory
<b>Required</b>
false

Stacks Collection Enabled

<b>Description</b>
Whether or not periodic stacks collection is enabled.
<b>Related Name</b>
stacks_collection_enabled
<b>Default Value</b>
false
<b>API Name</b>
stacks_collection_enabled
<b>Required</b>
true

Stacks Collection Frequency

<b>Description</b>
--------------------

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Parameter Validation: Advertised Host

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advertised Host parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_advertised.host.name

**Required**

true

#### Suppress Parameter Validation: Advertised Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advertised Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_advertised.port

**Required**

true

**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_atlas-application.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Broker ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Broker ID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker.id

**Required**

true

**Suppress Parameter Validation: Additional Broker Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Broker Java Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker\_java\_opts

**Required**

true

**Suppress Parameter Validation: Java Heap Size of Broker****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Broker parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user

**Required**

true

**Suppress Parameter Validation: Password of user with read-write access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user.passwd

**Required**

true

**Suppress Parameter Validation: Name of User with read-only access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with read-only access to the JMX Agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user

**Required**

true

**Suppress Parameter Validation: Password of User with read-only Access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with read-only Access to the JMX agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user.passwd

**Required**

true

**Suppress Parameter Validation: JMX Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_port

**Required**

true

**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka-monitoring.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: HTTP Metric Report Host****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metric Report Host parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.host

**Required**

true

**Suppress Parameter Validation: HTTP Metric Report Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metric Report Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.password

**Required**

true

**Suppress Parameter Validation: HTTP Metric Report Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metric Report Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.port

**Required**

true

**Suppress Parameter Validation: HTTP Metric Report User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metric Report User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.user

**Required**

true

**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_broker\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Data Directories****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Data Directories parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log.dirs

**Required**

true

**Suppress Parameter Validation: Segment File Size****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Segment File Size parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log.segment.bytes

**Required**

true

**Suppress Parameter Validation: Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Broker Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Number of I/O Threads****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of I/O Threads parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.io.threads

**Required**

true

**Suppress Parameter Validation: Number of Network Threads****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Network Threads parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.network.threads

**Required**

true

**Suppress Parameter Validation: Number of Recovery Threads per data directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Recovery Threads per data directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.recovery.threads.per.data.dir

**Required**

true

**Suppress Parameter Validation: Number of Alter Log Dir Threads****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Alter Log Dir Threads parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.replica.alter.log.dirs.threads

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: TCP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TCP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_port

**Required**

true

**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-security.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Kafka Plugin Conf Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_conf\_path

**Required**

true

### Suppress Parameter Validation: Ranger Kafka Plugin Audit Hdfs Spool Directory Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Audit Hdfs Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Kafka Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Policy Cache Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Kafka Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Audit Solr Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Broker TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Kafka Broker TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: TLS/SSL Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the TLS/SSL Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_port

**Required**

true

**Suppress Parameter Validation: Kafka Broker TLS/SSL Server Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Server Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Kafka Broker TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_ssl_server_keystore_location
<b>Required</b>
true

**Suppress Parameter Validation: Kafka Broker TLS/SSL Server Keystore File Password**

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker TLS/SSL Server Keystore File Password parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ssl_server_keystore_password
<b>Required</b>
true

**Suppress Parameter Validation: Stacks Collection Directory**

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_stacks_collection_directory
<b>Required</b>
true

**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for zookeeper-ssl.properties**

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for zookeeper-ssl.properties parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_zookeeper-ssl.properties_role_safety_valve
<b>Required</b>
true

**Suppress Health Test: Lagging Replicas Test**

<b>Description</b>
--------------------

Whether to suppress the results of the Lagging Replicas Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka-kafka\_broker-7.2.0-lagging\_replicas

**Required**

true

**Suppress Health Test: Network Processor Capacity Test****Description**

Whether to suppress the results of the Network Processor Capacity Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka-kafka\_broker-7.2.0-network\_processor\_capacity

**Required**

true

**Suppress Health Test: Offline Directory Test****Description**

Whether to suppress the results of the Offline Directory Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka-kafka\_broker-7.2.0-offline\_directories

**Required**

true

**Suppress Health Test: Offline Partitions Test****Description**

Whether to suppress the results of the Offline Partitions Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka-kafka\_broker-7.2.0-offline\_partitions

**Required**

true

**Suppress Health Test: Request Handler Capacity Test****Description**

Whether to suppress the results of the Request Handler Capacity Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka-kafka\_broker-7.2.0-request\_handler\_capacity

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_broker\_unexpected\_exits

**Required**

true

**Kafka Connect****Advanced****Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties****Description**

For advanced use only. A string to be inserted into connect-distributed.properties for this role only.

**Related Name****Default Value****API Name**

connect-distributed.properties\_role\_safety\_valve

**Required**

false

**Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KAFKA\_CONNECT\_role\_env\_safety\_valve

**Required**

false

**Kafka Connect Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs****Kafka Connect Log Directory****Description**

The log directory for log files of the role Kafka Connect.

**Related Name**

kafka\_connect.log4j.dir

**Default Value**

	/var/log/kafka
API Name	
	log_dir
Required	
	false

Kafka Connect Logging Threshold

Description	The minimum log level for Kafka Connect logs
Related Name	
Default Value	INFO
API Name	
	log_threshold
Required	
	false

Kafka Connect Maximum Log File Backups

Description	The maximum number of rolled log files to keep for Kafka Connect logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	
	max_log_backup_index
Required	
	false

Kafka Connect Max Log Size

Description	The maximum size, in megabytes, per log file for Kafka Connect logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	
	max_log_size
Required	
	false

Monitoring

Enable Health Alerts for this Role

Description
-------------

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

kafka\_connect\_fd\_thresholds

**Required**

false

### Kafka Connect Host Health Test

**Description**

When computing the overall Kafka Connect health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

kafka\_connect\_host\_health\_enabled

**Required**

false

### Kafka Connect Process Health Test

**Description**

Enables the health test that the Kafka Connect's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

kafka\_connect\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

`process_swap_memory_rate_thresholds`

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

`common.process.swap_memory_rate_window`

**Default Value**

5 minute(s)

**API Name**

`process_swap_memory_rate_window`

**Required**

false

## Process Swap Memory Thresholds

### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

### Related Name

### Default Value

Warning: 200 B, Critical: Never

### API Name

process\_swap\_memory\_thresholds

### Required

false

## Role Triggers

### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

### Related Name

### Default Value

[]

### API Name

role\_triggers

### Required

true

## Unexpected Exits Thresholds

### Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

### Related Name

### Default Value

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Bootstrap Servers****Description**

A comma-separated list of IP:port or hostname:port pairs of the brokers that Kafka Connect should connect to. The brokers you specify here must be brokers that are running in the same cluster that Kafka Connect is deployed in. Cloudera recommends that you specify multiple brokers for high availability.

**Related Name**

bootstrap.servers

**Default Value****API Name**

bootstrap.servers

**Required**

true

**Configuration Storage Topic Replication Factor****Description**

Replication factor used when creating the configuration storage topic.

**Related Name**

config.storage.replication.factor

**Default Value**

1

**API Name**

config.storage.replication.factor

**Required**

true

**Configuration Storage Topic Name****Description**

The name of the Kafka topic which stores connector and task configurations.

**Related Name**

config.storage.topic

**Default Value**

connect-configs

**API Name**

config.storage.topic

**Required**

true

**Cluster Group Id****Description**

A unique name used to identify the Connect cluster group. The name specified here cannot conflict with consumer group IDs.

**Related Name**

group.id

**Default Value**

connect-cluster

**API Name**

group.id

**Required**

true

**Include Connector Context In Logs****Description**

If this is enabled, the log layout includes connector-specific and task-specific information in the log message, where appropriate. This makes it easier to identify those log messages that apply to a specific connector.

**Related Name**

include.connector.context

**Default Value**

true

**API Name**

include.connector.context

**Required**

false

**Kafka Connect Configuration Directory****Description**

Directory with all configurations for Kafka Connect daemons.

**Related Name**

kafka.connect.conf.directory

**Default Value**

`$CONF_DIR`**API Name**`kafka.connect.conf.directory`**Required**`true`**Java Home Path Override****Description**

Java Home Path Override for Kafka Connect.

**Related Name**`kafka.connect.jdk.home`**Default Value****API Name**`kafka.connect.jdk.home`**Required**`false`**Kafka Connect Heap Java Options****Description**

Memory heap params while using Kafka Connect.

**Related Name**`KAFKA_HEAP_OPTS`**Default Value**`-Xms256M -Xmx2G`**API Name**`KAFKA_HEAP_OPTS`**Required**`false`**Key Converter****Description**

The key converter class used to convert between the Kafka Connect format and the serialized form that is written to Kafka. The key converter controls the format of the keys in the messages written to or read from Kafka. Since the key converter is independent of the connectors, it allows any connector to work with any serialization format. Examples of common formats include JSON and Avro.

**Related Name**`key.converter`**Default Value**`org.apache.kafka.connect.json.JsonConverter`**API Name**`key.converter`**Required**`true`

### Enable Key Converter Schema

**Description**

Enables the key converter to include schemas within each of the serialized keys.

**Related Name**

key.converter.schemas.enable

**Default Value**

true

**API Name**

key.converter.schemas.enable

**Required**

true

### Jetty Metrics Port

**Description**

Jetty Metrics port to expose JMX Json.

**Related Name**

metrics.jetty.server.port

**Default Value**

28084

**API Name**

metrics.jetty.server.port

**Required**

true

### Offset Flush Interval

**Description**

The interval, in milliseconds, at which Kafka Connect attempts to commit task offsets.

**Related Name**

offset.flush.interval.ms

**Default Value**

1 minute(s)

**API Name**

offset.flush.interval.ms

**Required**

true

### Offset Storage Topic Replication Factor

**Description**

Replication factor used when creating the offset storage topic.

**Related Name**

offset.storage.replication.factor

**Default Value**

1

**API Name**

offset.storage.replication.factor

**Required**

true

**Offset Storage Topic Name****Description**

The name of the Kafka topic which stores connector offsets. If this topic does not exist, Kafka Connect will attempt to create it. Alternatively, you can also choose to create the topic manually before starting Kafka Connect.

**Related Name**

offset.storage.topic

**Default Value**

connect-offsets

**API Name**

offset.storage.topic

**Required**

true

**Plugin Path****Description**

Path to directories immediately containing jars with plugins and their dependencies, uber-jars with plugins and their dependencies and classes of plugins and their dependencies.

**Related Name**

plugin.path

**Default Value**

/var/lib/kafka

**API Name**

plugin.path

**Required**

false

**Rest Extension Classes****Description**

Comma-separated names of ConnectRestExtension classes, loaded and called in the order specified. Typically used to add custom capability like logging, security, etc.

**Related Name**

rest.extension.classes

**Default Value**

com.cloudera.dim.kafka.metrics.JmxJsonMetricsRestExtension

**API Name**

rest.extension.classes

**Required**

true

**Kafka Connect Rest Port****Description**

The port that the REST API listens on for connection requests. This port is used by Kafka Connect if TLS/SSL is disabled.

**Related Name**

rest.port

**Default Value**

28083

**API Name**

rest.port

**Required**

true

**Secure Kafka Connect Rest Port****Description**

The secure port that the REST API listens on for connection requests. This port is used by Kafka Connect if TLS/SSL is enabled.

**Related Name**

secure.rest.port

**Default Value**

28085

**API Name**

secure.rest.port

**Required**

true

**SSL Client Authentication****Description**

Client authentication mode for SSL connections. If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

**Related Name**

ssl.client.auth

**Default Value**

none

**API Name**

ssl.client.auth

**Required**

false

**Status Storage Topic Replication Factor****Description**

Replication factor used when creating the offset storage topic.

**Related Name**

status.storage.replication.factor

**Default Value**

1

**API Name**

status.storage.replication.factor

**Required**

true

**Status Storage Topic Name****Description**

The name of the Kafka topic which stores connector and task status.

**Related Name**

status.storage.topic

**Default Value**

connect-status

**API Name**

status.storage.topic

**Required**

true

**Value Converter****Description**

The value converter class used to convert between the Kafka Connect format and the serialized form that is written to Kafka. The value converter controls the format of the values in the messages written to or read from Kafka. Since the value converter is independent of the connectors, it allows any connector to work with any serialization format. Examples of common formats include JSON and Avro.

**Related Name**

value.converter

**Default Value**

org.apache.kafka.connect.json.JsonConverter

**API Name**

value.converter

**Required**

true

**Enable Value Converter Schema****Description**

Enables the value converter to include schemas within each of the serialized values.

**Related Name**

value.converter.schemas.enable

**Default Value**

true

**API Name**

value.converter.schemas.enable

**Required**

true

Performance

Maximum Process File Descriptors

Description	If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
Related Name	
Default Value	
API Name	rlimit_fds
Required	false

Ports and Addresses

Kafka Connect Prometheus Metrics Port

Description	Port for exposing Kafka Connect metrics as Prometheus metrics / OpenMetrics format.
Related Name	connect.prometheus.metrics.port
Default Value	28086
API Name	connect.prometheus.metrics.port
Required	false

Resource Management

Cgroup CPU Shares

Description	Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.
Related Name	cpu.shares
Default Value	1024
API Name	rm_cpu_shares
Required	true

Custom Control Group Resources (overrides Cgroup settings)

Description	
-------------	--

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the `cgexec` command: `resource1,resource2:path1` or `resource3:path2` For example: `'cpu,memory:my/path blkio:my2/path2'`  
 \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

`custom.cgroups`

**Default Value****API Name**

`rm_custom_resources`

**Required**

`false`

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

`blkio.weight`

**Default Value**

`500`

**API Name**

`rm_io_weight`

**Required**

`true`

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

`memory.limit_in_bytes`

**Default Value**

`-1 MiB`

**API Name**

`rm_memory_hard_limit`

**Required**

`true`

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Kafka Connect TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka Connect might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Kafka Connect TLS/SSL Trust Store Password****Description**

The password for the Kafka Connect TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.truststore.password.generator

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Kafka Connect****Description**

Encrypt communication between clients and Kafka Connect using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Kafka Connect TLS/SSL Server Keystore Key Password****Description**

The password that protects the private key contained in the keystore used when Kafka Connect is acting as a TLS/SSL server.

**Related Name**

ssl.key.password.generator

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Kafka Connect TLS/SSL Server Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka Connect is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

ssl.keystore.location

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Kafka Connect TLS/SSL Server Keystore File Password****Description**

The password for the Kafka Connect keystore file.

**Related Name**

ssl.keystore.password.generator

**Default Value****API Name**

ssl\_server\_keystore\_password

<b>Required</b>
false

Stacks Collection

Stacks Collection Data Retention

<b>Description</b>
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>
stacks_collection_data_retention
<b>Default Value</b>
100 MiB
<b>API Name</b>
stacks_collection_data_retention
<b>Required</b>
false

Stacks Collection Directory

<b>Description</b>
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>
stacks_collection_directory
<b>Default Value</b>
<b>API Name</b>
stacks_collection_directory
<b>Required</b>
false

Stacks Collection Enabled

<b>Description</b>
Whether or not periodic stacks collection is enabled.
<b>Related Name</b>
stacks_collection_enabled
<b>Default Value</b>
false
<b>API Name</b>
stacks_collection_enabled
<b>Required</b>
true

Stacks Collection Frequency

<b>Description</b>
--------------------

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Parameter Validation: Bootstrap Servers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Bootstrap Servers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_bootstrap.servers

**Required**

true

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Configuration Storage Topic Replication Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Configuration Storage Topic Replication Factor parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_config.storage.replication.factor

**Required**

true

**Suppress Parameter Validation: Configuration Storage Topic Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Configuration Storage Topic Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_config.storage.topic

**Required**

true

**Suppress Parameter Validation: Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_connect-distributed.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Connect Prometheus Metrics Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Prometheus Metrics Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_connect.prometheus.metrics.port

**Required**

true

**Suppress Parameter Validation: Cluster Group Id****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cluster Group Id parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_group.id

**Required**

true

**Suppress Parameter Validation: Kafka Connect Configuration Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Configuration Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.connect.conf.directory

**Required**

true

**Suppress Parameter Validation: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.connect.jdk.home

**Required**

true

**Suppress Parameter Validation: Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_connect\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Connect Heap Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Heap Java Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_heap\_opts

**Required**

true

**Suppress Parameter Validation: Key Converter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Converter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_key.converter

**Required**

true

**Suppress Parameter Validation: Kafka Connect Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka Connect Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Jetty Metrics Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Jetty Metrics Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics.jetty.server.port

**Required**

true

**Suppress Parameter Validation: Offset Storage Topic Replication Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Storage Topic Replication Factor parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_offset.storage.replication.factor

**Required**

true
------

### Suppress Parameter Validation: Offset Storage Topic Name

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Storage Topic Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_offset.storage.topic

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Plugin Path

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Plugin Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_plugin.path

**Required**

true

### Suppress Parameter Validation: Rest Extension Classes

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rest Extension Classes parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_rest.extension.classes`**Required**`true`**Suppress Parameter Validation: Kafka Connect Rest Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Rest Port parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_rest.port`**Required**`true`**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_rm_custom_resources`**Required**`true`**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_role_triggers`**Required**`true`**Suppress Parameter Validation: Secure Kafka Connect Rest Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Kafka Connect Rest Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_secure.rest.port

**Required**

true

**Suppress Parameter Validation: Kafka Connect TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Kafka Connect TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Kafka Connect TLS/SSL Server Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Kafka Connect TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Kafka Connect TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Status Storage Topic Replication Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Status Storage Topic Replication Factor parameter.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_status.storage.replication.factor
<b>Required</b>
true

Suppress Parameter Validation: Status Storage Topic Name

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Status Storage Topic Name parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_status.storage.topic
<b>Required</b>
true

Suppress Parameter Validation: Value Converter

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Value Converter parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_value.converter
<b>Required</b>
true

Suppress Health Test: Audit Pipeline Test

<b>Description</b>
Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_health_suppression_kafka_kafka_connect_audit_health
<b>Required</b>
true

Suppress Health Test: File Descriptors

<b>Description</b>
--------------------

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_connect\_unexpected\_exits

**Required**

true

## Kafka MirrorMaker

### Advanced

#### Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KAFKA\_MIRROR\_MAKER\_role\_env\_safety\_valve

**Required**

false

#### Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

#### Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_consumers.properties

**Description**

For advanced use only. A string to be inserted into mirror\_maker\_consumers.properties for this role only.

**Related Name****Default Value**

**API Name**

mirror\_maker\_consumers.properties\_role\_safety\_valve

**Required**

false

**Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_producers.properties****Description**

For advanced use only. A string to be inserted into mirror\_maker\_producers.properties for this role only.

**Related Name****Default Value****API Name**

mirror\_maker\_producers.properties\_role\_safety\_valve

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_client.properties****Description**

For advanced use only. A string to be inserted into ssl\_client.properties for this role only.

**Related Name****Default Value****API Name**

ssl\_client.properties\_role\_safety\_valve

**Required**

false

**Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_server.properties****Description**

For advanced use only. A string to be inserted into ssl\_server.properties for this role only.

**Related Name****Default Value****API Name**

ssl\_server.properties\_role\_safety\_valve

**Required**

false

**Logs****Kafka MirrorMaker Log Directory****Description**

The log directory for log files of the role Kafka MirrorMaker.

**Related Name**

kafka\_mirrormaker.log4j.dir

**Default Value**

/var/log/kafka

**API Name**

log\_dir

**Required**

false

**Kafka MirrorMaker Logging Threshold****Description**

The minimum log level for Kafka MirrorMaker logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Kafka MirrorMaker Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Kafka MirrorMaker logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Kafka MirrorMaker Max Log Size****Description**

The maximum size, in megabytes, per log file for Kafka MirrorMaker logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

File Descriptor Monitoring Thresholds

Description	The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.
Related Name	
Default Value	Warning: 50.0 %, Critical: 70.0 %
API Name	kafka_mirror_maker_fd_thresholds
Required	false

Kafka MirrorMaker Host Health Test

Description	When computing the overall Kafka MirrorMaker health, consider the host's health.
Related Name	
Default Value	true
API Name	

kafka_mirror_maker_host_health_enabled
<b>Required</b>
false

**Kafka MirrorMaker Process Health Test**

<b>Description</b>
Enables the health test that the Kafka MirrorMaker's process state is consistent with the role configuration
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
kafka_mirror_maker_scm_health_enabled
<b>Required</b>
false

**Log Directory Free Space Monitoring Absolute Thresholds**

<b>Description</b>
The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
<b>Related Name</b>
<b>Default Value</b>
Warning: 10 GiB, Critical: 5 GiB
<b>API Name</b>
log_directory_free_space_absolute_thresholds
<b>Required</b>
false

**Log Directory Free Space Monitoring Percentage Thresholds**

<b>Description</b>
The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.
<b>Related Name</b>
<b>Default Value</b>
Warning: Never, Critical: Never
<b>API Name</b>
log_directory_free_space_percentage_thresholds
<b>Required</b>
false

**Metric Filter**

<b>Description</b>
Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

`process_swap_memory_rate_thresholds`

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

`common.process.swap_memory_rate_window`

**Default Value**

5 minute(s)

**API Name**

`process_swap_memory_rate_window`

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

### Other

### Abort on Send Failure

**Description**

Stop the entire mirror maker when a send failure occurs.

**Related Name**

`abort.on.send.failure`

**Default Value**

true

**API Name**

`abort.on.send.failure`

**Required**

false

### Producer Batch Size

**Description**

This configuration controls the batch size in bytes. The producer will attempt to batch records together into fewer requests whenever multiple records are being sent to the same partition. This helps performance on both the client and the server.

**Related Name**

`batch.size`

**Default Value**

16 KiB

**API Name**

batch.size
<b>Required</b>
false

Destination Broker List

<b>Description</b>
Comma-separated list of IP:port (or hostname:port) pairs of brokers on destination cluster. This should be more than one, for high availability, but there's no need to list all brokers.
<b>Related Name</b>
bootstrap.servers
<b>Default Value</b>
<b>API Name</b>
bootstrap.servers
<b>Required</b>
true

Producer Buffer Memory

<b>Description</b>
The total bytes of memory the producer can use to buffer records waiting to be sent to the server.
<b>Related Name</b>
buffer.memory
<b>Default Value</b>
32 MiB
<b>API Name</b>
buffer.memory
<b>Required</b>
false

Producer Compression Type

<b>Description</b>
The compression type for all data generated by the producer.
<b>Related Name</b>
compression.type
<b>Default Value</b>
none
<b>API Name</b>
compression.type
<b>Required</b>
false

MirrorMaker Consumer Rebalance Listener

<b>Description</b>
A consumer rebalance listener of the ConsumerRebalanceListener type. Invoked when MirrorMaker's consumer rebalances.
<b>Related Name</b>

consumer.rebalance.listener

**Default Value****API Name**

consumer.rebalance.listener

**Required**

false

**MirrorMaker Consumer Rebalance Listener Arguments****Description**

Arguments used by MirrorMaker consumer rebalance listener.

**Related Name**

consumer.rebalance.listener.args

**Default Value****API Name**

consumer.rebalance.listener.args

**Required**

false

**Consumer Request Timeout****Description**

The maximum amount of time the consumer will wait for the response of a request. If the response is not received before the timeout elapses, the consumer will resend the request if necessary or fail the request if retries are exhausted.

**Related Name**

consumer.request.timeout.ms

**Default Value**

40 second(s)

**API Name**

consumer.request.timeout.ms

**Required**

false

**Destination Kafka Cluster's Security Protocol****Description**

Protocol used for communication with destination Kafka cluster.

**Related Name**

destination.security.protocol

**Default Value**

PLAINTEXT

**API Name**

destination.security.protocol

**Required**

false

**Destination Kafka Cluster's Client Auth****Description**

Only required if destination Kafka cluster requires client authentication.

**Related Name**

destination.ssl.client.auth

**Default Value**

false

**API Name**

destination.ssl.client.auth

**Required**

false

**Consumer Minimum Fetch Size****Description**

The minimum amount of data the server should return for a fetch request. If insufficient data is available, the request will wait for that much data to accumulate before answering the request. Setting this property to something greater than 1 will cause the server to wait for larger amounts of data to accumulate which can improve server throughput a bit at the cost of some additional latency.

**Related Name**

fetch.min.bytes

**Default Value**

1 B

**API Name**

fetch.min.bytes

**Required**

false

**Consumer Group ID****Description**

Name of the consumer group used by MirrorMaker. When multiple role instances are configured with the same topics and same group ID, the role instances load-balance replication for the topics. When multiple role instances are configured with the same topics but different group ID, each role instance replicates all the events for those topics - this can be used to replicate the source cluster into multiple destination clusters.

**Related Name**

group.id

**Default Value**

cloudera\_mirrormaker

**API Name**

group.id

**Required**

false

**Enable Authenticated Communication with the JMX Agent****Description**

Enables Authenticated Communication with the JMX Agent.

**Related Name**

jmx.auth.enabled

**Default Value**

false

**API Name**

jmx.auth.enabled

**Required**

false

**Name of User with Read-Write Access to the JMX Agent****Description**

Specifies the name of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.control.user

**Default Value**

controlRole

**API Name**

jmx.control.user

**Required**

false

**Password of user with read-write access to the JMX agent****Description**

Specifies the password of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.control.user.passwd

**Default Value****API Name**

jmx.control.user.passwd

**Required**

false

**Name of User with read-only access to the JMX Agent****Description**

Specifies the name of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.monitor.user

**Default Value**

monitorRole

**API Name**

jmx.monitor.user

**Required**

false

**Password of User with read-only Access to the JMX agent****Description**

Specifies the password of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

**Related Name**

jmx.monitor.user.passwd

**Default Value****API Name**

jmx.monitor.user.passwd

**Required**

false

**Enable TLS client authentication for JMX port****Description**

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the ZooKeeper JMX TLS/SSL Server Trust Store file or the global trust store.

**Related Name**

jmx.ssl.client.auth.enabled

**Default Value**

false

**API Name**

jmx.ssl.client.auth.enabled

**Required**

false

**Enable TLS/SSL for Kafka JMX****Description**

Encrypt communication between clients and Kafka JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

jmx.ssl.enabled

**Default Value**

false

**API Name**

jmx.ssl.enabled

**Required**

false

**Producer Linger Time****Description**

The upper bound on the delay for batching. Once the producer gets a batch.size worth of records for a partition it will be sent immediately regardless of this setting. However, if fewer than this many

	bytes accumulated for this partition the producer will 'linger' for the specified time waiting for more records to show up.
Related Name	linger.ms
Default Value	0 second(s)
API Name	linger.ms
Required	false

MirrorMaker Message Handler

Description	A MirrorMaker message handler of the MirrorMakerMessageHandler type that will process every record in-between producer and consumer.
Related Name	message.handler
Default Value	
API Name	message.handler
Required	false

MirrorMaker Message Handler Arguments

Description	Arguments used by MirrorMaker message handler.
Related Name	message.handler.args
Default Value	
API Name	message.handler.args
Required	false

Additional MirrorMaker Java Options

Description	These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.
Related Name	mirror_maker_java_opts
Default Value	-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC -Djava.awt.headless=true -

Djava.net.preferIPv4Stack=true -Dcom.sun.management.jmxremote.host=127.0.0.1 -  
Dcom.sun.management.jmxremote.local.only=true -Djava.rmi.server.hostname=127.0.0.1

**API Name**

mirror\_maker\_java\_opts

**Required**

false

**Java Heap Size of MirrorMaker****Description**

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in megabytes.

**Related Name**

mirror\_maker\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

mirror\_maker\_max\_heap\_size

**Required**

false

**Number of Consumer Threads****Description**

Number of consumer threads.

**Related Name**

num.streams

**Default Value**

1

**API Name**

num.streams

**Required**

false

**Offset Commit Interval****Description**

Offset commit interval in milliseconds.

**Related Name**

offset.commit.interval.ms

**Default Value**

60000

**API Name**

offset.commit.interval.ms

**Required**

false

**Producer Request Timeout****Description**

The maximum amount of time the producer will wait for the response of a request. If the response is not received before the timeout elapses, the producer will resend the request if necessary or fail the request if retries are exhausted.

**Related Name**

producer.request.timeout.ms

**Default Value**

30 second(s)

**API Name**

producer.request.timeout.ms

**Required**

false

**Consumer Session Timeout****Description**

The timeout used to detect failures when using the group management facilities of Kafka. When the heartbeat of a consumer is not received within the session timeout, the broker will mark the consumer as failed and rebalance the group. Note that the value must be in the allowable range as configured in the broker by `group.min.session.timeout.ms` and `group.max.session.timeout.ms`.

**Related Name**

session.timeout.ms

**Default Value**

30 second(s)

**API Name**

session.timeout.ms

**Required**

false

**Source Broker List****Description**

Comma-separated list of IP:port (or hostname:port) pairs of brokers on source cluster. This should be more than one, for high availability, but there's no need to list all brokers.

**Related Name**

source.bootstrap.servers

**Default Value****API Name**

source.bootstrap.servers

**Required**

true

**Source Kafka Cluster's Security Protocol****Description**

Protocol used for communication with source Kafka cluster.

**Related Name**

source.security.protocol

**Default Value**

PLAINTEXT

**API Name**

source.security.protocol

**Required**

false

### Source Kafka Cluster's Client Auth

**Description**

Only required if the source Kafka cluster requires client authentication.

**Related Name**

source.ssl.client.auth

**Default Value**

false

**API Name**

source.ssl.client.auth

**Required**

false

### Topic Whitelist

**Description**

Regular expression that represents a set of topics to mirror.

**Related Name**

whitelist

**Default Value****API Name**

whitelist

**Required**

true

### Performance

#### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Ports and Addresses

### JMX Port

#### Description

Port for JMX.

#### Related Name

jmx\_port

#### Default Value

9394

#### API Name

jmx\_port

#### Required

false

## Resource Management

### Cgroup CPU Shares

#### Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

#### Related Name

cpu.shares

#### Default Value

1024

#### API Name

rm\_cpu\_shares

#### Required

true

### Custom Control Group Resources (overrides Cgroup settings)

#### Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

#### Related Name

custom.cgroups

#### Default Value

#### API Name

rm\_custom\_resources

#### Required

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

Security

Kafka MirrorMaker TLS/SSL Trust Store File

Description	The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka MirrorMaker might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.
Related Name	ssl.truststore.location
Default Value	
API Name	ssl_client_truststore_location
Required	false

Kafka MirrorMaker TLS/SSL Trust Store Password

Description	The password for the Kafka MirrorMaker TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.
Related Name	ssl.truststore.password.generator
Default Value	
API Name	ssl_client_truststore_password
Required	false

Enable TLS/SSL for Kafka MirrorMaker

Description	Encrypt communication between clients and Kafka MirrorMaker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).
Related Name	ssl_enabled
Default Value	false
API Name	ssl_enabled
Required	false

Kafka MirrorMaker TLS/SSL Server Keystore Key Password

Description	
-------------	--

The password that protects the private key contained in the keystore used when Kafka MirrorMaker is acting as a TLS/SSL server.

**Related Name**

ssl.key.password.generator

**Default Value**

**API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Kafka MirrorMaker TLS/SSL Server Keystore File Location**

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka MirrorMaker is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

ssl.keystore.location

**Default Value**

**API Name**

ssl\_server\_keystore\_location

**Required**

false

**Kafka MirrorMaker TLS/SSL Server Keystore File Password**

**Description**

The password for the Kafka MirrorMaker keystore file.

**Related Name**

ssl.keystore.password.generator

**Default Value**

**API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection**

**Stacks Collection Data Retention**

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks_collection_data_retention
<b>Required</b>
false

Stacks Collection Directory

<b>Description</b>
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>
stacks_collection_directory
<b>Default Value</b>
<b>API Name</b>
stacks_collection_directory
<b>Required</b>
false

Stacks Collection Enabled

<b>Description</b>
Whether or not periodic stacks collection is enabled.
<b>Related Name</b>
stacks_collection_enabled
<b>Default Value</b>
false
<b>API Name</b>
stacks_collection_enabled
<b>Required</b>
true

Stacks Collection Frequency

<b>Description</b>
The frequency with which stacks are collected.
<b>Related Name</b>
stacks_collection_frequency
<b>Default Value</b>
5.0 second(s)
<b>API Name</b>
stacks_collection_frequency
<b>Required</b>
false

Stacks Collection Method

<b>Description</b>
--------------------

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Parameter Validation: Destination Broker List****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Destination Broker List parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_bootstrap.servers

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: MirrorMaker Consumer Rebalance Listener****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Consumer Rebalance Listener parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_consumer.rebalance.listener

**Required**

true

**Suppress Parameter Validation: MirrorMaker Consumer Rebalance Listener Arguments****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Consumer Rebalance Listener Arguments parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_consumer.rebalance.listener.args

**Required**

true

**Suppress Parameter Validation: Consumer Group ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Consumer Group ID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_group.id

**Required**

true

**Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user

**Required**

true

**Suppress Parameter Validation: Password of user with read-write access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user.passwd

**Required**

true

**Suppress Parameter Validation: Name of User with read-only access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with read-only access to the JMX Agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user

**Required**

true

**Suppress Parameter Validation: Password of User with read-only Access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with read-only Access to the JMX agent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user.passwd

**Required**

true

**Suppress Parameter Validation: JMX Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_port

**Required**

true
------

### Suppress Parameter Validation: Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_mirror\_maker\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Kafka MirrorMaker Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: MirrorMaker Message Handler

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Message Handler parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_message.handler

**Required**

true

**Suppress Parameter Validation: MirrorMaker Message Handler Arguments****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Message Handler Arguments parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_message.handler.args

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_consumers.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_consumers.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_consumers.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Additional MirrorMaker Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional MirrorMaker Java Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_java\_opts

**Required**

true

**Suppress Parameter Validation: Java Heap Size of MirrorMaker****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of MirrorMaker parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_producers.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_producers.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_producers.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Source Broker List****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Source Broker List parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_source.bootstrap.servers

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_client.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_client.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_server.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_server.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Topic Whitelist****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Topic Whitelist parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_whitelist

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Swap Memory Usage Rate Beta

**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kafka\_kafka\_mirror\_maker\_unexpected\_exits

**Required**

true

**Service-Wide****Advanced****Kafka Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

KAFKA\_service\_env\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

kafka

**API Name**

process\_groupname

**Required**

true

System User

Description	The user that this service's processes should run as.
Related Name	
Default Value	kafka
API Name	process_username
Required	true

Monitoring

Enable Service Level Health Alerts

Description	When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

Healthy Kafka Broker Monitoring Thresholds

Description	The health test thresholds of the overall Kafka Broker health. The check returns "Concerning" health if the percentage of "Healthy" Kafka Brokers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Kafka Brokers falls below the critical threshold.
Related Name	
Default Value	Warning: 94.99 %, Critical: 49.99 %

**API Name**

KAFKA\_KAFKA\_BROKER\_healthy\_thresholds

**Required**

false

**Healthy Kafka Connect Monitoring Thresholds****Description**

The health test thresholds of the overall Kafka Connect health. The check returns "Concerning" health if the percentage of "Healthy" Kafka Connects falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Kafka Connects falls below the critical threshold.

**Related Name****Default Value**

Warning: 94.99 %, Critical: 49.99 %

**API Name**

KAFKA\_KAFKA\_CONNECT\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

### Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

### Other

### Atlas metadata namespace for Kafka Clients

**Description**

Metadata Namespace used in Atlas for Kafka clients (Producers, Consumers). It may be different from the topic namespace when clients used across clusters.

**Related Name**

atlas.metadata.namespace.client

**Default Value**

cm

**API Name**

atlas.metadata.namespace.client

**Required**

false

### Atlas metadata namespace for Kafka Topics

**Description**

Metadata Namespace used in Atlas for Kafka topics.

**Related Name**

atlas.metadata.namespace.topic

**Default Value**

cm

**API Name**

atlas.metadata.namespace.topic

**Required**

false

### Topic Auto Creation

**Description**

Enables auto creation of topics on the server. If set to true, it attempts to produce, consume, or fetch metadata for a non-existent topic automatically create the topic with the default replication factor and number of partitions.

**Related Name**

auto.create.topics.enable

**Default Value**

true

**API Name**

auto.create.topics.enable

**Required**

false

**Enable Automatic Leader Rebalancing****Description**

If automatic leader rebalancing is enabled, the controller tries to balance leadership for partitions among the brokers by periodically returning leadership for each partition to the preferred replica, if that replica is available.

**Related Name**

auto.leader.rebalance.enable

**Default Value**

true

**API Name**

auto.leader.rebalance.enable

**Required**

false

**Enable Controlled Shutdown****Description**

Enables controlled shutdown of the broker. If enabled, the broker moves all leaders on it to other brokers before shutting itself down. This reduces the unavailability window during shutdown.

**Related Name**

controlled.shutdown.enable

**Default Value**

true

**API Name**

controlled.shutdown.enable

**Required**

false

**Controlled Shutdown Maximum Attempts****Description**

Number of unsuccessful controlled shutdown attempts before executing an unclean shutdown. For example, the default value of 3 means that the system will attempt a controlled shutdown 3 times before executing an unclean shutdown.

**Related Name**

controlled.shutdown.max.retries

**Default Value**

3

**API Name**

controlled.shutdown.max.retries

**Required**

false

**Default Replication Factor****Description**

The default replication factor for automatically created topics.

**Related Name**

default.replication.factor

**Default Value**

1

**API Name**

default.replication.factor

**Required**

false

**Enable Delegation Tokens****Description**

Enables authentication with delegation tokens for this Kafka service. When enabled, a secure password is automatically generated and used as the "delegation.token.master.key" property for Kafka Brokers. Only allowed if Kerberos authentication is enabled.

**Related Name**

delegation.token.enable

**Default Value**

true

**API Name**

delegation.token.enable

**Required**

false

**Delegation Token Expiry Time****Description**

The expiry time of a delegation token. A delegation token can be renewed before its expiry time to extend its validity up to its maximum lifetime. If it is not renewed, it will expire even if it has time remaining from its maximum lifetime.

**Related Name**

delegation.token.expiry.time.ms

**Default Value**

1 day(s)

**API Name**

delegation.token.expiry.time.ms

**Required**

false

**Delegation Token Maximum Lifetime****Description**

The maximum amount of time that a delegation token can be valid for.

**Related Name**

delegation.token.max.lifetime.ms

**Default Value**

7 day(s)

**API Name**

delegation.token.max.lifetime.ms

**Required**

false

**Enable Delete Topic****Description**

Enables topic deletion using admin tools. When delete topic is disabled, deleting topics through the admin tools has no effect.

**Related Name**

delete.topic.enable

**Default Value**

true

**API Name**

delete.topic.enable

**Required**

false

**Consumer Group Maximum Session Timeout****Description**

The minimum allowed session timeout for registered consumers. Shorter timeouts result in quicker failure detection at the cost of more frequent consumer heartbeating, which can overwhelm broker resources.

**Related Name**

group.max.session.timeout.ms

**Default Value**

30 minute(s)

**API Name**

group.max.session.timeout.ms

**Required**

false

**Consumer Group Minimum Session Timeout****Description**

The minimum allowed session timeout for registered consumers. Shorter timeouts result in quicker failure detection at the cost of more frequent consumer heartbeating, which can overwhelm broker resources.

**Related Name**

group.min.session.timeout.ms

**Default Value**

6 second(s)

**API Name**

group.min.session.timeout.ms

**Required**

false

**HDFS Service****Description**

Name of the HDFS service that this Kafka service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

false

**Enable Kafka Decommission****Description**

Kafka decommission flag only takes affect when there is no Cruise Control. In other case the decommission will be always enabled.

**Related Name**

kafka.decommission.hook.enabled

**Default Value**

false

**API Name**

kafka.decommission.hook.enabled

**Required**

false

**List of Metric Reporters****Description**

List of metric reporter class names. HTTP reporter is included by default.

**Related Name**

kafka.metrics.reporters

**Default Value**

nl.techop.kafka.KafkaHttpMetricsReporter

**API Name**

kafka.metrics.reporters

**Required**

false

**Enable Kerberos Authentication****Description**

Enables Kerberos authentication for this Kafka service.

**Related Name**

	kerberos.auth.enable
Default Value	false
API Name	kerberos.auth.enable
Required	false

LDAP URL

Description	The URL of LDAP for authenticating Kafka clients.
Related Name	ldap.auth.url
Default Value	
API Name	ldap.auth.url
Required	false

LDAP User DN Template

Description	The LDAP user DN template for authenticating Kafka clients.
Related Name	ldap.auth.user.dn.template
Default Value	
API Name	ldap.auth.user.dn.template
Required	false

Leader Imbalance Check Interval

Description	Defines the frequency of leader imbalance checks.
Related Name	leader.imbalance.check.interval.seconds
Default Value	5 minute(s)
API Name	leader.imbalance.check.interval.seconds
Required	false

Leader Imbalance Allowed Per Broker

Description	
-------------	--

The percentage of leader imbalance allowed per broker. The controller rebalances leadership if the leader imbalance ratio goes above the configured value per broker.

**Related Name**

leader.imbalance.per.broker.percentage

**Default Value**

10 %

**API Name**

leader.imbalance.per.broker.percentage

**Required**

false

### Log Cleaner Deduplication Buffer Size

**Description**

The total memory used for log deduplication across all cleaner threads. This memory is statically allocated and will not cause GC problems.

**Related Name**

log.cleaner.dedupe.buffer.size

**Default Value**

128 MiB

**API Name**

log.cleaner.dedupe.buffer.size

**Required**

false

### Log Compaction Delete Record Retention Time

**Description**

The amount of time to retain delete messages for log compacted topics. Once a consumer has seen an original message, it has to be ensured that it also sees the delete message. If the delete message is removed too quickly, this might not happen. The configurable delete retention time helps to circumvent this issue.

**Related Name**

log.cleaner.delete.retention.ms

**Default Value**

7 day(s)

**API Name**

log.cleaner.delete.retention.ms

**Required**

false

### Enable Log Compaction

**Description**

Enables the log cleaner to compact topics with cleanup.policy=compact on this cluster.

**Related Name**

log.cleaner.enable

**Default Value**

true

**API Name**

log.cleaner.enable

**Required**

false

### Log Cleaner Clean Ratio

**Description**

Controls how frequently the log cleaner will attempt to clean the log. This ratio restricts the maximum space wasted by duplicates in the log. For example, if set to 0.5, then at most 50% of the log can be populated by duplicates. A higher ratio results in fewer, more efficient cleaning processes, but more wasted space in the log.

**Related Name**

log.cleaner.min.cleanable.ratio

**Default Value**

0.5

**API Name**

log.cleaner.min.cleanable.ratio

**Required**

false

### Number of Log Cleaner Threads

**Description**

The number of background threads used for log cleaning.

**Related Name**

log.cleaner.threads

**Default Value**

1

**API Name**

log.cleaner.threads

**Required**

false

### Log Flush Message Interval

**Description**

The number of messages written to a log partition before triggering an fsync on the log. Setting this property to a low value results in more frequent data to disk synchronization, but also has major impact on performance. For durability, Cloudera recommends the use of replication rather than depending on a single-server fsync. However, this setting can be used as an extra safety measure. If used in conjunction with log.flush.interval.ms, the log is flushed when either criteria is met.

**Related Name**

log.flush.interval.messages

**Default Value****API Name**

log.flush.interval.messages

**Required**

false

**Log Flush Time Interval****Description**

The maximum time between fsync calls on the log. If used in conjunction with log.flush.interval.messages, the log is flushed when either criteria is met.

**Related Name**

log.flush.interval.ms

**Default Value****API Name**

log.flush.interval.ms

**Required**

false

**Log Flush Scheduler Interval****Description**

The frequency, in milliseconds, with which the log flusher checks whether any log is eligible to be flushed to disk.

**Related Name**

log.flush.scheduler.interval.ms

**Default Value****API Name**

log.flush.scheduler.interval.ms

**Required**

false

**Maximum Message Size****Description**

The maximum size of a message that the server can receive. This property has to be in sync with the maximum fetch size the consumers use. Otherwise, an unruly producer could publish messages that are too large for consumption.

**Related Name**

message.max.bytes

**Default Value**

1000000 B

**API Name**

message.max.bytes

**Required**

false

**Minimum Number of Replicas in ISR****Description**

The minimum number of replicas in the in-sync replica needed to satisfy a produce request where required.acks=-1 (that is, all).

**Related Name**

min.insync.replicas

**Default Value**

1

**API Name**

min.insync.replicas

**Required**

false

**Enable Kafka Monitoring****Description**

Enables Kafka monitoring.

**Related Name**

monitoring.enabled

**Default Value**

true

**API Name**

monitoring.enabled

**Required**

false

**Default Number of Partitions****Description**

The default number of partitions for automatically created topics.

**Related Name**

num.partitions

**Default Value**

1

**API Name**

num.partitions

**Required**

false

**Number of Replica Fetchers****Description**

Number of threads used to replicate messages from leaders. Increasing this value increases the degree of I/O parallelism in the follower broker.

**Related Name**

num.replica.fetchers

**Default Value**

4

**API Name**

num.replica.fetchers

**Required**

false

Offset Retention Time

Description

After a consumer group loses all its consumers (i.e. becomes empty) its offsets will be kept for this retention period before getting discarded. For standalone consumers (using manual assignment), offsets will be expired after the time of last commit plus this retention period.

Related Name

offsets.retention.minutes

Default Value

7 day(s)

API Name

offsets.retention.minutes

Required

false

Offset Commit Topic Number of Partitions

Description

The number of partitions for the offset commit topic. Changing this value after deployment is currently unsupported, therefore, Cloudera recommends using a higher number of partitions (for example, 100-200) for production.

Related Name

offsets.topic.num.partitions

Default Value

50

API Name

offsets.topic.num.partitions

Required

false

Offset Commit Topic Replication Factor

Description

The replication factor for the offset commit topic. A higher setting (for example, 3 or 4) is recommended in order to ensure higher availability. If the offsets topic is created when there are fewer brokers than the replication factor, then the offsets topic is created with fewer replicas.

Related Name

offsets.topic.replication.factor

Default Value

3

API Name

offsets.topic.replication.factor

Required

false

PAM Service

Description

The PAM service name for authenticating Kafka clients. This corresponds to the service name in the PAM configuration.

**Related Name**

pam.auth.service

**Default Value**

login

**API Name**

pam.auth.service

**Required**

false

**Enable Producer Metrics****Description**

Enables producer metrics

**Related Name**

producer.metrics.enable

**Default Value**

true

**API Name**

producer.metrics.enable

**Required**

false

**Default Consumer Quota****Description**

Any consumer distinguished by clientId/consumer group will get throttled if it fetches more bytes than this value per-second.

**Related Name**

quota.consumer.default

**Default Value****API Name**

quota.consumer.default

**Required**

false

**Default Producer Quota****Description**

Any producer distinguished by clientId will get throttled if it produces more bytes than this value per-second.

**Related Name**

quota.producer.default

**Default Value****API Name**

quota.producer.default

<b>Required</b>
false

**Ranger Kafka Plugin Hdfs Audit Directory**

<b>Description</b>
The DFS path on which Ranger audits are written.
<b>Related Name</b>
ranger_kafka_plugin_hdfs_audit_directory
<b>Default Value</b>
\$ranger_base_audit_url/kafka
<b>API Name</b>
ranger_kafka_plugin_hdfs_audit_directory
<b>Required</b>
false

**'Ranger service' name for this Kafka service**

<b>Description</b>
Name of the 'Ranger service', that is used for authorization by this Kafka service. If this parameter is set to the placeholder value '{{GENERATED_RANGER_SERVICE_NAME}}', a generated service name will be used, and if necessary, created. The generated service name will refer to the name of the cluster and the name of this Kafka service. The name can consist of alphanumeric and '_' characters.
<b>Related Name</b>
ranger.plugin.kafka.service.name
<b>Default Value</b>
cm_kafka
<b>API Name</b>
ranger_plugin_kafka_service_name
<b>Required</b>
false

**RANGER Service**

<b>Description</b>
Name of the RANGER service that this Kafka service instance depends on
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
ranger_service
<b>Required</b>
false

**Replica Maximum Fetch Size**

<b>Description</b>
The maximum number of bytes to fetch for each partition in fetch requests that replicas send to the leader. This value should be larger than message.max.bytes.

**Related Name**

replica.fetch.max.bytes

**Default Value**

1 MiB

**API Name**

replica.fetch.max.bytes

**Required**

false

**Allowed Replica Time Lag****Description**

If a follower has not sent any fetch requests, nor has it consumed up to the leader's log end offset during this time, the leader removes the follower from the ISR set.

**Related Name**

replica.lag.time.max.ms

**Default Value**

30 second(s)

**API Name**

replica.lag.time.max.ms

**Required**

false

**SASL/PLAIN Authentication****Description**

Authentication method that the SASL/PLAIN mechanism uses to authenticate clients.

**Related Name**

sasl.plain.auth

**Default Value**

none

**API Name**

sasl.plain.auth

**Required**

false

**Minimum Number of Replicas in ISR for Transaction State Log****Description**

Overridden min.insync.replicas config for the transaction topic.

**Related Name**

transaction.state.log.min.isr

**Default Value**

2

**API Name**

transaction.state.log.min.isr

**Required**

false

Transaction State Log Replication Factor

Description

The replication factor for the transaction topic (set higher to ensure availability). Internal topic creation will fail until the cluster size meets this replication factor requirement.

Related Name

transaction.state.log.replication.factor

Default Value

3

API Name

transaction.state.log.replication.factor

Required

false

Enable Unclean Leader Election

Description

Enables replicas not in the ISR set to be elected as leader as a last resort, even though doing so might result in data loss.

Related Name

unclean.leader.election.enable

Default Value

false

API Name

unclean.leader.election.enable

Required

false

ZooKeeper Root

Description

The znode in ZooKeeper used as a root for this Kafka cluster. WARNING: Do not change this property following the initial launch of the Kafka service. Only configure this property during the initial setup phase, before starting the Kafka service for the first time. Updating the root znode on a Kafka service that has already been started does not copy over the original znodes to the new root. This causes Kafka to lose its operational metadata.

Related Name

zookeeper.chroot

Default Value

/kafka

API Name

zookeeper.chroot

Required

false

Enable Secure Connection to ZooKeeper

Description

Enables SSL/TLS for all connections to ZooKeeper. This applies only if 'Enable TLS/SSL for ZooKeeper' is enabled on the ZooKeeper service.

**Related Name**

zookeeper.secure.connection.enable

**Default Value**

true

**API Name**

zookeeper.secure.connection.enable

**Required**

false

### ZooKeeper Session Timeout

**Description**

If the server fails to send a heartbeat to ZooKeeper within this period of time, it is considered dead. If set to a too low value, ZooKeeper might falsely consider a server dead. If set to a too high value, ZooKeeper might take too long to recognize a dead server.

**Related Name**

zookeeper.session.timeout.ms

**Default Value**

18 second(s)

**API Name**

zookeeper.session.timeout.ms

**Required**

false

### ZooKeeper Service

**Description**

Name of the ZooKeeper service that this Kafka service instance depends on

**Related Name****Default Value****API Name**

zookeeper\_service

**Required**

true

### Security

#### Kerberos Principal

**Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

kafka

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions****Suppress Configuration Validator: Advertised Host****Description**

Whether to suppress configuration warnings produced by the Advertised Host configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_advertised.host.name

**Required**

true

**Suppress Configuration Validator: Advertised Port****Description**

Whether to suppress configuration warnings produced by the Advertised Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_advertised.port

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_atlas-application.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Destination Broker List****Description**

Whether to suppress configuration warnings produced by the Destination Broker List configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_bootstrap.servers

**Required**

true

**Suppress Configuration Validator: Broker ID****Description**

Whether to suppress configuration warnings produced by the Broker ID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker.id

**Required**

true

**Suppress Configuration Validator: Additional Broker Java Options****Description**

Whether to suppress configuration warnings produced by the Additional Broker Java Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker\_java\_opts

**Required**

true

**Suppress Configuration Validator: Java Heap Size of Broker****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Broker configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_broker\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Configuration Validator: Configuration Storage Topic Replication Factor****Description**

Whether to suppress configuration warnings produced by the Configuration Storage Topic Replication Factor configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_config.storage.replication.factor

**Required**

true

**Suppress Configuration Validator: Configuration Storage Topic Name****Description**

Whether to suppress configuration warnings produced by the Configuration Storage Topic Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_config.storage.topic

**Required**

true

### Suppress Configuration Validator: Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

**Description**

Whether to suppress configuration warnings produced by the Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_connect-distributed.properties\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Kafka Connect Prometheus Metrics Port

**Description**

Whether to suppress configuration warnings produced by the Kafka Connect Prometheus Metrics Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_connect.prometheus.metrics.port

**Required**

true

### Suppress Configuration Validator: MirrorMaker Consumer Rebalance Listener

**Description**

Whether to suppress configuration warnings produced by the MirrorMaker Consumer Rebalance Listener configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_consumer.rebalance.listener

**Required**

true

### Suppress Configuration Validator: MirrorMaker Consumer Rebalance Listener Arguments

**Description**

Whether to suppress configuration warnings produced by the MirrorMaker Consumer Rebalance Listener Arguments configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_consumer.rebalance.listener.args

**Required**

true

**Suppress Configuration Validator: Consumer Group ID****Description**

Whether to suppress configuration warnings produced by the Consumer Group ID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_group.id

**Required**

true

**Suppress Configuration Validator: Name of User with Read-Write Access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the Name of User with Read-Write Access to the JMX Agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user

**Required**

true

**Suppress Configuration Validator: Password of user with read-write access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the Password of user with read-write access to the JMX agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.control.user.passwd

**Required**

true

**Suppress Configuration Validator: Name of User with read-only access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the Name of User with read-only access to the JMX Agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user

**Required**

true

**Suppress Configuration Validator: Password of User with read-only Access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the Password of User with read-only Access to the JMX agent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx.monitor.user.passwd

**Required**

true

**Suppress Configuration Validator: JMX Port****Description**

Whether to suppress configuration warnings produced by the JMX Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_jmx\_port

**Required**

true

**Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf****Description**

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka-conf/kafka-client.conf\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties****Description**

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka-conf/kafka-ranger-repo.properties\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka-monitoring.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Connect Configuration Directory****Description**

Whether to suppress configuration warnings produced by the Kafka Connect Configuration Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.connect.conf.directory

**Required**

true

**Suppress Configuration Validator: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.connect.jdk.home

**Required**

true

**Suppress Configuration Validator: HTTP Metric Report Host****Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report Host configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.host

**Required**

true

**Suppress Configuration Validator: HTTP Metric Report Password****Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.password

**Required**

true

**Suppress Configuration Validator: HTTP Metric Report Port****Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.port

**Required**

true

**Suppress Configuration Validator: HTTP Metric Report User****Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.http.metrics.user

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_broker\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Kafka Connect Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_connect\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Connect Heap Java Options****Description**

Whether to suppress configuration warnings produced by the Kafka Connect Heap Java Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_heap\_opts

**Required**

true

**Suppress Configuration Validator: Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kafka\_mirror\_maker\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Key Converter****Description**

Whether to suppress configuration warnings produced by the Key Converter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_key.converter

**Required**

true

### Suppress Configuration Validator: Data Directories

**Description**

Whether to suppress configuration warnings produced by the Data Directories configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log.dirs

**Required**

true

### Suppress Configuration Validator: Segment File Size

**Description**

Whether to suppress configuration warnings produced by the Segment File Size configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log.segment.bytes

**Required**

true

### Suppress Configuration Validator: Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Kafka Broker Log Directory

**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: MirrorMaker Message Handler****Description**

Whether to suppress configuration warnings produced by the MirrorMaker Message Handler configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_message.handler

**Required**

true

**Suppress Configuration Validator: MirrorMaker Message Handler Arguments****Description**

Whether to suppress configuration warnings produced by the MirrorMaker Message Handler Arguments configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_message.handler.args

**Required**

true

**Suppress Configuration Validator: Jetty Metrics Port****Description**

Whether to suppress configuration warnings produced by the Jetty Metrics Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics.jetty.server.port

**Required**

true

**Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_consumers.properties****Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_consumers.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_consumers.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Additional MirrorMaker Java Options****Description**

Whether to suppress configuration warnings produced by the Additional MirrorMaker Java Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_java\_opts

**Required**

true

**Suppress Configuration Validator: Java Heap Size of MirrorMaker****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of MirrorMaker configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_producers.properties****Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror\_maker\_producers.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_mirror\_maker\_producers.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Number of I/O Threads****Description**

Whether to suppress configuration warnings produced by the Number of I/O Threads configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.io.threads

**Required**

true

**Suppress Configuration Validator: Number of Network Threads****Description**

Whether to suppress configuration warnings produced by the Number of Network Threads configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.network.threads

**Required**

true

**Suppress Configuration Validator: Number of Recovery Threads per data directory****Description**

Whether to suppress configuration warnings produced by the Number of Recovery Threads per data directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_num.recovery.threads.per.data.dir

**Required**

true

**Suppress Configuration Validator: Number of Alter Log Dir Threads****Description**

Whether to suppress configuration warnings produced by the Number of Alter Log Dir Threads configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_num.replica.alter.log.dirs.threads

**Required**

true

**Suppress Configuration Validator: Offset Storage Topic Replication Factor****Description**

Whether to suppress configuration warnings produced by the Offset Storage Topic Replication Factor configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_offset.storage.replication.factor

**Required**

true

**Suppress Configuration Validator: Offset Storage Topic Name****Description**

Whether to suppress configuration warnings produced by the Offset Storage Topic Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_offset.storage.topic

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Plugin Path****Description**

Whether to suppress configuration warnings produced by the Plugin Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_plugin.path

**Required**

true

**Suppress Configuration Validator: TCP Port****Description**

Whether to suppress configuration warnings produced by the TCP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_port

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true
------

### Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml

**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kafka-security.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Ranger Kafka Plugin Conf Path

**Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Conf Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_conf\_path

**Required**

true

### Suppress Configuration Validator: Ranger Kafka Plugin Audit Hdfs Spool Directory Path

**Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Audit Hdfs Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

### Suppress Configuration Validator: Ranger Kafka Plugin Policy Cache Directory Path

**Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Policy Cache Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Kafka Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kafka\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Configuration Validator: Rest Extension Classes****Description**

Whether to suppress configuration warnings produced by the Rest Extension Classes configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rest.extension.classes

**Required**

true

**Suppress Configuration Validator: Kafka Connect Rest Port****Description**

Whether to suppress configuration warnings produced by the Kafka Connect Rest Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rest.port

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Secure Kafka Connect Rest Port****Description**

Whether to suppress configuration warnings produced by the Secure Kafka Connect Rest Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_secure.rest.port

**Required**

true

**Suppress Configuration Validator: Source Broker List****Description**

Whether to suppress configuration warnings produced by the Source Broker List configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_source.bootstrap.servers

**Required**

true

**Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_client.properties****Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_client.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Kafka Broker TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: TLS/SSL Port****Description**

Whether to suppress configuration warnings produced by the TLS/SSL Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_port

**Required**

true

**Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_server.properties****Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl\_server.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Kafka Broker TLS/SSL Server Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server Keystore Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Configuration Validator: Kafka Broker TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Kafka Broker TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Status Storage Topic Replication Factor****Description**

Whether to suppress configuration warnings produced by the Status Storage Topic Replication Factor configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_status.storage.replication.factor

**Required**

true

**Suppress Configuration Validator: Status Storage Topic Name****Description**

Whether to suppress configuration warnings produced by the Status Storage Topic Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_status.storage.topic

**Required**

true

**Suppress Configuration Validator: Value Converter****Description**

Whether to suppress configuration warnings produced by the Value Converter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_value.converter

**Required**

true

**Suppress Configuration Validator: Topic Whitelist****Description**

Whether to suppress configuration warnings produced by the Topic Whitelist configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_whitelist

**Required**

true

### Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for zookeeper-ssl.properties

**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for zookeeper-ssl.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_zookeeper-ssl.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Atlas metadata namespace for Kafka Clients

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas metadata namespace for Kafka Clients parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_atlas.metadata.namespace.client

**Required**

true

### Suppress Parameter Validation: Atlas metadata namespace for Kafka Topics

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas metadata namespace for Kafka Topics parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_atlas.metadata.namespace.topic

**Required**

true

### Suppress Parameter Validation: Controlled Shutdown Maximum Attempts

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Controlled Shutdown Maximum Attempts parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_controlled.shutdown.max.retries

**Required**

true

**Suppress Parameter Validation: Default Replication Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Replication Factor parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_default.replication.factor

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: List of Metric Reporters****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the List of Metric Reporters parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kafka.metrics.reporters

**Required**

true

**Suppress Configuration Validator: Kafka Broker Count Validator****Description**

Whether to suppress configuration warnings produced by the Kafka Broker Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kafka\_broker\_count\_validator

**Required**

true

**Suppress Configuration Validator: Kafka Connect Count Validator****Description**

Whether to suppress configuration warnings produced by the Kafka Connect Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kafka\_connect\_count\_validator

**Required**

true

**Suppress Configuration Validator: Kafka MirrorMaker Count Validator****Description**

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kafka\_mirror\_maker\_count\_validator

**Required**

true

**Suppress Parameter Validation: Kafka Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kafka\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: LDAP URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap.auth.url

**Required**

true

**Suppress Parameter Validation: LDAP User DN Template****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User DN Template parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap.auth.user.dn.template

**Required**

true

**Suppress Parameter Validation: Leader Imbalance Check Interval****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Leader Imbalance Check Interval parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_leader.imbalance.check.interval.seconds

**Required**

true

**Suppress Parameter Validation: Leader Imbalance Allowed Per Broker****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Leader Imbalance Allowed Per Broker parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_leader.imbalance.per.broker.percentage

**Required**

true

**Suppress Parameter Validation: Maximum Message Size****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Message Size parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_message.max.bytes

**Required**

true

**Suppress Parameter Validation: Minimum Number of Replicas in ISR****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Minimum Number of Replicas in ISR parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_min.insync.replicas

**Required**

true

**Suppress Parameter Validation: Default Number of Partitions****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Number of Partitions parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_num.partitions

**Required**

true

**Suppress Parameter Validation: Number of Replica Fetchers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Replica Fetchers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_num.replica.fetchers

**Required**

true

**Suppress Parameter Validation: Offset Commit Topic Number of Partitions****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Commit Topic Number of Partitions parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_offsets.topic.num.partitions

**Required**

true

**Suppress Parameter Validation: Offset Commit Topic Replication Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Commit Topic Replication Factor parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_offsets.topic.replication.factor

**Required**

true

### Suppress Parameter Validation: PAM Service

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the PAM Service parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_pam.auth.service

**Required**

true

### Suppress Parameter Validation: System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

### Suppress Parameter Validation: Ranger Kafka Plugin Hdfs Audit Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Hdfs Audit Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kafka\_plugin\_hdfs\_audit\_directory

**Required**

true

**Suppress Parameter Validation: 'Ranger service' name for this Kafka service****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the 'Ranger service' name for this Kafka service parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_plugin\_kafka\_service\_name

**Required**

true

**Suppress Parameter Validation: Replica Maximum Fetch Size****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replica Maximum Fetch Size parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_replica.fetch.max.bytes

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Transaction State Log Replication Factor****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Transaction State Log Replication Factor parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_transaction.state.log.replication.factor

**Required**

true

**Suppress Parameter Validation: ZooKeeper Root****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Root parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper.chroot

**Required**

true

**Suppress Parameter Validation: ZooKeeper Session Timeout****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Session Timeout parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper.session.timeout.ms

**Required**

true

**Suppress Health Test: Kafka Broker Health****Description**

Whether to suppress the results of the Kafka Broker Health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_kafka\_kafka\_broker\_healthy

**Required**

true

**Suppress Health Test: Kafka Connect Health****Description**

Whether to suppress the results of the Kafka Connect Health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_kafka\_kafka\_connect\_healthy

**Required**

true

**Key Trustee Server Properties in Cloudera Runtime 7.2.16**

Role groups:

**Active Database****Advanced****Active Database Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

DB\_ACTIVE\_role\_env\_safety\_valve

**Required**

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric\_config\_auto\_refresh

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process\_auto\_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process\_should\_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

<b>Default Value</b>	3
<b>API Name</b>	process_start_retries
<b>Required</b>	false

Process Start Wait Timeout

<b>Description</b>	The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.
<b>Related Name</b>	
<b>Default Value</b>	20
<b>API Name</b>	process_start_secs
<b>Required</b>	false

Monitoring

File Descriptor Monitoring Thresholds

<b>Description</b>	The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.
<b>Related Name</b>	
<b>Default Value</b>	Warning: 50.0 %, Critical: 70.0 %
<b>API Name</b>	db_active_fd_thresholds
<b>Required</b>	false

Active Database Host Health Test

<b>Description</b>	When computing the overall Active Database health, consider the host's health.
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	db_active_host_health_enabled
<b>Required</b>	false

### Active Database Process Health Test

**Description**

Enables the health test that the Active Database's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

db\_active\_scm\_health\_enabled

**Required**

false

### Enable Health Alerts for this Role

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.

- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking **View as JSON**. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

`process_swap_memory_rate_thresholds`

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

`common.process.swap_memory_rate_window`

**Default Value**

5 minute(s)

**API Name**

`process_swap_memory_rate_window`

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Database Storage Directory****Description**

Directory (local file system) where the Key Trustee Server database will be stored. Changing this value after the service has been started will have no effect.

**Related Name**

db\_root

**Default Value**

/var/lib/keytrustee/db

**API Name**

db\_root

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

## Ports and Addresses

### Key Trustee Server Database Port

**Description**

The Key Trustee Server database server port. Changing this value after the service has been started will have no effect.

**Related Name**

db\_port

**Default Value**

11381

**API Name**

db\_port

**Required**

true

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Active Database Environment Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Database Environment Advanced Configuration Snippet (Safety Valve) parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_db_active_role_env_safety_valve
Required	true

Suppress Parameter Validation: Key Trustee Server Database Port

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Database Port parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_db_port
Required	true

Suppress Parameter Validation: Database Storage Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Storage Directory parameter.
Related Name	
Default Value	

false

**API Name**

role\_config\_suppression\_db\_root

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_host\_health

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_active\_unexpected\_exits

**Required**

true

**Active Key Trustee Server****Advanced****Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KEYTRUSTEE\_ACTIVE\_SERVER\_role\_env\_safety\_valve

**Required**

false

### Active Key Trustee Server XML Override

**Description**

For advanced use only, replace entire XML in the logback configuration file for Active Key Trustee Server, ignoring all logging configuration.

**Related Name**

logback\_safety\_valve

**Default Value****API Name**

logback\_safety\_valve

**Required**

false

### Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf

**Description**

For advanced use only. A string to be inserted into logging.conf for this role only.

**Related Name****Default Value****API Name**

logging.conf\_role\_safety\_valve

**Required**

false

### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true
------

### Enable Metric Collection

#### Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

#### Related Name

#### Default Value

true
------

#### API Name

process_should_monitor
------------------------

#### Required

true
------

### Process Start Retry Attempts

#### Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

#### Related Name

#### Default Value

3
---

#### API Name

process_start_retries
-----------------------

#### Required

false
-------

### Process Start Wait Timeout

#### Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

#### Related Name

#### Default Value

20
----

#### API Name

process_start_secs
--------------------

#### Required

false
-------

### Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties

#### Description

For advanced use only. A string to be inserted into ssl.properties for this role only.

#### Related Name

<b>Default Value</b>	
<b>API Name</b>	ssl.properties_role_safety_valve
<b>Required</b>	false

Logs

Active Key Trustee Server Log Directory

<b>Description</b>	The log directory for log files of the role Active Key Trustee Server.
<b>Related Name</b>	log_dir
<b>Default Value</b>	/var/lib/keytrustee/logs
<b>API Name</b>	log_dir
<b>Required</b>	false

Active Key Trustee Server Logging Threshold

<b>Description</b>	The minimum log level for Active Key Trustee Server logs
<b>Related Name</b>	
<b>Default Value</b>	INFO
<b>API Name</b>	log_threshold
<b>Required</b>	false

Active Key Trustee Server Maximum Log File Backups

<b>Description</b>	The maximum number of rolled log files to keep for Active Key Trustee Server logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	10
<b>API Name</b>	max_log_backup_index
<b>Required</b>	false

Active Key Trustee Server Max Log Size

Description	The maximum size, in megabytes, per log file for Active Key Trustee Server logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	max_log_size
Required	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

File Descriptor Monitoring Thresholds

Description	The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.
Related Name	
Default Value	Warning: 50.0 %, Critical: 70.0 %
API Name	

keytrustee\_active\_server\_fd\_thresholds

**Required**

false

**Active Key Trustee Server Host Health Test****Description**

When computing the overall Active Key Trustee Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

keytrustee\_active\_server\_host\_health\_enabled

**Required**

false

**Active Key Trustee Server Process Health Test****Description**

Enables the health test that the Active Key Trustee Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

keytrustee\_active\_server\_scm\_health\_enabled

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name**

**Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

### Swap Memory Usage Rate Window

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### Role Triggers

**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

Ports and Addresses

Key Trustee Server Port

Description	The Key Trustee Server port number.
Related Name	keytrustee_port
Default Value	11371
API Name	keytrustee_port
Required	true

Resource Management

Cgroup CPU Shares

Description	Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.
Related Name	cpu.shares
Default Value	1024
API Name	rm_cpu_shares
Required	true

Custom Control Group Resources (overrides Cgroup settings)

Description	Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***
Related Name	custom.cgroups
Default Value	
API Name	rm_custom_resources
Required	false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

Security

Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)

Description	The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Active Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.
Related Name	ssl.cacert.location
Default Value	
API Name	ssl_server_ca_certificate_location
Required	false

Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format)

Description	The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Active Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.
Related Name	ssl.cert.location
Default Value	/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee.pem
API Name	ssl_server_certificate_location
Required	false

Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format)

Description	The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Active Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.
Related Name	ssl.privatekey.location
Default Value	/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee-pk.pem
API Name	ssl_server_privatekey_location
Required	false

Active Key Trustee Server TLS/SSL Private Key Password

Description	
-------------	--

The password for the private key in the Active Key Trustee Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

**Related Name**

ssl.privatekey.password

**Default Value**

**API Name**

ssl\_server\_privatekey\_password

**Required**

false

**Suppressions**

**Suppress Configuration Validator: CDH Version Validator**

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_active\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Trustee Server Port**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Port parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_port

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server XML Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server XML Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logback\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logging.conf\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**`role_health_suppression_keytrustee_server_keytrustee_active_server_log_directory_free_space`**Required**`true`**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_keytrustee_server_keytrustee_active_server_scm_health`**Required**`true`**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_keytrustee_server_keytrustee_active_server_swap_memory_usage`**Required**`true`**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_keytrustee_server_keytrustee_active_server_swap_memory_usage_rate`**Required**`true`

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_active\_server\_unexpected\_exits

**Required**

true

## Passive Database

### Advanced

#### Passive Database Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

DB\_PASSIVE\_role\_env\_safety\_valve

**Required**

false

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

#### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name**

**Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

Monitoring

File Descriptor Monitoring Thresholds

Description	The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.
Related Name	
Default Value	Warning: 50.0 %, Critical: 70.0 %
API Name	db_passive_fd_thresholds
Required	false

Passive Database Host Health Test

Description	When computing the overall Passive Database health, consider the host's health.
Related Name	
Default Value	true
API Name	db_passive_host_health_enabled
Required	false

Passive Database Process Health Test

Description	Enables the health test that the Passive Database's process state is consistent with the role configuration
Related Name	
Default Value	true
API Name	db_passive_scm_health_enabled
Required	false

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

### Swap Memory Usage Rate Thresholds

**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

### Swap Memory Usage Rate Window

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### Role Triggers

**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

Other

Database Storage Directory

Description	Directory (local file system) where the Key Trustee Server database will be stored. Changing this value after the service has been started will have no effect.
Related Name	db_root
Default Value	/var/lib/keytrustee/db
API Name	db_root
Required	false

Retry Attempts

Description	Number of times a connection attempt will be made before giving up.
Related Name	retry_attempts
Default Value	30
API Name	retry_attempts
Required	true

Retry Timeout

Description	Number of seconds to wait between retries.
Related Name	retry_timeout
Default Value	1 second(s)
API Name	retry_timeout
Required	true

Performance

Maximum Process File Descriptors

Description	If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
Related Name	

**Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Key Trustee Server Database Port****Description**

The Key Trustee Server database server port. Changing this value after the service has been started will have no effect.

**Related Name**

db\_port

**Default Value**

11381

**API Name**

db\_port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value**

**API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB
<b>API Name</b>
rm_memory_soft_limit
<b>Required</b>
true

Suppressions

Suppress Configuration Validator: CDH Version Validator

<b>Description</b>
Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_cdh_version_validator
<b>Required</b>
true

Suppress Parameter Validation: Passive Database Environment Advanced Configuration Snippet (Safety Valve)

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Database Environment Advanced Configuration Snippet (Safety Valve) parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_db_passive_role_env_safety_valve
<b>Required</b>
true

Suppress Parameter Validation: Key Trustee Server Database Port

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Database Port parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_db_port
<b>Required</b>
true

**Suppress Parameter Validation: Database Storage Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Storage Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_db\_root

**Required**

true

**Suppress Parameter Validation: Retry Timeout****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Retry Timeout parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_retry\_timeout

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_host\_health

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_db\_passive\_unexpected\_exits

**Required**

true

## Passive Key Trustee Server

### Advanced

#### Passive Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KEYTRUSTEE\_PASSIVE\_SERVER\_role\_env\_safety\_valve

**Required**

false

#### Passive Key Trustee Server XML Override

**Description**

For advanced use only, replace entire XML in the logback configuration file for Passive Key Trustee Server, ignoring all logging configuration.

**Related Name**

logback\_safety\_valve

**Default Value****API Name**

logback\_safety\_valve

**Required**

false

#### Passive Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf

**Description**

For advanced use only. A string to be inserted into logging.conf for this role only.

**Related Name****Default Value****API Name**

logging.conf\_role\_safety\_valve

**Required**

false

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process_start_retries
<b>Required</b>
false

Process Start Wait Timeout

<b>Description</b>
The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.
<b>Related Name</b>
<b>Default Value</b>
20
<b>API Name</b>
process_start_secs
<b>Required</b>
false

Passive Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties

<b>Description</b>
For advanced use only. A string to be inserted into ssl.properties for this role only.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
ssl.properties_role_safety_valve
<b>Required</b>
false

Logs

Passive Key Trustee Server Log Directory

<b>Description</b>
The log directory for log files of the role Passive Key Trustee Server.
<b>Related Name</b>
log_dir
<b>Default Value</b>
/var/lib/keytrustee/logs
<b>API Name</b>
log_dir
<b>Required</b>
false

Passive Key Trustee Server Logging Threshold

<b>Description</b>
The minimum log level for Passive Key Trustee Server logs
<b>Related Name</b>

**Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Passive Key Trustee Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Passive Key Trustee Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Passive Key Trustee Server Max Log Size****Description**

The maximum size, in megabytes, per log file for Passive Key Trustee Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

keytrustee\_passive\_server\_fd\_thresholds

**Required**

false

### Passive Key Trustee Server Host Health Test

**Description**

When computing the overall Passive Key Trustee Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

keytrustee\_passive\_server\_host\_health\_enabled

**Required**

false

### Passive Key Trustee Server Process Health Test

**Description**

Enables the health test that the Passive Key Trustee Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

keytrustee\_passive\_server\_scm\_health\_enabled

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name**

**Default Value**

**API Name**

monitoring\_metric\_filter

**Required**

false

**Swap Memory Usage Rate Thresholds**

**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name**

**Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

**Swap Memory Usage Rate Window**

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds**

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name**

**Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### Role Triggers

#### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a `DataNode` fires if the `DataNode` has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

[]

#### API Name

role\_triggers

#### Required

true

### Unexpected Exits Thresholds

#### Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

#### Related Name

#### Default Value

Warning: Never, Critical: Any

#### API Name

unexpected\_exits\_thresholds

#### Required

false

### Unexpected Exits Monitoring Period

#### Description

The period to review when computing unexpected exits.

#### Related Name

**Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Key Trustee Server Port****Description**

The Key Trustee Server port number.

