Service-Wide

Advanced

Enable Django Debug Mode

Description

In debug mode, Django displays a detailed traceback when an exception occurs. Debugging information may contain sensitive data. Django remembers every SQL query it executes in debug mode, which will rapidly consume memory.

Related Name

django_debug_mode

Default Value

false

API Name

django_debug_enable

Required

false

Enable Debugging of Internal Server Error Responses

Description

Enable debug output in HTTP Internal Server Error (status 500) responses. Debugging information may contain sensitive data. If Enable Django Debug Mode is set, this is automatically enabled.

Related Name

http_500_debug_mode

Default Value

false

API Name

http_500_debug_enable

Required

false

Hue Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

hue_service_env_safety_valve

Required

false

Hue Service Advanced Configuration Snippet (Safety Valve) for hue_safety_valve.ini

Description

For advanced use only, a string to be inserted into hue_safety_valve.ini. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

hue_service_safety_valve

Required

false

Allowed size of an HTTP request header

Description

Specifies the number of bytes that will be allowed in an HTTP request header.

Related Name

limit_request_field_size

Default Value

API Name

limit_request_field_size

Required

false

Maximum number of HTTP headers**Description**

Limits the number of HTTP request header fields that will be accepted from the client.

Related Name

limit_request_fields

Default Value**API Name**

limit_request_fields

Required

false

Maximum size of HTTP request line**Description**

Limits the size of the HTTP request line that will be accepted from the client.

Related Name

Required

true

Enable Usage Data Collection

Description

When you enable anonymous usage data collection Hue tracks anonymised pages and application versions in order to gather information about each application's usage levels. The data collected does not include any hostnames or IDs. Data collection option is available on CDH 4.4 and later deployments.

Related Name

collect_usage

Default Value

true

API Name

usage_data_collection_enable

Required

false

Cloudera Navigator Optimizer

Auto Upload Queries to Cloudera Navigator Optimizer

Description

Automatically upload queries after their execution in order to improve recommendations.

Related Name

auto_upload_queries

Default Value

true

API Name

auto_upload_queries

Required

false

Enable Cloudera Navigator Optimizer integration with Hue

Description

Enable Cloudera Navigator Optimizer integration with Hue.

Related Name

enable_navopt

Default Value

false

API Name

enable_navopt

Required

false

Cloudera Altus Access Key

Description

Credentials for accessing Cloudera cloud services.

Related Name

Default Value**API Name**

navopt_altus_account

Required

false

Query History Upload Limit**Description**

Allow admins to upload the last N executed queries in the quick start wizard. Use 0 to disable.

Related Name

query_history_upload_limit

Default Value

10000

API Name

query_history_upload_limit

Required

false

Database**Hue Database Directory****Description**

If the database is SQLite3, this is the filename of the database to use, and the directory of this file must be writable by the 'hue' user.

Related Name

dir

Default Value

/var/lib/hue/desktop.db

API Name

database_dir

Required

false

Database Dump File**Description**

File where the database gets dumped to or loaded from.

Related Name**Default Value**

/tmp/hue_database_dump.json

API Name

database_dump_file

Required

true

Hue Database Hostname

Description

Name of host where the Hue database is running. Not necessary for SQLite3.

Related Name

host

Default Value

localhost

API Name

database_host

Required

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Healthy Hue Server Monitoring Thresholds**Description**

The health test thresholds of the overall Hue Server health. The check returns "Concerning" health if the percentage of "Healthy" Hue Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Hue Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

hue_hue_servers_healthy_thresholds

Required

false

Healthy Kerberos Ticket Renewer Monitoring Thresholds**Description**

The health test thresholds of the overall Kerberos Ticket Renewer health. The check returns "Concerning" health if the percentage of "Healthy" Kerberos Ticket Renewers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Kerberos Ticket Renewers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

hue_kt_renewers_healthy_thresholds

Required

false

Healthy Load Balancer Monitoring Thresholds**Description**

The health test thresholds of the overall Load Balancer health. The check returns "Concerning" health if the percentage of "Healthy" Load Balancers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Load Balancers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

hue_load_balancer_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other**Atlas Service****Description**

Name of the Atlas service that this Hue service instance depends on

Related Name**Default Value****API Name**

atlas_service

Required

false

Blacklist**Description**

Comma-separated list of regular expressions, which match any prefix of 'host:port/path' of requested proxy target. This does not support matching GET parameters.

Related Name

blacklist

Default Value

()

API Name

blacklist

Required

false

Hue Web Server Threads**Description**

Number of threads used by the Hue web server.

Related Name

cherrypy_server_threads

Default Value

2

API Name

cherrypy_server_threads

Required

false

Default Site Encoding**Description**

Default encoding for site data.

Related Name

default_site_encoding

Default Value

utf

API Name

default_site_encoding

Required

Hue Kerberos Credentials Cache Directory

Description

Directory where Hue stores cached Kerberos credentials

Related Name

ccache_path

Default Value

/var/run/hue

API Name

hue_ccache_path

Required

false

HBase Thrift Server

Description

Thrift server to use for HBase app.

Related Name**Default Value****API Name**

hue_hbase_thrift

Required

false

Override Phoenix Query Server for Hue

Description

Override Phoenix Query Server to use for Phoenix DB connection. If None selected CM will try to pick one automatically.

Related Name**Default Value****API Name**

hue_phoenix_queryserver

Required

false

HDFS Web Interface Role

Description

HTTPFS role or Namenode (if webhdfs is enabled) that hue can use to communicate with HDFS.

Related Name

webhdfs_url

Default Value**API Name**

hue_webhdfs

Required

false

Impala Service

Description

Name of the Impala service that this Hue service instance depends on

Related Name**Default Value****API Name**

impala_service

Required

false

Knox Proxy Hosts

Description

List of hosts that Knox proxy requests can come from.

Related Name

knox_proxyhosts

Default Value**API Name**

Description

Name of the Phoenix service that this Hue service instance depends on

Related Name**Default Value****API Name**

phoenix_service

Required

false

Query Processor Service

Description

Name of the Query Processor service that this Hue service instance depends on

Related Name**Default Value****API Name**

query_processor_service

Required

false

Solr Service

Description

Name of the Solr service that this Hue service instance depends on

Related Name

Default Value

API Name

solr_service

Required

false

Time Zone

Description

Time zone name.

Related Name

time_zone

Default Value

America/Los_Angeles

API Name

time_zone

Required

false

User Augmentor

Description

Class that defines extra accessor methods for user objects.

Related Name

user_augmentor

Default Value

desktop.auth.backend.DefaultUserAugmentor

API Name

user_augmentor

Required

false

Whitelist

Description

Comma-separated list of regular expressions, which match 'host:port' of requested proxy target.

Related Name

whitelist

Default Value

(localhost|127\.\.0\.\.0\.\.1):(50030|50070|50060|50075)

API Name

whitelist

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Hue service instance depends on

Related Name**Default Value****API Name**

zookeeper_service

Required

false

Security

Authentication Backend

Description

Mode of authenticating login credentials. Select `desktop.auth.backend.LdapBackend` to use LDAP to authenticate login credentials. LDAP requires you to also set the LDAP URL, Active Directory Domain, and optionally LDAP certificate if you are using secure LDAP. Select `desktop.auth.backend.PamBackend` to use PAM to authenticate login credentials.

Related Name

backend

Default Value

`desktop.auth.backend.AllowFirstUserDjangoBackend`

API Name

auth_backend

Required

false

LDAP Search Base

Description

The distinguished name to use as a search base for finding users and groups. This should be similar to `'dc=hadoop,dc=mycompany,dc=com'`.

Related Name

base_dn

Default Value**API Name**

base_dn

Required

false

LDAP Bind User Distinguished Name

Description

Distinguished name of the user to bind to AD as for user authentication search/bind and group lookup for role authorization. For openLDAP based directories this should be a DN string, for Active Directory this can be just a username, combined with the "Active Directory Domain" value for login. For example username in the field and example.com in the active directory domain will result in the User Principal Name value of `username@example.com` being used to bind. If you put a

UPM value here, do not over-configure the "active directory domain" field otherwise you will end up presenting username@example.com@example.com for binds. AD will accept a UPN value or the DN value as a valid Bind DN; An example of a Distinguished Name (DN): CN=cdh admin,OU=svcaccount,DC=example,DC=com An example of a UPN value: cdhadmin@example.com

Related Name

bind_dn

Default Value

API Name

bind_dn

Required

false

LDAP Bind Password

Description

The password of the bind user.

Related Name

bind_password

Default Value

API Name

bind_password

Required

false

Create LDAP users on login

Description

Create users in Hue when they try to login with their LDAP credentials. For use when using LdapBackend for Hue authentication.

Related Name

create_users_on_login

Default Value

true

API Name

create_users_on_login

Required

false

LDAP Group Filter

Description

Base filter for searching for groups. For Active Directory, this is typically '(objectClass=group)'.

Related Name

group_filter

Default Value

API Name

group_filter

Required

false

LDAP Group Membership Attribute**Description**

The attribute of the group object that identifies the members of the group. For Active Directory, this is typically 'member'.

Related Name

group_member_attr

Default Value**API Name**

group_member_attr

Required

false

LDAP Group Name Attribute**Description**

The group name attribute in the LDAP schema. For Active Directory, this is typically 'cn'.

Related Name

group_name_attr

Default Value**API Name**

group_name_attr

Required

false

Auto Logout Timeout**Description**

Auto logout/idle session timeout in seconds, -1 second is equivalent to no automatic logout.

Related Name

idle_session_timeout

Default Value

-1 second(s)

API Name

idle_session_timeout

Required

false

Kerberos Principal**Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

hue

API Name

kerberos_princ_name

Required

true

LDAP Server CA Certificate**Description**

The location on disk of the certificate, in .pem format, used to confirm the authenticity of the LDAP server certificate. This is the Certificate Authority (CA) certificate, and it was used to sign the LDAP server certificate. If not set, all certificates are trusted, which means that an attacker could potentially intercept otherwise encrypted usernames and passwords.

Related Name

ldap_cert

Default Value**API Name**

ldap_cert

Required

false

LDAP URL**Description**

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name

ldap_url

Default Value**API Name**

ldap_url

Required

false

LDAP Username Pattern**Description**

LDAP Username Pattern for use with non-Active Directory LDAP implementations. Must contain the special '*username*' string for replacement during authentication.

Related Name

ldap_username_pattern

Default Value**API Name**

ldap_username_pattern

Required

false

Active Directory Domain

Description

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name

nt_domain

Default Value**API Name**

nt_domain

Required

false

PAM Backend Service Name

Description

The PAM service name to use when authenticating over desktop.auth.backend.PamBackend. This is typically the name of a file under /etc/pam.d/ on the Hue host.

Related Name

pam_service

Default Value

login

API Name

pam_auth_service

Required

false

Use Search Bind Authentication

Description

Search Bind Authentication connects to the LDAP server using credentials provided in the 'bind_dn' and 'bind_password' configurations. If these configurations are not set, then an anonymous search is performed.

Related Name

search_bind_authentication

Default Value

false

API Name

search_bind_authentication

Required

false

LDAP Group Name for Test LDAP Configuration

Description

An optional group name for validating LDAP group configurations. If a test group name is provided, Hue's LDAP library uses it as a search parameter when running the command, Test Hue LDAP Configuration (under Hue * Actions). For example, (&(objectClass=*))

(sAMAccountName=test_ldap_group)). If test group name is not provided then Hue LDAP Configuration action will check only LDAP server connectivity.

