Running a query in Cloudera Data Warehouse.....	4
--	----------

Running a query in Cloudera Data Warehouse

You simply open Hue and submit your query. You do not need to manually start beeline or any other shell.

About this task

As a DWUser, you open Hue from a Virtual Warehouse that you set up, and run the query. The SQL engine reads from and writes to the same metastore, regardless of the type Virtual Warehouse.

Before you begin

- Required role: DW User
- You obtained permission to run SQL queries from the EnvironmentAdmin, who added you to a Hadoop SQL policy.

Procedure

1. Log into the Cloudera Data Warehouse service as DWUser.
2. Go to the **Virtual Warehouses** tab, locate the Virtual Warehouse using which you want to run queries, and click HUE.

The Hue query editor opens in a new browser tab.

3. To run a query:

- a) Click a database to view the tables it contains.

When you click a database, it sets it as the target of your query in the main query editor panel.

- b) Type a query in the editor panel and click  to run the query.