**Related Name**

keytrustee\_port

**Default Value**

11371

**API Name**

keytrustee\_port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm_cpu_shares
<b>Required</b>
true

Custom Control Group Resources (overrides Cgroup settings)

<b>Description</b>
Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***
<b>Related Name</b>
custom.cgroups
<b>Default Value</b>
<b>API Name</b>
rm_custom_resources
<b>Required</b>
false

Cgroup I/O Weight

<b>Description</b>
Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.
<b>Related Name</b>
blkio.weight
<b>Default Value</b>
500
<b>API Name</b>
rm_io_weight
<b>Required</b>
true

Cgroup Memory Hard Limit

<b>Description</b>
Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'
<b>Related Name</b>
memory.limit_in_bytes
<b>Default Value</b>
-1 MiB
<b>API Name</b>
rm_memory_hard_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Passive Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)****Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

**Related Name**

ssl.cacert.location

**Default Value****API Name**

ssl\_server\_ca\_certificate\_location

**Required**

false

**Passive Key Trustee Server TLS/SSL Server Certificate File (PEM Format)****Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

ssl.cert.location

**Default Value**

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee.pem

**API Name**

ssl\_server\_certificate\_location

<b>Required</b>
false

Passive Key Trustee Server TLS/SSL Server Private Key File (PEM Format)

<b>Description</b>
The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.
<b>Related Name</b>
ssl.privatekey.location
<b>Default Value</b>
/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee-pk.pem
<b>API Name</b>
ssl_server_privatekey_location
<b>Required</b>
false

Passive Key Trustee Server TLS/SSL Private Key Password

<b>Description</b>
The password for the private key in the Passive Key Trustee Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.
<b>Related Name</b>
ssl.privatekey.password
<b>Default Value</b>
<b>API Name</b>
ssl_server_privatekey_password
<b>Required</b>
false

Suppressions

Suppress Configuration Validator: CDH Version Validator

<b>Description</b>
Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_cdh_version_validator
<b>Required</b>
true

Suppress Parameter Validation: Passive Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)

<b>Description</b>
--------------------

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_passive\_server\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Key Trustee Server Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_port

**Required**

true

### Suppress Parameter Validation: Passive Key Trustee Server Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Parameter Validation: Passive Key Trustee Server XML Override

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server XML Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logback\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Passive Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logging.conf\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Passive Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Passive Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server TLS/SSL Server CA Certificate (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

### Suppress Parameter Validation: Passive Key Trustee Server TLS/SSL Server Certificate File (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server TLS/SSL Server Certificate File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

### Suppress Parameter Validation: Passive Key Trustee Server TLS/SSL Server Private Key File (PEM Format)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server TLS/SSL Server Private Key File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Parameter Validation: Passive Key Trustee Server TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server TLS/SSL Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_keytrustee\_server\_keytrustee\_passive\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**`role_health_suppression_keytrustee_server_keytrustee_passive_server_swap_memory_usage`**Required**`true`**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_keytrustee_server_keytrustee_passive_server_swap_memory_usage_rate`**Required**`true`**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_keytrustee_server_keytrustee_passive_server_unexpected_exits`**Required**`true`**Service-Wide****Advanced****Key Trustee Server Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**`KEYTRUSTEE_SERVER_service_env_safety_valve`**Required**`false`

**Key Trustee Server Service Advanced Configuration Snippet (Safety Valve) for logging.conf****Description**

For advanced use only, a string to be inserted into logging.conf. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

logging.conf\_service\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

keytrustee

**API Name**

process\_groupname

**Required**

true

**System User****Description**

The user that this service's processes should run as.

**Related Name****Default Value**

keytrustee

**API Name**

process\_username

**Required**

true

**Key Trustee Server Service Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

For advanced use only, a string to be inserted into ssl.properties. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ssl.properties\_service\_safety\_valve

**Required**

false

## Monitoring

### Enable Service Level Health Alerts

#### Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

#### Related Name

#### Default Value

true

#### API Name

enable\_alerts

#### Required

false

### Enable Configuration Change Alerts

#### Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

#### Related Name

#### Default Value

false

#### API Name

enable\_config\_alerts

#### Required

false

## Service Triggers

#### Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

**Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****Supported Cipher Configuration for SSL****Description**

A list of allowed and disallowed ciphers, colon-separated (':'). Using an exclamation mark (!) in front of the cipher name will disallow the respective cipher. For cipher options check [OpenSSL cipher list](#). If blank then [default ciphers](#) are set.

**Related Name**

ciphers

**Default Value****API Name**

ciphers

**Required**

false

**Key Trustee Home****Description**

Home directory of Key Trustee.

**Related Name**

keytrustee.home

**Default Value**

/var/lib/keytrustee/.keytrustee

**API Name**

keytrustee.home

**Required**

false

Minimum TLS Support

Description	Minimum TLS protocol supported.
Related Name	tls.min.protocols
Default Value	TLSv1
API Name	tls.min.protocols
Required	false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Configuration Validator: Active Database Environment Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the Active Database Environment Advanced Configuration Snippet (Safety Valve) configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_db_active_role_env_safety_valve
Required	true

Suppress Configuration Validator: Passive Database Environment Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the Passive Database Environment Advanced Configuration Snippet (Safety Valve) configuration validator.
Related Name	

**Default Value**

false

**API Name**

role\_config\_suppression\_db\_passive\_role\_env\_safety\_valve

**Suppress Configuration Validator: Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_logging.conf\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Retry Timeout****Description**

Whether to suppress configuration warnings produced by the Retry Timeout configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_retry\_timeout

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server TLS/SSL Private Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Parameter Validation: Supported Cipher Configuration for SSL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Supported Cipher Configuration for SSL parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ciphers

**Required**

true

**Suppress Configuration Validator: Active Database Count Validator****Description**

Whether to suppress configuration warnings produced by the Active Database Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_db\_active\_count\_validator

**Required**

true

**Suppress Configuration Validator: Passive Database Count Validator****Description**

Whether to suppress configuration warnings produced by the Passive Database Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_db\_passive\_count\_validator

**Required**

true

**Suppress Parameter Validation: Key Trustee Home****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Home parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keytrustee.home

**Required**

true

**Suppress Configuration Validator: Active Key Trustee Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Active Key Trustee Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keytrustee\_active\_server\_count\_validator

**Required**

true

**Suppress Configuration Validator: Passive Key Trustee Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Passive Key Trustee Server Count Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_keytrustee\_passive\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: Key Trustee Server Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keytrustee\_server\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Trustee Server Service Advanced Configuration Snippet (Safety Valve) for logging.conf****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Service Advanced Configuration Snippet (Safety Valve) for logging.conf parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_logging.conf\_service\_safety\_valve

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Key Trustee Server Service Advanced Configuration Snippet (Safety Valve) for ssl.properties**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Service Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

**Related Name**

<b>Default Value</b>	false
<b>API Name</b>	service_config_suppression_ssl.properties_service_safety_valve
<b>Required</b>	true

Key-Value Store Indexer Properties in Cloudera Runtime 7.2.16

Role groups:

Lily HBase Indexer

Advanced

Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml

<b>Description</b>	For advanced use only. A string to be inserted into hbase-indexer-site.xml for this role only.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	hbase_indexer_config_safety_valve
<b>Required</b>	false

Java Configuration Options for Lily HBase Indexer

<b>Description</b>	These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.
<b>Related Name</b>	
<b>Default Value</b>	JAVA_GC_ARGS
<b>API Name</b>	hbase_indexer_java_opts
<b>Required</b>	false

System Group

<b>Description</b>	The group that the HBase Indexer process should run as.
<b>Related Name</b>	
<b>Default Value</b>	

hbase

**API Name**

hbase\_indexer\_process\_groupname

**Required**

true

**System User****Description**

The user that the HBase Indexer process should run as.

**Related Name****Default Value**

hbase

**API Name**

hbase\_indexer\_process\_username

**Required**

true

**Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

HBASE\_INDEXER\_role\_env\_safety\_valve

**Required**

false

**HBase Indexer ZooKeeper Session Timeout****Description**

ZooKeeper session timeout. Controls the amount of time the HBase Indexer will attempt to connect to ZooKeeper before timing out.

**Related Name**

hbaseindexer.zookeeper.session.timeout

**Default Value**

1 minute(s)

**API Name**

hbase\_indexer\_zk\_session\_timeout

**Required**

false

**Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

#### Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

#### Related Name

#### Default Value

true

#### API Name

oom\_sigkill\_enabled

#### Required

true

### Automatically Restart Process

#### Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

#### Related Name

#### Default Value

false

#### API Name

process\_auto\_restart

#### Required

true

### Enable Metric Collection

#### Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

#### Related Name

#### Default Value

true

#### API Name

process\_should\_monitor

#### Required

true

### Process Start Retry Attempts

#### Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

#### Related Name

<b>Default Value</b>	3
<b>API Name</b>	process_start_retries
<b>Required</b>	false

Process Start Wait Timeout

<b>Description</b>	The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.
<b>Related Name</b>	
<b>Default Value</b>	20
<b>API Name</b>	process_start_secs
<b>Required</b>	false

Logs

HBase Indexer Log Directory

<b>Description</b>	Directory where HBase Indexer will place its log files.
<b>Related Name</b>	
<b>Default Value</b>	/var/log/hbase-solr
<b>API Name</b>	hbase_indexer_log_dir
<b>Required</b>	true

Lily HBase Indexer Logging Threshold

<b>Description</b>	The minimum log level for Lily HBase Indexer logs
<b>Related Name</b>	
<b>Default Value</b>	INFO
<b>API Name</b>	log_threshold
<b>Required</b>	false

Lily HBase Indexer Maximum Log File Backups

Description	The maximum number of rolled log files to keep for Lily HBase Indexer logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

Lily HBase Indexer Max Log Size

Description	The maximum size, in megabytes, per log file for Lily HBase Indexer logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	max_log_size
Required	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	

enable_config_alerts
<b>Required</b>
false

File Descriptor Monitoring Thresholds

<b>Description</b>
The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.
<b>Related Name</b>
<b>Default Value</b>
Warning: 50.0 %, Critical: 70.0 %
<b>API Name</b>
hbase_indexer_fd_thresholds
<b>Required</b>
false

Lily HBase Indexer Host Health Test

<b>Description</b>
When computing the overall Lily HBase Indexer health, consider the host's health.
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
hbase_indexer_host_health_enabled
<b>Required</b>
false

Lily HBase Indexer Process Health Test

<b>Description</b>
Enables the health test that the Lily HBase Indexer's process state is consistent with the role configuration
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
hbase_indexer_scm_health_enabled
<b>Required</b>
false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

<b>Description</b>
The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.
<b>Related Name</b>

**Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Heap Dump Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

`process_swap_memory_rate_thresholds`

**Required**

`false`

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

`common.process.swap_memory_rate_window`

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### Performance

#### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

### Ports and Addresses

#### HBase Indexer HTTP Port

**Description**

HTTP port used by HBase Indexer.

**Related Name**

hbaseindexer.http.port

**Default Value**

11060

**API Name**

hbase\_indexer\_http\_port

**Required**

true

**Resource Management****Java Heap Size of Lily HBase Indexer in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

hbase\_indexer\_java\_heapsize

**Required**

false

**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

Security

Role-Specific Kerberos Principal

Description	Kerberos principal used by the Lily HBase Indexer roles.
Related Name	
Default Value	hbase
API Name	kerberos_role_princ_name
Required	true

Stacks Collection

Stacks Collection Data Retention

Description	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name	stacks_collection_data_retention
Default Value	100 MiB
API Name	stacks_collection_data_retention
Required	false

Stacks Collection Directory

Description	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
Related Name	stacks_collection_directory
Default Value	
API Name	stacks_collection_directory
Required	false

Stacks Collection Enabled

Description	Whether or not periodic stacks collection is enabled.
Related Name	

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: HBase Indexer HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Indexer HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_http\_port

**Required**

true

**Suppress Parameter Validation: Java Configuration Options for Lily HBase Indexer****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Lily HBase Indexer parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_java\_opts

**Required**

true

**Suppress Parameter Validation: HBase Indexer Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Indexer Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_log\_dir

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_process\_username

**Required**

true

**Suppress Parameter Validation: Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_file\_descriptor

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_swap\_memory\_usage\_rate

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_hbase\_indexer\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### Key-Value Store Indexer Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ks\_indexer\_env\_safety\_valve

**Required**

false

### Monitoring

#### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name**

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Healthy Lily HBase Indexer Monitoring Thresholds****Description**

The health test thresholds of the overall Lily HBase Indexer health. The check returns "Concerning" health if the percentage of "Healthy" Lily HBase Indexers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Lily HBase Indexers falls below the critical threshold.

**Related Name****Default Value**

Warning: 95.0 %, Critical: 90.0 %

**API Name**

ks\_indexer\_indexers\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Morphlines****Custom Mime-types File****Description**

Text that goes verbatim into custom-mimetypes.xml file used by HBase Indexers.

**Related Name****Default Value**

```

```

**API Name**

grok\_dictionary\_conf\_file

**Required**

false

### Morphlines File

**Description**

Text that goes into morphlines.conf file used by HBase Indexers. The text goes verbatim into the config file except that \$ZK\_HOST is replaced by the ZooKeeper quorum of the Solr service.

**Related Name****Default Value**

```
SOLR_LOCATOR : # Name of solr collection collection : collection # ZooKeeper ensemble  
zkHost : $ZK_HOST morphlines : [ id : morphline importCommands : [org.kitesdk.**,  
com.ngdata.**] commands : [ extractHBaseCells mappings : [ inputColumn : data:* outputField :  
data type : string source : value ] logDebug format : output record: , args : [ @ ] ] ]
```

**API Name**

morphlines\_conf\_file

**Required**

false

### Other

### HBase Service

**Description**

Name of the HBase service that this Key-Value Store Indexer service instance depends on

**Related Name****Default Value****API Name**

hbase\_service

**Required**

true

### Solr Service

**Description**

Name of the Solr service that this Key-Value Store Indexer service instance depends on

**Related Name****Default Value****API Name**

solr\_service

**Required**

true

### Security

### HBase Indexer Secure Authentication

**Description**

Authentication mechanism used by HBase Indexer.

**Related Name**

hbaseindexer.authentication.type

**Default Value**

	simple
API Name	
	hbase_indexer_security_authentication
Required	
	false

**HBase Indexer TLS/SSL Trust Store File**

Description	The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HBase Indexer might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.
Related Name	
Default Value	
API Name	
	keystore_indexer_truststore_file
Required	
	false

**HBase Indexer TLS/SSL Trust Store Password**

Description	The password for the HBase Indexer TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.
Related Name	
Default Value	
API Name	
	keystore_indexer_truststore_password
Required	
	false

**Suppressions**

**Suppress Configuration Validator: CDH Version Validator**

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	
	false
API Name	
	role_config_suppression_cdh_version_validator
Required	
	true

**Suppress Configuration Validator: Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml****Description**

Whether to suppress configuration warnings produced by the Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: HBase Indexer HTTP Port****Description**

Whether to suppress configuration warnings produced by the HBase Indexer HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_http\_port

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Lily HBase Indexer****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Lily HBase Indexer configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_java\_opts

**Required**

true

**Suppress Configuration Validator: HBase Indexer Log Directory****Description**

Whether to suppress configuration warnings produced by the HBase Indexer Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_log\_dir

**Required**

true

**Suppress Configuration Validator: System Group****Description**

Whether to suppress configuration warnings produced by the System Group configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_process\_groupname

**Required**

true

**Suppress Configuration Validator: System User****Description**

Whether to suppress configuration warnings produced by the System User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_process\_username

**Required**

true

**Suppress Configuration Validator: Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hbase\_indexer\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Configuration Validator: Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Custom Mime-types File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Mime-types File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_custom\_mimetypes\_file

**Required**

true

**Suppress Parameter Validation: Grok Dictionary File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Grok Dictionary File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_grok\_dictionary\_conf\_file

**Required**

true

**Suppress Configuration Validator: Lily HBase Indexer Count Validator****Description**

Whether to suppress configuration warnings produced by the Lily HBase Indexer Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hbase\_indexer\_count\_validator

**Required**

true

**Suppress Parameter Validation: HBase Indexer TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Indexer TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keystore\_indexer\_truststore\_file

**Required**

true

**Suppress Parameter Validation: HBase Indexer TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Indexer TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keystore\_indexer\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Key-Value Store Indexer Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key-Value Store Indexer Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ks\_indexer\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Morphlines File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Morphlines File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_morphlines\_conf\_file

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

### Suppress Health Test: Lily HBase Indexer Health

**Description**

Whether to suppress the results of the Lily HBase Indexer Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ks\_indexer\_hbase\_indexers\_healthy

**Required**

true

## Knox Properties in Cloudera Runtime 7.2.16

Role groups:

### Gateway

#### Advanced

#### Deploy Directory

**Description**

The directory where the client configs will be deployed

**Related Name****Default Value**

/etc/knox

**API Name**

client\_config\_root\_dir

**Required**

true

#### Monitoring

#### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

Other

Alternatives Priority

Description	The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.
Related Name	
Default Value	50
API Name	client_config_priority
Required	true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Deploy Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_client_config_root_dir
Required	true

Knox Gateway

Advanced

Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties

Description	For advanced use only. A string to be inserted into conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties for this role only.
Related Name	
Default Value	
API Name	conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties_role_safety_valve
Required	false

Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties

Description	For advanced use only. A string to be inserted into conf/auto-discovery-advanced-configuration-cdp-proxy.properties for this role only.
Related Name	
Default Value	
API Name	conf/auto-discovery-advanced-configuration-cdp-proxy.properties_role_safety_valve
Required	false

Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml

Description	For advanced use only. A string to be inserted into conf/cdp-resources.xml for this role only.
Related Name	
Default Value	
API Name	conf/cdp-resources.xml_role_safety_valve
Required	false

Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

Description	For advanced use only. A string to be inserted into conf/gateway-site.xml for this role only.
Related Name	
Default Value	
API Name	

conf/gateway-site.xml\_role\_safety\_valve

**Required**

false

**Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-knox-audit.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-knox-audit.xml\_role\_safety\_valve

**Required**

false

**Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-knox-policymgr-ssl.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-knox-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

**Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-knox-security.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-knox-security.xml\_role\_safety\_valve

**Required**

false

**Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KNOX\_GATEWAY\_role\_env\_safety\_valve

**Required**

false

**Knox Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs****Knox Gateway Log Directory****Description**

The log directory for log files of the role Knox Gateway.

**Related Name**

log\_dir

**Default Value**

/var/log/knox/gateway

**API Name**

log\_dir

**Required**

false

**Knox Gateway Logging Threshold****Description**

The minimum log level for Knox Gateway logs

<b>Related Name</b>	
<b>Default Value</b>	INFO
<b>API Name</b>	log_threshold
<b>Required</b>	false

**Knox Gateway Maximum Log File Backups**

<b>Description</b>	The maximum number of rolled log files to keep for Knox Gateway logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	10
<b>API Name</b>	max_log_backup_index
<b>Required</b>	false

**Knox Gateway Max Log Size**

<b>Description</b>	The maximum size, in megabytes, per log file for Knox Gateway logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	200 MiB
<b>API Name</b>	max_log_size
<b>Required</b>	false

**Monitoring**

**Enable Health Alerts for this Role**

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	enable_alerts
<b>Required</b>	

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable\_config\_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

knox\_gateway\_fd\_thresholds

Required

false

Knox Gateway Host Health Test

Description

When computing the overall Knox Gateway health, consider the host's health.

Related Name

Default Value

true

API Name

knox\_gateway\_host\_health\_enabled

Required

false

Knox Gateway Process Health Test

Description

Enables the health test that the Knox Gateway's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

knox\_gateway\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name**

**Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name**

**Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.

- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

### Swap Memory Usage Rate Thresholds

**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

### Swap Memory Usage Rate Window

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Knox Gateway Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name****Default Value**

5 minute(s)

**API Name**

csd\_role\_diagnostics\_timeout

**Required**

false

**Knox Simplified Topology Management - API Authentication Provider****Description**

Authentication provider declaration used by pre-deinfed topologies such as admin, metadata or cdp-proxy-api.

**Related Name**

gateway\_api\_authentication\_provider

**Default Value**

```
role=authentication authentication.name=ShiroProvider authentication.param.sessionTimeout=30
authentication.param.main.pamRealm=org.apache.knox.gateway.shiorealm.KnoxPamRealm
authentication.param.main.pamRealm.service=login authentication.param.urls./**=authcBasic
```

**API Name**

gateway\_api\_authentication\_provider

**Required**

false

**Auto Discovery - Advanced Configuration Monitoring Interval****Description**

Defines the frequency of Knox's service auto-discovery advanced configuration files (auto-discovery-advanced-configuration-[cdp-proxy|cdp-proxy-api].properties) monitoring.

**Related Name**

gateway.cloudera.manager.advanced.service.discovery.config.monitor.interval

**Default Value**

10 second(s)

**API Name**

gateway\_auto\_discovery\_advanced\_configuration\_monitor\_interval

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Atlas API****Description**

Enables Knox auto-discovery for the Atlas API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.atlas-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_atlas

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Phoenix/Avatica****Description**

Enables Knox auto-discovery for the Phoenix/Avatica API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.avatica

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_avatica

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Cloudera Manager API****Description**

Enables Knox auto-discovery for the Cloudera Manager API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.cm-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_cm\_api

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Cruise Control API****Description**

Enables Knox auto-discovery for the Cruise Control API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.cruise-control-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_cruise\_control

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Hive Server****Description**

Enables Knox auto-discovery for the Hive Server in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.hive

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_hive

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Impala Catalog Server****Description**

Enables Knox auto-discovery for the Impala Catalog Server in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.impala

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_impala

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Livy Server For Spark3 API****Description**

Enables Knox auto-discovery for the Livy Server For Spark3 API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.livy\_for\_spark3

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_livy\_for\_spark3

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Livy Server API****Description**

Enables Knox auto-discovery for the Livy Server API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.livyserver

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_livyserver

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - NameNode****Description**

Enables Knox auto-discovery for the NameNode in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.namenode

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_namenode

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - NiFi****Description**

Enables Knox auto-discovery for the NiFi in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.nifi

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_nifi

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - NiFi Registry****Description**

Enables Knox auto-discovery for the NiFi Registry in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.nifi-registry

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_nifi\_registry

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Oozie Server

**Description**

Enables Knox auto-discovery for the Oozie Server in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.oozie

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_oozie

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Profiler Admin API

**Description**

Enables Knox auto-discovery for the Profiler Admin API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-admin-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_profiler\_admin\_api

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Profiler Metrics API

**Description**

Enables Knox auto-discovery for the Profiler Metrics API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-metrics-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_profiler\_metrics\_api

**Required**

false

### Enable Auto Discovery (cdp-proxy-api) - Profiler Scheduler API

**Description**

Enables Knox auto-discovery for the Profiler Scheduler API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-scheduler-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_profiler\_scheduler\_api

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Ranger Admin****Description**

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.ranger

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_ranger

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - ResourceManager****Description**

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.resourcemanager

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_resourcemanager

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - ResourceManager API****Description**

Enables Knox auto-discovery for the ResourceManager API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.resourcemanagerapi

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_resourcemanager\_api

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Schema Registry****Description**

Enables Knox auto-discovery for the Schema Registry in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.schema-registry

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_schema\_registry

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Stream Messaging Manager API****Description**

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.smm-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_smm

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - Solr Server****Description**

Enables Knox auto-discovery for the Solr Server in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.solr

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_solr

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - HBase Master API****Description**

Enables Knox auto-discovery for the HBase Master API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.webhbase

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_webhbase

**Required**

false

**Enable Auto Discovery (cdp-proxy-api) - WebHDFS API****Description**

Enables Knox auto-discovery for the WebHDFS API in the cdp-proxy-api topology.

**Related Name**

gateway.auto.discovery.cdp-proxy-api.enabled.webhdfs

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_api\_enabled\_webhdfs

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Atlas API****Description**

Enables Knox auto-discovery for the Atlas API in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.atlas-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_atlas

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Atlas Web UI****Description**

Enables Knox auto-discovery for the Atlas Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.atlas

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_atlas\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Cloudera Manager API****Description**

Enables Knox auto-discovery for the Cloudera Manager API in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.cm-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_cm\_api

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Cloudera Manager Admin Console****Description**

Enables Knox auto-discovery for the Cloudera Manager Admin Console in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.cm-ui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_cm\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Data Analytics Studio****Description**

Enables Knox auto-discovery for the Data Analytics Studio in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.das

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_das

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Flink Dashboard****Description**

Enables Knox auto-discovery for the Flink Dashboard in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.flink-dashboard

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_flink\_dashboard

**Required**

false

**Enable Auto Discovery (cdp-proxy) - HBase Web UI****Description**

Enables Knox auto-discovery for the HBase Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.hbaseui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_hbase\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Namenode Web UI****Description**

Enables Knox auto-discovery for the Namenode Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.hdfsui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_hdfs\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Hue Server****Description**

Enables Knox auto-discovery for the Hue Server in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.hue

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_hue

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Impala Catalog Server Web UI****Description**

Enables Knox auto-discovery for the Impala Catalog Server Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.impalauui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_impala\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - HistoryServer Web UI****Description**

Enables Knox auto-discovery for the HistoryServer Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.jobhistoryui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_jobhistory\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Kudu Master Web UI****Description**

Enables Knox auto-discovery for the Kudu Master Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.kuduui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_kudu\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Livy Server For Spark3 Web UI****Description**

Enables Knox auto-discovery for the Livy Server For Spark3 Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.livy\_for\_spark3

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_livy\_for\_spark3

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Livy Server Web UI****Description**

Enables Knox auto-discovery for the Livy Server Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.livyserver

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_livyserver

**Required**

false

### Enable Auto Discovery (cdp-proxy) - NameNode

**Description**

Enables Knox auto-discovery for the NameNode in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.namenode

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_namenode

**Required**

false

### Enable Auto Discovery (cdp-proxy) - NiFi

**Description**

Enables Knox auto-discovery for the NiFi in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.nifi

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_nifi

**Required**

false

### Enable Auto Discovery (cdp-proxy) - NiFi Registry

**Description**

Enables Knox auto-discovery for the NiFi Registry in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.nifi-registry

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_nifi\_registry

**Required**

false

### Enable Auto Discovery (cdp-proxy) - Oozie Server

**Description**

Enables Knox auto-discovery for the Oozie Server in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.oozie

**Default Value**

true

**API Name**`gateway_auto_discovery_cdp_proxy_enabled_oozie`**Required**`false`**Enable Auto Discovery (cdp-proxy) - Oozie Web UI****Description**

Enables Knox auto-discovery for the Oozie Web UI in the cdp-proxy topology.

**Related Name**`gateway.auto.discovery.cdp-proxy.enabled.oozieui`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_oozie_ui`**Required**`false`**Enable Auto Discovery (cdp-proxy) - Ranger Admin****Description**

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy topology.

**Related Name**`gateway.auto.discovery.cdp-proxy.enabled.ranger`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_ranger`**Required**`false`**Enable Auto Discovery (cdp-proxy) - Ranger Admin Web UI****Description**

Enables Knox auto-discovery for the Ranger Admin Web UI in the cdp-proxy topology.

**Related Name**`gateway.auto.discovery.cdp-proxy.enabled.rangerui`**Default Value**`true`**API Name**`gateway_auto_discovery_cdp_proxy_enabled_ranger_ui`**Required**`false`**Enable Auto Discovery (cdp-proxy) - ResourceManager****Description**

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.resourcemanager

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_resourcemanager

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Schema Registry****Description**

Enables Knox auto-discovery for the Schema Registry in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.schema-registry

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_schema\_registry

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Stream Messaging Manager API****Description**

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.smm-api

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_smm

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Stream Messaging Manager Web UI****Description**

Enables Knox auto-discovery for the Stream Messaging Manager Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.smm-ui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_smm\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Solr Server****Description**

Enables Knox auto-discovery for the Solr Server in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.solr

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_solr

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Spark 3 History Server Web UI****Description**

Enables Knox auto-discovery for the Spark 3 History Server Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.spark3historyui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_spark3history\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Spark History Server Web UI****Description**

Enables Knox auto-discovery for the Spark History Server Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.sparkhistoryui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_sparkhistory\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - WebHDFS API****Description**

Enables Knox auto-discovery for the WebHDFS API in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.webhdfs

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_webhdfs

**Required**

false

**Enable Auto Discovery (cdp-proxy) - ResourceManager Web UI****Description**

Enables Knox auto-discovery for the ResourceManager Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.yarnui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_yarn\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - ResourceManager Web UI V2****Description**

Enables Knox auto-discovery for the ResourceManager Web UI V2 in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.yarnuiv2

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_yarn\_ui\_v2

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Zeppelin Server Web UI****Description**

Enables Knox auto-discovery for the Zeppelin Server Web UI in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.zeppelinui

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_zeppelin\_ui

**Required**

false

**Enable Auto Discovery (cdp-proxy) - Zeppelin Server****Description**

Enables Knox auto-discovery for the Zeppelin Server in the cdp-proxy topology.

**Related Name**

gateway.auto.discovery.cdp-proxy.enabled.zeppelinws

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_cdp\_proxy\_enabled\_zeppelin\_ws

**Required**

false

**Enable/Disable Service Auto-Discovery****Description**

Whether Knox's service auto-discovery feature is enabled

**Related Name**

gateway.auto.discovery.enabled

**Default Value**

true

**API Name**

gateway\_auto\_discovery\_enabled

**Required**

false

**Knox Simplified Topology Management - Monitoring Interval****Description**

Defines the frequency of Cloudera Manager resources (descriptors and shared providers) file (cdp-resources.xml) monitoring.

**Related Name**

gateway.cloudera.manager.descriptors.monitor.interval

**Default Value**

10 second(s)

**API Name**

gateway\_cloudera\_manager\_descriptors\_monitor\_interval

**Required**

false

**Auto Discovery - Cluster Configuration Monitoring Interval****Description**

Defines the frequency of cluster configuration monitoring.

**Related Name**

gateway.cluster.config.monitor.cm.interval

**Default Value**

1 minute(s)

**API Name**

gateway\_cluster\_configuration\_monitor\_interval

**Required**

false

**Knox Gateway Configuration Directory****Description**

Contains configuration files that apply to the gateway globally (i.e. not cluster specific ).

**Related Name**

gateway\_conf\_dir

**Default Value**

/var/lib/knox/gateway/conf

**API Name**

gateway\_conf\_dir

**Required**

false

**Knox Gateway Data Directory****Description**

Contains security and topology specific artifacts as well as important applications for admin-ui

**Related Name**

gateway\_data\_dir

**Default Value**

/var/lib/knox/gateway/data

**API Name**

gateway\_data\_dir

**Required**

false

**Gateway - Default App Topology Name****Description**

When a topology file is deployed with a file name that matches the configured default topology name, a specialized mapping for URLs is installed for that particular topology. This allows the URLs that are expected by the existing Hadoop CLIs for WebHDFS to be used in interacting with the specific Hadoop cluster that is represented by the default topology file.

**Related Name**

default.app.topology.name

**Default Value**

cdp-proxy

**API Name**

gateway\_default\_topology\_name

**Required**

false

**Knox Simplified Topology Management - cdp-proxy****Description**

Knox descriptor block for 'cdp-proxy' topology. 'providerConfigRef' indicates the name of shared-provider the given descriptor would like to use. The rest of the entries hold service information. The structure of an service information entry is: \$SERVICE\_NAME[: \$PARAMETER\_NAME=\$PARAMETER\_VALUE]. The 'url' and 'version' parameter names are preserved keywords to set the given service's URL and version. For instance:

HIVE:url=http://localhost:123, HIVE:version:3.0.0, HIVE:httpclient.socketTimeout=5m,  
HIVE:test.pramameter.name=test.parameter.value

**Related Name**

cdp-proxy

**Default Value**

providerConfigRef=sso

**API Name**

gateway\_descriptor\_cdp\_proxy

**Required**

false

**Knox Simplified Topology Management - cdp-proxy-api****Description**

Knox descriptor block for 'cdp-proxy-api topology. 'providerConfigRef' indicates the name of shared-provider the given descriptor would like to use. The rest of the entries hold service information. The structure of an service information entry is: \$SERVICE\_NAME[: \$PARAMETER\_NAME=\$PARAMETER\_VALUE]. The 'url' and 'version' parameter names are preserved keywords to set the given service's URL and version. For instance: NIFI, HIVE:url=http://localhost:123, HIVE:version:3.0.0, HIVE:httpclient.socketTimeout=5m, HIVE:test.pramameter.name=test.parameter.value

**Related Name**

cdp-proxy-api

**Default Value**

providerConfigRef=pam

**API Name**

gateway\_descriptor\_cdp\_proxy\_api

**Required**

false

**Knox Gateway Dispatch Whitelist****Description**

The whitelist to be applied for dispatches associated with the service roles specified by gateway.dispatch.whitelist.services. By default this is replaced with DEFAULT or HTTPS\_ONLY based on if TLS is enabled.

**Related Name**

gateway.dispatch.whitelist

**Default Value**

WHITELIST\_CONFIG\_REPLACEME

**API Name**

gateway\_dispatch\_whitelist

**Required**

false

**Knox Gateway Dispatch Whitelist Services****Description**

The comma-delimited list of service roles for which the 'gateway.dispatch.whitelist' should be applied

**Related Name**

gateway.dispatch.whitelist.services

**Default Value**

DATANODE, HBASEUI, HDFSUI, IMPALAUI, JOBHISTORYUI, KUDUI, NODEUI, YARNUI, YARNUIV2, Knoxauth

**API Name**

gateway\_dispatch\_whitelist\_services

**Required**

false

**Gateway Config Directory****Description**

The directory within 'gateway\_data\_dir' that contains gateway topology files and deployments.

**Related Name**

gateway.gateway.conf.dir

**Default Value**

deployments

**API Name**

gateway\_gateway\_conf\_dir

**Required**

false

**Knox Gateway Initial/Max Heapsize****Description**

Initial/Maximum size for the Java Process heap. Passed to Java -Xmx/-Xms. Measured in megabytes.

**Related Name**

gateway\_heap\_size

**Default Value**

1 GiB

**API Name**

gateway\_heap\_size

**Required**

true

**Additional Gateway Java Options****Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here. -Xmx/-Xms should not be specified here: to set the heapsize use the 'Knox Gateway Initial/Max Heapsize' parameter

**Related Name**

gateway\_java\_opts

**Default Value****API Name**

gateway\_java\_opts

<b>Required</b>
false

Admin Groups

<b>Description</b>
Admin groups for Knox
<b>Related Name</b>
gateway.knox.admin.groups
<b>Default Value</b>
<b>API Name</b>
gateway_knox_admin_groups
<b>Required</b>
false

Knox Master Secret

<b>Description</b>
The master secret is used to access secured artifacts by the gateway instance. Keystore, trust stores and credential stores are all protected with the master secret. NOTE: changing the master secret will require you to change passwords protecting the keystores for the gateway, identity keystores and all credential stores
<b>Related Name</b>
gateway_master_secret
<b>Default Value</b>
<b>API Name</b>
gateway_master_secret
<b>Required</b>
true

Gateway Path

<b>Description</b>
The default context path for the gateway.
<b>Related Name</b>
gateway.path
<b>Default Value</b>
gateway
<b>API Name</b>
gateway_path
<b>Required</b>
true

Ranger Knox Plugin Conf Path

<b>Description</b>
Staging directory for Ranger Knox Plugin Configuration. This should generally not be changed.
<b>Related Name</b>
gateway_ranger_knox_plugin_conf_path

**Default Value**

/var/lib/knox/ranger-knox-plugin

**API Name**

gateway\_ranger\_knox\_plugin\_conf\_path

**Required**

true

**Ranger Knox Plugin Audit Hdfs Spool Directory Path****Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

xasecure.audit.destination.hdfs.batch.filespool.dir

**Default Value**

/var/log/knox/gateway/audit/hdfs/spool

**API Name**

gateway\_ranger\_knox\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Ranger Knox Plugin Policy Cache Directory Path****Description**

The directory where Ranger security policies are cached locally.

**Related Name**

ranger.plugin.knox.policy.cache.dir

**Default Value**

/var/lib/ranger/knox/gateway/policy-cache

**API Name**

gateway\_ranger\_knox\_plugin\_policy\_cache\_directory

**Required**

true

**Ranger Knox Plugin Audit Solr Spool Directory Path****Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**

xasecure.audit.destination.solr.batch.filespool.dir

**Default Value**

/var/log/knox/gateway/audit/solr/spool

**API Name**

gateway\_ranger\_knox\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Ranger Plugin Trusted Proxy IP Address****Description**

Accepts a list of IP addresses of proxy servers for trusting.

**Related Name**

ranger.plugin.knox.trusted.proxy.ipaddress

**Default Value****API Name**

gateway\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

false

**Ranger Plugin Use X-Forwarded For IP Address****Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

**Related Name**

ranger.plugin.knox.use.x-forwarded-for.ipaddress

**Default Value**

false

**API Name**

gateway\_ranger\_plugin\_use\_x\_forwarded\_for\_ipaddress

**Required**

false

**Cookie Scoping Enabled****Description**

Enable/Disable cookie scoping feature.

**Related Name**

gateway.scope.cookies.feature.enabled

**Default Value**

false

**API Name**

gateway\_scope\_cookies\_feature\_enabled

**Required**

false

**Security - Signing Key Alias****Description**

The alias for the signing keypair within the keystore specified via gateway\_signing\_keystore\_name

**Related Name**

gateway.signing.key.alias

**Default Value****API Name**

gateway\_signing\_key\_alias

**Required**

false

**Security - Signing Keystore Name****Description**

The filename of keystore file that contains the signing keypair

**Related Name**

gateway.signing.keystore.name

**Default Value****API Name**

gateway\_signing\_keystore\_name

**Required**

false

**Security - Signing Keystore Type****Description**

The type of the keystore file where the signing keypair is stored. See gateway\_signing\_keystore\_name

**Related Name**

gateway.signing.keystore.type

**Default Value****API Name**

gateway\_signing\_keystore\_type

**Required**

false

**Knox Simplified Topology Management - SSO Authentication Provider****Description**

Authentication provider declaration used by the UIs using the Knox SSO capabilities such as the Admin and Home Page UIs.

**Related Name**

gateway\_sso\_authentication\_provider

**Default Value**

role=authentication authentication.name=ShiroProvider authentication.param.sessionTimeout=30 authentication.param.redirectToUrl=/\$GATEWAY\_PATH/knoxssso/knoxauth/login.html authentication.param.restrictedCookies=rememberme, WWW-Authenticate authentication.param.main.pamRealm=org.apache.knox.gateway.shirorealm.KnoxPamRealm authentication.param.main.pamRealm.service=login authentication.param.urls./\*\*=authcBasic

**API Name**

gateway\_sso\_authentication\_provider

**Required**

false

**Security - TLS Certificate Alias (Optional)****Description**

The alias for the Gateway's TLS certificate and keypair within the default keystore or the keystore specified via gateway.tls.keystore.path

**Related Name**

gateway\_tls\_certificate\_alias

**Default Value****API Name**

gateway\_tls\_certificate\_alias

**Required**

false

**Security - Use FQDN as TLS Certificate Alias****Description**

If enabled, the FQDN will be used as gateway.tls.key.alias in gateway-site.xml; otherwise the UQDN is used. This behavior is overwritten if gateway\_tls\_certificate\_alias is set. In this case the value in gateway\_tls\_certificate\_alias is used as alias.

**Related Name**

gateway\_tls\_certificate\_alias\_use\_fqdn

**Default Value**

true

**API Name**

gateway\_tls\_certificate\_alias\_use\_fqdn

**Required**

false

**Security - TLS Certificate Path (Optional)****Description**

The path for the TLS certificate which Knox will import in the CM generated/distributed keystore in case SSL is enabled (if any).

**Related Name**

gateway\_tls\_certificate\_path

**Default Value****API Name**

gateway\_tls\_certificate\_path

**Required**

false

**Websockets Enabled****Description**

Enable/Disable websocket feature.

**Related Name**

gateway.websocket.feature.enabled

**Default Value**

true

**API Name**

gateway\_websocket\_feature\_enabled

**Required**

false

**X-Forwarded Header Context Service Name****Description**

The service name to be added in x-forward-context header.

**Related Name**

gateway.xforwarded.header.context.append.servicename

**Default Value**

LIVYSERVER, LIVY\_FOR\_SPARK3

**API Name**

gateway\_xforwarded\_header\_context\_append\_servicename

**Required**

false

**Admin Group Mapping - Class Name****Description**

The class name used for Hadoop admin group mapping

**Related Name**

gateway.group.config.hadoop.security.group.mapping

**Default Value**

org.apache.hadoop.security.ShellBasedUnixGroupsMapping

**API Name**

hadoop\_security\_group\_mapping\_class

**Required**

false

**Hadoop Group Mapping - Negative Cache Expiration****Description**

The Hadoop group mapping negative cache expiration in seconds

**Related Name**

gateway.group.config.hadoop.security.groups.negative-cache.secs

**Default Value**

5 second(s)

**API Name**

hadoop\_security\_group\_negative\_cache\_expiration\_seconds

**Required**

false

**Hadoop Group Mapping - Positive Cache Expiration****Description**

The Hadoop group mapping positive cache expiration in seconds

**Related Name**

gateway.group.config.hadoop.security.groups.cache.secs

**Default Value**

10 second(s)

**API Name**

hadoop_security_group_positive_cache_expiration_seconds
<b>Required</b>
false

**krb5.conf Location**

<b>Description</b>
Absolute path to krb5.conf file
<b>Related Name</b>
java.security.krb5.conf
<b>Default Value</b>
/etc/krb5.conf
<b>API Name</b>
java_security_krb5_conf
<b>Required</b>
false

**KRB5 Debug**

<b>Description</b>
Boolean flag indicating whether to enable debug messages for krb5 authentication
<b>Related Name</b>
sun.security.krb5.debug
<b>Default Value</b>
false
<b>API Name</b>
sun_security_krb5_debug
<b>Required</b>
false

**Performance**

**Maximum Process File Descriptors**

<b>Description</b>
If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
rlimit_fds
<b>Required</b>
false

**Ports and Addresses**

**Gateway HTTP Port**

<b>Description</b>
The HTTP port for the Gateway.

**Related Name**

gateway.port

**Default Value**

8443

**API Name**

gateway\_port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Knox Gateway TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Knox Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

gateway.httpclient.truststore.path

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Knox Gateway TLS/SSL Trust Store Password****Description**

The password for the Knox Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name****Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Knox Gateway****Description**

Encrypt communication between clients and Knox Gateway using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

knox.enableTLS

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Knox Gateway TLS/SSL Server Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Knox Gateway is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

gateway.tls.keystore.path

**Default Value**

<b>API Name</b>	ssl_server_keystore_location
<b>Required</b>	false

**Knox Gateway TLS/SSL Server Keystore File Password**

<b>Description</b>	The password for the Knox Gateway keystore file.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	ssl_server_keystore_password
<b>Required</b>	false

**Stacks Collection**

**Stacks Collection Data Retention**

<b>Description</b>	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>	stacks_collection_data_retention
<b>Default Value</b>	100 MiB
<b>API Name</b>	stacks_collection_data_retention
<b>Required</b>	false

**Stacks Collection Directory**

<b>Description</b>	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>	stacks_collection_directory
<b>Default Value</b>	
<b>API Name</b>	stacks_collection_directory
<b>Required</b>	false

**Stacks Collection Enabled**

<b>Description</b>
--------------------

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties\_  
role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/auto-discovery-advanced-configuration-cdp-proxy.properties\_role  
\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/cdp-resources.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/gateway-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Simplified Topology Management - API Authentication Provider****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - API Authentication Provider parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_api\_authentication\_provider

**Required**

true

**Suppress Parameter Validation: Knox Gateway Configuration Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Configuration Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_conf\_dir

**Required**

true

**Suppress Parameter Validation: Knox Gateway Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_data\_dir

**Required**

true

**Suppress Parameter Validation: Gateway - Default App Topology Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway - Default App Topology Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_default\_topology\_name

**Required**

true

**Suppress Parameter Validation: Knox Simplified Topology Management - cdp-proxy****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - cdp-proxy parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_descriptor\_cdp\_proxy

**Required**

true

**Suppress Parameter Validation: Knox Simplified Topology Management - cdp-proxy-api****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - cdp-proxy-api parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_descriptor\_cdp\_proxy\_api

**Required**

true

**Suppress Parameter Validation: Knox Gateway Dispatch Whitelist****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Dispatch Whitelist parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_dispatch\_whitelist

**Required**

true

**Suppress Parameter Validation: Knox Gateway Dispatch Whitelist Services****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Dispatch Whitelist Services parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_dispatch\_whitelist\_services

**Required**

true

**Suppress Parameter Validation: Gateway Config Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Config Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_gateway\_conf\_dir

**Required**

true

**Suppress Parameter Validation: Knox Gateway Initial/Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Initial/Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_heap\_size

**Required**

true

**Suppress Parameter Validation: Additional Gateway Java Options**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Gateway Java Options parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_java\_opts

**Required**

true

**Suppress Parameter Validation: Admin Groups**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Groups parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_knox\_admin\_groups

**Required**

true

**Suppress Parameter Validation: Knox Master Secret**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Master Secret parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_master\_secret

**Required**

true

**Suppress Parameter Validation: Gateway Path**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Path parameter.

**Related Name**

**Default Value**

false

**API Name**`role_config_suppression_gateway_path`**Required**`true`**Suppress Parameter Validation: Gateway HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway HTTP Port parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_gateway_port`**Required**`true`**Suppress Parameter Validation: Ranger Knox Plugin Conf Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Conf Path parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_gateway_ranger_knox_plugin_conf_path`**Required**`true`**Suppress Parameter Validation: Ranger Knox Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Audit Hdfs Spool Directory Path parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_gateway_ranger_knox_plugin_hdfs_audit_spool_directory`**Required**`true`**Suppress Parameter Validation: Ranger Knox Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Policy Cache Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Knox Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Audit Solr Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Parameter Validation: Security - Signing Key Alias****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Key Alias parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_key\_alias

**Required**

true

**Suppress Parameter Validation: Security - Signing Keystore Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_keystore\_name

**Required**

true

**Suppress Parameter Validation: Security - Signing Keystore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_keystore\_type

**Required**

true

**Suppress Parameter Validation: Knox Simplified Topology Management - SSO Authentication Provider****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - SSO Authentication Provider parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_sso\_authentication\_provider

**Required**

true

**Suppress Parameter Validation: Security - TLS Certificate Alias (Optional)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - TLS Certificate Alias (Optional) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_tls\_certificate\_alias

**Required**

true

**Suppress Parameter Validation: Security - TLS Certificate Path (Optional)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - TLS Certificate Path (Optional) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_tls\_certificate\_path

**Required**

true

**Suppress Parameter Validation: X-Forwarded Header Context Service Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the X-Forwarded Header Context Service Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_xforwarded\_header\_context\_append\_servicename

**Required**

true

**Suppress Parameter Validation: Admin Group Mapping - Class Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Group Mapping - Class Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_group\_mapping\_class

**Required**

true

**Suppress Parameter Validation: krb5.conf Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the krb5.conf Location parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_java\_security\_krb5\_conf

**Required**

true

**Suppress Parameter Validation: Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_knox\_gateway\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox Gateway Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Knox Gateway TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Knox Gateway TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Knox Gateway TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Knox Gateway TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_knox\_gateway\_unexpected\_exits

**Required**

true

**Knox IDBroker****Advanced****Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml****Description**

For advanced use only. A string to be inserted into conf/gateway-reloadable.xml for this role only.

**Related Name****Default Value****API Name**

conf/gateway-reloadable.xml\_role\_safety\_valve

**Required**

false

**Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml****Description**

For advanced use only. A string to be inserted into conf/gateway-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/gateway-site.xml\_role\_safety\_valve

**Required**

false

### Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

IDBROKER\_role\_env\_safety\_valve

**Required**

false

### Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

## Logs

### Knox IDBroker Log Directory

**Description**

The log directory for log files of the role Knox IDBroker.

**Related Name**

log\_dir

**Default Value**

/var/log/knox/idbroker

<b>API Name</b>	log_dir
<b>Required</b>	false

**Knox IDBroker Logging Threshold**

<b>Description</b>	The minimum log level for Knox IDBroker logs
<b>Related Name</b>	
<b>Default Value</b>	INFO
<b>API Name</b>	log_threshold
<b>Required</b>	false

**Knox IDBroker Maximum Log File Backups**

<b>Description</b>	The maximum number of rolled log files to keep for Knox IDBroker logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	10
<b>API Name</b>	max_log_backup_index
<b>Required</b>	false

**Knox IDBroker Max Log Size**

<b>Description</b>	The maximum size, in megabytes, per log file for Knox IDBroker logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	200 MiB
<b>API Name</b>	max_log_size
<b>Required</b>	false

**Monitoring**

**Enable Health Alerts for this Role**

<b>Description</b>
--------------------

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

idbroker\_fd\_thresholds

**Required**

false

### Knox IDBroker Host Health Test

**Description**

When computing the overall Knox IDBroker health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

idbroker\_host\_health\_enabled

**Required**

false

### Knox IDBroker Process Health Test

**Description**

Enables the health test that the Knox IDBroker's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

idbroker\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

### Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

`process_swap_memory_rate_thresholds`

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

`common.process.swap_memory_rate_window`

**Default Value**

5 minute(s)

**API Name**

`process_swap_memory_rate_window`

**Required**

false

## Process Swap Memory Thresholds

### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

### Related Name

### Default Value

Warning: 200 B, Critical: Never

### API Name

process\_swap\_memory\_thresholds

### Required

false

## Role Triggers

### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

### Related Name

### Default Value

[]

### API Name

role\_triggers

### Required

true

## Unexpected Exits Thresholds

### Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

### Related Name

### Default Value

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Knox IDBroker Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name****Default Value**

5 minute(s)

**API Name**

csd\_role\_diagnostics\_timeout

**Required**

false

**Knox IDBroker AWS Credentials Key****Description**

The AWS credentials key

**Related Name**

idbroker\_aws\_credentials\_key

**Default Value****API Name**

idbroker\_aws\_credentials\_key

**Required**

false

**Knox IDBroker AWS Credentials Secret****Description**

The AWS credentials secret

**Related Name**

idbroker\_aws\_credentials\_secret

**Default Value****API Name**

idbroker\_aws\_credentials\_secret

**Required**

false

**Knox IDBroker AWS Group Mapping****Description**

The list of AWS group-role mappings in 'group=role[;group=role]...[;group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=arn:aws:iam:XYZ:role/s3full;audit=arn:aws:iam:XYZ:role/s3Read

**Related Name**

idbroker.aws.group.role.mapping

**Default Value****API Name**

idbroker\_aws\_group\_mapping

**Required**

false

**Knox IDBroker AWS User Default Group Mapping****Description**

The list of AWS user default group mappings in 'user=group[user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

**Related Name**

idbroker.aws.user.default.group.mapping

**Default Value****API Name**

idbroker\_aws\_user\_default\_group\_mapping

**Required**

false

**Knox IDBroker AWS User Mapping****Description**

The list of AWS user-role mappings in 'user=role[user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=arn:aws:iam:XYZ:role/s3full;guest=arn:aws:iam:XYZ:role/s3Read

**Related Name**

idbroker.aws.user.role.mapping

**Default Value****API Name**

idbroker\_aws\_user\_mapping

**Required**

false

**Knox IDBroker AZURE ADLS2 Tenant Name****Description**

The name of the AZURE AD tenant. A tenant is a representation of an organization. It's a dedicated instance of Azure AD that an organization or application developer receives when the organization or application developer creates a relationship with Microsoft

**Related Name**

idbroker\_azure\_adls2\_tenant\_name

**Default Value****API Name**

idbroker\_azure\_adls2\_tenant\_name

**Required**

false

**Knox IDBroker AZURE 'blob-contributor' ClientID****Description**

The client ID credential for 'blob-contributor' role

**Related Name**

idbroker\_azure\_blob\_contributor\_clientid

**Default Value****API Name**

idbroker\_azure\_blob\_contributor\_clientid

**Required**

false

**Knox IDBroker AZURE 'blob-contributor' Secret****Description**

The secret credential for 'blob-contributor' role

**Related Name**

idbroker\_azure\_blob\_contributor\_secret

**Default Value****API Name**

idbroker\_azure\_blob\_contributor\_secret

**Required**

false

**Knox IDBroker AZURE 'blob-reader' ClientID****Description**

The client ID credential for 'blob-reader' role

**Related Name**

idbroker\_azure\_blob\_reader\_clientid

**Default Value****API Name**

idbroker\_azure\_blob\_reader\_clientid

**Required**

false

**Knox IDBroker AZURE 'blob-reader' Secret****Description**

The secret credential for 'blob-reader' role

**Related Name**

idbroker\_azure\_blob\_reader\_secret

**Default Value****API Name**

idbroker\_azure\_blob\_reader\_secret

**Required**

false

**Knox IDBroker AZURE Group Mapping****Description**

The list of AZURE group-role mappings in 'group=role[;group=role]...[;group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=blob-contributor

**Related Name**

idbroker.adls2.group.role.mapping

**Default Value****API Name**

idbroker\_azure\_group\_mapping

**Required**

false

**Knox IDBroker AZURE User Default Group Mapping****Description**

The list of AZURE user default group mappings in 'user=group[;user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

**Related Name**

idbroker.azure.user.default.group.mapping

**Default Value****API Name**

idbroker\_azure\_user\_default\_group\_mapping

**Required**

false

**Knox IDBroker AZURE User Mapping****Description**

The list of AZURE user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=blob-contributor

**Related Name**

idbroker.adls2.user.role.mapping

**Default Value****API Name**

idbroker\_azure\_user\_mapping

**Required**

false

**Knox IDBroker AZURE VM Assumer Identity****Description**

A user assigned managed identity that has Virtual Machine Contributor and Managed Identity Operator roles scoped at the resource group where IDBroker Virtual Machine is running.

**Related Name**

idbroker\_azure\_vm\_assumer\_identity

**Default Value****API Name**

idbroker\_azure\_vm\_assumer\_identity

**Required**

false

**Knox IDBroker Configuration Directory****Description**

Contains configuration files that apply to the gateway globally (i.e. not cluster specific ).

**Related Name**

idbroker\_conf\_dir

**Default Value**

/var/lib/knox/idbroker/conf

**API Name**

idbroker\_conf\_dir

**Required**

false

**Knox IDBroker Data Directory****Description**

Contains security and topology specific artifacts as well as important applications for admin-ui

**Related Name**

idbroker\_data\_dir

**Default Value**

/var/lib/knox/idbroker/data

**API Name**

idbroker\_data\_dir

**Required**

false

**Gateway - Default App Topology Name****Description**

When a topology file is deployed with a file name that matches the configured default topology name, a specialized mapping for URLs is installed for that particular topology. This allows the URLs that are expected by the existing Hadoop CLIs for WebHDFS to be used in interacting with the specific Hadoop cluster that is represented by the default topology file.

**Related Name**

default.app.topology.name

**Default Value****API Name**

idbroker\_default\_topology\_name

**Required**

false

**Gateway Config Directory****Description**

The directory within 'idbroker\_data\_dir' that contains gateway topology files and deployments.

**Related Name**

gateway.gateway.conf.dir

**Default Value**

deployments

**API Name**

idbroker\_gateway\_gateway\_conf\_dir

**Required**

false

**Admin Groups****Description**

Admin groups for Knox

**Related Name**

gateway.knox.admin.groups

**Default Value****API Name**

idbroker\_gateway\_knox\_admin\_groups

**Required**

false

**Gateway Path****Description**

The default context path for the gateway.

**Related Name**

gateway.path

**Default Value**

gateway

**API Name**

idbroker\_gateway\_path

**Required**

true

**Cookie Scoping Enabled****Description**

Enable/Disable cookie scoping feature.

**Related Name**

gateway.scope.cookies.feature.enabled

**Default Value**

false

**API Name**

idbroker\_gateway\_scope\_cookies\_feature\_enabled

**Required**

false

**Security - Signing Key Alias****Description**The alias for the signing keypair within the keystore specified via  
idbroker\_gateway\_signing\_keystore\_name**Related Name**

gateway.signing.key.alias

**Default Value****API Name**

idbroker\_gateway\_signing\_key\_alias

**Required**

false

**Security - Signing Keystore Name****Description**

The filename of keystore file that contains the signing keypair

**Related Name**

gateway.signing.keystore.name

**Default Value****API Name**

idbroker\_gateway\_signing\_keystore\_name

**Required**

false

**Security - Signing Keystore Type****Description**

The type of the keystore file where the signing keypair is stored. See `idbroker_gateway_signing_keystore_name`

**Related Name**

`gateway.signing.keystore.type`

**Default Value****API Name**

`idbroker_gateway_signing_keystore_type`

**Required**

false

**Knox IDBroker GCP Credential Key****Description**

The GCP Credential Key

**Related Name**

`idbroker_gcp_credential_key`

**Default Value****API Name**

`idbroker_gcp_credential_key`

**Required**

false

**Knox IDBroker GCP Credential Secret****Description**

The GCP Credential Secret

**Related Name**

`idbroker_gcp_credential_secret`

**Default Value****API Name**

`idbroker_gcp_credential_secret`

**Required**

false

**Knox IDBroker GCP Group Mapping****Description**

The list of GCP group-role mappings in 'group=role[:group=role]...[:group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: `admin=storage-admin@XYZ.iam.gserviceaccount.com;audit=storage-read-only@XYZ.iam.gserviceaccount.com`

**Related Name**

`idbroker.gcp.group.role.mapping`

**Default Value****API Name**

`idbroker_gcp_group_mapping`

**Required**

false

**Knox IDBroker GCP User Default Group Mapping****Description**

The list of GCP user default group mappings in 'user=group[;user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

**Related Name**

idbroker.gcp.user.default.group.mapping

**Default Value****API Name**

idbroker\_gcp\_user\_default\_group\_mapping

**Required**

false

**Knox IDBroker GCP User Mapping****Description**

The list of GCP user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=storage-admin@XYZ.iam.gserviceaccount.com;guest=storage-read-only@XYZ.iam.gserviceaccount.com

**Related Name**

idbroker.gcp.user.role.mapping

**Default Value****API Name**

idbroker\_gcp\_user\_mapping

**Required**

false

**Admin Group Mapping - Class Name****Description**

The class name used for Hadoop admin group mapping

**Related Name**

gateway.group.config.hadoop.security.group.mapping

**Default Value**

org.apache.hadoop.security.ShellBasedUnixGroupsMapping

**API Name**

idbroker\_hadoop\_security\_group\_mapping\_class

**Required**

false

**IDBroker Initial/Max Heapsize****Description**

Initial/Maximum size for the Java Process heap. Passed to Java -Xmx/-Xms. Measured in megabytes.

**Related Name**

	idbroker_heap_size
Default Value	1 GiB
API Name	idbroker_heap_size
Required	true

Additional IDBroker Java Options

Description	These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here. -Xmx/-Xms should not be specified here: to set the heapsize use the 'Knox Gateway Initial/Max Heapsize' parameter
Related Name	idbroker_java_opts
Default Value	
API Name	idbroker_java_opts
Required	false

krb5.conf Location

Description	Absolute path to krb5.conf file
Related Name	java.security.krb5.conf
Default Value	/etc/krb5.conf
API Name	idbroker_java_security_krb5_conf
Required	false

Kerberos Proxyuser Block

Description	Proxyuser configuration used in Knox's 'dt' topology in case Kerberos is enabled. Must conform a valid JSON key-value format!
Related Name	idbroker_kerberos_dt_proxyuser_block
Default Value	hadoop.proxyuser.livy.hosts: * hadoop.proxyuser.livy.groups: * hadoop.proxyuser.hive.hosts: * hadoop.proxyuser.hive.groups: * hadoop.proxyuser.httpfs.hosts: * hadoop.proxyuser.httpfs.groups: * hadoop.proxyuser.hue.hosts: * hadoop.proxyuser.hue.groups: * hadoop.proxyuser.oozie.hosts: * hadoop.proxyuser.oozie.groups: * hadoop.proxyuser.impala.hosts: * hadoop.proxyuser.impala.groups: *

**API Name**

idbroker\_kerberos\_dt\_proxyuser\_block

**Required**

false

**IDBroker Knox Token Eviction Grace Period****Description**

Defines the grace period for which an expired token's state will avoid eviction. Setting this to zero means there is no grace period, and token state is evicted based on expiration only. See `idbroker_knox_token_eviction_interval` for more information.

**Related Name**

gateway.knox.token.eviction.grace.period

**Default Value**

1 day(s)

**API Name**

idbroker\_knox\_token\_eviction\_grace\_period

**Required**

false

**IDBroker Knox Token Eviction Interval****Description**

Defines the interval on which Knox will check for expired token state which should be evicted. If the value is equal to zero, Knox will not perform this check.

**Related Name**

gateway.knox.token.eviction.interval

**Default Value**

1 minute(s)

**API Name**

idbroker\_knox\_token\_eviction\_interval

**Required**

false

**IDBroker Knox Token Permissive Validation****Description**

When enabled, Knox will verify tokens for which there is no server-managed state based only on the contents of the tokens themselves, rather than throwing `UnknownToken` exceptions.

**Related Name**

gateway.knox.token.permissive.validation

**Default Value**

false

**API Name**

idbroker\_knox\_token\_permissive\_validation

**Required**

false

**Enable IDBroker Knox Token State Server****Description**

Whether the Knox token state server is enabled for IDBroker

**Related Name**

idbroker\_knox\_token\_state\_enabled

**Default Value**

false

**API Name**

idbroker\_knox\_token\_state\_enabled

**Required**

false

**IDBroker Knox Token TTL****Description**

This indicates the lifespan of the token. Once it expires a new token must be acquired from KnoxToken service. This is in milliseconds.

**Related Name**

idbroker\_knox\_token\_ttl\_ms

**Default Value**

7 day(s)

**API Name**

idbroker\_knox\_token\_ttl\_ms

**Required**

false

**IDBroker Master Secret****Description**

The master secret is used to access secured artifacts by the gateway instance. Keystore, trust stores and credential stores are all protected with the master secret. NOTE: changing the master secret will require you to change passwords protecting the keystores for the gateway, identity keystores and all credential stores

**Related Name**

idbroker\_master\_secret

**Default Value****API Name**

idbroker\_master\_secret

**Required**

true

**Gateway Config Refresh Interval****Description**

Defines the frequency of gateway configuration refresh.

**Related Name**

gateway.config.refresh.interval

**Default Value**

10 second(s)

**API Name**

idbroker\_relaodable\_refresh\_interval\_ms

**Required**

false

**KRB5 Debug****Description**

Boolean flag indicating whether to enable debug messages for krb5 authentication

**Related Name**

sun.security.krb5.debug

**Default Value**

false

**API Name**

idbroker\_sun\_security\_krb5\_debug

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Gateway HTTP Port****Description**

The HTTP port for the Gateway.

**Related Name**

gateway.port

**Default Value**

8444

**API Name**

idbroker\_gateway\_port

**Required**

true

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

#### Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_hard\_limit

#### Required

true

### Cgroup Memory Soft Limit

#### Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.soft\_limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_soft\_limit

#### Required

true

### Security

#### Knox IDBroker TLS/SSL Trust Store File

#### Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Knox IDBroker might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

#### Related Name

gateway.httpclient.truststore.path

#### Default Value

#### API Name

ssl\_client\_truststore\_location

**Required**

false

**Knox IDBroker TLS/SSL Trust Store Password****Description**

The password for the Knox IDBroker TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name****Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Knox IDBroker****Description**

Encrypt communication between clients and Knox IDBroker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

knox.enableTLS

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Knox IDBroker TLS/SSL Server Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Knox IDBroker is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

gateway.tls.keystore.path

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Knox IDBroker TLS/SSL Server Keystore File Password****Description**

The password for the Knox IDBroker keystore file.

**Related Name**

<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_password
<b>Required</b>
false

Stacks Collection

Stacks Collection Data Retention

<b>Description</b>
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>
stacks_collection_data_retention
<b>Default Value</b>
100 MiB
<b>API Name</b>
stacks_collection_data_retention
<b>Required</b>
false

Stacks Collection Directory

<b>Description</b>
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>
stacks_collection_directory
<b>Default Value</b>
<b>API Name</b>
stacks_collection_directory
<b>Required</b>
false

Stacks Collection Enabled

<b>Description</b>
Whether or not periodic stacks collection is enabled.
<b>Related Name</b>
stacks_collection_enabled
<b>Default Value</b>
false
<b>API Name</b>
stacks_collection_enabled
<b>Required</b>

true

### Stacks Collection Frequency

#### Description

The frequency with which stacks are collected.

#### Related Name

stacks\_collection\_frequency

#### Default Value

5.0 second(s)

#### API Name

stacks\_collection\_frequency

#### Required

false

### Stacks Collection Method

#### Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

#### Related Name

stacks\_collection\_method

#### Default Value

jstack

#### API Name

stacks\_collection\_method

#### Required

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

##### Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

##### Related Name

##### Default Value

false

##### API Name

role\_config\_suppression\_cdh\_version\_validator

##### Required

true

#### Suppress Parameter Validation: Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml

##### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/gateway-reloadable.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/gateway-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Knox IDBroker AWS Credentials Key

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AWS Credentials Key parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_credentials\_key

**Required**

true

### Suppress Parameter Validation: Knox IDBroker AWS Credentials Secret

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AWS Credentials Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_credentials\_secret

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AWS Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AWS Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_group\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AWS User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AWS User Default Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_user\_default\_group\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AWS User Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AWS User Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_user\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE ADLS2 Tenant Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE ADLS2 Tenant Name parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_adls2\_tenant\_name

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE 'blob-contributor' ClientID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE 'blob-contributor' ClientID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_contributor\_clientid

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE 'blob-contributor' Secret****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE 'blob-contributor' Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_contributor\_secret

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE 'blob-reader' ClientID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE 'blob-reader' ClientID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_reader\_clientid

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE 'blob-reader' Secret****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE 'blob-reader' Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_reader\_secret

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_group\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE User Default Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_user\_default\_group\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker AZURE User Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE User Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_user\_mapping

**Required**

true
------

### Suppress Parameter Validation: Knox IDBroker AZURE VM Assumer Identity

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker AZURE VM Assumer Identity parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_vm\_assumer\_identity

**Required**

true

### Suppress Parameter Validation: Knox IDBroker Configuration Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Configuration Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_conf\_dir

**Required**

true

### Suppress Parameter Validation: Knox IDBroker Data Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_data\_dir

**Required**

true

### Suppress Parameter Validation: Gateway - Default App Topology Name

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway - Default App Topology Name parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_idbroker_default_topology_name`**Required**`true`**Suppress Parameter Validation: Gateway Config Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Config Directory parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_idbroker_gateway_gateway_conf_dir`**Required**`true`**Suppress Parameter Validation: Admin Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Groups parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_idbroker_gateway_knox_admin_groups`**Required**`true`**Suppress Parameter Validation: Gateway Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Path parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_idbroker_gateway_path`**Required**`true`**Suppress Parameter Validation: Gateway HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_port

**Required**

true

**Suppress Parameter Validation: Security - Signing Key Alias****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Key Alias parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_signing\_key\_alias

**Required**

true

**Suppress Parameter Validation: Security - Signing Keystore Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_signing\_keystore\_name

**Required**

true

**Suppress Parameter Validation: Security - Signing Keystore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_signing\_keystore\_type

**Required**

true

**Suppress Parameter Validation: Knox IDBroker GCP Credential Key****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP Credential Key parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_credential\_key

**Required**

true

**Suppress Parameter Validation: Knox IDBroker GCP Credential Secret****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP Credential Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_credential\_secret

**Required**

true

**Suppress Parameter Validation: Knox IDBroker GCP Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_group\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker GCP User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP User Default Group Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_user\_default\_group\_mapping

**Required**

true

**Suppress Parameter Validation: Knox IDBroker GCP User Mapping****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker GCP User Mapping parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_user\_mapping

**Required**

true

**Suppress Parameter Validation: Admin Group Mapping - Class Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Group Mapping - Class Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_hadoop\_security\_group\_mapping\_class

**Required**

true

**Suppress Parameter Validation: IDBroker Initial/Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the IDBroker Initial/Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_heap\_size

**Required**

true

**Suppress Parameter Validation: Additional IDBroker Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional IDBroker Java Options parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_java\_opts

**Required**

true

**Suppress Parameter Validation: krb5.conf Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the krb5.conf Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_java\_security\_krb5\_conf

**Required**

true

**Suppress Parameter Validation: Kerberos Proxyuser Block****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Proxyuser Block parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_kerberos\_dt\_proxyuser\_block

**Required**

true

**Suppress Parameter Validation: IDBroker Master Secret****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the IDBroker Master Secret parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_master\_secret

**Required**

true

**Suppress Parameter Validation: Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Knox IDBroker Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Knox IDBroker TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Knox IDBroker TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Knox IDBroker TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Knox IDBroker TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_knox\_idbroker\_unexpected\_exits

**Required**

true

**Service-Wide****Advanced****Knox Service Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml****Description**

For advanced use only, a string to be inserted into conf/gateway-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

conf/gateway-site.xml\_service\_safety\_valve

**Required**

false

**Knox Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

KNOX\_service\_env\_safety\_valve

**Required**

false

**System Group****Description**

The group that this service's processes should run as.

**Related Name****Default Value**

knox

<b>API Name</b>	process_groupname
<b>Required</b>	true

System User

<b>Description</b>	The user that this service's processes should run as.
<b>Related Name</b>	
<b>Default Value</b>	knox
<b>API Name</b>	process_username
<b>Required</b>	true

Monitoring

Enable Service Level Health Alerts

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	enable_alerts
<b>Required</b>	false

Enable Configuration Change Alerts

<b>Description</b>	When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	enable_config_alerts
<b>Required</b>	false

Healthy Knox IDBroker Monitoring Thresholds

<b>Description</b>	The health test thresholds of the overall Knox IDBroker health. The check returns "Concerning" health if the percentage of "Healthy" Knox IDBrokers falls below the warning threshold. The check
--------------------	--

is unhealthy if the total percentage of "Healthy" and "Concerning" Knox IDBrokers falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 49.0 %

**API Name**

KNOX\_IDBROKER\_healthy\_thresholds

**Required**

false

**Healthy Knox Gateway Monitoring Thresholds****Description**

The health test thresholds of the overall Knox Gateway health. The check returns "Concerning" health if the percentage of "Healthy" Knox Gateways falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Knox Gateways falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 49.0 %

**API Name**

KNOX\_KNOX\_GATEWAY\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****Automatic Restart on Stop****Description**

Automatically restart the service when a stop is issued.

**Related Name**

autorestart\_on\_stop

**Default Value**

false

**API Name**

autorestart\_on\_stop

**Required**

false

**HDFS Service****Description**

Name of the HDFS service that this Knox service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

false

**Enable Kerberos Authentication****Description**

Boolean flag indicating whether the Hadoop cluster protected by Gateway is secured with Kerberos

**Related Name**`gateway.hadoop.kerberos.secured`**Default Value**`false`**API Name**`kerberos.auth.enabled`**Required**`false`**Knox Home Page - Hidden Topologies****Description**

A comma-separated list of topology names that should not be listed in the Topologies section on the Knox Home page.

**Related Name**`knox.homepage.hidden.topologies`**Default Value**`admin manager knoxsso metadata homepage`**API Name**`knox_homepage_hidden_topologies`**Required**`false`**Knox Home Page - Enable Logout****Description**

Whether logout from the Knox Home page is enabled or not.

**Related Name**`knox.homepage.logout.enabled`**Default Value**`true`**API Name**`knox_homepage_logout_enabled`**Required**`false`**Knox Home Page - Pinned Topologies****Description**

A comma-separated list of topology names that should be auto-expanded on the Knox Home page.

**Related Name**`knox.homepage.pinned.topologies`**Default Value**`cdp-proxy`**API Name**`knox_homepage_pinned_topologies`**Required**

false

**Knox PAM Realm - Service Name**

**Description**

Using KnoxPamRealm requires a PAM service name. This is the name of the file under '/etc/pam.d' that is used to initialize and configure the PAM subsystem. Normally, this file reflects the application using it. For example 'login', 'sshd', 'su', etc...

**Related Name**

knox\_pam\_realm\_service

**Default Value**

login

**API Name**

knox\_pam\_realm\_service

**Required**

false

**Ranger Knox Plugin Hdfs Audit Directory**

**Description**

The HDFS path on which Ranger audits are written.

**Related Name**

ranger\_knox\_plugin\_hdfs\_audit\_directory

**Default Value**

\$ranger\_base\_audit\_url/knox

**API Name**

ranger\_knox\_plugin\_hdfs\_audit\_directory

**Required**

false

**RANGER Service**

**Description**

Name of the RANGER service that this Knox service instance depends on

**Related Name**

**Default Value**

**API Name**

ranger\_service

**Required**

false

**Save Alias Command Input**

**Description**

This parameter serves as the input for the 'Save Alias' command. The input must follow the following format: topology\_name\_1[:topology\_name\_2:...:topology\_name\_N].alias\_name=password

**Related Name**

save\_alias\_command\_input\_password

**Default Value****API Name**

save\_alias\_command\_input\_password

**Required**

false

**Security****Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

knox

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

### Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties

#### Description

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties\_role\_safety\_valve

#### Required

true

### Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties

#### Description

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_conf/auto-discovery-advanced-configuration-cdp-proxy.properties\_role\_safety\_valve

#### Required

true

### Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml

#### Description

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_conf/cdp-resources.xml\_role\_safety\_valve

#### Required

true

### Suppress Configuration Validator: Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml

#### Description

Whether to suppress configuration warnings produced by the Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/gateway-reloadable.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/gateway-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml

**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-audit.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml

**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-knox-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Simplified Topology Management - API Authentication Provider****Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - API Authentication Provider configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_api\_authentication\_provider

**Required**

true

**Suppress Configuration Validator: Knox Gateway Configuration Directory****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Configuration Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_conf\_dir

**Required**

true

**Suppress Configuration Validator: Knox Gateway Data Directory****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_data\_dir

**Required**

true

**Suppress Configuration Validator: Gateway - Default App Topology Name****Description**

Whether to suppress configuration warnings produced by the Gateway - Default App Topology Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_default\_topology\_name

**Required**

true

**Suppress Configuration Validator: Knox Simplified Topology Management - cdp-proxy****Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - cdp-proxy configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_descriptor\_cdp\_proxy

**Required**

true

**Suppress Configuration Validator: Knox Simplified Topology Management - cdp-proxy-api****Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - cdp-proxy-api configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_descriptor\_cdp\_proxy\_api

**Required**

true

### Suppress Configuration Validator: Knox Gateway Dispatch Whitelist

**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Dispatch Whitelist configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_dispatch\_whitelist

**Required**

true

### Suppress Configuration Validator: Knox Gateway Dispatch Whitelist Services

**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Dispatch Whitelist Services configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_dispatch\_whitelist\_services

**Required**

true

### Suppress Configuration Validator: Gateway Config Directory

**Description**

Whether to suppress configuration warnings produced by the Gateway Config Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_gateway\_conf\_dir

**Required**

true

### Suppress Configuration Validator: Knox Gateway Initial/Max Heapsize

**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Initial/Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_heap\_size

**Required**

true

**Suppress Configuration Validator: Additional Gateway Java Options****Description**

Whether to suppress configuration warnings produced by the Additional Gateway Java Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_java\_opts

**Required**

true

**Suppress Configuration Validator: Admin Groups****Description**

Whether to suppress configuration warnings produced by the Admin Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_knox\_admin\_groups

**Required**

true

**Suppress Configuration Validator: Knox Master Secret****Description**

Whether to suppress configuration warnings produced by the Knox Master Secret configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_master\_secret

**Required**

true

**Suppress Configuration Validator: Gateway Path****Description**

Whether to suppress configuration warnings produced by the Gateway Path configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_path

**Required**

true

**Suppress Configuration Validator: Gateway HTTP Port****Description**

Whether to suppress configuration warnings produced by the Gateway HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_port

**Required**

true

**Suppress Configuration Validator: Ranger Knox Plugin Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Conf Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_conf\_path

**Required**

true

**Suppress Configuration Validator: Ranger Knox Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Audit Hdfs Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Knox Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Policy Cache Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Knox Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_knox\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Configuration Validator: Security - Signing Key Alias****Description**

Whether to suppress configuration warnings produced by the Security - Signing Key Alias configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_key\_alias

**Required**

true

**Suppress Configuration Validator: Security - Signing Keystore Name****Description**

Whether to suppress configuration warnings produced by the Security - Signing Keystore Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_keystore\_name

**Required**

true

**Suppress Configuration Validator: Security - Signing Keystore Type****Description**

Whether to suppress configuration warnings produced by the Security - Signing Keystore Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_signing\_keystore\_type

**Required**

true

**Suppress Configuration Validator: Knox Simplified Topology Management - SSO Authentication Provider****Description**

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - SSO Authentication Provider configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_sso\_authentication\_provider

**Required**

true

**Suppress Configuration Validator: Security - TLS Certificate Alias (Optional)****Description**

Whether to suppress configuration warnings produced by the Security - TLS Certificate Alias (Optional) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_tls\_certificate\_alias

**Required**

true

**Suppress Configuration Validator: Security - TLS Certificate Path (Optional)****Description**

Whether to suppress configuration warnings produced by the Security - TLS Certificate Path (Optional) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_tls\_certificate\_path

**Required**

true

**Suppress Configuration Validator: X-Forwarded Header Context Service Name****Description**

Whether to suppress configuration warnings produced by the X-Forwarded Header Context Service Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gateway\_xforwarded\_header\_context\_append\_servicename

**Required**

true

**Suppress Configuration Validator: Admin Group Mapping - Class Name****Description**

Whether to suppress configuration warnings produced by the Admin Group Mapping - Class Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_group\_mapping\_class

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AWS Credentials Key****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Credentials Key configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_credentials\_key

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AWS Credentials Secret****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Credentials Secret configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_credentials\_secret

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AWS Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_group\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AWS User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS User Default Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_user\_default\_group\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AWS User Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AWS User Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_aws\_user\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE ADLS2 Tenant Name****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE ADLS2 Tenant Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_adls2\_tenant\_name

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE 'blob-contributor' ClientID****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-contributor' ClientID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_contributor\_clientid

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE 'blob-contributor' Secret****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-contributor' Secret configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_contributor\_secret

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE 'blob-reader' ClientID****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-reader' ClientID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_reader\_clientid

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE 'blob-reader' Secret****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-reader' Secret configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_blob\_reader\_secret

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_group\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE User Default Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_user\_default\_group\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE User Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE User Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_user\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker AZURE VM Assumer Identity****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE VM Assumer Identity configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_azure\_vm\_assumer\_identity

**Required**

true

**Suppress Configuration Validator: Knox IDBroker Configuration Directory****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Configuration Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_conf\_dir

**Required**

true

### Suppress Configuration Validator: Knox IDBroker Data Directory

#### Description

Whether to suppress configuration warnings produced by the Knox IDBroker Data Directory configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_idbroker\_data\_dir

#### Required

true

### Suppress Configuration Validator: Gateway - Default App Topology Name

#### Description

Whether to suppress configuration warnings produced by the Gateway - Default App Topology Name configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_idbroker\_default\_topology\_name

#### Required

true

### Suppress Configuration Validator: Gateway Config Directory

#### Description

Whether to suppress configuration warnings produced by the Gateway Config Directory configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_idbroker\_gateway\_gateway\_conf\_dir

#### Required

true

### Suppress Configuration Validator: Admin Groups

#### Description

Whether to suppress configuration warnings produced by the Admin Groups configuration validator.