Related Name

test_ldap_group

Default Value**API Name**

test_ldap_group

Required

false

LDAP Username for Test LDAP Configuration

Description

An optional user name for validating LDAP user configurations. If a test user name is provided, Hue's LDAP library uses it as a search parameter when running the command, Test Hue LDAP Configuration (under Hue * Actions). For example, (&(objectClass=*)(sAMAccountName=test_ldap_user)). If "*" is provided, then all user attributes are returned. If test user name is not provided then Test Hue LDAP Configuration action will check only LDAP server connectivity.

Related Name

test_ldap_user

Default Value**API Name**

test_ldap_user

Required

false

Enable LDAP TLS

Description

If true, attempts to establish a TLS (Transport Layer Security) connection with an LDAP server that was specified with ldap://. Not required when using an LDAP URL with prefix ldaps://, because that already specifies TLS. This option is also known as "Use StartTLS".

Related Name

use_start_tls

Default Value

true

API Name

use_start_tls

Required

false

LDAP User Filter

Description

The base filter for searching for users. For Active Directory, this is typically '(objectClass=user)'.

Related Name

user_filter

Default Value**API Name**

user_filter

Required

false

LDAP Username Attribute**Description**

The username attribute in the LDAP schema. For Active Directory, this is typically 'sAMAccountName'.

Related Name

user_name_attr

Default Value**API Name**

user_name_attr

Required

false

Suppressions**Suppress Configuration Validator: Top Banner Custom HTML****Description**

Whether to suppress configuration warnings produced by the Top Banner Custom HTML configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_banner_html

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Hue HTTP Port**Description**

Whether to suppress configuration warnings produced by the Hue HTTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_http_port

Required

true

Suppress Configuration Validator: Hue Server Advanced Configuration Snippet (Safety Valve) for impalad_flags**Description**

Whether to suppress configuration warnings produced by the Hue Server Advanced Configuration Snippet (Safety Valve) for impalad_flags configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_impalad_flags_safety_valve

Required

true

Suppress Configuration Validator: Hue Load Balancer Log Directory**Description**

Whether to suppress configuration warnings produced by the Hue Load Balancer Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_load_balancer_log_dir

Required

true

Suppress Configuration Validator: Load Balancer Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Load Balancer Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_load_balancer_role_env_safety_valve

Required

true

Suppress Configuration Validator: Load Balancer Advanced Configuration Snippet (Safety Valve) for httpd.conf

Description

Whether to suppress configuration warnings produced by the Load Balancer Advanced Configuration Snippet (Safety Valve) for httpd.conf configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hue_load_balancer_safety_valve

Required

true

Suppress Configuration Validator: Metrics Sample File Location

Description

Whether to suppress configuration warnings produced by the Metrics Sample File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hue_metrics_sample_file_location

Required

true

Suppress Configuration Validator: Hue Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml

Description

Whether to suppress configuration warnings produced by the Hue Server Advanced Configuration Snippet (Safety Valve) for hive-site.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hue_server_hive_safety_valve

Required

true

Suppress Configuration Validator: Hue Server Advanced Configuration Snippet (Safety Valve) for hue_safety_valve_server.ini**Description**

Whether to suppress configuration warnings produced by the Hue Server Advanced Configuration Snippet (Safety Valve) for hue_safety_valve_server.ini configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_hue_safety_valve

Required

true

Suppress Configuration Validator: Hue Server Log Directory**Description**

Whether to suppress configuration warnings produced by the Hue Server Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_log_dir

Required

true

Suppress Configuration Validator: Jobsub Examples and Templates Directory**Description**

Whether to suppress configuration warnings produced by the Jobsub Examples and Templates Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_remote_data_dir

Required

true

Suppress Configuration Validator: Hue Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Hue Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hue_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Hue Server Safety Valve Format Validator

Description

Whether to suppress configuration warnings produced by the Hue Server Safety Valve Format Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hue_server_safety_valve_format_validator

Required

true

Suppress Configuration Validator: Hue Server Advanced Configuration Snippet (Safety Valve) for sqoop.properties

Description

Whether to suppress configuration warnings produced by the Hue Server Advanced Configuration Snippet (Safety Valve) for sqoop.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hue_sqoop2_properties_safety_valve

Required

true

Suppress Configuration Validator: Hue TLS/SSL Validator

Description

Whether to suppress configuration warnings produced by the Hue TLS/SSL Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hue_ssl_validator

Required

true

Suppress Configuration Validator: Kerberos Ticket Renewer Log Directory

Description

Whether to suppress configuration warnings produced by the Kerberos Ticket Renewer Log Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kt_renewer_log_dir

Required

true

Suppress Configuration Validator: Kerberos Ticket Renewer Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Kerberos Ticket Renewer Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kt_renewer_role_env_safety_valve

Required

true

Suppress Configuration Validator: Hue Load Balancer Port

Description

Whether to suppress configuration warnings produced by the Hue Load Balancer Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_listen

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Helper Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Receivers Section configuration validator.

Related Name

Default Value

	false
API Name	role_config_suppression_otelcol_receivers
Required	true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Password

Description	Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Password configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_remote_write_password
Required	true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write URL

Description	Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write URL configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_remote_write_url
Required	true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Username

Description	Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Username configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_remote_write_user
Required	true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description	
--------------------	--

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Configuration Validator: Hue Load Balancer TLS/SSL Server SSLPassPhraseDialog

Description

Whether to suppress configuration warnings produced by the Hue Load Balancer TLS/SSL Server SSLPassPhraseDialog configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_passphrasefile_location

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Secret Key

Description

Whether to suppress configuration warnings produced by the Secret Key configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_secret_key

Required

true

Suppress Configuration Validator: Hue TLS/SSL Server CA Certificate (PEM Format)

Description

Whether to suppress configuration warnings produced by the Hue TLS/SSL Server CA Certificate (PEM Format) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_cacerts

Required

true

Suppress Configuration Validator: Hue TLS/SSL Server Certificate File (PEM Format)

Description

Whether to suppress configuration warnings produced by the Hue TLS/SSL Server Certificate File (PEM Format) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_certificate

Required

true

Suppress Configuration Validator: Hue Load Balancer TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the Hue Load Balancer TLS/SSL Server Private Key File (PEM Format) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_certificate_key

Required

true

Suppress Configuration Validator: SSLCipherSuite

Description

Whether to suppress configuration warnings produced by the SSLCipherSuite configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_cipher_suite

Required

true

Suppress Configuration Validator: Hue TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the Hue TLS/SSL Server Private Key File (PEM Format) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_private_key

Required

true

Suppress Configuration Validator: Hue TLS/SSL Private Key Password**Description**

Whether to suppress configuration warnings produced by the Hue TLS/SSL Private Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_private_key_password

Required

true

Suppress Configuration Validator: SSLProtocol**Description**

Whether to suppress configuration warnings produced by the SSLProtocol configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_protocol

Required

true

Suppress Parameter Validation: LDAP Search Base**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Search Base parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_base_dn

Required

true

Suppress Parameter Validation: LDAP Bind User Distinguished Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind User Distinguished Name parameter.

Related Name**Default Value**

	false
API Name	service_config_suppression_bind_dn
Required	true

Suppress Parameter Validation: LDAP Bind Password

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Bind Password parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_bind_password
Required	true

Suppress Parameter Validation: Blacklist

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Blacklist parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_blacklist
Required	true

Suppress Parameter Validation: Hue Database Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Directory parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_database_dir
Required	true

Suppress Parameter Validation: Database Dump File

Description	
--------------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Dump File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_dump_file

Required

true

Suppress Parameter Validation: Hue Database Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Hostname parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_host

Required

true

Suppress Parameter Validation: Hue Database Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_name

Required

true

Suppress Parameter Validation: Hue Database Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_password

Required

true

Suppress Parameter Validation: Hue Database Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_port

Required

true

Suppress Parameter Validation: Hue Database Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Database Username parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_user

Required

true

Suppress Parameter Validation: Default Site Encoding

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Site Encoding parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_default_site_encoding

Required

true

Suppress Parameter Validation: Default User Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default User Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_default_user_group

Required

true

Suppress Parameter Validation: LDAP Group Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Filter parameter.

Related Name

Default Value

false

API Name

service_config_suppression_group_filter

Required

true

Suppress Parameter Validation: LDAP Group Membership Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Membership Attribute parameter.

Related Name

Default Value

false

API Name

service_config_suppression_group_member_attr

Required

true

Suppress Parameter Validation: LDAP Group Name Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Name Attribute parameter.

Related Name

Default Value

false

API Name

service_config_suppression_group_name_attr

Required

true

Suppress Configuration Validator: HDFS HTTPFS Usage Validator

Description

Whether to suppress configuration warnings produced by the HDFS HTTPFS Usage Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_httpfs_present_validator

Required

true

Suppress Parameter Validation: HDFS Temporary Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Temporary Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdfs_tmp_dir

Required

true

Suppress Parameter Validation: Hue Kerberos Credentials Cache Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Kerberos Credentials Cache Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_ccache_path

Required

true

Suppress Configuration Validator: HBase Thrift Usage Validator**Description**

Whether to suppress configuration warnings produced by the HBase Thrift Usage Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_hbase_thrift_server_validator

Required

true

Suppress Configuration Validator: Knox Proxy Hosts validator for Hue

Description

Whether to suppress configuration warnings produced by the Knox Proxy Hosts validator for Hue configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_knox_proxyhosts_validator

Required

true

Suppress Configuration Validator: Load Balancer Count Validator

Description

Whether to suppress configuration warnings produced by the Load Balancer Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_load_balancer_count_validator

Required

true

Suppress Configuration Validator: Phoenix Query Server

Description

Whether to suppress configuration warnings produced by the Phoenix Query Server configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_phoenix_query_server_validator

Required

true

Suppress Configuration Validator: Hue Server Count Validator

Description

Whether to suppress configuration warnings produced by the Hue Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_server_count_validator

Required

true

Suppress Configuration Validator: Hue Service Config Safety Valve Format Validator

Description

Whether to suppress configuration warnings produced by the Hue Service Config Safety Valve Format Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_hue_service_config_safety_valve_format_validator

Required

true

Suppress Parameter Validation: Hue Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_hue_service_env_safety_valve

Required

true

Suppress Parameter Validation: Hue Service Advanced Configuration Snippet (Safety Valve) for hue_safety_valve.ini

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Service Advanced Configuration Snippet (Safety Valve) for hue_safety_valve.ini parameter.

Related Name

Default Value

false

API Name

service_config_suppression_hue_service_safety_valve

Required

true

Suppress Parameter Validation: HDFS Web Interface Role

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HDFS Web Interface Role parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hue_webhdfs

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Knox Proxy Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knox_proxyhosts

Required

true

Suppress Configuration Validator: Kerberos Ticket Renewer Count Validator**Description**

Whether to suppress configuration warnings produced by the Kerberos Ticket Renewer Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_kt_renewer_count_validator

Required

true

Suppress Parameter Validation: LDAP Server CA Certificate

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Server CA Certificate parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap_cert

Required

true

Suppress Parameter Validation: LDAP URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap_url

Required

true

Suppress Parameter Validation: LDAP Username Pattern

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Username Pattern parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap_username_pattern

Required

true

Suppress Parameter Validation: Active Directory Domain

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_nt_domain

Required

true

Suppress Parameter Validation: PAM Backend Service Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the PAM Backend Service Name parameter.

