Download CSV option	4

Download CSV option

The download CSV feature in Data Catalog allows users to download the search result for the current query with the selected data lake. This feature allows you to download upto 10000 rows for the current search query.

The CSV format does not confirm with any specific order or continuation in the downloaded results. For example, a user downloads 10000 assets once and later downloads the CSV again with about 10000 assets. The CSV may not contain the search results in the same order as it was downloaded earlier or previously.

Attention: This feature is under entitlement. Contact your Cloudera account representative to activate this feature in your CDP environment.

Make sure that your account has been granted the entitlement -> **DATA_CATALOG_ENABLE_DOWNLOAD_CSV**. Once the entitlement is enabled, you must be able to download the assets.

Setup the Profiler for spark-p5zj3y

Profiler runs data profiling operations as a pipeline on data located in the data lake which helps to view the profiled results for assets. Setting up a Profiler launches a cluster with various services like HDFS, YARN, Livy, Spark, HMS, Profiler Manager Service, and Profiler Scheduler Service. [Get Started >](#)