#### Related Name

#### Default Value

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_knox\_admin\_groups

**Required**

true

**Suppress Configuration Validator: Gateway Path****Description**

Whether to suppress configuration warnings produced by the Gateway Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_path

**Required**

true

**Suppress Configuration Validator: Gateway HTTP Port****Description**

Whether to suppress configuration warnings produced by the Gateway HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_port

**Required**

true

**Suppress Configuration Validator: Security - Signing Key Alias****Description**

Whether to suppress configuration warnings produced by the Security - Signing Key Alias configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_signing\_key\_alias

**Required**

true

**Suppress Configuration Validator: Security - Signing Keystore Name****Description**

Whether to suppress configuration warnings produced by the Security - Signing Keystore Name configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_signing\_keystore\_name

**Required**

true

**Suppress Configuration Validator: Security - Signing Keystore Type****Description**

Whether to suppress configuration warnings produced by the Security - Signing Keystore Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gateway\_signing\_keystore\_type

**Required**

true

**Suppress Configuration Validator: Knox IDBroker GCP Credential Key****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP Credential Key configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_credential\_key

**Required**

true

**Suppress Configuration Validator: Knox IDBroker GCP Credential Secret****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP Credential Secret configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_credential\_secret

**Required**

true

**Suppress Configuration Validator: Knox IDBroker GCP Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_group\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker GCP User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP User Default Group Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_user\_default\_group\_mapping

**Required**

true

**Suppress Configuration Validator: Knox IDBroker GCP User Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP User Mapping configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_gcp\_user\_mapping

**Required**

true

**Suppress Configuration Validator: Admin Group Mapping - Class Name****Description**

Whether to suppress configuration warnings produced by the Admin Group Mapping - Class Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_hadoop\_security\_group\_mapping\_class

**Required**

true

**Suppress Configuration Validator: IDBroker Initial/Max Heapsize****Description**

Whether to suppress configuration warnings produced by the IDBroker Initial/Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_heap\_size

**Required**

true

**Suppress Configuration Validator: Additional IDBroker Java Options****Description**

Whether to suppress configuration warnings produced by the Additional IDBroker Java Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_java\_opts

**Required**

true

**Suppress Configuration Validator: krb5.conf Location****Description**

Whether to suppress configuration warnings produced by the krb5.conf Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_java\_security\_krb5\_conf

**Required**

true

**Suppress Configuration Validator: Kerberos Proxyuser Block****Description**

Whether to suppress configuration warnings produced by the Kerberos Proxyuser Block configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_kerberos\_dt\_proxyuser\_block

**Required**

true

**Suppress Configuration Validator: IDBroker Master Secret****Description**

Whether to suppress configuration warnings produced by the IDBroker Master Secret configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_master\_secret

**Required**

true

**Suppress Configuration Validator: Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_idbroker\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: krb5.conf Location****Description**

Whether to suppress configuration warnings produced by the krb5.conf Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_java\_security\_krb5\_conf

**Required**

true

**Suppress Configuration Validator: Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_knox\_gateway\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Knox Gateway Log Directory****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_oom_heap_dump_dir`**Required**`true`**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_rm_custom_resources`**Required**`true`**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_role_triggers`**Required**`true`**Suppress Configuration Validator: Knox Gateway TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ssl_client_truststore_location`**Required**`true`**Suppress Configuration Validator: Knox Gateway TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Trust Store Password configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Knox Gateway TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Server Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Knox Gateway TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Knox Service Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Service Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_conf/gateway-site.xml\_service\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Configuration Validator: Knox IDBroker Count Validator****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_idbroker\_count\_validator

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Configuration Validator: Knox Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Knox Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_knox\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: Knox Home Page - Hidden Topologies****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Home Page - Hidden Topologies parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_knox\_homepage\_hidden\_topologies

**Required**

true

**Suppress Parameter Validation: Knox Home Page - Pinned Topologies****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Home Page - Pinned Topologies parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_knox\_homepage\_pinned\_topologies

**Required**

true

**Suppress Parameter Validation: Knox PAM Realm - Service Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox PAM Realm - Service Name parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_knox\_pam\_realm\_service

**Required**

true

**Suppress Parameter Validation: Knox Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_knox\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Ranger Knox Plugin Hdfs Audit Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Hdfs Audit Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_knox\_plugin\_hdfs\_audit\_directory

**Required**

true

**Suppress Parameter Validation: Save Alias Command Input****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Save Alias Command Input parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_save\_alias\_command\_input\_password

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Health Test: Knox IDBroker Health****Description**

Whether to suppress the results of the Knox IDBroker Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_knox\_idbroker\_healthy

**Required**

true

**Suppress Health Test: Knox Gateway Health****Description**

Whether to suppress the results of the Knox Gateway Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_knox\_knox\_gateway\_healthy

**Required**

true

**Kudu Properties in Cloudera Runtime 7.2.16**

Role groups:

**Master****Advanced****Master Advanced Configuration Snippet (Safety Valve) for gflagfile****Description**

For advanced use only. A string to be inserted into gflagfile for this role only.

**Related Name****Default Value****API Name**

gflagfile\_role\_safety\_valve

**Required**

false

**Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties****Description**

For advanced use only. A string to be inserted into kudu-monitoring.properties for this role only.

**Related Name****Default Value****API Name**

kudu-monitoring.properties\_role\_safety\_valve

**Required**

false

**Master Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KUDU\_MASTER\_role\_env\_safety\_valve

**Required**

false

**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-audit.xml****Description**

For advanced use only. A string to be inserted into ranger-kudu-audit.xml for this role only.

**Related Name**

**Default Value**

**API Name**

ranger-kudu-audit.xml\_role\_safety\_valve

**Required**

false

**Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-policymgr-ssl.xml**

**Description**

For advanced use only. A string to be inserted into ranger-kudu-policymgr-ssl.xml for this role only.

**Related Name**

**Default Value**

**API Name**

ranger-kudu-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

**Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-security.xml**

**Description**

For advanced use only. A string to be inserted into ranger-kudu-security.xml for this role only.

**Related Name**

**Default Value**

**API Name**

ranger-kudu-security.xml\_role\_safety\_valve

**Required**

false

**Logs**

**Master Maximum Log Level to Buffer**

**Description**

Log messages logged at this level or lower are buffered in memory.

**Related Name**

logbuflevel

**Default Value**

0

**API Name**

glog\_logbuflevel

**Required**

false

**Master Maximum Log Size**

**Description**

Approximate maximum log file size in megabytes before rolling to a new log file.

**Related Name**

max\_log\_size

**Default Value**

1800 MiB

**API Name**

glog\_maxlogsize

**Required**

false

### Master Minimum Log Level

**Description**

Messages logged via LOG() at a lower level than this are not logged anywhere.

**Related Name**

minloglevel

**Default Value**

0

**API Name**

glog\_minloglevel

**Required**

false

### Master Minimum Log Verbosity

**Description**

Messages logged via VLOG() at a lower verbosity than this are not logged anywhere.

**Related Name**

v

**Default Value**

0

**API Name**

glog\_verbose

**Required**

false

### Master Log Directory

**Description**

The log directory for log files of the role Master.

**Related Name**

log\_dir

**Default Value**

/var/log/kudu

**API Name**

log\_dir

**Required**

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

Related Name

Default Value

true

API Name

enable\_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable\_config\_alerts

Required

false

Enable Failed Data Directories

Description

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name

Default Value

true

API Name

KUDU-KUDU\_MASTER-7.2.0-FAILED\_DATA\_DIRS\_test\_enable

Required

false

Enable Full Data Directories

Description

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name

Default Value

true

**API Name**

KUDU-KUDU\_MASTER-7.2.0-FULL\_DATA\_DIRS\_test\_enable

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

kudu\_master\_fd\_thresholds

**Required**

false

**Master Host Health Test****Description**

When computing the overall Master health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

kudu\_master\_host\_health\_enabled

**Required**

false

**Master Process Health Test****Description**

Enables the health test that the Master's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

kudu\_master\_scm\_health\_enabled

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring_metric_filter
<b>Required</b>
false

Swap Memory Usage Rate Thresholds

<b>Description</b>
The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.
<b>Related Name</b>
<b>Default Value</b>
Warning: Never, Critical: Never
<b>API Name</b>
process_swap_memory_rate_thresholds
<b>Required</b>
false

Swap Memory Usage Rate Window

<b>Description</b>
The period to review when computing unexpected swap memory usage change of the process.
<b>Related Name</b>
common.process.swap_memory_rate_window
<b>Default Value</b>
5 minute(s)
<b>API Name</b>
process_swap_memory_rate_window
<b>Required</b>
false

Process Swap Memory Thresholds

<b>Description</b>
The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.
<b>Related Name</b>
<b>Default Value</b>
Warning: 200 B, Critical: Never
<b>API Name</b>
process_swap_memory_thresholds
<b>Required</b>
false

Role Triggers

<b>Description</b>
The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

[]

#### API Name

role\_triggers

#### Required

true

### Unexpected Exits Thresholds

#### Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

#### Related Name

#### Default Value

Warning: Never, Critical: Any

#### API Name

unexpected\_exits\_thresholds

#### Required

false

### Unexpected Exits Monitoring Period

#### Description

The period to review when computing unexpected exits.

#### Related Name

#### Default Value

5 minute(s)

#### API Name

unexpected\_exits\_window

#### Required

false

Other

Master Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

1 minute(s)

API Name

csd\_role\_diagnostics\_timeout

Required

false

Default Number of Replicas

Description

Default number of replicas for each tablet.

Related Name

default\_num\_replicas

Default Value

3

API Name

default\_num\_replicas

Required

true

Kudu Master Data Directories

Description

Directories where Kudu masters will store data blocks.

Related Name

fs\_data\_dirs

Default Value

API Name

fs\_data\_dirs

Required

true

Kudu Master WAL Directory

Description

Directory where Kudu masters will store write-ahead logs. It can be the same as one of the data directories, but not a sub-directory of a data directory. Master and tablet servers must use different directories when co-located on the same machine.

Related Name

fs\_wal\_dir

**Default Value****API Name**

fs\_wal\_dir

**Required**

true

**Kudu Master WAL Fsyncs All Entries****Description**

If true, the Master will use the fsync system call to ensure that all modifications to the catalog table are durably written to disk. WARNING: In this release, enabling this option can cause serious issues.

**Related Name**

log\_force\_fsync\_all

**Default Value**

false

**API Name**

log\_force\_fsync\_all

**Required**

true

**Master Address****Description**

Configuration that's automatically set by Cloudera Manager to propagate the Master's address to the Tablet Servers.

**Related Name**

server.address

**Default Value****API Name**

master\_address

**Required**

false

**Kudu Master Core Dump Directory****Description**

If Enable Core Dump is set, Kudu masters will dump cores to this location.

**Related Name**

master\_core\_dump\_directory

**Default Value**

/var/log/kudu

**API Name**

master\_core\_dump\_directory

**Required**

true

### Kudu Metrics URL Parameters

**Description**

The URL query parameters to append to the `/metrics` URL when collecting Kudu metrics.

**Related Name**

metrics\_url\_parameters

**Default Value**

compact=1&level=info

**API Name**

metrics\_url\_parameters

**Required**

true

### Ranger Kudu Plugin Audit HDFS Spool Directory Path

**Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

xasecure.audit.destination.hdfs.batch.filespool.dir

**Default Value**

/var/log/kudu/audit/hdfs/spool

**API Name**

ranger\_kudu\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

### Ranger Kudu Plugin Policy Cache Directory Path

**Description**

The directory where Ranger security policies are cached locally.

**Related Name**

ranger.plugin.kudu.policy.cache.dir

**Default Value**

/var/lib/ranger/kudu/policy-cache

**API Name**

ranger\_kudu\_plugin\_policy\_cache\_directory

**Required**

true

### Ranger service name for this Kudu service

**Description**

Name of the Kudu Ranger service, that is used for authorization by this Kudu service. If this parameter is set to the placeholder value '{GENERATED\_RANGER\_SERVICE\_NAME}', a generated service name will be used, and if necessary, created. The generated service name will refer to the name of the cluster and the name of this Kudu service. The name can consist of alphanumeric and '\_' characters.

**Related Name**

ranger.plugin.kudu.service.name

<b>Default Value</b>	cm_kudu
<b>API Name</b>	ranger_kudu_plugin_service_name
<b>Required</b>	false

**Ranger Kudu Plugin Audit Solr Spool Directory Path**

<b>Description</b>	Spool directory for Ranger audits being written to Solr.
<b>Related Name</b>	xasecure.audit.destination.solr.batch.filespool.dir
<b>Default Value</b>	/var/log/kudu/audit/solr/spool
<b>API Name</b>	ranger_kudu_plugin_solr_audit_spool_directory
<b>Required</b>	true

**Ranger Plugin Trusted Proxy IP Address**

<b>Description</b>	Accepts a list of IP addresses of proxy servers for trusting.
<b>Related Name</b>	ranger.plugin.kudu.trusted.proxy.ipaddress
<b>Default Value</b>	
<b>API Name</b>	ranger_kudu_plugin_trusted_proxy_ipaddress
<b>Required</b>	false

**Ranger Plugin Use X-Forwarded For IP Address**

<b>Description</b>	The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.
<b>Related Name</b>	ranger.plugin.kudu.use.x-forwarded-for.ipaddress
<b>Default Value</b>	false
<b>API Name</b>	ranger_kudu_plugin_use_x_forwarded_for_ipaddress
<b>Required</b>	false

**Kudu Master Web UI Interface**

<b>Description</b>	
--------------------	--

	The interface of the Kudu Master Web UI. If blank, binds to 0.0.0.0.
<b>Related Name</b>	webserver_interface
<b>Default Value</b>	
<b>API Name</b>	webserver_interface
<b>Required</b>	false

Performance

Maximum Process File Descriptors

<b>Description</b>	If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	rlimit_fds
<b>Required</b>	false

Ports and Addresses

Kudu Master Web UI Port

<b>Description</b>	The port of the Kudu Master Web UI.
<b>Related Name</b>	webserver_port
<b>Default Value</b>	8051
<b>API Name</b>	webserver_port
<b>Required</b>	true

Resource Management

Cgroup CPU Shares

<b>Description</b>	Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.
<b>Related Name</b>	cpu.shares
<b>Default Value</b>	

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Master TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Master might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

kudu.ssl.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Master TLS/SSL Trust Store Password****Description**

The password for the Master TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

kudu.ssl.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Master****Description**

Encrypt communication between clients and Master using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Master TLS/SSL Server CA Certificate (PEM Format)****Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

**Related Name****Default Value****API Name**

ssl\_server\_ca\_certificate\_location

**Required**

false

**Master TLS/SSL Server Certificate File (PEM Format)****Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

webserver\_certificate\_file

**Default Value****API Name**

ssl\_server\_certificate\_location

**Required**

false

**Master TLS/SSL Server Private Key File (PEM Format)****Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

webserver\_private\_key\_file

**Default Value****API Name**

ssl\_server\_privatekey\_location

**Required**

false

### Master TLS/SSL Private Key Password

**Description**

The password for the private key in the Master TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

**Related Name**

webserver\_private\_key\_password\_cmd

**Default Value****API Name**

ssl\_server\_privatekey\_password

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Parameter Validation: Default Number of Replicas

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Number of Replicas parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_default\_num\_replicas

**Required**

true

**Suppress Parameter Validation: Kudu Master Data Directories****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Master Data Directories parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_data\_dirs

**Required**

true

**Suppress Parameter Validation: Kudu Master WAL Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Master WAL Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_wal\_dir

**Required**

true

**Suppress Parameter Validation: Master Advanced Configuration Snippet (Safety Valve) for gflagfile****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Advanced Configuration Snippet (Safety Valve) for gflagfile parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gflagfile\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_kudu-monitoring.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Master Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu\_master\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Master Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Master Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_master\_address

**Required**

true

**Suppress Parameter Validation: Kudu Master Core Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Master Core Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_master\_core\_dump\_directory

**Required**

true

**Suppress Parameter Validation: Kudu Metrics URL Parameters****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Metrics URL Parameters parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics\_url\_parameters

**Required**

true

**Suppress Parameter Validation: Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kudu-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kudu-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kudu-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Kudu Plugin Audit HDFS Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kudu Plugin Audit HDFS Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kudu\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Kudu Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kudu Plugin Policy Cache Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kudu\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Parameter Validation: Ranger service name for this Kudu service****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger service name for this Kudu service parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kudu\_plugin\_service\_name

**Required**

true

**Suppress Parameter Validation: Ranger Kudu Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kudu Plugin Audit Solr Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kudu\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kudu\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Master TLS/SSL Trust Store File**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master TLS/SSL Trust Store File parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Master TLS/SSL Trust Store Password**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master TLS/SSL Trust Store Password parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Master TLS/SSL Server CA Certificate (PEM Format)**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master TLS/SSL Server CA Certificate (PEM Format) parameter.

**Related Name**

**Default Value**

false

**API Name**`role_config_suppression_ssl_server_ca_certificate_location`**Required**`true`**Suppress Parameter Validation: Master TLS/SSL Server Certificate File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master TLS/SSL Server Certificate File (PEM Format) parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ssl_server_certificate_location`**Required**`true`**Suppress Parameter Validation: Master TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master TLS/SSL Server Private Key File (PEM Format) parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ssl_server_privatekey_location`**Required**`true`**Suppress Parameter Validation: Master TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Master TLS/SSL Private Key Password parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ssl_server_privatekey_password`**Required**`true`**Suppress Parameter Validation: Kudu Master Web UI Interface****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Master Web UI Interface parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_interface

**Required**

true

**Suppress Parameter Validation: Kudu Master Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Master Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_port

**Required**

true

**Suppress Health Test: Failed Data Directories****Description**

Whether to suppress the results of the Failed Data Directories health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu-kudu\_master-7.2.0-failed\_data\_dirs

**Required**

true

**Suppress Health Test: Full Data Directories****Description**

Whether to suppress the results of the Full Data Directories health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu-kudu\_master-7.2.0-full\_data\_dirs

**Required**

true
------

### Suppress Health Test: Audit Pipeline Test

#### Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_kudu\_kudu\_master\_audit\_health

#### Required

true

### Suppress Health Test: File Descriptors

#### Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_kudu\_kudu\_master\_file\_descriptor

#### Required

true

### Suppress Health Test: Host Health

#### Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

#### Related Name

#### Default Value

false

#### API Name

role\_health\_suppression\_kudu\_kudu\_master\_host\_health

#### Required

true

### Suppress Health Test: Log Directory Free Space

#### Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits**

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_master\_unexpected\_exits

**Required**

true

**Service-Wide**

**Advanced**

**Kudu Service Advanced Configuration Snippet (Safety Valve) for gflagfile**

**Description**

For advanced use only, a string to be inserted into gflagfile. Applies to configurations of all roles in this service except client configuration.

**Related Name**

**Default Value**

**API Name**

gflagfile\_service\_safety\_valve

**Required**

false

**Kudu Service Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties**

**Description**

For advanced use only, a string to be inserted into kudu-monitoring.properties. Applies to configurations of all roles in this service except client configuration.

**Related Name**

**Default Value**

**API Name**

kudu-monitoring.properties\_service\_safety\_valve

**Required**

false

**Kudu Service Environment Advanced Configuration Snippet (Safety Valve)**

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	KUDU_service_env_safety_valve
<b>Required</b>	false

System Group

<b>Description</b>	The group that this service's processes should run as.
<b>Related Name</b>	
<b>Default Value</b>	kudu
<b>API Name</b>	process_groupname
<b>Required</b>	true

System User

<b>Description</b>	The user that this service's processes should run as.
<b>Related Name</b>	
<b>Default Value</b>	kudu
<b>API Name</b>	process_username
<b>Required</b>	true

Monitoring

Enable Service Level Health Alerts

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	enable_alerts
<b>Required</b>	false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Healthy Master Monitoring Thresholds

**Description**

The health test thresholds of the overall Master health. The check returns "Concerning" health if the percentage of "Healthy" Masters falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Masters falls below the critical threshold.

**Related Name****Default Value**

Warning: 80.1 %, Critical: 60.0 %

**API Name**

KUDU\_KUDU\_MASTER\_healthy\_thresholds

**Required**

false

### Healthy Tablet Server Monitoring Thresholds

**Description**

The health test thresholds of the overall Tablet Server health. The check returns "Concerning" health if the percentage of "Healthy" Tablet Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Tablet Servers falls below the critical threshold.

**Related Name****Default Value**

Warning: 75.0 %, Critical: 50.0 %

**API Name**

KUDU\_KUDU\_TSERVER\_healthy\_thresholds

**Required**

false

### Service Triggers

**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.

- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

`service_triggers`

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

`smon_derived_configs_safety_valve`

**Required**

false

**Other****Time Servers for Built-In NTP Client****Description**

Comma-separated list of NTP servers to use for the built-in NTP client, in format [FQDN|IPv4][:PORT]. These are only used if the 'builtin' Time Source is selected.

**Related Name**

`builtin_ntp_servers`

**Default Value**

`0.pool.ntp.org, 1.pool.ntp.org, 2.pool.ntp.org, 3.pool.ntp.org`

**API Name**

`builtin_ntp_servers`

**Required**

false

### Enable Core Dump

**Description**

Used to generate a core dump to get more information about a Kudu crash. Unless otherwise configured systemwide using `/proc/sys/kernel/core_pattern`, the dump is generated in the configured core dump directory. The core file can be very large.

**Related Name**

`enable_core_dump`

**Default Value**

`false`

**API Name**

`enable_core_dump`

**Required**

`true`

### Enable Secure Authentication, Encryption, And Web UI

**Description**

Enable secure authentication and encryption between all Kudu clients and servers as well as between individual servers. Also enables secure authentication in every Kudu server's web UI. Kerberos must be configured.

**Related Name**

`enable_security`

**Default Value**

`false`

**API Name**

`enable_security`

**Required**

`true`

### HDFS Service

**Description**

Name of the HDFS service that this Kudu service instance depends on

**Related Name****Default Value****API Name**

`hdfs_service`

**Required**

`false`

### HMS Service

**Description**

Name of the HMS service that this Kudu service instance depends on

**Related Name****Default Value****API Name**

hms_service
<b>Required</b>
false

**Ranger Kudu Plugin Hdfs Audit Directory**

<b>Description</b>
The HDFS path on which Ranger audits are written.
<b>Related Name</b>
ranger_kudu_plugin_hdfs_audit_directory
<b>Default Value</b>
\$ranger_base_audit_url/kudu
<b>API Name</b>
ranger_kudu_plugin_hdfs_audit_directory
<b>Required</b>
false

**RANGER Service**

<b>Description</b>
Name of the RANGER service that this Kudu service instance depends on
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
ranger_service
<b>Required</b>
false

**Maximum Number of Per-tablet-server Replica Moves**

<b>Description</b>
Maximum number of replica moves to perform concurrently on one tablet server: moves of replicas to the server and moves of replicas off of the server count against this limit.
<b>Related Name</b>
rb_max_moves_per_server
<b>Default Value</b>
5
<b>API Name</b>
rb_max_moves_per_server
<b>Required</b>
false

**Maximum Allowed Runtime of the Rebalancing Tool**

<b>Description</b>
Maximum time to run the rebalancing, in seconds. Specifying 0 means not imposing any limit on the rebalancing run time.
<b>Related Name</b>
rb_max_run_time_sec

**Default Value**

0

**API Name**

rb\_max\_run\_time\_sec

**Required**

false

**Maximum Allowed Duration Without Rebalancer Progress****Description**

Maximum duration of the 'staleness' interval where the rebalance can not make progress. If this period elapses without the rebalancer making progress, it will exit indicating failure. This may happen in case of a persistent problem with the cluster or when some unexpected concurrent activity is present (such as automatic recovery of failed replicas, etc.)

**Related Name**

rb\_max\_staleness\_interval\_sec

**Default Value**

300

**API Name**

rb\_max\_staleness\_interval\_sec

**Required**

false

**Maximum Allowed Runtime to Rolling Restart a Batch of Servers****Description**

Maximum time to allow for the restart of a batch of servers during a rolling restart. If this period elapses without the cluster becoming healthy, the rolling restart will exit indicating failure. This may happen if there is a persistent problem with the cluster.

**Related Name**

rr\_batch\_time\_limit\_sec

**Default Value**

1800

**API Name**

rr\_batch\_time\_limit\_sec

**Required**

false

**Rolling Restart Health Check Interval****Description**

Interval in seconds with which to check the health of a cluster in waiting for a server or batch of servers to come back online, before moving onto the next server or batch of servers during a rolling restart.

**Related Name**

rr\_health\_check\_interval\_sec

**Default Value**

60

**API Name**

rr\_health\_check\_interval\_sec

**Required**

false

**Sentry Service****Description**

Name of the Sentry service that this Kudu service instance depends on

**Related Name****Default Value****API Name**

sentry\_service

**Required**

false

**Superuser Access Control List****Description**

The list of usernames to allow as super users, comma-separated. A '\*' entry indicates that all authenticated users are allowed. If this is left unset or blank, the default behavior is that the identity of the daemon itself determines the superuser. If the daemon is logged in from a Keytab, then the local username from the Kerberos principal is used; otherwise, the local Unix username is used.

**Related Name**

superuser\_acl

**Default Value****API Name**

superuser\_acl

**Required**

false

**Time Source****Description**

Time source for HybridClock timestamps. If set to 'auto', Kudu selects the best available time source for the environment: for particular public cloud types, Kudu uses the dedicated NTP server available from within a public cloud instance, otherwise, Kudu relies on the local system clock to be synchronized by NTP. If set to 'builtin', Kudu masters and tablet servers use the built-in NTP client, where the set of servers is configured as specified by the 'Servers for Built-in NTP Client' configuration property (--builtin\_ntp\_servers flag). If set to 'system', Kudu relies on the local system clock to be synchronized by NTP, where the synchronization by NTP is a requirement.

**Related Name**

time\_source

**Default Value**

system

**API Name**

time\_source

**Required**

true

### User Access Control List

**Description**

The list of usernames who may access the cluster, comma-separated. A '\*' entry indicates that all authenticated users are allowed.

**Related Name**

user\_acl

**Default Value**

\*

**API Name**

user\_acl

**Required**

false

### Security

#### Kerberos Principal

**Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**

kudu

**API Name**

kerberos\_princ\_name

**Required**

true

### Suppressions

#### Suppress Configuration Validator: Kudu Tablet Server Block Cache Capacity

**Description**

Whether to suppress configuration warnings produced by the Kudu Tablet Server Block Cache Capacity configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_block\_cache\_capacity\_mb

**Required**

true

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Default Number of Replicas****Description**

Whether to suppress configuration warnings produced by the Default Number of Replicas configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_default\_num\_replicas

**Required**

true

**Suppress Configuration Validator: Kudu Master Data Directories****Description**

Whether to suppress configuration warnings produced by the Kudu Master Data Directories configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_data\_dirs

**Required**

true

**Suppress Configuration Validator: Kudu Master WAL Directory****Description**

Whether to suppress configuration warnings produced by the Kudu Master WAL Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_wal\_dir

**Required**

true

**Suppress Configuration Validator: Master Advanced Configuration Snippet (Safety Valve) for gflagfile****Description**

Whether to suppress configuration warnings produced by the Master Advanced Configuration Snippet (Safety Valve) for gflagfile configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gflagfile\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties

**Description**

Whether to suppress configuration warnings produced by the Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu-monitoring.properties\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Master Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Master Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu\_master\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Tablet Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Tablet Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu\_tserver\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Master Log Directory****Description**

Whether to suppress configuration warnings produced by the Master Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Kudu Tablet Server Maintenance Threads****Description**

Whether to suppress configuration warnings produced by the Kudu Tablet Server Maintenance Threads configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_maintenance\_manager\_num\_threads

**Required**

true

**Suppress Configuration Validator: Master Address****Description**

Whether to suppress configuration warnings produced by the Master Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_master\_address

**Required**

true

**Suppress Configuration Validator: Kudu Master Core Dump Directory****Description**

Whether to suppress configuration warnings produced by the Kudu Master Core Dump Directory configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_master\_core\_dump\_directory

**Required**

true

**Suppress Configuration Validator: Kudu Tablet Server Hard Memory Limit****Description**

Whether to suppress configuration warnings produced by the Kudu Tablet Server Hard Memory Limit configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_memory\_limit\_hard\_bytes

**Required**

true

**Suppress Configuration Validator: Kudu Metrics URL Parameters****Description**

Whether to suppress configuration warnings produced by the Kudu Metrics URL Parameters configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_metrics\_url\_parameters

**Required**

true

**Suppress Configuration Validator: Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-audit.xml****Description**

Whether to suppress configuration warnings produced by the Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kudu-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kudu-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-security.xml****Description**

Whether to suppress configuration warnings produced by the Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-security.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-kudu-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Kudu Plugin Audit HDFS Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kudu Plugin Audit HDFS Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kudu\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Kudu Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kudu Plugin Policy Cache Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ranger_kudu_plugin_policy_cache_directory`**Required**`true`**Suppress Configuration Validator: Ranger service name for this Kudu service****Description**

Whether to suppress configuration warnings produced by the Ranger service name for this Kudu service configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kudu_plugin_service_name`**Required**`true`**Suppress Configuration Validator: Ranger Kudu Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Kudu Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kudu_plugin_solr_audit_spool_directory`**Required**`true`**Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kudu_plugin_trusted_proxy_ipaddress`**Required**`true`**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Master TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Master TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Master TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Master TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Master TLS/SSL Server CA Certificate (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Master TLS/SSL Server CA Certificate (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

**Suppress Configuration Validator: Master TLS/SSL Server Certificate File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Master TLS/SSL Server Certificate File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

**Suppress Configuration Validator: Master TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the Master TLS/SSL Server Private Key File (PEM Format) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Configuration Validator: Master TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the Master TLS/SSL Private Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Configuration Validator: Kudu Tablet Server Core Dump Directory****Description**

Whether to suppress configuration warnings produced by the Kudu Tablet Server Core Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_tserver\_core\_dump\_directory

**Required**

true

**Suppress Configuration Validator: Kudu Master Web UI Interface****Description**

Whether to suppress configuration warnings produced by the Kudu Master Web UI Interface configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_interface

**Required**

true

**Suppress Configuration Validator: Kudu Master Web UI Port****Description**

Whether to suppress configuration warnings produced by the Kudu Master Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_port

**Required**

true

**Suppress Parameter Validation: Time Servers for Built-In NTP Client****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Time Servers for Built-In NTP Client parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_builtin\_ntp\_servers

**Required**

true

**Suppress Parameter Validation: Kudu Service Advanced Configuration Snippet (Safety Valve) for gflagfile****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Service Advanced Configuration Snippet (Safety Valve) for gflagfile parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gflagfile\_service\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: Kudu Service Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Service Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kudu-monitoring.properties\_service\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Master Count Validator****Description**

Whether to suppress configuration warnings produced by the Master Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kudu\_master\_count\_validator

**Required**

true

**Suppress Parameter Validation: Kudu Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kudu\_service\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Tablet Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Tablet Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kudu\_tserver\_count\_validator

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service_config_suppression_process_groupname
<b>Required</b>
true

Suppress Parameter Validation: System User

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
service_config_suppression_process_username
<b>Required</b>
true

Suppress Parameter Validation: Ranger Kudu Plugin Hdfs Audit Directory

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kudu Plugin Hdfs Audit Directory parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
service_config_suppression_ranger_kudu_plugin_hdfs_audit_directory
<b>Required</b>
true

Suppress Parameter Validation: Service Triggers

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
service_config_suppression_service_triggers
<b>Required</b>
true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Superuser Access Control List****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Superuser Access Control List parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_superuser\_acl

**Required**

true

**Suppress Parameter Validation: User Access Control List****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the User Access Control List parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_user\_acl

**Required**

true

**Suppress Health Test: Master Health****Description**

Whether to suppress the results of the Master Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_kudu\_kudu\_master\_healthy

**Required**

true

### Suppress Health Test: Tablet Server Health

**Description**

Whether to suppress the results of the Tablet Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_kudu\_kudu\_tserver\_healthy

**Required**

true

## Tablet Server

### Advanced

#### Tablet Server Advanced Configuration Snippet (Safety Valve) for gflagfile

**Description**

For advanced use only. A string to be inserted into gflagfile for this role only.

**Related Name****Default Value****API Name**

gflagfile\_role\_safety\_valve

**Required**

false

#### Tablet Server Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties

**Description**

For advanced use only. A string to be inserted into kudu-monitoring.properties for this role only.

**Related Name****Default Value****API Name**

kudu-monitoring.properties\_role\_safety\_valve

**Required**

false

#### Tablet Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

KUDU_TSERVER_role_env_safety_valve
<b>Required</b>
false

Enable auto refresh for metric configurations

<b>Description</b>
When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
metric_config_auto_refresh
<b>Required</b>
false

Automatically Restart Process

<b>Description</b>
When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
process_auto_restart
<b>Required</b>
true

Enable Metric Collection

<b>Description</b>
Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
process_should_monitor
<b>Required</b>
true

Process Start Retry Attempts

<b>Description</b>
--------------------

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Logs****Tablet Server Maximum Log Level to Buffer****Description**

Log messages logged at this level or lower are buffered in memory.

**Related Name**

logbuflevel

**Default Value**

0

**API Name**

glog\_logbuflevel

**Required**

false

**Tablet Server Maximum Log Size****Description**

Approximate maximum log file size in megabytes before rolling to a new log file.

**Related Name**

max\_log\_size

**Default Value**

1800 MiB

<b>API Name</b>	glog_maxlogsize
<b>Required</b>	false

**Tablet Server Minimum Log Level**

<b>Description</b>	Messages logged via LOG() at a lower level than this are not logged anywhere.
<b>Related Name</b>	minloglevel
<b>Default Value</b>	0
<b>API Name</b>	glog_minloglevel
<b>Required</b>	false

**Tablet Server Minimum Log Verbosity**

<b>Description</b>	Messages logged via VLOG() at a lower verbosity than this are not logged anywhere.
<b>Related Name</b>	v
<b>Default Value</b>	0
<b>API Name</b>	glog_verbose
<b>Required</b>	false

**Tablet Server Log Directory**

<b>Description</b>	The log directory for log files of the role Tablet Server.
<b>Related Name</b>	log_dir
<b>Default Value</b>	/var/log/kudu
<b>API Name</b>	log_dir
<b>Required</b>	false

**Monitoring**

**Enable Health Alerts for this Role**

<b>Description</b>
--------------------

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

### Enable Failed Data Directories

**Description**

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

**Related Name****Default Value**

true

**API Name**

KUDU-KUDU\_TSERVER-7.2.0-FAILED\_DATA\_DIRS\_test\_enable

**Required**

false

### Enable Full Data Directories

**Description**

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

**Related Name****Default Value**

true

**API Name**

KUDU-KUDU\_TSERVER-7.2.0-FULL\_DATA\_DIRS\_test\_enable

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

kudu\_tserver\_fd\_thresholds

**Required**

false

### Tablet Server Host Health Test

**Description**

When computing the overall Tablet Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

kudu\_tserver\_host\_health\_enabled

**Required**

false

### Tablet Server Process Health Test

**Description**

Enables the health test that the Tablet Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

kudu\_tserver\_scm\_health\_enabled

**Required**

false

### Log Directory Free Space Monitoring Absolute Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

### Log Directory Free Space Monitoring Percentage Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

#### Related Name

#### Default Value

Warning: Never, Critical: Never

#### API Name

log\_directory\_free\_space\_percentage\_thresholds

#### Required

false

### Metric Filter

#### Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

#### Related Name

#### Default Value

#### API Name

monitoring\_metric\_filter

#### Required

false

### Swap Memory Usage Rate Thresholds

#### Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.

- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Kudu Tablet Server Block Cache Capacity****Description**

Maximum amount of memory allocated to the Kudu Tablet Server's block cache.

**Related Name**

	block_cache_capacity_mb
Default Value	512 MiB
API Name	block_cache_capacity_mb
Required	true

Tablet Server Diagnostics Collection Timeout

Description	The timeout in milliseconds to wait for diagnostics collection to complete.
Related Name	
Default Value	1 minute(s)
API Name	csd_role_diagnostics_timeout
Required	false

Kudu Tablet Server Data Directories

Description	Directories where Kudu tablet servers will store data blocks.
Related Name	fs_data_dirs
Default Value	
API Name	fs_data_dirs
Required	true

Kudu Tablet Server WAL Directory

Description	Directory where Kudu tablet servers will store write-ahead logs. It can be the same as one of the data directories, but not a sub-directory of a data directory. Master and tablet servers must use different directories when co-located on the same machine.
Related Name	fs_wal_dir
Default Value	
API Name	fs_wal_dir
Required	true

### Kudu Tablet Server WAL Fsyncs All Entries

**Description**

If true, the Tablet Server will use the fsync system call to ensure that all writes are durably written to the write-ahead log (WAL) before responding. If false, edits will be written to the Linux buffer cache on a majority of replicas before responding.

**Related Name**

log\_force\_fsync\_all

**Default Value**

false

**API Name**

log\_force\_fsync\_all

**Required**

true

### Kudu Tablet Server Maintenance Threads

**Description**

The number of threads devoted to background maintenance operations such as flushes and compactions. If the tablet server appears to be falling behind on write operations (inserts, updates, and deletes) but CPU and disk resources are not saturated, increasing this thread count will devote more resources to these background operations.

**Related Name**

maintenance\_manager\_num\_threads

**Default Value**

1

**API Name**

maintenance\_manager\_num\_threads

**Required**

true

### Kudu Tablet Server Hard Memory Limit

**Description**

Maximum amount of memory that the Kudu Tablet Server will use before it starts rejecting all incoming writes.

**Related Name**

memory\_limit\_hard\_bytes

**Default Value**

4 GiB

**API Name**

memory\_limit\_hard\_bytes

**Required**

true

### Kudu Metrics URL Parameters

**Description**

The URL query parameters to append to the `/metrics` URL when collecting Kudu metrics.

**Related Name**

	metrics_url_parameters
Default Value	compact=1&level=info
API Name	metrics_url_parameters
Required	true

Tablet History Max Age

Description	The maximum amount of time, in seconds, to preserve tablet data history, including history required to perform diff scans and incremental backups. The duration defined by this parameter is also the maximum amount of time it is possible to wait after a full or incremental backup before performing the next incremental backup. Setting the value to -1 disables history removal.
Related Name	tablet_history_max_age_sec
Default Value	7 day(s)
API Name	tablet_history_max_age_sec
Required	true

Tablet Server Quiescing Interval

Description	Interval in seconds with which to check whether a Tablet Server has fully quiesced
Related Name	ts_quiescing_retry_interval_sec
Default Value	30
API Name	ts_quiescing_retry_interval_sec
Required	false

Maximum Allowed Runtime to Quiesce a Tablet Server

Description	Maximum time to wait for a Tablet Server to fully quiesce, relinquishing leadership of all Tablets and completion of all active scans.
Related Name	ts_quiescing_time_limit_sec
Default Value	1800
API Name	ts_quiescing_time_limit_sec

**Required**

false

**Kudu Tablet Server Core Dump Directory****Description**

If Enable Core Dump is set, Kudu Tablet Servers will dump cores to this location.

**Related Name**

tserver\_core\_dump\_directory

**Default Value**

/var/log/kudu

**API Name**

tserver\_core\_dump\_directory

**Required**

true

**Kudu Tablet Server Web UI Interface****Description**

The interface of the Kudu Tablet Server Web UI. If blank, binds to 0.0.0.0.

**Related Name**

webserver\_interface

**Default Value****API Name**

webserver\_interface

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Kudu Tablet Server Web UI Port****Description**

The port of the Kudu Tablet Server Web UI.

**Related Name**

webserver\_port

**Default Value**

8050

**API Name**

webserver\_port

**Required**

true

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value**

**API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Enable TLS/SSL for Tablet Server****Description**

Encrypt communication between clients and Tablet Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ssl\_enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Tablet Server TLS/SSL Server CA Certificate (PEM Format)****Description**

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

**Related Name****Default Value****API Name**

ssl\_server\_ca\_certificate\_location

**Required**

false

**Tablet Server TLS/SSL Server Certificate File (PEM Format)****Description**

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

webserver\_certificate\_file

**Default Value****API Name**

ssl\_server\_certificate\_location

**Required**

false

**Tablet Server TLS/SSL Server Private Key File (PEM Format)****Description**

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

**Related Name**

webserver\_private\_key\_file

**Default Value****API Name**

ssl\_server\_privatekey\_location

**Required**

false

### Tablet Server TLS/SSL Private Key Password

#### Description

The password for the private key in the Tablet Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

#### Related Name

webserver\_private\_key\_password\_cmd

#### Default Value

#### API Name

ssl\_server\_privatekey\_password

#### Required

false

### Suppressions

### Suppress Parameter Validation: Kudu Tablet Server Block Cache Capacity

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Block Cache Capacity parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_block\_cache\_capacity\_mb

#### Required

true

### Suppress Configuration Validator: CDH Version Validator

#### Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_cdh\_version\_validator

#### Required

true

### Suppress Parameter Validation: Kudu Tablet Server Data Directories

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Data Directories parameter.

#### Related Name

**Default Value**

false

**API Name**

role\_config\_suppression\_fs\_data\_dirs

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server WAL Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server WAL Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_fs\_wal\_dir

**Required**

true

**Suppress Parameter Validation: Tablet Server Advanced Configuration Snippet (Safety Valve) for gflagfile****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Advanced Configuration Snippet (Safety Valve) for gflagfile parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_gflagfile\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Tablet Server Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu-monitoring.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Tablet Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kudu\_tserver\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Tablet Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server Maintenance Threads****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Maintenance Threads parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_maintenance\_manager\_num\_threads

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server Hard Memory Limit****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Hard Memory Limit parameter.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_memory_limit_hard_bytes
<b>Required</b>
true

Suppress Parameter Validation: Kudu Metrics URL Parameters

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Metrics URL Parameters parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_metrics_url_parameters
<b>Required</b>
true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_rm_custom_resources
<b>Required</b>
true

Suppress Parameter Validation: Role Triggers

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_role_triggers
<b>Required</b>
true

Suppress Parameter Validation: Tablet Server TLS/SSL Server CA Certificate (PEM Format)

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Server CA Certificate (PEM Format) parameter.
<b>Related Name</b>

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_ca\_certificate\_location

**Required**

true

**Suppress Parameter Validation: Tablet Server TLS/SSL Server Certificate File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Server Certificate File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_certificate\_location

**Required**

true

**Suppress Parameter Validation: Tablet Server TLS/SSL Server Private Key File (PEM Format)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Server Private Key File (PEM Format) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_location

**Required**

true

**Suppress Parameter Validation: Tablet Server TLS/SSL Private Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tablet Server TLS/SSL Private Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_privatekey\_password

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server Core Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Core Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_tserver\_core\_dump\_directory

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server Web UI Interface****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Web UI Interface parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_interface

**Required**

true

**Suppress Parameter Validation: Kudu Tablet Server Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_webserver\_port

**Required**

true

**Suppress Health Test: Failed Data Directories****Description**

Whether to suppress the results of the Failed Data Directories health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu-kudu\_tserver-7.2.0-failed\_data\_dirs

<b>Required</b>
true

**Suppress Health Test: Full Data Directories**

<b>Description</b>
Whether to suppress the results of the Full Data Directories health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_health_suppression_kudu-kudu_tserver-7.2.0-full_data_dirs
<b>Required</b>
true

**Suppress Health Test: Audit Pipeline Test**

<b>Description</b>
Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_health_suppression_kudu_kudu_tserver_audit_health
<b>Required</b>
true

**Suppress Health Test: File Descriptors**

<b>Description</b>
Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_health_suppression_kudu_kudu_tserver_file_descriptor
<b>Required</b>
true

**Suppress Health Test: Host Health**

<b>Description</b>
--------------------

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_kudu\_kudu\_tserver\_unexpected\_exits

**Required**

true

## Livy Properties in Cloudera Runtime 7.2.16

Role groups:

### Gateway

**Advanced****Deploy Directory****Description**

The directory where the client configs will be deployed

**Related Name****Default Value**

/etc/livy

<b>API Name</b>	client_config_root_dir
<b>Required</b>	true

**Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf**

<b>Description</b>	For advanced use only, a string to be inserted into the client configuration for livy-conf/livy-client.conf.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	livy-conf/livy-client.conf_client_config_safety_valve
<b>Required</b>	false

**Monitoring**

**Enable Configuration Change Alerts**

<b>Description</b>	When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	enable_config_alerts
<b>Required</b>	false

**Other**

**Alternatives Priority**

<b>Description</b>	The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.
<b>Related Name</b>	
<b>Default Value</b>	50
<b>API Name</b>	client_config_priority
<b>Required</b>	true

Security

Gateway TLS/SSL Trust Store File

Description	The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.
Related Name	livy.truststore
Default Value	
API Name	ssl_client_truststore_location
Required	false

Gateway TLS/SSL Trust Store Password

Description	The password for the Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.
Related Name	livy.truststore.password
Default Value	
API Name	ssl_client_truststore_password
Required	false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Deploy Directory

Description	
-------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

### Suppress Parameter Validation: Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy-conf/livy-client.conf\_client\_config\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Gateway TLS/SSL Trust Store File

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

### Suppress Parameter Validation: Gateway TLS/SSL Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

<b>Required</b>
true

Livy Server

Advanced

Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf

<b>Description</b>
For advanced use only. A string to be inserted into livy-conf/livy.conf for this role only.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
livy-conf/livy.conf_role_safety_valve
<b>Required</b>
false

Livy Server Environment Advanced Configuration Snippet (Safety Valve)

<b>Description</b>
For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
LIVY_SERVER_role_env_safety_valve
<b>Required</b>
false

Livy Server Logging Advanced Configuration Snippet (Safety Valve)

<b>Description</b>
For advanced use only, a string to be inserted into log4j.properties for this role only.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
log4j_safety_valve
<b>Required</b>
false

Enable auto refresh for metric configurations

<b>Description</b>
When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.
<b>Related Name</b>
<b>Default Value</b>

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name**

<b>Default Value</b>	20
<b>API Name</b>	process_start_secs
<b>Required</b>	false

Logs

Livy Server Log Directory

<b>Description</b>	The log directory for log files of the role Livy Server.
<b>Related Name</b>	log_dir
<b>Default Value</b>	/var/log/livy
<b>API Name</b>	log_dir
<b>Required</b>	false

Livy Server Logging Threshold

<b>Description</b>	The minimum log level for Livy Server logs
<b>Related Name</b>	
<b>Default Value</b>	INFO
<b>API Name</b>	log_threshold
<b>Required</b>	false

Livy Server Maximum Log File Backups

<b>Description</b>	The maximum number of rolled log files to keep for Livy Server logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	10
<b>API Name</b>	max_log_backup_index
<b>Required</b>	false

**Livy Server Max Log Size**

**Description**

The maximum size, in megabytes, per log file for Livy Server logs. Typically used by log4j or logback.

**Related Name**

**Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring**

**Enable Health Alerts for this Role**

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name**

**Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts**

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name**

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**File Descriptor Monitoring Thresholds**

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name**

**Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

livy_server_fd_thresholds
<b>Required</b>
false

Livy Server Host Health Test

<b>Description</b>
When computing the overall Livy Server health, consider the host's health.
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
livy_server_host_health_enabled
<b>Required</b>
false

Livy Server Process Health Test

<b>Description</b>
Enables the health test that the Livy Server's process state is consistent with the role configuration
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
livy_server_scm_health_enabled
<b>Required</b>
false

Log Directory Free Space Monitoring Absolute Thresholds

<b>Description</b>
The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
<b>Related Name</b>
<b>Default Value</b>
Warning: 10 GiB, Critical: 5 GiB
<b>API Name</b>
log_directory_free_space_absolute_thresholds
<b>Required</b>
false

Log Directory Free Space Monitoring Percentage Thresholds

<b>Description</b>
The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.
<b>Related Name</b>

**Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

### Swap Memory Usage Rate Window

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### Role Triggers

**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Enable Access Control****Description**

Perform access control when processing user requests.

**Related Name**

livy.server.access-control.enabled

**Default Value**

true

**API Name**

livy\_access\_control\_enabled

**Required**

false

### Admin Users

**Description**

List of users with admin permissions (can view and modify any session).

**Related Name**

livy.superusers

**Default Value**

knox zeppelin

**API Name**

livy\_admin\_users

**Required**

false

### Extra JVM Options

**Description**

Command line options to add to the Livy Server JVM. May be used also to override options automatically added by CM.

**Related Name**

livy\_extra\_java\_opts

**Default Value****API Name**

livy\_extra\_java\_opts

**Required**

false

### Enable User Impersonation

**Description**

Start applications as the requesting user, instead of using the Livy account.

**Related Name**

livy.impersonation.enabled

**Default Value**

true

**API Name**

livy\_impersonation\_enabled

**Required**

false

### Max Header Size

**Description**

Maximum size of a header field accepted by the Livy server. May need to be increased in certain environments where SPNEGO is enabled.

**Related Name**

livy.server.request-header.size

**Default Value**

128 KiB

**API Name**

livy_max_header_size
<b>Required</b>
false

Java Heap Size of Livy Server

<b>Description</b>
Maximum size for the Java process heap memory.
<b>Related Name</b>
livy_max_heapsize
<b>Default Value</b>
512 MiB
<b>API Name</b>
livy_max_heapsize
<b>Required</b>
false

Enable RPC Encryption

<b>Description</b>
Enable encryption of communication between the Livy session and managed Spark sessions.
<b>Related Name</b>
livy_rpc_encryption_enabled
<b>Default Value</b>
true
<b>API Name</b>
livy_rpc_encryption_enabled
<b>Required</b>
false

Enable Livy Thrift Server

<b>Description</b>
Enables the Livy Thrift server
<b>Related Name</b>
livy.server.thrift.enabled
<b>Default Value</b>
false
<b>API Name</b>
livy_server_thrift_enabled
<b>Required</b>
false

Livy Thrift Server Transport Mode

<b>Description</b>
Transport mode used by the Livy Thrift server
<b>Related Name</b>
livy.server.thrift.transport.mode

<b>Default Value</b>	binary
<b>API Name</b>	livy_server_thrift_transport_mode
<b>Required</b>	false

Enable Session Recovery

<b>Description</b>	Enable recovery of live sessions when the Livy server restarts. Uses HDFS to store recovery information.
<b>Related Name</b>	livy_session_recovery_enabled
<b>Default Value</b>	true
<b>API Name</b>	livy_session_recovery_enabled
<b>Required</b>	false

Enable User Authentication

<b>Description</b>	Enables user authentication using SPNEGO when Kerberos is enabled.
<b>Related Name</b>	livy_spnego_enabled
<b>Default Value</b>	true
<b>API Name</b>	livy_spnego_enabled
<b>Required</b>	false

Performance

Maximum Process File Descriptors

<b>Description</b>	If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	rlimit_fds
<b>Required</b>	false

## Ports and Addresses

### Livy Server Port

**Description**

The port of the Livy server

**Related Name**

livy.server.port

**Default Value**

8998

**API Name**

livy\_server\_port

**Required**

false

### Livy Thrift Server Port

**Description**

The port of the Livy Thrift server

**Related Name**

livy.server.thrift.port

**Default Value**

10090

**API Name**

livy\_server\_thrift\_port

**Required**

false

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when

the process starts. Use the same format as used for arguments to the `cgexec` command:  
 resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'  
 \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page

cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security**

**Enable TLS/SSL for Livy Server**

**Description**

Encrypt communication between clients and Livy Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

livy.tls.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Livy Server TLS/SSL Server Keystore File Location**

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Livy Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

livy.keystore

**Default Value**

**API Name**

ssl\_server\_keystore\_location

**Required**

false

**Livy Server TLS/SSL Server Keystore File Password**

**Description**

The password for the Livy Server keystore file.

**Related Name**

livy.keystore.password

**Default Value**

<b>API Name</b>	ssl_server_keystore_password
<b>Required</b>	false

Stacks Collection

Stacks Collection Data Retention

<b>Description</b>	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>	stacks_collection_data_retention
<b>Default Value</b>	100 MiB
<b>API Name</b>	stacks_collection_data_retention
<b>Required</b>	false

Stacks Collection Directory

<b>Description</b>	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>	stacks_collection_directory
<b>Default Value</b>	
<b>API Name</b>	stacks_collection_directory
<b>Required</b>	false

Stacks Collection Enabled

<b>Description</b>	Whether or not periodic stacks collection is enabled.
<b>Related Name</b>	stacks_collection_enabled
<b>Default Value</b>	false
<b>API Name</b>	stacks_collection_enabled
<b>Required</b>	true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Parameter Validation: Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy-conf/livy.conf\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Admin Users****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_admin\_users

**Required**

true

**Suppress Parameter Validation: Extra JVM Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Extra JVM Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_extra\_java\_opts

**Required**

true

**Suppress Parameter Validation: Livy Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_port

**Required**

true

**Suppress Parameter Validation: Livy Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Livy Thrift Server Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Thrift Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_thrift\_port

**Required**

true

**Suppress Parameter Validation: Livy Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Livy Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Livy Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Livy Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_livy\_livy\_server\_unexpected\_exits

**Required**

true

Service-Wide

Advanced

Livy Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment.  
Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

LIVY\_service\_env\_safety\_valve

Required

false

System Group

Description

The group that this service's processes should run as.

Related Name

livy

API Name

process\_username

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

Related Name

Default Value

	true
<b>API Name</b>	
	enable_alerts
<b>Required</b>	
	false

### Enable Configuration Change Alerts

#### Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

#### Related Name

#### Default Value

false

#### API Name

enable\_config\_alerts

#### Required

false

### Livy Server Role Health Test

#### Description

When computing the overall LIVY health, consider Livy Server's health

#### Related Name

#### Default Value

true

#### API Name

LIVY\_LIVY\_SERVER\_health\_enabled

#### Required

false

### Service Triggers

#### Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "

streamThreshold": 10, "enabled": "true"}}See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****HMS Service****Description**

Name of the HMS service that this Livy service instance depends on

**Related Name****Default Value****API Name**

hms\_service

**Required**

false

**Recovery Directory (HDFS)****Description**

Location where to store recovery metadata.

**Related Name**

livy.server.recovery.state-store.url

**Default Value**

/user/livy/recovery

**API Name**

livy\_recovery\_dir

**Required**

false

**SPARK\_ON\_YARN Service**

**Description**

Name of the SPARK\_ON\_YARN service that this Livy service instance depends on

**Related Name**

**Default Value**

**API Name**

spark\_on\_yarn\_service

**Required**

true

**YARN Service**

**Description**

Name of the YARN service that this Livy service instance depends on

**Related Name**

**Default Value**

**API Name**

yarn\_service

**Required**

true

**Security**

**Kerberos Principal**

**Description**

Kerberos principal short name used by all roles of this service.

**Related Name**

**Default Value**

livy

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions**

**Suppress Configuration Validator: CDH Version Validator**

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Configuration Validator: Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf****Description**

Whether to suppress configuration warnings produced by the Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy-conf/livy-client.conf\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf****Description**

Whether to suppress configuration warnings produced by the Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy-conf/livy.conf\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Admin Users****Description**

Whether to suppress configuration warnings produced by the Admin Users configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_admin\_users

**Required**

true

**Suppress Configuration Validator: Extra JVM Options****Description**

Whether to suppress configuration warnings produced by the Extra JVM Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_extra\_java\_opts

**Required**

true

**Suppress Configuration Validator: Livy Server Port****Description**

Whether to suppress configuration warnings produced by the Livy Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_port

**Required**

true

**Suppress Configuration Validator: Livy Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Livy Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Livy Thrift Server Port****Description**

Whether to suppress configuration warnings produced by the Livy Thrift Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_livy\_server\_thrift\_port

**Required**

true

**Suppress Configuration Validator: Livy Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Livy Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Livy Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Livy Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Gateway TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Gateway TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Gateway TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Gateway TLS/SSL Trust Store Password configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Livy Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Livy Server TLS/SSL Server Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Livy Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Livy Server TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: Recovery Directory (HDFS)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recovery Directory (HDFS) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_livy\_recovery\_dir

**Required**

true

**Suppress Configuration Validator: Livy Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Livy Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_livy\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: Livy Service Environment Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>	Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Service Environment Advanced Configuration Snippet (Safety Valve) parameter.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	service_config_suppression_livy_service_env_safety_valve
<b>Required</b>	true

**Suppress Parameter Validation: System Group**

<b>Description</b>	Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	service_config_suppression_process_groupname
<b>Required</b>	true

**Suppress Parameter Validation: System User**

<b>Description</b>	Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	service_config_suppression_process_username
<b>Required</b>	true

**Suppress Parameter Validation: Service Triggers**

<b>Description</b>	Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.
<b>Related Name</b>	
<b>Default Value</b>	

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Health Test: Livy Server Health****Description**

Whether to suppress the results of the Livy Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_livy\_livy\_livy\_server\_health

**Required**

true

## Oozie Properties in Cloudera Runtime 7.2.16

Role groups:

### Oozie Server

**Advanced****Oozie Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value**

**API Name**

log4j\_safety\_valve

**Required**

false

**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml

**Description**

For advanced use only. A string to be inserted into action-conf/default.xml for this role only.

**Related Name****Default Value****API Name**

oozie\_action\_config\_default\_safety\_valve

**Required**

false

### Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml

**Description**

For advanced use only. A string to be inserted into oozie-site.xml for this role only.

**Related Name****Default Value****API Name**

oozie\_config\_safety\_valve

**Required**

false

### Oozie ActionService Executor Extension Classes

**Description**

Comma-separated list of ActionService executor extension classes. Only action types with associated executors can be used in workflows. For CDH 5.4 and higher, this parameter is used only to specify additional classes for workflows. All executor extension classes included in that release will be added automatically and do not need to be specified.

**Related Name**

oozie.service.ActionService.executor.ext.classes

**Default Value****API Name**

oozie\_executor\_extension\_classes

**Required**

false

**Java Configuration Options for Oozie Server****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value**

-XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC

**API Name**

oozie\_java\_opts

**Required**

false

**Directory For JSP Temp Files****Description**

Directory to use to for temporary JSP file storage.

**Related Name**

oozie.jsp.tmp.dir

**Default Value**

/tmp

**API Name**

oozie\_jsp\_tmp\_dir

**Required**

false

**Default Launcher Max Attempts****Description**

The default YARN maximal attempt count of the Launcher ApplicationMaster.

**Related Name**

oozie.launcher.default.max.attempts

**Default Value**

2

**API Name**

oozie\_launcher\_default\_max\_attempts

**Required**

false

**Default Launcher Memory****Description**

The default amount of memory in MiB that is allocated for the Launcher ApplicationMasters.

**Related Name**

oozie.launcher.default.memory.mb
<b>Default Value</b>
2 GiB
<b>API Name</b>
oozie_launcher_default_memory
<b>Required</b>
false

Default Launcher Queue

<b>Description</b>
The default YARN pool where the Launcher ApplicationMaster is placed.
<b>Related Name</b>
oozie.launcher.default.queue
<b>Default Value</b>
default
<b>API Name</b>
oozie_launcher_default_queue
<b>Required</b>
false

Oozie Server Environment Advanced Configuration Snippet (Safety Valve)

<b>Description</b>
For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
OOZIE_SERVER_role_env_safety_valve
<b>Required</b>
false

Oozie HTTP Request Header Size

<b>Description</b>
Controls the size of the HTTP request header.
<b>Related Name</b>
oozie.http.request.header.size
<b>Default Value</b>
64 KiB
<b>API Name</b>
oozie_service_http_request_header_size
<b>Required</b>
false

### Oozie HTTP Response Header Size

**Description**

Controls the size of the HTTP response header.

**Related Name**

oozie.http.response.header.size

**Default Value**

64 KiB

**API Name**

oozie\_service\_http\_response\_header\_size

**Required**

false

### Oozie SchemaService Workflow Extension Schemas

**Description**

Comma-separated list of SchemaService workflow extension schemas for additional action types. From CDH 5.4 and higher, this parameter is used only to specify additional schemas for workflows. All schemas included in that release will be added automatically and do not need to be specified.

**Related Name**

oozie.service.SchemaService.wf.ext.schemas

**Default Value****API Name**

oozie\_workflow\_extension\_schemas

**Required**

false

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

	true
API Name	
	process_should_monitor
Required	
	true

Process Start Retry Attempts

Description	Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.
Related Name	
Default Value	3
API Name	
	process_start_retries
Required	
	false

Process Start Wait Timeout

Description	The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.
Related Name	
Default Value	20
API Name	
	process_start_secs
Required	
	false

Database

Oozie Server Data Directory

Description	Directory where the Oozie Server places its data. Only applicable when using Derby as the database type.
Related Name	
Default Value	/var/lib/oozie/data
API Name	
	oozie_data_dir
Required	
	false

Oozie Server Database Host

Description	Hostname of the database used by Oozie Server. If the port is non-default for your database type, use host:port notation. Does not apply if you are using Derby as the database type.
Related Name	
Default Value	localhost
API Name	oozie_database_host
Required	false

Oozie Server Database Name

Description	Name of the database used by Oozie Server.
Related Name	
Default Value	oozie
API Name	oozie_database_name
Required	false

Oozie Server Database Password

Description	Password for connecting to the database used by Oozie Server. Does not apply if you are using Derby as the database type.
Related Name	oozie.service.JPAService.jdbc.password
Default Value	
API Name	oozie_database_password
Required	false

Oozie Server Database Type

Description	Type of the database used by Oozie Server.
Related Name	
Default Value	derby
API Name	oozie_database_type
Required	

false

Oozie Server Database User

Description

Username for connecting to the database used by Oozie Server. Does not apply if you are using Derby as the database type.

Related Name

oozie.service.JPAService.jdbc.username

Default Value

sa

API Name

oozie\_database\_user

Required

false

Logs

Oozie Server Logging Threshold

Description

The minimum log level for Oozie Server logs

Related Name

Default Value

INFO

API Name

log\_threshold

Required

false

Oozie Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Oozie Server logs. Typically used by log4j or logback.

Related Name

Default Value

720

API Name

max\_log\_backup\_index

Required

false

Oozie Server Log Directory

Description

Directory where Oozie Server will place its log files.

Related Name

Default Value

	/var/log/oozie
API Name	oozie_log_dir
Required	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.
Related Name	
Default Value	Warning: 10 GiB, Critical: 5 GiB
API Name	heap_dump_directory_free_space_absolute_thresholds
Required	false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description	
-------------	--

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Workflow Status Metrics Collection Interval****Description**

Workflow Status metrics collection interval.

**Related Name**

`oozie.service.DBLiteWorkflowStoreService.status.metrics.collection.interval`

**Default Value**

1 minute(s)

**API Name**

`oozie_job_metric_collection_interval`

**Required**

`false`

**Oozie Server Callable Queue Monitoring Threshold****Description**

The health test thresholds of the weighted average size of the Oozie Server callable queue over a recent period. See also Oozie Server Callable Queue Monitoring Period.

**Related Name****Default Value**

Warning: 80.0 %, Critical: 95.0 %

**API Name**

`oozie_server_callable_queue_threshold`

**Required**

`false`

### Oozie Server Callable Queue Monitoring Period

**Description**

The period over which to compute the moving average of the callable queue size.

**Related Name****Default Value**

5 minute(s)

**API Name**

oozie\_server\_callable\_queue\_window

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

oozie\_server\_fd\_thresholds

**Required**

false

### Oozie Server Host Health Test

**Description**

When computing the overall Oozie Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

oozie\_server\_host\_health\_enabled

**Required**

false

### Pause Duration Thresholds

**Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

oozie\_server\_pause\_duration\_thresholds

**Required**

false

Pause Duration Monitoring Period

Description

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name

Default Value

5 minute(s)

API Name

oozie\_server\_pause\_duration\_window

Required

false

Oozie Server Process Health Test

Description

Enables the health test that the Oozie Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

oozie\_server\_scm\_health\_enabled

Required

false

Enable Oozie Server Shared Libraries Version Check

Description

If true, enables version check for Oozie Server and installed shared libraries.

Related Name

Default Value

true

API Name

oozie\_server\_shared\_lib\_version\_check\_enabled

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name

Default Value

true

API Name

oozie\_server\_web\_metric\_collection\_enabled

**Required**

false

**Web Metric Collection Duration****Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

oozie\_server\_web\_metric\_collection\_thresholds

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name**

**Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

Unexpected Exits Monitoring Period

Description	The period to review when computing unexpected exits.
Related Name	
Default Value	5 minute(s)
API Name	unexpected_exits_window
Required	false

Other

Oozie Email Action From Address

Description	The from address to be used for mailing all emails for Oozie email action
Related Name	oozie.email.from.address
Default Value	oozie@localhost
API Name	oozie_email_from_address
Required	false

Oozie Email Action SMTP Authentication Enabled

Description	Enable SMTP authentication for Oozie email action
Related Name	oozie.email.smtp.auth
Default Value	false
API Name	oozie_email_smtp_auth
Required	false

Oozie Email Action SMTP Host

Description	The SMTP server host to use for Oozie email action
Related Name	oozie.email.smtp.host
Default Value	localhost
API Name	

oozie_email_smtp_host
<b>Required</b>
false

Oozie Email Action SMTP Authentication Password

<b>Description</b>
SMTP password for Oozie email action
<b>Related Name</b>
oozie.email.smtp.password
<b>Default Value</b>
<b>API Name</b>
oozie_email_smtp_password
<b>Required</b>
false

Oozie Email Action SMTP Authentication Username

<b>Description</b>
SMTP username for Oozie email action
<b>Related Name</b>
oozie.email.smtp.username
<b>Default Value</b>
<b>API Name</b>
oozie_email_smtp_username
<b>Required</b>
false

Oozie Server Plugins

<b>Description</b>
Comma-separated list of Oozie plug-ins to be activated. If one plugin cannot be loaded, all the plugins are ignored.
<b>Related Name</b>
oozie.services.ext
<b>Default Value</b>
<b>API Name</b>
oozie_plugins_list
<b>Required</b>
false

Maximum concurrency for a given callable type

<b>Description</b>
Maximum concurrency for a given callable type.. Each command is a callable type: submit, start, run, etc.. Each action type is a callable type: MapReduce, SSH, sub-workflow, etc. All commands that use action executors (action-start, action-end. etc.) use the action type as the callable type.
<b>Related Name</b>
oozie.service.CallableQueueService.callable.concurrency

**Default Value**

10

**API Name**

oozie\_service\_callablequeueservice\_callable\_concurrency

**Required**

false

**Maximum Callable Queue Size****Description**

Maximum callable queue size

**Related Name**

oozie.service.CallableQueueService.queue.size

**Default Value**

10000

**API Name**

oozie\_service\_callablequeueservice\_queue\_size

**Required**

false

**Number Threads For Executing Callables****Description**

Number of threads used for executing callables

**Related Name**

oozie.service.CallableQueueService.threads

**Default Value**

50

**API Name**

oozie\_service\_callablequeueservice\_threads

**Required**

false

**Enable The Metrics Instrumentation Service****Description**

Whether to use the Codehale-based metrics for instrumentation. Enabling this disables the 'instrumentation' REST endpoint and enables the 'metrics' REST endpoint (\*hostname:port\*/v2/admin/metrics).

**Related Name****Default Value**

true

**API Name**

oozie\_use\_metric\_instrumentation

**Required**

false

### Enable Oozie Server Web Console

**Description**

If true, enables the Oozie Server web console. ExtJS 2.2 zip archive must be extracted to /var/lib/oozie on the same host as the Oozie Server.

**Related Name****Default Value**

false

**API Name**

oozie\_web\_console

**Required**

false

### Days to Keep Completed Bundle Jobs

**Description**

Completed bundle jobs older than this value, in days, will be purged by the PurgeService.

**Related Name**

oozie.service.PurgeService.bundle.older.than

**Default Value**

7 day(s)

**API Name**

purgeservice\_bundle\_older\_than

**Required**

false

### Days to Keep Completed Coordinator Jobs

**Description**

Completed coordinator jobs older than this value, in days, will be purged by the PurgeService.

**Related Name**

oozie.service.PurgeService.coord.older.than

**Default Value**

7 day(s)

**API Name**

purgeservice\_coord\_older\_than

**Required**

false

### Days to Keep Completed Workflow Jobs

**Description**

Completed workflow jobs older than this value, in days, will be purged by the PurgeService.

**Related Name**

oozie.service.PurgeService.older.than

**Default Value**

30 day(s)

**API Name**

purgeservice_older_than
<b>Required</b>
false

Enable Purge for Long-Running Coordinator Jobs

<b>Description</b>
Whether to purge completed workflows and their corresponding coordinator actions of long-running coordinator jobs if the completed workflow jobs are older than the value specified in <code>oozie.service.PurgeService.older.than</code> .
<b>Related Name</b>
<code>oozie.service.PurgeService.purge.old.coord.action</code>
<b>Default Value</b>
true
<b>API Name</b>
<code>purgeservice_purge_old_coord_action</code>
<b>Required</b>
false

Performance

Default Launcher Virtual CPU Cores

<b>Description</b>
The default number of Virtual CPU Cores that are allocated for the Launcher ApplicationMasters.
<b>Related Name</b>
<code>oozie.launcher.default.vcores</code>
<b>Default Value</b>
1
<b>API Name</b>
<code>oozie_launcher_default_vcores</code>
<b>Required</b>
false

Oozie Server Threadpool Size

<b>Description</b>
Controls the threadpool size for the Oozie Server (both Jetty and Tomcat).
<b>Related Name</b>
<code>oozie.server.threadpool.max.threads</code>
<b>Default Value</b>
150
<b>API Name</b>
<code>oozie_service_threadpool_max_threads</code>
<b>Required</b>
false

Maximum Process File Descriptors

<b>Description</b>
--------------------

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name**

**Default Value**

**API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses**

**Oozie Email Action SMTP Port**

**Description**

The SMTP server port to use for Oozie email action

**Related Name**

oozie.email.smtp.port

**Default Value**

25

**API Name**

oozie\_email\_smtp\_prt

**Required**

false

**Oozie HTTP Port**

**Description**

Port of Oozie Server

**Related Name**

oozie.http.port

**Default Value**

11000

**API Name**

oozie\_http\_port

**Required**

false

**Oozie HTTPS Port**

**Description**

Port of the Oozie Server when using TLS/SSL.

**Related Name**

oozie.https.port

**Default Value**

11443

**API Name**

oozie\_https\_port

**Required**

false

**Resource Management****Java Heap Size of Oozie Server in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

**Related Name****Default Value**

1 GiB

**API Name**

oozie\_java\_heapsize

**Required**

false

**Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

## Security

### Excluded Cipher Suites

#### Description

List of cipher suite names that should be excluded.

#### Related Name

oozie.https.exclude.cipher.suites

#### Default Value

TLS\_ECDHE\_RSA\_WITH\_RC4\_128\_SHA  
SSL\_DHE\_RSA\_EXPORT\_WITH\_DES40\_CBC\_SHA SSL\_RSA\_WITH\_DES\_CBC\_SHA  
SSL\_DHE\_RSA\_WITH\_DES\_CBC\_SHA SSL\_RSA\_EXPORT\_WITH\_RC4\_40\_MD5  
SSL\_RSA\_EXPORT\_WITH\_DES40\_CBC\_SHA SSL\_RSA\_WITH\_RC4\_128\_MD5

#### API Name

oozie\_https\_exclude\_cipher\_suites

#### Required

false

### Enabled TLS Protocols

#### Description

TLS protocols accepted by the Oozie Server.

#### Related Name

oozie.https.include.protocols

#### Default Value

SSLv2Hello, TLSv1, TLSv1.1, TLSv1.2

#### API Name

oozie\_https\_include\_protocols

#### Required

false

### Oozie TLS/SSL Server Keystore File Location

#### Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Oozie is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

#### Related Name

oozie.https.keystore.file

#### Default Value

/var/lib/oozie/.keystore

#### API Name

oozie\_https\_keystore\_file

#### Required

false

### Oozie TLS/SSL Server Keystore File Password

#### Description

The password for the Oozie keystore file.

**Related Name**

oozie.https.keystore.pass

**Default Value****API Name**

oozie\_https\_keystore\_password

**Required**

false

**Oozie TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Oozie might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

oozie.https.truststore.file

**Default Value****API Name**

oozie\_https\_truststore\_file

**Required**

false

**Oozie TLS/SSL Trust Store Password****Description**

The password for the Oozie TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

oozie.https.truststore.pass

**Default Value****API Name**

oozie\_https\_truststore\_password

**Required**

false

**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

<b>API Name</b>	stacks_collection_data_retention
<b>Required</b>	false

**Stacks Collection Directory**

<b>Description</b>	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>	stacks_collection_directory
<b>Default Value</b>	
<b>API Name</b>	stacks_collection_directory
<b>Required</b>	false

**Stacks Collection Enabled**

<b>Description</b>	Whether or not periodic stacks collection is enabled.
<b>Related Name</b>	stacks_collection_enabled
<b>Default Value</b>	false
<b>API Name</b>	stacks_collection_enabled
<b>Required</b>	true

**Stacks Collection Frequency**

<b>Description</b>	The frequency with which stacks are collected.
<b>Related Name</b>	stacks_collection_frequency
<b>Default Value</b>	5.0 second(s)
<b>API Name</b>	stacks_collection_frequency
<b>Required</b>	false

**Stacks Collection Method**

<b>Description</b>	
--------------------	--

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Oozie Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_action\_config\_default\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Oozie Server Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_data\_dir

**Required**

true

**Suppress Parameter Validation: Oozie Server Database Host****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Database Host parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_host

**Required**

true

**Suppress Parameter Validation: Oozie Server Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Database Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_name

**Required**

true

**Suppress Parameter Validation: Oozie Server Database Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Database Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_password

**Required**

true

**Suppress Parameter Validation: Oozie Server Database User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Database User parameter.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_oozie_database_user
<b>Required</b>
true

Suppress Parameter Validation: Oozie Email Action From Address

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Email Action From Address parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_oozie_email_from_address
<b>Required</b>
true

Suppress Parameter Validation: Oozie Email Action SMTP Host

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Email Action SMTP Host parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_oozie_email_smtp_host
<b>Required</b>
true

Suppress Parameter Validation: Oozie Email Action SMTP Authentication Password

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Email Action SMTP Authentication Password parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_oozie_email_smtp_password
<b>Required</b>
true

Suppress Parameter Validation: Oozie Email Action SMTP Port

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Email Action SMTP Port parameter.
<b>Related Name</b>

**Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_prt

**Required**

true

**Suppress Parameter Validation: Oozie Email Action SMTP Authentication Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Email Action SMTP Authentication Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_username

**Required**

true

**Suppress Parameter Validation: Oozie ActionService Executor Extension Classes****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie ActionService Executor Extension Classes parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_executor\_extension\_classes

**Required**

true

**Suppress Parameter Validation: Oozie HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_http\_port

**Required**

true

**Suppress Parameter Validation: Excluded Cipher Suites****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Excluded Cipher Suites parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_exclude\_cipher\_suites

**Required**

true

**Suppress Parameter Validation: Oozie TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_keystore\_file

**Required**

true

**Suppress Parameter Validation: Oozie TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Oozie HTTPS Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie HTTPS Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_port

**Required**

true

### Suppress Parameter Validation: Oozie TLS/SSL Trust Store File

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Trust Store File parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_oozie\_https\_truststore\_file

#### Required

true

### Suppress Parameter Validation: Oozie TLS/SSL Trust Store Password

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Trust Store Password parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_oozie\_https\_truststore\_password

#### Required

true

### Suppress Parameter Validation: Java Configuration Options for Oozie Server

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Oozie Server parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_oozie\_java\_opts

#### Required

true

### Suppress Parameter Validation: Directory For JSP Temp Files

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Directory For JSP Temp Files parameter.

#### Related Name

#### Default Value

false

**API Name**

role\_config\_suppression\_oozie\_jsp\_tmp\_dir

**Required**

true

**Suppress Parameter Validation: Default Launcher Queue****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Launcher Queue parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_launcher\_default\_queue

**Required**

true

**Suppress Parameter Validation: Oozie Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_log\_dir

**Required**

true

**Suppress Parameter Validation: Oozie Server Plugins****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Plugins parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_plugins\_list

**Required**

true

**Suppress Parameter Validation: Oozie Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Oozie SchemaService Workflow Extension Schemas****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie SchemaService Workflow Extension Schemas parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_workflow\_extension\_schemas

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role\_config\_suppression\_stacks\_collection\_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role\_health\_suppression\_oozie\_server\_audit\_health

Required

true

Suppress Health Test: Callable Queue Size

Description

Whether to suppress the results of the Callable Queue Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role\_health\_suppression\_oozie\_server\_callablequeue\_size\_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

**Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_heap\_dump\_directory\_free\_space

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Pause Duration****Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_pause\_duration

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_scm\_health

**Required**

true

**Suppress Health Test: Oozie Server Shared Library Check****Description**

Whether to suppress the results of the Oozie Server Shared Library Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_shared\_lib\_version\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_unexpected\_exits

**Required**

true

**Suppress Health Test: Web Server Status****Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_oozie\_server\_web\_metric\_collection

**Required**

true

Service-Wide

Advanced

Oozie Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name**

**Default Value**

**API Name**

oozie\_env\_safety\_valve

**Required**

false

System Group

**Description**

The group that this service's processes should run as.