Related Name

Default Value

false

API Name

service_config_suppression_pam_auth_service

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: LDAP Group Name for Test LDAP Configuration**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Group Name for Test LDAP Configuration parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_test_ldap_group

Required

true

Suppress Parameter Validation: LDAP Username for Test LDAP Configuration**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Username for Test LDAP Configuration parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_test_ldap_user

Required

true

Suppress Parameter Validation: Time Zone**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Time Zone parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_time_zone

Required

true

Suppress Parameter Validation: User Augmentor**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the User Augmentor parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_user_augmentor

Required

true

Suppress Parameter Validation: LDAP User Filter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User Filter parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_user_filter

Required

true

Suppress Parameter Validation: LDAP Username Attribute**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Username Attribute parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_user_name_attr

Required

true

Suppress Parameter Validation: Whitelist**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Whitelist parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_whitelist

Required

true

Suppress Health Test: Hue Server Health**Description**

Whether to suppress the results of the Hue Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hue_hue_servers_healthy

Required

true

Suppress Health Test: Kerberos Ticket Renewer Health**Description**

Whether to suppress the results of the Kerberos Ticket Renewer Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_hue_kt_renewers_healthy

Required

true

Suppress Health Test: Load Balancer Health**Description**

Whether to suppress the results of the Load Balancer Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_hue_load_balancer_healthy

Required

true

Iceberg Replication Properties in Cloudera Runtime 7.3.1

Role groups:

Admin Server

Advanced

Admin Server Advanced Configuration Snippet (Safety Valve) for iceberg_replication.xml

Description

For advanced use only. A string to be inserted into iceberg_replication.xml for this role only.

Related Name

Default Value

API Name

iceberg_replication.xml_role_safety_valve

Required

false

Admin Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

ICEBERG_REPLICATION_ADMINSERVER_role_env_safety_valve

Required

false

Admin Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name

Default Value**API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

Admin Server Log Directory

Description

The log directory for log files of the role Admin Server.

Related Name

log_dir

Default Value

/var/log/iceberg_replication/admin_server

API Name

log_dir

Required

false

Admin Server Logging Threshold

Description

The minimum log level for Admin Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Admin Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Admin Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Admin Server Max Log Size

Description

The maximum size, in megabytes, per log file for Admin Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

iceberg_replication_adminserver_fd_thresholds

Required

false

Admin Server Host Health Test**Description**

When computing the overall Admin Server health, consider the host's health.

Related Name**Default Value**

true

API Name

iceberg_replication_adminserver_host_health_enabled

Required

false

Admin Server Process Health Test**Description**

Enables the health test that the Admin Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

iceberg_replication_adminserver_scm_health_enabled

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name

Default Value

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name

Default Value

API Name

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

extensions: basicauth/\$ROLE_NAME: client_auth: username:
\$ROLE_PARAM(otelcol_remote_write_user) password:

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Required

false

Ports and Addresses**Admin Server Port Number****Description**

The port number on which admin server runs

Related Name

admin_server_port_number

Default Value

2288

API Name

admin_server_port_number

Required

true

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

false

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_smon_derived_configs_safety_valve`**Required**`true`

Impala Properties in Cloudera Runtime 7.3.1

Role groups:

Impala Catalog Server

Advanced**Catalog Server Command Line Argument Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, key-value pairs (one on each line) to be added (verbatim) to Catalog Server command line flags. Key names should begin with a hyphen(-). For example: `-log_filename=foo.log`

Related Name**Default Value****API Name**`catalogd_cmd_args_safety_valve`

Required

false

Impala Catalog Server Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value****API Name**

catalogd_core_site_safety_valve

Required

false

Catalog Server HBase Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into hbase-site.xml for this role only.

Related Name**Default Value****API Name**

catalogd_hbase_conf_safety_valve

Required

false

Catalog Server HDFS Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into hdfs-site.xml for this role only.

Related Name**Default Value****API Name**

catalogd_hdfs_site_conf_safety_valve

Required

false

Catalog Server Hive Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into hive-site.xml for this role only.

Related Name**Default Value****API Name**

catalogd_hive_conf_safety_valve

Required

false

Java Configuration Options for Catalog Server

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value****API Name**

catalogd_java_opts

Required

false

Impala Catalog Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

CATALOGSERVER_role_env_safety_valve

Required

false

Catalog Server Core Dump Directory

Description

Directory where the Catalog Server core dump is placed.

Related Name

core_dump_dir

Default Value

/var/log/catalogd

API Name

core_dump_dir

Required

false

Catalog Server Hive Metastore Connection Retries

Description

Number of retry attempts the Catalog Server will make when connecting to the Hive Metastore Server. By default, the Catalog Server waits one second between retries.

Related Name

hive.metastore.connect.retries

Default Value

5

API Name

hive_metastore_connect_retries

Required

false

Catalog Server Hive Metastore Connection Timeout**Description**

Timeout for requests to the Hive Metastore Server from Catalog Server. Consider increasing this if you have tables with a lot of metadata and see timeout errors.

Related Name

hive.metastore.client.socket.timeout

Default Value

1 hour(s)

API Name

hive_metastore_timeout

Required

false

Metastore Notification Polling Interval**Description**

The value of this configuration determines the interval with which the Catalog Server fetches new notifications from Hive Metastore. The feature is disabled when it is set to 0.

Related Name

hms_event_polling_interval_s

Default Value

2 second(s)

API Name

hms_event_polling_interval_s

Required

false

Load Catalog in Background**Description**

If true, loads catalog metadata in the background. If false, metadata is loaded lazily (on access). Only effective in CDH 5 and Impala 1.2.4 and higher.

Related Name

load_catalog_in_background

Default Value

false

API Name

load_catalog_in_background

Required

false

Catalog Server Max Breakpad Dump Files**Description**

Maximum number of Breakpad dump files stored by Catalog Server Role.

Related Name

max_minidumps

Default Value

9

API Name

max_minidumps

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Catalog Server Breakpad Dump Directory**Description**

Directory for storing Catalog Server Breakpad dumps.

Related Name

minidump_path

Default Value

/var/log/impala-minidumps

API Name

minidump_path

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

true

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Catalog Server Log Directory

Description

Directory where Catalog Server will place its log files.

Related Name

log_dir

Default Value

/var/log/catalogd

API Name

log_dir

Required

false

Impala Catalog Server Logging Threshold

Description

The minimum log level for Impala Catalog Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Catalog Server Verbose Log Level

Description

Verbose logging level for the GLog logger. These messages are always logged at 'INFO' log level, so this setting has no effect if Logging Threshold is set to 'WARN' or above.

Related Name

GLOG_v

Default Value

1

API Name

log_verbose_level

Required

false

Catalog Server Log Buffer Level

Description

Buffer log messages logged at this level or lower (-1 means don't buffer; 0 means buffer INFO only; 1 means buffer WARNING only, ...)

Related Name

logbuflevel

Default Value

0

API Name

logbuflevel

Required

false

Catalog Server Maximum Log Files

Description

The number of log files that are kept for each severity level before all older log files are removed. The number has to be greater than 1 to keep at least the current log file open. If set to 0, all log files are retained and log rotation is effectively disabled.

Related Name

max_log_files

Default Value

10

API Name

max_log_files

Required

false

Impala Catalog Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Impala Catalog Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Catalog Server Connectivity Health Test****Description**

Enables the health test that verifies the Catalog Server is connected to the StateStore

Related Name**Default Value**

true

API Name

catalogserver_connectivity_health_enabled

Required

false

Catalog Server Connectivity Tolerance at Startup**Description**

The amount of time to wait for the Catalog Server to fully start up and connect to the StateStore before enforcing the connectivity check.

Related Name**Default Value**

3 minute(s)

API Name

catalogserver_connectivity_tolerance

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

catalogserver_fd_thresholds

Required

false

Impala Catalog Server Host Health Test

Description

When computing the overall Impala Catalog Server health, consider the host's health.

Related Name

Default Value

true

API Name

catalogserver_host_health_enabled

Required

false

Impala Catalog Server Process Health Test

Description

Enables the health test that the Impala Catalog Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

catalogserver_scm_health_enabled

Required

false

Health Test Startup Tolerance

Description

The amount of time allowed after this role is started that failures of health tests that rely on communication with this role will be tolerated.

Related Name

Default Value

5 minute(s)

API Name

catalogserver_startup_tolerance

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name

Default Value

true

API Name

catalogserver_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name

Default Value

Warning: 10 second(s), Critical: Never

API Name

catalogserver_web_metric_collection_thresholds

Required

false

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds**Description**

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures**Description**

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check**Description**

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following

configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

`exporters: prometheusremotewrite/$ROLE_NAME: endpoint: $ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls: insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s max_elapsed_time: 300s`

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

`extensions: basicauth/$ROLE_NAME: client_auth: username: $ROLE_PARAM(otelcol_remote_write_user) password: '$ROLE_PARAM(otelcol_remote_write_password)' spnegoauth/$ROLE_NAME: enabled: $ROLE_BOOLEAN_PARAM(hadoop_secure_web_ui, true, false) realm: '$KRB_REALM' principal: 'HTTP/$HOST_NAME' krb5_conf_path: '$KRB_CONF_PATH' keytab_path: $TARGET_PROC_DIR/impala.keytab http_forwarder/$ROLE_NAME: ingress: endpoint: localhost:$ROLE_PARAM(otelcol_helper_port) egress: endpoint: $ROLE_BOOLEAN_PARAM(client_services_ssl_enabled, https, http)://$HOST_NAME: $ROLE_PARAM(catalogserver_webserver_port)/ auth: authenticator: spnegoauth/$ROLE_NAME tls: insecure_skip_verify: true headers: otel_http_forwarder: dev timeout: 5s`

API Name

otelcol_extensions

Required

false

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value**

11151

API Name

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
processors: filter/$ROLE_NAME: metrics: include: match_type: strict metric_names: -
impala_rpc_method_catalog_server_CatalogService_GetPartialCatalogObject_call_duration
- impala_thrift_server_CatalogService_svc_thread_wait_time -

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

true

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Resident Set Size Thresholds**Description**

The health test thresholds on the resident size of the process.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_resident_set_size_thresholds

Required

false

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

Resource Management

Java Heap Size of Catalog Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

4 GiB

API Name

catalogd_embedded_jvm_heapsize

Required

false

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/

O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

false

Suppressions**Suppress Parameter Validation: Catalog Server Service Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Service Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalog_service_port

Required

true

Suppress Parameter Validation: Catalog Server Command Line Argument Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Command Line Argument Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogd_cmd_args_safety_valve

Required

true

Suppress Parameter Validation: Impala Catalog Server Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Catalog Server Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogd_core_site_safety_valve

Required

true

Suppress Parameter Validation: Catalog Server HBase Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server HBase Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogd_hbase_conf_safety_valve

Required

true

Suppress Parameter Validation: Catalog Server HDFS Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server HDFS Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_catalogd_hdfs_site_conf_safety_valve

Required

true

Suppress Parameter Validation: Catalog Server Hive Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Hive Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_catalogd_hive_conf_safety_valve

Required

true

Suppress Parameter Validation: Java Configuration Options for Catalog Server

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Catalog Server parameter.

Related Name

Default Value

false

API Name

role_config_suppression_catalogd_java_opts

Required

true

Suppress Parameter Validation: Impala Catalog Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Catalog Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_catalogserver_role_env_safety_valve

Required

true

Suppress Parameter Validation: Catalog Server HTTP Server Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server HTTP Server Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_catalogserver_webserver_port

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Catalog Server Core Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Core Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_core_dump_dir

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**

false

API Name
role_config_suppression_jmx_exporter_yaml

Required
true

Suppress Parameter Validation: Catalog Server Log Directory

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Log Directory parameter.

Related Name

Default Value
false

API Name
role_config_suppression_log_dir

Required
true

Suppress Parameter Validation: Catalog Server Breakpad Dump Directory

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Breakpad Dump Directory parameter.