**Related Name**

**Default Value**

oozie

**API Name**

process\_groupname

**Required**

true

System User

**Description**

The user that this service's processes should run as.

**Related Name**

**Default Value**

oozie

**API Name**

process\_username

**Required**

true

Database

Database Dump File

**Description**

File where the database gets dumped to or loaded from.

**Related Name**

**Default Value**

/tmp/oozie\_database\_dump.zip

**API Name**

database\_dump\_file

**Required**

false

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Healthy Oozie Server Monitoring Thresholds****Description**

The health test thresholds of the overall Oozie Server health. The check returns "Concerning" health if the percentage of "Healthy" Oozie Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Oozie Servers falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 51.0 %

**API Name**

oozie\_servers\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name**
**Default Value**

[]

**API Name**

service\_triggers

**Required**

true

### Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name**
**Default Value**
**API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

### Other

#### Hive Service

**Description**

Name of the Hive service that this Oozie service instance depends on. This is used to configure Oozie HCat integration.

**Related Name**
**Default Value**
**API Name**

hive_service
<b>Required</b>
false

MapReduce Service

<b>Description</b>
Service to run MapReduce jobs against
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
mapreduce_yarn_service
<b>Required</b>
true

Oozie Event Listeners

<b>Description</b>
List of event listeners used by the Oozie service. Listeners needed for JMS or SLA integration are automatically emitted if they are enabled.
<b>Related Name</b>
oozie.service.EventHandlerService.event.listeners
<b>Default Value</b>
<b>API Name</b>
oozie_event_listeners
<b>Required</b>
false

JMS Broker

<b>Description</b>
URL of the JMS Broker used by the Oozie service in JMS integration is enabled.
<b>Related Name</b>
oozie.jms.producer.connection.properties
<b>Default Value</b>
tcp://localhost:61616
<b>API Name</b>
oozie_jms_broker
<b>Required</b>
false

Oozie Load Balancer Hostname

<b>Description</b>
Hostname of the load balancer used if Oozie HA is enabled.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>

oozie_load_balancer
<b>Required</b>
false

Coordinator Job Lookup Interval

<b>Description</b>
Coordinator Job Lookup trigger command is scheduled at this interval (in seconds).
<b>Related Name</b>
oozie.service.CoordMaterializeTriggerService.lookup.interval
<b>Default Value</b>
5 minute(s)
<b>API Name</b>
oozie_service_coord_lookup_interval
<b>Required</b>
false

Coordinator Action Input Check Default Timeout

<b>Description</b>
Default timeout for a Coordinator Action input check (in minutes) for a Coordinator Job.
<b>Related Name</b>
oozie.service.coord.normal.default.timeout
<b>Default Value</b>
2 hour(s)
<b>API Name</b>
oozie_service_coord_normal_default_timeout
<b>Required</b>
false

ShareLib Root Directory

<b>Description</b>
Root of the directory in HDFS where the Oozie ShareLibs are stored. The libraries are stored in the share/lib subdirectory under the specified root directory.
<b>Related Name</b>
oozie.service.WorkflowAppService.system.libpath
<b>Default Value</b>
/user/oozie
<b>API Name</b>
oozie_sharelib_rootdir
<b>Required</b>
true

Oozie Upload ShareLib Command Timeout

<b>Description</b>
The timeout in seconds used for the Oozie Upload ShareLib command. When the value is zero, there is no timeout for the command.

<b>Related Name</b>	
<b>Default Value</b>	270
<b>API Name</b>	oozie_upload_sharelib_cmd_timeout
<b>Required</b>	false

Oozie Upload ShareLib Command Concurrency Level

<b>Description</b>	The number of threads that Oozie will use for the Upload ShareLib command.
<b>Related Name</b>	
<b>Default Value</b>	8
<b>API Name</b>	oozie_upload_sharelib_concurrency
<b>Required</b>	false

Enable JMS Integration

<b>Description</b>	Whether to configure Oozie properties needed for JMS integration
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	oozie_use_jms
<b>Required</b>	false

Enable SLA Integration

<b>Description</b>	Whether to configure Oozie properties needed for SLA integration
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	oozie_use_sla
<b>Required</b>	false

Use ACLs on Znode

<b>Description</b>	
--------------------	--

Use ACLs on Znode while a secure ZooKeeper is used for Oozie High Availability. Note: This config is not emitted if ZooKeeper is not secure.

**Related Name**

oozie.zookeeper.secure

**Default Value**

true

**API Name**

oozie\_zk\_secure

**Required**

false

**ZooKeeper Namespace**

**Description**

Namespace used by this Oozie service in ZooKeeper when High Availability is enabled.

**Related Name**

oozie.zookeeper.namespace

**Default Value**

oozie

**API Name**

oozie\_zookeeper\_namespace

**Required**

false

**Spark on Yarn Service**

**Description**

Name of the Spark on Yarn service that this Oozie service instance depends on

**Related Name**

**Default Value**

**API Name**

spark\_on\_yarn\_service

**Required**

false

**ZooKeeper Service**

**Description**

Name of the ZooKeeper service that this Oozie service instance depends on

**Related Name**

**Default Value**

**API Name**

zookeeper\_service

**Required**

false

Ports and Addresses

Oozie Load Balancer HTTP Port

Description	HTTP port of the load balancer used if Oozie HA is enabled and SSL is disabled.
Related Name	
Default Value	
API Name	oozie_load_balancer_http_port
Required	false

Oozie Load Balancer HTTPS Port

Description	HTTPS port of the load balancer used if Oozie HA is enabled and SSL is enabled.
Related Name	
Default Value	
API Name	oozie_load_balancer_https_port
Required	false

Security

Kerberos Principal

Description	Kerberos principal short name used by all roles of this service.
Related Name	
Default Value	oozie
API Name	kerberos_princ_name
Required	true

Oozie Credential Classes

Description	A list of credential class mappings for CredentialsProvider.
Related Name	oozie.credentials.credentialclasses
Default Value	hcat=org.apache.oozie.action.hadoop.HCatCredentials hbase=org.apache.oozie.action.hadoop.HbaseCredentials hive2=org.apache.oozie.action.hadoop.Hive2Credentials

**API Name**

oozie\_credential\_classes

**Required**

false

**Enable TLS/SSL for Oozie****Description**

Encrypt communication between clients and Oozie using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

oozie.https.enabled

**Default Value**

false

**API Name**

oozie\_use\_ssl

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Oozie Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Oozie Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml****Description**

Whether to suppress configuration warnings produced by the Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_action\_config\_default\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml****Description**

Whether to suppress configuration warnings produced by the Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Oozie Server Data Directory****Description**

Whether to suppress configuration warnings produced by the Oozie Server Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_oozie_data_dir`**Required**`true`**Suppress Configuration Validator: Oozie Server Database Host****Description**

Whether to suppress configuration warnings produced by the Oozie Server Database Host configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_oozie_database_host`**Required**`true`**Suppress Configuration Validator: Oozie Server Database Name****Description**

Whether to suppress configuration warnings produced by the Oozie Server Database Name configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_oozie_database_name`**Required**`true`**Suppress Configuration Validator: Oozie Server Database Password****Description**

Whether to suppress configuration warnings produced by the Oozie Server Database Password configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_oozie_database_password`**Required**`true`**Suppress Configuration Validator: Oozie Server Database User****Description**

Whether to suppress configuration warnings produced by the Oozie Server Database User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_database\_user

**Required**

true

**Suppress Configuration Validator: Oozie Email Action From Address****Description**

Whether to suppress configuration warnings produced by the Oozie Email Action From Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_from\_address

**Required**

true

**Suppress Configuration Validator: Oozie Email Action SMTP Host****Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Host configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_host

**Required**

true

**Suppress Configuration Validator: Oozie Email Action SMTP Authentication Password****Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Authentication Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_password

**Required**

true

**Suppress Configuration Validator: Oozie Email Action SMTP Port****Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_prt

**Required**

true

**Suppress Configuration Validator: Oozie Email Action SMTP Authentication Username****Description**

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Authentication Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_email\_smtp\_username

**Required**

true

**Suppress Configuration Validator: Oozie ActionService Executor Extension Classes****Description**

Whether to suppress configuration warnings produced by the Oozie ActionService Executor Extension Classes configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_executor\_extension\_classes

**Required**

true

**Suppress Configuration Validator: Oozie HTTP Port****Description**

Whether to suppress configuration warnings produced by the Oozie HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_http\_port

**Required**

true

**Suppress Configuration Validator: Excluded Cipher Suites****Description**

Whether to suppress configuration warnings produced by the Excluded Cipher Suites configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_exclude\_cipher\_suites

**Required**

true

**Suppress Configuration Validator: Oozie TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Server Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_keystore\_file

**Required**

true

**Suppress Configuration Validator: Oozie TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Oozie HTTPS Port****Description**

Whether to suppress configuration warnings produced by the Oozie HTTPS Port configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_port

**Required**

true

**Suppress Configuration Validator: Oozie TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_truststore\_file

**Required**

true

**Suppress Configuration Validator: Oozie TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_https\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Oozie Server****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Oozie Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_java\_opts

**Required**

true

**Suppress Configuration Validator: Directory For JSP Temp Files****Description**

Whether to suppress configuration warnings produced by the Directory For JSP Temp Files configuration validator.

**Related Name**

**Default Value**  
false

**API Name**  
role\_config\_suppression\_oozie\_jsp\_tmp\_dir

**Required**  
true

Suppress Configuration Validator: Default Launcher Queue

Description  
Whether to suppress configuration warnings produced by the Default Launcher Queue configuration validator.

**Related Name**

**Default Value**  
false

**API Name**  
role\_config\_suppression\_oozie\_launcher\_default\_queue

**Required**  
true

Suppress Configuration Validator: Oozie Server Log Directory

Description  
Whether to suppress configuration warnings produced by the Oozie Server Log Directory configuration validator.

**Related Name**

**Default Value**  
false

**API Name**  
role\_config\_suppression\_oozie\_log\_dir

**Required**  
true

Suppress Configuration Validator: Oozie Server Plugins

Description  
Whether to suppress configuration warnings produced by the Oozie Server Plugins configuration validator.

**Related Name**

**Default Value**  
false

**API Name**  
role\_config\_suppression\_oozie\_plugins\_list

**Required**

true

**Suppress Configuration Validator: Oozie Server Environment Advanced Configuration Snippet (Safety Valve)**

**Description**

Whether to suppress configuration warnings produced by the Oozie Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Oozie SchemaService Workflow Extension Schemas**

**Description**

Whether to suppress configuration warnings produced by the Oozie SchemaService Workflow Extension Schemas configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_oozie\_workflow\_extension\_schemas

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**

**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers**

**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Database Dump File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Dump File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_dump\_file

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: Oozie Credential Classes****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Credential Classes parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_credential\_classes

**Required**

true

**Suppress Parameter Validation: Oozie Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Oozie Event Listeners****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Event Listeners parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_event\_listeners

**Required**

true

**Suppress Parameter Validation: JMS Broker****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMS Broker parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_jms\_broker

**Required**

true

**Suppress Parameter Validation: Oozie Load Balancer Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer Hostname parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_load\_balancer

**Required**

true

**Suppress Parameter Validation: Oozie Load Balancer HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_load\_balancer\_http\_port

**Required**

true

**Suppress Parameter Validation: Oozie Load Balancer HTTPS Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer HTTPS Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_load\_balancer\_https\_port

**Required**

true

**Suppress Configuration Validator: Oozie Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Oozie Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: ShareLib Root Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ShareLib Root Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_sharelib\_rootdir

**Required**

true

**Suppress Parameter Validation: ZooKeeper Namespace****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Namespace parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_oozie\_zookeeper\_namespace

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Health Test: Oozie Server Health****Description**

Whether to suppress the results of the Oozie Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_oozie\_oozie\_servers\_healthy

**Required**

true

## Ozone Properties in Cloudera Runtime 7.2.16

Role groups:

### Gateway

#### Advanced

#### Deploy Directory

Description	The directory where the client configs will be deployed
Related Name	
Default Value	/etc/ozone
API Name	client_config_root_dir
Required	true

#### Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description	For advanced use only, a string to be inserted into log4j.properties for this role only.
Related Name	
Default Value	
API Name	log4j_safety_valve
Required	false

#### Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description	For advanced use only, a string to be inserted into the client configuration for ozone-conf/ozone-site.xml.
Related Name	
Default Value	
API Name	ozone-conf/ozone-site.xml_client_config_safety_valve
Required	false

#### Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description	For advanced use only, a string to be inserted into the client configuration for ozone-conf/ssl-client.xml.
-------------	---

<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	ozone-conf/ssl-client.xml_client_config_safety_valve
<b>Required</b>	false

Logs

Gateway Logging Threshold

<b>Description</b>	The minimum log level for Gateway logs
<b>Related Name</b>	
<b>Default Value</b>	INFO
<b>API Name</b>	log_threshold
<b>Required</b>	false

Monitoring

Enable Configuration Change Alerts

<b>Description</b>	When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	enable_config_alerts
<b>Required</b>	false

Other

Alternatives Priority

<b>Description</b>	The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.
<b>Related Name</b>	
<b>Default Value</b>	50
<b>API Name</b>	client_config_priority
<b>Required</b>	

true

Security

Gateway TLS/SSL Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.client.truststore.location

**Default Value**

**API Name**

ssl\_client\_truststore\_location

**Required**

false

Gateway TLS/SSL Trust Store Password

**Description**

The password for the Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.client.truststore.password

**Default Value**

**API Name**

ssl\_client\_truststore\_password

**Required**

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

Suppress Parameter Validation: Deploy Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_client\_config\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

<b>API Name</b>	role_config_suppression_ozone-conf/ssl-client.xml_client_config_safety_valve
<b>Required</b>	true

**Suppress Parameter Validation: Gateway TLS/SSL Trust Store File**

<b>Description</b>	Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store File parameter.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	role_config_suppression_ssl_client_truststore_location
<b>Required</b>	true

**Suppress Parameter Validation: Gateway TLS/SSL Trust Store Password**

<b>Description</b>	Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store Password parameter.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	role_config_suppression_ssl_client_truststore_password
<b>Required</b>	true

**Ozone DataNode**

**Advanced**

**Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>	For advanced use only, a string to be inserted into log4j.properties for this role only.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	log4j_safety_valve
<b>Required</b>	false

**Enable auto refresh for metric configurations**

<b>Description</b>
--------------------

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

### Dump Heap When Out of Memory

**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties****Description**

For advanced use only. A string to be inserted into ozone-conf/dn-audit-log4j2.properties for this role only.

**Related Name****Default Value****API Name**

ozone-conf/dn-audit-log4j2.properties\_role\_safety\_valve

**Required**

false

**Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

false

**Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

false

**Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**  
false

**Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve)**

**Description**  
For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name**

**Default Value**

**API Name**  
OZONE\_DATANODE\_role\_env\_safety\_valve

**Required**  
false

**Automatically Restart Process**

**Description**  
When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name**

**Default Value**  
false

**API Name**  
process\_auto\_restart

**Required**  
true

**Role Specific System Group**

**Description**  
The group that this role's processes should run as.

**Related Name**

**Default Value**  
hdfs

**API Name**  
process\_groupname

**Required**  
true

**Enable Metric Collection**

**Description**  
Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name**

**Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Role Specific System User****Description**

The user that this role's processes should run as.

**Related Name****Default Value**

hdfs

**API Name**

process\_username

**Required**

true

Logs

Ozone DataNode Log Directory

Description	The log directory for log files of the role Ozone DataNode.
Related Name	log.dir
Default Value	/var/log/hadoop-ozone
API Name	log_dir
Required	false

Ozone DataNode Logging Threshold

Description	The minimum log level for Ozone DataNode logs
Related Name	
Default Value	INFO
API Name	log_threshold
Required	false

Ozone DataNode Maximum Log File Backups

Description	The maximum number of rolled log files to keep for Ozone DataNode logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

Ozone DataNode Max Log Size

Description	The maximum size, in megabytes, per log file for Ozone DataNode logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB

<b>API Name</b>	max_log_size
<b>Required</b>	false

Monitoring

Enable Health Alerts for this Role

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	enable_alerts
<b>Required</b>	false

Enable Configuration Change Alerts

<b>Description</b>	When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	enable_config_alerts
<b>Required</b>	false

Log Directory Free Space Monitoring Absolute Thresholds

<b>Description</b>	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
<b>Related Name</b>	
<b>Default Value</b>	Warning: 10 GiB, Critical: 5 GiB
<b>API Name</b>	log_directory_free_space_absolute_thresholds
<b>Required</b>	false

Log Directory Free Space Monitoring Percentage Thresholds

<b>Description</b>
--------------------

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ozone\_datanode\_fd\_thresholds

**Required**

false

**Ozone DataNode Host Health Test**

**Description**

When computing the overall Ozone DataNode health, consider the host's health.

**Related Name**

**Default Value**

true

**API Name**

ozone\_datanode\_host\_health\_enabled

**Required**

false

**Ozone DataNode Process Health Test**

**Description**

Enables the health test that the Ozone DataNode's process state is consistent with the role configuration

**Related Name**

**Default Value**

true

**API Name**

ozone\_datanode\_scm\_health\_enabled

**Required**

false

**Swap Memory Usage Rate Thresholds**

**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name**

**Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

**Swap Memory Usage Rate Window**

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

<b>Required</b>
true

Unexpected Exits Thresholds

<b>Description</b>
The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.
<b>Related Name</b>
<b>Default Value</b>
Warning: Never, Critical: Any
<b>API Name</b>
unexpected_exits_thresholds
<b>Required</b>
false

Unexpected Exits Monitoring Period

<b>Description</b>
The period to review when computing unexpected exits.
<b>Related Name</b>
<b>Default Value</b>
5 minute(s)
<b>API Name</b>
unexpected_exits_window
<b>Required</b>
false

Other

Datanode Ratis Metadata Directory

<b>Description</b>
One or more directories used for storing Datanode Ratis metadata. Ideally, this should be mapped to a fast disk like an SSD.
<b>Related Name</b>
dfs.container.ratis.datanode.storage.dir
<b>Default Value</b>
/var/lib/hadoop-ozone/datanode/ratis/data
<b>API Name</b>
dfs.container.ratis.datanode.storage.dir
<b>Required</b>
true

Datanode Data Directory

<b>Description</b>
Determines where on the local filesystem HDDS data will be stored.
<b>Related Name</b>

	hdds.datanode.dir
Default Value	/var/lib/hadoop-ozone/datanode/data
API Name	hdds.datanode.dir
Required	true

Ozone Datanode HTTP Bind Hostname

Description	The actual address the Ozone Datanode web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.datanode.http-address'.
Related Name	ozone.datanode.http-bind-host
Default Value	0.0.0.0
API Name	ozone.datanode.http-bind-host
Required	false

Secure Ozone Datanode HTTPS Bind Hostname

Description	The actual address the Ozone Datanode web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.datanode.https-address'.
Related Name	ozone.datanode.https-bind-host
Default Value	0.0.0.0
API Name	ozone.datanode.https-bind-host
Required	false

HSTS Header for DataNode UI

Description	HSTS Header (Strict-Transport-Security) value to use
Related Name	ozone.http.header.Strict-Transport-Security
Default Value	max-age=63072000; includeSubDomains;
API Name	ozone.http.header.Strict-Transport-Security
Required	false

### Ozone Log Directory

**Description**

Directory where Ozone DataNode logs will be written to

**Related Name**

ozone.log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

ozone.log.dir

**Required**

false

### Datanode Metadata Directory

**Description**

Determines where on the local filesystem datanode security certificates will be stored.

**Related Name**

ozone.metadata.dirs

**Default Value**

/var/lib/hadoop-ozone/datanode/ozone-metadata

**API Name**

ozone.metadata.dirs

**Required**

true

### Datanode ID Directory

**Description**

Ozone Datanode ID Directory

**Related Name**

ozone.scm.datanode.id.dir

**Default Value**

/var/lib/hadoop-ozone/datanode

**API Name**

ozone.scm.datanode.id.dir

**Required**

true

### Java Heap Size of DataNode

**Description**

Maximum size for the Java process heap memory.

**Related Name**

ozone\_datanode\_heap\_size

**Default Value**

4 GiB

**API Name**

ozone_datanode_heap_size
<b>Required</b>
false

Performance

Maximum Process File Descriptors

<b>Description</b>
If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
rlimit_fds
<b>Required</b>
false

Ports and Addresses

Datanode Ratis IPC Port for Admin Requests

<b>Description</b>
The container IPC port number for admin requests.
<b>Related Name</b>
dfs.container.ratis.admin.port
<b>Default Value</b>
9857
<b>API Name</b>
dfs.container.ratis.admin.port
<b>Required</b>
true

Datanode Ratis IPC Port for Server-to-Server Communication

<b>Description</b>
The container IPC port number for server-to-server communication.
<b>Related Name</b>
dfs.container.ratis.server.port
<b>Default Value</b>
9856
<b>API Name</b>
dfs.container.ratis.server.port
<b>Required</b>
true

Ozone Datanode HTTP Web UI Port

<b>Description</b>
--------------------

The base port that the Ozone Datanode web user interface listens on. The host name is combined with this port to form the 'hdds.datanode.http-address'.

**Related Name**

ozone.datanode.http-port

**Default Value**

9882

**API Name**

ozone.datanode.http-port

**Required**

true

**Ozone Datanode Port (TLS/SSL)****Description**

The base port that the Ozone Datanode web user interface listens on when using HTTPS. The host name is combined with this port to form the 'hdds.datanode.https-address'.

**Related Name**

ozone.datanode.https-port

**Default Value**

9883

**API Name**

ozone.datanode.https-port

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgroup command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

<b>Related Name</b>	memory.soft_limit_in_bytes
<b>Default Value</b>	-1 MiB
<b>API Name</b>	rm_memory_soft_limit
<b>Required</b>	true

Security

Role-Specific Kerberos Principal

<b>Description</b>	Kerberos principal used by the Ozone DataNode roles.
<b>Related Name</b>	
<b>Default Value</b>	dn
<b>API Name</b>	kerberos_role_princ_name
<b>Required</b>	true

Ozone DataNode TLS/SSL Trust Store File

<b>Description</b>	The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone DataNode might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.
<b>Related Name</b>	ssl.client.truststore.location
<b>Default Value</b>	
<b>API Name</b>	ssl_client_truststore_location
<b>Required</b>	false

Ozone DataNode TLS/SSL Trust Store Password

<b>Description</b>	The password for the Ozone DataNode TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.
<b>Related Name</b>	ssl.client.truststore.password
<b>Default Value</b>	
<b>API Name</b>	

ssl_client_truststore_password
<b>Required</b>
false

Enable TLS/SSL for Ozone DataNode

<b>Description</b>
Encrypt communication between clients and Ozone DataNode using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).
<b>Related Name</b>
ozone.ssl.enabled
<b>Default Value</b>
false
<b>API Name</b>
ssl_enabled
<b>Required</b>
false

Ozone DataNode TLS/SSL Server Keystore Key Password

<b>Description</b>
The password that protects the private key contained in the keystore used when Ozone DataNode is acting as a TLS/SSL server.
<b>Related Name</b>
ssl.server.keystore.keypassword
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_keypassword
<b>Required</b>
false

Ozone DataNode TLS/SSL Server Keystore File Location

<b>Description</b>
The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone DataNode is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.
<b>Related Name</b>
ssl.server.keystore.location
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_location
<b>Required</b>
false

Ozone DataNode TLS/SSL Server Keystore File Password

<b>Description</b>
The password for the Ozone DataNode keystore file.

<b>Related Name</b>	ssl.server.keystore.password
<b>Default Value</b>	
<b>API Name</b>	ssl_server_keystore_password
<b>Required</b>	false

Stacks Collection

Stacks Collection Data Retention

<b>Description</b>	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>	stacks_collection_data_retention
<b>Default Value</b>	100 MiB
<b>API Name</b>	stacks_collection_data_retention
<b>Required</b>	false

Stacks Collection Directory

<b>Description</b>	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>	stacks_collection_directory
<b>Default Value</b>	
<b>API Name</b>	stacks_collection_directory
<b>Required</b>	false

Stacks Collection Enabled

<b>Description</b>	Whether or not periodic stacks collection is enabled.
<b>Related Name</b>	stacks_collection_enabled
<b>Default Value</b>	false
<b>API Name</b>	

stacks_collection_enabled
<b>Required</b>
true

Stacks Collection Frequency

<b>Description</b>
The frequency with which stacks are collected.
<b>Related Name</b>
stacks_collection_frequency
<b>Default Value</b>
5.0 second(s)
<b>API Name</b>
stacks_collection_frequency
<b>Required</b>
false

Stacks Collection Method

<b>Description</b>
The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.
<b>Related Name</b>
stacks_collection_method
<b>Default Value</b>
jstack
<b>API Name</b>
stacks_collection_method
<b>Required</b>
false

Suppressions

Suppress Configuration Validator: CDH Version Validator

<b>Description</b>
Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_cdh_version_validator
<b>Required</b>
true

**Suppress Parameter Validation: Datanode Ratis IPC Port for Admin Requests****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis IPC Port for Admin Requests parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_dfs.container.ratis.admin.port

**Required**

true

**Suppress Parameter Validation: Datanode Ratis Metadata Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis Metadata Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_dfs.container.ratis.datanode.storage.dir

**Required**

true

**Suppress Parameter Validation: Datanode Ratis IPC Port for Server-to-Server Communication****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis IPC Port for Server-to-Server Communication parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_dfs.container.ratis.server.port

**Required**

true

**Suppress Parameter Validation: Datanode Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.datanode.dir

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone DataNode Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/dn-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Datanode HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Datanode HTTP Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.http-bind-host

**Required**

true

**Suppress Parameter Validation: Ozone Datanode HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Datanode HTTP Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.http-port

**Required**

true

**Suppress Parameter Validation: Secure Ozone Datanode HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone Datanode HTTPS Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.https-bind-host

**Required**

true

**Suppress Parameter Validation: Ozone Datanode Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Datanode Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.https-port

**Required**

true

**Suppress Parameter Validation: HSTS Header for DataNode UI****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HSTS Header for DataNode UI parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.http.header.strict-transport-security

**Required**

true

**Suppress Parameter Validation: Ozone Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

### Suppress Parameter Validation: Datanode Metadata Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Metadata Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.metadata.dirs

**Required**

true

### Suppress Parameter Validation: Datanode ID Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode ID Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.datanode.id.dir

**Required**

true

### Suppress Parameter Validation: Java Heap Size of DataNode

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of DataNode parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_datanode\_heap\_size

**Required**

true

### Suppress Parameter Validation: Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_datanode\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Role Specific System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: Role Specific System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ozone DataNode TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ozone DataNode TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ozone DataNode TLS/SSL Server Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Server Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Ozone DataNode TLS/SSL Server Keystore File Location**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Server Keystore File Location parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ozone DataNode TLS/SSL Server Keystore File Password**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode TLS/SSL Server Keystore File Password parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test**

**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_datanode\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_datanode\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_datanode\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_datanode\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_datanode\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_datanode\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_datanode\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_datanode\_unexpected\_exits

**Required**

true

## Ozone Manager

### Advanced

#### Ozone Manager Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom_heap_dump_dir
<b>Required</b>
false

Dump Heap When Out of Memory

<b>Description</b>
When set, generates a heap dump file when when an out-of-memory error occurs.
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
oom_heap_dump_enabled
<b>Required</b>
true

Kill When Out of Memory

<b>Description</b>
When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
oom_sigkill_enabled
<b>Required</b>
true

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties

<b>Description</b>
For advanced use only. A string to be inserted into ozone-conf/om-audit-log4j2.properties for this role only.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
ozone-conf/om-audit-log4j2.properties_role_safety_valve
<b>Required</b>
false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

<b>Description</b>
For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.
<b>Related Name</b>
<b>Default Value</b>

**API Name**

ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-audit.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ranger-ozone-audit.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-policymgr-ssl.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ranger-ozone-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-security.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ranger-ozone-security.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

**Related Name**

**Default Value****API Name**

ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

false

**Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

OZONE\_MANAGER\_role\_env\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Role Specific System Group****Description**

The group that this role's processes should run as.

**Related Name**

**Default Value**

hdfs

**API Name**

process\_groupname

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process\_username

Required

true

Logs

Ozone Manager Log Directory

Description

The log directory for log files of the role Ozone Manager.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log\_dir

Required

false

Ozone Manager Logging Threshold

Description

The minimum log level for Ozone Manager logs

Related Name

Default Value

INFO

API Name

log\_threshold

Required

false

Ozone Manager Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ozone Manager logs. Typically used by log4j or logback.

Related Name

Default Value

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Ozone Manager Max Log Size****Description**

The maximum size, in megabytes, per log file for Ozone Manager logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name**

**Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

## Log Directory Free Space Monitoring Percentage Thresholds

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name**

**Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

## Metric Filter

**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name**

**Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ozone\_manager\_fd\_thresholds

**Required**

false

**Ozone Manager Host Health Test****Description**

When computing the overall Ozone Manager health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ozone\_manager\_host\_health\_enabled

**Required**

false

**Ozone Manager Process Health Test****Description**

Enables the health test that the Ozone Manager's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ozone\_manager\_scm\_health\_enabled

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.

- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Java Heap Size of Ozone Manager****Description**

Maximum size for the Java process heap memory.

**Related Name**

om_max_heap_size
<b>Default Value</b>
4 GiB
<b>API Name</b>
om_max_heap_size
<b>Required</b>
false

**Ozone Filesystem Trash Checkpoint Interval**

<b>Description</b>
Number of minutes between trash checkpoints
<b>Related Name</b>
ozone.fs.trash.checkpoint.interval
<b>Default Value</b>
1 hour(s)
<b>API Name</b>
ozone.fs.trash.checkpoint.interval
<b>Required</b>
false

**Ozone Filesystem Trash Interval**

<b>Description</b>
Controls the number of minutes after which a trash checkpoint directory is deleted permanently
<b>Related Name</b>
ozone.fs.trash.interval
<b>Default Value</b>
1 day(s)
<b>API Name</b>
ozone.fs.trash.interval
<b>Required</b>
false

**HSTS Header for Ozone Manager UI**

<b>Description</b>
HSTS Header (Strict-Transport-Security) value to use
<b>Related Name</b>
ozone.http.header.Strict-Transport-Security
<b>Default Value</b>
max-age=63072000; includeSubDomains;
<b>API Name</b>
ozone.http.header.Strict-Transport-Security
<b>Required</b>
false

### Ozone Log Directory

**Description**

Directory where Ozone Manager logs will be written to

**Related Name**

ozone.log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

ozone.log.dir

**Required**

false

### Ozone Manager Metadata Directory

**Description**

Determines where on the local filesystem Ozone Manager security certificates will be stored.

**Related Name**

ozone.metadata.dirs

**Default Value**

/var/lib/hadoop-ozone/om/ozone-metadata

**API Name**

ozone.metadata.dirs

**Required**

true

### Ozone Manager Data Directory

**Description**

Directory where the OzoneManager stores its metadata.

**Related Name**

ozone.om.db.dirs

**Default Value**

/var/lib/hadoop-ozone/om/data

**API Name**

ozone.om.db.dirs

**Required**

true

### Ozone Manager HTTP Bind Hostname

**Description**

The actual address the OM web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.om.http-address'.

**Related Name**

ozone.om.http-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.om.http-bind-host

**Required**

false

**Secure Ozone Manager HTTPS Bind Hostname****Description**

The actual address the OM web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.om.https-address'.

**Related Name**

ozone.om.https-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.om.https-bind-host

**Required**

false

**Ozone Manager Ratis Storage Directory****Description**

This directory is used for storing Ozone Manager's Ratis metadata like logs. Ideally, this should be mapped to a fast disk like an SSD.

**Related Name**

ozone.om.ratis.storage.dir

**Default Value**

/var/lib/hadoop-ozone/om/ratis

**API Name**

ozone.om.ratis.storage.dir

**Required**

true

**Ozone Server Replication Factor****Description**

The default value of the replication factor for objects. The default is used if replication is not specified when creating a key or if no default replication is set at the bucket. Supported values for RATIS are 1, 3. Supported values for EC are rs-3-2-1024k, rs-6-3-1024k, rs-10-4-1024k, XOR-3-2-1024k, XOR-6-3-1024k, XOR-10-4-4096K (i.e XOR-3-2-{CHUNK\_SIZE})

**Related Name**

ozone.server.default.replication

**Default Value**

3

**API Name**

ozone.server.default.replication

**Required**

true

### Ozone Server Replication Type

**Description**

The default replication type to be used for Objects. The default is used when a type is not specified when creating an Object or no default value is set for the bucket. Supported values are RATIS, STAND\_ALONE, and EC.

**Related Name**

ozone.server.default.replication.type

**Default Value**

RATIS

**API Name**

ozone.server.default.replication.type

**Required**

true

### Ozone Manager Upgrade Need Finalization Canary Enabled

**Description**

Determines if the Ozone Manager Upgrade Need Finalization Canary is enabled.

**Related Name**

ozone\_om\_upgrade\_need\_finalization\_canary\_enabled

**Default Value**

true

**API Name**

ozone\_om\_upgrade\_need\_finalization\_canary\_enabled

**Required**

false

### Ozone Manager Upgrade Need Finalization Canary Timeout

**Description**

Sets Ozone Manager Upgrade Need Finalization Canary's timeout.

**Related Name**

ozone\_om\_upgrade\_need\_finalization\_canary\_timeout

**Default Value**

30 second(s)

**API Name**

ozone\_om\_upgrade\_need\_finalization\_canary\_timeout

**Required**

false

### Ranger Ozone Plugin Conf Path

**Description**

Staging directory for Ranger Ozone Plugin Configuration. This should generally not be changed.

**Related Name**

ranger\_ozone\_plugin\_conf\_path

**Default Value**

/etc/ranger/ozone-plugin

<b>API Name</b>	ranger_ozone_plugin_conf_path
<b>Required</b>	true

**Ranger Ozone Plugin Policy Cache Directory Path**

<b>Description</b>	The directory where Ranger security policies are cached locally.
<b>Related Name</b>	ranger.plugin.ozone.policy.cache.dir
<b>Default Value</b>	/var/lib/ranger/ozone/policy-cache
<b>API Name</b>	ranger_ozone_plugin_policy_cache_directory
<b>Required</b>	true

**Ranger Ozone Plugin Audit Solr Spool Directory Path**

<b>Description</b>	Spool directory for Ranger audits being written to Solr.
<b>Related Name</b>	xasecure.audit.destination.solr.batch.filespool.dir
<b>Default Value</b>	/var/log/hadoop-ozone/ranger-audit/solr/spool
<b>API Name</b>	ranger_ozone_plugin_solr_audit_spool_directory
<b>Required</b>	true

**Performance**

**Maximum Process File Descriptors**

<b>Description</b>	If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	rlimit_fds
<b>Required</b>	false

**Ports and Addresses**

**Ozone Manager HTTP Web UI Port**

<b>Description</b>
--------------------

The base port that the Ozone Manager HTTP web user interface listens on. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.http-address'.

**Related Name**

ozone.om.http-port

**Default Value**

9874

**API Name**

ozone.om.http-port

**Required**

true

**Secure Ozone Manager Web UI Port (TLS/SSL)****Description**

The base port that the Ozone Manager HTTP web user interface listens on when using HTTPS. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.https-address'.

**Related Name**

ozone.om.https-port

**Default Value**

9875

**API Name**

ozone.om.https-port

**Required**

false

**Ozone Manager Ratis port****Description**

The base port that Ozone Manager's Ratis Server listens on if multiple Ozone Manager's are configured.

**Related Name**

ozone.om.ratis-port

**Default Value**

9872

**API Name**

ozone.om.ratis-port

**Required**

false

**Ozone Manager RPC port****Description**

The base port that Ozone Manager listens on when serving RPCs. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.address'.

**Related Name**

ozone.om.rpc-port

**Default Value**

9862

**API Name**

ozone.om.rpc-port

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm_io_weight
<b>Required</b>
true

Cgroup Memory Hard Limit

<b>Description</b>
Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'
<b>Related Name</b>
memory.limit_in_bytes
<b>Default Value</b>
-1 MiB
<b>API Name</b>
rm_memory_hard_limit
<b>Required</b>
true

Cgroup Memory Soft Limit

<b>Description</b>
Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'
<b>Related Name</b>
memory.soft_limit_in_bytes
<b>Default Value</b>
-1 MiB
<b>API Name</b>
rm_memory_soft_limit
<b>Required</b>
true

Security

Role-Specific Kerberos Principal

<b>Description</b>
Kerberos principal used by the Ozone Manager roles.
<b>Related Name</b>
<b>Default Value</b>
om
<b>API Name</b>

kerberos_role_princ_name
<b>Required</b>
true

Ozone Manager TLS/SSL Trust Store File

<b>Description</b>
The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone Manager might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.
<b>Related Name</b>
ssl.client.truststore.location
<b>Default Value</b>
<b>API Name</b>
ssl_client_truststore_location
<b>Required</b>
false

Ozone Manager TLS/SSL Trust Store Password

<b>Description</b>
The password for the Ozone Manager TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.
<b>Related Name</b>
ssl.client.truststore.password
<b>Default Value</b>
<b>API Name</b>
ssl_client_truststore_password
<b>Required</b>
false

Enable TLS/SSL for Ozone Manager

<b>Description</b>
Encrypt communication between clients and Ozone Manager using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).
<b>Related Name</b>
ozone.ssl.enabled
<b>Default Value</b>
false
<b>API Name</b>
ssl_enabled
<b>Required</b>
false

Ozone Manager TLS/SSL Server Keystore Key Password

<b>Description</b>
--------------------

The password that protects the private key contained in the keystore used when Ozone Manager is acting as a TLS/SSL server.

**Related Name**

ssl.server.keystore.keypassword

**Default Value**

**API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**Ozone Manager TLS/SSL Server Keystore File Location**

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone Manager is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

ssl.server.keystore.location

**Default Value**

**API Name**

ssl\_server\_keystore\_location

**Required**

false

**Ozone Manager TLS/SSL Server Keystore File Password**

**Description**

The password for the Ozone Manager keystore file.

**Related Name**

ssl.server.keystore.password

**Default Value**

**API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection**

**Stacks Collection Data Retention**

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks_collection_data_retention
<b>Required</b>
false

Stacks Collection Directory

<b>Description</b>
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>
stacks_collection_directory
<b>Default Value</b>
<b>API Name</b>
stacks_collection_directory
<b>Required</b>
false

Stacks Collection Enabled

<b>Description</b>
Whether or not periodic stacks collection is enabled.
<b>Related Name</b>
stacks_collection_enabled
<b>Default Value</b>
false
<b>API Name</b>
stacks_collection_enabled
<b>Required</b>
true

Stacks Collection Frequency

<b>Description</b>
The frequency with which stacks are collected.
<b>Related Name</b>
stacks_collection_frequency
<b>Default Value</b>
5.0 second(s)
<b>API Name</b>
stacks_collection_frequency
<b>Required</b>
false

Stacks Collection Method

<b>Description</b>
--------------------

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Ozone Manager Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Manager Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Java Heap Size of Ozone Manager****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Ozone Manager parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_om\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/om-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-audit.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: HSTS Header for Ozone Manager UI****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HSTS Header for Ozone Manager UI parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.http.header.strict-transport-security

**Required**

true

**Suppress Parameter Validation: Ozone Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

**Suppress Parameter Validation: Ozone Manager Metadata Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Metadata Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.metadata.dirs

**Required**

true

**Suppress Parameter Validation: Ozone Manager Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.db.dirs

**Required**

true

**Suppress Parameter Validation: Ozone Manager HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager HTTP Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.http-bind-host

**Required**

true

**Suppress Parameter Validation: Ozone Manager HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager HTTP Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.http-port

**Required**

true

**Suppress Parameter Validation: Secure Ozone Manager HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone Manager HTTPS Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.https-bind-host

**Required**

true

**Suppress Parameter Validation: Secure Ozone Manager Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone Manager Web UI Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.https-port

**Required**

true

**Suppress Parameter Validation: Ozone Manager Ratis port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Ratis port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.ratis-port

**Required**

true

**Suppress Parameter Validation: Ozone Manager Ratis Storage Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Ratis Storage Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.ratis.storage.dir

**Required**

true

**Suppress Parameter Validation: Ozone Manager RPC port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager RPC port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.rpc-port

**Required**

true

### Suppress Parameter Validation: Ozone Server Replication Factor

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Server Replication Factor parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.server.default.replication

**Required**

true

### Suppress Parameter Validation: Ozone Server Replication Type

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Server Replication Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.server.default.replication.type

**Required**

true

### Suppress Parameter Validation: Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_manager\_role\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Role Specific System Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: Role Specific System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Ranger Ozone Plugin Conf Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_conf\_path

**Required**

true

**Suppress Parameter Validation: Ranger Ozone Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Policy Cache Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Ozone Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Audit Solr Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ozone Manager TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true
------

### Suppress Parameter Validation: Ozone Manager TLS/SSL Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

### Suppress Parameter Validation: Ozone Manager TLS/SSL Server Keystore Key Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

### Suppress Parameter Validation: Ozone Manager TLS/SSL Server Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

### Suppress Parameter Validation: Ozone Manager TLS/SSL Server Keystore File Password

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ssl_server_keystore_password`**Required**`true`**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Health Test: Ozone Manager Upgrade Need Finalization Canary****Description**

Whether to suppress the results of the Ozone Manager Upgrade Need Finalization Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_ozone_om_upgrade_need_finalization_canary`**Required**`true`**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_ozone_ozone_manager_audit_health`**Required**`true`**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_manager\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_manager\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_manager\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_manager\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_manager\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_manager\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_manager\_unexpected\_exits

**Required**

true

## Ozone Prometheus

### Advanced

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

#### Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml

**Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-prometheus.yml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ozone-prometheus.yml\_role\_safety\_valve

**Required**

false

#### Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/prometheus-token

**Description**

For advanced use only. A string to be inserted into ozone-conf/prometheus-token for this role only.

**Related Name****Default Value****API Name**

ozone-conf/prometheus-token\_role\_safety\_valve

**Required**

false

#### Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value**

**API Name**

OZONE\_PROMETHEUS\_role\_env\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Role Specific System Group****Description**

The group that this role's processes should run as.

**Related Name****Default Value**

hdfs

**API Name**

process\_groupname

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Role Specific System User****Description**

The user that this role's processes should run as.

**Related Name****Default Value**

hdfs

**API Name**

process\_username

**Required**

true

**Monitoring****Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ozone\_prometheus\_fd\_thresholds

**Required**

false

**Ozone Prometheus Host Health Test****Description**

When computing the overall Ozone Prometheus health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ozone\_prometheus\_host\_health\_enabled

**Required**

false

**Ozone Prometheus Process Health Test****Description**

Enables the health test that the Ozone Prometheus's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ozone\_prometheus\_scm\_health\_enabled

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

### Swap Memory Usage Rate Window

#### Description

The period to review when computing unexpected swap memory usage change of the process.

#### Related Name

common.process.swap\_memory\_rate\_window

#### Default Value

5 minute(s)

#### API Name

process\_swap\_memory\_rate\_window

#### Required

false

### Process Swap Memory Thresholds

#### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

#### Related Name

#### Default Value

Warning: 200 B, Critical: Never

#### API Name

process\_swap\_memory\_thresholds

#### Required

false

### Role Triggers

#### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

	[]
API Name	role_triggers
Required	true

Unexpected Exits Thresholds

Description	The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.
Related Name	
Default Value	Warning: Never, Critical: Any
API Name	unexpected_exits_thresholds
Required	false

Unexpected Exits Monitoring Period

Description	The period to review when computing unexpected exits.
Related Name	
Default Value	5 minute(s)
API Name	unexpected_exits_window
Required	false

Other

Ozone Log Directory

Description	Directory where Prometheus logs will be written to
Related Name	ozone.log.dir
Default Value	/var/log/hadoop-ozone
API Name	ozone.log.dir
Required	false

CA File Path

Description	
-------------	--

Location of the CA File for Prometheus

**Related Name**

ozone.prometheus.ca.file

**Default Value**

AUTO\_TLS\_CA\_FILE

**API Name**

ozone.prometheus.ca.file

**Required**

false

**Prometheus Data Retention time.****Description**

How long to retain samples in storage. Units Supported: y, w, d, h, m, s, ms.

**Related Name**

ozone.prometheus.data.retention.time

**Default Value**

15d

**API Name**

ozone.prometheus.data.retention.time

**Required**

false

**Prometheus Data Directory****Description**

Directory where the Prometheus Server stores its metadata.

**Related Name**

ozone.prometheus.db.dir

**Default Value**

/var/lib/hadoop-ozone/prometheus/data

**API Name**

ozone.prometheus.db.dir

**Required**

true

**Prometheus server extra flags.****Description**

Extra command line flags that can be used while starting up the server. For example, '--query.timeout=2m --query.max-samples=5000'

**Related Name**

ozone.prometheus.extra.flags

**Default Value****API Name**

ozone.prometheus.extra.flags

**Required**

false

Prometheus server log level.

Description	Only log messages with the given severity or above. One of: [debug, info, warn, error]
Related Name	ozone.prometheus.log.level
Default Value	info
API Name	ozone.prometheus.log.level
Required	false

Prometheus Binary Location

Description	Location of the unarchived Prometheus binary.
Related Name	prometheus.location
Default Value	
API Name	prometheus.location
Required	false

Performance

Maximum Process File Descriptors

Description	If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
Related Name	
Default Value	
API Name	rlimit_fds
Required	false

Ports and Addresses

Prometheus HTTP Port

Description	The base port that the prometheus web user interface listens on.
Related Name	ozone.prometheus.http-port

**Default Value**

9094

**API Name**

ozone.prometheus.http-port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-prometheus.yml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/prometheus-token****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/prometheus-token parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/prometheus-token\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

### Suppress Parameter Validation: CA File Path

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the CA File Path parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ozone.prometheus.ca.file

#### Required

true

### Suppress Parameter Validation: Prometheus Data Retention time.

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus Data Retention time. parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ozone.prometheus.data.retention.time

#### Required

true

### Suppress Parameter Validation: Prometheus Data Directory

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus Data Directory parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ozone.prometheus.db.dir

#### Required

true

### Suppress Parameter Validation: Prometheus server extra flags.

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus server extra flags. parameter.

#### Related Name

#### Default Value

false

**API Name**`role_config_suppression_ozone.prometheus.extra.flags`**Required**`true`**Suppress Parameter Validation: Prometheus HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus HTTP Port parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.prometheus.http-port`**Required**`true`**Suppress Parameter Validation: Prometheus server log level.****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus server log level. parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.prometheus.log.level`**Required**`true`**Suppress Parameter Validation: Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone_prometheus_role_env_safety_valve`**Required**`true`**Suppress Parameter Validation: Role Specific System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: Role Specific System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Prometheus Binary Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus Binary Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_prometheus.location

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role\_config\_suppression\_role\_triggers

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role\_health\_suppression\_ozon\_ozon\_prometheus\_audit\_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role\_health\_suppression\_ozon\_ozon\_prometheus\_file\_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

**Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_prometheus\_host\_health

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_prometheus\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_prometheus\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_prometheus\_swap\_memory\_usage\_rate

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_prometheus\_unexpected\_exits

**Required**

true

## Ozone Recon

### Advanced

#### Ozone Recon Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions

and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory**

**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name**

**Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory**

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name**

**Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml**

**Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

**Related Name**

**Default Value**

**API Name**

ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

false

**Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

false

**Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

false

**Ozone Recon Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

OZONE\_RECON\_role\_env\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Role Specific System Group

**Description**

The group that this role's processes should run as.

**Related Name****Default Value**

hdfs

**API Name**

process\_groupname

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20
<b>API Name</b>
process_start_secs
<b>Required</b>
false

Role Specific System User

<b>Description</b>
The user that this role's processes should run as.
<b>Related Name</b>
<b>Default Value</b>
hdfs
<b>API Name</b>
process_username
<b>Required</b>
true

Logs

Ozone Recon Log Directory

<b>Description</b>
The log directory for log files of the role Ozone Recon.
<b>Related Name</b>
log.dir
<b>Default Value</b>
/var/log/hadoop-ozone
<b>API Name</b>
log_dir
<b>Required</b>
false

Ozone Recon Logging Threshold

<b>Description</b>
The minimum log level for Ozone Recon logs
<b>Related Name</b>
<b>Default Value</b>
INFO
<b>API Name</b>
log_threshold
<b>Required</b>
false

Ozone Recon Maximum Log File Backups

<b>Description</b>
--------------------

	The maximum number of rolled log files to keep for Ozone Recon logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

Ozone Recon Max Log Size

Description	The maximum size, in megabytes, per log file for Ozone Recon logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	max_log_size
Required	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ozone\_recon\_fd\_thresholds

**Required**

false

**Ozone Recon Host Health Test****Description**

When computing the overall Ozone Recon health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ozone\_recon\_host\_health\_enabled

**Required**

false

**Ozone Recon Process Health Test****Description**

Enables the health test that the Ozone Recon's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ozone\_recon\_scm\_health\_enabled

**Required**

false

### Swap Memory Usage Rate Thresholds

**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

### Swap Memory Usage Rate Window

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### Role Triggers

**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

Other

HSTS Header for Recon UI

Description	HSTS Header (Strict-Transport-Security) value to use
Related Name	ozone.http.header.Strict-Transport-Security
Default Value	max-age=63072000; includeSubDomains;
API Name	ozone.http.header.Strict-Transport-Security
Required	false

Ozone Log Directory

Description	Directory where Recon logs will be written to
Related Name	ozone.log.dir
Default Value	/var/log/hadoop-ozone
API Name	ozone.log.dir
Required	false

Recon Metadata Directory

Description	Determines where on the local filesystem recon security certificates will be stored.
Related Name	ozone.metadata.dirs
Default Value	/var/lib/hadoop-ozone/recon/ozone-metadata
API Name	ozone.metadata.dirs
Required	true

Recon Data Directory

Description	Directory where the Recon Server stores its metadata.
Related Name	ozone.recon.db.dir
Default Value	/var/lib/hadoop-ozone/recon/data

**API Name**

ozone.recon.db.dir

**Required**

true

**Recon HTTP Bind Hostname****Description**

The actual address the Recon web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.recon.http-address'.

**Related Name**

ozone.recon.http-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.recon.http-bind-host

**Required**

false

**Secure Recon HTTPS Bind Hostname****Description**

The actual address the Recon web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.recon.https-address'.

**Related Name**

ozone.recon.https-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.recon.https-bind-host

**Required**

false

**Recon OzoneManager Data Directory****Description**

Directory where the Recon Server stores OzoneManager's metadata

**Related Name**

ozone.recon.om.db.dir

**Default Value**

/var/lib/hadoop-ozone/recon/om/data

**API Name**

ozone.recon.om.db.dir

**Required**

true

**Recon StorageContainerManager Data Directory****Description**

Directory where the Recon Server stores StorageContainerManager's metadata

**Related Name**

ozone.recon.scm.db.dirs

**Default Value**

/var/lib/hadoop-ozone/recon/scm/data

**API Name**

ozone.recon.scm.db.dirs

**Required**

true

### Java Heap Size of Recon

**Description**

Maximum size for the Java process heap memory.

**Related Name**

ozone\_recon\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

ozone\_recon\_max\_heap\_size

**Required**

false

### Performance

#### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

### Ports and Addresses

#### Recon HTTP Web UI Port

**Description**

The base port that the Recon web user interface listens on. The host name of the Recon web user interface is combined with this port to form the 'ozone.recon.http-address'.

**Related Name**

ozone.recon.http-port

**Default Value**

9888

**API Name**

ozone.recon.http-port

**Required**

true

**Secure Recon Web UI Port (TLS/SSL)****Description**

The base port that the Recon web user interface listens on when using HTTPS. The host name of the Recon web user interface is combined with this port to form the 'ozone.recon.https-address'.

**Related Name**

ozone.recon.https-port

**Default Value**

9889

**API Name**

ozone.recon.https-port

**Required**

false

**Recon RPC Port****Description**

The base port that Recon listens on when serving RPCs. The host name of Recon is combined with this port to form the 'ozone.recon.address'.

**Related Name**

ozone.recon.rpc-port

**Default Value**

9891

**API Name**

ozone.recon.rpc-port

**Required**

true

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft\_limit\_in\_bytes

Default Value

-1 MiB

API Name

rm\_memory\_soft\_limit

Required

true

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the Ozone Recon roles.

Related Name

Default Value

recon

API Name

kerberos\_role\_princ\_name

Required

true

Ozone Recon TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone Recon might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value

API Name

ssl\_client\_truststore\_location

Required

false

Ozone Recon TLS/SSL Trust Store Password

Description

The password for the Ozone Recon TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.client.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

### Enable TLS/SSL for Ozone Recon

**Description**

Encrypt communication between clients and Ozone Recon using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ozone.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### Ozone Recon TLS/SSL Server Keystore Key Password

**Description**

The password that protects the private key contained in the keystore used when Ozone Recon is acting as a TLS/SSL server.

**Related Name**

ssl.server.keystore.keypassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

### Ozone Recon TLS/SSL Server Keystore File Location

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone Recon is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

ssl.server.keystore.location

**Default Value****API Name**

ssl_server_keystore_location
<b>Required</b>
false

Ozone Recon TLS/SSL Server Keystore File Password

<b>Description</b>
The password for the Ozone Recon keystore file.
<b>Related Name</b>
ssl.server.keystore.password
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_password
<b>Required</b>
false

Stacks Collection

Stacks Collection Data Retention

<b>Description</b>
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>
stacks_collection_data_retention
<b>Default Value</b>
100 MiB
<b>API Name</b>
stacks_collection_data_retention
<b>Required</b>
false

Stacks Collection Directory

<b>Description</b>
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>
stacks_collection_directory
<b>Default Value</b>
<b>API Name</b>
stacks_collection_directory
<b>Required</b>
false

Stacks Collection Enabled

<b>Description</b>
--------------------

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Ozone Recon Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Recon Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: HSTS Header for Recon UI****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HSTS Header for Recon UI parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.http.header.strict-transport-security

**Required**

true

**Suppress Parameter Validation: Ozone Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

**Suppress Parameter Validation: Recon Metadata Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon Metadata Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.metadata.dirs

**Required**

true

**Suppress Parameter Validation: Recon Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.db.dir

**Required**

true

**Suppress Parameter Validation: Recon HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon HTTP Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.http-bind-host

**Required**

true

**Suppress Parameter Validation: Recon HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon HTTP Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.http-port

**Required**

true

**Suppress Parameter Validation: Secure Recon HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Recon HTTPS Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.https-bind-host

**Required**

true

**Suppress Parameter Validation: Secure Recon Web UI Port (TLS/SSL)**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Recon Web UI Port (TLS/SSL) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.https-port

**Required**

true

**Suppress Parameter Validation: Recon OzoneManager Data Directory**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon OzoneManager Data Directory parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.om.db.dir

**Required**

true

**Suppress Parameter Validation: Recon RPC Port**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon RPC Port parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.rpc-port

**Required**

true

**Suppress Parameter Validation: Recon StorageContainerManager Data Directory**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recon StorageContainerManager Data Directory parameter.

**Related Name**

**Default Value**

false

**API Name**`role_config_suppression_ozone.recon.scm.db.dirs`**Required**`true`**Suppress Parameter Validation: Java Heap Size of Recon****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Recon parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone_recon_max_heap_size`**Required**`true`**Suppress Parameter Validation: Ozone Recon Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone_recon_role_env_safety_valve`**Required**`true`**Suppress Parameter Validation: Role Specific System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_process_groupname`**Required**`true`**Suppress Parameter Validation: Role Specific System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ozone Recon TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ozone Recon TLS/SSL Trust Store Password**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon TLS/SSL Trust Store Password parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ozone Recon TLS/SSL Server Keystore Key Password**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon TLS/SSL Server Keystore Key Password parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Ozone Recon TLS/SSL Server Keystore File Location**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon TLS/SSL Server Keystore File Location parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ozone Recon TLS/SSL Server Keystore File Password**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon TLS/SSL Server Keystore File Password parameter.

**Related Name**

**Default Value**

false

**API Name**`role_config_suppression_ssl_server_keystore_password`**Required**`true`**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_ozon_ozon_recon_audit_health`**Required**`true`**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_ozon_ozon_recon_file_descriptor`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_recon\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_recon\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_ozone\_recon\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**`role_health_suppression_ozone_ozone_recon_swap_memory_usage`**Required**`true`**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_ozone_ozone_recon_swap_memory_usage_rate`**Required**`true`**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_ozone_ozone_recon_unexpected_exits`**Required**`true`**S3 Gateway****Advanced****S3 Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**`log4j_safety_valve`**Required**`false`

### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

### Dump Heap When Out of Memory

**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name**

**Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

false

**S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/s3g-audit-log4j2.properties****Description**

For advanced use only. A string to be inserted into ozone-conf/s3g-audit-log4j2.properties for this role only.

**Related Name****Default Value****API Name**

ozone-conf/s3g-audit-log4j2.properties\_role\_safety\_valve

**Required**

false

**S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

false

**S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

**Related Name**

**Default Value****API Name**

ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Role Specific System Group****Description**

The group that this role's processes should run as.

**Related Name****Default Value**

hdfs

**API Name**

process\_groupname

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Role Specific System User****Description**

The user that this role's processes should run as.

**Related Name****Default Value**

hdfs

**API Name**

process\_username

**Required**

true

**S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

S3\_GATEWAY\_role\_env\_safety\_valve

**Required**

false

Logs

S3 Gateway Log Directory

Description	The log directory for log files of the role S3 Gateway.
Related Name	log.dir
Default Value	/var/log/hadoop-ozone
API Name	log_dir
Required	false

S3 Gateway Logging Threshold

Description	The minimum log level for S3 Gateway logs
Related Name	
Default Value	INFO
API Name	log_threshold
Required	false

S3 Gateway Maximum Log File Backups

Description	The maximum number of rolled log files to keep for S3 Gateway logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

S3 Gateway Max Log Size

Description	The maximum size, in megabytes, per log file for S3 Gateway logs. Typically used by log4j or logback.
Related Name	
Default Value	

	200 MiB
API Name	
	max_log_size
Required	
	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

Log Directory Free Space Monitoring Absolute Thresholds

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
Related Name	
Default Value	Warning: 10 GiB, Critical: 5 GiB
API Name	log_directory_free_space_absolute_thresholds
Required	false

Log Directory Free Space Monitoring Percentage Thresholds

Description	
-------------	--

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

s3\_gateway\_fd\_thresholds

**Required**

false

**S3 Gateway Host Health Test****Description**

When computing the overall S3 Gateway health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

s3\_gateway\_host\_health\_enabled

**Required**

false

**S3 Gateway Process Health Test****Description**

Enables the health test that the S3 Gateway's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

s3\_gateway\_scm\_health\_enabled

**Required**

false

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****HSTS Header for S3G HTTPS Endpoint****Description**

HSTS Header (Strict-Transport-Security) value to use

**Related Name**

ozone.http.header.Strict-Transport-Security

**Default Value**

max-age=63072000; includeSubDomains;

**API Name**

ozone.http.header.Strict-Transport-Security

**Required**

false

**Ozone S3G Log Directory****Description**

Directory where Ozone S3G logs will be written to

**Related Name**

ozone.log.dir

**Default Value**`/var/log/hadoop-ozone`**API Name**`ozone.log.dir`**Required**`false`**Ozone S3 Gateway HTTP Bind Hostname****Description**

The actual address the S3 Gateway web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.s3g.http-address'.

**Related Name**`ozone.s3g.http-bind-host`**Default Value**`0.0.0.0`**API Name**`ozone.s3g.http-bind-host`**Required**`false`**Secure Ozone S3 Gateway HTTPS Bind Hostname****Description**

The actual address the S3 Gateway web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.s3g.https-address'.

**Related Name**`ozone.s3g.https-bind-host`**Default Value**`0.0.0.0`**API Name**`ozone.s3g.https-bind-host`**Required**`false`**Java Heap Size of S3 Gateway****Description**

Maximum size for the Java process heap memory.

**Related Name**`ozone_S3_gateway_max_heap_size`**Default Value**`1 GiB`**API Name**`ozone_S3_gateway_max_heap_size`**Required**`false`

Performance

Maximum Process File Descriptors

Description	If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
Related Name	
Default Value	
API Name	rlimit_fds
Required	false

Ports and Addresses

Ozone S3 Gateway HTTP Web UI Port

Description	The base port that the S3 Gateway web user interface listens on. The host name of the S3 Gateway is combined with this port to form the 'ozone.s3g.http-address'.
Related Name	ozone.s3g.http-port
Default Value	9878
API Name	ozone.s3g.http-port
Required	true

Secure Ozone S3 Gateway Web UI Port (TLS/SSL)

Description	The base port that the S3 Gateway web user interface listens on when using HTTPS. The host name of the S3 Gateway is combined with this port to form the 'ozone.s3g.https-address'.
Related Name	ozone.s3g.https-port
Default Value	9879
API Name	ozone.s3g.https-port
Required	false

Resource Management

Cgroup CPU Shares

Description
-------------

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the

value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Role-Specific Kerberos Principal****Description**

Kerberos principal used by the S3 Gateway roles.

**Related Name****Default Value**

s3g

**API Name**

kerberos\_role\_princ\_name

**Required**

true

**S3 Gateway TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that S3 Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.client.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**S3 Gateway TLS/SSL Trust Store Password****Description**

The password for the S3 Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.client.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for S3 Gateway****Description**

Encrypt communication between clients and S3 Gateway using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ozone.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**S3 Gateway TLS/SSL Server Keystore Key Password****Description**

The password that protects the private key contained in the keystore used when S3 Gateway is acting as a TLS/SSL server.

**Related Name**

ssl.server.keystore.keypassword

**Default Value****API Name**

ssl\_server\_keystore\_keypassword

**Required**

false

**S3 Gateway TLS/SSL Server Keystore File Location**

**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when S3 Gateway is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

ssl.server.keystore.location

**Default Value**

**API Name**

ssl\_server\_keystore\_location

**Required**

false

**S3 Gateway TLS/SSL Server Keystore File Password**

**Description**

The password for the S3 Gateway keystore file.

**Related Name**

ssl.server.keystore.password

**Default Value**

**API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection**

**Stacks Collection Data Retention**

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory**

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user

with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

**Related Name**

stacks\_collection\_directory

**Default Value**

**API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled**

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency**

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method**

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks_collection_method
<b>Required</b>
false

Suppressions

Suppress Configuration Validator: CDH Version Validator

<b>Description</b>
Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_cdh_version_validator
<b>Required</b>
true

Suppress Parameter Validation: Role-Specific Kerberos Principal

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_kerberos_role_princ_name
<b>Required</b>
true

Suppress Parameter Validation: S3 Gateway Logging Advanced Configuration Snippet (Safety Valve)

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_log4j_safety_valve
<b>Required</b>
true

Suppress Parameter Validation: S3 Gateway Log Directory

<b>Description</b>
--------------------

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/s3g-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/s3g-audit-log4j2.properties parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ozone-conf/s3g-audit-log4j2.properties_role_safety_valve`**Required**`true`**Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone-conf/ssl-client.xml_role_safety_valve`**Required**`true`**Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone-conf/ssl-server.xml_role_safety_valve`**Required**`true`**Suppress Parameter Validation: HSTS Header for S3G HTTPS Endpoint****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HSTS Header for S3G HTTPS Endpoint parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.http.header.strict-transport-security`**Required**`true`

**Suppress Parameter Validation: Ozone S3G Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone S3G Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

**Suppress Parameter Validation: Ozone S3 Gateway HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone S3 Gateway HTTP Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.http-bind-host

**Required**

true

**Suppress Parameter Validation: Ozone S3 Gateway HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone S3 Gateway HTTP Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.http-port

**Required**

true

**Suppress Parameter Validation: Secure Ozone S3 Gateway HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone S3 Gateway HTTPS Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.https-bind-host

**Required**

true

**Suppress Parameter Validation: Secure Ozone S3 Gateway Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone S3 Gateway Web UI Port (TLS/SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.https-port

**Required**

true

**Suppress Parameter Validation: Java Heap Size of S3 Gateway****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of S3 Gateway parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_s3\_gateway\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Role Specific System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: Role Specific System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_s3\_gateway\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: S3 Gateway TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: S3 Gateway TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: S3 Gateway TLS/SSL Server Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: S3 Gateway TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_ssl_server_keystore_location
<b>Required</b>
true

**Suppress Parameter Validation: S3 Gateway TLS/SSL Server Keystore File Password**

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server Keystore File Password parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ssl_server_keystore_password
<b>Required</b>
true

**Suppress Parameter Validation: Stacks Collection Directory**

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_stacks_collection_directory
<b>Required</b>
true

**Suppress Health Test: Audit Pipeline Test**

<b>Description</b>
Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_health_suppression_ozone_s3_gateway_audit_health
<b>Required</b>
true

**Suppress Health Test: File Descriptors**

<b>Description</b>
--------------------

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_s3\_gateway\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_s3\_gateway\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozon\_s3\_gateway\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_s3\_gateway\_unexpected\_exits

**Required**

true

## Service-Wide

### Advanced

#### Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

**Description**

For advanced use only, a string to be inserted into ozone-conf/ozone-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ozone-conf/ozone-site.xml\_service\_safety\_valve

**Required**

false

#### Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

**Description**

For advanced use only, a string to be inserted into ozone-conf/ssl-client.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_service\_safety\_valve

**Required**

false

#### Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

**Description**

For advanced use only, a string to be inserted into ozone-conf/ssl-server.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_service\_safety\_valve

**Required**

false

#### Ozone Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

OZONE_service_env_safety_valve
<b>Required</b>
false

System Group

<b>Description</b>
The group that this service's processes should run as.
<b>Related Name</b>
<b>Default Value</b>
hdfs
<b>API Name</b>
process_groupname
<b>Required</b>
true

System User

<b>Description</b>
The user that this service's processes should run as.
<b>Related Name</b>
<b>Default Value</b>
hdfs
<b>API Name</b>
process_username
<b>Required</b>
true

Monitoring

Enable Service Level Health Alerts

<b>Description</b>
When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
enable_alerts
<b>Required</b>
false

Enable Configuration Change Alerts

<b>Description</b>
When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Healthy Ozone DataNode Monitoring Thresholds****Description**

The health test thresholds of the overall Ozone DataNode health. The check returns "Concerning" health if the percentage of "Healthy" Ozone DataNodes falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ozone DataNodes falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 90.0 %

**API Name**

OZONE\_OZONE\_DATANODE\_healthy\_thresholds

**Required**

false

**Healthy Ozone Manager Monitoring Thresholds****Description**

The health test thresholds of the overall Ozone Manager health. The check returns "Concerning" health if the percentage of "Healthy" Ozone Managers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ozone Managers falls below the critical threshold.

**Related Name****Default Value**

Warning: 75.0 %, Critical: 50.0 %

**API Name**

OZONE\_OZONE\_MANAGER\_healthy\_thresholds

**Required**

false

**Healthy Storage Container Manager Monitoring Thresholds****Description**

The health test thresholds of the overall Storage Container Manager health. The check returns "Concerning" health if the percentage of "Healthy" Storage Container Managers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Storage Container Managers falls below the critical threshold.

**Related Name****Default Value**

Warning: 75.0 %, Critical: 50.0 %

**API Name**

OZONE\_STORAGE\_CONTAINER\_MANAGER\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****Ozone Proxy User Groups****Description**

Comma-delimited list of groups to allow the Ozone user to impersonate. To disable entirely, use a string that does not correspond to a group name, such as '\_no\_group\_'

**Related Name**

hadoop.proxyuser.om.groups

**Default Value**

\*

**API Name**

hadoop.proxyuser.om.groups

**Required**

true

**Ozone Proxy User Hosts****Description**

Comma-delimited list of hosts to allow the Ozone user to impersonate. To disable entirely, use a string that does not correspond to a group name, such as '\_no\_group\_'

**Related Name**

hadoop.proxyuser.om.hosts

**Default Value**

\*

**API Name**

hadoop.proxyuser.om.hosts

**Required**

true

**Choose RocksDB profile****Description**

This property allows user to pick a configuration that tunes the RocksDB settings for the hardware it is running on. Right now, we have SSD and DISK as profile options.

**Related Name**

hdds.db.profile

**Default Value**

DISK

**API Name**

hdds.db.profile

**Required**

false

**Enable HDDS gRPC Server TLS****Description**

Enable HDDS gRPC server TLS on this cluster. Please note this won't take effect unless Kerberos Authentication (ozone.security.enabled) is enabled as well.

**Related Name**

hdds.grpc.tls.enabled

**Default Value**

false

**API Name**

hdds.grpc.tls.enabled

**Required**

false

**Ozone Prometheus Endpoint Token****Description**

Enables token based authentication for Prometheus servlet endpoints. This will disable SPNEGO based authentication on the endpoints.

**Related Name**

hdds.prometheus.endpoint.token

**Default Value****API Name**

hdds.prometheus.endpoint.token

**Required**

false

**HDFS Service****Description**

Name of the HDFS service that this Ozone service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

false

**Ozone Administrators****Description**

A comma separated list of Kerberos principals of Ozone Administrators. This will be effective only when security is enabled.

**Related Name**

ozone.administrators

**Default Value****API Name**

ozone.administrators

**Required**

false

**Ozone Replication Factor****Description**

Default replication factor value for keys stored in Ozone. The actual number of replications can be specified when writing the key. The default is used if replication value is not specified. Supported values: 1 and 3.

**Related Name**

ozone.replication
<b>Default Value</b>
3
<b>API Name</b>
ozone.replication
<b>Required</b>
true

**Ozone SCM Primordial Node ID**

<b>Description</b>
SCM Primordial Node ID is the hostname of the SCM which should act as a Root Certificate Authority(CA) for Ozone during security initialization. It is mandatory to have a Primordial Node ID when there is more than one SCM instance configured.
<b>Related Name</b>
ozone.scm.primordial.node.id
<b>Default Value</b>
<b>API Name</b>
ozone.scm.primordial.node.id
<b>Required</b>
false

**Ozone SCM Service ID**

<b>Description</b>
A final alphanumerical name to identify this Ozone service. The value is configured during installation, and should not be modified after that, as any change in the service id may cause service disruption.
<b>Related Name</b>
ozone.scm.service.id
<b>Default Value</b>
scm1
<b>API Name</b>
ozone.scm.service.id
<b>Required</b>
true

**Enable Kerberos Authentication**

<b>Description</b>
Enables Kerberos authentication for Ozone.
<b>Related Name</b>
ozone.security.enabled
<b>Default Value</b>
false
<b>API Name</b>
ozone.security.enabled
<b>Required</b>

false

Enable Kerberos Authentication for HTTP web consoles

Description

Enables Kerberos authentication for Ozone HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled for the Ozone service.

Related Name

ozone.security.http.kerberos.enabled

Default Value

false

API Name

ozone.security.http.kerberos.enabled

Required

false

Ozone Service ID

Description

A final alphanumerical name to identify this Ozone service. The value is configured during installation, and should not be modified after that, as any change in the service id may cause service disruption.

Related Name

ozone.service.id

Default Value

API Name

ozone.service.id

Required

true

Ozone Java Options

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags would be passed here.

Related Name

ozone\_java\_opts

Default Value

java\_args

API Name

ozone\_java\_opts

Required

false

Ranger Ozone Plugin Hdfs Audit Directory

Description

The DFS path on which Ranger audits are written.

Related Name

ranger\_ozone\_plugin\_hdfs\_audit\_directory

**Default Value**

\$ranger\_base\_audit\_url/ozone

**API Name**

ranger\_ozone\_plugin\_hdfs\_audit\_directory

**Required**

false

**RANGER Service****Description**

Name of the RANGER service that this Ozone service instance depends on

**Related Name****Default Value****API Name**

ranger\_service

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Configuration Validator: Datanode Ratis IPC Port for Admin Requests****Description**

Whether to suppress configuration warnings produced by the Datanode Ratis IPC Port for Admin Requests configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_dfs.container.ratis.admin.port

**Required**

true

**Suppress Configuration Validator: Datanode Ratis Metadata Directory****Description**

Whether to suppress configuration warnings produced by the Datanode Ratis Metadata Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_dfs.container.ratis.datanode.storage.dir

**Required**

true

**Suppress Configuration Validator: Datanode Ratis IPC Port for Server-to-Server Communication****Description**

Whether to suppress configuration warnings produced by the Datanode Ratis IPC Port for Server-to-Server Communication configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_dfs.container.ratis.server.port

**Required**

true

**Suppress Configuration Validator: Balancing Interval****Description**

Whether to suppress configuration warnings produced by the Balancing Interval configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.balancing.iteration.interval

**Required**

true

**Suppress Configuration Validator: Exclude Containers from Balancing****Description**

Whether to suppress configuration warnings produced by the Exclude Containers from Balancing configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.exclude.containers

**Required**

true

**Suppress Configuration Validator: Exclude Datanodes****Description**

Whether to suppress configuration warnings produced by the Exclude Datanodes configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.exclude.datanodes

**Required**

true

**Suppress Configuration Validator: Include Datanodes****Description**

Whether to suppress configuration warnings produced by the Include Datanodes configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.include.datanodes

**Required**

true

**Suppress Configuration Validator: Container Move Timeout****Description**

Whether to suppress configuration warnings produced by the Container Move Timeout configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.move.timeout

**Required**

true

**Suppress Configuration Validator: Maximum Size Entering Target****Description**

Whether to suppress configuration warnings produced by the Maximum Size Entering Target configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.size.entering.target.max

**Required**

true

**Suppress Configuration Validator: Maximum Size Leaving Source****Description**

Whether to suppress configuration warnings produced by the Maximum Size Leaving Source configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.size.leaving.source.max

**Required**

true

**Suppress Configuration Validator: Maximum Size to Move in Balancing****Description**

Whether to suppress configuration warnings produced by the Maximum Size to Move in Balancing configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.size.moved.max.per.iteration

**Required**

true

**Suppress Configuration Validator: Datanode Data Directory****Description**

Whether to suppress configuration warnings produced by the Datanode Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.datanode.dir

**Required**

true

**Suppress Configuration Validator: Datanode Container Protocol ACL****Description**

Whether to suppress configuration warnings produced by the Datanode Container Protocol ACL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.security.client.datanode.container.protocol.acl

**Required**

true

**Suppress Configuration Validator: SCM Client Certificate Protocol ACL****Description**

Whether to suppress configuration warnings produced by the SCM Client Certificate Protocol ACL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.security.client.scm.certificate.protocol.acl

**Required**

true

**Suppress Configuration Validator: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)**

**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Log Directory**

**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Log Directory configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Topology Script File Name**

**Description**

Whether to suppress configuration warnings produced by the Topology Script File Name configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_net\_topology\_script\_file\_name

**Required**

true

**Suppress Configuration Validator: Java Heap Size of Ozone Manager**

**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Ozone Manager configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_om\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/dn-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/hadoop-policy.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties

#### Description

Whether to suppress configuration warnings produced by the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ozone-conf/om-audit-log4j2.properties\_role\_safety\_valve

#### Required

true

### Suppress Configuration Validator: Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml

#### Description

Whether to suppress configuration warnings produced by the Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ozone-conf/ozone-prometheus.yml\_role\_safety\_valve

#### Required

true

### Suppress Configuration Validator: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

#### Description

Whether to suppress configuration warnings produced by the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ozone-conf/ozone-site.xml\_client\_config\_safety\_valve

#### Required

true

### Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

#### Description

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/prometheus-token****Description**

Whether to suppress configuration warnings produced by the Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/prometheus-token configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/prometheus-token\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml

**Description**

Whether to suppress configuration warnings produced by the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ranger-ozone-security.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/s3g-audit-log4j2.properties

**Description**

Whether to suppress configuration warnings produced by the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/s3g-audit-log4j2.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/s3g-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties

**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/scm-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_client\_config\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ozone Datanode HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Ozone Datanode HTTP Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.http-bind-host

**Required**

true

**Suppress Configuration Validator: Ozone Datanode HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the Ozone Datanode HTTP Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.http-port

**Required**

true

**Suppress Configuration Validator: Secure Ozone Datanode HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Secure Ozone Datanode HTTPS Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.https-bind-host

**Required**

true

**Suppress Configuration Validator: Ozone Datanode Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the Ozone Datanode Port (TLS/SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.datanode.https-port

**Required**

true

**Suppress Configuration Validator: HSTS Header for Ozone SCM UI****Description**

Whether to suppress configuration warnings produced by the HSTS Header for Ozone SCM UI configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.http.header.strict-transport-security

**Required**

true

**Suppress Configuration Validator: Ozone Log Directory****Description**

Whether to suppress configuration warnings produced by the Ozone Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Metadata Directory****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Metadata Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.metadata.dirs

**Required**

true

**Suppress Configuration Validator: Ozone Manager Data Directory****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.db.dirs

**Required**

true
------

### Suppress Configuration Validator: Ozone Manager HTTP Bind Hostname

**Description**

Whether to suppress configuration warnings produced by the Ozone Manager HTTP Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.http-bind-host

**Required**

true

### Suppress Configuration Validator: Ozone Manager HTTP Web UI Port

**Description**

Whether to suppress configuration warnings produced by the Ozone Manager HTTP Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.http-port

**Required**

true

### Suppress Configuration Validator: Secure Ozone Manager HTTPS Bind Hostname

**Description**

Whether to suppress configuration warnings produced by the Secure Ozone Manager HTTPS Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.om.https-bind-host

**Required**

true

### Suppress Configuration Validator: Secure Ozone Manager Web UI Port (TLS/SSL)

**Description**

Whether to suppress configuration warnings produced by the Secure Ozone Manager Web UI Port (TLS/SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ozone.om.https-port`**Required**`true`**Suppress Configuration Validator: Ozone Manager Ratis port****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Ratis port configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.om.ratis-port`**Required**`true`**Suppress Configuration Validator: Ozone Manager Ratis Storage Directory****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Ratis Storage Directory configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.om.ratis.storage.dir`**Required**`true`**Suppress Configuration Validator: Ozone Manager RPC port****Description**

Whether to suppress configuration warnings produced by the Ozone Manager RPC port configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ozone.om.rpc-port`**Required**`true`**Suppress Configuration Validator: CA File Path****Description**

Whether to suppress configuration warnings produced by the CA File Path configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.ca.file

**Required**

true

**Suppress Configuration Validator: Prometheus Data Retention time.****Description**

Whether to suppress configuration warnings produced by the Prometheus Data Retention time. configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.data.retention.time

**Required**

true

**Suppress Configuration Validator: Prometheus Data Directory****Description**

Whether to suppress configuration warnings produced by the Prometheus Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.db.dir

**Required**

true

**Suppress Configuration Validator: Prometheus server extra flags.****Description**

Whether to suppress configuration warnings produced by the Prometheus server extra flags. configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.extra.flags

**Required**

true

**Suppress Configuration Validator: Prometheus HTTP Port****Description**

Whether to suppress configuration warnings produced by the Prometheus HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.http-port

**Required**

true

**Suppress Configuration Validator: Prometheus server log level.****Description**

Whether to suppress configuration warnings produced by the Prometheus server log level configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.prometheus.log.level

**Required**

true

**Suppress Configuration Validator: Recon Data Directory****Description**

Whether to suppress configuration warnings produced by the Recon Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.db.dir

**Required**

true

**Suppress Configuration Validator: Recon HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Recon HTTP Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.http-bind-host

**Required**

true

**Suppress Configuration Validator: Recon HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the Recon HTTP Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.http-port

**Required**

true

**Suppress Configuration Validator: Secure Recon HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Secure Recon HTTPS Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.https-bind-host

**Required**

true

**Suppress Configuration Validator: Secure Recon Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the Secure Recon Web UI Port (TLS/SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.https-port

**Required**

true

**Suppress Configuration Validator: Recon OzoneManager Data Directory****Description**

Whether to suppress configuration warnings produced by the Recon OzoneManager Data Directory configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.om.db.dir

**Required**

true

**Suppress Configuration Validator: Recon RPC Port****Description**

Whether to suppress configuration warnings produced by the Recon RPC Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.rpc-port

**Required**

true

**Suppress Configuration Validator: Recon StorageContainerManager Data Directory****Description**

Whether to suppress configuration warnings produced by the Recon StorageContainerManager Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.recon.scm.db.dirs

**Required**

true

**Suppress Configuration Validator: Ozone S3 Gateway HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Ozone S3 Gateway HTTP Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.http-bind-host

**Required**

true

**Suppress Configuration Validator: Ozone S3 Gateway HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the Ozone S3 Gateway HTTP Web UI Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.http-port

**Required**

true

**Suppress Configuration Validator: Secure Ozone S3 Gateway HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Secure Ozone S3 Gateway HTTPS Bind Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.https-bind-host

**Required**

true

**Suppress Configuration Validator: Secure Ozone S3 Gateway Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the Secure Ozone S3 Gateway Web UI Port (TLS/SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.s3g.https-port

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Block Client port****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Block Client port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.block.client.port

**Required**

true

### Suppress Configuration Validator: Storage Container Manager Client port

#### Description

Whether to suppress configuration warnings produced by the Storage Container Manager Client port configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ozone.scm.client.port

true

**Suppress Configuration Validator: Ozone Server Replication Factor****Description**

Whether to suppress configuration warnings produced by the Ozone Server Replication Factor configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.server.default.replication

**Required**

true

**Suppress Configuration Validator: Ozone Server Replication Type****Description**

Whether to suppress configuration warnings produced by the Ozone Server Replication Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.server.default.replication.type

**Required**

true

**Suppress Configuration Validator: Java Heap Size of DataNode****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of DataNode configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_datanode\_heap\_size

**Required**

true

### Suppress Configuration Validator: Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_datanode\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Ozone Manager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_manager\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_prometheus\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Java Heap Size of Recon

**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Recon configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_recon\_max\_heap\_size

**Required**

true

### Suppress Configuration Validator: Ozone Recon Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Ozone Recon Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_recon\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Java Heap Size of S3 Gateway

**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of S3 Gateway configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone\_s3\_gateway\_max\_heap\_size

**Required**

true

### Suppress Configuration Validator: Role Specific System Group

**Description**

Whether to suppress configuration warnings produced by the Role Specific System Group configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Configuration Validator: Role Specific System User****Description**

Whether to suppress configuration warnings produced by the Role Specific System User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_username

**Required**

true

**Suppress Configuration Validator: Prometheus Binary Location****Description**

Whether to suppress configuration warnings produced by the Prometheus Binary Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_prometheus.location

**Required**

true

**Suppress Configuration Validator: Ranger Ozone Plugin Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Conf Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_conf\_path

**Required**

true

**Suppress Configuration Validator: Ranger Ozone Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Policy Cache Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Ozone Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ozone\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the S3 Gateway Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_s3\_gateway\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Java Heap Size of Storage Container Manager****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Storage Container Manager configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_scm\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Storage Container Manager TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Storage Container Manager TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true
------

### Suppress Configuration Validator: Storage Container Manager TLS/SSL Server Keystore Key Password

#### Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server Keystore Key Password configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

#### Required

true

### Suppress Configuration Validator: Storage Container Manager TLS/SSL Server Keystore File Location

#### Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server Keystore File Location configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_server\_keystore\_location

#### Required

true

### Suppress Configuration Validator: Storage Container Manager TLS/SSL Server Keystore File Password

#### Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server Keystore File Password configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ssl\_server\_keystore\_password

#### Required

true

### Suppress Configuration Validator: Stacks Collection Directory

#### Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

#### Related Name

**Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_storage\_container\_manager\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: Ozone Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hadoop.proxyuser.om.groups

**Required**

true

**Suppress Parameter Validation: Ozone Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hadoop.proxyuser.om.hosts

**Required**

true

**Suppress Parameter Validation: Ozone Prometheus Endpoint Token****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Prometheus Endpoint Token parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hdds.prometheus.endpoint.token

**Required**

true

**Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone-conf/ozone-site.xml\_service\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_ozone-conf/ssl-client.xml\_service\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone-conf/ssl-server.xml\_service\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ozone Administrators****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Administrators parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone.administrators

**Required**

true

**Suppress Parameter Validation: Ozone SCM Primordial Node ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone SCM Primordial Node ID parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone.scm.primordial.node.id

**Required**

true

**Suppress Parameter Validation: Ozone SCM Service ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone SCM Service ID parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone.scm.service.id

**Required**

true

**Suppress Parameter Validation: Ozone Service ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service ID parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone.service.id

**Required**

true

**Suppress Configuration Validator: Ozone DataNode Count Validator****Description**

Whether to suppress configuration warnings produced by the Ozone DataNode Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_datanode\_count\_validator

**Required**

true

**Suppress Parameter Validation: Ozone Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Java Options parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_java\_opts

**Required**

true

**Suppress Configuration Validator: Ozone Manager Count Validator****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_manager\_count\_validator

**Required**

true

**Suppress Configuration Validator: Ozone Prometheus Count Validator****Description**

Whether to suppress configuration warnings produced by the Ozone Prometheus Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_prometheus\_count\_validator

**Required**

true

**Suppress Configuration Validator: Ozone Recon Count Validator****Description**

Whether to suppress configuration warnings produced by the Ozone Recon Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_recon\_count\_validator

**Required**

true

**Suppress Parameter Validation: Ozone Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ozone\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Ranger Ozone Plugin Hdfs Audit Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Hdfs Audit Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_ozone\_plugin\_hdfs\_audit\_directory

**Required**

true

**Suppress Configuration Validator: S3 Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the S3 Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_s3\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Storage Container Manager Count Validator****Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_storage\_container\_manager\_count\_validator

**Required**

true

**Suppress Health Test: Ozone DataNode Health****Description**

Whether to suppress the results of the Ozone DataNode Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ozone\_ozone\_datanode\_healthy

**Required**

true

**Suppress Health Test: Ozone Manager Health****Description**

Whether to suppress the results of the Ozone Manager Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ozone\_ozone\_manager\_healthy

**Required**

true

**Suppress Health Test: Storage Container Manager Health****Description**

Whether to suppress the results of the Storage Container Manager Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ozone\_storage\_container\_manager\_healthy

**Required**

true

## Storage Container Manager

### Advanced

#### Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

#### Dump Heap When Out of Memory

**Description**

When set, generates a heap dump file when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/hadoop-policy.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/hadoop-policy.xml\_role\_safety\_valve

**Required**

false

**Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

false

**Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties****Description**

For advanced use only. A string to be inserted into ozone-conf/scm-audit-log4j2.properties for this role only.

**Related Name****Default Value****API Name**

ozone-conf/scm-audit-log4j2.properties\_role\_safety\_valve

**Required**

false

**Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

false

**Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

**Related Name****Default Value****API Name**

ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true
------

### Role Specific System Group

#### Description

The group that this role's processes should run as.

#### Related Name

#### Default Value

hdfs

#### API Name

process\_groupname

#### Required

true

### Enable Metric Collection

#### Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

#### Related Name

#### Default Value

true

#### API Name

process\_should\_monitor

#### Required

true

### Process Start Retry Attempts

#### Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

#### Related Name

#### Default Value

3

#### API Name

process\_start\_retries

#### Required

false

### Process Start Wait Timeout

#### Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

#### Related Name

**Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Role Specific System User****Description**

The user that this role's processes should run as.

**Related Name****Default Value**

hdfs

**API Name**

process\_username

**Required**

true

**Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

STORAGE\_CONTAINER\_MANAGER\_role\_env\_safety\_valve

**Required**

false

**Logs****Storage Container Manager Log Directory****Description**

The log directory for log files of the role Storage Container Manager.

**Related Name**

log.dir

**Default Value**

/var/log/hadoop-ozone

**API Name**

log\_dir

**Required**

false

**Storage Container Manager Logging Threshold**

<b>Description</b>	The minimum log level for Storage Container Manager logs
<b>Related Name</b>	
<b>Default Value</b>	INFO
<b>API Name</b>	log_threshold
<b>Required</b>	false

**Storage Container Manager Maximum Log File Backups**

<b>Description</b>	The maximum number of rolled log files to keep for Storage Container Manager logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	10
<b>API Name</b>	max_log_backup_index
<b>Required</b>	false

**Storage Container Manager Max Log Size**

<b>Description</b>	The maximum size, in megabytes, per log file for Storage Container Manager logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	200 MiB
<b>API Name</b>	max_log_size
<b>Required</b>	false

**Monitoring**

**Enable Health Alerts for this Role**

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

`process_swap_memory_rate_thresholds`

**Required**

`false`

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

`common.process.swap_memory_rate_window`

**Default Value**

5 minute(s)

**API Name**

`process_swap_memory_rate_window`

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

storage\_container\_manager\_fd\_thresholds

**Required**

false

### Storage Container Manager Host Health Test

**Description**

When computing the overall Storage Container Manager health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

storage\_container\_manager\_host\_health\_enabled

**Required**

false

### Storage Container Manager Process Health Test

**Description**

Enables the health test that the Storage Container Manager's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

storage\_container\_manager\_scm\_health\_enabled

**Required**

false

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### Other

### Balancing Interval

**Description**

The interval period between each iteration of Container Balancer. Units Supported: d, h, m, s, ms.

**Related Name**

hdds.container.balancer.balancing.iteration.interval

**Default Value**

70m

**API Name**

hdds.container.balancer.balancing.iteration.interval

**Required**

false

### Maximum Percentage of Datanodes Involved in Balancing

**Description**

Maximum percentage of healthy, in-service datanodes that can be involved in balancing in one iteration (for example, '20' for 20%).

**Related Name**

hdds.container.balancer.datanodes.involved.max.percentage.per.iteration

**Default Value**

20

**API Name**

hdds.container.balancer.datanodes.involved.max.percentage.per.iteration

**Required**

false

### Exclude Containers from Balancing

**Description**

Containers to exclude from balancing. Specified as a string of Container IDs (for example, '1, 2, 3').

**Related Name**

hdds.container.balancer.exclude.containers

**Default Value****API Name**

hdds.container.balancer.exclude.containers
<b>Required</b>
false

Exclude Datanodes

<b>Description</b>
A comma separated string of Datanode hostnames or IP addresses that will be excluded from balancing.
<b>Related Name</b>
hdds.container.balancer.exclude.datanodes
<b>Default Value</b>
<b>API Name</b>
hdds.container.balancer.exclude.datanodes
<b>Required</b>
false

Include Datanodes

<b>Description</b>
A comma separated string of Datanode hostnames or IP addresses that will be the only participants in balancing.
<b>Related Name</b>
hdds.container.balancer.include.datanodes
<b>Default Value</b>
<b>API Name</b>
hdds.container.balancer.include.datanodes
<b>Required</b>
false

Number of Balancing Iterations

<b>Description</b>
Number of iterations that Container Balancer will run for.
<b>Related Name</b>
hdds.container.balancer.iterations
<b>Default Value</b>
10
<b>API Name</b>
hdds.container.balancer.iterations
<b>Required</b>
false

Container Move Timeout

<b>Description</b>
The amount of time to allow a single container to move from source to target. Units Supported: d, h, m, s, ms.
<b>Related Name</b>

	hdds.container.balancer.move.timeout
Default Value	30m
API Name	hdds.container.balancer.move.timeout
Required	false

Maximum Size Entering Target

Description	The maximum size that can enter a target datanode in each iteration while balancing. This is the sum of data from multiple sources. Units supported: eb, pb, tb, gb, mb, kb, b.
Related Name	hdds.container.balancer.size.entering.target.max
Default Value	26gb
API Name	hdds.container.balancer.size.entering.target.max
Required	false

Maximum Size Leaving Source

Description	The maximum size that can leave a source datanode in each iteration while balancing. This is the sum of data moving to multiple targets. Units supported: eb, pb, tb, gb, mb, kb, b.
Related Name	hdds.container.balancer.size.leaving.source.max
Default Value	26gb
API Name	hdds.container.balancer.size.leaving.source.max
Required	false

Maximum Size to Move in Balancing

Description	The maximum size of data that will be moved by Container Balancer in one iteration. Units supported: eb, pb, tb, gb, mb, kb, b.
Related Name	hdds.container.balancer.size.moved.max.per.iteration
Default Value	500gb
API Name	hdds.container.balancer.size.moved.max.per.iteration
Required	

false

Balancing Threshold

Description

The percentage deviation from average utilization, after which a node will be rebalanced (for example, '10' for 10%).

Related Name

hdds.container.balancer.utilization.threshold

Default Value

10.0

API Name

hdds.container.balancer.utilization.threshold

Required

false

Datanode Container Protocol ACL

Description

ACLs that define which users can access the Datanode Container Protocol in SCM. It is a comma separated list of Kerberos Principals.

Related Name

hdds.security.client.datanode.container.protocol.acl

Default Value

OZONE\_SERVICE\_PRINCIPALS

API Name

hdds.security.client.datanode.container.protocol.acl

Required

false

SCM Client Certificate Protocol ACL

Description

ACLs that define which users can access the SCM Certificate Protocol. It is a comma separated list of Kerberos Principals.

Related Name

hdds.security.client.scm.certificate.protocol.acl

Default Value

OZONE\_ADMINS, OZONE\_SERVICE\_PRINCIPALS

API Name

hdds.security.client.scm.certificate.protocol.acl

Required

false

Topology Script File Name

Description

Full path to a custom topology script on the host file system. The topology script is used to determine the rack location of nodes. If left with "{ {DEFAULT\_TOPOLOGY\_SCRIPT} }", a topology script will be provided that uses your hosts' rack information, visible in the "Hosts" page.

**Related Name**`net.topology.script.file.name`**Default Value**`DEFAULT_TOPOLOGY_SCRIPT`**API Name**`net.topology.script.file.name`**Required**`false`**HSTS Header for Ozone SCM UI****Description**

HSTS Header (Strict-Transport-Security) value to use

**Related Name**`ozone.http.header.Strict-Transport-Security`**Default Value**`max-age=63072000; includeSubDomains;`**API Name**`ozone.http.header.Strict-Transport-Security`**Required**`false`**Ozone Log Directory****Description**

Directory where Storage Container Manager logs will be written to

**Related Name**`ozone.log.dir`**Default Value**`/var/log/hadoop-ozone`**API Name**`ozone.log.dir`**Required**`false`**Storage Container Manager Metadata Directory****Description**

Determines where on the local filesystem SCM security certificates will be stored.

**Related Name**`ozone.metadata.dirs`**Default Value**`/var/lib/hadoop-ozone/scm/ozone-metadata`**API Name**`ozone.metadata.dirs`**Required**`true`

### Storage Container Manager Data Directory

**Description**

Directory where the StorageContainerManager stores its metadata

**Related Name**

ozone.scm.db.dirs

**Default Value**

/var/lib/hadoop-ozone/scm/data

**API Name**

ozone.scm.db.dirs

**Required**

true

### Storage Container Manager Ratis Storage Directory

**Description**

Storage directory used by SCM to write Ratis logs.

**Related Name**

ozone.scm.ha.ratis.storage.dir

**Default Value**

/var/lib/hadoop-ozone/scm/ratis

**API Name**

ozone.scm.ha.ratis.storage.dir

**Required**

true

### Storage Container Manager HTTP Bind Hostname

**Description**

The actual address the SCM web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.scm.http-address'.

**Related Name**

ozone.scm.http-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.scm.http-bind-host

**Required**

false

### Secure Storage Container Manager HTTPS Bind Hostname

**Description**

The actual address the SCM web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.scm.https-address'.

**Related Name**

ozone.scm.https-bind-host

**Default Value**

0.0.0.0

**API Name**

ozone.scm.https-bind-host

**Required**

false

**Ozone Storage Container Manager Safemode Canary Enabled****Description**

Determines if the Ozone Storage Container Manager Safemode checker canary is enabled.

**Related Name**

ozone\_scm\_safemode\_canary\_enabled

**Default Value**

true

**API Name**

ozone\_scm\_safemode\_canary\_enabled

**Required**

false

**Ozone Storage Container Manager Safemode Canary Timeout****Description**

Ozone Storage Container Manager Safemode Canary's timeout

**Related Name**

ozone\_scm\_safemode\_canary\_timeout

**Default Value**

30 second(s)

**API Name**

ozone\_scm\_safemode\_canary\_timeout

**Required**

false

**Ozone Storage Container Manager Upgrade Need Finalization Canary Enabled****Description**

Determines if the Ozone Storage Container Manager Upgrade Need Finalization Canary is enabled.

**Related Name**

ozone\_scm\_upgrade\_need\_finalization\_canary\_enabled

**Default Value**

true

**API Name**

ozone\_scm\_upgrade\_need\_finalization\_canary\_enabled

**Required**

false

**Ozone Storage Container Manager Upgrade Need Finalization Canary Timeout****Description**

Sets Ozone Storage Container Manager Upgrade Need Finalization Canary's timeout.

**Related Name**

	ozone_scm_upgrade_need_finalization_canary_timeout
Default Value	30 second(s)
API Name	ozone_scm_upgrade_need_finalization_canary_timeout
Required	false

Java Heap Size of Storage Container Manager

Description	Maximum size for the Java process heap memory.
Related Name	scm_max_heap_size
Default Value	4 GiB
API Name	scm_max_heap_size
Required	false

Performance

Maximum Process File Descriptors

Description	If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
Related Name	
Default Value	
API Name	rlimit_fds
Required	false

Ports and Addresses

Storage Container Manager Block Client port

Description	The port number of the Ozone SCM block client service.
Related Name	ozone.scm.block.client.port
Default Value	9863
API Name	ozone.scm.block.client.port
Required	

false

**Storage Container Manager Client port**

**Description**

The port number of the Ozone SCM block client service.

**Related Name**

ozone.scm.client.port

**Default Value**

9860

**API Name**

ozone.scm.client.port

**Required**

false

**Storage Container Manager Datanode port**

**Description**

The port number of the Ozone SCM service.

**Related Name**

ozone.scm.datanode.port

**Default Value**

9861

**API Name**

ozone.scm.datanode.port

**Required**

false

**Storage Container Manager GRPC port**

**Description**

Port used by SCM for Grpc Server.

**Related Name**

ozone.scm.grpc.port

**Default Value**

9895

**API Name**

ozone.scm.grpc.port

**Required**

false

**Storage Container Manager HTTP Web UI Port**

**Description**

The base port that the Storage Container Manager web user interface listens on. The host name of the Storage Container Manager is combined with this port to form the 'ozone.scm.http-address'.

**Related Name**

ozone.scm.http-port

**Default Value**

9876

**API Name**

ozone.scm.http-port

**Required**

true

**Secure Storage Container Manager Web UI Port (TLS/SSL)****Description**

The base port that the Storage Container Manager web user interface listens on when using HTTPS. The host name of the Storage Container Manager is combined with this port to form the 'ozone.scm.https-address'.

**Related Name**

ozone.scm.https-port

**Default Value**

9877

**API Name**

ozone.scm.https-port

**Required**

false

**Storage Container Manager Ratis port****Description**

The base port that SCM's Ratis Server listens on if multiple SCM's are configured.

**Related Name**

ozone.scm.ratis.port

**Default Value**

9894

**API Name**

ozone.scm.ratis.port

**Required**

false

**Storage Container Manager Security Service port****Description**

SCM security server port.

**Related Name**

ozone.scm.security.service.port

**Default Value**

9961

**API Name**

ozone.scm.security.service.port

**Required**

false

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

#### Role-Specific Kerberos Principal

**Description**

Kerberos principal used by the Storage Container Manager roles.

**Related Name****Default Value**

scm

**API Name**

kerberos\_role\_princ\_name

**Required**

true

### Storage Container Manager TLS/SSL Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Storage Container Manager might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ssl.client.truststore.location

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

### Storage Container Manager TLS/SSL Trust Store Password

**Description**

The password for the Storage Container Manager TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ssl.client.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

### Enable TLS/SSL for Storage Container Manager

**Description**

Encrypt communication between clients and Storage Container Manager using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ozone.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

### Storage Container Manager TLS/SSL Server Keystore Key Password

**Description**

The password that protects the private key contained in the keystore used when Storage Container Manager is acting as a TLS/SSL server.

**Related Name**

ssl.server.keystore.keypassword
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_keypassword
<b>Required</b>
false

Storage Container Manager TLS/SSL Server Keystore File Location

<b>Description</b>
The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Storage Container Manager is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.
<b>Related Name</b>
ssl.server.keystore.location
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_location
<b>Required</b>
false

Storage Container Manager TLS/SSL Server Keystore File Password

<b>Description</b>
The password for the Storage Container Manager keystore file.
<b>Related Name</b>
ssl.server.keystore.password
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_password
<b>Required</b>
false

Stacks Collection

Stacks Collection Data Retention

<b>Description</b>
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>
stacks_collection_data_retention
<b>Default Value</b>
100 MiB
<b>API Name</b>
stacks_collection_data_retention
<b>Required</b>
false

### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

### Stacks Collection Frequency

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Balancing Interval****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Balancing Interval parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.balancing.iteration.interval

**Required**

true

**Suppress Parameter Validation: Exclude Containers from Balancing****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Containers from Balancing parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.exclude.containers

**Required**

true

**Suppress Parameter Validation: Exclude Datanodes****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Datanodes parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.exclude.datanodes

**Required**

true

**Suppress Parameter Validation: Include Datanodes****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Include Datanodes parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.include.datanodes

**Required**

true

**Suppress Parameter Validation: Container Move Timeout****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Move Timeout parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.move.timeout

**Required**

true

**Suppress Parameter Validation: Maximum Size Entering Target****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Size Entering Target parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.size.entering.target.max

**Required**

true

**Suppress Parameter Validation: Maximum Size Leaving Source****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Size Leaving Source parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.size.leaving.source.max

**Required**

true

**Suppress Parameter Validation: Maximum Size to Move in Balancing****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Size to Move in Balancing parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.container.balancer.size.moved.max.per.iteration

**Required**

true

**Suppress Parameter Validation: Datanode Container Protocol ACL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Container Protocol ACL parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hdds.security.client.datanode.container.protocol.acl

**Required**

true

**Suppress Parameter Validation: SCM Client Certificate Protocol ACL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SCM Client Certificate Protocol ACL parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_hdds.security.client.scm.certificate.protocol.acl

**Required**

true

**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kerberos\_role\_princ\_name

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Topology Script File Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Topology Script File Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_net.topology.script.file.name

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/hadoop-policy.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ozone-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/scm-audit-log4j2.properties\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-client.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone-conf/ssl-server.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: HSTS Header for Ozone SCM UI****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HSTS Header for Ozone SCM UI parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.http.header.strict-transport-security

**Required**

true

**Suppress Parameter Validation: Ozone Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.log.dir

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Metadata Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Metadata Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.metadata.dirs

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Block Client port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Block Client port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.block.client.port

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Client port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Client port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.client.port

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Datanode port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Datanode port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.datanode.port

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.db.dirs

**Required**

true

**Suppress Parameter Validation: Storage Container Manager GRPC port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager GRPC port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.grpc.port

**Required**

true

**Suppress Parameter Validation: Storage Container Manager Ratis Storage Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Ratis Storage Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.ha.ratis.storage.dir

**Required**

true

**Suppress Parameter Validation: Storage Container Manager HTTP Bind Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager HTTP Bind Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.http-bind-host

**Required**

true

**Suppress Parameter Validation: Storage Container Manager HTTP Web UI Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager HTTP Web UI Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ozone.scm.http-port

**Required**

true

### Suppress Parameter Validation: Secure Storage Container Manager HTTPS Bind Hostname

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Storage Container Manager HTTPS Bind Hostname parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ozone.scm.https-bind-host

#### Required

true

### Suppress Parameter Validation: Secure Storage Container Manager Web UI Port (TLS/SSL)

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Storage Container Manager Web UI Port (TLS/SSL) parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ozone.scm.https-port

#### Required

true

### Suppress Parameter Validation: Storage Container Manager Ratis port

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Ratis port parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ozone.scm.ratis.port

#### Required

true

### Suppress Parameter Validation: Storage Container Manager Security Service port

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Security Service port parameter.

#### Related Name

#### Default Value

false

**API Name**

role\_config\_suppression\_ozone.scm.security.service.port

**Required**

true

**Suppress Parameter Validation: Role Specific System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: Role Specific System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Java Heap Size of Storage Container Manager****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Storage Container Manager parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_scm\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Storage Container Manager TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Storage Container Manager TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Storage Container Manager TLS/SSL Server Keystore Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Server Keystore Key Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_keypassword

**Required**

true

**Suppress Parameter Validation: Storage Container Manager TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Storage Container Manager TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Parameter Validation: Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_storage_container_manager_role_env_safety_valve`**Required**`true`**Suppress Health Test: Ozone SCM Safemode Canary****Description**

Whether to suppress the results of the Ozone SCM Safemode Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_ozone_scm_safemode_canary`**Required**`true`**Suppress Health Test: Ozone SCM Upgrade Need Finalization Canary****Description**

Whether to suppress the results of the Ozone SCM Upgrade Need Finalization Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**`false`**API Name**`role_health_suppression_ozone_scm_upgrade_need_finalization_canary`**Required**`true`

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_storage\_container\_manager\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_storage\_container\_manager\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_storage\_container\_manager\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ozonestorage\_container\_manager\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozonestorage\_container\_manager\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozonestorage\_container\_manager\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozonestorage\_container\_manager\_swap\_memory\_usage\_rate

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ozone\_storage\_container\_manager\_unexpected\_exits

**Required**

true

## Phoenix Properties in Cloudera Runtime 7.2.16

Role groups:

### Query Server

#### Advanced

#### Query Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml****Description**

For advanced use only. A string to be inserted into phoenix-site.xml for this role only.

**Related Name****Default Value****API Name**

phoenix-site.xml\_role\_safety\_valve

**Required**

false

**Query Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

PHOENIX\_QUERY\_SERVER\_role\_env\_safety\_valve

**Required**

false

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

<b>Related Name</b>	
<b>Default Value</b>	3
<b>API Name</b>	process_start_retries
<b>Required</b>	false

Process Start Wait Timeout

<b>Description</b>	The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.
<b>Related Name</b>	
<b>Default Value</b>	20
<b>API Name</b>	process_start_secs
<b>Required</b>	false

Logs

Query Server Log Directory

<b>Description</b>	The log directory for log files of the role Query Server.
<b>Related Name</b>	log_dir
<b>Default Value</b>	/var/log/phoenix
<b>API Name</b>	log_dir
<b>Required</b>	false

Query Server Logging Threshold

<b>Description</b>	The minimum log level for Query Server logs
<b>Related Name</b>	
<b>Default Value</b>	INFO
<b>API Name</b>	log_threshold
<b>Required</b>	

false

Query Server Maximum Log File Backups

Description	The maximum number of rolled log files to keep for Query Server logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

Query Server Max Log Size

Description	The maximum size, in megabytes, per log file for Query Server logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	max_log_size
Required	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

phoenix\_query\_server\_fd\_thresholds

**Required**

false

**Query Server Host Health Test****Description**

When computing the overall Query Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

phoenix\_query\_server\_host\_health\_enabled

**Required**

false

**Query Server Process Health Test****Description**

Enables the health test that the Query Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

phoenix\_query\_server\_scm\_health\_enabled

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

Other

Enable Remote User Extractor

Description	Boolean which controls if a remote user to impersonate should be extracted from the HTTP request parameter made by that user instead of the HTTP-authenticated user name (which is the default). Required for accessing Phoenix Query Server via Knox.
Related Name	phoenix.queryserver.withRemoteUserExtractor
Default Value	true
API Name	phoenix_query_server_with_remote_user_extractor
Required	false

Additional Phoenix Query Server Options

Description	These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.
Related Name	phoenix_queryserver_java_opts
Default Value	
API Name	phoenix_queryserver_java_opts
Required	false

Phoenix Query Server Max Heapsize

Description	Maximum size for the Phoenix Query Server Java Process heap. Passed to Java -Xmx.
Related Name	phoenix_queryserver_max_heap_size
Default Value	2 GiB
API Name	phoenix_queryserver_max_heap_size
Required	true

Performance

Maximum Process File Descriptors

Description	If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
-------------	--

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Phoenix Query Server Port****Description**

The port Phoenix Query Server will listen on

**Related Name**

phoenix.queryserver.http.port

**Default Value**

8765

**API Name**

phoenix\_query\_server\_port

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Query Server TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Query Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

phoenix.queryserver.tls.truststore

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Query Server TLS/SSL Trust Store Password****Description**

The password for the Query Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

phoenix.queryserver.tls.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Query Server****Description**

Encrypt communication between clients and Query Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

phoenix.queryserver.tls.enabled

**Default Value**

false

**API Name**

ssl\_enabled

<b>Required</b>
false

**Query Server TLS/SSL Server Keystore File Location**

<b>Description</b>
The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Query Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.
<b>Related Name</b>
phoenix.queryserver.tls.keystore
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_location
<b>Required</b>
false

**Query Server TLS/SSL Server Keystore File Password**

<b>Description</b>
The password for the Query Server keystore file.
<b>Related Name</b>
phoenix.queryserver.tls.keystore.password
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_password
<b>Required</b>
false

**Stacks Collection**

**Stacks Collection Data Retention**

<b>Description</b>
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>
stacks_collection_data_retention
<b>Default Value</b>
100 MiB
<b>API Name</b>
stacks_collection_data_retention
<b>Required</b>
false

**Stacks Collection Directory**

<b>Description</b>
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user

with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

**Related Name**

stacks\_collection\_directory

**Default Value**

**API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled**

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency**

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method**

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Query Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Query Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Phoenix Query Server Port

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Phoenix Query Server Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_query\_server\_port

**Required**

true

### Suppress Parameter Validation: Query Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_query\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Additional Phoenix Query Server Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Phoenix Query Server Options parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_queryserver\_java\_opts

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Query Server TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Query Server TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Query Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Query Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Query Server TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_phoenix\_phoenix\_query\_server\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

	Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	false
API Name	role_health_suppression_phoenix_phoenix_query_server_swap_memory_usage_rate
Required	true

Suppress Health Test: Unexpected Exits

Description	Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	false
API Name	role_health_suppression_phoenix_phoenix_query_server_unexpected_exits
Required	true

Service-Wide

Advanced

Phoenix Service Environment Advanced Configuration Snippet (Safety Valve)

Description	For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.
Related Name	
Default Value	
API Name	PHOENIX_service_env_safety_valve
Required	false

System Group

Description	The group that this service's processes should run as.
Related Name	
Default Value	phoenix

<b>API Name</b>	process_groupname
<b>Required</b>	true

System User

<b>Description</b>	The user that this service's processes should run as.
<b>Related Name</b>	
<b>Default Value</b>	phoenix
<b>API Name</b>	process_username
<b>Required</b>	true

Monitoring

Enable Service Level Health Alerts

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	enable_alerts
<b>Required</b>	false

Enable Configuration Change Alerts

<b>Description</b>	When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	enable_config_alerts
<b>Required</b>	false

Healthy Query Server Monitoring Thresholds

<b>Description</b>	The health test thresholds of the overall Query Server health. The check returns "Concerning" health if the percentage of "Healthy" Query Servers falls below the warning threshold. The check
--------------------	--

is unhealthy if the total percentage of "Healthy" and "Concerning" Query Servers falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 90.0 %

**API Name**

PHOENIX\_PHOENIX\_QUERY\_SERVER\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon_derived_configs_safety_valve
<b>Required</b>
false

Other

HBase Service

<b>Description</b>
Name of the HBase service that this Phoenix service instance depends on
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
hbase_service
<b>Required</b>
true

HDFS Service

<b>Description</b>
Name of the HDFS service that this Phoenix service instance depends on
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
hdfs_service
<b>Required</b>
true

ZooKeeper Service

<b>Description</b>
Name of the ZooKeeper service that this Phoenix service instance depends on
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
zookeeper_service
<b>Required</b>
true

Security

Kerberos Principal

<b>Description</b>
Kerberos principal short name used by all roles of this service.
<b>Related Name</b>
<b>Default Value</b>
phoenix

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Query Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Query Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Query Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Query Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Configuration Validator: Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml

**Description**

Whether to suppress configuration warnings produced by the Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Phoenix Query Server Port

**Description**

Whether to suppress configuration warnings produced by the Phoenix Query Server Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_query\_server\_port

**Required**

true

### Suppress Configuration Validator: Query Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Query Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_query\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Additional Phoenix Query Server Options****Description**

Whether to suppress configuration warnings produced by the Additional Phoenix Query Server Options configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_phoenix\_queryserver\_java\_opts

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Query Server TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Query Server TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Query Server TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Query Server TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Query Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Query Server TLS/SSL Server Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Query Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Query Server TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Configuration Validator: Phoenix HBase Dependency Write-Ahead Log (WAL) Codec Class Validator****Description**

Whether to suppress configuration warnings produced by the Phoenix HBase Dependency Write-Ahead Log (WAL) Codec Class Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_phoenix\_hbase\_regionserver\_wal\_codec\_validator

**Required**

true

**Suppress Configuration Validator: Query Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Query Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_phoenix\_query\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: Phoenix Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Phoenix Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_phoenix\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Health Test: Query Server Health****Description**

Whether to suppress the results of the Query Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_phoenix\_phoenix\_query\_server\_healthy

**Required**

true

## Ranger Properties in Cloudera Runtime 7.2.16

Role groups:

### Ranger Admin

**Advanced****Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-admin-site.xml for this role only.

**Related Name**

**Default Value****API Name**`conf/ranger-admin-site.xml_role_safety_valve`**Required**`false`**Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into `log4j.properties` for this role only.

**Related Name****Default Value****API Name**`log4j_safety_valve`**Required**`false`**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**`false`**API Name**`metric_config_auto_refresh`**Required**`false`**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**`oom_heap_dump_dir`**Default Value**`/tmp`**API Name**`oom_heap_dump_dir`**Required**`false`

### Dump Heap When Out of Memory

**Description**

When set, generates a heap dump file when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

RANGER\_ADMIN\_role\_env\_safety\_valve

**Required**

false

**Logs****Ranger Admin Log Directory****Description**

The log directory for log files of the role Ranger Admin.

**Related Name**

ranger.logs.base.dir

**Default Value**

/var/log/ranger/admin

**API Name**

log\_dir

**Required**

false

**Ranger Admin Logging Threshold****Description**

The minimum log level for Ranger Admin logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Ranger Admin Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Ranger Admin logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Ranger Admin Max Log Size****Description**

The maximum size, in megabytes, per log file for Ranger Admin logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

Log Directory Free Space Monitoring Absolute Thresholds

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
Related Name	
Default Value	Warning: 10 GiB, Critical: 5 GiB
API Name	log_directory_free_space_absolute_thresholds
Required	false

Log Directory Free Space Monitoring Percentage Thresholds

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.
Related Name	
Default Value	Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

### Swap Memory Usage Rate Window

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ranger\_admin\_fd\_thresholds

**Required**

false

### Ranger Admin Host Health Test

**Description**

When computing the overall Ranger Admin health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ranger\_admin\_host\_health\_enabled

**Required**

false

**Ranger Admin Process Health Test****Description**

Enables the health test that the Ranger Admin's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ranger\_admin\_scm\_health\_enabled

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

`unexpected_exits_thresholds`

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

`unexpected_exits_window`

**Required**

false

### Other

### Ranger Admin Diagnostics Collection Timeout

**Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name****Default Value**

5 minute(s)

**API Name**

`csd_role_diagnostics_timeout`

**Required**

false

### Graceful Shutdown Timeout

**Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

**Related Name****Default Value**

18 second(s)

**API Name**

`graceful_stop_timeout`

**Required**

false

### Exclude Users from Audit Access Tab

**Description**

A single user, or a comma-separated list of multiple users that are excluded from Ranger audits when the Exclude Service Users checkbox is selected on the Ranger Audit Access tab in the Ranger Admin Web UI.

**Related Name**

ranger.accesslogs.exclude.users.list

**Default Value**

rangertagsync

**API Name**

ranger.accesslogs.exclude.users.list

**Required**

false

### Kerberos Cookie Path

**Description**

Kerberos Cookie path

**Related Name**

ranger.admin.kerberos.cookie.path

**Default Value**

/

**API Name**

ranger.admin.kerberos.cookie.path

**Required**

false

### Kerberos Token Valid Seconds

**Description**

Kerberos token validity

**Related Name**

ranger.admin.kerberos.token.valid.seconds

**Default Value**

30

**API Name**

ranger.admin.kerberos.token.valid.seconds

**Required**

false

### Maximum Shards for Solr Collection of Ranger Audits

**Description**

Maximum number of shards for the Ranger Audit Solr collection. The recommended value is, number of replica given multiple by number of shards given for the collection.

**Related Name**

ranger.audit.solr.max.shards.per.node

**Default Value**

1

**API Name**

ranger.audit.solr.max.shards.per.node

**Required**

true

**Replicas for Solr Collection of Ranger Audits****Description**

Number of replicas for Ranger Audit Solr collection. The recommended value is, number of Solr servers running in the current cluster divided by number of shards for the collection.

**Related Name**

ranger.audit.solr.no.replica

**Default Value**

1

**API Name**

ranger.audit.solr.no.replica

**Required**

true

**Shards for Solr Collection of Ranger Audits****Description**

Number of shards required for Ranger Audit Solr collection. The recommended number of shards is equal or less than the number of Solr Server running in the current cluster.

**Related Name**

ranger.audit.solr.no.shards

**Default Value**

1

**API Name**

ranger.audit.solr.no.shards

**Required**

true

**Enable Knox Trusted Proxy Support****Description**

Determine if the Ranger service should allow authentication using Knox trusted proxy.

**Related Name**

ranger.authentication.allow.trustedproxy

**Default Value**

true

**API Name**

ranger.authentication.allow.trustedproxy

**Required**

false

### Default Policy Groups

**Description**

Single or comma separated list of groups that are required in default policies for Ranger plugin services. The groups will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

**Related Name**

ranger.default.policy.groups

**Default Value****API Name**

ranger.default.policy.groups

**Required**

false

### Default Policy Users

**Description**

Single or comma separated list of users that are required in default policies for Ranger plugin services. The users will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

**Related Name**

ranger.default.policy.users

**Default Value****API Name**

ranger.default.policy.users

**Required**

false

### Admin AD Auth Base DN

**Description**

This parameter is only used if Authentication method is AD. The Distinguished Name (DN) of the starting point for directory server searches.

**Related Name**

ranger.ldap.ad.base.dn

**Default Value****API Name**

ranger.ldap.ad.base.dn

**Required**

false

### Admin AD Auth Bind DN

**Description**

Full distinguished name (DN), including common name (CN), of an AD user account that has privileges to search for users. Only used if Authentication method is AD

**Related Name**

ranger.ldap.ad.bind.dn

**Default Value**

**API Name**

ranger.ldap.ad.bind.dn

**Required**

false

**Admin AD Auth Domain Name****Description**

AD domain. Only used if Authentication method is AD.

**Related Name**

ranger.ldap.ad.domain

**Default Value****API Name**

ranger.ldap.ad.domain

**Required**

false

**Admin AD Auth Referral****Description**

This parameter is only used if Authentication method is AD. Set to follow if multiple AD servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed.

**Related Name**

ranger.ldap.ad.referral

**Default Value**

ignore

**API Name**

ranger.ldap.ad.referral

**Required**

false

**Admin AD Auth URL****Description**

AD URL. Only used if Authentication method is AD

**Related Name**

ranger.ldap.ad.url

**Default Value****API Name**

ranger.ldap.ad.url

**Required**

false

**Admin AD Auth User Search Filter****Description**

AD user search filter. Only used if Authentication method is AD.

**Related Name**

ranger.ldap.ad.user.searchfilter

**Default Value****API Name**

ranger.ldap.ad.user.searchfilter

**Required**

false

**Admin LDAP Auth Base DN****Description**

The Distinguished Name (DN) of the starting point for directory server searches. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.base.dn

**Default Value****API Name**

ranger.ldap.base.dn

**Required**

false

**Admin LDAP Auth Bind User****Description**

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search for users. This user is used for searching the users. This could be read-only LDAP user. Example: cn=admin,dc=example,dc=com

**Related Name**

ranger.ldap.bind.dn

**Default Value****API Name**

ranger.ldap.bind.dn

**Required**

false

**Admin LDAP Auth Group Role Attribute****Description**

LDAP group role attribute. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.group.roleattribute

**Default Value****API Name**

ranger.ldap.group.roleattribute

**Required**

false

### Admin LDAP Auth Group Search Base

**Description**

LDAP group searchbase. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.group.searchbase

**Default Value****API Name**

ranger.ldap.group.searchbase

**Required**

false

### Admin LDAP Auth Group Search Filter

**Description**

LDAP group search filter. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.group.searchfilter

**Default Value****API Name**

ranger.ldap.group.searchfilter

**Required**

false

### Admin LDAP Auth Referral

**Description**

This parameter is only used if Authentication method is LDAP. Set to follow if multiple LDAP servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

**Related Name**

ranger.ldap.referral

**Default Value**

ignore

**API Name**

ranger.ldap.referral

**Required**

false

### Admin LDAP Auth URL

**Description**

LDAP server URL. Example: value = ldap://localhost:389 or ldaps://localhost:636

**Related Name**

ranger.ldap.url

**Default Value****API Name**

ranger.ldap.url

**Required**

false

**Admin LDAP Auth User DN Pattern****Description**

LDAP user DN. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.user.dnpattern

**Default Value****API Name**

ranger.ldap.user.dnpattern

**Required**

false

**Admin LDAP Auth User Search Filter****Description**

LDAP user search filter. Only used if Authentication method is LDAP.

**Related Name**

ranger.ldap.user.searchfilter

**Default Value****API Name**

ranger.ldap.user.searchfilter

**Required**

false

**SSO Browser Useragent****Description**

Comma seperated values of browser agent

**Related Name**

ranger.sso.browser.useragent

**Default Value**

Mozilla, chrome

**API Name**

ranger.sso.browser.useragent

**Required**

false

**Enable Ranger SSO****Description**

Determine if Ranger is Knox SSO enabled or not ?

**Related Name**

ranger.sso.enabled

**Default Value**

	false
API Name	
	ranger.sso.enabled
Required	
	false

SSO Provider Url

Description	SSO provider url Example: https://KNOX_HOST:KNOX_PORT/gateway/KNOXSSO_TOPOLOGY_NAME/api/v1/websso
Related Name	
	ranger.sso.providerurl
Default Value	
API Name	
	ranger.sso.providerurl
Required	
	false

SSO Public Key

Description	Public key for SSO cookie verification
Related Name	
	ranger.sso.publicKey
Default Value	
API Name	
	ranger.sso.publicKey
Required	
	false

Enable Auto Create Tag Service

Description	Whether to create tag service in Ranger Admin.
Related Name	
	ranger.tagservice.auto.create
Default Value	
	true
API Name	
	ranger.tagservice.auto.create
Required	
	false

Enable Tag Service Auto Link

Description	Whether to link the Tag service set in "Tag Service Name" parameter to all available services in Ranger Admin.
-------------	--

**Related Name**`ranger.tagservice.auto.link`**Default Value**`true`**API Name**`ranger.tagservice.auto.link`**Required**`false`**Tag Service Name****Description**

Name of the tag service that will be created in Ranger Admin when "Enable Auto Create Tag Service" parameter is enabled.

**Related Name**`ranger.tagservice.auto.name`**Default Value**`cm_tag`**API Name**`ranger.tagservice.auto.name`**Required**`false`**Admin UNIX Auth Remote Login****Description**

Whether remote login is enabled. Only used if Authentication method is UNIX.

**Related Name**`ranger.unixauth.remote.login.enabled`**Default Value**`true`**API Name**`ranger.unixauth.remote.login.enabled`**Required**`false`**Admin UNIX Auth Service Hostname****Description**

Host where unix authentication service is running. Only used if Authentication method is UNIX. {{RANGER\_USERSYNC\_HOST}} is a placeholder value which will be replaced with the host where Ranger Usersync will be installed in the current cluster.

**Related Name**`ranger.unixauth.service.hostname`**Default Value**`RANGER_USERSYNC_HOST`**API Name**`ranger.unixauth.service.hostname`

**Required**

false

**Ranger Admin Canary Health Enabled****Description**

Ranger Admin Canary is enabled/disabled

**Related Name**

ranger\_admin\_canary\_health\_enabled

**Default Value**

true

**API Name**

ranger\_admin\_canary\_health\_enabled

**Required**

false

**Ranger Admin Canary Health Timeout****Description**

Timeout for Ranger Admin Canary health check

**Related Name**

ranger\_admin\_canary\_health\_timeout

**Default Value**

30 second(s)

**API Name**

ranger\_admin\_canary\_health\_timeout

**Required**

false

**Ranger Admin Conf Path****Description**

Staging directory for Ranger Admin Configuration. This should generally not be changed.

**Related Name**

ranger\_admin\_conf\_path

**Default Value**

/etc/ranger/admin

**API Name**

ranger\_admin\_conf\_path

**Required**

true

**Ranger Admin Max Heapsize****Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

**Related Name**

ranger\_admin\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

ranger\_admin\_max\_heap\_size

**Required**

true

**Admin Authentication Method****Description**

Authentication Method for login to Ranger Admin.

**Related Name**

ranger.authentication.method

**Default Value**

PAM

**API Name**

ranger\_authentication\_method

**Required**

false

**Ranger Database Host****Description**

Hostname of the database used by Ranger Admin. If the port is non-default for your database type, use host:port notation.

**Related Name**

ranger\_database\_host

**Default Value****API Name**

ranger\_database\_host

**Required**

true

**Ranger Database Name****Description**

Name of Ranger Admin database.

**Related Name**

ranger\_database\_name

**Default Value**

ranger

**API Name**

ranger\_database\_name

**Required**

true

**Ranger Database User Password****Description**

Password for Ranger Admin database.

**Related Name**

ranger.jpa.jdbc.password

**Default Value****API Name**

ranger\_database\_password

**Required**

true

**Ranger Database Type****Description**

Database type to be used.

**Related Name**

ranger\_database\_type

**Default Value**

PostgreSQL

**API Name**

ranger\_database\_type

**Required**

true

**Ranger Database User****Description**

User for Ranger Admin database.

**Related Name**

ranger.jpa.jdbc.user

**Default Value**

rangeradmin

**API Name**

ranger\_database\_user

**Required**

true

**Admin AD Auth Bind Password****Description**

Password for the account that can search for users. Only used if Authentication method is AD

**Related Name**

ranger.ldap.ad.bind.password

**Default Value****API Name**

ranger\_ldap\_ad\_bind\_password

**Required**

false

### Admin LDAP Auth Bind User Password

**Description**

Password for the account that can search for users.

**Related Name**

ranger.ldap.bind.password

**Default Value****API Name**

ranger\_ldap\_bind\_password

**Required**

false

### Knox Proxy User Groups

**Description**

Accepts a list of group names. The Knox user can impersonate only the users that belong to the groups specified in the list. The wildcard value \* may be used to allow impersonation of any user belonging to any group.

**Related Name**

ranger.proxyuser.knox.groups

**Default Value**

\*

**API Name**

ranger\_proxyuser\_knox\_groups

**Required**

false

### Knox Proxy User Hosts

**Description**

Accepts a list of IP addresses, IP address ranges in CIDR format and/or host names. The Knox user can impersonate only the requests coming from hosts specified in the list. The wildcard value \* may be used to allow impersonation from any host.

**Related Name**

ranger.proxyuser.knox.hosts

**Default Value**

\*

**API Name**

ranger\_proxyuser\_knox\_hosts

**Required**

false

### Knox Proxy User Users

**Description**

Accepts a list of usernames. The Knox user can impersonate only the users specified in the list. The wildcard value \* may be used to allow impersonation of any user.

**Related Name**

ranger.proxyuser.knox.users

**Default Value**

\*

**API Name**

ranger\_proxyuser\_knox\_users

**Required**

false

**Ranger Tomcat Work Dir****Description**

Tomcat work directory for Ranger Admin. This should generally not be changed.

**Related Name**

ranger\_tomcat\_work\_dir

**Default Value**

/var/lib/ranger/admin

**API Name**

ranger\_tomcat\_work\_dir

**Required**

true

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses****Admin Unix Auth Service Port****Description**

Port for unix authentication service. Only used if Authentication method is UNIX.

**Related Name**

ranger.unixauth.service.port

**Default Value**

5151

**API Name**

ranger.unixauth.service.port

**Required**

false

## Resource Management

### Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

#### Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_hard\_limit

#### Required

true

### Cgroup Memory Soft Limit

#### Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

#### Related Name

memory.soft\_limit\_in\_bytes

#### Default Value

-1 MiB

#### API Name

rm\_memory\_soft\_limit

#### Required

true

### Security

### Ranger Admin TLS/SSL Trust Store File

#### Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Admin might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

#### Related Name

ranger.truststore.file

#### Default Value

#### API Name

ssl\_client\_truststore\_location

**Required**

false

**Ranger Admin TLS/SSL Trust Store Password****Description**

The password for the Ranger Admin TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ranger.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Ranger Admin****Description**

Encrypt communication between clients and Ranger Admin using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ranger.service.https.attrib.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Ranger Admin TLS/SSL Server Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Admin is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

ranger.https.attrib.keystore.file

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

**Ranger Admin TLS/SSL Server Keystore File Password****Description**

The password for the Ranger Admin keystore file.

<b>Related Name</b>	ranger.service.https.attrib.keystore.pass
<b>Default Value</b>	
<b>API Name</b>	ssl_server_keystore_password
<b>Required</b>	false

Stacks Collection

Stacks Collection Data Retention

<b>Description</b>	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>	stacks_collection_data_retention
<b>Default Value</b>	100 MiB
<b>API Name</b>	stacks_collection_data_retention
<b>Required</b>	false

Stacks Collection Directory

<b>Description</b>	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>	stacks_collection_directory
<b>Default Value</b>	
<b>API Name</b>	stacks_collection_directory
<b>Required</b>	false

Stacks Collection Enabled

<b>Description</b>	Whether or not periodic stacks collection is enabled.
<b>Related Name</b>	stacks_collection_enabled
<b>Default Value</b>	false
<b>API Name</b>	

stacks_collection_enabled
<b>Required</b>
true

Stacks Collection Frequency

<b>Description</b>
The frequency with which stacks are collected.
<b>Related Name</b>
stacks_collection_frequency
<b>Default Value</b>
5.0 second(s)
<b>API Name</b>
stacks_collection_frequency
<b>Required</b>
false

Stacks Collection Method

<b>Description</b>
The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.
<b>Related Name</b>
stacks_collection_method
<b>Default Value</b>
jstack
<b>API Name</b>
stacks_collection_method
<b>Required</b>
false

Suppressions

Suppress Configuration Validator: CDH Version Validator

<b>Description</b>
Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_cdh_version_validator
<b>Required</b>
true

**Suppress Parameter Validation: Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-admin-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Admin Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Exclude Users from Audit Access Tab****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Users from Audit Access Tab parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.accesslogs.exclude.users.list

**Required**

true

**Suppress Parameter Validation: Kerberos Cookie Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Cookie Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.admin.kerberos.cookie.path

**Required**

true

**Suppress Parameter Validation: Default Policy Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Policy Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.default.policy.groups

**Required**

true

**Suppress Parameter Validation: Default Policy Users****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Policy Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.default.policy.users

**Required**

true

**Suppress Parameter Validation: Admin AD Auth Base DN****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Base DN parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.base.dn

**Required**

true

**Suppress Parameter Validation: Admin AD Auth Bind DN****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Bind DN parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.bind.dn

**Required**

true

**Suppress Parameter Validation: Admin AD Auth Domain Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Domain Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.domain

**Required**

true

### Suppress Parameter Validation: Admin AD Auth URL

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth URL parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger.ldap.ad.url

#### Required

true

### Suppress Parameter Validation: Admin AD Auth User Search Filter

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth User Search Filter parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger.ldap.ad.user.searchfilter

#### Required

true

### Suppress Parameter Validation: Admin LDAP Auth Base DN

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Base DN parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger.ldap.base.dn

#### Required

true

### Suppress Parameter Validation: Admin LDAP Auth Bind User

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Bind User parameter.

#### Related Name

#### Default Value

false

**API Name**`role_config_suppression_ranger.ldap.bind.dn`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth Group Role Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Role Attribute parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.group.roleattribute`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth Group Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Search Base parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.group.searchbase`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth Group Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Search Filter parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.group.searchfilter`**Required**`true`**Suppress Parameter Validation: Admin LDAP Auth URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth URL parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.url

**Required**

true

**Suppress Parameter Validation: Admin LDAP Auth User DN Pattern****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth User DN Pattern parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.user.dnpattern

**Required**

true

**Suppress Parameter Validation: Admin LDAP Auth User Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth User Search Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.user.searchfilter

**Required**

true

**Suppress Parameter Validation: SSO Browser Useragent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Browser Useragent parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.sso.browser.useragent

**Required**

true

**Suppress Parameter Validation: SSO Provider Url****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Provider Url parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.sso.providerurl

**Required**

true

**Suppress Parameter Validation: SSO Public Key****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Public Key parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.sso.publickey

**Required**

true

**Suppress Parameter Validation: Tag Service Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tag Service Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.tagservice.auto.name

**Required**

true

**Suppress Parameter Validation: Admin UNIX Auth Service Hostname****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin UNIX Auth Service Hostname parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.unixauth.service.hostname

**Required**

true

**Suppress Parameter Validation: Admin Unix Auth Service Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Unix Auth Service Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.unixauth.service.port

**Required**

true

**Suppress Parameter Validation: Ranger Admin Conf Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_conf\_path

**Required**

true

**Suppress Parameter Validation: Ranger Admin Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Database Host****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database Host parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_database\_host

**Required**

true

**Suppress Parameter Validation: Ranger Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_database\_name

**Required**

true

**Suppress Parameter Validation: Ranger Database User Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database User Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_database\_password

**Required**

true

**Suppress Parameter Validation: Ranger Database User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_database\_user

**Required**

true

**Suppress Parameter Validation: Admin AD Auth Bind Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Bind Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ldap\_ad\_bind\_password

**Required**

true

**Suppress Parameter Validation: Admin LDAP Auth Bind User Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Bind User Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ldap\_bind\_password

**Required**

true

**Suppress Parameter Validation: Knox Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_proxyuser\_knox\_groups

**Required**

true

**Suppress Parameter Validation: Knox Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_proxyuser\_knox\_hosts

**Required**

true

**Suppress Parameter Validation: Knox Proxy User Users****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Users parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_proxyuser\_knox\_users

**Required**

true

**Suppress Parameter Validation: Ranger Tomcat Work Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tomcat Work Dir parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tomcat\_work\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ranger Admin TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Admin TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ranger Admin TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Admin TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Ranger Admin URL Canary Check****Description**

Whether to suppress the results of the Ranger Admin URL Canary Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_admin\_canary

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_admin\_unexpected\_exits

**Required**

true

**Ranger Tagsync****Advanced****Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties****Description**

For advanced use only. A string to be inserted into conf/atlas-application.properties for this role only.

**Related Name****Default Value****API Name**

conf/atlas-application.properties\_role\_safety\_valve

**Required**

false

**Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-tagsync-policymgr-ssl.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-tagsync-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

**Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-tagsync-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-tagsync-site.xml\_role\_safety\_valve

**Required**

false

**Ranger Tagsync Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom_heap_dump_dir
<b>Required</b>
false

Dump Heap When Out of Memory

<b>Description</b>
When set, generates a heap dump file when when an out-of-memory error occurs.
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
oom_heap_dump_enabled
<b>Required</b>
true

Kill When Out of Memory

<b>Description</b>
When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
oom_sigkill_enabled
<b>Required</b>
true

Automatically Restart Process

<b>Description</b>
When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
process_auto_restart
<b>Required</b>
true

Enable Metric Collection

<b>Description</b>
Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

RANGER\_TAGSYNC\_role\_env\_safety\_valve

**Required**

false

Logs

Ranger Tagsync Log Directory

Description	The log directory for log files of the role Ranger Tagsync.
Related Name	ranger.tagsync.logdir
Default Value	/var/log/ranger/tagsync
API Name	log_dir
Required	false

Ranger Tagsync Logging Threshold

Description	The minimum log level for Ranger Tagsync logs
Related Name	
Default Value	INFO
API Name	log_threshold
Required	false

Ranger Tagsync Maximum Log File Backups

Description	The maximum number of rolled log files to keep for Ranger Tagsync logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

Ranger Tagsync Max Log Size

Description	The maximum size, in megabytes, per log file for Ranger Tagsync logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB

<b>API Name</b>	max_log_size
<b>Required</b>	false

Monitoring

Enable Health Alerts for this Role

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	enable_alerts
<b>Required</b>	false

Enable Configuration Change Alerts

<b>Description</b>	When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	enable_config_alerts
<b>Required</b>	false

Log Directory Free Space Monitoring Absolute Thresholds

<b>Description</b>	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
<b>Related Name</b>	
<b>Default Value</b>	Warning: 10 GiB, Critical: 5 GiB
<b>API Name</b>	log_directory_free_space_absolute_thresholds
<b>Required</b>	false

Log Directory Free Space Monitoring Percentage Thresholds

<b>Description</b>
--------------------

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

### Swap Memory Usage Rate Window

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ranger\_tagsync\_fd\_thresholds

**Required**

false

### Ranger Tagsync Host Health Test

**Description**

When computing the overall Ranger Tagsync health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ranger\_tagsync\_host\_health\_enabled

**Required**

false

**Ranger Tagsync Process Health Test****Description**

Enables the health test that the Ranger Tagsync's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ranger\_tagsync\_scm\_health\_enabled

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Atlas Source: Kafka Consumer Group****Description**

Kafka consumer group.

**Related Name**

atlas.kafka.entities.group.id

**Default Value**

ranger\_entities\_consumer

**API Name**

atlas.kafka.entities.group.id

**Required**

false

**Graceful Shutdown Timeout****Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

**Related Name****Default Value**

	18 second(s)
API Name	
	graceful_stop_timeout
Required	
	false

Capture Cluster name

Description	Capture cluster name.
Related Name	
	ranger.tagsync.atlas.default.cluster.name
Default Value	
API Name	
	ranger.tagsync.atlas.default.cluster.name
Required	
	false

Enable Ranger Tagsync Cookie Authentication

Description	Enable cookie-based authentication for requests going from Ranger Tagsync to Ranger Admin.
Related Name	
	ranger.tagsync.cookie.enabled
Default Value	
	true
API Name	
	ranger.tagsync.cookie.enabled
Required	
	false

Ranger Tagsync Username

Description	Ranger Tagsync username in Ranger Admin.
Related Name	
	ranger.tagsync.dest.ranger.username
Default Value	
	rangertagsync
API Name	
	ranger.tagsync.dest.ranger.username
Required	
	false

Enable File Tag Source

Description	Whether to sync tags from file.
-------------	---------------------------------

**Related Name**

ranger.tagsync.source.file

**Default Value**

false

**API Name**

ranger.tagsync.source.file

**Required**

false

**File Source: File Update Polling Interval****Description**

Sync Interval for updating tags from file.

**Related Name**

ranger.tagsync.source.file.check.interval.millis

**Default Value**

1 minute(s)

**API Name**

ranger.tagsync.source.file.check.interval.millis

**Required**

false

**File Source: Filename****Description**

Filename containing tags.

**Related Name**

ranger.tagsync.source.file.filename

**Default Value****API Name**

ranger.tagsync.source.file.filename

**Required**

false

**Ranger Tagsync Conf Path****Description**

Staging directory for Ranger Tagsync Configuration. This should generally not be changed.

**Related Name**

ranger\_tagsync\_conf\_path

**Default Value**

/etc/ranger/tagsync

**API Name**

ranger\_tagsync\_conf\_path

**Required**

true

### Ranger Tagsync Max Heapsize

**Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

**Related Name**

ranger\_tagsync\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

ranger\_tagsync\_max\_heap\_size

**Required**

true

### Enable Ranger Tagsync Metrics

**Description**

Controls whether the Ranger Tagsync metrics are enabled.

**Related Name**

ranger.tagsync.metrics.enabled

**Default Value**

true

**API Name**

ranger\_tagsync\_metrics\_enabled

**Required**

false

### Ranger Tagsync Metrics File Name

**Description**

File name for the metrics exposed by Ranger Tagsync. The file is updated at the frequency configured by Ranger Tagsync Metrics Frequency.

**Related Name**

ranger.tagsync.metrics.filename

**Default Value**

metrics.json

**API Name**

ranger\_tagsync\_metrics\_filename

**Required**

false

### Ranger Tagsync Metrics File Path

**Description**

The location at which the metrics exposed by Ranger Tagsync will be written.

**Related Name**

ranger.tagsync.metrics.filepath

**Default Value**

/var/log/ranger/metrics-tagsync

**API Name**

ranger_tagsync_metrics_filepath
<b>Required</b>
false

Ranger Tagsync Metrics Frequency

<b>Description</b>
The frequency at which the metrics are logged at Ranger Tagsync Metrics File Path.
<b>Related Name</b>
ranger.tagsync.metrics.frequencytimeinmillis
<b>Default Value</b>
1 minute(s)
<b>API Name</b>
ranger_tagsync_metrics_frequency
<b>Required</b>
false

Performance

Maximum Process File Descriptors

<b>Description</b>
If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
rlimit_fds
<b>Required</b>
false

Resource Management

Cgroup CPU Shares

<b>Description</b>
Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.
<b>Related Name</b>
cpu.shares
<b>Default Value</b>
1024
<b>API Name</b>
rm_cpu_shares
<b>Required</b>
true

### Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

### Ranger Tagsync TLS/SSL Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Tagsync might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

xasecure.policymgr.clientssl.truststore

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

### Ranger Tagsync TLS/SSL Trust Store Password

**Description**

The password for the Ranger Tagsync TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

xasecure.policymgr.clientssl.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

Enable TLS/SSL for Ranger Tagsync

Description

Encrypt communication between clients and Ranger Tagsync using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

Default Value

false

API Name

ssl\_enabled

Required

false

Ranger Tagsync TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Tagsync is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

xasecure.policymgr.clientssl.keystore

Default Value

API Name

ssl\_server\_keystore\_location

Required

false

Ranger Tagsync TLS/SSL Server Keystore File Password

Description

The password for the Ranger Tagsync keystore file.

Related Name

xasecure.policymgr.clientssl.keystore.password

Default Value

API Name

ssl\_server\_keystore\_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks\_collection\_data\_retention

Default Value

100 MiB
<b>API Name</b>
stacks_collection_data_retention
<b>Required</b>
false

Stacks Collection Directory

<b>Description</b>
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
<b>Related Name</b>
stacks_collection_directory
<b>Default Value</b>
<b>API Name</b>
stacks_collection_directory
<b>Required</b>
false

Stacks Collection Enabled

<b>Description</b>
Whether or not periodic stacks collection is enabled.
<b>Related Name</b>
stacks_collection_enabled
<b>Default Value</b>
false
<b>API Name</b>
stacks_collection_enabled
<b>Required</b>
true

Stacks Collection Frequency

<b>Description</b>
The frequency with which stacks are collected.
<b>Related Name</b>
stacks_collection_frequency
<b>Default Value</b>
5.0 second(s)
<b>API Name</b>
stacks_collection_frequency
<b>Required</b>
false

### Stacks Collection Method

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

### Suppressions

#### Suppress Parameter Validation: Atlas Source: Kafka Consumer Group

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Source: Kafka Consumer Group parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_atlas.kafka.entities.group.id

**Required**

true

#### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

#### Suppress Parameter Validation: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/atlas-application.properties\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-tagsync-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-tagsync-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Tagsync Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Capture Cluster name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Capture Cluster name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.tagsync.atlas.default.cluster.name

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.tagsync.dest.ranger.username

**Required**

true

**Suppress Parameter Validation: File Source: Filename****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the File Source: Filename parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.tagsync.source.file.filename

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Conf Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_conf\_path

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Max Heapspace****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Max Heapspace parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Metrics File Name**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Metrics File Name parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_metrics\_filename

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Metrics File Path**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Metrics File Path parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_metrics\_filepath

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve)**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_tagsync\_unexpected\_exits

**Required**

true

## Ranger Usersync

### Advanced

#### Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml

**Description**

For advanced use only. A string to be inserted into conf/ranger-ugsync-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-ugsync-site.xml\_role\_safety\_valve

**Required**

false

#### Ranger Usersync Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists,

it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

<b>Required</b>
true

Enable Metric Collection

<b>Description</b>
Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.
<b>Related Name</b>
<b>Default Value</b>
true
<b>API Name</b>
process_should_monitor
<b>Required</b>
true

Process Start Retry Attempts

<b>Description</b>
Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.
<b>Related Name</b>
<b>Default Value</b>
3
<b>API Name</b>
process_start_retries
<b>Required</b>
false

Process Start Wait Timeout

<b>Description</b>
The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/ crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.
<b>Related Name</b>
<b>Default Value</b>
20
<b>API Name</b>
process_start_secs
<b>Required</b>
false

Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)

<b>Description</b>
--------------------

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment.  
Applies to configurations of this role except client configuration.

**Related Name**

**Default Value**

**API Name**

RANGER\_USERSYNC\_role\_env\_safety\_valve

**Required**

false

Logs

Ranger Usersync Log Directory

**Description**

The log directory for log files of the role Ranger Usersync.

**Related Name**

ranger.usersync.logdir

**Default Value**

/var/log/ranger/usersync

**API Name**

log\_dir

**Required**

false

Ranger Usersync Logging Threshold

**Description**

The minimum log level for Ranger Usersync logs

**Related Name**

**Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

Ranger Usersync Maximum Log File Backups

**Description**

The maximum number of rolled log files to keep for Ranger Usersync logs. Typically used by log4j or logback.

**Related Name**

**Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Ranger Usersync Max Log Size**

**Description**

The maximum size, in megabytes, per log file for Ranger Usersync logs. Typically used by log4j or logback.

**Related Name**

**Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Monitoring**

**Enable Health Alerts for this Role**

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name**

**Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts**

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name**

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds**

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name**

**Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process\_swap\_memory\_rate\_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap\_memory\_rate\_window

Default Value

5 minute(s)

API Name

process\_swap\_memory\_rate\_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process\_swap\_memory\_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ranger\_usersync\_fd\_thresholds

**Required**

false

**Ranger Usersync Host Health Test****Description**

When computing the overall Ranger Usersync health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ranger\_usersync\_host\_health\_enabled

**Required**

false

**Ranger Usersync Process Health Test****Description**

Enables the health test that the Ranger Usersync's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ranger\_usersync\_scm\_health\_enabled

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more

details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### Other

#### Graceful Shutdown Timeout

**Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

**Related Name****Default Value**

18 second(s)

**API Name**

graceful\_stop\_timeout

**Required**

false

Enable Ranger Usersync Cookie Authentication

**Description**

Enable cookie-based authentication for requests going from Ranger Usersync to Ranger Admin.

**Related Name**

ranger.usersync.cookie.enabled

**Default Value**

true

**API Name**

ranger.usersync.cookie.enabled

**Required**

false

Enable User Sync

**Description**

Should users and groups be synchronized to Ranger Database? Required to setup Ranger policies.

**Related Name**

ranger.usersync.enabled

**Default Value**

true

**API Name**

ranger.usersync.enabled

**Required**

false

Usersync Filesource File Name

**Description**

Path to the file with the users and groups information. Only used when Usersync Sync Source is set to "org.apache.ranger.unixusersync.process.FileSourceUserGroupBuilder". Example: /tmp/usergroup.json or /tmp/usergroup.csv or /tmp/usergroup.txt

**Related Name**

ranger.usersync.filesource.file

**Default Value**

**API Name**

ranger.usersync.filesource.file

**Required**

false

Usersync Filesource Delimiter

**Description**

Delimiter used in file, if File based user sync is used

**Related Name**

ranger.usersync.filesource.text.delimiter

**Default Value**

**API Name**

ranger.usersync.filesource.text.delimiter

**Required**

false

**Ranger Usersync Group Based Role Assignment Rules****Description**

The parameter is used to assign roles to users and groups synced in Ranger Admin. Based on the given values specified in the above delimiter parameters, Ranger Usersync will parse the value specified in this parameter and sync users and groups along with roles given. Example - "ROLE\_SYS\_ADMIN:u:username1,username2&ROLE\_KEY\_ADMIN:g:groupname1".

**Related Name**

ranger.usersync.group.based.role.assignment.rules

**Default Value****API Name**

ranger.usersync.group.based.role.assignment.rules

**Required**

false

**Usersync Group Member Attribute****Description**

LDAP group member attribute name. Example: member

**Related Name**

ranger.usersync.group.memberattributename

**Default Value****API Name**

ranger.usersync.group.memberattributename

**Required**

false

**Usersync Group Name Attribute****Description**

LDAP group name attribute. Example: cn

**Related Name**

ranger.usersync.group.nameattribute

**Default Value****API Name**

ranger.usersync.group.nameattribute

**Required**

false

**Usersync Group Object Class****Description**

LDAP Group object class. Example: group

**Related Name**`ranger.usersync.group.objectclass`**Default Value****API Name**`ranger.usersync.group.objectclass`**Required**`false`**Usersync Enable Group Search First****Description**

Enable Group Search First.

**Related Name**`ranger.usersync.group.search.first.enabled`**Default Value**`false`**API Name**`ranger.usersync.group.search.first.enabled`**Required**`false`**Usersync Group Search Base****Description**

Search base for groups. Sample value would be `ou=groups,dc=hadoop,dc=apache,dc=org`. The parameter overrides value specified in `ranger.usersync.ldap.searchBase`, `ranger.usersync.ldap.user.searchbase`. If a value is not specified, takes the value of `ranger.usersync.ldap.searchBase`. If `ranger.usersync.ldap.searchBase` is also not specified, takes the value of `ranger.usersync.ldap.user.searchbase`. Multiple Ous can be configured with ; (semicolon) separated eg: `ou=groups,DC=example,DC=com;ou=group1,ou=group2`

**Related Name**`ranger.usersync.group.searchbase`**Default Value****API Name**`ranger.usersync.group.searchbase`**Required**`false`**Usersync Enable Group Sync****Description**

Whether Usersync should use `ldapsearch` to find groups instead of relying on user entry attributes.

**Related Name**`ranger.usersync.group.searchenabled`**Default Value**`true`**API Name**`ranger.usersync.group.searchenabled`

**Required**

false

**Usersync Group Search Filter****Description**

Optional additional filter constraining the groups selected for syncing. A sample value would be (dept=eng)

**Related Name**

ranger.usersync.group.searchfilter

**Default Value****API Name**

ranger.usersync.group.searchfilter

**Required**

false

**Usersync Group Search Scope****Description**

Search scope for the groups. Value "base" indicates that only the entry specified as the search base in ranger.usersync.group.searchbase should be considered. One "indicates" that only the immediate children of the entry specified as the search base in ranger.usersync.group.searchbase should be considered. "Sub" indicates that the entry specified as the search base in ranger.usersync.group.searchbase, and all of its subordinates to any depth, should be considered.

**Related Name**

ranger.usersync.group.searchscope

**Default Value**

sub

**API Name**

ranger.usersync.group.searchscope

**Required**

false

**Usersync Group Usermap Sync****Description**

Whether to sync all groups for a user.

**Related Name**

ranger.usersync.group.usermapsyncenabled

**Default Value**

true

**API Name**

ranger.usersync.group.usermapsyncenabled

**Required**

false

**Usersync Bind User****Description**

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search for users. This user is used for searching the users. This could be read-only LDAP user. Example: cn=admin,dc=example,dc=com

**Related Name**

ranger.usersync.ldap.binddn

**Default Value****API Name**

ranger.usersync.ldap.binddn

**Required**

false

### Usersync Incremental Sync

**Description**

Enable Incremental Sync.

**Related Name**

ranger.usersync.ldap.deltasync

**Default Value**

true

**API Name**

ranger.usersync.ldap.deltasync

**Required**

false

### Usersync Group Hierarchy Levels

**Description**

Levels of LDAP directory tree where the groups need to be searched.

**Related Name**

ranger.usersync.ldap.grouphierarchylevels

**Default Value**

0

**API Name**

ranger.usersync.ldap.grouphierarchylevels

**Required**

false

### Usersync Groupname Case Conversion

**Description**

Used for converting syncing groups to the selected case conversion.

**Related Name**

ranger.usersync.ldap.groupname.caseconversion

**Default Value**

none

**API Name**

ranger.usersync.ldap.groupname.caseconversion

**Required**

false

**Usersync Referral****Description**

Set to follow if multiple LDAP/AD servers are configured to return continuation references for results. Set to ignore if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

**Related Name**

ranger.usersync.ldap.referral

**Default Value**

ignore

**API Name**

ranger.usersync.ldap.referral

**Required**

false

**Usersync Search Base****Description**

Search base for users and groups. Sample value would be dc=hadoop,dc=apache,dc=org. Multiple OUs can be configured with ; (semicolon) separated.

**Related Name**

ranger.usersync.ldap.searchBase

**Default Value****API Name**

ranger.usersync.ldap.searchBase

**Required**

false

**Usersync Enable STARTTLS****Description**

Enable LDAP STARTTLS.

**Related Name**

ranger.usersync.ldap.starttls

**Default Value**

false

**API Name**

ranger.usersync.ldap.starttls

**Required**

false

**Usersync LDAP/AD URL****Description**

LDAP server URL. Example: value = ldap://localhost:389 or ldaps://localhost:636

**Related Name**

ranger.usersync.ldap.url

**Default Value****API Name**

ranger.usersync.ldap.url

**Required**

false

**Usersync User Group Name Attribute****Description**

LDAP user group name attribute. Generally it is the same as username attribute. Example: sAMAccountName in AD, uid or cn in OpenLDAP

**Related Name**

ranger.usersync.ldap.user.groupnameattribute

**Default Value****API Name**

ranger.usersync.ldap.user.groupnameattribute

**Required**

false

**Usersync User Name Attribute****Description**

LDAP user name attribute. Example: sAMAccountName in AD, uid or cn in OpenLDAP

**Related Name**

ranger.usersync.ldap.user.nameattribute

**Default Value****API Name**

ranger.usersync.ldap.user.nameattribute

**Required**

false

**Usersync User Object Class****Description**

LDAP User Object Class. Example: person or user

**Related Name**

ranger.usersync.ldap.user.objectclass

**Default Value****API Name**

ranger.usersync.ldap.user.objectclass

**Required**

false

**Usersync User Search Base****Description**

Search base for users. Sample value would be ou=users,dc=hadoop,dc=apache,dc=org. Overrides value specified in ranger.usersync.ldap.searchBase. Multiple Ous can be configured with ; (semicolon) separated eg: cn=users,dc=example,dc=com;ou=example1,ou=example2

**Related Name**

ranger.usersync.ldap.user.searchbase

**Default Value****API Name**

ranger.usersync.ldap.user.searchbase

**Required**

false

### Usersync User Search Filter

**Description**

Optional additional filter constraining the users selected for syncing. A sample value would be (dept=eng). Customize the value to suit your deployment.