Related Name

Default Value
false

API Name
role_config_suppression_minidump_path

Required
true

Suppress Parameter Validation: Heap Dump Directory

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value
false

API Name
role_config_suppression_oom_heap_dump_dir

Required
true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Service Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Catalog Server Webserver TLS/SSL Server Certificate File (PEM Format)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Webserver TLS/SSL Server Certificate File (PEM Format) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_webserver_certificate_file

Required

true

Suppress Parameter Validation: Catalog Server Web Server User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Web Server User Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_webserver_htpassword_password

Required

true

Suppress Parameter Validation: Catalog Server Web Server Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Web Server Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_webserver_htpassword_user

Required

true

Suppress Parameter Validation: Catalog Server Webserver TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Webserver TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_webserver_private_key_file

Required

true

Suppress Parameter Validation: Catalog Server Webserver TLS/SSL Private Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Catalog Server Webserver TLS/SSL Private Key Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_webserver_private_key_password_cmd

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_audit_health

Required

true

Suppress Health Test: StateStore Connectivity**Description**

Whether to suppress the results of the StateStore Connectivity health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_connectivity

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_file_descriptor

Required

true

Suppress Health Test: Heap Dump Directory Free Space**Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_log_directory_free_space

Required

true

Suppress Health Test: Resident Set Size**Description**

Whether to suppress the results of the Resident Set Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_memory_rss_health

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_otelcol_health

Required

true

Suppress Health Test: Ranger Plugin Hdfs Spool Directory Size**Description**

Whether to suppress the results of the Ranger Plugin Hdfs Spool Directory Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_ranger_plugin_hdfs_spool_directory_size_health

Required

true

Suppress Health Test: Ranger Plugin Solr Spool Directory Size**Description**

Whether to suppress the results of the Ranger Plugin Solr Spool Directory Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_ranger_plugin_solr_spool_directory_size_health

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_catalogserver_unexpected_exits

Required

true

Suppress Health Test: Web Server Status**Description**

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_catalogserver_web_metric_collection

Required

true

Impala Daemon**Advanced****Abort on Config Error****Description**

Abort Impala startup if there are improper configs or running on unsupported hardware.

Related Name

abort_on_config_error

Default Value

true

API Name

abort_on_config_error

Required

false

Impala Daemon Core Dump Directory**Description**

Directory where an Impala Daemon core dump is placed.

Related Name

core_dump_dir

Default Value

/var/log/impalad

API Name

core_dump_dir

Required

false

Impala Daemon Max Client Connections**Description**

Maximum number of concurrent client connections allowed. This determines how many queries can run simultaneously. When more clients try to connect to Impala than the value of this setting, the later arriving clients have to wait until previous clients disconnect. Setting this value too high could negatively impact query latency.

Related Name

fe_service_threads

Default Value

64

API Name

fe_service_threads

Required

false

Impala Daemon Hive Metastore Connection Retries**Description**

Number of retry attempts the Impala Daemon will make when connecting to the Hive Metastore Server. By default, the Impala Daemon waits one second between retries.

Related Name

hive.metastore.connect.retries

Default Value

5

API Name

hive_metastore_connect_retries

Required

false

Impala Daemon Hive Metastore Connection Timeout**Description**

Timeout for requests to the Hive Metastore Server from Impala. Consider increasing this if you have tables with a lot of metadata and see timeout errors.

Related Name

hive.metastore.client.socket.timeout

Default Value

1 hour(s)

API Name

hive_metastore_timeout

Required

false

Impala Daemon HDFS Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into hdfs-site.xml for this role only.

Related Name**Default Value****API Name**

impala_hdfs_site_conf_safety_valve

Required

false

Impala Daemon Hive Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into hive-site.xml for this role only.

Related Name**Default Value****API Name**

impala_hive_conf_safety_valve

Required

false

Impala Daemon Llama Site Advanced Configuration Snippet (Safety Valve)**Description**

An XML snippet to append to llama-site.xml for Impala Daemons. This configuration only has effect on Impala versions 1.3 or greater.

Related Name**Default Value****API Name**

impala_llama_site_conf_safety_valve

Required

false

Impala Daemon Command Line Argument Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be added (verbatim) to Impala Daemon command-line flags. Key names should begin with a hyphen(-). For example: -log_filename=foo.log

Related Name**Default Value****API Name**

impalad_cmd_args_safety_valve

Required

false

Impala Daemon Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value****API Name**

impalad_core_site_safety_valve

Required

false

Java Configuration Options for Impala Daemon

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name

Impala Daemon Java Options

Default Value**API Name**

impalad_embedded_java_opts

Required

false

Impala Daemon Fair Scheduler Advanced Configuration Snippet (Safety Valve)

Description

An XML string to use verbatim for the contents of fair-scheduler.xml for Impala Daemons. This configuration only has effect on Impala versions 1.3 or greater.

Related Name**Default Value****API Name**

impalad_fair_scheduler_safety_valve

Required

false

Impala Daemon HBase Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into hbase-site.xml for this role only.

Related Name**Default Value****API Name**

impalad_hbase_conf_safety_valve

Required

false

Result Cache Maximum Size

Description

Maximum number of query results a client may request to be cached on a per-query basis to support restarting fetches. This option guards against unreasonably large result caches requested by clients. Requests exceeding this maximum will be rejected.

Related Name

max_result_cache_size

Default Value

100000

API Name

impalad_result_cache_max_size

Required

false

Impala Daemon Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

IMPALAD_role_env_safety_valve

Required

false

Llama Maximum Request Attempts

Description

Maximum number of times a request to reserve, expand, or release resources is attempted until the request is cancelled.

Related Name

llama_max_request_attempts

Default Value

5

API Name

llama_max_request_attempts

Required

false

Llama Registration Timeout Seconds

Description

Maximum number of seconds that Impala attempts to register or re-register with Llama. If registration is unsuccessful, Impala cancels the action with an error, which could result in an impalad startup failure or a cancelled query. A setting of -1 seconds means try indefinitely.

Related Name

llama_registration_timeout_secs

Default Value

30 second(s)

API Name

llama_registration_timeout_secs

Required

false

Llama Registration Wait Seconds

Description

Number of seconds to wait between attempts during Llama registration.

Related Name

llama_registration_wait_secs

Default Value

3 second(s)

API Name

llama_registration_wait_secs

Required

false

Impala Daemon Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Impala Daemon Max Breakpad Dump Files

Description

Maximum number of Breakpad dump files stored by Impala Daemon Role.

Related Name

max_minidumps

Default Value

9

API Name

max_minidumps

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Impala Daemon Breakpad Dump Directory

Description

Directory for storing Impala Daemon Breakpad dumps.

Related Name

minidump_path

Default Value

/var/log/impala-minidumps

API Name

minidump_path

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

true

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Impala Daemon Audit Log Directory****Description**

The directory in which Impala daemon audit event log files are written. If "Impala Audit Event Generation" property is enabled, Impala will generate its audit logs in this directory.

Related Name

audit_event_log_dir

Default Value

/var/log/impalad/audit

API Name

audit_event_log_dir

Required

true

Enable Impala Audit Event Generation**Description**

Enables audit event generation by Impala daemons. The audit log file will be placed in the directory specified by 'Impala Daemon Audit Log Directory' parameter.

Related Name

enable_audit_event_log

Default Value

	false
API Name	enable_audit_event_log
Required	false

Enable Impala Lineage Generation

Description	Enables lineage generation by Impala daemons. The lineage log file is placed in the directory specified by the 'Impala Daemon Lineage Log Directory' parameter.
Related Name	enable_lineage_log
Default Value	true
API Name	enable_lineage_log
Required	false

Impala Daemon Lineage Log Directory

Description	The directory in which Impala daemon lineage log files are written. If "Impala Lineage Generation" property is enabled, Impala generates its lineage logs in this directory.
Related Name	lineage_event_log_dir
Default Value	/var/log/impalad/lineage
API Name	lineage_event_log_dir
Required	true

Impala Daemon Log Directory

Description	Directory where Impala Daemon will place its log files.
Related Name	log_dir
Default Value	/var/log/impalad
API Name	log_dir
Required	false

Impala Daemon Logging Threshold

Description

The minimum log level for Impala Daemon logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Impala Daemon Verbose Log Level

Description

Verbose logging level for the GLog logger. These messages are always logged at 'INFO' log level, so this setting has no effect if Logging Threshold is set to 'WARN' or above.

Related Name

GLOG_v

Default Value

1

API Name

log_verbose_level

Required

false

Impala Daemon Log Buffer Level

Description

Buffer log messages logged at this level or lower (-1 means don't buffer; 0 means buffer INFO only; 1 means buffer WARNING only, ...)

Related Name

logbuflevel

Default Value

0

API Name

logbuflevel

Required

false

Impala Daemon Maximum Audit Log File Size

Description

The maximum size (in queries) of the Impala Daemon audit event log file before a new one is created.

Related Name

max_audit_event_log_file_size

Default Value

5000 line(s)

API Name

max_audit_event_log_file_size

Required

false

Impala Daemon Maximum Lineage Log File Size**Description**

The maximum size (in entries) of the Impala daemon lineage log file before a new one is created.

Related Name

max_lineage_log_file_size

Default Value

5000 line(s)

API Name

max_lineage_log_file_size

Required

false

Impala Maximum Log Files**Description**

The number of log files that are kept for each severity level before all older log files are removed. The number has to be greater than 1 to keep at least the current log file open. If set to 0, all log files are retained and log rotation is effectively disabled.

Related Name

max_log_files

Default Value

10

API Name

max_log_files

Required

false

Impala Daemon Max Log Size**Description**

The maximum size, in megabytes, per log file for Impala Daemon logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Query Monitoring Timeout

Description

The timeout used by the Cloudera Manager Agent's query monitor when communicating with the Impala Daemon web server, specified in seconds.

Related Name**Default Value**

15.0 second(s)

API Name

executing_queries_timeout_seconds

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Query Monitoring Failures Thresholds**Description**

The health test thresholds for failures encountered when monitoring queries within a recent period specified by the impala_query_monitoring_failure_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

impala_query_monitoring_failure_thresholds

Required

false

Monitoring Period For Query Monitoring Failures**Description**

The period to review when computing query monitoring failures.

Related Name**Default Value**

5 minute(s)

API Name

impala_query_monitoring_failure_window

Required

false

Impala Daemon Query Collection Status Health Check**Description**

Enables the health check that determines if query collection for the Impala Daemon is successful.

Related Name

Default Value

true

API Name

impala_query_monitoring_status_check_enabled

Required

false

Impala Daemon Connectivity Health Test

Description

Enables the health test that verifies the Impala Daemon is connected to the StateStore.

Related Name

Default Value

true

API Name

impalad_connectivity_health_enabled

Required

false

Impala Daemon Connectivity Tolerance at Startup

Description

The amount of time to wait for the Impala Daemon to fully start up and connect to the StateStore before enforcing the connectivity check.

Related Name

Default Value

3 minute(s)

API Name

impalad_connectivity_tolerance

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

impalad_fd_thresholds

Required

false

Impala Daemon Concurrent Client Connections Monitoring Percentage Thresholds

Description

The health check thresholds for monitoring of the number of concurrent client connections to Impala Daemon. Specified as a percentage of the maximum client connections parameter.

Related Name**Default Value**

Warning: 80.0 %, Critical: 95.0 %

API Name

impalad_frontend_connections_thresholds

Required

false

Impala Daemon Host Health Test**Description**

When computing the overall Impala Daemon health, consider the host's health.

Related Name**Default Value**

true

API Name

impalad_host_health_enabled

Required

false

Pause Duration Thresholds**Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

impalad_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

impalad_pause_duration_window

Required

false

Impala Daemon Ready Status Health Check

Description

Enables the health check that determines if the Impala daemon is ready to process queries.

Related Name**Default Value**

true

API Name

impalad_ready_status_check_enabled

Required

false

Impala Daemon Ready Status Startup Tolerance

Description

The amount of time at Impala Daemon startup allowed for the Impala Daemon to start accepting new queries for processing.