**Related Name**

ranger.usersync.ldap.user.searchfilter

**Default Value****API Name**

ranger.usersync.ldap.user.searchfilter

**Required**

false

### Usersync User Search Scope

**Description**

Search scope for the users. Value "base" indicates that only the entry specified as the search base in ranger.usersync.ldap.user.searchbase should be considered. "One" indicates that only the immediate children of the entry specified as the search base in ranger.usersync.ldap.user.searchbase should be considered. "Sub" indicates that the entry specified as the search base in ranger.usersync.ldap.user.searchbase, and all of its subordinates to any depth, should be considered.

**Related Name**

ranger.usersync.ldap.user.searchscope

**Default Value**

sub

**API Name**

ranger.usersync.ldap.user.searchscope

**Required**

false

### Usersync Username Case Conversion

**Description**

Used for converting syncing users to the selected case conversion.

**Related Name**

ranger.usersync.ldap.username.caseconversion

**Default Value**

none

**API Name**

ranger.usersync.ldap.username.caseconversion

**Required**

false

**Enable Results to be Paged for User/Group Request****Description**

Whether results can be paged for User/Group requests.

**Related Name**

ranger.usersync.pagedresultsenabled

**Default Value**

true

**API Name**

ranger.usersync.pagedresultsenabled

**Required**

false

**User/Group Request Page size.****Description**

Enter Page size for User/Group Request.

**Related Name**

ranger.usersync.pagedresultssize

**Default Value**

500

**API Name**

ranger.usersync.pagedresultssize

**Required**

false

**Maximum Records Per API Call****Description**

Maximum number of records to be returned per API call.

**Related Name**

ranger.usersync.policymanager.maxrecordsperapicall

**Default Value**

1000

**API Name**

ranger.usersync.policymanager.maxrecordsperapicall

**Required**

true

**Ranger Usersync Policymgr Username****Description**

Ranger Usersync username in Ranger Admin.

**Related Name**

ranger.usersync.policymgr.username

**Default Value**

rangerusersync

**API Name**

ranger.usersync.policymgr.username

**Required**

false

**Ranger Usersync Unix Service Port****Description**

Port for Unix authentication service.

**Related Name**

ranger.usersync.port

**Default Value**

5151

**API Name**

ranger.usersync.port

**Required**

true

**Ranger Usersync Role Assignment List Delimiter****Description**

The parameter is used to specify delimiter while syncing roles to users and groups in Ranger Admin. It is a delimiter for roles. Example - "ROLE\_SYS\_ADMIN:u:username1,username2&ROLE\_KEY\_ADMIN:g:groupname1", where ROLE\_SYS\_ADMIN and ROLE\_KEY\_ADMIN are roles in Ranger Admin separated by delimiter &. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

**Related Name**

ranger.usersync.role.assignment.list.delimiter

**Default Value**

&amp;

**API Name**

ranger.usersync.role.assignment.list.delimiter

**Required**

false

**Usersync Sleeptime interval****Description**

Sleep time interval between user sync operations in milliseconds.

**Related Name**

ranger.usersync.sleeptimeinmillisbetween sync cycle

**Default Value**

1 minute(s)

**API Name**

ranger.usersync.sleepinmillisbetween sync cycle

**Required**

false

**Source for Syncing User and Groups****Description**

For syncing from Ldap source, use "org.apache.ranger.ldapusersync.process.LdapUserGroupBuilder". For syncing from Unix source, use "org.apache.ranger.unixusersync.process.UnixUserGroupBuilder". For syncing from File source, use "org.apache.ranger.unixusersync.process.FileSourceUserGroupBuilder"

**Related Name**

ranger.usersync.source.impl.class

**Default Value**

org.apache.ranger.unixusersync.process.UnixUserGroupBuilder

**API Name**

ranger.usersync.source.impl.class

**Required**

true

**Ranger Usersync Unix Backend****Description**

The backend mechanism to read users and groups from a UNIX system. The value is applicable only on UNIX-based systems.

**Related Name**

ranger.usersync.unix.backend

**Default Value**

nss

**API Name**

ranger.usersync.unix.backend

**Required**

false

**Usersync UNIX Minimum User ID****Description**

Minimum User ID to start syncing. This should be set to avoid syncing of UNIX system-level users in the Ranger Admin.

**Related Name**

ranger.usersync.unix.minUserId

**Default Value**

500

**API Name**

ranger.usersync.unix.minUserId

**Required**

false

**Usersync Enable User Search****Description**

Enable User Search, when ranger.usersync.group.search.first.enabled is set to true.

**Related Name**

ranger.usersync.user.searchenabled

**Default Value**

false

**API Name**

ranger.usersync.user.searchenabled

**Required**

false

**Ranger Usersync Username Groupname Assignment List Delimiter****Description**

The parameter is used to specify a delimiter while syncing users and groups in Ranger Admin. Used as a delimiter to differentiate between two or more users and groups. Example - "ROLE\_SYS\_ADMIN:u:username1,username2", where username1 and username2 are separated by ,. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

**Related Name**

ranger.usersync.username.groupname.assignment.list.delimiter

**Default Value**

,

**API Name**

ranger.usersync.username.groupname.assignment.list.delimiter

**Required**

false

**Ranger Usersync User Groups Assignment List Delimiter****Description**

The parameter is used to specify delimiter while syncing users and groups along with specified roles in Ranger Admin. It is a delimiter to differentiate between users and groups from respective roles. Example - "ROLE\_SYS\_ADMIN:u:username1,username2&ROLE\_SYS\_ADMIN:g:groupname1,groupname2", where ROLE\_SYS\_ADMIN is a role. "u" is used to denote the list of users followed by actual usernames which are username1 and username2. While "g" is used to denote the list of groups followed by actual groupnames which are groupname1 and groupname2. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

**Related Name**

ranger.usersync.users.groups.assignment.list.delimiter

**Default Value**

	:
API Name	ranger.usersync.users.groups.assignment.list.delimiter
Required	false

Ranger Usersync Conf Path

Description	Staging directory for Ranger Usersync Configuration. This should generally not be changed.
Related Name	ranger_usersync_conf_path
Default Value	/etc/ranger/usersync
API Name	ranger_usersync_conf_path
Required	true

Usersync Bind User Password

Description	Password for the LDAP bind user used for searching users.
Related Name	ranger.usersync.ldap.ldapbindpassword
Default Value	
API Name	ranger_usersync_ldap_ldapbindpassword
Required	false

Ranger Usersync Max Heapsize

Description	Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.
Related Name	ranger_usersync_max_heap_size
Default Value	1 GiB
API Name	ranger_usersync_max_heap_size
Required	true

Enable Ranger Usersync Metrics

Description	Controls whether the Ranger Usersync metrics are enabled.
-------------	---

**Related Name**`ranger.usersync.metrics.enabled`**Default Value**`true`**API Name**`ranger_usersync_metrics_enabled`**Required**`false`**Ranger Usersync Metrics File Name****Description**

File name for the metrics exposed by Ranger Usersync. The file is updated at the frequency configured by Ranger Usersync Metrics Frequency.

**Related Name**`ranger.usersync.metrics.filename`**Default Value**`metrics.json`**API Name**`ranger_usersync_metrics_filename`**Required**`false`**Ranger Usersync Metrics File Path****Description**

The location at which the metrics exposed by Ranger Usersync will be written.

**Related Name**`ranger.usersync.metrics.filepath`**Default Value**`/var/log/ranger/metrics-usersync`**API Name**`ranger_usersync_metrics_filepath`**Required**`false`**Ranger Usersync Metrics Frequency****Description**

The frequency at which the metrics are logged at Ranger Usersync Metrics File Path.

**Related Name**`ranger.usersync.metrics.frequencytimeinmillis`**Default Value**`1 minute(s)`**API Name**`ranger_usersync_metrics_frequency`**Required**

false

Performance

Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name**

**Default Value**

**API Name**

rlimit\_fds

**Required**

false

Resource Management

Cgroup CPU Shares

**Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

Custom Control Group Resources (overrides Cgroup settings)

**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value**

**API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

Security

Ranger Usersync TLS/SSL Trust Store File

Description	The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Usersync might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.
Related Name	ranger.usersync.truststore.file
Default Value	
API Name	ssl_client_truststore_location
Required	false

Ranger Usersync TLS/SSL Trust Store Password

Description	The password for the Ranger Usersync TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.
Related Name	ranger.usersync.truststore.password
Default Value	
API Name	ssl_client_truststore_password
Required	false

Stacks Collection

Stacks Collection Data Retention

Description	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name	stacks_collection_data_retention
Default Value	100 MiB
API Name	stacks_collection_data_retention
Required	false

Stacks Collection Directory

Description	
-------------	--

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

**Related Name**

stacks\_collection\_directory

**Default Value**

**API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled**

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency**

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method**

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack
<b>API Name</b>
stacks_collection_method
<b>Required</b>
false

Suppressions

Suppress Configuration Validator: CDH Version Validator

<b>Description</b>
Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_cdh_version_validator
<b>Required</b>
true

Suppress Parameter Validation: Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_conf/ranger-ugsync-site.xml_role_safety_valve
<b>Required</b>
true

Suppress Parameter Validation: Ranger Usersync Logging Advanced Configuration Snippet (Safety Valve)

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Logging Advanced Configuration Snippet (Safety Valve) parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_log4j_safety_valve
<b>Required</b>

true

### Suppress Parameter Validation: Ranger Usersync Log Directory

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Log Directory parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_log\_dir

#### Required

true

### Suppress Parameter Validation: Heap Dump Directory

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_oom\_heap\_dump\_dir

#### Required

true

### Suppress Parameter Validation: Usersync Filesource File Name

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Filesource File Name parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger.usersync.filesource.file

#### Required

true

### Suppress Parameter Validation: Usersync Filesource Delimiter

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Filesource Delimiter parameter.

#### Related Name

#### Default Value

false

**API Name**`role_config_suppression_ranger.usersync.filesource.text.delimiter`**Required**`true`**Suppress Parameter Validation: Ranger Usersync Group Based Role Assignment Rules****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Group Based Role Assignment Rules parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.group.based.role.assignment.rules`**Required**`true`**Suppress Parameter Validation: Usersync Group Member Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Member Attribute parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.group.memberattributename`**Required**`true`**Suppress Parameter Validation: Usersync Group Name Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Name Attribute parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.group.nameattribute`**Required**`true`**Suppress Parameter Validation: Usersync Group Object Class****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Object Class parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.objectclass

**Required**

true

**Suppress Parameter Validation: Usersync Group Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Search Base parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.searchbase

**Required**

true

**Suppress Parameter Validation: Usersync Group Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Search Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.searchfilter

**Required**

true

**Suppress Parameter Validation: Usersync Bind User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Bind User parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.binddn

**Required**

true

**Suppress Parameter Validation: Usersync Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Search Base parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.searchbase

**Required**

true

**Suppress Parameter Validation: Usersync LDAP/AD URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync LDAP/AD URL parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.url

**Required**

true

**Suppress Parameter Validation: Usersync User Group Name Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Group Name Attribute parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.groupnameattribute

**Required**

true

**Suppress Parameter Validation: Usersync User Name Attribute****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Name Attribute parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.nameattribute

**Required**

true

**Suppress Parameter Validation: Usersync User Object Class****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Object Class parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.objectclass

**Required**

true

**Suppress Parameter Validation: Usersync User Search Base****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Search Base parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.searchbase

**Required**

true

**Suppress Parameter Validation: Usersync User Search Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Search Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.searchfilter

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Policymgr Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Policymgr Username parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.policymgr.username

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Unix Service Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Unix Service Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.port

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Role Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Role Assignment List Delimiter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.role.assignment.list.delimiter

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Username Groupname Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Username Groupname Assignment List Delimiter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.username.groupname.assignment.list.delimiter

**Required**

true

**Suppress Parameter Validation: Ranger Usersync User Groups Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync User Groups Assignment List Delimiter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.users.groups.assignment.list.delimiter

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Conf Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Conf Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_conf\_path

**Required**

true

**Suppress Parameter Validation: Usersync Bind User Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Bind User Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_ldap\_ldapbindpassword

**Required**

true

**Suppress Parameter Validation: Ranger Usersync Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_max\_heap\_size

**Required**

true

### Suppress Parameter Validation: Ranger Usersync Metrics File Name

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Metrics File Name parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger\_usersync\_metrics\_filename

#### Required

true

### Suppress Parameter Validation: Ranger Usersync Metrics File Path

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Metrics File Path parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger\_usersync\_metrics\_filepath

#### Required

true

### Suppress Parameter Validation: Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve) parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger\_usersync\_role\_env\_safety\_valve

#### Required

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

#### Related Name

#### Default Value

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ranger Usersync TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Usersync TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_swap\_memory\_usage\_rate

**Required**

true

Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_ranger\_usersync\_unexpected\_exits

**Required**

true

Service-Wide

Advanced

System Group

**Description**

The group that this service's processes should run as.

**Related Name**

**Default Value**

ranger

**API Name**

process\_groupname

**Required**

true

System User

**Description**

The user that this service's processes should run as.

**Related Name**

**Default Value**

ranger

**API Name**

process\_username

**Required**

true

**Ranger Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

RANGER\_service\_env\_safety\_valve

**Required**

false

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Healthy Ranger Admin Monitoring Thresholds****Description**

The health test thresholds of the overall Ranger Admin health. The check returns "Concerning" health if the percentage of "Healthy" Ranger Admins falls below the warning threshold. The check

is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger Admins falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 49.0 %

**API Name**

RANGER\_RANGER\_ADMIN\_healthy\_thresholds

**Required**

false

**Ranger Tagsync Role Health Test****Description**

When computing the overall RANGER health, consider Ranger Tagsync's health

**Related Name****Default Value**

true

**API Name**

RANGER\_RANGER\_TAGSYNC\_health\_enabled

**Required**

false

**Ranger Usersync Role Health Test****Description**

When computing the overall RANGER health, consider Ranger Usersync's health

**Related Name****Default Value**

true

**API Name**

RANGER\_RANGER\_USERSYNC\_health\_enabled

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

`service_triggers`

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

`smon_derived_configs_safety_valve`

**Required**

false

**Other****HDFS Service****Description**

Name of the HDFS service that this Ranger service instance depends on

**Related Name****Default Value****API Name**

`hdfs_service`

**Required**

true

**Ranger KMS Keyadmin User Initial Password****Description**

Password for the Ranger administrator, whose login name is "keyadmin". The password should be minimum 8 characters long, with at least one alphabetic and one numeric character. The following characters are invalid: " ' \ ` ´". Note that this password is only used to setup Ranger in the cluster: any subsequent changes will not be effective. This password can be later changed from the Ranger Admin UI under the user profile page.

**Related Name**

keyadmin\_user\_password

**Default Value****API Name**

keyadmin\_user\_password

**Required**

true

**Load Balancer Address****Description**

Load Balancer Address used by clients to access Ranger Admin. Only required when Ranger Admin is running with High Availability. Example: http://load-balancer-host:load-balancer-port

**Related Name**

ranger.externalurl

**Default Value****API Name**

load\_balancer\_url

**Required**

false

**Ranger Plugin DFS Audit Enabled****Description**

Whether DFS audit is enabled.

**Related Name**

ranger\_plugin\_hdfs\_audit\_enabled

**Default Value**

true

**API Name**

ranger\_plugin\_hdfs\_audit\_enabled

**Required**

false

**Ranger Plugin DFS Audit URL****Description**

An absolute URL with no trailing slash should be entered, or leave the value empty. Allows setting up a centralized storage location for Ranger audits. This URL is used as the base for audit directories: all services plugging into Ranger will prepend this URL to their configured path used to store Ranger audits.

**Related Name**

ranger\_plugin\_hdfs\_audit\_url

**Default Value**

/ranger/audit

**API Name**

ranger\_plugin\_hdfs\_audit\_url

**Required**

false

### Ranger Admin User Initial Password

#### Description

Password for the Ranger administrator, whose login name is "admin". The password should be minimum 8 characters long, with at least one alphabetic and one numeric character. The following characters are invalid: " ' \ ` ´. Note that this password is only used to setup Ranger in the cluster; any subsequent changes will not be effective. This password can be later changed from the Ranger Admin UI under the user profile page.

#### Related Name

rangeradmin\_user\_password

#### Default Value

#### API Name

rangeradmin\_user\_password

#### Required

true

### Ranger Tagsync User Initial Password

#### Description

Password for the Ranger administrator, whose login name is "rangertagsync". The password should be minimum 8 characters long, with at least one alphabetic and one numeric character. The following characters are invalid: " ' \ ` ´. Note that this password is only used to setup Ranger in the cluster; any subsequent changes will not be effective. This password can be later changed from the Ranger Admin UI under the user profile page.

#### Related Name

rangertagsync\_user\_password

#### Default Value

#### API Name

rangertagsync\_user\_password

#### Required

true

### Ranger Usersync User Initial Password

#### Description

Password for the Ranger administrator, whose login name is "rangerusersync". The password should be minimum 8 characters long, with at least one alphabetic and one numeric character. The following characters are invalid: " ' \ ` ´. Note that this password is only used to setup Ranger in the cluster; any subsequent changes will not be effective. This password can be later changed from the Ranger Admin UI under the user profile page.

#### Related Name

rangerusersync\_user\_password

#### Default Value

#### API Name

rangerusersync\_user\_password

#### Required

true

**Solr Service**

<b>Description</b>	Name of the Solr service that this Ranger service instance depends on
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	solr_service
<b>Required</b>	true

**Ports and Addresses**

**Admin HTTP Port**

<b>Description</b>	HTTP Port for Ranger Admin.
<b>Related Name</b>	ranger.service.http.port
<b>Default Value</b>	6080
<b>API Name</b>	ranger_service_http_port
<b>Required</b>	true

**Admin HTTPS port**

<b>Description</b>	HTTPS Port for Ranger Admin. Only used when SSL is enabled for Ranger Admin.
<b>Related Name</b>	ranger.service.https.port
<b>Default Value</b>	6182
<b>API Name</b>	ranger_service_https_port
<b>Required</b>	true

**Suppressions**

**Suppress Configuration Validator: Atlas Source: Kafka Consumer Group**

<b>Description</b>	Whether to suppress configuration warnings produced by the Atlas Source: Kafka Consumer Group configuration validator.
<b>Related Name</b>	
<b>Default Value</b>	false

**API Name**

role\_config\_suppression\_atlas.kafka.entities.group.id

**Required**

true

**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/atlas-application.properties\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-admin-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-tagsync-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-tagsync-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-ugsync-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Admin Log Directory****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Exclude Users from Audit Access Tab****Description**

Whether to suppress configuration warnings produced by the Exclude Users from Audit Access Tab configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.accesslogs.exclude.users.list

**Required**

true

**Suppress Configuration Validator: Kerberos Cookie Path****Description**

Whether to suppress configuration warnings produced by the Kerberos Cookie Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.admin.kerberos.cookie.path

**Required**

true

### Suppress Configuration Validator: Default Policy Groups

**Description**

Whether to suppress configuration warnings produced by the Default Policy Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.default.policy.groups

**Required**

true

### Suppress Configuration Validator: Default Policy Users

**Description**

Whether to suppress configuration warnings produced by the Default Policy Users configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.default.policy.users

**Required**

true

### Suppress Configuration Validator: Admin AD Auth Base DN

**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Base DN configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.base.dn

**Required**

true

### Suppress Configuration Validator: Admin AD Auth Bind DN

**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Bind DN configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.bind.dn

**Required**

true

### Suppress Configuration Validator: Admin AD Auth Domain Name

**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Domain Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.domain

**Required**

true

### Suppress Configuration Validator: Admin AD Auth URL

**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth URL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.ad.url

**Required**

true

### Suppress Configuration Validator: Admin AD Auth User Search Filter

**Description**

Whether to suppress configuration warnings produced by the Admin AD Auth User Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ranger.ldap.ad.user.searchfilter`**Required**`true`**Suppress Configuration Validator: Admin LDAP Auth Base DN****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Base DN configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.base.dn`**Required**`true`**Suppress Configuration Validator: Admin LDAP Auth Bind User****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Bind User configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.bind.dn`**Required**`true`**Suppress Configuration Validator: Admin LDAP Auth Group Role Attribute****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Role Attribute configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.ldap.group.roleattribute`**Required**`true`**Suppress Configuration Validator: Admin LDAP Auth Group Search Base****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Search Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.group.searchbase

**Required**

true

**Suppress Configuration Validator: Admin LDAP Auth Group Search Filter****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Group Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.group.searchfilter

**Required**

true

**Suppress Configuration Validator: Admin LDAP Auth URL****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth URL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.url

**Required**

true

**Suppress Configuration Validator: Admin LDAP Auth User DN Pattern****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth User DN Pattern configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.user.dnpattern

**Required**

true

**Suppress Configuration Validator: Admin LDAP Auth User Search Filter****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth User Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.ldap.user.searchfilter

**Required**

true

**Suppress Configuration Validator: SSO Browser Useragent****Description**

Whether to suppress configuration warnings produced by the SSO Browser Useragent configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.sso.browser.useragent

**Required**

true

**Suppress Configuration Validator: SSO Provider Url****Description**

Whether to suppress configuration warnings produced by the SSO Provider Url configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.sso.providerurl

**Required**

true

**Suppress Configuration Validator: SSO Public Key****Description**

Whether to suppress configuration warnings produced by the SSO Public Key configuration validator.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_ranger.sso.publickey
<b>Required</b>
true

Suppress Configuration Validator: Tag Service Name

<b>Description</b>
Whether to suppress configuration warnings produced by the Tag Service Name configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ranger.tagservice.auto.name
<b>Required</b>
true

Suppress Configuration Validator: Capture Cluster name

<b>Description</b>
Whether to suppress configuration warnings produced by the Capture Cluster name configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ranger.tagsync.atlas.default.cluster.name
<b>Required</b>
true

Suppress Configuration Validator: Ranger Tagsync Username

<b>Description</b>
Whether to suppress configuration warnings produced by the Ranger Tagsync Username configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ranger.tagsync.dest.ranger.username
<b>Required</b>
true

Suppress Configuration Validator: File Source: Filename

<b>Description</b>
Whether to suppress configuration warnings produced by the File Source: Filename configuration validator.
<b>Related Name</b>

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger.tagsync.source.file.filename

**Required**

true

**Suppress Configuration Validator: Admin UNIX Auth Service Hostname****Description**

Whether to suppress configuration warnings produced by the Admin UNIX Auth Service Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.unixauth.service.hostname

**Required**

true

**Suppress Configuration Validator: Admin Unix Auth Service Port****Description**

Whether to suppress configuration warnings produced by the Admin Unix Auth Service Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.unixauth.service.port

**Required**

true

**Suppress Configuration Validator: Usersync Filesource File Name****Description**

Whether to suppress configuration warnings produced by the Usersync Filesource File Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.filesource.file

**Required**

true

**Suppress Configuration Validator: Usersync Filesource Delimiter****Description**

Whether to suppress configuration warnings produced by the Usersync Filesource Delimiter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.filesource.text.delimiter

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Group Based Role Assignment Rules****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Group Based Role Assignment Rules configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.based.role.assignment.rules

**Required**

true

**Suppress Configuration Validator: Usersync Group Member Attribute****Description**

Whether to suppress configuration warnings produced by the Usersync Group Member Attribute configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.memberattributename

**Required**

true

**Suppress Configuration Validator: Usersync Group Name Attribute****Description**

Whether to suppress configuration warnings produced by the Usersync Group Name Attribute configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.group.nameattribute

**Required**

true

### Suppress Configuration Validator: Usersync Group Object Class

#### Description

Whether to suppress configuration warnings produced by the Usersync Group Object Class configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger.usersync.group.objectclass

#### Required

true

### Suppress Configuration Validator: Usersync Group Search Base

#### Description

Whether to suppress configuration warnings produced by the Usersync Group Search Base configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger.usersync.group.searchbase

#### Required

true

### Suppress Configuration Validator: Usersync Group Search Filter

#### Description

Whether to suppress configuration warnings produced by the Usersync Group Search Filter configuration validator.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger.usersync.group.searchfilter

#### Required

true

### Suppress Configuration Validator: Usersync Bind User

#### Description

Whether to suppress configuration warnings produced by the Usersync Bind User configuration validator.

#### Related Name

#### Default Value

false

**API Name**`role_config_suppression_ranger.usersync.ldap.binddn`**Required**`true`**Suppress Configuration Validator: Usersync Search Base****Description**

Whether to suppress configuration warnings produced by the Usersync Search Base configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.ldap.searchbase`**Required**`true`**Suppress Configuration Validator: Usersync LDAP/AD URL****Description**

Whether to suppress configuration warnings produced by the Usersync LDAP/AD URL configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.ldap.url`**Required**`true`**Suppress Configuration Validator: Usersync User Group Name Attribute****Description**

Whether to suppress configuration warnings produced by the Usersync User Group Name Attribute configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.usersync.ldap.user.groupnameattribute`**Required**`true`**Suppress Configuration Validator: Usersync User Name Attribute****Description**

Whether to suppress configuration warnings produced by the Usersync User Name Attribute configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.nameattribute

**Required**

true

**Suppress Configuration Validator: Usersync User Object Class****Description**

Whether to suppress configuration warnings produced by the Usersync User Object Class configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.objectclass

**Required**

true

**Suppress Configuration Validator: Usersync User Search Base****Description**

Whether to suppress configuration warnings produced by the Usersync User Search Base configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.searchbase

**Required**

true

**Suppress Configuration Validator: Usersync User Search Filter****Description**

Whether to suppress configuration warnings produced by the Usersync User Search Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.ldap.user.searchfilter

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Polycmgr Username****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Polycmgr Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.policymgr.username

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Unix Service Port****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Unix Service Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.port

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Role Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Role Assignment List Delimiter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.role.assignment.list.delimiter

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Username Groupname Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Username Groupname Assignment List Delimiter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.username.groupname.assignment.list.delimiter

**Required**

true

**Suppress Configuration Validator: Ranger Usersync User Groups Assignment List Delimiter****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync User Groups Assignment List Delimiter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.usersync.users.groups.assignment.list.delimiter

**Required**

true

**Suppress Configuration Validator: Ranger Admin Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Conf Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_conf\_path

**Required**

true

**Suppress Configuration Validator: Ranger Admin Max Heapsize****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_admin\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Database Host****Description**

Whether to suppress configuration warnings produced by the Ranger Database Host configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_database\_host

**Required**

true

**Suppress Configuration Validator: Ranger Database Name****Description**

Whether to suppress configuration warnings produced by the Ranger Database Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_database\_name

**Required**

true

**Suppress Configuration Validator: Ranger Database User Password****Description**

Whether to suppress configuration warnings produced by the Ranger Database User Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_database\_password

**Required**

true

**Suppress Configuration Validator: Ranger Database User****Description**

Whether to suppress configuration warnings produced by the Ranger Database User configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_database\_user

**Required**

true

**Suppress Configuration Validator: Admin AD Auth Bind Password****Description**

Whether to suppress configuration warnings produced by the Admin AD Auth Bind Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ldap\_ad\_bind\_password

**Required**

true

**Suppress Configuration Validator: Admin LDAP Auth Bind User Password****Description**

Whether to suppress configuration warnings produced by the Admin LDAP Auth Bind User Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_ldap\_bind\_password

**Required**

true

**Suppress Configuration Validator: Knox Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Knox Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_ranger_proxyuser_knox_groups
<b>Required</b>
true

Suppress Configuration Validator: Knox Proxy User Hosts

<b>Description</b>
Whether to suppress configuration warnings produced by the Knox Proxy User Hosts configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ranger_proxyuser_knox_hosts
<b>Required</b>
true

Suppress Configuration Validator: Knox Proxy User Users

<b>Description</b>
Whether to suppress configuration warnings produced by the Knox Proxy User Users configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ranger_proxyuser_knox_users
<b>Required</b>
true

Suppress Configuration Validator: Ranger Tagsync Conf Path

<b>Description</b>
Whether to suppress configuration warnings produced by the Ranger Tagsync Conf Path configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ranger_tagsync_conf_path
<b>Required</b>
true

Suppress Configuration Validator: Ranger Tagsync Max Heapsize

<b>Description</b>
Whether to suppress configuration warnings produced by the Ranger Tagsync Max Heapsize configuration validator.
<b>Related Name</b>

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Metrics File Name****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Metrics File Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_metrics\_filename

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Metrics File Path****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Metrics File Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_metrics\_filepath

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tagsync\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Tomcat Work Dir****Description**

Whether to suppress configuration warnings produced by the Ranger Tomcat Work Dir configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_tomcat\_work\_dir

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Conf Path****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Conf Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_conf\_path

**Required**

true

**Suppress Configuration Validator: Usersync Bind User Password****Description**

Whether to suppress configuration warnings produced by the Usersync Bind User Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_ldap\_ldapbindpassword

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Max Heapsize****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Metrics File Name****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Metrics File Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_metrics\_filename

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Metrics File Path****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Metrics File Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_metrics\_filepath

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_usersync\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Ranger Admin TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Ranger Admin TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Ranger Admin TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Server Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Ranger Admin TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Ranger Admin TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Ranger KMS Keyadmin User Initial Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Keyadmin User Initial Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_keyadmin\_user\_password

**Required**

true

**Suppress Parameter Validation: Load Balancer Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Load Balancer Address parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_load\_balancer\_url

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Configuration Validator: Ranger Admin Count Validator****Description**

Whether to suppress configuration warnings produced by the Ranger Admin Count Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_admin\_count\_validator

**Required**

true

**Suppress Parameter Validation: Ranger Plugin DFS Audit URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin DFS Audit URL parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_plugin\_hdfs\_audit\_url

**Required**

true

**Suppress Parameter Validation: Ranger Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Admin HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_service\_http\_port

**Required**

true

**Suppress Parameter Validation: Admin HTTPS port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin HTTPS port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_service\_https\_port

**Required**

true

**Suppress Configuration Validator: Ranger Tagsync Count Validator****Description**

Whether to suppress configuration warnings produced by the Ranger Tagsync Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_tagsync\_count\_validator

**Required**

true

**Suppress Configuration Validator: Ranger Usersync Count Validator****Description**

Whether to suppress configuration warnings produced by the Ranger Usersync Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_usersync\_count\_validator

**Required**

true

**Suppress Parameter Validation: Ranger Admin User Initial Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin User Initial Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_rangeradmin\_user\_password

**Required**

true

**Suppress Parameter Validation: Ranger Tagsync User Initial Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tagsync User Initial Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_rangertagsync\_user\_password

**Required**

true

**Suppress Parameter Validation: Ranger Usersync User Initial Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync User Initial Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_rangerusersync\_user\_password

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Health Test: Ranger Admin Health****Description**

Whether to suppress the results of the Ranger Admin Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ranger\_ranger\_admin\_healthy

**Required**

true

**Suppress Health Test: Ranger Tagsync Health****Description**

Whether to suppress the results of the Ranger Tagsync Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ranger\_ranger\_ranger\_tagsync\_health

**Required**

true

**Suppress Health Test: Ranger Usersync Health****Description**

Whether to suppress the results of the Ranger Usersync Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ranger\_ranger\_ranger\_usersync\_health

**Required**

true

## Ranger KMS Properties in Cloudera Runtime 7.2.16

Role groups:

### Ranger KMS Server

#### Advanced

#### Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml

**Description**

For advanced use only. A string to be inserted into conf/core-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/core-site.xml\_role\_safety\_valve

**Required**

false

#### Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml

**Description**

For advanced use only. A string to be inserted into conf/dbks-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/dbks-site.xml\_role\_safety\_valve

**Required**

false

#### Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml

**Description**

For advanced use only. A string to be inserted into conf/hdfs-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/hdfs-site.xml\_role\_safety\_valve

**Required**

false

#### Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml

**Description**

For advanced use only. A string to be inserted into conf/kms-site.xml for this role only.

**Related Name**

**Default Value****API Name**`conf/kms-site.xml_role_safety_valve`**Required**`false`**Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-kms-audit.xml for this role only.

**Related Name****Default Value****API Name**`conf/ranger-kms-audit.xml_role_safety_valve`**Required**`false`**Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-kms-policymgr-ssl.xml for this role only.

**Related Name****Default Value****API Name**`conf/ranger-kms-policymgr-ssl.xml_role_safety_valve`**Required**`false`**Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-kms-security.xml for this role only.

**Related Name****Default Value****API Name**`conf/ranger-kms-security.xml_role_safety_valve`**Required**`false`**Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-kms-site.xml for this role only.

**Related Name**

**Default Value****API Name**`conf/ranger-kms-site.xml_role_safety_valve`**Required**`false`**Ranger KMS Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into `log4j.properties` for this role only.

**Related Name****Default Value****API Name**`log4j_safety_valve`**Required**`false`**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**`false`**API Name**`metric_config_auto_refresh`**Required**`false`**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**`oom_heap_dump_dir`**Default Value**`/tmp`**API Name**`oom_heap_dump_dir`**Required**`false`

### Dump Heap When Out of Memory

**Description**

When set, generates a heap dump file when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Ranger KMS Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

RANGER\_KMS\_SERVER\_role\_env\_safety\_valve

**Required**

false

**Logs****Ranger KMS Server Log Directory****Description**

The log directory for log files of the role Ranger KMS Server.

<b>Related Name</b>	log_dir
<b>Default Value</b>	/var/log/ranger/kms
<b>API Name</b>	log_dir
<b>Required</b>	false

**Ranger KMS Server Logging Threshold**

<b>Description</b>	The minimum log level for Ranger KMS Server logs
<b>Related Name</b>	
<b>Default Value</b>	INFO
<b>API Name</b>	log_threshold
<b>Required</b>	false

**Ranger KMS Server Maximum Log File Backups**

<b>Description</b>	The maximum number of rolled log files to keep for Ranger KMS Server logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	10
<b>API Name</b>	max_log_backup_index
<b>Required</b>	false

**Ranger KMS Server Max Log Size**

<b>Description</b>	The maximum size, in megabytes, per log file for Ranger KMS Server logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	200 MiB
<b>API Name</b>	max_log_size
<b>Required</b>	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts
Required	false

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

Log Directory Free Space Monitoring Absolute Thresholds

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
Related Name	
Default Value	Warning: 10 GiB, Critical: 5 GiB
API Name	log_directory_free_space_absolute_thresholds
Required	false

Log Directory Free Space Monitoring Percentage Thresholds

Description	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.
Related Name	
Default Value	Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

### Swap Memory Usage Rate Window

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ranger\_kms\_server\_fd\_thresholds

**Required**

false

### Ranger KMS Server Host Health Test

**Description**

When computing the overall Ranger KMS Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ranger\_kms\_server\_host\_health\_enabled

**Required**

false

**Ranger KMS Server Process Health Test****Description**

Enables the health test that the Ranger KMS Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ranger\_kms\_server\_scm\_health\_enabled

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Ranger KMS Server Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name****Default Value**

5 minute(s)

**API Name**

csd\_role\_diagnostics\_timeout

**Required**

false

**Graceful Shutdown Timeout****Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

**Related Name****Default Value**

18 second(s)

**API Name**

graceful\_stop\_timeout

**Required**

false

### Hadoop KMS Audit Aggregation Window In Milliseconds

**Description**

Duplicate audit log events within the aggregation window (specified in ms) are quashed to reduce log traffic. A single message for aggregated events is printed at the end of the window, along with a count of the number of aggregated events.

**Related Name**

hadoop.kms.audit.aggregation.window.ms

**Default Value**

10 second(s)

**API Name**

hadoop\_kms\_audit\_aggregation\_window\_ms

**Required**

false

### Hadoop KMS Authentication Signer Secret Provider

**Description**

Indicates how the secret to sign the authentication cookies will be stored. Options are 'random' (default), 'string' and 'zookeeper'. If using a setup with multiple KMS instances, 'zookeeper' should be used.

**Related Name**

hadoop.kms.authentication.signer.secret.provider

**Default Value**

random

**API Name**

hadoop\_kms\_authentication\_signer\_secret\_provider

**Required**

false

### Hadoop KMS Authentication Signer Secret Provider Zookeeper Auth Type

**Description**

The Zookeeper authentication type, 'none' or kerberos.

**Related Name**

hadoop.kms.authentication.signer.secret.provider.zookeeper.auth.type

**Default Value**

none

**API Name**

hadoop\_kms\_authentication\_signer\_secret\_provider\_zookeeper\_auth\_type

**Required**

false

### Hadoop KMS Authentication Signer Secret Provider Zookeeper Path

**Description**

The Zookeeper ZNode path where the KMS instances will store and retrieve the secret from.

**Related Name**

hadoop.kms.authentication.signer.secret.provider.zookeeper.path

**Default Value**`/hadoop-kms/hadoop-auth-signature-secret`**API Name**`hadoop_kms_authentication_signer_secret_provider_zookeeper_path`**Required**`false`**Hadoop KMS Blacklist Decrypt EEK****Description**

Add user which is needed to be blacklist for decrypt EncryptedKey CryptoExtension operations. Multiple list of user's can be added with comma separated.

**Related Name**`hadoop.kms.blacklist.DECRYPT_EEK`**Default Value**`hdfs`**API Name**`hadoop_kms_blacklist_decrypt_eeek`**Required**`false`**Hadoop KMS Cache Enable****Description**

Whether the KMS will act as a cache for the backing KeyProvider. When the cache is enabled, operations like `getKeyVersion`, `getMetadata`, and `getCurrentKey` will sometimes return cached data without consulting the backing KeyProvider. Cached values are flushed when keys are deleted or modified.

**Related Name**`hadoop.kms.cache.enable`**Default Value**`true`**API Name**`hadoop_kms_cache_enable`**Required**`false`**Hadoop Kms Cache Timeout In Milliseconds****Description**

Expiry time for the KMS key version and key metadata cache, in milliseconds. This affects `getKeyVersion` and `getMetadata`.

**Related Name**`hadoop.kms.cache.timeout.ms`**Default Value**`10 minute(s)`**API Name**`hadoop_kms_cache_timeout_ms`

**Required**

false

**Hadoop KMS Current Key Cache Timeout In Milliseconds****Description**

Expiry time for the KMS current key cache, in milliseconds. This affects getCurrentKey operations.

**Related Name**`hadoop.kms.current.key.cache.timeout.ms`**Default Value**

30 second(s)

**API Name**`hadoop_kms_current_key_cache_timeout_ms`**Required**

false

**HDFS Proxy User Groups****Description**

Allows the hdfs superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**`hadoop.kms.proxyuser.hdfs.groups`**Default Value**

\*

**API Name**`hadoop_kms_proxyuser_hdfs_groups`**Required**

false

**HDFS Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the hdfs user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**`hadoop.kms.proxyuser.hdfs.hosts`**Default Value**

\*

**API Name**`hadoop_kms_proxyuser_hdfs_hosts`**Required**

false

**Hive Proxy User Groups****Description**

Allows the hive superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.hive.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hive\_groups

**Required**

false

**Hive Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the hive user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

hadoop.kms.proxyuser.hive.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hive\_hosts

**Required**

false

**HTTP Proxy User Groups****Description**

Allows the HTTP superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.HTTP.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_HTTP\_groups

**Required**

false

**HTTP Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

	hadoop.kms.proxyuser.HTTP.hosts
Default Value	*
API Name	
	hadoop_kms_proxyuser_HTTP_hosts
Required	false

HttpFS Proxy User Groups

Description	Allows the httpfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.
Related Name	hadoop.kms.proxyuser.httpfs.groups
Default Value	*
API Name	
	hadoop_kms_proxyuser_httpfs_groups
Required	false

HttpFS Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the httpfs user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.
Related Name	hadoop.kms.proxyuser.httpfs.hosts
Default Value	*
API Name	
	hadoop_kms_proxyuser_httpfs_hosts
Required	false

Hue Proxy User Groups

Description	Allows the hue superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.
Related Name	hadoop.kms.proxyuser.hue.groups
Default Value	*

**API Name**

hadoop\_kms\_proxyuser\_hue\_groups

**Required**

false

**Hue Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the hue user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.hue.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hue\_hosts

**Required**

false

**Livy Proxy User Groups****Description**

Allows the livy superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.livy.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_livy\_groups

**Required**

false

**Livy Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the livy user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.livy.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_livy\_hosts

**Required**

false

### Mapred Proxy User Groups

**Description**

Allows the mapred superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.mapred.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_mapred\_groups

**Required**

false

### Mapred Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the mapred user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

hadoop.kms.proxyuser.mapred.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_mapred\_hosts

**Required**

false

### Oozie Proxy User Groups

**Description**

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.oozie.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_oozie\_groups

**Required**

false

### Oozie Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.oozie.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_oozie\_hosts

**Required**

false

### Ranger Proxy User Groups

**Description**

Allows the ranger superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.ranger.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_ranger\_groups

**Required**

false

### Ranger Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the ranger user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.ranger.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_ranger\_hosts

**Required**

false

### YARN Proxy User Groups

**Description**

Allows the yarn superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

	hadoop.kms.proxyuser.yarn.groups
Default Value	*
API Name	
	hadoop_kms_proxyuser_yarn_groups
Required	false

YARN Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the yarn user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
Related Name	hadoop.kms.proxyuser.yarn.hosts
Default Value	*
API Name	
	hadoop_kms_proxyuser_yarn_hosts
Required	false

Zeppelin Proxy User Groups

Description	Allows the zeppelin superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.
Related Name	hadoop.kms.proxyuser.zeppelin.groups
Default Value	*
API Name	
	hadoop_kms_proxyuser_zeppelin_groups
Required	false

Zeppelin Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the zeppelin user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
Related Name	hadoop.kms.proxyuser.zeppelin.hosts
Default Value	*

**API Name**

hadoop\_kms\_proxyuser\_zeppelin\_hosts

**Required**

false

**Hadoop Security Keystore JavaKeyStoreProvider Password****Description**

If using the JavaKeyStoreProvider, the password for the keystore file.

**Related Name**

hadoop.security.keystore.JavaKeyStoreProvider.password

**Default Value****API Name**

hadoop\_security\_keystore\_javakeystoreprovider\_password

**Required**

false

**Azure Client ID****Description**

Azure client id is a unique identifier generated by Azure AD that is tied to an application and service principal during its initial provisioning.

**Related Name**

ranger.kms.azure.client.id

**Default Value****API Name**

ranger\_kms\_azure\_client\_id

**Required**

false

**Azure Client Secret****Description**

Azure client secret to authenticate to key vault.

**Related Name**

ranger.kms.azure.client.secret

**Default Value****API Name**

ranger\_kms\_azure\_client\_secret

**Required**

false

**Azure key vault certificate password****Description**

Azure key vault certificate password.

**Related Name**

ranger.kms.azure.keyvault.certificate.password

**Default Value****API Name**

ranger\_kms\_azure\_keyvault\_certificate\_password

**Required**

false

**Azure Key Vault Certificate Path****Description**

Azure key vault certificate path.

**Related Name**

ranger.kms.azure.keyvault.certificate.path

**Default Value****API Name**

ranger\_kms\_azure\_keyvault\_certificate\_path

**Required**

false

**Enable Azure Key Vault SSL****Description**

Azure authentication via certificate or password.

**Related Name**

ranger.kms.azure.keyvault.ssl.enabled

**Default Value**

false

**API Name**

ranger\_kms\_azure\_keyvault\_ssl\_enabled

**Required**

false

**Azure Master Key Name****Description**

Azure master key name.

**Related Name**

ranger.kms.azure.masterkey.name

**Default Value****API Name**

ranger\_kms\_azure\_masterkey\_name

**Required**

false

**Azure Master Key Type****Description**

Select the type for the Master key. Key Vault supports RSA and Elliptic Curve keys.

**Related Name**

ranger.kms.azure.masterkey.type

**Default Value**

RSA

**API Name**

ranger\_kms\_azure\_masterkey\_type

**Required**

false

**Azure Zonekey Encryption Algorithm****Description**

A supported algorithm for a encryption zone key operation.

**Related Name**

ranger.kms.azure.zonekey.encryption.algorithm

**Default Value**

RSA1\_5

**API Name**

ranger\_kms\_azure\_zonekey\_encryption\_algorithm

**Required**

false

**Enable Azure Key Vault****Description**

Whether to enable Azure key vault for secure key management.

**Related Name**

ranger.kms.azurekeyvault.enabled

**Default Value**

false

**API Name**

ranger\_kms\_azurekeyvault\_enabled

**Required**

false

**Azure Key Vault Url****Description**

Azure Key Vault url of format "https://{keyvault-name}.vault.azure.net/", where keyvault-name is the name for a key vault in the Microsoft Azure Key Vault service.

**Related Name**

ranger.kms.azurekeyvault.url

**Default Value****API Name**

ranger\_kms\_azurekeyvault\_url

**Required**

false

### Enable Hardware Security Module (HSM) For Ranger KMS (Luna)

**Description**

Whether to enable HSM for protection of cryptographic keys.

**Related Name**

ranger.ks.hsm.enabled

**Default Value**

false

**API Name**

ranger\_kms\_hsm\_enabled

**Required**

false

### HSM Partition Name

**Description**

Independent logical HSM partition that resides within Luna SA appliance's physical K6 HSM appliances. It manage access controls, security policies and administration access. In case of high availability enter the group name.

**Related Name**

ranger.ks.hsm.partition.name

**Default Value****API Name**

ranger\_kms\_hsm\_partition\_name

**Required**

false

### HSM partition password

**Description**

Password for securing HSM partition.

**Related Name**

ranger.ks.hsm.partition.password

**Default Value****API Name**

ranger\_kms\_hsm\_partition\_password

**Required**

false

### HSM Type

**Description**

Select HSM type.

**Related Name**

ranger.ks.hsm.type

**Default Value**

LunaProvider

**API Name**

ranger_kms_hsm_type
<b>Required</b>
false

Enable SafeNet Keysecure For Ranger KMS

<b>Description</b>
Whether to enable Keysecure for secure and centralized key management.
<b>Related Name</b>
ranger.kms.keysecure.enabled
<b>Default Value</b>
false
<b>API Name</b>
ranger_kms_keysecure_enabled
<b>Required</b>
false

SafeNet Keysecure Hostname

<b>Description</b>
Hostname of SafeNet Keysecure.
<b>Related Name</b>
ranger.kms.keysecure.hostname
<b>Default Value</b>
<b>API Name</b>
ranger_kms_keysecure_hostname
<b>Required</b>
false

SafeNet Keysecure Login Password

<b>Description</b>
Login Password for accessing SafeNet Keysecure.
<b>Related Name</b>
ranger.kms.keysecure.login.password
<b>Default Value</b>
<b>API Name</b>
ranger_kms_keysecure_login_password
<b>Required</b>
false

SafeNet Keysecure Login Username

<b>Description</b>
Login Username for accessing SafeNet Keysecure.
<b>Related Name</b>
ranger.kms.keysecure.login.username
<b>Default Value</b>

**API Name**

ranger\_kms\_keysecure\_login\_username

**Required**

false

**SafeNet Keysecure MasterKey Name****Description**

Enter Keysecure masterkey Name. It is used for encrypting/decrypting zone keys.

**Related Name**

ranger.kms.keysecure.masterkey.name

**Default Value****API Name**

ranger\_kms\_keysecure\_masterkey\_name

**Required**

false

**SafeNet Keysecure Masterkey Size****Description**

SafeNet Keysecure Masterkey Size.

**Related Name**

ranger.kms.keysecure.masterkey.size

**Default Value**

256

**API Name**

ranger\_kms\_keysecure\_masterkey\_size

**Required**

false

**SafeNet Keysecure Sunpkcs11 cfg Filepath****Description**

SafeNet Keysecure sunpkcs11 cfg filepath.

**Related Name**

ranger.kms.keysecure.sunpkcs11.cfg.filepath

**Default Value****API Name**

ranger\_kms\_keysecure\_sunpkcs11\_cfg\_filepath

**Required**

false

**Enable SafeNet Keysecure User Password Authentication****Description**

Whether to enable SafeNet Keysecure user password authentication.

**Related Name**

ranger.kms.keysecure.UserPassword.Authentication

**Default Value**

false

**API Name**

ranger\_kms\_keysecure\_userpassword\_authentication

**Required**

false

**Ranger KMS Master Key Password****Description**

Password for Ranger KMS Master Key.

**Related Name**

ranger.db.encrypt.key.password

**Default Value****API Name**

ranger\_kms\_master\_key\_password

**Required**

true

**Ranger KMS Max Heapsize****Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

**Related Name**

ranger\_kms\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

ranger\_kms\_max\_heap\_size

**Required**

true

**Ranger KMS Plugin Audit Hdfs Spool Directory Path****Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

xasecure.audit.destination.hdfs.batch.filespool.dir

**Default Value**

/var/log/kms/audit/hdfs/spool

**API Name**

ranger\_kms\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Ranger KMS Plugin Policy Cache Directory Path****Description**

The directory where Ranger security policies are cached locally.

**Related Name**

ranger.plugin.kms.policy.cache.dir

**Default Value**

/var/lib/ranger/kms/policy-cache

**API Name**

ranger\_kms\_plugin\_policy\_cache\_directory

**Required**

true

**Ranger KMS Plugin Audit Solr Spool Directory Path****Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**

xasecure.audit.destination.solr.batch.filespool.dir

**Default Value**

/var/log/kms/audit/solr/spool

**API Name**

ranger\_kms\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Ranger Kms Server Canary Health Enabled****Description**

Ranger Kms Server Canary is enabled/disabled

**Related Name**

ranger\_kms\_server\_canary\_health\_enabled

**Default Value**

true

**API Name**

ranger\_kms\_server\_canary\_health\_enabled

**Required**

false

**Ranger Kms Server Canary Health Timeout****Description**

Timeout for Ranger Kms Server Canary health check.

**Related Name**

ranger\_kms\_server\_canary\_health\_timeout

**Default Value**

30 second(s)

**API Name**

ranger\_kms\_server\_canary\_health\_timeout

**Required**

false

**Ranger KMS Tomcat Work Dir**

**Description**

Tomcat work directory for Ranger KMS. This should generally not be changed.

**Related Name**

ranger\_kms\_tomcat\_work\_dir

**Default Value**

/var/lib/ranger/kms

**API Name**

ranger\_kms\_tomcat\_work\_dir

**Required**

true

**Ranger Plugin Trusted Proxy IP Address**

**Description**

Accepts a list of IP addresses of proxy servers for trusting.

**Related Name**

ranger.plugin.kms.trusted.proxy.ipaddress

**Default Value**

**API Name**

ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

false

**Ranger Plugin Use X-Forwarded For IP Address**

**Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

**Related Name**

ranger.plugin.kms.use.x-forwarded-for.ipaddress

**Default Value**

false

**API Name**

ranger\_plugin\_use\_x\_forwarded\_for\_ipaddress

**Required**

false

**Performance**

**Maximum Process File Descriptors**

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name**

<b>Default Value</b>
<b>API Name</b>
rlimit_fds
<b>Required</b>
false

Ports and Addresses

Ranger KMS HTTP Port

<b>Description</b>
HTTP Port for Ranger KMS.
<b>Related Name</b>
ranger.service.http.port
<b>Default Value</b>
9292
<b>API Name</b>
ranger_kms_http_port
<b>Required</b>
false

Ranger KMS HTTPS Port

<b>Description</b>
HTTPS Port for Ranger KMS. Only used when SSL is enabled for Ranger KMS.
<b>Related Name</b>
ranger.service.https.port
<b>Default Value</b>
9494
<b>API Name</b>
ranger_kms_https_port
<b>Required</b>
false

Resource Management

Cgroup CPU Shares

<b>Description</b>
Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.
<b>Related Name</b>
cpu.shares
<b>Default Value</b>
1024
<b>API Name</b>
rm_cpu_shares
<b>Required</b>

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

### Security

### Ranger KMS Server TLS/SSL Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger KMS Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

xasecure.policymgr.clientssl.truststore

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

### Ranger KMS Server TLS/SSL Trust Store Password

**Description**

The password for the Ranger KMS Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

xasecure.policymgr.clientssl.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

Enable TLS/SSL for Ranger KMS Server

Description	Encrypt communication between clients and Ranger KMS Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).
Related Name	ranger.service.https.attrib.ssl.enabled
Default Value	false
API Name	ssl_enabled
Required	false

Ranger KMS Server TLS/SSL Server Keystore File Location

Description	The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger KMS Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.
Related Name	ranger.service.https.attrib.keystore.file
Default Value	
API Name	ssl_server_keystore_location
Required	false

Ranger KMS Server TLS/SSL Server Keystore File Password

Description	The password for the Ranger KMS Server keystore file.
Related Name	ranger.service.https.attrib.keystore.pass
Default Value	
API Name	ssl_server_keystore_password
Required	false

Stacks Collection

Stacks Collection Data Retention

Description	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name	stacks_collection_data_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory****Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

Stacks Collection Method

Description	The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.
Related Name	stacks_collection_method
Default Value	jstack
API Name	stacks_collection_method
Required	false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_conf/core-site.xml_role_safety_valve
Required	true

Suppress Parameter Validation: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml

Description	
-------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/dbks-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/hdfs-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/kms-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Hadoop KMS Authentication Signer Secret Provider Zookeeper Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop KMS Authentication Signer Secret Provider Zookeeper Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_authentication\_signer\_secret\_provider\_zookeeper\_path

**Required**

true

**Suppress Parameter Validation: Hadoop KMS Blacklist Decrypt EEK****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop KMS Blacklist Decrypt EEK parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_blacklist\_decrypt\_eeek

**Required**

true

**Suppress Parameter Validation: HDFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hdfs\_groups

**Required**

true

**Suppress Parameter Validation: HDFS Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Proxy User Hosts parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hdfs\_hosts

**Required**

true

**Suppress Parameter Validation: Hive Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_groups

**Required**

true

**Suppress Parameter Validation: Hive Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_hosts

**Required**

true

**Suppress Parameter Validation: HTTP Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_groups

**Required**

true

**Suppress Parameter Validation: HTTP Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_hosts

**Required**

true

**Suppress Parameter Validation: HttpFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_httpfs\_groups

**Required**

true

**Suppress Parameter Validation: HttpFS Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_httpfs\_hosts

**Required**

true

**Suppress Parameter Validation: Hue Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_groups

**Required**

true

Suppress Parameter Validation: Hue Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Hosts parameter.

Related Name

Default Value

false

API Name

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_hosts

Required

true

Suppress Parameter Validation: Livy Proxy User Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Proxy User Groups parameter.

Related Name

Default Value

false

API Name

role\_config\_suppression\_hadoop\_kms\_proxyuser\_livy\_groups

Required

true

Suppress Parameter Validation: Livy Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Proxy User Hosts parameter.

Related Name

Default Value

false

API Name

role\_config\_suppression\_hadoop\_kms\_proxyuser\_livy\_hosts

Required

true

Suppress Parameter Validation: Mapred Proxy User Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Mapred Proxy User Groups parameter.

Related Name

Default Value

false

**API Name**`role_config_suppression_hadoop_kms_proxyuser_mapred_groups`**Required**`true`**Suppress Parameter Validation: Mapred Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Mapred Proxy User Hosts parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_mapred_hosts`**Required**`true`**Suppress Parameter Validation: Oozie Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Groups parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_oozie_groups`**Required**`true`**Suppress Parameter Validation: Oozie Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Hosts parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_oozie_hosts`**Required**`true`**Suppress Parameter Validation: Ranger Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_ranger\_groups

**Required**

true

**Suppress Parameter Validation: Ranger Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_ranger\_hosts

**Required**

true

**Suppress Parameter Validation: YARN Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_groups

**Required**

true

**Suppress Parameter Validation: YARN Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_hosts

**Required**

true

**Suppress Parameter Validation: Zeppelin Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_zeppelin\_groups

**Required**

true

**Suppress Parameter Validation: Zeppelin Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_zeppelin\_hosts

**Required**

true

**Suppress Parameter Validation: Hadoop Security Keystore JavaKeyStoreProvider Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Security Keystore JavaKeyStoreProvider Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_keystore\_javakeystoreprovider\_password

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Azure Client ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Azure Client ID parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azure\_client\_id

**Required**

true

**Suppress Parameter Validation: Azure Client Secret****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Azure Client Secret parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azure\_client\_secret

**Required**

true

**Suppress Parameter Validation: Azure key vault certificate password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Azure key vault certificate password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azure\_keyvault\_certificate\_password

**Required**

true

**Suppress Parameter Validation: Azure Key Vault Certificate Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Azure Key Vault Certificate Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azure\_keyvault\_certificate\_path

**Required**

true

**Suppress Parameter Validation: Azure Master Key Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Azure Master Key Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azure\_masterkey\_name

**Required**

true

**Suppress Parameter Validation: Azure Key Vault Url****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Azure Key Vault Url parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azurekeyvault\_url

**Required**

true

**Suppress Parameter Validation: HSM Partition Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HSM Partition Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_hsm\_partition\_name

**Required**

true

**Suppress Parameter Validation: HSM partition password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HSM partition password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_hsm\_partition\_password

**Required**

true

**Suppress Parameter Validation: Ranger KMS HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_http\_port

**Required**

true

**Suppress Parameter Validation: Ranger KMS HTTPS Port**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS HTTPS Port parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_https\_port

**Required**

true

**Suppress Parameter Validation: SafeNet Keysecure Hostname**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SafeNet Keysecure Hostname parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_keysecure\_hostname

**Required**

true

**Suppress Parameter Validation: SafeNet Keysecure Login Password**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SafeNet Keysecure Login Password parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_keysecure\_login\_password

**Required**

true

**Suppress Parameter Validation: SafeNet Keysecure Login Username**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SafeNet Keysecure Login Username parameter.

**Related Name**

**Default Value**

false

**API Name**`role_config_suppression_ranger_kms_keysecure_login_username`**Required**`true`**Suppress Parameter Validation: SafeNet Keysecure MasterKey Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SafeNet Keysecure MasterKey Name parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kms_keysecure_masterkey_name`**Required**`true`**Suppress Parameter Validation: SafeNet Keysecure Sunpkcs11 cfg Filepath****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SafeNet Keysecure Sunpkcs11 cfg Filepath parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kms_keysecure_sunpkcs11_cfg_filepath`**Required**`true`**Suppress Parameter Validation: Ranger KMS Master Key Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Master Key Password parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kms_master_key_password`**Required**`true`**Suppress Parameter Validation: Ranger KMS Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Ranger KMS Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Plugin Audit Hdfs Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger KMS Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Plugin Policy Cache Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Parameter Validation: Ranger KMS Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Plugin Audit Solr Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Tomcat Work Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Tomcat Work Dir parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_tomcat\_work\_dir

**Required**

true

**Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server TLS/SSL Server Keystore File Location parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_ranger\_kms\_server\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_ranger\_kms\_server\_file\_descriptor

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_ranger\_kms\_server\_host\_health

**Required**

true

### Suppress Health Test: Log Directory Free Space

**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_ranger\_kms\_server\_log\_directory\_free\_space

**Required**

true

### Suppress Health Test: Process Status

**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_ranger\_kms\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_ranger\_kms\_server\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_ranger\_kms\_server\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_ranger\_kms\_server\_unexpected\_exits

**Required**

true

**Suppress Health Test: Ranger KMS URL Canary Check**

<b>Description</b>	Whether to suppress the results of the Ranger KMS URL Canary Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	role_health_suppression_ranger_kms_server_canary
<b>Required</b>	true

**Service-Wide**

**Advanced**

**System Group**

<b>Description</b>	The group that this service's processes should run as.
<b>Related Name</b>	
<b>Default Value</b>	kms
<b>API Name</b>	process_groupname
<b>Required</b>	true

**System User**

<b>Description</b>	The user that this service's processes should run as.
<b>Related Name</b>	
<b>Default Value</b>	kms
<b>API Name</b>	process_username
<b>Required</b>	true

**Ranger KMS Service Environment Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>	For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.
<b>Related Name</b>	
<b>Default Value</b>	

<b>API Name</b>	RANGER_KMS_service_env_safety_valve
<b>Required</b>	false

Database

Ranger KMS Database Host

<b>Description</b>	Hostname of the database used by Ranger KMS. If the port is non-default for your database type, use host:port notation.
<b>Related Name</b>	ranger_kms_database_host
<b>Default Value</b>	localhost
<b>API Name</b>	ranger_kms_database_host
<b>Required</b>	true

Ranger KMS Database Name

<b>Description</b>	Name of Ranger KMS database.
<b>Related Name</b>	ranger_kms_database_name
<b>Default Value</b>	rangerkms
<b>API Name</b>	ranger_kms_database_name
<b>Required</b>	true

Ranger KMS Database User Password

<b>Description</b>	Password for Ranger KMS database.
<b>Related Name</b>	ranger.ks.jpa.jdbc.password
<b>Default Value</b>	
<b>API Name</b>	ranger_kms_database_password
<b>Required</b>	true

Ranger KMS Database Port

<b>Description</b>	
--------------------	--

	Port for Ranger KMS database.
Related Name	ranger_kms_database_port
Default Value	5432
API Name	ranger_kms_database_port
Required	true

Ranger KMS Database Type

Description	Database type to be used (postgres).
Related Name	ranger_kms_database_type
Default Value	postgresql
API Name	ranger_kms_database_type
Required	true

Ranger KMS Database User

Description	User for Ranger KMS database.
Related Name	ranger.ks.jpa.jdbc.user
Default Value	rangerkms
API Name	ranger_kms_database_user
Required	true

Monitoring

Enable Service Level Health Alerts

Description	When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Healthy Ranger KMS Server Monitoring Thresholds****Description**

The health test thresholds of the overall Ranger KMS Server health. The check returns "Concerning" health if the percentage of "Healthy" Ranger KMS Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger KMS Servers falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 49.0 %

**API Name**

RANGER\_KMS\_RANGER\_KMS\_SERVER\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on

how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****Ranger KMS Authentication Type****Description**

Authentication type for the Ranger KMS. Can either be "simple" or "kerberos".

**Related Name**

hadoop.kms.authentication.type

**Default Value**

kerberos

**API Name**

hadoop\_kms\_authentication\_type

**Required**

true

**Ranger KMS Load Balancer****Description**

Only required when Ranger KMS is running with High Availability.

**Related Name**

ranger\_kms\_load\_balancer

**Default Value****API Name**

ranger\_kms\_load\_balancer

**Required**

false

**Ranger KMS Plugin Hdfs Audit Directory**

**Description**

The DFS path on which Ranger audits are written.

**Related Name**

ranger\_kms\_plugin\_hdfs\_audit\_directory

**Default Value**

\$ranger\_base\_audit\_url/kms

**API Name**

ranger\_kms\_plugin\_hdfs\_audit\_directory

**Required**

false

**ZooKeeper Service**

**Description**

Name of the ZooKeeper service that this Ranger KMS service instance depends on

**Related Name**

**Default Value**

**API Name**

zookeeper\_service

**Required**

false

**Security**

**Kerberos Principal**

**Description**

Kerberos principal short name used by all roles of this service.

**Related Name**

**Default Value**

rangerkms

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions**

**Suppress Configuration Validator: CDH Version Validator**

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/core-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/dbks-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/hdfs-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/kms-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Hadoop KMS Authentication Signer Secret Provider Zookeeper Path****Description**

Whether to suppress configuration warnings produced by the Hadoop KMS Authentication Signer Secret Provider Zookeeper Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_authentication\_signer\_secret\_provider\_zookeeper\_path

**Required**

true

**Suppress Configuration Validator: Hadoop KMS Blacklist Decrypt EEK****Description**

Whether to suppress configuration warnings produced by the Hadoop KMS Blacklist Decrypt EEK configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_blacklist\_decrypt\_eeek

**Required**

true

**Suppress Configuration Validator: HDFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the HDFS Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hdfs\_groups

**Required**

true

**Suppress Configuration Validator: HDFS Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the HDFS Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hdfs\_hosts

**Required**

true

**Suppress Configuration Validator: Hive Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Hive Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_groups

**Required**

true

**Suppress Configuration Validator: Hive Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Hive Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_hosts

**Required**

true

**Suppress Configuration Validator: HTTP Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the HTTP Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_groups

**Required**

true

**Suppress Configuration Validator: HTTP Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the HTTP Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_hosts

**Required**

true

**Suppress Configuration Validator: HttpFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the HttpFS Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_httpfs\_groups

**Required**

true

**Suppress Configuration Validator: HttpFS Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the HttpFS Proxy User Hosts configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_https\_hosts

**Required**

true

**Suppress Configuration Validator: Hue Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_groups

**Required**

true

**Suppress Configuration Validator: Hue Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_hosts

**Required**

true

**Suppress Configuration Validator: Livy Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Livy Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_livy\_groups

**Required**

true

**Suppress Configuration Validator: Livy Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Livy Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_livy\_hosts

**Required**

true

**Suppress Configuration Validator: Mapred Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Mapred Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_mapred\_groups

**Required**

true

**Suppress Configuration Validator: Mapred Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Mapred Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_mapred\_hosts

**Required**

true

**Suppress Configuration Validator: Oozie Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Oozie Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_groups

**Required**

true

**Suppress Configuration Validator: Oozie Proxy User Hosts**

**Description**

Whether to suppress configuration warnings produced by the Oozie Proxy User Hosts configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_hosts

**Required**

true

**Suppress Configuration Validator: Ranger Proxy User Groups**

**Description**

Whether to suppress configuration warnings produced by the Ranger Proxy User Groups configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_ranger\_groups

**Required**

true

**Suppress Configuration Validator: Ranger Proxy User Hosts**

**Description**

Whether to suppress configuration warnings produced by the Ranger Proxy User Hosts configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_ranger\_hosts

**Required**

true

**Suppress Configuration Validator: YARN Proxy User Groups**

**Description**

Whether to suppress configuration warnings produced by the YARN Proxy User Groups configuration validator.

**Related Name**

**Default Value**

false

**API Name**`role_config_suppression_hadoop_kms_proxyuser_yarn_groups`**Required**`true`**Suppress Configuration Validator: YARN Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the YARN Proxy User Hosts configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_yarn_hosts`**Required**`true`**Suppress Configuration Validator: Zeppelin Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Zeppelin Proxy User Groups configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_zeppelin_groups`**Required**`true`**Suppress Configuration Validator: Zeppelin Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Zeppelin Proxy User Hosts configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_zeppelin_hosts`**Required**`true`**Suppress Configuration Validator: Hadoop Security Keystore JavaKeyStoreProvider Password****Description**

Whether to suppress configuration warnings produced by the Hadoop Security Keystore JavaKeyStoreProvider Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_keystore\_javakeystoreprovider\_password

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Azure Client ID****Description**

Whether to suppress configuration warnings produced by the Azure Client ID configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azure\_client\_id

**Required**

true

**Suppress Configuration Validator: Azure Client Secret****Description**

Whether to suppress configuration warnings produced by the Azure Client Secret configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azure\_client\_secret

**Required**

true

**Suppress Configuration Validator: Azure key vault certificate password****Description**

Whether to suppress configuration warnings produced by the Azure key vault certificate password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azure\_keyvault\_certificate\_password

**Required**

true

**Suppress Configuration Validator: Azure Key Vault Certificate Path****Description**

Whether to suppress configuration warnings produced by the Azure Key Vault Certificate Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azure\_keyvault\_certificate\_path

**Required**

true

**Suppress Configuration Validator: Azure Master Key Name****Description**

Whether to suppress configuration warnings produced by the Azure Master Key Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azure\_masterkey\_name

**Required**

true

**Suppress Configuration Validator: Azure Key Vault Url****Description**

Whether to suppress configuration warnings produced by the Azure Key Vault Url configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_azurekeyvault\_url

**Required**

true

**Suppress Configuration Validator: HSM Partition Name****Description**

Whether to suppress configuration warnings produced by the HSM Partition Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_hsm\_partition\_name

**Required**

true

**Suppress Configuration Validator: HSM partition password****Description**

Whether to suppress configuration warnings produced by the HSM partition password configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_hsm\_partition\_password

**Required**

true

**Suppress Configuration Validator: Ranger KMS HTTP Port****Description**

Whether to suppress configuration warnings produced by the Ranger KMS HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_http\_port

**Required**

true

**Suppress Configuration Validator: Ranger KMS HTTPS Port****Description**

Whether to suppress configuration warnings produced by the Ranger KMS HTTPS Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_https\_port

**Required**

true

**Suppress Configuration Validator: SafeNet Keysecure Hostname****Description**

Whether to suppress configuration warnings produced by the SafeNet Keysecure Hostname configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_keysecure\_hostname

**Required**

true

**Suppress Configuration Validator: SafeNet Keysecure Login Password****Description**

Whether to suppress configuration warnings produced by the SafeNet Keysecure Login Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_keysecure\_login\_password

**Required**

true

**Suppress Configuration Validator: SafeNet Keysecure Login Username****Description**

Whether to suppress configuration warnings produced by the SafeNet Keysecure Login Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_keysecure\_login\_username

**Required**

true

**Suppress Configuration Validator: SafeNet Keysecure MasterKey Name****Description**

Whether to suppress configuration warnings produced by the SafeNet Keysecure MasterKey Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_keysecure\_masterkey\_name

**Required**

true

**Suppress Configuration Validator: SafeNet Keysecure Sunpkcs11 cfg Filepath****Description**

Whether to suppress configuration warnings produced by the SafeNet Keysecure Sunpkcs11 cfg Filepath configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_keysecure\_sunpkcs11\_cfg\_filepath

**Required**

true

### Suppress Configuration Validator: Ranger KMS Master Key Password

**Description**

Whether to suppress configuration warnings produced by the Ranger KMS Master Key Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_master\_key\_password

**Required**

true

### Suppress Configuration Validator: Ranger KMS Max Heapsize

**Description**

Whether to suppress configuration warnings produced by the Ranger KMS Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_max\_heap\_size

**Required**

true

### Suppress Configuration Validator: Ranger KMS Plugin Audit Hdfs Spool Directory Path

**Description**

Whether to suppress configuration warnings produced by the Ranger KMS Plugin Audit Hdfs Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

### Suppress Configuration Validator: Ranger KMS Plugin Policy Cache Directory Path

**Description**

Whether to suppress configuration warnings produced by the Ranger KMS Plugin Policy Cache Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ranger_kms_plugin_policy_cache_directory`**Required**`true`**Suppress Configuration Validator: Ranger KMS Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kms_plugin_solr_audit_spool_directory`**Required**`true`**Suppress Configuration Validator: Ranger KMS Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kms_server_role_env_safety_valve`**Required**`true`**Suppress Configuration Validator: Ranger KMS Tomcat Work Dir****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Tomcat Work Dir configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_kms_tomcat_work_dir`**Required**`true`**Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server TLS/SSL Server Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_stacks_collection_directory
<b>Required</b>
true

Suppress Parameter Validation: Kerberos Principal

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
service_config_suppression_kerberos_princ_name
<b>Required</b>
true

Suppress Parameter Validation: System Group

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
service_config_suppression_process_groupname
<b>Required</b>
true

Suppress Parameter Validation: System User

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
service_config_suppression_process_username
<b>Required</b>
true

Suppress Parameter Validation: Ranger KMS Database Host

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database Host parameter.
<b>Related Name</b>

**Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kms\_database\_host

**Required**

true

**Suppress Parameter Validation: Ranger KMS Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database Name parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kms\_database\_name

**Required**

true

**Suppress Parameter Validation: Ranger KMS Database User Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database User Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kms\_database\_password

**Required**

true

**Suppress Parameter Validation: Ranger KMS Database Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kms\_database\_port

**Required**

true

**Suppress Parameter Validation: Ranger KMS Database User****Description**

	Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database User parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_ranger_kms_database_user
Required	true

Suppress Parameter Validation: Ranger KMS Load Balancer

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Load Balancer parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_ranger_kms_load_balancer
Required	true

Suppress Parameter Validation: Ranger KMS Plugin Hdfs Audit Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Plugin Hdfs Audit Directory parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_ranger_kms_plugin_hdfs_audit_directory
Required	true

Suppress Configuration Validator: Ranger KMS Server Count Validator

Description	Whether to suppress configuration warnings produced by the Ranger KMS Server Count Validator configuration validator.
Related Name	
Default Value	false
API Name	service_config_suppression_ranger_kms_server_count_validator
Required	

true

### Suppress Parameter Validation: Ranger KMS Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kms\_service\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Service Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

### Suppress Health Test: Ranger KMS Server Health

**Description**

Whether to suppress the results of the Ranger KMS Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

service\_health\_suppression\_ranger\_kms\_ranger\_kms\_server\_healthy

**Required**

true

## Ranger KMS with Key Trustee Server Properties in Cloudera Runtime 7.2.16

Role groups:

### Ranger KMS Server with KTS

#### Advanced

#### Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml

**Description**

For advanced use only. A string to be inserted into conf/core-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/core-site.xml\_role\_safety\_valve

**Required**

false

#### Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml

**Description**

For advanced use only. A string to be inserted into conf/dbks-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/dbks-site.xml\_role\_safety\_valve

**Required**

false

#### Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml

**Description**

For advanced use only. A string to be inserted into conf/hdfs-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/hdfs-site.xml\_role\_safety\_valve

**Required**

false

**Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml****Description**

For advanced use only. A string to be inserted into conf/kms-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/kms-site.xml\_role\_safety\_valve

**Required**

false

**Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kts-site.xml****Description**

For advanced use only. A string to be inserted into conf/kts-site.xml for this role only.

**Related Name****Default Value****API Name**

conf/kts-site.xml\_role\_safety\_valve

**Required**

false

**Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-kms-audit.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-kms-audit.xml\_role\_safety\_valve

**Required**

false

**Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml****Description**

For advanced use only. A string to be inserted into conf/ranger-kms-policymgr-ssl.xml for this role only.

**Related Name****Default Value****API Name**

conf/ranger-kms-policymgr-ssl.xml\_role\_safety\_valve

<b>Required</b>
false

**Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml**

<b>Description</b>
For advanced use only. A string to be inserted into conf/ranger-kms-security.xml for this role only.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
conf/ranger-kms-security.xml_role_safety_valve
<b>Required</b>
false

**Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml**

<b>Description</b>
For advanced use only. A string to be inserted into conf/ranger-kms-site.xml for this role only.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
conf/ranger-kms-site.xml_role_safety_valve
<b>Required</b>
false

**Ranger KMS Server with KTS Logging Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>
For advanced use only, a string to be inserted into log4j.properties for this role only.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
log4j_safety_valve
<b>Required</b>
false

**Enable auto refresh for metric configurations**

<b>Description</b>
When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
metric_config_auto_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Ranger KMS Server with KTS Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

RANGER\_KMS\_SERVER\_KTS\_role\_env\_safety\_valve

**Required**

false

**Logs****Ranger KMS Server with KTS Log Directory****Description**

The log directory for log files of the role Ranger KMS Server with KTS.

**Related Name**

log\_dir

**Default Value**

/var/log/ranger/kms

**API Name**

log\_dir

**Required**

false

**Ranger KMS Server with KTS Logging Threshold****Description**

The minimum log level for Ranger KMS Server with KTS logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Ranger KMS Server with KTS Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Ranger KMS Server with KTS logs. Typically used by log4j or logback.

<b>Related Name</b>	
<b>Default Value</b>	10
<b>API Name</b>	max_log_backup_index
<b>Required</b>	false

**Ranger KMS Server with KTS Max Log Size**

<b>Description</b>	The maximum size, in megabytes, per log file for Ranger KMS Server with KTS logs. Typically used by log4j or logback.
<b>Related Name</b>	
<b>Default Value</b>	200 MiB
<b>API Name</b>	max_log_size
<b>Required</b>	false

**Monitoring**

**Enable Health Alerts for this Role**

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	enable_alerts
<b>Required</b>	false

**Enable Configuration Change Alerts**

<b>Description</b>	When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	enable_config_alerts
<b>Required</b>	false

### Log Directory Free Space Monitoring Absolute Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

#### Related Name

#### Default Value

Warning: 10 GiB, Critical: 5 GiB

#### API Name

log\_directory\_free\_space\_absolute\_thresholds

#### Required

false

### Log Directory Free Space Monitoring Percentage Thresholds

#### Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

#### Related Name

#### Default Value

Warning: Never, Critical: Never

#### API Name

log\_directory\_free\_space\_percentage\_thresholds

#### Required

false

### Metric Filter

#### Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm\_heap\_used\_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm\_heap\_used\_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ranger\_kms\_server\_kts\_fd\_thresholds

**Required**

false

### Ranger KMS Server with KTS Host Health Test

**Description**

When computing the overall Ranger KMS Server with KTS health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ranger\_kms\_server\_kts\_host\_health\_enabled

**Required**

false

### Ranger KMS Server with KTS Process Health Test

**Description**

Enables the health test that the Ranger KMS Server with KTS's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ranger\_kms\_server\_kts\_scm\_health\_enabled

**Required**

false

### Role Triggers

**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part of the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

Other

Key Trustee Server Auth Code

Description	Key Trustee Server auth code used for KMS to authenticate against the server
Related Name	cloudera.trustee.keyprovider.auth
Default Value	
API Name	cloudera_trustee_keyprovider_auth
Required	true

Active Key Trustee Server

Description	Active Key Trustee Server hostname that backs the KMS.
Related Name	cloudera.trustee.keyprovider.hostname-ACTIVE
Default Value	
API Name	cloudera_trustee_keyprovider_hostname-ACTIVE
Required	true

Passive Key Trustee Server

Description	Passive Key Trustee Server hostname that backs the KMS. Only needed for Key Trustee Server high availability.
Related Name	cloudera.trustee.keyprovider.hostname-PASSIVE
Default Value	
API Name	cloudera_trustee_keyprovider_hostname-PASSIVE
Required	false

Key Trustee Server Org Name

Description	Key Trustee Server Organization that keys are stored against.
Related Name	cloudera.trustee.keyprovider.org
Default Value	
API Name	cloudera_trustee_keyprovider_org

<b>Required</b>
true

**Key Trustee Server Key Provider Pool Timeout**

<b>Description</b>
Key Trustee key provider pool timeout.
<b>Related Name</b>
cloudera.trustee.keyprovider.pool.abandoned.timeout
<b>Default Value</b>
5 minute(s)
<b>API Name</b>
cloudera_trustee_keyprovider_pool_abandoned_timeout
<b>Required</b>
true

**Key Trustee Server Key Provider Max Connections**

<b>Description</b>
Key Trustee Server Key Provider Max Connections.
<b>Related Name</b>
cloudera.trustee.keyprovider.pool.max
<b>Default Value</b>
5
<b>API Name</b>
cloudera_trustee_keyprovider_pool_max
<b>Required</b>
true

**Key Trustee Server Key Provider Pool Max Idle**

<b>Description</b>
Key Trustee Server Key Provider Pool Max Idle.
<b>Related Name</b>
cloudera.trustee.keyprovider.pool.max.idle
<b>Default Value</b>
2
<b>API Name</b>
cloudera_trustee_keyprovider_pool_max_idle
<b>Required</b>
true

**Key Trustee Server Key Provider Pool Min Idle**

<b>Description</b>
Key Trustee Server Key Provider Pool Min Idle.
<b>Related Name</b>
cloudera.trustee.keyprovider.pool.min.idle
<b>Default Value</b>

1

**API Name**

cloudera\_trustee\_keyprovider\_pool\_min\_idle

**Required**

true

**Key Trustee Server Round Robin Reads****Description**

Distribute read requests amongst the available Key Trustee Servers. Only effective when a passive server is specified.