Related Name**Default Value**

3 minute(s)

API Name

impalad_ready_status_check_startup_tolerance

Required

false

Impala Daemon Process Health Test

Description

Enables the health test that the Impala Daemon's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

impalad_scm_health_enabled

Required

false

Impala Daemon Scratch Directories Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's Impala Daemon Scratch Directories.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

impalad_scratch_directories_free_space_absolute_thresholds

Required

false

Impala Daemon Scratch Directories Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's Impala Daemon Scratch Directories. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Impala Daemon Scratch Directories Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

impalad_scratch_directories_free_space_percentage_thresholds

Required

false

Web Metric Collection**Description**

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

impalad_web_metric_collection_enabled

Required

false

Web Metric Collection Duration**Description**

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

impalad_web_metric_collection_thresholds

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds

Description

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures

Description

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

`mgmt_navigator_failure_window`

Required

false

Navigator Audit Pipeline Health Check

Description

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

`mgmt.navigator.status.check.enabled`

Default Value

true

API Name

`mgmt_navigator_status_check_enabled`

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can
run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a
Prometheus like storage.

Related Name

Default Value

true

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

true

API Name

otelcol_should_collect_rtm_logs

Required

true

Resident Set Size Thresholds

Description

The health test thresholds on the resident size of the process.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_resident_set_size_thresholds

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

`common.process.swap_memory_rate_window`**Default Value**

5 minute(s)

API Name`process_swap_memory_rate_window`**Required**

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: Any, Critical: Any

API Name`process_swap_memory_thresholds`**Required**

false

Query Monitoring Full Sync Period**Description**

The full sync period of the Impala query monitor in the Cloudera Manager Agent, specified in minutes. When a full sync is happening, all query profiles are sent over regardless of having been updated or not. If set to zero, a full sync is performed at each polling period.

Related Name**Default Value**

3.0 minute(s)

API Name`query_monitoring_full_sync_period_minutes`**Required**

false

Query Monitoring Period**Description**

The polling period of the Impala query monitor in the Cloudera Manager Agent, specified in seconds. If set to zero, query monitoring is disabled.

Related Name**Default Value**

120.0 second(s)

API Name`query_monitoring_period_seconds`**Required**

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Impala Daemon Default Query Options**Description**

A list of key-value pairs of additional query options to pass to the Impala Daemon command line, separated by ','.

Related Name

default_query_options

Default Value**API Name**

default_query_options

Required

false

Default Table Format**Description**

Whether tables should be created as ACID insert-only by default. Does not apply to external tables.

Related Name

default_transactional_type

Default Value

insert_only

API Name

default_transactional_type

Required

true

Impala Graceful Shutdown Deadline**Description**

Deadline (in seconds) for the graceful shutdown process of Impala Daemons. Once this deadline is reached, the daemon shuts down regardless of any running queries. A value of 0 means immediate shutdown.

Related Name**Default Value**

1 minute(s)

API Name

impala_graceful_shutdown_deadline

Required

false

Impala Daemons Load Balancer**Description**

Address of the load balancer used for Impala daemons. Should be specified in host:port format, where the port corresponds to the Beeswax protocol. If this is specified and Kerberos is enabled, Cloudera Manager adds a principal for 'impala/*load_balancer_host*@*realm*' to the keytab for all Impala daemons.

Related Name**Default Value****API Name**

impalad_load_balancer

Required

false

Maximum Cached File Handles**Description**

Maximum number of cached HDFS file handles. Caching HDFS file handles reduces the number of new file handles opened and thus reduces the load on the HDFS NameNode. Each cached file handle consumes a small amount of memory on the Impala Daemon. If set to zero, the file handle caching is disabled.

Related Name

max_cached_file_handles

Default Value

20000

API Name

impalad_max_cached_file_handles

Required

false

Impala Daemon Specialization**Description**

Configures Impala daemons to only execute queries or perform query coordination. When this setting is in use, daemons specializing in both tasks must exist.

Related Name**Default Value**

NO_SPECIALIZATION

API Name

impalad_specialization

Required

false

Unused Cached File Handle Timeout**Description**

Maximum time, in seconds, that an unused HDFS file handle will remain in the HDFS file handle cache. When the underlying file for a cached file handle is deleted, the disk space may not be freed until the cached file handle is removed from the cache. Specifying this timeout allows the disk space of deleted files to be freed in a predictable period of time. If set to zero, unused cached HDFS file handles do not time out.

Related Name

unused_file_handle_timeout_sec

Default Value

21600

API Name

impalad_unused_file_handle_timeout_sec

Required

false

User-defined function (UDF) libraries are copied from HDFS into this local directory.

Related Name

local_library_dir

Default Value

/var/lib/impala/udfs

API Name

local_library_dir

Required

false

Impala Daemon Scratch Directories

Description

Directories where Impala Daemon will write data such as spilling information to disk to free up memory. This can potentially be large amounts of data.

Related Name

scratch_dirs

Default Value**API Name**

scratch_dirs

Required

false

Impala Shutdown Grace Period

Description

When the shutdown process is started for this daemon, it will wait for at least the startup grace period before shutting down. This gives time for updated cluster membership information to propagate to all coordinators and for fragment instances that were scheduled based on old cluster membership to start executing (and therefore be reflected in the metrics used to detect quiescence)

Related Name

shutdown_grace_period_s

Default Value

2 minute(s)

API Name

shutdown_grace_period_s

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Impala Daemon Backend Port

Description

Port on which thrift-based ImpalaInternalService is exported.

Related Name

	be_port
Default Value	22000
API Name	be_port
Required	false

Impala Daemon Beeswax Port

Description	Port on which Beeswax client requests are served by Impala Daemons.
Related Name	beeswax_port
Default Value	21000
API Name	beeswax_port
Required	false

Impala Daemon HiveServer2 HTTP Port

Description	Port on which HiveServer2 client requests are served by Impala Daemons via HTTP.
Related Name	hs2_http_port
Default Value	28000
API Name	hs2_http_port
Required	false

Impala Daemon HiveServer2 Port

Description	Port on which HiveServer2 client requests are served by Impala Daemons via the thrift binary protocol.
Related Name	hs2_port
Default Value	21050
API Name	hs2_port
Required	false

Impala Daemons Load Balancer Hiveserver2 Port

Description

The load balancer port corresponding to the Hiveserver2 protocol.

Related Name**Default Value**

0

API Name

impala_load_balancer_hs2_port

Required

false

Enable Impala Daemon Web Server

Description

Enable or disable the Impala Daemon web server. This web server contains useful information about Impala Daemon.

Related Name

enable_webserver

Default Value

true

API Name

impalad_enable_webserver

Required

false

Impala Daemon HTTP Server Port

Description

Port where Impala debug web server runs.

Related Name

webserver_port

Default Value

25000

API Name

impalad_webserver_port

Required

false

Impala Daemon KRPC Port

Description

Port on which KRPC-based ImpalaInternalService is exported.

Related Name

krpc_port

Default Value

27000

API Name

krpc_port

Required

false

Llama Callback Port

Description

Port where Llama notification callback should be started

Related Name

llama_callback_port

Default Value

0

API Name

llama_callback_port

Required

false

Second Statestore Host Name

Description

The hostname of the second statestore instance. Valid when statestore HA enabled.

Related Name

state_store_2_host

Default Value

API Name

state_store_2_host

Required

false

Second Statestore Port

Description

The port of statestore service running on the second statestore instance. Valid when statestore HA enabled.

Related Name

state_store_2_port

Default Value

24000

API Name

state_store_2_port

Required

false

Statestore Host Name

Description

The hostname of the statestore instance. When statestore HA is enabled, this stands for the first statestore instance.

Related Name

state_store_host

Default Value**API Name**

state_store_host

Required

false

Statestore Port**Description**

The port of statestore service running on the statestore instance. When statestore HA is enabled, this stands for the first statestore instance.

Related Name

state_store_port

Default Value

24000

API Name

state_store_port

Required

false

StateStoreSubscriber Service Port**Description**

Port where StateStoreSubscriberService is running.

Related Name

state_store_subscriber_port

Default Value

23000

API Name

state_store_subscriber_port

Required

false

Resource Management**Java Heap Size of Impala Daemon in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Impala Daemon JVM Heap

Default Value

4 GiB

API Name

impalad_embedded_jvm_heapsize

Required

false

Idle Query Timeout

Description

The time that a query may be idle (i.e. no processing work is done and no updates are received from the client) before it is cancelled. If 0, idle queries are never expired.

Related Name

idle_query_timeout

Default Value

0 second(s)

API Name

impalad_idle_query_timeout

Required

false

Idle Session Timeout

Description

The time that a session may be idle before it is closed (and all running queries cancelled) by Impala. If 0, idle sessions are never expired.

Related Name

idle_session_timeout

Default Value

0 second(s)

API Name

impalad_idle_session_timeout

Required

false

Impala Daemon Memory Limit

Description

Memory limit for Impala Daemon, enforced by the daemon itself. This limit does not include memory consumed by the daemon's embedded JVM. The Impala Daemon uses up to this amount of memory for query processing, cached data, network buffers, background operations, etc. If exceeded, queries running on the Impala Daemon will be killed until the Impala Daemon is under the memory limit.

Related Name

mem_limit

Default Value**API Name**

impalad_memory_limit

Required

false

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/

O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Disk Spill Encryption****Description**

Encrypt and verify the integrity of all data spilled to disk as part of a query. This feature is only supported for Impala 2.0 and higher and CDH 5.2 and higher (which includes Impala 2.0).

Related Name

disk_spill_encryption

Default Value

false

API Name

disk_spill_encryption

Required

false

LDAP Server CA Certificate**Description**

The location on disk of the certificate, in .pem format, used to confirm the authenticity of the LDAP server certificate. This is the Certificate Authority (CA) certificate, and it was used to sign the LDAP server certificate. If not set, all certificates are trusted, which means that an attacker could potentially intercept otherwise encrypted usernames and passwords.

Related Name

ldap_ca_certificate

Default Value**API Name**

impalad_ldap_ca_certificate

Required

false

JWKS Pull Timeout**Description**

The time in seconds to wait for the JWKS to be downloaded from the specified URL before timing out.

Related Name

jwks_pulling_timeout_s

Default Value

10 second(s)

API Name

jwks_pulling_timeout_s

Required

false

JWKS Update Frequency**Description**

The time in seconds to wait between re-downloading the JWKS from the specified URL.

Related Name

jwks_update_frequency_s

Default Value

10 second(s)

API Name

jwtks_update_frequency_s

Required

false

JWKS URL

Description

URL where the JSON Web Key Set (JWKS) can be downloaded for JWT verification.

Related Name

jwtks_url

Default Value

API Name

jwtks_url

Required

false

Verify JWKS Server Certificate

Description

Specifies if the TLS certificate of the JWKS server is verified when retrieving the JWKS from the specified JWKS URL. This should only be set to false for development / testing.

Related Name

jwtks_verify_server_certificate

Default Value

true

API Name

jwtks_verify_server_certificate

Required

false

JWT Allow Without TLS

Description

Determines if JWT authentication is allowed without TLS being enabled on connections to the Impala daemon.

Related Name

jwt_allow_without_tls

Default Value

false

API Name

jwt_allow_without_tls

Required

false

Username JWT Custom Claim

Description

JWT claim that contains the username to use when authenticating with Impala.

Related Name

jwt_custom_claim_username

Default Value

API Name

jwt_custom_claim_username

Required

false

JWT Token Authentication

Description

Determines if JWT token authentication is enabled.

Related Name

jwt_token_auth

Default Value

false

API Name

jwt_token_auth

Required

false

JWT Validate Signature

Description

Determines if the signatures on incoming JWTs are validated against the JWKS.

Related Name

jwt_validate_signature

Default Value

true

API Name

jwt_validate_signature

Required

false

Impala Daemon Webserver TLS/SSL Server Certificate File (PEM Format)

Description

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Impala Daemon Webserver is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_certificate_file

Default Value

API Name

webserver_certificate_file

Required

false

Impala Daemon Web Server User Password

Description

Password for Impala Daemon webserver authentication.

Related Name

webserver_htpassword_password

Default Value**API Name**

webserver_htpassword_password

Required

false

Impala Daemon Web Server Username

Description

Username for Impala Daemon webserver authentication.

Related Name

webserver_htpassword_user

Default Value**API Name**

webserver_htpassword_user

Required

false

Impala Daemon Webserver TLS/SSL Server Private Key File (PEM Format)

Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Impala Daemon Webserver is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_private_key_file

Default Value**API Name**

webserver_private_key_file

Required

false

Impala Daemon Webserver TLS/SSL Private Key Password

Description

The password for the private key in the Impala Daemon Webserver TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

webserver_private_key_password_cmd

Default Value**API Name**

webserver_private_key_password_cmd

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Parameter Validation: Impala Daemon Audit Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Audit Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_audit_event_log_dir

Required

true

Suppress Parameter Validation: Impala Daemon Backend Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Backend Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_be_port

Required

true

Suppress Parameter Validation: Impala Daemon Beeswax Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Beeswax Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_beeswax_port

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Impala Daemon Core Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Core Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_core_dump_dir

Required

true

Suppress Parameter Validation: Impala Daemon Data Cache Directories**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Data Cache Directories parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_datacache_dirs

Required

true

Suppress Configuration Validator: Impala Daemon Default Memory Limit Validator**Description**

Whether to suppress configuration warnings produced by the Impala Daemon Default Memory Limit Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_default_impalad_memory_limit_validator

Required

true

Suppress Parameter Validation: Impala Daemon Default Query Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Default Query Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_default_query_options

Required

true

Suppress Parameter Validation: Impala Daemon HiveServer2 HTTP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon HiveServer2 HTTP Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_http_port

Required

true

Suppress Parameter Validation: Impala Daemon HiveServer2 Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon HiveServer2 Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hs2_port

Required

true

Suppress Configuration Validator: Impala Audit Enabled Validator**Description**

Whether to suppress configuration warnings produced by the Impala Audit Enabled Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_impala_audit_enabled_validator

Required

true

Suppress Parameter Validation: Impala Daemon HDFS Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon HDFS Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_impala_hdfs_site_conf_safety_valve

Required

true

Suppress Parameter Validation: Impala Daemon Hive Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Hive Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_impala_hive_conf_safety_valve

Required

true

Suppress Configuration Validator: Impala Lineage Enabled Validator

Description

Whether to suppress configuration warnings produced by the Impala Lineage Enabled Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_impala_lineage_enabled_validator

Required

true

Suppress Parameter Validation: Impala Daemon Llama Site Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Llama Site Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_impala_llama_site_conf_safety_valve

Required

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Impala Daemon Scratch Directories**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Scratch Directories parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_scratch_dirs

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Second Statestore Host Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Second Statestore Host Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_state_store_2_host

Required

true

Suppress Parameter Validation: Statestore Host Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Statestore Host Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_state_store_host

Required

true

Suppress Parameter Validation: StateStoreSubscriber Service Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the StateStoreSubscriber Service Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_state_store_subscriber_port

Required

true

Suppress Configuration Validator: Impala Daemon Unlimited Memory Limit Validator**Description**

Whether to suppress configuration warnings produced by the Impala Daemon Unlimited Memory Limit Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_unlimited_impalad_memory_limit_validator

Required

true

Suppress Parameter Validation: Impala Daemon Webserver TLS/SSL Server Certificate File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Webserver TLS/SSL Server Certificate File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_certificate_file

Required

true

Suppress Parameter Validation: Impala Daemon Web Server User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Web Server User Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_webserver_htpassword_password

Required

true

Suppress Parameter Validation: Impala Daemon Web Server Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Web Server Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_webserver_htpassword_user

Required

true

Suppress Parameter Validation: Impala Daemon Webserver TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Webserver TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_webserver_private_key_file

Required

true

Suppress Parameter Validation: Impala Daemon Webserver TLS/SSL Private Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Daemon Webserver TLS/SSL Private Key Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_webserver_private_key_password_cmd

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_audit_health

Required

true

Suppress Health Test: StateStore Connectivity**Description**

Whether to suppress the results of the StateStore Connectivity health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_connectivity

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_file_descriptor

Required

true

Suppress Health Test: Impala Concurrent Client Connections

Description

Whether to suppress the results of the Impala Concurrent Client Connections health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_impalad_frontend_connections

Required

true

Suppress Health Test: Heap Dump Directory Free Space

Description

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_impalad_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_impalad_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_log_directory_free_space

Required

true

Suppress Health Test: Resident Set Size**Description**

Whether to suppress the results of the Resident Set Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_memory_rss_health

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_otelcol_health

Required

true

Suppress Health Test: Pause Duration**Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_pause_duration

Required

true

Suppress Health Test: Query Monitoring Status Check

Description

Whether to suppress the results of the Query Monitoring Status Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_impalad_query_monitoring_status

Required

true

Suppress Health Test: Ranger Plugin Hdfs Spool Directory Size

Description

Whether to suppress the results of the Ranger Plugin Hdfs Spool Directory Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_impalad_ranger_plugin_hdfs_spool_directory_size_health

Required

true

Suppress Health Test: Ranger Plugin Solr Spool Directory Size

Description

Whether to suppress the results of the Ranger Plugin Solr Spool Directory Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_impalad_ranger_plugin_solr_spool_directory_size_health

Required

true

Suppress Health Test: Impala Daemon Ready Check

Description

Whether to suppress the results of the Impala Daemon Ready Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_ready_status

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_scm_health

Required

true

Suppress Health Test: Impala Daemon Scratch Directories Free Space**Description**

Whether to suppress the results of the Impala Daemon Scratch Directories Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_scratch_directories_free_space

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_unexpected_exits

Required

true

Suppress Health Test: Web Server Status

Description

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_impalad_web_metric_collection

Required

true

Impala StateStore

Advanced

StateStore Core Dump Directory

Description

Directory where a StateStore core dump is placed.

Related Name

core_dump_dir

Default Value

/var/log/statestore

API Name

core_dump_dir

Required

false

Statestore Max Breakpad Dump Files

Description

Maximum number of Breakpad dump files stored by Statestore Role.

Related Name

max_minidumps

Default Value

9

API Name

max_minidumps

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Statestore Breakpad Dump Directory

Description

Directory for storing Statestore Breakpad dumps.

Related Name

minidump_path

Default Value`/var/log/impala-minidumps`**API Name**`minidump_path`**Required**`false`**Automatically Restart Process****Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**`true`**API Name**`process_auto_restart`**Required**`true`**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**`true`**API Name**`process_should_monitor`**Required**`true`**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**`3`**API Name**`process_start_retries`**Required**`false`

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Statestore Command Line Argument Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be added (verbatim) to StateStore command line flags.

Related Name**Default Value****API Name**

statestore_cmd_args_safety_valve

Required

false

Impala StateStore Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

STATESTORE_role_env_safety_valve

Required

false

Logs

StateStore Log Directory

Description

Directory where StateStore will place its log files.

Related Name

log_dir

Default Value

/var/log/statestore

API Name

log_dir

Required

false

Impala StateStore Logging Threshold

Description

The minimum log level for Impala StateStore logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

StateStore Verbose Log Level

Description

Verbose logging level for the GLog logger. These messages are always logged at 'INFO' log level, so this setting has no effect if Logging Threshold is set to 'WARN' or above.

Related Name

GLOG_v

Default Value

1

API Name

log_verbose_level

Required

false

StateStore Log Buffer Level

Description

Buffer log messages logged at this level or lower (-1 means don't buffer; 0 means buffer INFO only; 1 means buffer WARNING only, ...)

Related Name

logbuflevel

Default Value

0

API Name

logbuflevel

Required

false

StateStore Maximum Log Files

Description

The number of log files that are kept for each severity level before all older log files are removed. The number has to be greater than 1 to keep at least the current log file open. If set to 0, all log files are retained and log rotation is effectively disabled.

Related Name

max_log_files

Default Value

10

API Name

max_log_files

Required

false

Impala StateStore Max Log Size**Description**

The maximum size, in megabytes, per log file for Impala StateStore logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds

Description

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the `mgmt_navigator_failure_window` configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

`mgmt.navigator.failure.thresholds`

Default Value

Warning: Never, Critical: Any

API Name

`mgmt_navigator_failure_thresholds`

Required

false

Monitoring Period For Audit Failures

Description

The period to review when checking if audits are blocked and not getting processed.

Related Name

`mgmt.navigator.failure.window`

Default Value

20 minute(s)

API Name

`mgmt_navigator_failure_window`

Required

false

Navigator Audit Pipeline Health Check

Description

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

`mgmt.navigator.status.check.enabled`

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

Resident Set Size Thresholds

Description

The health test thresholds on the resident size of the process.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_resident_set_size_thresholds

Required

false

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

all_admission_control_enabled

Required

false

Advanced

Impala Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties

Description

For advanced use only, a string to be inserted into atlas-application.properties. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

application_properties_safety_valve

Required

false

Enable Core Dump

Description

Used to generate a core dump to get more information about an Impala crash. Unless otherwise configured systemwide using /proc/sys/kernel/core_pattern, the dump is generated in the 'current directory' of the Impala process (usually a subdirectory of the /var/run/cloudera-scm-agent/process directory). The core file can be very large.

Related Name**Default Value**

false

API Name

enable_core_dump

Required

false

Maximum HBase Client Retries

Description

Maximum number of HBase client retries for Impala. Used as a maximum for all operations such as fetching of the root region from the root RegionServer, getting a cell's value, and starting a row update. Overrides configuration in the HBase service.

Related Name

`hbase.client.retries.number`**Default Value**

3

API Name`hbase_client_retries_number`**Required**

false

HBase RPC Timeout**Description**

Timeout in milliseconds for all HBase RPCs made by Impala. Overrides configuration in HBase service.

Related Name`hbase.rpc.timeout`**Default Value**

3 second(s)

API Name`hbase_rpc_timeout`**Required**

false

Impala Command Line Argument Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be added (verbatim) to Impala Daemon command-line flags. Applies to all roles in this service. Key names should begin with a hyphen(-). For example: `-log_filename=foo.log`

Related Name**Default Value****API Name**`impala_cmd_args_safety_valve`**Required**

false

Fair Scheduler Configuration Rules (Deployed)**Description**

A list specifying the rules to run to determine which Fair Scheduler configuration to use. The value specified here is deployed to all hosts. This configuration has effect only on Impala versions 1.3 or greater.

Related Name**Default Value**

[]

API Name`impala_schedule_rules`**Required**

false

Fair Scheduler Configuration Rules (Staged)

Description

A list specifying the rules to run to determine which Fair Scheduler configuration to use. Typically edited using the Rules configuration UI. This configuration only has effect on Impala versions 1.3 or greater.

Related Name**Default Value****API Name**

impala_schedule_rules_draft

Required

false

Fair Scheduler Allocations (Deployed)

Description

JSON representation of all the configurations that the Fair Scheduler can take across all schedules. This configuration has effect only on Impala versions 1.3 or greater.

Related Name**Default Value**

```
queues: [ name: root, queues: [ name: default, queues: [], schedulablePropertiesList:
[ scheduleName: default ] ], schedulablePropertiesList: [ scheduleName: default ] ], users: []
```

API Name

impala_scheduled_allocations

Required

false

Fair Scheduler Allocations (Staged)

Description

JSON representation of all the configurations that the Fair Scheduler can take across all schedules. Typically edited using the Pools configuration UI. This configuration only has effect on Impala versions 1.3 or greater.