**Related Name**

cloudera.trustee.keyprovider.roundrobin

**Default Value**

true

**API Name**

cloudera\_trustee\_keyprovider\_roundrobin

**Required**

false

**Ranger KMS Server with KTS Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

**Related Name****Default Value**

5 minute(s)

**API Name**

csd\_role\_diagnostics\_timeout

**Required**

false

**Graceful Shutdown Timeout****Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

**Related Name****Default Value**

18 second(s)

**API Name**

graceful\_stop\_timeout

**Required**

false

**Hadoop KMS Audit Aggregation Window****Description**

Duplicate audit log events within the aggregation window (specified in ms) are quashed to reduce log traffic. A single message for aggregated events is printed at the end of the window, along with a count of the number of aggregated events.

**Related Name**

hadoop.kms.audit.aggregation.window.ms

**Default Value**

10 second(s)

**API Name**

hadoop\_kms\_audit\_aggregation\_window\_ms

**Required**

false

**Hadoop KMS Authentication Signer Secret Provider Zookeeper Auth Type****Description**

The Zookeeper authentication type, 'none' or kerberos.

**Related Name**

hadoop.kms.authentication.signer.secret.provider.zookeeper.auth.type

**Default Value**

none

**API Name**

hadoop\_kms\_authentication\_signer\_secret\_provider\_zookeeper\_auth\_type

**Required**

true

**Hadoop KMS Authentication Signer Secret Provider Zookeeper Path****Description**

The Zookeeper ZNode path where the KMS instances will store and retrieve the secret from.

**Related Name**

hadoop.kms.authentication.signer.secret.provider.zookeeper.path

**Default Value**

/hadoop-kms/hadoop-auth-signature-secret

**API Name**

hadoop\_kms\_authentication\_signer\_secret\_provider\_zookeeper\_path

**Required**

true

**Hadoop KMS Blacklist Decrypt EEK****Description**

Add user which is needed to be blacklist for decrypt EncryptedKey CryptoExtension operations. Multiple list of user's can be added with comma separated.

**Related Name**

hadoop.kms.blacklist.DECRYPT\_EEK

**Default Value**

hdfs

**API Name**

hadoop_kms_blacklist_decrypt_ee
<b>Required</b>
false

**Hadoop KMS Cache Enable**

<b>Description</b>
Whether the KMS will act as a cache for the backing KeyProvider. When the cache is enabled, operations like getKeyVersion, getMetadata, and getCurrentKey will sometimes return cached data without consulting the backing KeyProvider. Cached values are flushed when keys are deleted or modified.
<b>Related Name</b>
hadoop.kms.cache.enable
<b>Default Value</b>
true
<b>API Name</b>
hadoop_kms_cache_enable
<b>Required</b>
false

**Hadoop Kms Cache Timeout**

<b>Description</b>
Expiry time for the KMS key version and key metadata cache, in milliseconds. This affects getKeyVersion and getMetadata.
<b>Related Name</b>
hadoop.kms.cache.timeout.ms
<b>Default Value</b>
10 minute(s)
<b>API Name</b>
hadoop_kms_cache_timeout_ms
<b>Required</b>
false

**Hadoop KMS Current Key Cache Timeout**

<b>Description</b>
Expiry time for the KMS current key cache, in milliseconds. This affects getCurrentKey operations.
<b>Related Name</b>
hadoop.kms.current.key.cache.timeout.ms
<b>Default Value</b>
30 second(s)
<b>API Name</b>
hadoop_kms_current_key_cache_timeout_ms
<b>Required</b>
false

**HDFS Proxy User Groups**

<b>Description</b>
--------------------

Allows the hdfs superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.hdfs.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hdfs\_groups

**Required**

false

### HDFS Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the hdfs user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

hadoop.kms.proxyuser.hdfs.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hdfs\_hosts

**Required**

false

### Hive Proxy User Groups

**Description**

Allows the hive superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.hive.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hive\_groups

**Required**

false

### Hive Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the hive user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

	hadoop.kms.proxyuser.hive.hosts
Default Value	*
API Name	
	hadoop_kms_proxyuser_hive_hosts
Required	false

HTTP Proxy User Groups

Description	Allows the HTTP superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.
Related Name	hadoop.kms.proxyuser.HTTP.groups
Default Value	*
API Name	
	hadoop_kms_proxyuser_HTTP_groups
Required	false

HTTP Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.
Related Name	hadoop.kms.proxyuser.HTTP.hosts
Default Value	*
API Name	
	hadoop_kms_proxyuser_HTTP_hosts
Required	false

HttpFS Proxy User Groups

Description	Allows the httpfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.
Related Name	hadoop.kms.proxyuser.httpfs.groups
Default Value	*

**API Name**

hadoop\_kms\_proxyuser\_httpfs\_groups

**Required**

false

**HttpFS Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the httpfs user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.httpfs.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_httpfs\_hosts

**Required**

false

**Hue Proxy User Groups****Description**

Allows the hue superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.hue.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hue\_groups

**Required**

false

**Hue Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the hue user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.hue.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_hue\_hosts

**Required**

false

### Livy Proxy User Groups

**Description**

Allows the livy superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.livy.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_livy\_groups

**Required**

false

### Livy Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the livy user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

hadoop.kms.proxyuser.livy.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_livy\_hosts

**Required**

false

### Mapred Proxy User Groups

**Description**

Allows the mapred superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.mapred.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_mapred\_groups

**Required**

false

### Mapred Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the mapred user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.mapred.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_mapred\_hosts

**Required**

false

**Oozie Proxy User Groups****Description**

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.oozie.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_oozie\_groups

**Required**

false

**Oozie Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

hadoop.kms.proxyuser.oozie.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_oozie\_hosts

**Required**

false

**Ranger Proxy User Groups****Description**

Allows the ranger superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

	hadoop.kms.proxyuser.ranger.groups
Default Value	*
API Name	
	hadoop_kms_proxyuser_ranger_groups
Required	false

Ranger Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the ranger user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
Related Name	hadoop.kms.proxyuser.ranger.hosts
Default Value	*
API Name	
	hadoop_kms_proxyuser_ranger_hosts
Required	false

YARN Proxy User Groups

Description	Allows the yarn superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.
Related Name	hadoop.kms.proxyuser.yarn.groups
Default Value	*
API Name	
	hadoop_kms_proxyuser_yarn_groups
Required	false

YARN Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the yarn user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
Related Name	hadoop.kms.proxyuser.yarn.hosts
Default Value	*

**API Name**

hadoop\_kms\_proxyuser\_yarn\_hosts

**Required**

false

**Zeppelin Proxy User Groups****Description**

Allows the zeppelin superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

hadoop.kms.proxyuser.zeppelin.groups

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_zeppelin\_groups

**Required**

false

**Zeppelin Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the zeppelin user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

hadoop.kms.proxyuser.zeppelin.hosts

**Default Value**

\*

**API Name**

hadoop\_kms\_proxyuser\_zeppelin\_hosts

**Required**

false

**Key Trustee KeyStoreProvider Directory****Description**

Directory to the keystore file used by Key Trustee KeyStoreProvider that backs the KMS.

**Related Name**

hadoop.kms.key.provider.uri

**Default Value**

/var/lib/kms-keytrustee

**API Name**

hadoop\_security\_key\_provider\_dir

**Required**

true

### Hadoop Security Keystore JavaKeyStoreProvider Password

**Description**

If using the JavaKeyStoreProvider, the password for the keystore file.

**Related Name**

hadoop.security.keystore.JavaKeyStoreProvider.password

**Default Value****API Name**

hadoop\_security\_keystore\_javakeystoreprovider\_password

**Required**

false

### Key Trustee KeyStoreProvider Configuration Directory

**Description**

Directory to store configuration of keystore file used by Key Trustee KeyStoreProvider that backs the KMS.

**Related Name**

keytrustee.kms.key.provider.conf.uri

**Default Value**

/var/lib/kms-keytrustee/keytrustee

**API Name**

keytrustee\_security\_key\_provider\_conf\_dir

**Required**

true

### Additional Java Configuration Options for KMS

**Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

**Related Name**

kms\_java\_opts

**Default Value****API Name**

kms\_java\_opts

**Required**

false

### Ranger KMS Max Heapspace

**Description**

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

**Related Name**

ranger\_kms\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

ranger\_kms\_max\_heap\_size

**Required**

true

**Ranger KMS Plugin Audit Hdfs Spool Directory Path****Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

xasecure.audit.destination.hdfs.batch.filespool.dir

**Default Value**

/var/log/kms/audit/hdfs/spool

**API Name**

ranger\_kms\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Ranger KMS Plugin Policy Cache Directory Path****Description**

The directory where Ranger security policies are cached locally.

**Related Name**

ranger.plugin.kms.policy.cache.dir

**Default Value**

/var/lib/ranger/kms/policy-cache

**API Name**

ranger\_kms\_plugin\_policy\_cache\_directory

**Required**

true

**Ranger KMS Plugin Audit Solr Spool Directory Path****Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**

xasecure.audit.destination.solr.batch.filespool.dir

**Default Value**

/var/log/kms/audit/solr/spool

**API Name**

ranger\_kms\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Ranger Kms Kts Server Canary Health Enabled****Description**

Ranger Kms Kts Server Canary is enabled/disabled

**Related Name**

ranger\_kms\_server\_kts\_canary\_health\_enabled

**Default Value**

true

**API Name**

ranger\_kms\_server\_kts\_canary\_health\_enabled

**Required**

false

**Ranger Kms Kts Server Canary Health Timeout****Description**

Timeout for Ranger Kms Kts Server Canary health check.

**Related Name**

ranger\_kms\_server\_kts\_canary\_health\_timeout

**Default Value**

30 second(s)

**API Name**

ranger\_kms\_server\_kts\_canary\_health\_timeout

**Required**

false

**Ranger KMS Tomcat Work Dir****Description**

Tomcat work directory for Ranger KMS. This should generally not be changed.

**Related Name**

ranger\_kms\_tomcat\_work\_dir

**Default Value**

/var/lib/ranger/kms

**API Name**

ranger\_kms\_tomcat\_work\_dir

**Required**

true

**Ranger Plugin Trusted Proxy IP Address****Description**

Accepts a list of IP addresses of proxy servers for trusting.

**Related Name**

ranger.plugin.kms.trusted.proxy.ipaddress

**Default Value****API Name**

ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

false

**Ranger Plugin Use X-Forwarded For IP Address****Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

**Related Name**

ranger.plugin.kms.use.x-forwarded-for.ipaddress

**Default Value**

false

**API Name**

ranger\_plugin\_use\_x\_forwarded\_for\_ipaddress

**Required**

false

**Performance**

**Maximum Process File Descriptors**

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name**

**Default Value**

**API Name**

rlimit\_fds

**Required**

false

**Ports and Addresses**

**Ranger KMS HTTP Port**

**Description**

HTTP Port for Ranger KMS.

**Related Name**

ranger.service.http.port

**Default Value**

9292

**API Name**

ranger\_kms\_http\_port

**Required**

false

**Ranger KMS HTTPS Port**

**Description**

HTTPS Port for Ranger KMS. Only used when SSL is enabled for Ranger KMS.

**Related Name**

ranger.service.https.port

**Default Value**

9494

**API Name**

ranger\_kms\_https\_port

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Ranger KMS Server with KTS TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger KMS Server with KTS might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

xasecure.policymgr.clientssl.truststore

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

**Ranger KMS Server with KTS TLS/SSL Trust Store Password****Description**

The password for the Ranger KMS Server with KTS TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

xasecure.policymgr.clientssl.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

**Enable TLS/SSL for Ranger KMS Server with KTS****Description**

Encrypt communication between clients and Ranger KMS Server with KTS using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ranger.service.https.attrib.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

**Required**

false

**Ranger KMS Server with KTS TLS/SSL Server Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger KMS Server with KTS is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

ranger.service.https.attrib.keystore.file

**Default Value****API Name**

ssl\_server\_keystore\_location

**Required**

false

### Ranger KMS Server with KTS TLS/SSL Server Keystore File Password

**Description**

The password for the Ranger KMS Server with KTS keystore file.

**Related Name**

ranger.service.https.attrib.keystore.pass

**Default Value****API Name**

ssl\_server\_keystore\_password

**Required**

false

### Stacks Collection

#### Stacks Collection Data Retention

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

#### Stacks Collection Directory

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

#### Stacks Collection Enabled

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

<b>Default Value</b>	false
<b>API Name</b>	stacks_collection_enabled
<b>Required</b>	true

Stacks Collection Frequency

<b>Description</b>	The frequency with which stacks are collected.
<b>Related Name</b>	stacks_collection_frequency
<b>Default Value</b>	5.0 second(s)
<b>API Name</b>	stacks_collection_frequency
<b>Required</b>	false

Stacks Collection Method

<b>Description</b>	The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.
<b>Related Name</b>	stacks_collection_method
<b>Default Value</b>	jstack
<b>API Name</b>	stacks_collection_method
<b>Required</b>	false

Suppressions

Suppress Configuration Validator: CDH Version Validator

<b>Description</b>	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	role_config_suppression_cdh_version_validator

**Required**

true

**Suppress Parameter Validation: Key Trustee Server Auth Code****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Auth Code parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cloudera\_trustee\_keyprovider\_auth

**Required**

true

**Suppress Parameter Validation: Active Key Trustee Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cloudera\_trustee\_keyprovider\_hostname-active

**Required**

true

**Suppress Parameter Validation: Passive Key Trustee Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Key Trustee Server parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cloudera\_trustee\_keyprovider\_hostname-passive

**Required**

true

**Suppress Parameter Validation: Key Trustee Server Org Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Org Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cloudera\_trustee\_keyprovider\_org

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/core-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/dbks-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/hdfs-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/kms-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kts-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kts-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/kts-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Hadoop KMS Authentication Signer Secret Provider Zookeeper Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop KMS Authentication Signer Secret Provider Zookeeper Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_authentication\_signer\_secret\_provider\_zookeeper\_path

**Required**

true

**Suppress Parameter Validation: Hadoop KMS Blacklist Decrypt EEK****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop KMS Blacklist Decrypt EEK parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_blacklist\_decrypt\_eeek

**Required**

true

**Suppress Parameter Validation: HDFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hdfs\_groups

**Required**

true

**Suppress Parameter Validation: HDFS Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hdfs\_hosts

**Required**

true

Suppress Parameter Validation: Hive Proxy User Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Groups parameter.

Related Name

Default Value

false

API Name

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_groups

Required

true

Suppress Parameter Validation: Hive Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Hosts parameter.

Related Name

Default Value

false

API Name

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hive\_hosts

Required

true

Suppress Parameter Validation: HTTP Proxy User Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy User Groups parameter.

Related Name

Default Value

false

API Name

role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_groups

Required

true

Suppress Parameter Validation: HTTP Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy User Hosts parameter.

Related Name

Default Value

false

**API Name**`role_config_suppression_hadoop_kms_proxyuser_http_hosts`**Required**`true`**Suppress Parameter Validation: HttpFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Proxy User Groups parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_httpfs_groups`**Required**`true`**Suppress Parameter Validation: HttpFS Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HttpFS Proxy User Hosts parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_httpfs_hosts`**Required**`true`**Suppress Parameter Validation: Hue Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Groups parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_hue_groups`**Required**`true`**Suppress Parameter Validation: Hue Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_hosts

**Required**

true

**Suppress Parameter Validation: Livy Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_livy\_groups

**Required**

true

**Suppress Parameter Validation: Livy Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_livy\_hosts

**Required**

true

**Suppress Parameter Validation: Mapred Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Mapred Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_mapred\_groups

**Required**

true

**Suppress Parameter Validation: Mapred Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Mapred Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_mapred\_hosts

**Required**

true

**Suppress Parameter Validation: Oozie Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_groups

**Required**

true

**Suppress Parameter Validation: Oozie Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_hosts

**Required**

true

**Suppress Parameter Validation: Ranger Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_hadoop_kms_proxyuser_ranger_groups
<b>Required</b>
true

Suppress Parameter Validation: Ranger Proxy User Hosts

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Proxy User Hosts parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_hadoop_kms_proxyuser_ranger_hosts
<b>Required</b>
true

Suppress Parameter Validation: YARN Proxy User Groups

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Proxy User Groups parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_hadoop_kms_proxyuser_yarn_groups
<b>Required</b>
true

Suppress Parameter Validation: YARN Proxy User Hosts

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the YARN Proxy User Hosts parameter.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_hadoop_kms_proxyuser_yarn_hosts
<b>Required</b>
true

Suppress Parameter Validation: Zeppelin Proxy User Groups

<b>Description</b>
Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Proxy User Groups parameter.
<b>Related Name</b>

**Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_zeppelin\_groups

**Required**

true

**Suppress Parameter Validation: Zeppelin Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Zeppelin Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_zeppelin\_hosts

**Required**

true

**Suppress Parameter Validation: Key Trustee KeyStoreProvider Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee KeyStoreProvider Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_key\_provider\_dir

**Required**

true

**Suppress Parameter Validation: Hadoop Security Keystore JavaKeyStoreProvider Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Security Keystore JavaKeyStoreProvider Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_keystore\_javakeystoreprovider\_password

**Required**

true

**Suppress Parameter Validation: Key Trustee KeyStoreProvider Configuration Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee KeyStoreProvider Configuration Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_security\_key\_provider\_conf\_dir

**Required**

true

**Suppress Parameter Validation: Additional Java Configuration Options for KMS****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Java Configuration Options for KMS parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_java\_opts

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Ranger KMS HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_http\_port

**Required**

true

**Suppress Parameter Validation: Ranger KMS HTTPS Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS HTTPS Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_https\_port

**Required**

true

**Suppress Parameter Validation: Ranger KMS Max Heapspace****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Max Heapspace parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Ranger KMS Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Plugin Audit Hdfs Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger KMS Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Plugin Policy Cache Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Parameter Validation: Ranger KMS Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Plugin Audit Solr Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_server\_kts\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Tomcat Work Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Tomcat Work Dir parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_tomcat\_work\_dir

**Required**

true

**Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS TLS/SSL Server Keystore File Location parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ranger KMS Server with KTS TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Server with KTS TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_kts\_ranger\_kms\_server\_kts\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_kts\_ranger\_kms\_server\_kts\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_kts\_ranger\_kms\_server\_kts\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_kts\_ranger\_kms\_server\_kts\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_kts\_ranger\_kms\_server\_kts\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_kts\_ranger\_kms\_server\_kts\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_kts\_ranger\_kms\_server\_kts\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_kts\_ranger\_kms\_server\_kts\_unexpected\_exits

**Required**

true

**Suppress Health Test: Ranger KMS KTS URL Canary Check**

**Description**

Whether to suppress the results of the Ranger KMS KTS URL Canary Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_kms\_server\_kts\_canary

**Required**

true

**Service-Wide**

**Advanced**

**System Group**

**Description**

The group that this service's processes should run as.

**Related Name**

**Default Value**

kms

**API Name**

process\_groupname

**Required**

true

**System User**

**Description**

The user that this service's processes should run as.

**Related Name**

**Default Value**

kms

**API Name**

process\_username

**Required**

true

**Ranger KMS with Key Trustee Server Service Environment Advanced Configuration Snippet (Safety Valve)**

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name**

**Default Value****API Name**

RANGER\_KMS\_KTS\_service\_env\_safety\_valve

**Required**

false

**Monitoring****Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name****Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Healthy Ranger KMS Server with KTS Monitoring Thresholds****Description**

The health test thresholds of the overall Ranger KMS Server with KTS health. The check returns "Concerning" health if the percentage of "Healthy" Ranger KMS Server with KTSs falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger KMS Server with KTSs falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 49.0 %

**API Name**

RANGER\_KMS\_KTS\_RANGER\_KMS\_SERVER\_KTS\_healthy\_thresholds

**Required**

false

## Service Triggers

### Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

### Related Name

### Default Value

[]

### API Name

`service_triggers`

### Required

true

## Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

### Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

### Related Name

### Default Value

### API Name

`smon_derived_configs_safety_valve`

### Required

false

## Other

## Ranger KMS Authentication Type

### Description

Authentication type for the Ranger KMS.

### Related Name

`hadoop.kms.authentication.type`

<b>Default Value</b>	kerberos
<b>API Name</b>	hadoop_kms_authentication_type
<b>Required</b>	true

Ranger KMS Load Balancer

<b>Description</b>	Only required when Ranger KMS is running with High Availability.
<b>Related Name</b>	ranger_kms_load_balancer
<b>Default Value</b>	
<b>API Name</b>	ranger_kms_load_balancer
<b>Required</b>	false

Ranger KMS Plugin Hdfs Audit Directory

<b>Description</b>	The DFS path on which Ranger audits are written.
<b>Related Name</b>	ranger_kms_plugin_hdfs_audit_directory
<b>Default Value</b>	\$ranger_base_audit_url/kms
<b>API Name</b>	ranger_kms_plugin_hdfs_audit_directory
<b>Required</b>	false

ZooKeeper Service

<b>Description</b>	Name of the ZooKeeper service that this Ranger KMS with Key Trustee Server service instance depends on
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	zookeeper_service
<b>Required</b>	false

Security

Kerberos Principal

<b>Description</b>	
--------------------	--

	Kerberos principal short name used by all roles of this service.
Related Name	
Default Value	rangerkms
API Name	kerberos_princ_name
Required	true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Configuration Validator: Key Trustee Server Auth Code

Description	Whether to suppress configuration warnings produced by the Key Trustee Server Auth Code configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cloudera_trustee_keyprovider_auth
Required	true

Suppress Configuration Validator: Active Key Trustee Server

Description	Whether to suppress configuration warnings produced by the Active Key Trustee Server configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cloudera_trustee_keyprovider_hostname-active

**Required**

true

**Suppress Configuration Validator: Passive Key Trustee Server****Description**

Whether to suppress configuration warnings produced by the Passive Key Trustee Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cloudera\_trustee\_keyprovider\_hostname-passive

**Required**

true

**Suppress Configuration Validator: Key Trustee Server Org Name****Description**

Whether to suppress configuration warnings produced by the Key Trustee Server Org Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cloudera\_trustee\_keyprovider\_org

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/core-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/dbks-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/hdfs-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/kms-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kts-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kts-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/kts-site.xml\_role\_safety\_valve

**Required**

true
------

**Suppress Configuration Validator: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_conf/ranger-kms-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Hadoop KMS Authentication Signer Secret Provider Zookeeper Path****Description**

Whether to suppress configuration warnings produced by the Hadoop KMS Authentication Signer Secret Provider Zookeeper Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_authentication\_signer\_secret\_provider\_zookeeper\_path

**Required**

true

**Suppress Configuration Validator: Hadoop KMS Blacklist Decrypt EEK****Description**

Whether to suppress configuration warnings produced by the Hadoop KMS Blacklist Decrypt EEK configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_blacklist\_decrypt\_eeek

**Required**

true

**Suppress Configuration Validator: HDFS Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the HDFS Proxy User Groups configuration validator.

**Related Name****Default Value**

	false
API Name	
	role_config_suppression_hadoop_kms_proxyuser_hdfs_groups
Required	
	true

Suppress Configuration Validator: HDFS Proxy User Hosts

Description	Whether to suppress configuration warnings produced by the HDFS Proxy User Hosts configuration validator.
Related Name	
Default Value	
	false
API Name	
	role_config_suppression_hadoop_kms_proxyuser_hdfs_hosts
Required	
	true

Suppress Configuration Validator: Hive Proxy User Groups

Description	Whether to suppress configuration warnings produced by the Hive Proxy User Groups configuration validator.
Related Name	
Default Value	
	false
API Name	
	role_config_suppression_hadoop_kms_proxyuser_hive_groups
Required	
	true

Suppress Configuration Validator: Hive Proxy User Hosts

Description	Whether to suppress configuration warnings produced by the Hive Proxy User Hosts configuration validator.
Related Name	
Default Value	
	false
API Name	
	role_config_suppression_hadoop_kms_proxyuser_hive_hosts
Required	
	true

Suppress Configuration Validator: HTTP Proxy User Groups

Description	
-------------	--

Whether to suppress configuration warnings produced by the HTTP Proxy User Groups configuration validator.

**Related Name**

**Default Value**  
false

**API Name**  
role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_groups

**Required**  
true

Suppress Configuration Validator: HTTP Proxy User Hosts

Description  
Whether to suppress configuration warnings produced by the HTTP Proxy User Hosts configuration validator.

**Related Name**

**Default Value**  
false

**API Name**  
role\_config\_suppression\_hadoop\_kms\_proxyuser\_http\_hosts

**Required**  
true

Suppress Configuration Validator: HttpFS Proxy User Groups

Description  
Whether to suppress configuration warnings produced by the HttpFS Proxy User Groups configuration validator.

**Related Name**

**Default Value**  
false

**API Name**  
role\_config\_suppression\_hadoop\_kms\_proxyuser\_httpfs\_groups

**Required**  
true

Suppress Configuration Validator: HttpFS Proxy User Hosts

Description  
Whether to suppress configuration warnings produced by the HttpFS Proxy User Hosts configuration validator.

**Related Name**

**Default Value**  
false

**API Name**  
role\_config\_suppression\_hadoop\_kms\_proxyuser\_httpfs\_hosts

**Required**

true

### Suppress Configuration Validator: Hue Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_groups

**Required**

true

### Suppress Configuration Validator: Hue Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_hue\_hosts

**Required**

true

### Suppress Configuration Validator: Livy Proxy User Groups

**Description**

Whether to suppress configuration warnings produced by the Livy Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_livy\_groups

**Required**

true

### Suppress Configuration Validator: Livy Proxy User Hosts

**Description**

Whether to suppress configuration warnings produced by the Livy Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_hadoop_kms_proxyuser_livy_hosts`**Required**`true`**Suppress Configuration Validator: Mapred Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Mapred Proxy User Groups configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_mapred_groups`**Required**`true`**Suppress Configuration Validator: Mapred Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Mapred Proxy User Hosts configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_mapred_hosts`**Required**`true`**Suppress Configuration Validator: Oozie Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Oozie Proxy User Groups configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_hadoop_kms_proxyuser_oozie_groups`**Required**`true`**Suppress Configuration Validator: Oozie Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Oozie Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_oozie\_hosts

**Required**

true

**Suppress Configuration Validator: Ranger Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Ranger Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_ranger\_groups

**Required**

true

**Suppress Configuration Validator: Ranger Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Ranger Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_ranger\_hosts

**Required**

true

**Suppress Configuration Validator: YARN Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the YARN Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_groups

**Required**

true

**Suppress Configuration Validator: YARN Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the YARN Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_yarn\_hosts

**Required**

true

**Suppress Configuration Validator: Zeppelin Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Zeppelin Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_zeppelin\_groups

**Required**

true

**Suppress Configuration Validator: Zeppelin Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Zeppelin Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_kms\_proxyuser\_zeppelin\_hosts

**Required**

true

**Suppress Configuration Validator: Key Trustee KeyStoreProvider Directory****Description**

Whether to suppress configuration warnings produced by the Key Trustee KeyStoreProvider Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_key\_provider\_dir

**Required**

true

**Suppress Configuration Validator: Hadoop Security Keystore JavaKeyStoreProvider Password****Description**

Whether to suppress configuration warnings produced by the Hadoop Security Keystore JavaKeyStoreProvider Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_hadoop\_security\_keystore\_javakeystoreprovider\_password

**Required**

true

**Suppress Configuration Validator: Key Trustee KeyStoreProvider Configuration Directory****Description**

Whether to suppress configuration warnings produced by the Key Trustee KeyStoreProvider Configuration Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_keytrustee\_security\_key\_provider\_conf\_dir

**Required**

true

**Suppress Configuration Validator: Additional Java Configuration Options for KMS****Description**

Whether to suppress configuration warnings produced by the Additional Java Configuration Options for KMS configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_kms\_java\_opts

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Log Directory****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Ranger KMS HTTP Port****Description**

Whether to suppress configuration warnings produced by the Ranger KMS HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_http\_port

**Required**

true

**Suppress Configuration Validator: Ranger KMS HTTPS Port****Description**

Whether to suppress configuration warnings produced by the Ranger KMS HTTPS Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_https\_port

**Required**

true

**Suppress Configuration Validator: Ranger KMS Max Heapsize****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Max Heapsize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Ranger KMS Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Plugin Audit Hdfs Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Ranger KMS Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Plugin Policy Cache Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Configuration Validator: Ranger KMS Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_server\_kts\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger KMS Tomcat Work Dir****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Tomcat Work Dir configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_kms\_tomcat\_work\_dir

**Required**

true

**Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS TLS/SSL Server Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_stacks_collection_directory`**Required**`true`**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_kerberos_princ_name`**Required**`true`**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_process_groupname`**Required**`true`**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_process_username`**Required**`true`**Suppress Parameter Validation: Ranger KMS with Key Trustee Server Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS with Key Trustee Server Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kms\_kts\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger KMS Load Balancer****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Load Balancer parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kms\_load\_balancer

**Required**

true

**Suppress Parameter Validation: Ranger KMS Plugin Hdfs Audit Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Plugin Hdfs Audit Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kms\_plugin\_hdfs\_audit\_directory

**Required**

true

**Suppress Configuration Validator: Ranger KMS Server with KTS Count Validator****Description**

Whether to suppress configuration warnings produced by the Ranger KMS Server with KTS Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_kms\_server\_kts\_count\_validator

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

**Suppress Health Test: Ranger KMS Server with KTS Health****Description**

Whether to suppress the results of the Ranger KMS Server with KTS Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_ranger\_kms\_kts\_ranger\_kms\_server\_kts\_healthy

**Required**

true

**Ranger Raz Properties in Cloudera Runtime 7.2.16**

Role groups:

## Ranger Raz Server

### Advanced

#### Ranger Raz Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

#### Dump Heap When Out of Memory

**Description**

When set, generates a heap dump file when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true
------

### Process Start Retry Attempts

#### Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

#### Related Name

#### Default Value

3

#### API Name

process\_start\_retries

#### Required

false

### Process Start Wait Timeout

#### Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

#### Related Name

#### Default Value

20

#### API Name

process\_start\_secs

#### Required

false

### Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-audit.xml

#### Description

For advanced use only. A string to be inserted into ranger-raz-conf/ranger-raz-audit.xml for this role only.

#### Related Name

#### Default Value

#### API Name

ranger-raz-conf/ranger-raz-audit.xml\_role\_safety\_valve

#### Required

false

### Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-policymgr-ssl.xml

#### Description

For advanced use only. A string to be inserted into ranger-raz-conf/ranger-raz-policymgr-ssl.xml for this role only.

#### Related Name

**Default Value****API Name**

ranger-raz-conf/ranger-raz-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

**Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-security.xml****Description**

For advanced use only. A string to be inserted into ranger-raz-conf/ranger-raz-security.xml for this role only.

**Related Name****Default Value****API Name**

ranger-raz-conf/ranger-raz-security.xml\_role\_safety\_valve

**Required**

false

**Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-site.xml****Description**

For advanced use only. A string to be inserted into ranger-raz-conf/ranger-raz-site.xml for this role only.

**Related Name****Default Value****API Name**

ranger-raz-conf/ranger-raz-site.xml\_role\_safety\_valve

**Required**

false

**Ranger Raz Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

RANGER\_RAZ\_SERVER\_role\_env\_safety\_valve

**Required**

false

Logs

Ranger Raz Server Log Directory

Description	The log directory for log files of the role Ranger Raz Server.
Related Name	ranger.raz.log.dir
Default Value	/var/log/ranger/raz
API Name	log_dir
Required	false

Ranger Raz Server Logging Threshold

Description	The minimum log level for Ranger Raz Server logs
Related Name	
Default Value	INFO
API Name	log_threshold
Required	false

Ranger Raz Server Maximum Log File Backups

Description	The maximum number of rolled log files to keep for Ranger Raz Server logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

Ranger Raz Server Max Log Size

Description	The maximum size, in megabytes, per log file for Ranger Raz Server logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB

<b>API Name</b>	max_log_size
<b>Required</b>	false

Monitoring

Enable Health Alerts for this Role

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	enable_alerts
<b>Required</b>	false

Enable Configuration Change Alerts

<b>Description</b>	When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	enable_config_alerts
<b>Required</b>	false

Log Directory Free Space Monitoring Absolute Thresholds

<b>Description</b>	The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.
<b>Related Name</b>	
<b>Default Value</b>	Warning: 10 GiB, Critical: 5 GiB
<b>API Name</b>	log_directory_free_space_absolute_thresholds
<b>Required</b>	false

Log Directory Free Space Monitoring Percentage Thresholds

<b>Description</b>
--------------------

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

monitoring\_metric\_filter

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

process\_swap\_memory\_rate\_thresholds

**Required**

false

### Swap Memory Usage Rate Window

**Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

common.process.swap\_memory\_rate\_window

**Default Value**

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

### Process Swap Memory Thresholds

**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ranger\_raz\_server\_fd\_thresholds

**Required**

false

### Ranger Raz Server Host Health Test

**Description**

When computing the overall Ranger Raz Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ranger\_raz\_server\_host\_health\_enabled

**Required**

false

**Ranger Raz Server Process Health Test****Description**

Enables the health test that the Ranger Raz Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ranger\_raz\_server\_scm\_health\_enabled

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

<b>Required</b>
true

Unexpected Exits Thresholds

<b>Description</b>
The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.
<b>Related Name</b>
<b>Default Value</b>
Warning: Never, Critical: Any
<b>API Name</b>
unexpected_exits_thresholds
<b>Required</b>
false

Unexpected Exits Monitoring Period

<b>Description</b>
The period to review when computing unexpected exits.
<b>Related Name</b>
<b>Default Value</b>
5 minute(s)
<b>API Name</b>
unexpected_exits_window
<b>Required</b>
false

Other

Raz Kerberos Cookie Path

<b>Description</b>
Raz Kerberos cookie path.
<b>Related Name</b>
ranger.raz.auth.method.dt.params.cookie.path
<b>Default Value</b>
/
<b>API Name</b>
ranger.raz.auth.method.dt.params.cookie.path
<b>Required</b>
false

Raz Kerberos Name Rules

<b>Description</b>
Raz Kerberos name rules.
<b>Related Name</b>
ranger.raz.auth.method.dt.params.kerberos.name.rules

**Default Value**

DEFAULT

**API Name**

ranger.raz.auth.method.dt.params.kerberos.name.rules

**Required**

false

**Parameter Type for Kerberos Raz Authentication Method****Description**

Indicates the parameter type used when kerberos Raz authentication method is enabled.

**Related Name**

ranger.raz.auth.method.dt.params.type

**Default Value**

kerberos

**API Name**

ranger.raz.auth.method.dt.params.type

**Required**

false

**Raz Policy Cache Directory****Description**

Directory where Raz policies are cached after successful retrieval from the source.

**Related Name**

ranger.raz.policy.cache.dir

**Default Value**

/var/lib/ranger/ranger-raz/policy-cache

**API Name**

ranger.raz.policy.cache.dir

**Required**

true

**Raz Policy Poll Interval****Description**

Time interval to poll for changes in Raz policies.

**Related Name**

ranger.raz.policy.pollIntervalMs

**Default Value**

30 second(s)

**API Name**

ranger.raz.policy.pollIntervalMs

**Required**

false

**Connection Timeout for Raz Policy Rest Client****Description**

Connection timeout for Raz policy rest client.

**Related Name**

ranger.raz.policy.rest.client.connection.timeoutMs

**Default Value**

2 minute(s)

**API Name**

ranger.raz.policy.rest.client.connection.timeoutMs

**Required**

false

**Connection Timeout for Raz Policy Rest Read****Description**

Connection timeout for Raz policy rest read.

**Related Name**

ranger.raz.policy.rest.read.timeoutMs

**Default Value**

2 minute(s)

**API Name**

ranger.raz.policy.rest.read.timeoutMs

**Required**

false

**Raz Policy Rest Support Policy Deltas****Description**

Raz Policy rest support policy deltas.

**Related Name**

ranger.raz.policy.rest.supports.policy.deltas

**Default Value**

false

**API Name**

ranger.raz.policy.rest.supports.policy.deltas

**Required**

false

**Raz Policy Rest Support Tag Deltas****Description**

Raz Policy rest support tag deltas.

**Related Name**

ranger.raz.tag.rest.supports.tag.deltas

**Default Value**

false

**API Name**

ranger.raz.tag.rest.supports.tag.deltas

**Required**

false

### Raz Tomcat Ciphers

**Description**

A list of comma separated Tomcat ciphers supported by Raz server for SSL.

**Related Name**

ranger.raz.tomcat.ciphers

**Default Value****API Name**

ranger.raz.tomcat.ciphers

**Required**

false

### Ranger Raz Azure Storage Accounts

**Description**

A comma-separated list of storage accounts from which user delegation keys will be created, cached, and renewed.

**Related Name**

ranger.raz.azure.storage.accounts

**Default Value****API Name**

ranger\_raz\_azure\_storage\_accounts

**Required**

false

### Ranger Raz Max Heapsize

**Description**

Maximum size for the Java process heap. Passed to Java -Xmx.

**Related Name**

ranger\_raz\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

ranger\_raz\_max\_heap\_size

**Required**

true

### Ranger Raz Plugin Audit Hdfs Spool Directory Path

**Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

xasecure.audit.destination.hdfs.batch.filespool.dir

**Default Value**

/var/log/ranger-raz/audit/hdfs/spool

**API Name**`ranger_raz_plugin_hdfs_audit_spool_directory`**Required**`true`**Ranger Raz Plugin Policy Cache Directory Path****Description**

The directory where Ranger security policies are cached locally.

**Related Name**`ranger.plugin.raz.policy.cache.dir`**Default Value**`/var/lib/ranger/ranger-raz/policy-cache`**API Name**`ranger_raz_plugin_policy_cache_directory`**Required**`true`**Ranger Raz Plugin Audit Solr Spool Directory Path****Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**`xasecure.audit.destination.solr.batch.filespool.dir`**Default Value**`/var/log/ranger-raz/audit/solr/spool`**API Name**`ranger_raz_plugin_solr_audit_spool_directory`**Required**`true`**Hive Proxy User Groups****Description**

Allows the hive superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**`ranger.raz.proxyuser.hive.groups`**Default Value**`*`**API Name**`ranger_raz_proxyuser_hive_groups`**Required**`false`**Hive Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the hive user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

ranger.raz.proxyuser.hive.hosts

**Default Value**

\*

**API Name**

ranger\_raz\_proxyuser\_hive\_hosts

**Required**

false

### Httpfs Proxy User Groups

**Description**

Allows the httpfs superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

ranger.raz.proxyuser.httpfs.groups

**Default Value**

\*

**API Name**

ranger\_raz\_proxyuser\_httpfs\_groups

**Required**

false

### Httpfs Proxy User Hosts

**Description**

Comma-delimited list of hosts where you want to allow the httpfs user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host'.

**Related Name**

ranger.raz.proxyuser.httpfs.hosts

**Default Value**

\*

**API Name**

ranger\_raz\_proxyuser\_httpfs\_hosts

**Required**

false

### Hue Proxy User Groups

**Description**

Allows the hue superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

	ranger.raz.proxyuser.hue.groups
Default Value	*
API Name	
	ranger_raz_proxyuser_hue_groups
Required	false

Hue Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the hue user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
Related Name	
	ranger.raz.proxyuser.hue.hosts
Default Value	*
API Name	
	ranger_raz_proxyuser_hue_hosts
Required	false

Impala Proxy User Groups

Description	Allows the impala superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.
Related Name	
	ranger.raz.proxyuser.impala.groups
Default Value	*
API Name	
	ranger_raz_proxyuser_impala_groups
Required	false

Impala Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the impala user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
Related Name	
	ranger.raz.proxyuser.impala.hosts
Default Value	*

**API Name**

ranger\_raz\_proxyuser\_impala\_hosts

**Required**

false

**Livy Proxy User Groups****Description**

Allows the livy superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

ranger.raz.proxyuser.livy.groups

**Default Value**

\*

**API Name**

ranger\_raz\_proxyuser\_livy\_groups

**Required**

false

**Livy Proxy User Hosts****Description**

Comma-delimited list of hosts where you want to allow the livy user to impersonate other users. The default '\*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '\_no\_host\_'.

**Related Name**

ranger.raz.proxyuser.livy.hosts

**Default Value**

\*

**API Name**

ranger\_raz\_proxyuser\_livy\_hosts

**Required**

false

**Oozie Proxy User Groups****Description**

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '\*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '\_no\_group\_'.

**Related Name**

ranger.raz.proxyuser.oozie.groups

**Default Value**

\*

**API Name**

ranger\_raz\_proxyuser\_oozie\_groups

**Required**

false

Oozie Proxy User Hosts

Description	Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.
Related Name	ranger.raz.proxyuser.oozie.hosts
Default Value	*
API Name	ranger_raz_proxyuser_oozie_hosts
Required	false

Performance

Maximum Process File Descriptors

Description	If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
Related Name	
Default Value	
API Name	rlimit_fds
Required	false

Ports and Addresses

Raz HTTP Port

Description	The HTTP port for Ranger Raz.
Related Name	ranger.raz.service.http.port
Default Value	6081
API Name	ranger_raz_service_http_port
Required	false

Raz HTTPS Port

Description	The HTTPS port for Ranger Raz.
Related Name	ranger.raz.service.https.port

**Default Value**

6082

**API Name**

ranger\_raz\_service\_https\_port

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**Security****Ranger Raz Server TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Raz Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**`xasecure.policymgr.clientssl.truststore`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Ranger Raz Server TLS/SSL Trust Store Password****Description**

The password for the Ranger Raz Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**`xasecure.policymgr.clientssl.truststore.password`**Default Value****API Name**`ssl_client_truststore_password`**Required**`false`**Enable TLS/SSL for Ranger Raz Server****Description**

Encrypt communication between clients and Ranger Raz Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**`ranger.raz.service.https.attrib.ssl.enabled`**Default Value**`false`**API Name**`ssl_enabled`**Required**`false`**Ranger Raz Server TLS/SSL Server Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Raz Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**`ranger.raz.service.https.attrib.keystore.file`**Default Value****API Name**`ssl_server_keystore_location`**Required**

false

**Ranger Raz Server TLS/SSL Server Keystore File Password**

**Description**

The password for the Ranger Raz Server keystore file.

**Related Name**

ranger.raz.service.https.attrib.keystore.pass

**Default Value**

**API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection**

**Stacks Collection Data Retention**

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory**

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

**Related Name**

stacks\_collection\_directory

**Default Value**

**API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled**

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

	stacks_collection_enabled
Default Value	false
API Name	stacks_collection_enabled
Required	true

Stacks Collection Frequency

Description	The frequency with which stacks are collected.
Related Name	stacks_collection_frequency
Default Value	5.0 second(s)
API Name	stacks_collection_frequency
Required	false

Stacks Collection Method

Description	The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.
Related Name	stacks_collection_method
Default Value	jstack
API Name	stacks_collection_method
Required	false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Ranger Raz Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Raz Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-raz-conf/ranger-raz-audit.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-policymgr-ssl.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-raz-conf/ranger-raz-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-security.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-raz-conf/ranger-raz-security.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-site.xml parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger-raz-conf/ranger-raz-site.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Raz Kerberos Cookie Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Raz Kerberos Cookie Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.raz.auth.method.dt.params.cookie.path

**Required**

true

**Suppress Parameter Validation: Raz Kerberos Name Rules****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Raz Kerberos Name Rules parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.raz.auth.method.dt.params.kerberos.name.rules

**Required**

true

**Suppress Parameter Validation: Raz Policy Cache Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Raz Policy Cache Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.raz.policy.cache.dir

**Required**

true

**Suppress Parameter Validation: Raz Tomcat Ciphers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Raz Tomcat Ciphers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.raz.tomcat.ciphers

**Required**

true

**Suppress Parameter Validation: Ranger Raz Azure Storage Accounts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Azure Storage Accounts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_azure\_storage\_accounts

**Required**

true

**Suppress Parameter Validation: Ranger Raz Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Ranger Raz Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Plugin Audit Hdfs Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

### Suppress Parameter Validation: Ranger Raz Plugin Policy Cache Directory Path

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Plugin Policy Cache Directory Path parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger\_raz\_plugin\_policy\_cache\_directory

#### Required

true

### Suppress Parameter Validation: Ranger Raz Plugin Audit Solr Spool Directory Path

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Plugin Audit Solr Spool Directory Path parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger\_raz\_plugin\_solr\_audit\_spool\_directory

#### Required

true

### Suppress Parameter Validation: Hive Proxy User Groups

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Groups parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_ranger\_raz\_proxyuser\_hive\_groups

#### Required

true

### Suppress Parameter Validation: Hive Proxy User Hosts

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hive Proxy User Hosts parameter.

#### Related Name

#### Default Value

false

**API Name**`role_config_suppression_ranger_raz_proxyuser_hive_hosts`**Required**`true`**Suppress Parameter Validation: Httpfs Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Httpfs Proxy User Groups parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_raz_proxyuser_httpfs_groups`**Required**`true`**Suppress Parameter Validation: Httpfs Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Httpfs Proxy User Hosts parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_raz_proxyuser_httpfs_hosts`**Required**`true`**Suppress Parameter Validation: Hue Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Groups parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_raz_proxyuser_hue_groups`**Required**`true`**Suppress Parameter Validation: Hue Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_hue\_hosts

**Required**

true

**Suppress Parameter Validation: Impala Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_impala\_groups

**Required**

true

**Suppress Parameter Validation: Impala Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_impala\_hosts

**Required**

true

**Suppress Parameter Validation: Livy Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_livy\_groups

**Required**

true

**Suppress Parameter Validation: Livy Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_livy\_hosts

**Required**

true

**Suppress Parameter Validation: Oozie Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Groups parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_oozie\_groups

**Required**

true

**Suppress Parameter Validation: Oozie Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Proxy User Hosts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_oozie\_hosts

**Required**

true

**Suppress Parameter Validation: Ranger Raz Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Raz HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Raz HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_service\_http\_port

**Required**

true

**Suppress Parameter Validation: Raz HTTPS Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Raz HTTPS Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_service\_https\_port

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ranger Raz Server TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Raz Server TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ranger Raz Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ranger Raz Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Server TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_raz\_ranger\_raz\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_raz\_ranger\_raz\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_raz\_ranger\_raz\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_raz\_ranger\_raz\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_raz\_ranger\_raz\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

	Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	false
API Name	role_health_suppression_ranger_raz_ranger_raz_server_swap_memory_usage
Required	true

Suppress Health Test: Swap Memory Usage Rate Beta

Description	Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	false
API Name	role_health_suppression_ranger_raz_ranger_raz_server_swap_memory_usage_rate
Required	true

Suppress Health Test: Unexpected Exits

Description	Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	false
API Name	role_health_suppression_ranger_raz_ranger_raz_server_unexpected_exits
Required	true

Service-Wide

Advanced

System Group

Description	The group that this service's processes should run as.
Related Name	

**Default Value**

ranger

**API Name**

process\_groupname

**Required**

true

**System User**

**Description**

The user that this service's processes should run as.

**Related Name**

**Default Value**

rangerraz

**API Name**

process\_username

**Required**

true

**Ranger Raz Service Environment Advanced Configuration Snippet (Safety Valve)**

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name**

**Default Value**

**API Name**

RANGER\_RAZ\_service\_env\_safety\_valve

**Required**

false

**Monitoring**

**Enable Service Level Health Alerts**

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name**

**Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts**

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Healthy Ranger Raz Server Monitoring Thresholds****Description**

The health test thresholds of the overall Ranger Raz Server health. The check returns "Concerning" health if the percentage of "Healthy" Ranger Raz Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger Raz Servers falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 49.0 %

**API Name**

RANGER\_RAZ\_RANGER\_RAZ\_SERVER\_healthy\_thresholds

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

<b>API Name</b>	service_triggers
<b>Required</b>	true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

<b>Description</b>	For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	smon_derived_configs_safety_valve
<b>Required</b>	false

Other

HDFS Service

<b>Description</b>	Name of the HDFS service that this Ranger Raz service instance depends on
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	hdfs_service
<b>Required</b>	false

Enable Kerberos Raz Authentication Method

<b>Description</b>	Indicates whether Kerberos is enabled.
<b>Related Name</b>	ranger.raz.auth.method.dt.params.kerberos
<b>Default Value</b>	true
<b>API Name</b>	ranger_raz_authentication_method_kerberos
<b>Required</b>	false

Ranger Raz Plugin Hdfs Audit Directory

<b>Description</b>	The DFS path on which Ranger audits are written.
<b>Related Name</b>	ranger_raz_plugin_hdfs_audit_directory

<b>Default Value</b>	\$ranger_base_audit_url/rangerraz
<b>API Name</b>	ranger_raz_plugin_hdfs_audit_directory
<b>Required</b>	false

Ranger Service

<b>Description</b>	Name of the Ranger service that this Ranger Raz service instance depends on
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	ranger_service
<b>Required</b>	false

ZooKeeper Service

<b>Description</b>	Name of the ZooKeeper service that this Ranger Raz service instance depends on
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	zookeeper_service
<b>Required</b>	false

Security

Kerberos Principal

<b>Description</b>	Kerberos principal short name used by all roles of this service.
<b>Related Name</b>	
<b>Default Value</b>	rangerraz
<b>API Name</b>	kerberos_princ_name
<b>Required</b>	true

Suppressions

Suppress Configuration Validator: CDH Version Validator

<b>Description</b>
--------------------

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Configuration Validator: Ranger Raz Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Ranger Raz Server Log Directory

**Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

### Suppress Configuration Validator: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-audit.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-raz-conf/ranger-raz-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-raz-conf/ranger-raz-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-security.xml****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-security.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-raz-conf/ranger-raz-security.xml\_role\_safety\_valve

**Required**

**Suppress Configuration Validator: Raz Kerberos Cookie Path****Description**

Whether to suppress configuration warnings produced by the Raz Kerberos Cookie Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.raz.auth.method.dt.params.cookie.path

**Required**

true

**Suppress Configuration Validator: Raz Kerberos Name Rules****Description**

Whether to suppress configuration warnings produced by the Raz Kerberos Name Rules configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.raz.auth.method.dt.params.kerberos.name.rules

**Required**

true

**Suppress Configuration Validator: Raz Policy Cache Directory****Description**

Whether to suppress configuration warnings produced by the Raz Policy Cache Directory configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ranger.raz.policy.cache.dir`**Required**`true`**Suppress Configuration Validator: Raz Tomcat Ciphers****Description**

Whether to suppress configuration warnings produced by the Raz Tomcat Ciphers configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger.raz.tomcat.ciphers`**Required**`true`**Suppress Configuration Validator: Ranger Raz Azure Storage Accounts****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Azure Storage Accounts configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_raz_azure_storage_accounts`**Required**`true`**Suppress Configuration Validator: Ranger Raz Max Heapsize****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Max Heapsize configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_raz_max_heap_size`**Required**`true`**Suppress Configuration Validator: Ranger Raz Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Plugin Audit Hdfs Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Raz Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Plugin Policy Cache Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_plugin\_policy\_cache\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Raz Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Hive Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Hive Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_hive\_groups

**Required**

true

**Suppress Configuration Validator: Hive Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Hive Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_hive\_hosts

**Required**

true

**Suppress Configuration Validator: Httpfs Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Httpfs Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_httpfs\_groups

**Required**

true

**Suppress Configuration Validator: Httpfs Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Httpfs Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_httpfs\_hosts

**Required**

true

**Suppress Configuration Validator: Hue Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role_config_suppression_ranger_raz_proxyuser_hue_groups
<b>Required</b>
true

Suppress Configuration Validator: Hue Proxy User Hosts

<b>Description</b>
Whether to suppress configuration warnings produced by the Hue Proxy User Hosts configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ranger_raz_proxyuser_hue_hosts
<b>Required</b>
true

Suppress Configuration Validator: Impala Proxy User Groups

<b>Description</b>
Whether to suppress configuration warnings produced by the Impala Proxy User Groups configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ranger_raz_proxyuser_impala_groups
<b>Required</b>
true

Suppress Configuration Validator: Impala Proxy User Hosts

<b>Description</b>
Whether to suppress configuration warnings produced by the Impala Proxy User Hosts configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_ranger_raz_proxyuser_impala_hosts
<b>Required</b>
true

Suppress Configuration Validator: Livy Proxy User Groups

<b>Description</b>
Whether to suppress configuration warnings produced by the Livy Proxy User Groups configuration validator.
<b>Related Name</b>

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_livy\_groups

**Required**

true

**Suppress Configuration Validator: Livy Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Livy Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_livy\_hosts

**Required**

true

**Suppress Configuration Validator: Oozie Proxy User Groups****Description**

Whether to suppress configuration warnings produced by the Oozie Proxy User Groups configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_oozie\_groups

**Required**

true

**Suppress Configuration Validator: Oozie Proxy User Hosts****Description**

Whether to suppress configuration warnings produced by the Oozie Proxy User Hosts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_proxyuser\_oozie\_hosts

**Required**

true

### Suppress Configuration Validator: Ranger Raz Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_server\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Raz HTTP Port

**Description**

Whether to suppress configuration warnings produced by the Raz HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_service\_http\_port

**Required**

true

### Suppress Configuration Validator: Raz HTTPS Port

**Description**

Whether to suppress configuration warnings produced by the Raz HTTPS Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_raz\_service\_https\_port

**Required**

true

### Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Ranger Raz Server TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Ranger Raz Server TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Ranger Raz Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server TLS/SSL Server Keystore File Location configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Ranger Raz Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Ranger Raz Plugin Hdfs Audit Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Plugin Hdfs Audit Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_raz\_plugin\_hdfs\_audit\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Raz Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Ranger Raz Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_raz\_server\_count\_validator

**Required**

true

### Suppress Parameter Validation: Ranger Raz Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Raz Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_raz\_service\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Service Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_smon\_derived\_configs\_safety\_valve

**Required**

true

### Suppress Health Test: Ranger Raz Server Health

**Description**

Whether to suppress the results of the Ranger Raz Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

service\_health\_suppression\_ranger\_raz\_ranger\_raz\_server\_healthy

**Required**

true

## Ranger RMS Properties in Cloudera Runtime 7.2.16

Role groups:

### Ranger RMS Server

#### Advanced

#### Ranger RMS Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

#### Enable auto refresh for metric configurations

**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

#### Heap Dump Directory

**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

### Process Start Wait Timeout

**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

### Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-policymgr-ssl.xml

**Description**

For advanced use only. A string to be inserted into ranger-rms-conf/ranger-rms-policymgr-ssl.xml for this role only.

**Related Name**

**Default Value**

**API Name**

ranger-rms-conf/ranger-rms-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

**Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-site.xml**

**Description**

For advanced use only. A string to be inserted into ranger-rms-conf/ranger-rms-site.xml for this role only.

**Related Name**

**Default Value**

**API Name**

ranger-rms-conf/ranger-rms-site.xml\_role\_safety\_valve

**Required**

false

**Ranger RMS Server Environment Advanced Configuration Snippet (Safety Valve)**

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name**

**Default Value**

**API Name**

RANGER\_RMS\_SERVER\_role\_env\_safety\_valve

**Required**

false

**Logs**

**Ranger RMS Server Log Directory**

**Description**

The log directory for log files of the role Ranger RMS Server.

**Related Name**

ranger-rms.log.dir

**Default Value**

/var/log/ranger/rms

**API Name**

log\_dir

**Required**

false

**Ranger RMS Server Logging Threshold**

**Description**

	The minimum log level for Ranger RMS Server logs
Related Name	
Default Value	INFO
API Name	log_threshold
Required	false

Ranger RMS Server Maximum Log File Backups

Description	The maximum number of rolled log files to keep for Ranger RMS Server logs. Typically used by log4j or logback.
Related Name	
Default Value	10
API Name	max_log_backup_index
Required	false

Ranger RMS Server Max Log Size

Description	The maximum size, in megabytes, per log file for Ranger RMS Server logs. Typically used by log4j or logback.
Related Name	
Default Value	200 MiB
API Name	max_log_size
Required	false

Monitoring

Enable Health Alerts for this Role

Description	When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
Related Name	
Default Value	true
API Name	enable_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

`false`

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

`process_swap_memory_rate_thresholds`

**Required**

`false`

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

`common.process.swap_memory_rate_window`

**Default Value**

5 minute(s)

**API Name**

`process_swap_memory_rate_window`

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

ranger\_rms\_server\_fd\_thresholds

**Required**

false

**Ranger RMS Server Host Health Test****Description**

When computing the overall Ranger RMS Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

ranger\_rms\_server\_host\_health\_enabled

**Required**

false

**Ranger RMS Server Process Health Test****Description**

Enables the health test that the Ranger RMS Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

ranger\_rms\_server\_scm\_health\_enabled

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

**Unexpected Exits Thresholds****Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### Other

### Ranger RMS JWKS Provider Url

**Description**

The `{{JWKS_PROVIDER_URL}}` is a placeholder value which will be replaced with the IDBroker endpoint to get JWKS (JSON Web Key Set) when present in the cluster. The placeholder can be replaced to have custom JWKS provider url endpoint.

**Related Name**

ranger-rms.auth.method.dt.params.jwks.provider-url

**Default Value**

JWKS\_PROVIDER\_URL

**API Name**

ranger-rms.auth.method.dt.params.jwks.provider-url

**Required**

false

### Ranger RMS JWT Audiences

**Description**

List of comma separated audiences whose claims are supported by Ranger RMS service.

**Related Name**

ranger-rms.auth.method.dt.params.jwt.audiences

**Default Value**

idbroker, rms

**API Name**

ranger-rms.auth.method.dt.params.jwt.audiences

**Required**

false

### Ranger RMS Server TLS/SSL Keystore File Alias

**Description**

The alias for the Ranger RMS Server TLS/SSL keystore file. User must configure the alias for the Ranger RMS keystore.

**Related Name**

ranger-rms.service.https.attrib.keystore.keyalias

**Default Value****API Name**

ranger-rms.service.https.attrib.keystore.keyalias

**Required**

false

**Ranger RMS Access log Rotation Max Days****Description**

The number of days to retain Ranger RMS Access logs before they are automatically rotated.

**Related Name**

ranger-rms.accesslog.rotate.max.days

**Default Value**

15

**API Name**

ranger-rms\_accesslog\_rotate\_max\_days

**Required**

false

**Enable Mapping Hive Managed Tables****Description**

Ranger RMS, by default keeps track of external Hive table locations maintained in Hive Metastore. If Hive managed tables also need to be tracked, then enable this configuration.

**Related Name**

ranger-rms.HMS.map.managed.tables

**Default Value**

false

**API Name**

ranger\_rms\_hms\_map\_managed\_tables

**Required**

false

**Ranger RMS Hive Metastore Source Service Name****Description**

Hdfs plugin service name managed in Ranger Admin. RMS needs to associate the HDFS locations with this service name before starting. Along with "Ranger RMS Hive Metastore Target Service Name" parameter, RMS will be able to map HMS data to RMS entities and persist them in RMS database. The default value points to default Hdfs plugin service name that gets created as a part of Ranger service installation from Cloudera Manager. Need to update the parameter value if using different Hdfs plugin service name in Ranger Admin.

**Related Name**

ranger-rms.HMS.source.service.name

**Default Value**

cm\_hdfs

**API Name**

ranger\_rms\_hms\_source\_service\_name

**Required**

false

**Ranger RMS Hive Metastore Target Service Name****Description**

Hive plugin service name managed in Ranger Admin. RMS need to associate the Hive tables with this service name before starting. The default value points to default Hive plugin service name that gets created as a part of Ranger service installation from Cloudera Manager. Need to update the parameter value if using different Hive plugin service name in Ranger Admin.

**Related Name**

ranger-rms.HMS.target.service.name

**Default Value**

cm\_hive

**API Name**

ranger\_rms\_hms\_target\_service\_name

**Required**

false

**Ranger RMS Max Heapsize****Description**

Maximum size for the Java process heap. Passed to Java -Xmx.

**Related Name**

ranger\_rms\_max\_heap\_size

**Default Value**

1 GiB

**API Name**

ranger\_rms\_max\_heap\_size

**Required**

true

**Ranger RMS Polling Notifications Frequency****Description**

Polling notifications frequency in milliseconds for Ranger RMS.

**Related Name**

ranger-rms.polling.notifications.frequency.ms

**Default Value**

30 second(s)

**API Name**

ranger\_rms\_polling\_notifications\_frequency\_ms

**Required**

false

**Ranger RMS Server HA****Description**

Enable High availability for Ranger RMS server.

**Related Name**

ranger-rms.server.ha.enabled

**Default Value**

false

**API Name**

ranger\_rms\_server\_ha\_enabled

**Required**

false

**Ranger RMS HA Zookeeper ACL****Description**

Zookeeper ACL for Ranger RMS server.

**Related Name**

ranger-rms.server.ha.zookeeper.acl

**Default Value**

auth:

**API Name**

ranger\_rms\_server\_ha\_zookeeper\_acl

**Required**

false

**Ranger RMS Server Zookeeper ACL Auth****Description**

Zookeeper ACL Auth for Ranger RMS server.

**Related Name**

ranger-rms.server.ha.zookeeper.auth

**Default Value****API Name**

ranger\_rms\_server\_ha\_zookeeper\_acl\_auth

**Required**

false

**Ranger RMS Server HA Zookeeper Num Retries****Description**

Number of retries to connect zookeeper for Ranger RMS server.

**Related Name**

ranger-rms.server.ha.zookeeper.num.retries

**Default Value**

3

**API Name**

ranger\_rms\_server\_ha\_zookeeper\_num\_retries

**Required**

false

**Ranger RMS Server HA Zookeeper Retry Sleeptime****Description**

Zookeeper retry sleeptime in milliseconds for Ranger RMS server.

**Related Name**

ranger-rms.server.ha.zookeeper.retry.sleeptime.ms

**Default Value**

1 second(s)

**API Name**

ranger\_rms\_server\_ha\_zookeeper\_retry\_sleeptime\_ms

**Required**

false

**Ranger RMS Server HA Zookeeper Session Timeout****Description**

Zookeeper session timeout in milliseconds for Ranger RMS server.

**Related Name**

ranger-rms.server.ha.zookeeper.session.timeout.ms

**Default Value**

20 second(s)

**API Name**

ranger\_rms\_server\_ha\_zookeeper\_session\_timeout\_ms

**Required**

false

**Ranger RMS Server HA Zookeeper Zkroot****Description**

Zookeeper Zkroot for Ranger RMS server.

**Related Name**

ranger-rms.server.ha.zookeeper.zkroot

**Default Value**

/ranger-rms

**API Name**

ranger\_rms\_server\_ha\_zookeeper\_zkroot

**Required**

false

**Ranger RMS Server IDs****Description**

Ranger RMS Server IDs.

**Related Name**

ranger-rms.server.ids

**Default Value****API Name**

ranger\_rms\_server\_ids

<b>Required</b>
false

**Ranger RMS Supported Uri Scheme**

<b>Description</b>
Hive service storage type used to store Hive's tables.
<b>Related Name</b>
ranger-rms.supported.uri.scheme
<b>Default Value</b>
hdfs
<b>API Name</b>
ranger_rms_supported_uri_scheme
<b>Required</b>
false

**Ranger RMS Tomcat Work Dir**

<b>Description</b>
Tomcat work directory for Ranger RMS.
<b>Related Name</b>
ranger-rms.tomcat.work.dir
<b>Default Value</b>
/var/lib/ranger/ranger-rms/work
<b>API Name</b>
ranger_rms_tomcat_work_dir
<b>Required</b>
true

**Performance**

**Maximum Process File Descriptors**

<b>Description</b>
If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.
<b>Related Name</b>
<b>Default Value</b>
<b>API Name</b>
rlimit_fds
<b>Required</b>
false

**Ports and Addresses**

**RMS HTTP Port**

<b>Description</b>
The HTTP port for Ranger RMS.
<b>Related Name</b>

	ranger-rms.service.http.port
Default Value	8383
API Name	
	ranger_rms_service_http_port
Required	false

RMS HTTPS Port

Description	The HTTPS port for Ranger RMS.
Related Name	
	ranger-rms.service.https.port
Default Value	8484
API Name	
	ranger_rms_service_https_port
Required	false

Resource Management

Cgroup CPU Shares

Description	Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.
Related Name	
	cpu.shares
Default Value	1024
API Name	
	rm_cpu_shares
Required	true

Custom Control Group Resources (overrides Cgroup settings)

Description	Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***
Related Name	
	custom.cgroups
Default Value	

**API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

## Security

### Ranger RMS Server TLS/SSL Trust Store File

**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger RMS Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name**

ranger-rms.truststore.file

**Default Value****API Name**

ssl\_client\_truststore\_location

**Required**

false

### Ranger RMS Server TLS/SSL Trust Store Password

**Description**

The password for the Ranger RMS Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

ranger-rms.truststore.password

**Default Value****API Name**

ssl\_client\_truststore\_password

**Required**

false

### Enable TLS/SSL for Ranger RMS Server

**Description**

Encrypt communication between clients and Ranger RMS Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

**Related Name**

ranger-rms.service.https.attrib.ssl.enabled

**Default Value**

false

**API Name**

ssl\_enabled

<b>Required</b>
false

**Ranger RMS Server TLS/SSL Server Keystore File Location**

<b>Description</b>
The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger RMS Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.
<b>Related Name</b>
ranger-rms.service.https.attrib.keystore.file
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_location
<b>Required</b>
false

**Ranger RMS Server TLS/SSL Server Keystore File Password**

<b>Description</b>
The password for the Ranger RMS Server keystore file.
<b>Related Name</b>
ranger-rms.service.https.attrib.keystore.pass
<b>Default Value</b>
<b>API Name</b>
ssl_server_keystore_password
<b>Required</b>
false

**Stacks Collection**

**Stacks Collection Data Retention**

<b>Description</b>
The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
<b>Related Name</b>
stacks_collection_data_retention
<b>Default Value</b>
100 MiB
<b>API Name</b>
stacks_collection_data_retention
<b>Required</b>
false

**Stacks Collection Directory**

<b>Description</b>
The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user

with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

**Related Name**

stacks\_collection\_directory

**Default Value**

**API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled**

**Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency**

**Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method**

**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Ranger RMS Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger RMS Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Parameter Validation: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-policymgr-ssl.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-rms-conf/ranger-rms-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-site.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-site.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-rms-conf/ranger-rms-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Ranger RMS JWKS Provider Url

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS JWKS Provider Url parameter.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_ranger-rms.auth.method.dt.params.jwks.provider-url`**Required**`true`**Suppress Parameter Validation: Ranger RMS JWT Audiences****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS JWT Audiences parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger-rms.auth.method.dt.params.jwt.audiences`**Required**`true`**Suppress Parameter Validation: Ranger RMS Server TLS/SSL Keystore File Alias****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server TLS/SSL Keystore File Alias parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger-rms.service.https.attrib.keystore.keyalias`**Required**`true`**Suppress Parameter Validation: Ranger RMS Hive Metastore Source Service Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Hive Metastore Source Service Name parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_ranger_rms_hms_source_service_name`**Required**`true`**Suppress Parameter Validation: Ranger RMS Hive Metastore Target Service Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Hive Metastore Target Service Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_hms\_target\_service\_name

**Required**

true

**Suppress Parameter Validation: Ranger RMS Max Heapsize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Max Heapsize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_max\_heap\_size

**Required**

true

**Suppress Parameter Validation: Ranger RMS HA Zookeeper ACL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS HA Zookeeper ACL parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_server\_ha\_zookeeper\_acl

**Required**

true

**Suppress Parameter Validation: Ranger RMS Server Zookeeper ACL Auth****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server Zookeeper ACL Auth parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_server\_ha\_zookeeper\_acl\_auth

**Required**

true

**Suppress Parameter Validation: Ranger RMS Server HA Zookeeper Zkroot****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server HA Zookeeper Zkroot parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_server\_ha\_zookeeper\_zkroot

**Required**

true

**Suppress Parameter Validation: Ranger RMS Server IDs****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server IDs parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_server\_ids

**Required**

true

**Suppress Parameter Validation: Ranger RMS Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: RMS HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the RMS HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_service\_http\_port

**Required**

true

**Suppress Parameter Validation: RMS HTTPS Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the RMS HTTPS Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_service\_https\_port

**Required**

true

**Suppress Parameter Validation: Ranger RMS Supported Uri Scheme****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Supported Uri Scheme parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_supported\_uri\_scheme

**Required**

true

**Suppress Parameter Validation: Ranger RMS Tomcat Work Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Tomcat Work Dir parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_tomcat\_work\_dir

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Ranger RMS Server TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Ranger RMS Server TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Ranger RMS Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Ranger RMS Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Server TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_rms\_ranger\_rms\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_rms\_ranger\_rms\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_rms\_ranger\_rms\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_rms\_ranger\_rms\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_rms\_ranger\_rms\_server\_scm\_health

**Required**

true

### Suppress Health Test: Swap Memory Usage

**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_rms\_ranger\_rms\_server\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Swap Memory Usage Rate Beta

**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_ranger\_rms\_ranger\_rms\_server\_swap\_memory\_usage\_rate

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**`role_health_suppression_ranger_rms_ranger_rms_server_unexpected_exits`**Required**`true`

## Service-Wide

### Advanced

#### System Group

**Description**

The group that this service's processes should run as.

**Related Name****Default Value**`ranger`**API Name**`process_groupname`**Required**`true`

#### System User

**Description**

The user that this service's processes should run as.

**Related Name****Default Value**`ranger_rms`**API Name**`process_username`**Required**`true`

#### Ranger RMS Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**`RANGER_RMS_service_env_safety_valve`**Required**`false`

## Monitoring

### Enable Service Level Health Alerts

**Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

**Related Name****Default Value**

true

**API Name**

`enable_alerts`

**Required**

false

### Enable Configuration Change Alerts

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

`enable_config_alerts`

**Required**

false

### Healthy Ranger RMS Server Monitoring Thresholds

**Description**

The health test thresholds of the overall Ranger RMS Server health. The check returns "Concerning" health if the percentage of "Healthy" Ranger RMS Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger RMS Servers falls below the critical threshold.

**Related Name****Default Value**

Warning: 99.0 %, Critical: 49.0 %

**API Name**

`RANGER_RMS_RANGER_RMS_SERVER_healthy_thresholds`

**Required**

false

### Service Triggers

**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific service.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****Ranger RMS Authentication****Description**

Authentication type for the Ranger RMS. Can either be "simple" or "kerberos".

**Related Name**

hadoop.security.authentication

**Default Value**

kerberos

**API Name**

ranger\_rms\_authentication

**Required**

false

**Ranger Service**

**Description**

Name of the Ranger service that this Ranger RMS service instance depends on

**Related Name**

**Default Value**

**API Name**

ranger\_service

**Required**

true

**ZooKeeper Service**

**Description**

Name of the ZooKeeper service that this Ranger RMS service instance depends on

**Related Name**

**Default Value**

**API Name**

zookeeper\_service

**Required**

true

**Security**

**Kerberos Principal**

**Description**

Kerberos principal short name used by all roles of this service.

**Related Name**

**Default Value**

rangerms

**API Name**

kerberos\_princ\_name

**Required**

true

**Suppressions**

**Suppress Configuration Validator: CDH Version Validator**

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log\_dir

**Required**

true

**Suppress Configuration Validator: Heap Dump Directory****Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-rms-conf/ranger-rms-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-site.xml

**Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-site.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-rms-conf/ranger-rms-site.xml\_role\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Ranger RMS JWKS Provider Url

**Description**

Whether to suppress configuration warnings produced by the Ranger RMS JWKS Provider Url configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-rms.auth.method.dt.params.jwks.provider-url

**Required**

true

### Suppress Configuration Validator: Ranger RMS JWT Audiences

**Description**

Whether to suppress configuration warnings produced by the Ranger RMS JWT Audiences configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-rms.auth.method.dt.params.jwt.audiences

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server TLS/SSL Keystore File Alias****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server TLS/SSL Keystore File Alias configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-rms.service.https.attrib.keystore.keyalias

**Required**

true

**Suppress Configuration Validator: Ranger RMS Hive Metastore Source Service Name****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Hive Metastore Source Service Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_hms\_source\_service\_name

**Required**

true

**Suppress Configuration Validator: Ranger RMS Hive Metastore Target Service Name****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Hive Metastore Target Service Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_hms\_target\_service\_name

**Required**

true

**Suppress Configuration Validator: Ranger RMS Max Heapsize****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Max Heapsize configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_max\_heap\_size

**Required**

true

**Suppress Configuration Validator: Ranger RMS HA Zookeeper ACL****Description**

Whether to suppress configuration warnings produced by the Ranger RMS HA Zookeeper ACL configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_server\_ha\_zookeeper\_acl

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server Zookeeper ACL Auth****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server Zookeeper ACL Auth configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_server\_ha\_zookeeper\_acl\_auth

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server HA Zookeeper Zkroot****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server HA Zookeeper Zkroot configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_server\_ha\_zookeeper\_zkroot

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server IDs****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server IDs configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_server\_ids

**Required**

true

### Suppress Configuration Validator: Ranger RMS Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_server\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: RMS HTTP Port

**Description**

Whether to suppress configuration warnings produced by the RMS HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_service\_http\_port

**Required**

true

### Suppress Configuration Validator: RMS HTTPS Port

**Description**

Whether to suppress configuration warnings produced by the RMS HTTPS Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_service\_https\_port

**Required**

true

**Suppress Configuration Validator: Ranger RMS Supported Uri Scheme****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Supported Uri Scheme configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_supported\_uri\_scheme

**Required**

true

**Suppress Configuration Validator: Ranger RMS Tomcat Work Dir****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Tomcat Work Dir configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_rms\_tomcat\_work\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server TLS/SSL Server Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Ranger RMS Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Ranger RMS Server TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

### Suppress Parameter Validation: System User

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_process\_username

#### Required

true

### Suppress Configuration Validator: Ranger RMS Server Count Validator

#### Description

Whether to suppress configuration warnings produced by the Ranger RMS Server Count Validator configuration validator.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_ranger\_rms\_server\_count\_validator

#### Required

true

### Suppress Parameter Validation: Ranger RMS Service Environment Advanced Configuration Snippet (Safety Valve)

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger RMS Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_ranger\_rms\_service\_env\_safety\_valve

#### Required

true

### Suppress Parameter Validation: Service Triggers

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

#### Related Name

#### Default Value

	false
API Name	
	service_config_suppression_service_triggers
Required	
	true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.
Related Name	
Default Value	
	false
API Name	
	service_config_suppression_smon_derived_configs_safety_valve
Required	
	true

**Suppress Health Test: Ranger RMS Server Health**

Description	Whether to suppress the results of the Ranger RMS Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	
	false
API Name	
	service_health_suppression_ranger_rms_ranger_rms_server_healthy
Required	
	true

**S3 Connector Properties in Cloudera Runtime 7.2.16**

Role groups:

**Service-Wide**

**Advanced**

**S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve)**

Description	For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.
Related Name	

**Default Value****API Name**

AWS\_S3\_service\_env\_safety\_valve

**Required**

false

**Default S3 Endpoint****Description**

Optional, default endpoint used by CDH services accessing S3, indicating the AWS region. To see a list of valid values for this parameter please consult [AWS Regions and Endpoints for S3](#): use one of the values listed in the 'Endpoint' column, eg. 's3.us-east-2.amazonaws.com'. When not specified the endpoint used is s3.amazonaws.com

**Related Name**

fs.s3a.endpoint

**Default Value****API Name**

s3\_endpoint

**Required**

false

**Monitoring****Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Other****Cloud Account Name****Description**

Name of an AWS account. The associated AWS keys are emitted to Hue, Impala and the Hive Metastore Server.

**Related Name****Default Value****API Name**

cloud\_account

**Required**

true

## Security

### Credentials Protection Policy

**Description**

Determines a security policy for the distribution of AWS account credentials to cluster services. 'More Secure': Encrypted at all times and directly available to a limited set of services. 'Less Secure': Credentials may be in plain text in some configuration files for specific services in the cluster. When IAM profiles are used, credentials are externally managed in AWS and there are no AWS credentials in any configuration files, so this setting is not applicable.