Related Name**Default Value****API Name**

impala_scheduled_allocations_draft

Required

false

Impala Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

impala_service_env_safety_valve

Required

false

Impala Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml**Description**

For advanced use only, a string to be inserted into sentry-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

impalad_sentry_safety_valve

Required

false

Use HDFS Rules to Map Kerberos Principals to Short Names**Description**

If checked and Impala is using Kerberos, Impala will use the hadoop.security.auth_to_local rules from HDFS configuration. The relevant HDFS configuration is derived from Additional Rules to Map Kerberos Principals to Short Names.

Related Name

load_auth_to_local_rules

use_debug_build

Required

false

Cloudera Navigator

Enable Audit Collection

Description

Enable collection of audit events from the service's roles.

Related Name

navigator.audit.enabled

Default Value

true

API Name

navigator_audit_enabled

Required

false

Audit Event Filter

Description

Event filters are defined in a JSON object like the following: { "defaultAction" : ("accept", "discard"), "rules" : [{ "action" : ("accept", "discard"), "fields" : [{ "name" : "fieldName", "match" : "regex" }] }] } A filter has a default action and a list of rules, in order of precedence. Each rule defines an action, and a list of fields to match against the audit event. A rule is "accepted" if all the listed field entries match the audit event. At that point, the action declared by the rule is taken. If no rules match the event, the default action is taken. Actions default to "accept" if not defined in the JSON object. The following is the list of fields that can be filtered for Impala events:

- `userName`: the user performing the action.
- `ipAddress`: the IP from where the request originated.
- `operation`: the Impala operation being performed.
- `databaseName`: the databaseName for the operation.
- `tableName`: the tableName for the operation.

Related Name

`navigator.event.filter`

Default Value**API Name**

`navigator_audit_event_filter`

Required

false

Audit Queue Policy**Description**

Action to take when the audit event queue is full. Drop the event or shutdown the affected process.

Related Name

`navigator.batch.queue_policy`

Default Value

DROP

API Name

`navigator_audit_queue_policy`

Required

false

Audit Event Tracker**Description**

Configures the rules for event tracking and coalescing. This feature is used to define equivalency between different audit events. When events match, according to a set of configurable parameters, only one entry in the audit list is generated for all the matching events. Tracking works by keeping a reference to events when they first appear, and comparing other incoming events against the "tracked" events according to the rules defined here. Event trackers are defined in a JSON object like the following: { "timeToLive" : [integer], "fields" : [{ "type" : [string], "name" : [string] }] } Where:

- `timeToLive`: maximum amount of time an event will be tracked, in milliseconds. Must be provided. This defines how long, since it's first seen, an event will be tracked. A value of 0 disables tracking.
- `fields`: list of fields to compare when matching events against tracked events.

Each field has an evaluator type associated with it. The evaluator defines how the field data is to be compared. The following evaluators are available:

- value: uses the field value for comparison.
- userName: treats the field value as a userName, and ignores any host-specific data. This is useful for environment using Kerberos, so that only the principal name and realm are compared.

The following is the list of fields that can be used to compare Impala events:

- operation: the Impala operation being performed.
- username: the user performing the action.
- ipAddress: the IP from where the request originated.
- allowed: whether the operation was allowed or denied.
- databaseName: the database affected by the operation.
- tableName: the table affected by the operation.
- objectType: the type of object affected by the operation.
- privilege: the privilege associated with the operation.

Healthy Impala Llama ApplicationMaster Monitoring Thresholds**Description**

The health test thresholds of the overall Impala Llama ApplicationMaster health. The check returns "Concerning" health if the percentage of "Healthy" Impala Llama ApplicationMasters falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Impala Llama ApplicationMasters falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

impala_llamas_healthy_thresholds

Required

false

Impala Query Aggregates**Description**

Controls the aggregate metrics generated for Impala queries. The structure is a JSON list of the attributes to aggregate and the entities to aggregate to. For example, if the attributeName is 'hdfs_bytes_read' and the aggregationTargets is ['USER'] then the Service Monitor will create the metric 'impala_query_hdfs_bytes_read_rate' and, every ten minutes, will record the total hdfs bytes read for each user across all their Impala queries. By default it will also record the number of queries issues ('num_impala_queries_rate') for both users and pool. For a full list of the supported attributes see the Impala search page. Note that the valid aggregation targets are USER, YARN_POOL, and IMPALA (the service), and that these aggregate metrics can be viewed on both the reports and charts search pages.

Related Name**Default Value**

```
[ attributeName: hdfs_bytes_read, aggregationTargets: [USER, IMPALA_POOL_USER,
IMPALA_POOL, IMPALA, CLUSTER] , attributeName: hdfs_bytes_written, aggregationTargets:
[USER, IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName:
thread_cpu_time, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL,
IMPALA, CLUSTER] , attributeName: bytes_streamed, aggregationTargets: [USER,
IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName:
cm_cpu_milliseconds, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL,
IMPALA, CLUSTER] , attributeName: query_duration, aggregationTargets: [USER,
IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName:
admission_wait, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL,
IMPALA, CLUSTER] , attributeName: memory_accrual, aggregationTargets: [USER,
IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] , attributeName:
thread_cpu_time, aggregationTargets: [USER, IMPALA_POOL_USER, IMPALA_POOL,
IMPALA, CLUSTER] , attributeName: memory_spilled, aggregationTargets: [USER,
IMPALA_POOL_USER, IMPALA_POOL, IMPALA, CLUSTER] ]
```

API Name

`impala_query_aggregates`**Required**`false`**Healthy Impala StateStore Monitoring Thresholds****Description**

The health test thresholds of the overall Impala StateStore health. The check returns "Concerning" health if the percentage of "Healthy" Impala StateStores falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Impala StateStores falls below the critical threshold.

Related Name**Default Value**`Warning: 99.0 %, Critical: 1.0 %`**API Name**`impala_statestore_healthy_thresholds`**Required**`false`**Service Triggers****Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**`[]`**API Name**`service_triggers`**Required**`true`

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

false

YARN Service for Resource Management

Description

Name of YARN service to use for resource management integration between Impala and YARN. This service dependency and the existence of a Llama role is required for using said integration.

Related Name**Default Value****API Name**

yarn_service

Required

false

ZooKeeper Service for Llama HA

Description

Name of the ZooKeeper service to use for leader election and fencing when Llama is configured for high availability. This service dependency is required when more than one Llama role is present.

Related Name**Default Value****API Name**

zookeeper_service

Required

false

Performance

Enable HDFS Short-Circuit Read

Description

Enable HDFS short-circuit read. This allows a client colocated with the DataNode to read HDFS file blocks directly. This gives a performance boost to distributed clients that are aware of locality.

Related Name

dfs.client.read.shortcircuit

Default Value

true

API Name

dfs_client_read_shortcircuit

Required

false

Enable Iceberg manifest caching

Description

This option enables Iceberg manifest caching for Impala Coordinator and Catalog Server.

Related Name

iceberg_manifest_cache_enabled

Default Value

true

API Name

iceberg_manifest_cache_enabled

Required

false

StateStoreSubscriber Timeout

Description

Time in seconds before Impala Daemon or Catalog Server times out with the StateStore.

Related Name

statestore_subscriber_timeout_seconds

Default Value

30 second(s)

API Name

statestore_subscriber_timeout

Required

false

Security

Atlas Kafka Messages Spool Directory

Description

Spool directory for Atlas Kafka Messages.

Related Name

atlas.hook.spool.dir

Default Value

/var/log/impala/atlas-spool

API Name

atlas_message_spool_path

Required

false

Enable TLS/SSL for Impala

Description

Encrypt communication between clients and Impala using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

client_services_ssl_enabled

Default Value

false

API Name

client_services_ssl_enabled

Required

false

Enable LDAP Authentication**Description**

When checked, LDAP-based authentication for users is enabled.

Related Name

enable_ldap_auth

Default Value

false

API Name

enable_ldap_auth

Required

false

Enable LDAP TLS**Description**

If true, attempts to establish a TLS (Transport Layer Security) connection with an LDAP server that was specified with ldap://. Not required when using an LDAP URL with prefix ldaps://, because that already specifies TLS. This option is also known as "Use StartTLS".

Related Name

ldap_tls

Default Value

false

API Name

enable_ldap_tls

Required

false

Enable Kerberos Authentication for HTTP Web-Consoles**Description**

Enables Kerberos authentication for Hadoop HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled.

Related Name**Default Value**

false

API Name

`hadoop_secure_web_ui`**Required**`false`**Proxy Group Configuration****Description**

Specifies the set of authorized proxy groups (users who can impersonate other users belonging to the specified groups during authorization) and whom they are allowed to impersonate. Input is a semicolon-separated list of key=value pairs of authorized proxy users to the group(s) they can impersonate. These groups are specified as a comma separated list of groups, or '*' to indicate all groups. For example: joe=group1,group2;hue=*;admin=*. Only valid when Sentry is enabled.

Related Name`authorized_proxy_group_config`**Default Value****API Name**`impala_authorized_proxy_group_config`**Required**`false`**Proxy User Configuration****Description**

Specifies the set of authorized proxy users (users who can impersonate other users during authorization) and whom they are allowed to impersonate. Input is a semicolon-separated list of key=value pairs of authorized proxy users to the user(s) they can impersonate. These users are specified as a comma separated list of short usernames, or '*' to indicate all users. For example: joe=alice,bob;hue=*;admin=*. Only valid when Sentry is enabled.

Related Name`authorized_proxy_user_config`**Default Value**`hue=*;knox=*`**API Name**`impala_authorized_proxy_user_config`**Required**`false`**LDAP URL****Description**

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name`ldap_uri`**Default Value****API Name**

`impala_ldap_uri`**Required**`false`**impala TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that impala might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**`impala_truststore_file`**Required**`false`**impala TLS/SSL Trust Store Password****Description**

The password for the impala TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**`impala_truststore_password`**Required**`false`**Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**`impala`**API Name**`kerberos_princ_name`**Required**`true`**Kerberos Re-init Interval****Description**

Number of minutes between reestablishing our ticket with the Kerberos server.

Related Name`kerberos_reinit_interval`

Default Value

1 hour(s)

API Name

kerberos_reinit_interval

Required

false

LDAP BaseDN**Description**

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,*this parameter*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

Related Name

ldap_baseDN

Default Value**API Name**

ldap_baseDN

Required

false

LDAP Pattern**Description**

When set, this parameter allows arbitrary mapping from usernames into a Distinguished Name (DN). The string specified must have a placeholder named "#UID" inside it, and that #UID is replaced with the username. For example, you could mimic the behavior of LDAP BaseDN by specifying "uid=#UID,ou=People,dc=cloudera,dc=com". When the username of "mike" comes in, it replaces the #UID and the result is "uid=mike,ou=People,dc=cloudera,dc=com". This option should be used when more control over the DN is needed. This parameter is mutually exclusive with LDAP Domain and LDAP BaseDN.

Related Name

ldap_bind_pattern

Default Value**API Name**

ldap_bind_pattern

Required

false

Impala Client LDAP Password**Description**

The password for connecting to Impala when using LDAP authentication. This is used by Cloudera Manager to execute Impala APIs like cancelling a query.

Related Name

ldap_cm_password

Default Value**API Name**

ldap_cm_password

Required

false

Impala Client LDAP Username**Description**

The username for connecting to Impala when using LDAP authentication. This is used by Cloudera Manager to execute Impala APIs like cancelling a query.

Related Name

ldap_cm_user

Default Value**API Name**

ldap_cm_user

Required

false

Active Directory Domain**Description**

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name

ldap_domain

Default Value**API Name**

ldap_domain

Required

false

Ranger DFS Audit Path**Description**

The DFS path on which Ranger audits are written. The special placeholder '\${ranger_base_audit_url}' should be used as the prefix, in order to use the centralized location defined in the Ranger service.