**Related Name****Default Value**

SECURE

**API Name**

key\_distribution\_policy

**Required**

true

## Suppressions

### Suppress Parameter Validation: S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Connector Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_aws\_s3\_service\_env\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Default S3 Endpoint

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default S3 Endpoint parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_s3\_endpoint

**Required**

true

### Suppress Configuration Validator: S3Guard CDH Validator

**Description**

	Whether to suppress configuration warnings produced by the S3Guard CDH Validator configuration validator.
Related Name	
Default Value	false
API Name	service_config_suppression_s3guard_unsupported_cdh_validator
Required	true

Schema Registry Properties in Cloudera Runtime 7.2.16

Role groups:

Gateway

Advanced

Deploy Directory

Description	The directory where the client configs will be deployed
Related Name	
Default Value	/etc/schemaregistry
API Name	client_config_root_dir
Required	true

Monitoring

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	false
API Name	enable_config_alerts
Required	false

Other

Alternatives Priority

Description	
-------------	--

	The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.
Related Name	
Default Value	50
API Name	client_config_priority
Required	true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Deploy Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_client_config_root_dir
Required	true

Schema Registry Server

Advanced

Schema Registry Server XML Override

Description	For advanced use only, replace entire XML in the logback configuration file for Schema Registry Server, ignoring all logging configuration.
Related Name	logback_safety_valve

**Default Value****API Name**

logback\_safety\_valve

**Required**

false

**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

### Kill When Out of Memory

**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-audit.xml****Description**

For advanced use only. A string to be inserted into ranger-schema-registry-audit.xml for this role only.

**Related Name****Default Value****API Name**

ranger-schema-registry-audit.xml\_role\_safety\_valve

**Required**

false

**Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-policymgr-ssl.xml****Description**

For advanced use only. A string to be inserted into ranger-schema-registry-policymgr-ssl.xml for this role only.

**Related Name****Default Value****API Name**

ranger-schema-registry-policymgr-ssl.xml\_role\_safety\_valve

**Required**

false

**Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-security.xml**

<b>Description</b>	For advanced use only. A string to be inserted into ranger-schema-registry-security.xml for this role only.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	ranger-schema-registry-security.xml_role_safety_valve
<b>Required</b>	false

**Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml**

<b>Description</b>	For advanced use only. A string to be inserted into registry.yaml for this role only.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	registry.yaml_role_safety_valve
<b>Required</b>	false

**Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>	For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	SCHEMA_REGISTRY_SERVER_role_env_safety_valve
<b>Required</b>	false

**Logs**

**Schema Registry Server Log Directory**

<b>Description</b>	The log directory for log files of the role Schema Registry Server.
<b>Related Name</b>	log_dir
<b>Default Value</b>	/var/log/schemaregistry
<b>API Name</b>	log_dir

<b>Required</b>
false

**Schema Registry Server Logging Threshold**

<b>Description</b>
The minimum log level for Schema Registry Server logs
<b>Related Name</b>
<b>Default Value</b>
INFO
<b>API Name</b>
log_threshold
<b>Required</b>
false

**Schema Registry Server Maximum Log File Backups**

<b>Description</b>
The maximum number of rolled log files to keep for Schema Registry Server logs. Typically used by log4j or logback.
<b>Related Name</b>
<b>Default Value</b>
10
<b>API Name</b>
max_log_backup_index
<b>Required</b>
false

**Schema Registry Server Max Log Size**

<b>Description</b>
The maximum size, in megabytes, per log file for Schema Registry Server logs. Typically used by log4j or logback.
<b>Related Name</b>
<b>Default Value</b>
200 MiB
<b>API Name</b>
max_log_size
<b>Required</b>
false

**Monitoring**

**Enable Health Alerts for this Role**

<b>Description</b>
When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>

**Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts****Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name****Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- **Health Test Metric Set** - Select this parameter to collect only metrics required for health tests.
- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

#### Related Name

#### Default Value

#### API Name

`monitoring_metric_filter`

#### Required

false

### Swap Memory Usage Rate Thresholds

#### Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

#### Related Name

#### Default Value

Warning: Never, Critical: Never

#### API Name

`process_swap_memory_rate_thresholds`

#### Required

false

### Swap Memory Usage Rate Window

#### Description

The period to review when computing unexpected swap memory usage change of the process.

#### Related Name

`common.process.swap_memory_rate_window`

#### Default Value

5 minute(s)

**API Name**

process\_swap\_memory\_rate\_window

**Required**

false

**Process Swap Memory Thresholds****Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

**Related Name****Default Value**

Warning: 200 B, Critical: Never

**API Name**

process\_swap\_memory\_thresholds

**Required**

false

**Role Triggers****Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- **triggerName** (mandatory) - The name of the trigger. This value must be unique for the specific role.
- **triggerExpression** (mandatory) - A tsquery expression representing the trigger.
- **streamThreshold** (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- **enabled** (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- **expressionEditorConfig** (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd\_open WHERE roleName=\$ROLENAME and last(fd\_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

role\_triggers

**Required**

true

### File Descriptor Monitoring Thresholds

**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

schema\_registry\_server\_fd\_thresholds

**Required**

false

### Schema Registry Server Host Health Test

**Description**

When computing the overall Schema Registry Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

schema\_registry\_server\_host\_health\_enabled

**Required**

false

### Schema Registry Server Process Health Test

**Description**

Enables the health test that the Schema Registry Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

schema\_registry\_server\_scm\_health\_enabled

**Required**

false

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

**Unexpected Exits Monitoring Period****Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

**Other****Ranger Schema Registry Plugin Policy Cache Directory Path****Description**

The directory where Ranger security policies are cached locally.

**Related Name**

ranger.plugin.schema-registry.policy.cache.dir

**Default Value**

/var/lib/schemaregistry/policy-cache

**API Name**

ranger.plugin.schema-registry.policy.cache.dir

**Required**

true

**Ranger Schema Registry Service Name****Description**

Schema Registry service name in Ranger. If this parameter is set to the placeholder value '{{GENERATED\_RANGER\_SERVICE\_NAME}}', a generated service name will be used, and if necessary, created. The generated service name will refer to the name of the cluster and the name of this SchemaRegistry service. The name can consist of alphanumeric, '-' and '\_' characters.

**Related Name**

ranger.plugin.schema-registry.service.name

**Default Value**

cm\_schema-registry

**API Name**

ranger.plugin.schema-registry.service.name

**Required**

false

**Ranger Schema Registry Manager Plugin Audit Hdfs Spool Directory Path****Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**`xasecure.audit.destination.hdfs.batch.filespool.dir`**Default Value**`/var/log/schemaregistry/audit/hdfs/spool`**API Name**`ranger_schemaregistry_plugin_hdfs_audit_spool_directory`**Required**`true`**Ranger Schema Registry Plugin Audit Solr Spool Directory Path****Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**`xasecure.audit.destination.solr.batch.filespool.dir`**Default Value**`/var/log/schemaregistry/audit/solr/spool`**API Name**`ranger_schemaregistry_plugin_solr_audit_spool_directory`**Required**`true`**Schema Registry Admin Port****Description**

The admin port for the server.

**Related Name**`schema.registry.adminPort`**Default Value**`7789`**API Name**`schema.registry.adminPort`**Required**`true`**Schema Registry Allowed Resources****Description**

Allowed resources for Schema Registry.

**Related Name**`schema.registry.allowed.resources`**Default Value**`401.html, back-default.png, favicon.ico`**API Name**`schema.registry.allowed.resources`**Required**`false`

### Enable TLS with Oracle DB

**Description**

Enable TLS with Oracle as DB for Schema Registry.

**Related Name**

schema.registry.enable.TLS.Oracle

**Default Value**

false

**API Name**

schema.registry.enable.TLS.Oracle

**Required**

false

### Hashing Algorithm Used For Generating Fingerprints

**Description**

Schema Registry hashes the schema text for performance reasons. It is important to remember that changing this value to a different algorithm will require you to manually rehash all existing fingerprints and update the database accordingly.

**Related Name**

schema.registry.hash.function

**Default Value**

MD5

**API Name**

schema.registry.hash.function

**Required**

true

### Password For HTTP Proxy Server Username

**Description**

Password For HTTP Proxy Server Username.

**Related Name**

schema.registry.httpProxyPassword

**Default Value****API Name**

schema.registry.httpProxyPassword

**Required**

false

### HTTP Proxy Server

**Description**

URL for http proxy server. Please enter it in format protocol\_name://host\_name:port\_number.

**Related Name**

schema.registry.httpProxyServer

**Default Value****API Name**

schema.registry.httpProxyServer
<b>Required</b>
false

HTTP Proxy Server Availability

<b>Description</b>
Boolean to set if HTTP Proxy Server is available or not.
<b>Related Name</b>
schema.registry.httpProxyServer.available
<b>Default Value</b>
false
<b>API Name</b>
schema.registry.httpProxyServer.available
<b>Required</b>
false

Username For HTTP Proxy Server

<b>Description</b>
Username for http proxy server.
<b>Related Name</b>
schema.registry.httpProxyUsername
<b>Default Value</b>
<b>API Name</b>
schema.registry.httpProxyUsername
<b>Required</b>
false

Schema Registry Jar Storage Directory Path

<b>Description</b>
Jar storage directory path.
<b>Related Name</b>
schema.registry.jar.storage.directory.path
<b>Default Value</b>
/tmp/schema-registry/local-jars
<b>API Name</b>
schema.registry.jar.storage.directory.path
<b>Required</b>
false

Schema Registry Jar Storage HDFS URL

<b>Description</b>
URL of the directory to be used for storing jars on HDFS when HDFS is not selected as an optional dependency.
<b>Related Name</b>
schema.registry.jar.storage.hdfs.url

**Default Value**

hdfs://localhost:8020

**API Name**

schema.registry.jar.storage.hdfs.url

**Required**

false

**Schema Registry Jar Storage Type****Description**

Jar storage type for storing jars on the local filesystem or on HDFS. If 'hdfs' is set but HDFS is not selected as an optional dependency, please provide a value for the 'Schema Registry Jar Storage HDFS URL' property.

**Related Name**

schema.registry.jar.storage.type

**Default Value**

local

**API Name**

schema.registry.jar.storage.type

**Required**

false

**Oracle TLS javax.net.ssl.keyStore****Description**

Path to keystore file if enabling TLS using Oracle DB.

**Related Name**

schema.registry.javax.net.ssl.keyStore

**Default Value****API Name**

schema.registry.javax.net.ssl.keyStore

**Required**

false

**Oracle TLS javax.net.ssl.keyStorePassword****Description**

KeyStorePassword if enabling TLS using Oracle DB.

**Related Name**

schema.registry.javax.net.ssl.keyStorePassword

**Default Value****API Name**

schema.registry.javax.net.ssl.keyStorePassword

**Required**

false

**Oracle TLS javax.net.ssl.keyStoreType****Description**

KeyStoreType type if enabling TLS using Oracle DB.

**Related Name**

schema.registry.javax.net.ssl.keyStoreType

**Default Value****API Name**

schema.registry.javax.net.ssl.keyStoreType

**Required**

false

**Oracle TLS javax.net.ssl.trustStore****Description**

Required Path to truststore file if enabling TLS using Oracle DB.

**Related Name**

schema.registry.javax.net.ssl.trustStore

**Default Value****API Name**

schema.registry.javax.net.ssl.trustStore

**Required**

false

**Oracle TLS javax.net.ssl.trustStorePassword****Description**

TrustStorePassword type if enabling TLS using Oracle DB.

**Related Name**

schema.registry.javax.net.ssl.trustStorePassword

**Default Value****API Name**

schema.registry.javax.net.ssl.trustStorePassword

**Required**

false

**Oracle TLS javax.net.ssl.trustStoreType****Description**

Required Truststore type if enabling TLS using Oracle DB.

**Related Name**

schema.registry.javax.net.ssl.trustStoreType

**Default Value****API Name**

schema.registry.javax.net.ssl.trustStoreType

**Required**

false

**Java Home Path Override****Description**

Java home path override for Schema Registry.

**Related Name**

schema.registry.jdk.home

**Default Value****API Name**

schema.registry.jdk.home

**Required**

false

### Schema Registry Kerberos Name Rules

**Description**

Kerberos name rules for Schema Registry.

**Related Name**

schema.registry.kerberos.name.rules

**Default Value**

RULE:[2:\$1@\$0]([jt]t@.\*EXAMPLE.COM)s/.\*/\$MAPRED\_USER/ RULE:[2:\$1@\$0]  
([nd]n@.\*EXAMPLE.COM)s/.\*/\$HDFS\_USER/DEFAULT

**API Name**

schema.registry.kerberos.name.rules

**Required**

false

### Schema Registry Kerberos Non Browser User Agents

**Description**

Non browser user agents if kerberos is enabled.

**Related Name**

schema.registry.kerberos.non.browser.user.agents

**Default Value****API Name**

schema.registry.kerberos.non.browser.user.agents

**Required**

false

### Schema Registry MaxRequestHeaderSize

**Description**

Maximum Request Header Size for the Schema Registry, in KiB.

**Related Name**

schema.registry.maxRequestHeaderSize

**Default Value**

8

**API Name**

schema.registry.maxRequestHeaderSize

**Required**

false

**Oracle TLS `oracle.net.authentication_services`****Description**

Oracle net authentication service if enabling TLS using Oracle DB.

**Related Name**

schema.registry.oracle.net.authentication\_services

**Default Value****API Name**

schema.registry.oracle.net.authentication\_services

**Required**

false

**Oracle TLS `oracle.net.ssl_cipher_suites`****Description**

Oracle net ssl cipher suites if enabling TLS using Oracle DB e.g. SSL\_DH\_DSS\_WITH\_DES\_CBC\_SHA.

**Related Name**

schema.registry.oracle.net.ssl\_cipher\_suites

**Default Value****API Name**

schema.registry.oracle.net.ssl\_cipher\_suites

**Required**

false

**Oracle TLS `oracle.net.ssl_server_dn_match`****Description**

ORacle ssl server domain name match if enabling TLS using Oracle DB.

**Related Name**

schema.registry.oracle.net.ssl\_server\_dn\_match

**Default Value**

true

**API Name**

schema.registry.oracle.net.ssl\_server\_dn\_match

**Required**

false

**Version of `oracle.net.ssl`****Description**

Oracle net ssl version.

**Related Name**

schema.registry.oracle.net.ssl\_version

**Default Value****API Name**

schema.registry.oracle.net.ssl\_version

**Required**

false

### Schema Registry Port

#### Description

The port on which server accepts connections.

#### Related Name

schema.registry.port

#### Default Value

7788

#### API Name

schema.registry.port

#### Required

true

### Schema Registry Proxyuser Knox Hosts

#### Description

Comma separated list of IP addresses from which Knox can act as a trusted proxy.

#### Related Name

schema.registry.proxyuser.knox.hosts

#### Default Value

\*

#### API Name

schema.registry.proxyuser.knox.hosts

#### Required

true

### Schema Registry Servlet Filter

#### Description

Schema Registry servlet filter class.

#### Related Name

schema.registry.servlet.filter

#### Default Value

com.hortonworks.registries.auth.server.AuthenticationFilter

#### API Name

schema.registry.servlet.filter

#### Required

true

### Schema Registry Admin Port (SSL)

#### Description

HTTPS admin port Schema Registry node runs on when SSL is enabled.

#### Related Name

schema.registry.ssl.adminPort

#### Default Value

7791

**API Name**

schema.registry.ssl.adminPort

**Required**

false

**SSL Keystore Type****Description**

The keystore type. It is blank by default but required if schema registry's ssl is enabled. e.g. PKCS12 or JKS. If it is left empty then this keystore type will come from CM settings.

**Related Name**

schema.registry.ssl.keyStoreType

**Default Value****API Name**

schema.registry.ssl.keyStoreType

**Required**

false

**Schema Registry Port (SSL)****Description**

HTTPS port Schema Registry node runs on when SSL is enabled.

**Related Name**

schema.registry.ssl.port

**Default Value**

7790

**API Name**

schema.registry.ssl.port

**Required**

false

**SSL TrustStore Type****Description**

The truststore type. It is blank by default but required if schema registry's ssl is enabled. e.g. PKCS12 or JKS. If it is left empty then this keystore type will come from CM settings.

**Related Name**

schema.registry.ssl.trustStoreType

**Default Value****API Name**

schema.registry.ssl.trustStoreType

**Required**

false

**SSL ValidateCerts****Description**

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates. Note: if this is enabled, the certificate revocation method

(CRLDP/OCSP) is also needed. This can be done by overriding Dropwizard configuration with Java system properties. E.g: `-Ddw.server.applicationConnectors[0].enableCRLDP=true` (more details at <https://www.dropwizard.io/en/latest/manual/core.html>)

**Related Name**

`schema.registry.ssl.validateCerts`

**Default Value**

`false`

**API Name**

`schema.registry.ssl.validateCerts`

**Required**

`false`

**SSL ValidatePeers****Description**

Whether or not to validate TLS peer certificates.

**Related Name**

`schema.registry.ssl.validatePeers`

**Default Value**

`false`

**API Name**

`schema.registry.ssl.validatePeers`

**Required**

`false`

**Schema Registry Query Timeout****Description**

Schema Registry query timeout.

**Related Name**

`schema.registry.storage.query.timeout`

**Default Value**

`30 second(s)`

**API Name**

`schema.registry.storage.query.timeout`

**Required**

`true`

**Schema Registry Token Validity****Description**

Kerberos token validity for Schema Registry in ms.

**Related Name**

`schema.registry.token.validity`

**Default Value**

`36000`

**API Name**

`schema.registry.token.validity`

**Required**

false

**Performance****Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

**Required**

false

**Resource Management****Cgroup CPU Shares****Description**

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

### Cgroup I/O Weight

**Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

### Cgroup Memory Hard Limit

**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

### Cgroup Memory Soft Limit

**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

Security

Schema Registry Server TLS/SSL Trust Store File

Description	The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Schema Registry Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.
Related Name	schema.registry.ssl.trustStorePath
Default Value	
API Name	ssl_client_truststore_location
Required	false

Schema Registry Server TLS/SSL Trust Store Password

Description	The password for the Schema Registry Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.
Related Name	schema.registry.ssl.trustStorePassword
Default Value	
API Name	ssl_client_truststore_password
Required	false

Enable TLS/SSL for Schema Registry Server

Description	Encrypt communication between clients and Schema Registry Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).
Related Name	ssl.enable
Default Value	false
API Name	ssl_enabled
Required	false

Schema Registry Server TLS/SSL Server Keystore File Location

Description	
-------------	--

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Schema Registry Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name**

schema.registry.ssl.keyStorePath

**Default Value**

**API Name**

ssl\_server\_keystore\_location

**Required**

false

**Schema Registry Server TLS/SSL Server Keystore File Password**

**Description**

The password for the Schema Registry Server keystore file.

**Related Name**

schema.registry.ssl.keyStorePassword

**Default Value**

**API Name**

ssl\_server\_keystore\_password

**Required**

false

**Stacks Collection**

**Stacks Collection Data Retention**

**Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

**Related Name**

stacks\_collection\_data\_retention

**Default Value**

100 MiB

**API Name**

stacks\_collection\_data\_retention

**Required**

false

**Stacks Collection Directory**

**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

**Related Name**

stacks\_collection\_directory

**Default Value**

**API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Schema Registry Server Log Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Log Directory parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_log_dir
Required	true

Suppress Parameter Validation: Schema Registry Server XML Override

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server XML Override parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_logback_safety_valve
Required	true

Suppress Parameter Validation: Heap Dump Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.
Related Name	
Default Value	false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Parameter Validation: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-schema-registry-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-schema-registry-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-security.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-schema-registry-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Schema Registry Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Schema Registry Plugin Policy Cache Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.plugin.schema-registry.policy.cache.dir

**Required**

true

**Suppress Parameter Validation: Ranger Schema Registry Service Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Schema Registry Service Name parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.plugin.schema-registry.service.name

**Required**

true

**Suppress Parameter Validation: Ranger Schema Registry Manager Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Schema Registry Manager Plugin Audit Hdfs Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_schemaregistry\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Ranger Schema Registry Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Schema Registry Plugin Audit Solr Spool Directory Path parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_schemaregistry\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Parameter Validation: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_registry.yaml\_role\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Schema Registry Admin Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Admin Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.adminport

**Required**

true

**Suppress Parameter Validation: Schema Registry Allowed Resources****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Allowed Resources parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.allowed.resources

**Required**

true

**Suppress Parameter Validation: Hashing Algorithm Used For Generating Fingerprints****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hashing Algorithm Used For Generating Fingerprints parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.hash.function

**Required**

true

**Suppress Parameter Validation: Password For HTTP Proxy Server Username****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password For HTTP Proxy Server Username parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.httpproxypassword

**Required**

true

### Suppress Parameter Validation: HTTP Proxy Server

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Proxy Server parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_schema.registry.httpproxyserver

#### Required

true

### Suppress Parameter Validation: Username For HTTP Proxy Server

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Username For HTTP Proxy Server parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_schema.registry.httpproxyusername

#### Required

true

### Suppress Parameter Validation: Schema Registry Jar Storage Directory Path

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Jar Storage Directory Path parameter.

#### Related Name

#### Default Value

false

#### API Name

role\_config\_suppression\_schema.registry.jar.storage.directory.path

#### Required

true

### Suppress Parameter Validation: Schema Registry Jar Storage HDFS URL

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Jar Storage HDFS URL parameter.

#### Related Name

#### Default Value

false

**API Name**`role_config_suppression_schema.registry.jar.storage.hdfs.url`**Required**`true`**Suppress Parameter Validation: Oracle TLS javax.net.ssl.keyStore****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.keyStore parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.javax.net.ssl.keystore`**Required**`true`**Suppress Parameter Validation: Oracle TLS javax.net.ssl.keyStorePassword****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.keyStorePassword parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.javax.net.ssl.keystorepassword`**Required**`true`**Suppress Parameter Validation: Oracle TLS javax.net.ssl.keyStoreType****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.keyStoreType parameter.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.javax.net.ssl.keystoretype`**Required**`true`**Suppress Parameter Validation: Oracle TLS javax.net.ssl.trustStore****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.trustStore parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.javax.net.ssl.truststore

**Required**

true

**Suppress Parameter Validation: Oracle TLS javax.net.ssl.trustStorePassword****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.trustStorePassword parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.javax.net.ssl.truststorepassword

**Required**

true

**Suppress Parameter Validation: Oracle TLS javax.net.ssl.trustStoreType****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS javax.net.ssl.trustStoreType parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.javax.net.ssl.truststoretype

**Required**

true

**Suppress Parameter Validation: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.jdk.home

**Required**

true

**Suppress Parameter Validation: Schema Registry Kerberos Name Rules****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Kerberos Name Rules parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.kerberos.name.rules

**Required**

true

**Suppress Parameter Validation: Schema Registry Kerberos Non Browser User Agents****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Kerberos Non Browser User Agents parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.kerberos.non.browser.user.agents

**Required**

true

**Suppress Parameter Validation: Schema Registry MaxRequestHeaderSize****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry MaxRequestHeaderSize parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.maxrequestheadersize

**Required**

true

**Suppress Parameter Validation: Oracle TLS oracle.net.authentication\_services****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS oracle.net.authentication\_services parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.oracle.net.authentication\_services

**Required**

true

**Suppress Parameter Validation: Oracle TLS oracle.net.ssl\_cipher\_suites****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS oracle.net.ssl\_cipher\_suites parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.oracle.net.ssl\_cipher\_suites

**Required**

true

**Suppress Parameter Validation: Version of oracle.net.ssl****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Version of oracle.net.ssl parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.oracle.net.ssl\_version

**Required**

true

**Suppress Parameter Validation: Schema Registry Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.port

**Required**

true

**Suppress Parameter Validation: Schema Registry Proxyuser Knox Hosts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Proxyuser Knox Hosts parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.proxyuser.knox.hosts

**Required**

true

**Suppress Parameter Validation: Schema Registry Servlet Filter****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Servlet Filter parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.servlet.filter

**Required**

true

**Suppress Parameter Validation: Schema Registry Admin Port (SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Admin Port (SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.adminport

**Required**

true

**Suppress Parameter Validation: SSL Keystore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.keystoretype

**Required**

true

**Suppress Parameter Validation: Schema Registry Port (SSL)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Port (SSL) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.port

**Required**

true

**Suppress Parameter Validation: SSL TrustStore Type****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.truststoretype

**Required**

true

**Suppress Parameter Validation: SSL ValidateCerts****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.validatecerts

**Required**

true

**Suppress Parameter Validation: SSL ValidatePeers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidatePeers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.validatepeers

**Required**

true

**Suppress Parameter Validation: Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_schema\_registry\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Schema Registry Server TLS/SSL Trust Store File**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Trust Store File parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

**Suppress Parameter Validation: Schema Registry Server TLS/SSL Trust Store Password**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Trust Store Password parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

**Suppress Parameter Validation: Schema Registry Server TLS/SSL Server Keystore File Location**

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Server Keystore File Location parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Parameter Validation: Schema Registry Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_audit\_health

**Required**

true

**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_file\_descriptor

**Required**

true

**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_swap\_memory\_usage

**Required**

true

**Suppress Health Test: Swap Memory Usage Rate Beta****Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_swap\_memory\_usage\_rate

**Required**

true

**Suppress Health Test: Unexpected Exits****Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_schemaregistry\_schema\_registry\_server\_unexpected\_exits

**Required**

true

Service-Wide

Advanced

Schema Registry Database JDBC Url Override

Description	Specify JDBC url override for connecting to Schema Registry database. If not specified, the JDBC url will be calculated on basis of the Schema Registry database parameters specified.
Related Name	database_jdbc_url_override
Default Value	
API Name	database_jdbc_url_override
Required	false

System Group

Description	The group that this service's processes should run as.
Related Name	
Default Value	hadoop
API Name	process_groupname
Required	true

System User

Description	The user that this service's processes should run as.
Related Name	
Default Value	schemaregistry
API Name	process_username
Required	true

Schema Registry Service Environment Advanced Configuration Snippet (Safety Valve)

Description	For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.
Related Name	
Default Value	

<b>API Name</b>	SCHEMAREGISTRY_service_env_safety_valve
<b>Required</b>	false

Database

Schema Registry Database Host

<b>Description</b>	Hostname of the database used by Schema Registry.
<b>Related Name</b>	schema.registry.storage.connector.host
<b>Default Value</b>	localhost
<b>API Name</b>	database_host
<b>Required</b>	true

Schema Registry Database Name

<b>Description</b>	Name of Schema Registry database.
<b>Related Name</b>	schema.registry.storage.connector.name
<b>Default Value</b>	schemaregistry
<b>API Name</b>	database_name
<b>Required</b>	true

Schema Registry Database User Password

<b>Description</b>	Password for Schema Registry database.
<b>Related Name</b>	schema.registry.storage.connector.password
<b>Default Value</b>	
<b>API Name</b>	database_password
<b>Required</b>	true

Schema Registry Database Port

<b>Description</b>	Port for Schema Registry database.
--------------------	------------------------------------

<b>Related Name</b>	schema.registry.storage.connector.port
<b>Default Value</b>	3306
<b>API Name</b>	database_port
<b>Required</b>	true

**Schema Registry Database Type**

<b>Description</b>	Database type to be used (postgres).
<b>Related Name</b>	schema.registry.storage.connector.type
<b>Default Value</b>	mysql
<b>API Name</b>	database_type
<b>Required</b>	true

**Schema Registry Database User**

<b>Description</b>	User for Schema Registry database.
<b>Related Name</b>	schema.registry.storage.connector.user
<b>Default Value</b>	schemaregistry
<b>API Name</b>	database_user
<b>Required</b>	true

**Monitoring**

**Enable Service Level Health Alerts**

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	enable_alerts
<b>Required</b>	

false

### Enable Configuration Change Alerts

#### Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

#### Related Name

#### Default Value

false

#### API Name

enable\_config\_alerts

#### Required

false

### Healthy Schema Registry Server Monitoring Thresholds

#### Description

The health test thresholds of the overall Schema Registry Server health. The check returns "Concerning" health if the percentage of "Healthy" Schema Registry Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Schema Registry Servers falls below the critical threshold.

#### Related Name

#### Default Value

Warning: 99.99 %, Critical: 49.99 %

#### API Name

SCHEMAREGISTRY\_SCHEMA\_REGISTRY\_SERVER\_healthy\_thresholds

#### Required

false

### Service Triggers

#### Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

**Related Name****Default Value**

[]

**API Name**

service\_triggers

**Required**

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

**Other****Enable Kerberos Authentication with Trusted Proxy****Description**

Enables Trusted proxy with Kerberos authentication for this Schema Registry service.

**Related Name**

enable.trusted.proxy

**Default Value**

true

**API Name**

enable.trusted.proxy

**Required**

false

**HDFS Service****Description**

Name of the HDFS service that this Schema Registry service instance depends on

**Related Name****Default Value****API Name**

hdfs\_service

**Required**

false

Enable Kerberos Authentication

Description	Enables Kerberos authentication for this Schema Registry service.
Related Name	kerberos.auth.enable
Default Value	false
API Name	kerberos.auth.enable
Required	false

Ranger Service

Description	Name of the Ranger service that this Schema Registry service instance depends on
Related Name	
Default Value	
API Name	ranger_service
Required	false

Security

Kerberos Principal

Description	Kerberos principal short name used by all roles of this service.
Related Name	
Default Value	schemaregistry
API Name	kerberos_princ_name
Required	true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	

role_config_suppression_cdh_version_validator
<b>Required</b>
true

Suppress Configuration Validator: Deploy Directory

<b>Description</b>
Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_client_config_root_dir
<b>Required</b>
true

Suppress Configuration Validator: Schema Registry Server Log Directory

<b>Description</b>
Whether to suppress configuration warnings produced by the Schema Registry Server Log Directory configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_log_dir
<b>Required</b>
true

Suppress Configuration Validator: Schema Registry Server XML Override

<b>Description</b>
Whether to suppress configuration warnings produced by the Schema Registry Server XML Override configuration validator.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
role_config_suppression_logback_safety_valve
<b>Required</b>
true

Suppress Configuration Validator: Heap Dump Directory

<b>Description</b>
Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.
<b>Related Name</b>

**Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-audit.xml****Description**

Whether to suppress configuration warnings produced by the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-audit.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-schema-registry-audit.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-policymgr-ssl.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-schema-registry-policymgr-ssl.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-security.xml****Description**

Whether to suppress configuration warnings produced by the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-security.xml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger-schema-registry-security.xml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Ranger Schema Registry Plugin Policy Cache Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Schema Registry Plugin Policy Cache Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.plugin.schema-registry.policy.cache.dir

**Required**

true

**Suppress Configuration Validator: Ranger Schema Registry Service Name****Description**

Whether to suppress configuration warnings produced by the Ranger Schema Registry Service Name configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger.plugin.schema-registry.service.name

**Required**

true

**Suppress Configuration Validator: Ranger Schema Registry Manager Plugin Audit Hdfs Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Schema Registry Manager Plugin Audit Hdfs Spool Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_schemaregistry\_plugin\_hdfs\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Ranger Schema Registry Plugin Audit Solr Spool Directory Path****Description**

Whether to suppress configuration warnings produced by the Ranger Schema Registry Plugin Audit Solr Spool Directory Path configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_ranger\_schemaregistry\_plugin\_solr\_audit\_spool\_directory

**Required**

true

**Suppress Configuration Validator: Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml****Description**

Whether to suppress configuration warnings produced by the Schema Registry Server Advanced Configuration Snippet (Safety Valve) for registry.yaml configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_registry.yaml\_role\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Schema Registry Admin Port****Description**

Whether to suppress configuration warnings produced by the Schema Registry Admin Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.adminport

**Required**

true

### Suppress Configuration Validator: Schema Registry Allowed Resources

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Allowed Resources configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.allowed.resources

**Required**

true

### Suppress Configuration Validator: Hashing Algorithm Used For Generating Fingerprints

**Description**

Whether to suppress configuration warnings produced by the Hashing Algorithm Used For Generating Fingerprints configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.hash.function

**Required**

true

### Suppress Configuration Validator: Password For HTTP Proxy Server Username

**Description**

Whether to suppress configuration warnings produced by the Password For HTTP Proxy Server Username configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.httpproxypassword

**Required**

true

### Suppress Configuration Validator: HTTP Proxy Server

**Description**

Whether to suppress configuration warnings produced by the HTTP Proxy Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.httpproxyserver

**Required**

true

### Suppress Configuration Validator: Username For HTTP Proxy Server

**Description**

Whether to suppress configuration warnings produced by the Username For HTTP Proxy Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.httpproxyusername

**Required**

true

### Suppress Configuration Validator: Schema Registry Jar Storage Directory Path

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Jar Storage Directory Path configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.jar.storage.directory.path

**Required**

true

### Suppress Configuration Validator: Schema Registry Jar Storage HDFS URL

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Jar Storage HDFS URL configuration validator.

**Related Name****Default Value**

false

**API Name**`role_config_suppression_schema.registry.jar.storage.hdfs.url`**Required**`true`**Suppress Configuration Validator: Oracle TLS javax.net.ssl.keyStore****Description**

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.keyStore configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.javax.net.ssl.keystore`**Required**`true`**Suppress Configuration Validator: Oracle TLS javax.net.ssl.keyStorePassword****Description**

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.keyStorePassword configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.javax.net.ssl.keystorepassword`**Required**`true`**Suppress Configuration Validator: Oracle TLS javax.net.ssl.keyStoreType****Description**

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.keyStoreType configuration validator.

**Related Name****Default Value**`false`**API Name**`role_config_suppression_schema.registry.javax.net.ssl.keystoretype`**Required**`true`**Suppress Configuration Validator: Oracle TLS javax.net.ssl.trustStore****Description**

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.trustStore configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.javax.net.ssl.truststore

**Required**

true

**Suppress Configuration Validator: Oracle TLS javax.net.ssl.trustStorePassword****Description**

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.trustStorePassword configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.javax.net.ssl.truststorepassword

**Required**

true

**Suppress Configuration Validator: Oracle TLS javax.net.ssl.trustStoreType****Description**

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.trustStoreType configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.javax.net.ssl.truststoretype

**Required**

true

**Suppress Configuration Validator: Java Home Path Override****Description**

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.jdk.home

**Required**

true

**Suppress Configuration Validator: Schema Registry Kerberos Name Rules****Description**

Whether to suppress configuration warnings produced by the Schema Registry Kerberos Name Rules configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.kerberos.name.rules

**Required**

true

**Suppress Configuration Validator: Schema Registry Kerberos Non Browser User Agents****Description**

Whether to suppress configuration warnings produced by the Schema Registry Kerberos Non Browser User Agents configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.kerberos.non.browser.user.agents

**Required**

true

**Suppress Configuration Validator: Schema Registry MaxRequestHeaderSize****Description**

Whether to suppress configuration warnings produced by the Schema Registry MaxRequestHeaderSize configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.maxrequestheadersize

**Required**

true

**Suppress Configuration Validator: Oracle TLS oracle.net.authentication\_services****Description**

Whether to suppress configuration warnings produced by the Oracle TLS oracle.net.authentication\_services configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.oracle.net.authentication\_services

**Required**

true

**Suppress Configuration Validator: Oracle TLS oracle.net.ssl\_cipher\_suites****Description**

Whether to suppress configuration warnings produced by the Oracle TLS oracle.net.ssl\_cipher\_suites configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.oracle.net.ssl\_cipher\_suites

**Required**

true

**Suppress Configuration Validator: Version of oracle.net.ssl****Description**

Whether to suppress configuration warnings produced by the Version of oracle.net.ssl configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.oracle.net.ssl\_version

**Required**

true

**Suppress Configuration Validator: Schema Registry Port****Description**

Whether to suppress configuration warnings produced by the Schema Registry Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.port

**Required**

true

**Suppress Configuration Validator: Schema Registry Proxyuser Knox Hosts****Description**

Whether to suppress configuration warnings produced by the Schema Registry Proxyuser Knox Hosts configuration validator.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.proxyuser.knox.hosts

**Required**

true

**Suppress Configuration Validator: Schema Registry Servlet Filter****Description**

Whether to suppress configuration warnings produced by the Schema Registry Servlet Filter configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.servlet.filter

**Required**

true

**Suppress Configuration Validator: Schema Registry Admin Port (SSL)****Description**

Whether to suppress configuration warnings produced by the Schema Registry Admin Port (SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.adminport

**Required**

true

**Suppress Configuration Validator: SSL Keystore Type****Description**

Whether to suppress configuration warnings produced by the SSL Keystore Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.keystoretype

**Required**

true

**Suppress Configuration Validator: Schema Registry Port (SSL)****Description**

Whether to suppress configuration warnings produced by the Schema Registry Port (SSL) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.port

**Required**

true

**Suppress Configuration Validator: SSL TrustStore Type****Description**

Whether to suppress configuration warnings produced by the SSL TrustStore Type configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.truststoretype

**Required**

true

**Suppress Configuration Validator: SSL ValidateCerts****Description**

Whether to suppress configuration warnings produced by the SSL ValidateCerts configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.validatecerts

**Required**

true

**Suppress Configuration Validator: SSL ValidatePeers****Description**

Whether to suppress configuration warnings produced by the SSL ValidatePeers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema.registry.ssl.validatepeers

**Required**

true
------

### Suppress Configuration Validator: Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_schema\_registry\_server\_role\_env\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Schema Registry Server TLS/SSL Trust Store File

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Trust Store File configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_location

**Required**

true

### Suppress Configuration Validator: Schema Registry Server TLS/SSL Trust Store Password

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Trust Store Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_client\_truststore\_password

**Required**

true

### Suppress Configuration Validator: Schema Registry Server TLS/SSL Server Keystore File Location

**Description**

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Server Keystore File Location configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_location

**Required**

true

**Suppress Configuration Validator: Schema Registry Server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Schema Registry Server TLS/SSL Server Keystore File Password configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_ssl\_server\_keystore\_password

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Parameter Validation: Schema Registry Database Host****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database Host parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_host

**Required**

true

**Suppress Parameter Validation: Schema Registry Database JDBC Url Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database JDBC Url Override parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_jdbc\_url\_override

**Required**

true

**Suppress Parameter Validation: Schema Registry Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database Name parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_name

**Required**

true

**Suppress Parameter Validation: Schema Registry Database User Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database User Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_password

**Required**

true

**Suppress Parameter Validation: Schema Registry Database Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database Port parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_database\_port

**Required**

true
------

### Suppress Parameter Validation: Schema Registry Database User

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database User parameter.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_database\_user

#### Required

true

### Suppress Configuration Validator: Gateway Count Validator

#### Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_gateway\_count\_validator

#### Required

true

### Suppress Parameter Validation: Kerberos Principal

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

#### Related Name

#### Default Value

false

#### API Name

service\_config\_suppression\_kerberos\_princ\_name

#### Required

true

### Suppress Parameter Validation: System Group

#### Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

#### Related Name

#### Default Value

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Configuration Validator: Schema Registry Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Schema Registry Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_schema\_registry\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: Schema Registry Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_schemaregistry\_service\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Service Triggers****Description**

	Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_service_triggers
Required	true

**Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_smon_derived_configs_safety_valve
Required	true

**Suppress Health Test: Schema Registry Server Health**

Description	Whether to suppress the results of the Schema Registry Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	false
API Name	service_health_suppression_schemaregistry_schema_registry_server_healthy
Required	true

**Solr Properties in Cloudera Runtime 7.2.16**

Role groups:

Gateway

Advanced

Deploy Directory

Description	The directory where the client configs will be deployed
Related Name	
Default Value	/etc/solr
API Name	client_config_root_dir
Required	true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description	For advanced use only, a string to be inserted into log4j.properties for this role only.
Related Name	
Default Value	
API Name	log4j_safety_valve
Required	false

Logs

Gateway Logging Threshold

Description	The minimum log level for Gateway logs
Related Name	
Default Value	INFO
API Name	log_threshold
Required	false

Monitoring

Enable Configuration Change Alerts

Description	When set, Cloudera Manager will send alerts when this entity's configuration changes.
Related Name	
Default Value	

	false
API Name	
	enable_config_alerts
Required	
	false

Other

Alternatives Priority

Description	The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.
Related Name	
Default Value	90
API Name	client_config_priority
Required	true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Deploy Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_client_config_root_dir
Required	true

**Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)**

<b>Description</b>	Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.
<b>Related Name</b>	
<b>Default Value</b>	false
<b>API Name</b>	role_config_suppression_log4j_safety_valve
<b>Required</b>	true

**Service-Wide**

**Advanced**

**System Group**

<b>Description</b>	The group that this service's processes should run as.
<b>Related Name</b>	
<b>Default Value</b>	solr
<b>API Name</b>	process_groupname
<b>Required</b>	true

**System User**

<b>Description</b>	The user that this service's processes should run as.
<b>Related Name</b>	
<b>Default Value</b>	solr
<b>API Name</b>	process_username
<b>Required</b>	true

**Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml**

<b>Description</b>	For advanced use only, a string to be inserted into ranger-solr-audit.xml. Applies to configurations of all roles in this service except client configuration.
<b>Related Name</b>	
<b>Default Value</b>	

**API Name**

ranger\_audit\_safety\_valve

**Required**

false

**Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-policymgr-ssl.xml****Description**

For advanced use only, a string to be inserted into ranger-solr-policymgr-ssl.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ranger\_policymgr\_ssl\_safety\_valve

**Required**

false

**Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-security.xml****Description**

For advanced use only, a string to be inserted into ranger-solr-security.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

ranger\_security\_safety\_valve

**Required**

false

**Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

For advanced use only, a string to be inserted into core-site.xml. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value****API Name**

solr\_core\_site\_safety\_valve

**Required**

false

**Solr Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

**Related Name****Default Value**

<b>API Name</b>	solr_env_safety_valve
<b>Required</b>	false

**Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml**

<b>Description</b>	For advanced use only, a string to be inserted into hdfs-site.xml. Applies to configurations of all roles in this service except client configuration.
<b>Related Name</b>	
<b>Default Value</b>	
<b>API Name</b>	solr_hdfs_site_safety_valve
<b>Required</b>	false

**Enable Solrd Watchdog**

<b>Description</b>	Enable the background watchdog thread that can kill Catalina process if Solr is not responsive.
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	solrd_enable_watchdog
<b>Required</b>	false

**Monitoring**

**Enable Service Level Health Alerts**

<b>Description</b>	When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold
<b>Related Name</b>	
<b>Default Value</b>	true
<b>API Name</b>	enable_alerts
<b>Required</b>	false

**Enable Configuration Change Alerts**

<b>Description</b>	When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>	

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd\_open WHERE roleType = DataNode and last(fd\_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

true

**Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

**Related Name****Default Value****API Name**

smon\_derived\_configs\_safety\_valve

**Required**

false

Healthy Solr Server Monitoring Thresholds

Description

The health test thresholds of the overall Solr Server health. The check returns "Concerning" health if the percentage of "Healthy" Solr Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Solr Servers falls below the critical threshold.

Related Name

Default Value

Warning: 95.0 %, Critical: 90.0 %

API Name

solr\_solr\_servers\_healthy\_thresholds

Required

false

Other

HDFS Data Directory

Description

HDFS directory used for storage by this Solr service.

Related Name

Default Value

/solr

API Name

hdfs\_data\_dir

Required

true

HDFS Service

Description

Name of the HDFS service that this Search service instance depends on

Related Name

Default Value

API Name

hdfs\_service

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.solr.trusted.proxy.ipaddress

Default Value

API Name

ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

false

**Ranger Plugin Use X-Forwarded for IP Address****Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

**Related Name**

ranger.plugin.solr.use.x-forwarded-for.ipaddress

**Default Value**

false

**API Name**

ranger\_plugin\_use\_x\_forwarded\_for\_ipaddress

**Required**

false

**Ranger Service****Description**

Name of the Ranger service that this Solr service instance depends on. This config is used for enabling Ranger authorization in the Solr instance not used by Ranger.

**Related Name****Default Value****API Name**

ranger\_service

**Required**

false

**Solr Server for Upgrade****Description**

Solr server to be used while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7.

**Related Name****Default Value****API Name**

solr\_server\_for\_upgrade

**Required**

false

**Upgrade Backup Directory****Description**

Directory on the HDFS file system that is used as the backup directory while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7.

**Related Name****Default Value**

/user/solr/upgrade\_backup

**API Name**

solr\_upgrade\_backup\_dir

**Required**

false

**Upgrade Metadata Directory****Description**

Directory on the local file system containing the migrated configurations and metadata required while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7. Note: This directory should be present in the Solr Server specified in 'Solr Server for Upgrade'.

**Related Name****Default Value**

/var/lib/upgrade/solr\_config

**API Name**

solr\_upgrade\_metadata\_dir

**Required**

true

**Solrd Watchdog Timeout****Description**

If Solr does not respond on its web URL within this time interval, the Catalina process is killed.

**Related Name****Default Value**

1 minute(s), 10 second(s)

**API Name**

solrd\_watchdog\_timeout

**Required**

false

**ZooKeeper Service****Description**

Name of the ZooKeeper service that this Search service instance depends on

**Related Name****Default Value****API Name**

zookeeper\_service

**Required**

true

**ZooKeeper Znode****Description**

ZooKeeper znode used to store information about this Solr service.

**Related Name****Default Value**

`/solr`**API Name**`zookeeper_znode`**Required**`true`**Security****Enable Ranger Authorization for the Infrastructure Solr Service****Description**

Enable fine-grained security using Ranger for the infrastructure (infra) Solr service. This option is only for the Solr service that the Ranger service is using (for ranger-audits, etc.). No other Solr service can or should enable this option.

**Related Name****Default Value**`false`**API Name**`enable_ranger_authorization`**Required**`false`**Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

**Related Name****Default Value**`solr`**API Name**`kerberos_princ_name`**Required**`true`**Active Directory Domain****Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

**Related Name****Default Value****API Name**`ldap_domain`**Required**`false`

### Ranger DFS Audit Path

**Description**

The DFS path on which Ranger audits are written. The special placeholder `'${ranger_base_audit_url}'` should be used as the prefix, in order to use the centralized location defined in the Ranger service.

**Related Name**

`xasecure.audit.destination.hdfs.dir`

**Default Value**

`$ranger_base_audit_url/solr`

**API Name**

`ranger_audit_hdfs_dir`

**Required**

`false`

### Ranger Audit DFS Spool Dir

**Description**

Spool directory for Ranger audits being written to DFS.

**Related Name**

`xasecure.audit.destination.hdfs.batch.filespool.dir`

**Default Value**

`/var/log/solr/audit/hdfs/spool`

**API Name**

`ranger_audit_hdfs_spool_dir`

**Required**

`false`

### Ranger Audit Solr Spool Dir

**Description**

Spool directory for Ranger audits being written to Solr.

**Related Name**

`xasecure.audit.destination.solr.batch.filespool.dir`

**Default Value**

`/var/log/solr/audit/solr/spool`

**API Name**

`ranger_audit_solr_spool_dir`

**Required**

`false`

### Ranger Policy Cache Directory

**Description**

The directory where Ranger security policies are cached locally.

**Related Name**

`ranger.plugin.solr.policy.cache.dir`

**Default Value**

`/var/lib/ranger/solr/policy-cache`

**API Name**

ranger\_policy\_cache\_dir

**Required**

false

**Enable LDAP Authentication****Description**

When checked, LDAP-based authentication for users is enabled.

**Related Name****Default Value**

false

**API Name**

solr\_enable\_ldap\_auth

**Required**

false

**Solr TLS/SSL Server Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Solr is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

**Related Name****Default Value****API Name**

solr\_https\_keystore\_file

**Required**

false

**Solr TLS/SSL Server Keystore File Password****Description**

The password for the Solr keystore file.

**Related Name**

solr.jetty.keystore.password

**Default Value****API Name**

solr\_https\_keystore\_password

**Required**

false

**Solr TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Solr might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

**Related Name****Default Value****API Name**

solr\_https\_truststore\_file

**Required**

false

**Solr TLS/SSL Trust Store Password****Description**

The password for the Solr TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

**Related Name**

solr.jetty.truststore.password

**Default Value****API Name**

solr\_https\_truststore\_password

**Required**

false

**LDAP BaseDN****Description**

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,\*this parameter\*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

**Related Name****Default Value****API Name**

solr\_ldap\_basedn

**Required**

false

**Enable LDAP TLS****Description**

If true, attempts to establish a TLS (Transport Layer Security) connection with an LDAP server that was specified with ldap://. Not required when using an LDAP URL with prefix ldaps://, because that already specifies TLS. This option is also known as "Use StartTLS".

**Related Name****Default Value**

false

**API Name**

solr\_ldap\_enable\_starttls

**Required**

false

**LDAP URL****Description**

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

**Related Name****Default Value****API Name**

solr\_ldap\_uri

**Required**

false

**Solr Secure Authentication****Description**

Choose the authentication mechanism used by Solr.

**Related Name****Default Value**

simple

**API Name**

solr\_security\_authentication

**Required**

false

**Enable TLS/SSL for Solr****Description**

Encrypt communication between clients and Solr using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)). Additional manual steps must be performed; see [Enabling TLS/SSL for Solr](#).

**Related Name****Default Value**

false

**API Name**

solr\_use\_ssl

**Required**

false

## Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Configuration Validator: Deploy Directory

**Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

### Suppress Configuration Validator: Solr Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the Solr Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Configuration Validator: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

**Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)****Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Configuration Validator: Role Triggers****Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Configuration Validator: Solr Admin Port****Description**

Whether to suppress configuration warnings produced by the Solr Admin Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_admin\_port

**Required**

true

**Suppress Configuration Validator: Solr Data Directory****Description**

Whether to suppress configuration warnings produced by the Solr Data Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_data\_dir

**Required**

true

**Suppress Configuration Validator: Solr HTTP Port****Description**

Whether to suppress configuration warnings produced by the Solr HTTP Port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_http\_port

**Required**

true

**Suppress Configuration Validator: Solr HTTPS port****Description**

Whether to suppress configuration warnings produced by the Solr HTTPS port configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_https\_port

**Required**

true

**Suppress Configuration Validator: Java Heap Size of Solr Server in Bytes****Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Solr Server in Bytes configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_java\_heapsize

**Required**

true

**Suppress Configuration Validator: Java Configuration Options for Solr Server****Description**

Whether to suppress configuration warnings produced by the Java Configuration Options for Solr Server configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_java\_opts

**Required**

true

**Suppress Configuration Validator: Solr Load Balancer****Description**

Whether to suppress configuration warnings produced by the Solr Load Balancer configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_load\_balancer

**Required**

true

**Suppress Configuration Validator: Solr Server Log Directory****Description**

Whether to suppress configuration warnings produced by the Solr Server Log Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_log\_dir

**Required**

true

**Suppress Configuration Validator: Solr Plugins Directory****Description**

Whether to suppress configuration warnings produced by the Solr Plugins Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_plugins\_dir

**Required**

true

**Suppress Configuration Validator: Solr Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the Solr Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Configuration Validator: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Configuration Validator: Gateway Count Validator****Description**

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_gateway\_count\_validator

**Required**

true

**Suppress Parameter Validation: HDFS Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_hdfs\_data\_dir

**Required**

true

**Suppress Parameter Validation: Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_kerberos\_princ\_name

**Required**

true

**Suppress Parameter Validation: Active Directory Domain****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ldap\_domain

**Required**

true

**Suppress Parameter Validation: System Group****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_groupname

**Required**

true

**Suppress Parameter Validation: System User****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_process\_username

**Required**

true

**Suppress Parameter Validation: Ranger DFS Audit Path****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger DFS Audit Path parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_hdfs\_dir

**Required**

true

**Suppress Parameter Validation: Ranger Audit DFS Spool Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit DFS Spool Dir parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_hdfs\_spool\_dir

**Required**

true

**Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Ranger Audit Solr Spool Dir****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_audit\_solr\_spool\_dir

**Required**

true

**Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_plugin\_trusted\_proxy\_ipaddress

**Required**

true

**Suppress Parameter Validation: Ranger Policy Cache Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_policy\_cache\_dir

**Required**

true

**Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-policymgr-ssl.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-policymgr-ssl.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_policymgr\_ssl\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-security.xml

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-security.xml parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_ranger\_security\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Service Triggers

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_service\_triggers

**Required**

true

### Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**`service_config_suppression_smon_derived_configs_safety_valve`**Required**`true`**Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_solr_core_site_safety_valve`**Required**`true`**Suppress Parameter Validation: Solr Service Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_solr_env_safety_valve`**Required**`true`**Suppress Parameter Validation: Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml parameter.

**Related Name****Default Value**`false`**API Name**`service_config_suppression_solr_hdfs_site_safety_valve`**Required**`true`

**Suppress Parameter Validation: Solr TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Server Keystore File Location parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_https\_keystore\_file

**Required**

true

**Suppress Parameter Validation: Solr TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Server Keystore File Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_https\_keystore\_password

**Required**

true

**Suppress Parameter Validation: Solr TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Trust Store File parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_https\_truststore\_file

**Required**

true

**Suppress Parameter Validation: Solr TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Trust Store Password parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_https\_truststore\_password

**Required**

true

**Suppress Parameter Validation: LDAP BaseDN****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_ldap\_basedn

**Required**

true

**Suppress Configuration Validator: LDAP TLS Validator****Description**

Whether to suppress configuration warnings produced by the LDAP TLS Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_ldap\_tls\_validator

**Required**

true

**Suppress Parameter Validation: LDAP URL****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_ldap\_uri

**Required**

true

**Suppress Configuration Validator: LDAP Secure URI and Start TLS Validator****Description**

Whether to suppress configuration warnings produced by the LDAP Secure URI and Start TLS Validator configuration validator.

**Related Name**

**Default Value**

false

**API Name**

service\_config\_suppression\_solr\_ldaps\_or\_tls\_validator

**Required**

true

**Suppress Configuration Validator: Solr Server Count Validator****Description**

Whether to suppress configuration warnings produced by the Solr Server Count Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_server\_count\_validator

**Required**

true

**Suppress Parameter Validation: Upgrade Backup Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Upgrade Backup Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_upgrade\_backup\_dir

**Required**

true

**Suppress Parameter Validation: Upgrade Metadata Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Upgrade Metadata Directory parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_upgrade\_metadata\_dir

**Required**

true

**Suppress Parameter Validation: Solr Watchdog Timeout****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Watchdog Timeout parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_solr\_watchdog\_timeout

**Required**

true

### Suppress Parameter Validation: ZooKeeper Znode

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Znode parameter.

**Related Name****Default Value**

false

**API Name**

service\_config\_suppression\_zookeeper\_znode

**Required**

true

### Suppress Health Test: Solr Server Health

**Description**

Whether to suppress the results of the Solr Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

service\_health\_suppression\_solr\_solr\_servers\_healthy

**Required**

true

## Solr Server

### Advanced

#### Solr Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

**Related Name****Default Value****API Name**

log4j\_safety\_valve

**Required**

false

**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

**Related Name****Default Value**

false

**API Name**

metric\_config\_auto\_refresh

**Required**

false

**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

**Related Name**

oom\_heap\_dump\_dir

**Default Value**

/tmp

**API Name**

oom\_heap\_dump\_dir

**Required**

false

**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

**Related Name****Default Value**

true

**API Name**

oom\_heap\_dump\_enabled

**Required**

true

**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

**Related Name****Default Value**

true

**API Name**

oom\_sigkill\_enabled

**Required**

true

### Automatically Restart Process

**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

**Related Name****Default Value**

false

**API Name**

process\_auto\_restart

**Required**

true

### Enable Metric Collection

**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

**Related Name****Default Value**

true

**API Name**

process\_should\_monitor

**Required**

true

### Process Start Retry Attempts

**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

**Related Name****Default Value**

3

**API Name**

process\_start\_retries

**Required**

false

**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

**Related Name****Default Value**

20

**API Name**

process\_start\_secs

**Required**

false

**Java Configuration Options for Solr Server****Description**

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA\_GC\_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

**Related Name****Default Value**

JAVA\_GC\_ARGS

**API Name**

solr\_java\_opts

**Required**

false

**Solr Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

**Related Name****Default Value****API Name**

SOLR\_SERVER\_role\_env\_safety\_valve

**Required**

false

**ZooKeeper Client Timeout****Description**

The time in milliseconds a client is allowed to not talk to ZooKeeper before its session expires.

**Related Name**

zkClientTimeout

**Default Value**

15 second(s)

**API Name**

zookeeper\_client\_timeout

**Required**

true

**Logs****Solr Server Logging Threshold****Description**

The minimum log level for Solr Server logs

**Related Name****Default Value**

INFO

**API Name**

log\_threshold

**Required**

false

**Solr Server Maximum Log File Backups****Description**

The maximum number of rolled log files to keep for Solr Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

10

**API Name**

max\_log\_backup\_index

**Required**

false

**Solr Server Max Log Size****Description**

The maximum size, in megabytes, per log file for Solr Server logs. Typically used by log4j or logback.

**Related Name****Default Value**

200 MiB

**API Name**

max\_log\_size

**Required**

false

**Solr Server Log Directory**

**Description**

Directory where Solr Server will place its log files.

**Related Name**

**Default Value**

/var/log/solr

**API Name**

solr\_log\_dir

**Required**

true

**Monitoring**

**Enable Health Alerts for this Role**

**Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver\_health\_events\_alert\_threshold

**Related Name**

**Default Value**

true

**API Name**

enable\_alerts

**Required**

false

**Enable Configuration Change Alerts**

**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

**Related Name**

**Default Value**

false

**API Name**

enable\_config\_alerts

**Required**

false

**Heap Dump Directory Free Space Monitoring Absolute Thresholds**

**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

**Related Name**

**Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

heap\_dump\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Heap Dump Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

heap\_dump\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Absolute Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

**Related Name****Default Value**

Warning: 10 GiB, Critical: 5 GiB

**API Name**

log\_directory\_free\_space\_absolute\_thresholds

**Required**

false

**Log Directory Free Space Monitoring Percentage Thresholds****Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

log\_directory\_free\_space\_percentage\_thresholds

**Required**

false

**Navigator Audit Failure Thresholds****Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

**Related Name**

`mgmt.navigator.failure.thresholds`

**Default Value**

Warning: Never, Critical: Any

**API Name**

`mgmt_navigator_failure_thresholds`

**Required**

false

**Monitoring Period For Audit Failures****Description**

The period to review when checking if audits are blocked and not getting processed.

**Related Name**

`mgmt.navigator.failure.window`

**Default Value**

20 minute(s)

**API Name**

`mgmt_navigator_failure_window`

**Required**

false

**Navigator Audit Pipeline Health Check****Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

**Related Name**

`mgmt.navigator.status.check.enabled`

**Default Value**

true

**API Name**

`mgmt_navigator_status_check_enabled`

**Required**

false

**Metric Filter****Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm\_heap\_used\_mb"] }

**Related Name****Default Value****API Name**

`monitoring_metric_filter`

**Required**

false

**Swap Memory Usage Rate Thresholds****Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

**Related Name****Default Value**

Warning: Never, Critical: Never

**API Name**

`process_swap_memory_rate_thresholds`

**Required**

false

**Swap Memory Usage Rate Window****Description**

The period to review when computing unexpected swap memory usage change of the process.

**Related Name**

`common.process.swap_memory_rate_window`

**Default Value**

5 minute(s)

**API Name**

`process_swap_memory_rate_window`

**Required**

false

### Process Swap Memory Thresholds

#### Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

#### Related Name

#### Default Value

Warning: 200 B, Critical: Never

#### API Name

process\_swap\_memory\_thresholds

#### Required

false

### Role Triggers

#### Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

#### Related Name

#### Default Value

[]

#### API Name

role\_triggers

#### Required

true

### Solr Server API Liveness

#### Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather status of Solr Cores from the Solr Server with a simple API request.

#### Related Name

#### Default Value

true

**API Name**

solr\_core\_status\_collection\_health\_enabled

**Required**

false

**Solr Server API Liveness Request Duration****Description**

The health test thresholds on the duration of the Solr Server API request.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

solr\_core\_status\_collection\_thresholds

**Required**

false

**File Descriptor Monitoring Thresholds****Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

**Related Name****Default Value**

Warning: 50.0 %, Critical: 70.0 %

**API Name**

solr\_server\_fd\_thresholds

**Required**

false

**Garbage Collection Duration Thresholds****Description**

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

**Related Name****Default Value**

Warning: 30.0, Critical: 60.0

**API Name**

solr\_server\_gc\_duration\_thresholds

**Required**

false

**Garbage Collection Duration Monitoring Period****Description**

The period to review when computing the moving average of garbage collection time.

**Related Name****Default Value**

5 minute(s)

**API Name**

solr\_server\_gc\_duration\_window

**Required**

false

**Solr Server Host Health Test****Description**

When computing the overall Solr Server health, consider the host's health.

**Related Name****Default Value**

true

**API Name**

solr\_server\_host\_health\_enabled

**Required**

false

**Solr Server Process Health Test****Description**

Enables the health test that the Solr Server's process state is consistent with the role configuration

**Related Name****Default Value**

true

**API Name**

solr\_server\_scm\_health\_enabled

**Required**

false

**Web Metric Collection****Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

**Related Name****Default Value**

true

**API Name**

solr\_server\_web\_metric\_collection\_enabled

**Required**

false

**Web Metric Collection Duration****Description**

The health test thresholds on the duration of the metrics request to the web server.

**Related Name****Default Value**

Warning: 10 second(s), Critical: Never

**API Name**

solr\_server\_web\_metric\_collection\_thresholds

**Required**

false

### Unexpected Exits Thresholds

**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected\_exits\_window configuration for the role.

**Related Name****Default Value**

Warning: Never, Critical: Any

**API Name**

unexpected\_exits\_thresholds

**Required**

false

### Unexpected Exits Monitoring Period

**Description**

The period to review when computing unexpected exits.

**Related Name****Default Value**

5 minute(s)

**API Name**

unexpected\_exits\_window

**Required**

false

### Other

#### Solr Data Directory

**Description**

Directory on local file system where Solr Server keeps the configurations for collections.

**Related Name****Default Value**

/var/lib/solr

**API Name**

solr\_data\_dir

**Required**

true

### Graceful Shutdown Timeout

**Description**

Timeout (in seconds) for graceful shutdown of this Solr server. Once this timeout is reached, Solr server is abruptly shutdown. A value of 0 means no timeout.

**Related Name****Default Value**

3 minute(s)

**API Name**

solr\_graceful\_stop\_timeout

**Required**

false

### Solr Load Balancer

**Description**

Address of the load balancer, specified in host:port format.

**Related Name****Default Value****API Name**

solr\_load\_balancer

**Required**

false

### Solr Plugins Directory

**Description**

Directory on local file system where Solr Server can find additional JARs. This directory is not monitored for changes during the lifetime of a solr server, and a restart is required to read any updates to the directory contents.

**Related Name****Default Value****API Name**

solr\_plugins\_dir

**Required**

false

### Performance

#### Maximum Process File Descriptors

**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

**Related Name****Default Value****API Name**

rlimit\_fds

<b>Required</b>
false

**Solr Max Connector Threads**

<b>Description</b>
The maximum number of request processing threads to be created by Solr server, which determines the maximum number of simultaneous requests that can be handled.
<b>Related Name</b>
<b>Default Value</b>
10000
<b>API Name</b>
solr_max_connector_thread
<b>Required</b>
true

**Ports and Addresses**

**Solr Admin Port**

<b>Description</b>
Admin port of the Solr Server.
<b>Related Name</b>
<b>Default Value</b>
8984
<b>API Name</b>
solr_admin_port
<b>Required</b>
true

**Solr HTTP Port**

<b>Description</b>
HTTP port of Solr Server.
<b>Related Name</b>
solr_http_port
<b>Default Value</b>
8983
<b>API Name</b>
solr_http_port
<b>Required</b>
true

**Resource Management**

**Cgroup CPU Shares**

<b>Description</b>
--------------------

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

**Related Name**

cpu.shares

**Default Value**

1024

**API Name**

rm\_cpu\_shares

**Required**

true

**Custom Control Group Resources (overrides Cgroup settings)****Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' \*\*\*These settings override other cgroup settings.\*\*\*

**Related Name**

custom.cgroups

**Default Value****API Name**

rm\_custom\_resources

**Required**

false

**Cgroup I/O Weight****Description**

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

**Related Name**

blkio.weight

**Default Value**

500

**API Name**

rm\_io\_weight

**Required**

true

**Cgroup Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the

value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_hard\_limit

**Required**

true

**Cgroup Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

**Related Name**

memory.soft\_limit\_in\_bytes

**Default Value**

-1 MiB

**API Name**

rm\_memory\_soft\_limit

**Required**

true

**HDFS Block Cache Blocks per Slab****Description**

Number of blocks per cache slab. The size of the cache is 8 KB (the block size) times the number of blocks per slab times the number of slabs.

**Related Name**

solr.hdfs.blockcache.blocksperbank

**Default Value**

16384

**API Name**

solr\_hdfs\_blockcache\_blocksperbank

**Required**

true

**HDFS Block Cache Off-Heap Memory****Description**

Use off-heap memory when caching HDFS blocks in Solr.

**Related Name**

solr.hdfs.blockcache.direct.memory.allocation

**Default Value**

true

**API Name**

solr\_hdfs\_blockcache\_direct\_memory\_allocation

**Required**

true

**HDFS Block Cache****Description**

Enable caching of HDFS blocks in Solr. There is one block cache per Solr collection. configured to use off-heap memory, Maximum Off-Heap Memory must be set high enough to account for all block caches.

**Related Name**

solr.hdfs.blockcache.enabled

**Default Value**

true

**API Name**

solr\_hdfs\_blockcache\_enabled

**Required**

true

**HDFS Block Cache Number of Slabs****Description**

Number of slabs per block cache. The size of the cache is 8 KB (the block size) times the number of blocks per slab times the number of slabs.

**Related Name**

solr.hdfs.blockcache.slab.count

**Default Value**

1

**API Name**

solr\_hdfs\_blockcache\_slab\_count

**Required**

true

**Java Direct Memory Size of Solr Server in Bytes****Description**

Maximum amount of off-heap memory in bytes that may be allocated by the Java process. Passed to Java -XX:MaxDirectMemorySize. If unset, defaults to the size of the heap.

**Related Name****Default Value**

1 GiB

**API Name**

solr\_java\_direct\_memory\_size

**Required**

false

Java Heap Size of Solr Server in Bytes

Description	Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.
Related Name	
Default Value	1 GiB
API Name	solr_java_heapsize
Required	false

Security

Solr HTTPS port

Description	HTTPS port of Solr Server.
Related Name	solr_https_port
Default Value	8985
API Name	solr_https_port
Required	false

Stacks Collection

Stacks Collection Data Retention

Description	The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.
Related Name	stacks_collection_data_retention
Default Value	100 MiB
API Name	stacks_collection_data_retention
Required	false

Stacks Collection Directory

Description	The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.
-------------	--

**Related Name**

stacks\_collection\_directory

**Default Value****API Name**

stacks\_collection\_directory

**Required**

false

**Stacks Collection Enabled****Description**

Whether or not periodic stacks collection is enabled.

**Related Name**

stacks\_collection\_enabled

**Default Value**

false

**API Name**

stacks\_collection\_enabled

**Required**

true

**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

**Related Name**

stacks\_collection\_frequency

**Default Value**

5.0 second(s)

**API Name**

stacks\_collection\_frequency

**Required**

false

**Stacks Collection Method****Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

**Related Name**

stacks\_collection\_method

**Default Value**

jstack

**API Name**

stacks\_collection\_method

**Required**

false

## Suppressions

### Suppress Configuration Validator: CDH Version Validator

**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

### Suppress Parameter Validation: Solr Server Logging Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_log4j\_safety\_valve

**Required**

true

### Suppress Parameter Validation: Heap Dump Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_oom\_heap\_dump\_dir

**Required**

true

### Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

**Related Name**

**Default Value**

false

**API Name**

role\_config\_suppression\_rm\_custom\_resources

**Required**

true

**Suppress Parameter Validation: Role Triggers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_role\_triggers

**Required**

true

**Suppress Parameter Validation: Solr Admin Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Admin Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_admin\_port

**Required**

true

**Suppress Parameter Validation: Solr Data Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Data Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_data\_dir

**Required**

true

**Suppress Parameter Validation: Solr HTTP Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr HTTP Port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_http\_port

**Required**

true

**Suppress Parameter Validation: Solr HTTPS port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr HTTPS port parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_https\_port

**Required**

true

**Suppress Parameter Validation: Java Heap Size of Solr Server in Bytes****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Solr Server in Bytes parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_java\_heapsize

**Required**

true

**Suppress Parameter Validation: Java Configuration Options for Solr Server****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Solr Server parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_java\_opts

**Required**

true
------

### Suppress Parameter Validation: Solr Load Balancer

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Load Balancer parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_load\_balancer

**Required**

true

### Suppress Parameter Validation: Solr Server Log Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Server Log Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_log\_dir

**Required**

true

### Suppress Parameter Validation: Solr Plugins Directory

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Plugins Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_plugins\_dir

**Required**

true

### Suppress Parameter Validation: Solr Server Environment Advanced Configuration Snippet (Safety Valve)

**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_solr\_server\_role\_env\_safety\_valve

**Required**

true

**Suppress Parameter Validation: Stacks Collection Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_stacks\_collection\_directory

**Required**

true

**Suppress Health Test: Solr Server API Liveness****Description**

Whether to suppress the results of the Solr Server API Liveness health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_core\_status\_collection\_health

**Required**

true

**Suppress Health Test: Audit Pipeline Test****Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_audit\_health

**Required**

true

### Suppress Health Test: File Descriptors

**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_file\_descriptor

**Required**

true

### Suppress Health Test: GC Duration

**Description**

Whether to suppress the results of the GC Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_gc\_duration

**Required**

true

### Suppress Health Test: Heap Dump Directory Free Space

**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_heap\_dump\_directory\_free\_space

**Required**

true

### Suppress Health Test: Host Health

**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name**

**Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_host\_health

**Required**

true

**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_log\_directory\_free\_space

**Required**

true

**Suppress Health Test: Process Status****Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_scm\_health

**Required**

true

**Suppress Health Test: Swap Memory Usage****Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_swap\_memory\_usage

**Required**

true

### Suppress Health Test: Swap Memory Usage Rate Beta

**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_swap\_memory\_usage\_rate

**Required**

true

### Suppress Health Test: Unexpected Exits

**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_unexpected\_exits

**Required**

true

### Suppress Health Test: Web Server Status

**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

**Related Name****Default Value**

false

**API Name**

role\_health\_suppression\_solr\_server\_web\_metric\_collection

**Required**

true

## Spark Properties in Cloudera Runtime 7.2.16

Role groups:

Gateway

Advanced

Deploy Directory

Description	The directory where the client configs will be deployed
Related Name	
Default Value	/etc/spark
API Name	client_config_root_dir
Required	true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description	For advanced use only, a string to be inserted into log4j.properties for this role only.
Related Name	
Default Value	
API Name	log4j_safety_valve
Required	false

Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf

Description	For advanced use only, a string to be inserted into the client configuration for spark-conf/spark-defaults.conf.
Related Name	
Default Value	
API Name	spark-conf/spark-defaults.conf_client_config_safety_valve
Required	false

Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

Description	For advanced use only, a string to be inserted into the client configuration for spark-conf/spark-env.sh.
Related Name	
Default Value	
API Name	spark-conf/spark-env.sh_client_config_safety_valve

<b>Required</b>
false

Logs

Gateway Logging Threshold

<b>Description</b>
The minimum log level for Gateway logs
<b>Related Name</b>
<b>Default Value</b>
INFO
<b>API Name</b>
log_threshold
<b>Required</b>
false

Monitoring

Enable Configuration Change Alerts

<b>Description</b>
When set, Cloudera Manager will send alerts when this entity's configuration changes.
<b>Related Name</b>
<b>Default Value</b>
false
<b>API Name</b>
enable_config_alerts
<b>Required</b>
false

Other

Alternatives Priority

<b>Description</b>
The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.
<b>Related Name</b>
<b>Default Value</b>
51
<b>API Name</b>
client_config_priority
<b>Required</b>
true

Spark Data Serializer

<b>Description</b>
Name of class implementing org.apache.spark.serializer.Serializer to use in Spark applications.

**Related Name**

spark.serializer

**Default Value**

org.apache.spark.serializer.KryoSerializer

**API Name**

spark\_data\_serializer

**Required**

true

**Default Application Deploy Mode****Description**

Which deploy mode to use by default. Can be overridden by users when launching applications.

**Related Name**

spark\_deploy\_mode

**Default Value**

client

**API Name**

spark\_deploy\_mode

**Required**

false

**Caching Executor Idle Timeout****Description**

When dynamic allocation is enabled, time after which idle executors with cached RDDs blocks will be stopped. By default, they're never stopped.

**Related Name**

spark.dynamicAllocation.cachedExecutorIdleTimeout

**Default Value****API Name**

spark\_dynamic\_allocation\_cached\_idle\_timeout

**Required**

false

**Enable Dynamic Allocation****Description**

Enable dynamic allocation of executors in Spark applications.

**Related Name**

spark.dynamicAllocation.enabled

**Default Value**

true

**API Name**

spark\_dynamic\_allocation\_enabled

**Required**

false

### Executor Idle Timeout

**Description**

When dynamic allocation is enabled, time after which idle executors will be stopped.

**Related Name**

spark.dynamicAllocation.executorIdleTimeout

**Default Value**

1 minute(s)

**API Name**

spark\_dynamic\_allocation\_idle\_timeout

**Required**

false

### Initial Executor Count

**Description**

When dynamic allocation is enabled, number of executors to allocate when the application starts. By default, this is the same value as the minimum number of executors.

**Related Name**

spark.dynamicAllocation.initialExecutors

**Default Value****API Name**

spark\_dynamic\_allocation\_initial\_executors

**Required**

false

### Maximum Executor Count

**Description**

When dynamic allocation is enabled, maximum number of executors to allocate. By default, Spark relies on YARN to control the maximum number of executors for the application.

**Related Name**

spark.dynamicAllocation.maxExecutors

**Default Value****API Name**

spark\_dynamic\_allocation\_max\_executors

**Required**

false

### Minimum Executor Count

**Description**

When dynamic allocation is enabled, minimum number of executors to keep alive while the application is running.

**Related Name**

spark.dynamicAllocation.minExecutors

**Default Value**

0

**API Name**

spark_dynamic_allocation_min_executors
<b>Required</b>
false

Scheduler Backlog Timeout

<b>Description</b>
When dynamic allocation is enabled, timeout before requesting new executors when there are backlogged tasks.
<b>Related Name</b>
spark.dynamicAllocation.schedulerBacklogTimeout
<b>Default Value</b>
1 second(s)
<b>API Name</b>
spark_dynamic_allocation_scheduler_backlog_timeout
<b>Required</b>
false

Sustained Scheduler Backlog Timeout

<b>Description</b>
When dynamic allocation is enabled, timeout before requesting new executors after the initial backlog timeout has already expired. By default this is the same value as the initial backlog timeout.
<b>Related Name</b>
spark.dynamicAllocation.sustainedSchedulerBacklogTimeout
<b>Default Value</b>
<b>API Name</b>
spark_dynamic_allocation_sustained_scheduler_backlog_timeout
<b>Required</b>
false

Shell Logging Threshold

<b>Description</b>
The minimum log level for the Spark shell.
<b>Related Name</b>
spark_gateway_shell_logging_threshold
<b>Default Value</b>
WARN
<b>API Name</b>
spark_gateway_shell_logging_threshold
<b>Required</b>
true

Enable Kill From UI

<b>Description</b>
Whether to allow users to kill running stages from the Spark Web UI.
<b>Related Name</b>

	spark.ui.killEnabled
Default Value	true
API Name	spark_gateway_ui_kill_enabled
Required	true

Enable History

Description	Write Spark application history logs to HDFS.
Related Name	spark.eventLog.enabled
Default Value	true
API Name	spark_history_enabled
Required	false

Enable I/O Encryption

Description	Whether to encrypt temporary shuffle and cache files stored by Spark on the local disks.
Related Name	spark.io.encryption.enabled
Default Value	false
API Name	spark_io_encryption_enabled
Required	false

Enable Spark Lineage

Description	Whether to enable spark lineage support. If enabled, spark lineage is sent to Atlas.
Related Name	spark.lineage.enabled
Default Value	true
API Name	spark_lineage_enabled
Required	false

### Enable Network Encryption

**Description**

Whether to encrypt communication between Spark processes belonging to the same application. Requires authentication (spark.authenticate) to be enabled.

**Related Name**

spark.network.crypto.enabled

**Default Value**

false

**API Name**

spark\_network\_encryption\_enabled

**Required**

false

### Enable Optimized S3 Committers

**Description**

Whether use optimized committers when writing data to S3.

**Related Name**

spark.cloudera.s3\_committers.enabled

**Default Value**

true

**API Name**

spark\_optimized\_s3\_committers\_enabled

**Required**

false

### Extra Python Path

**Description**

Python library paths to add to PySpark applications.

**Related Name**

spark\_python\_path

**Default Value****API Name**

spark\_python\_path

**Required**

false

### Enable Shuffle Service

**Description**

Enables the external shuffle service. The external shuffle service preserves shuffle files written by executors so that the executors can be deallocated without losing work. Must be enabled if Enable Dynamic Allocation is enabled. Recommended and enabled by default.

**Related Name**

spark.shuffle.service.enabled

**Default Value**

true

**API Name**

spark\_shuffle\_service\_enabled

**Required**

true

**Enable Spark Web UI****Description**

Whether to enable the Spark Web UI on individual applications. It's recommended that the UI be disabled in secure clusters.

**Related Name**

spark.ui.enabled

**Default Value**

true

**API Name**

spark\_ui\_enabled

**Required**

false

**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_cdh\_version\_validator

**Required**

true

**Suppress Parameter Validation: Deploy Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

**Related Name****Default Value**

false

**API Name**

role\_config\_suppression\_client\_config\_root\_dir

**Required**

true

**Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

**Related Name****Default Value**

false

**API Name**