Related Name

xasecure.audit.destination.hdfs.dir

Default Value

\$ranger_base_audit_url/impala

API Name

ranger_audit_hdfs_dir

Required

false

Ranger Audit DFS Spool Dir

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/impala/audit/hdfs/spool

API Name

ranger_audit_hdfs_spool_dir

Required

false

Ranger Audit Solr Spool Dir

Description

Spool directory for Ranger audits being written to Solr.

Related Name

Suppress Configuration Validator: Impala Llama Supported Validator

Description

Whether to suppress configuration warnings produced by the Impala Llama Supported Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_impala_llama_supported_validator

Required

true

Suppress Parameter Validation: Impala Query Aggregates

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Query Aggregates parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_impala_query_aggregates

Required

true

Suppress Parameter Validation: Impala Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_impala_service_env_safety_valve

Required

true

Suppress Configuration Validator: Impala Specialization Validator**Description**

Whether to suppress configuration warnings produced by the Impala Specialization Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_impala_specialization_validator

Required

true

Suppress Parameter Validation: impala TLS/SSL Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the impala TLS/SSL Trust Store File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_impala_truststore_file

Required

true

Suppress Parameter Validation: impala TLS/SSL Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the impala TLS/SSL Trust Store Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_impala_truststore_password

Required

true

Suppress Configuration Validator: Impala Daemon Count Validator**Description**

Whether to suppress configuration warnings produced by the Impala Daemon Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_impalad_count_validator

Required

true

Suppress Parameter Validation: Impala Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Advanced Configuration Snippet (Safety Valve) for sentry-site.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_impalad_sentry_safety_valve

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: LDAP BaseDN**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap_basedn

Required

true

Suppress Parameter Validation: LDAP Pattern**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP Pattern parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap_bind_pattern

Required

true

Suppress Parameter Validation: Impala Client LDAP Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Client LDAP Password parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ldap_cm_password

Required

true

Suppress Parameter Validation: Impala Client LDAP Username**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Client LDAP Username parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ldap_cm_user

Required

true

Suppress Parameter Validation: Active Directory Domain

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Directory Domain parameter.

Related Name

false

API Name

service_config_suppression_ldap_domain

Required

true

Suppress Parameter Validation: Audit Event Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Filter parameter.

Related Name

Default Value

false

API Name

service_config_suppression_navigator_audit_event_filter

Required

true

Suppress Parameter Validation: Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.client.properties parameter.

Related Name

Default Value

false

API Name

service_config_suppression_navigator_client_config_safety_valve

Required

true

Suppress Parameter Validation: Audit Event Tracker**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Audit Event Tracker parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_event_tracker

Required

true

Suppress Parameter Validation: Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Client Advanced Configuration Snippet (Safety Valve) for navigator.lineage.client.properties parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_navigator_lineage_client_config_safety_valve

Required

true

Suppress Configuration Validator: CA Certificate File Validator**Description**

Whether to suppress configuration warnings produced by the CA Certificate File Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_pem_ca_cert_recommended_for_ssl

Required

true

Suppress Parameter Validation: Impala System Group (except Llama)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala System Group (except Llama) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: Impala System User (except Llama)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala System User (except Llama) parameter.

Related Name

Default Value

false

Suppress Parameter Validation: Ranger Audit Solr Spool Dir

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Audit Solr Spool Dir parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Ranger Plugin URL Auth Filesystem Schemes

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin URL Auth Filesystem Schemes parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_plugin_urlauth_filesystem_schemes

Required

true

Suppress Parameter Validation: Ranger Policy Cache Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Policy Cache Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_policy_cache_dir

Required

true

Suppress Parameter Validation: Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-policymgr-ssl.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-policymgr-ssl.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_policymgr_ssl_safety_valve

Required

true

Suppress Parameter Validation: Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala Service Advanced Configuration Snippet (Safety Valve) for ranger-impala-security.xml parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ranger_security_safety_valve

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Configuration Validator: Short-Circuit Read Enabled Validator

Description

Whether to suppress configuration warnings produced by the Short-Circuit Read Enabled Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_short_circuit_read_validator

Required

true

Suppress Configuration Validator: Short-Circuit Read Permissions Validator

Description

Whether to suppress configuration warnings produced by the Short-Circuit Read Permissions Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_short_circuit_reads_data_directory_permissions_validator

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: The allowed set of OpenSSL ciphers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the The allowed set of OpenSSL ciphers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_cipher_list

Required

true

Suppress Parameter Validation: Impala TLS/SSL CA Certificate**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL CA Certificate parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_client_ca_certificate

Required

true

Suppress Parameter Validation: Impala TLS/SSL Server Private Key File (PEM Format)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl_private_key

Required

true

Suppress Parameter Validation: Impala TLS/SSL Private Key Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL Private Key Password parameter.

Related Name**Default Value**

	false
API Name	service_config_suppression_ssl_private_key_password
Required	true

Suppress Parameter Validation: Impala TLS/SSL Server Certificate File (PEM Format)

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Impala TLS/SSL Server Certificate File (PEM Format) parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_ssl_server_certificate
Required	true

Suppress Configuration Validator: Impala StateStore Count Validator

Description	Whether to suppress configuration warnings produced by the Impala StateStore Count Validator configuration validator.
Related Name	
Default Value	false
API Name	service_config_suppression_statestore_count_validator
Required	true

Suppress Health Test: Impala Catalog Server Health

Description	Whether to suppress the results of the Impala Catalog Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.
Related Name	
Default Value	false
API Name	service_health_suppression_impala_catalogserver_healthy
Required	true

Suppress Health Test: Impala Daemon Health

Description	
--------------------	--

Whether to suppress the results of the Impala Daemon Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_impala_impalads_healthy

Required

true

Suppress Health Test: Impala Llama ApplicationMaster Health**Description**

Whether to suppress the results of the Impala Llama ApplicationMaster Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_impala_llamas_healthy

Required

true

Suppress Health Test: Impala StateStore Health**Description**

Whether to suppress the results of the Impala StateStore Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_impala_statestore_healthy

Required

true

Java KeyStore KMS Properties in Cloudera Runtime 7.3.1

Role groups:

Key Management Server

Advanced

Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only. A string to be inserted into core-site.xml for this role only.

Related Name**Default Value****API Name**

core-site.xml_role_safety_valve

Required

false

Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-acls.xml

Description

For advanced use only. A string to be inserted into kms-acls.xml for this role only.

Related Name**Default Value****API Name**

kms-acls.xml_role_safety_valve

Required

false

Key Management Server Advanced Configuration Snippet (Safety Valve) for kms-site.xml

Description

For advanced use only. A string to be inserted into kms-site.xml for this role only.

Related Name**Default Value****API Name**

kms-site.xml_role_safety_valve

Required

false

Key Management Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KMS_role_env_safety_valve

Required

false

Key Management Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Key Management Server Advanced Configuration Snippet (Safety Valve) for ssl-server.xml

Description

For advanced use only. A string to be inserted into ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ssl-server.xml_role_safety_valve

Required

false

Logs

Key Management Server Log Directory

Description

The log directory for log files of the role Key Management Server.

Related Name

log.dir

Default Value

/var/log/hadoop-kms

API Name

log_dir

Required

false

Key Management Server Logging Threshold

Description

The minimum log level for Key Management Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Key Management Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Key Management Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Key Management Server Max Log Size

Description

The maximum size, in megabytes, per log file for Key Management Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name

Default Value

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name

Default Value

API Name

jmx_exporter_yaml

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

kms_fd_thresholds

Required

false

Key Management Server Host Health Test

Description

When computing the overall Key Management Server health, consider the host's health.

Related Name**Default Value**

true

API Name

kms_host_health_enabled

Required

false

Key Management Server Process Health Test

Description

Enables the health test that the Key Management Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

kms_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

exporters: prometheusremotewrite/\$ROLE_NAME: endpoint:
\$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/\$ROLE_NAME tls:

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

false

HTTP Proxy User Groups**Description**

Allows the HTTP superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.HTTP.groups

Default Value

*

API Name

hadoop_kms_proxyuser_HTTP_groups

Required

false

HTTP Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.HTTP.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_HTTP_hosts

Required

false

HttpFS Proxy User Groups

Description

Allows the httpfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.httpfs.groups

Default Value

*

API Name

hadoop_kms_proxyuser_httpfs_groups

Required

false

HttpFS Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the httpfs user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host_'.

Related Name

hadoop.kms.proxyuser.httpfs.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_httpfs_hosts

Required

false

Hue Proxy User Groups

Description

Allows the hue superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hue.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hue_groups

Required

false

Hue Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hue user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hue.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hue_hosts

Required

false

Mapred Proxy User Groups

Description

Allows the mapred superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.mapred.groups

Default Value

*

API Name

hadoop_kms_proxyuser_mapred_groups

Required

false

Mapred Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the mapred user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.mapred.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_mapred_hosts

Required

false

Oozie Proxy User Groups

Description

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

`hadoop.kms.proxyuser.oozie.groups`**Default Value**

*

API Name`hadoop_kms_proxyuser_oozie_groups`**Required**

false

Oozie Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name`hadoop.kms.proxyuser.oozie.hosts`**Default Value**

*

API Name`hadoop_kms_proxyuser_oozie_hosts`**Required**

false

YARN Proxy User Groups**Description**

Allows the yarn superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name`hadoop.kms.proxyuser.yarn.groups`**Default Value**

*

API Name`hadoop_kms_proxyuser_yarn_groups`**Required**

false

YARN Proxy User Hosts**Description**

Comma-delimited list of hosts where you want to allow the yarn user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name`hadoop.kms.proxyuser.yarn.hosts`**Default Value**

*

API Name

hadoop_kms_proxyuser_yarn_hosts

Required

false

JavaKeyStoreProvider Directory**Description**

Directory of the keystore file kms.keystore used by JavaKeyStoreProvider that backs the KMS.

Related Name

hadoop.kms.key.provider.uri

Default Value

/var/lib/kms

API Name

hadoop_security_key_provider_dir

Required

true

KMS Accept Count**Description**

The maximum queue length for incoming connection requests when all possible request processing threads are in use. Any requests received when the queue is full will be refused. This configuration is only supported in CDH 5.11 and up.

Related Name

hadoop.http.accept.queue.size

Default Value

500

API Name

kms_accept_count

Required

false

KMS Blacklist Users**Description**

A comma-separated list of users (no spaces) for whom to disallow access to key material. These users can still fetch key metadata and create encrypted encryption keys, but are unable to do any other KMS operations. Typically, HDFS superusers will be specified here.

Related Name

kms_blacklist_users

Default Value**API Name**

kms_blacklist_users

Required

false

KMS Heap Size

Description

Maximum heap size of the KMS.

Related Name

kms_heap_size

Default Value

1 GiB

API Name

kms_heap_size

Required

true

Additional Java Configuration Options for KMS

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name

kms_java_opts

Default Value**API Name**

kms_java_opts

Required

false

KMS Max Threads

Description

Maximum number of threads used to handle KMS requests.

Related Name

hadoop.http.max.threads

Default Value

250

API Name

kms_max_threads

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

`rlimit_fds`**Required**`false`**Ports and Addresses****KMS HTTP Port****Description**

Port used by clients to interact with the KMS.

Related Name`hadoop.kms.http.port`**Default Value**`16000`**API Name**`kms_http_port`**Required**`true`**Resource Management****Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**`500`**API Name**`rm_blkio_weight`**Required**`true`**Cgroup V1 CPU Shares****Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name`cpu.shares`**Default Value**`1024`**API Name**`rm_cpu_shares`

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

`rm_memory_soft_limit_v1`**Required**`true`**Cgroup V2 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.high`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v2`**Required**`true`**Security****Key Management Server TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Key Management Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`ssl.server.truststore.location`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Key Management Server TLS/SSL Trust Store Password****Description**

The password for the Key Management Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name`ssl.server.truststore.password`**Default Value****API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Key Management Server

Description

Encrypt communication between clients and Key Management Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hadoop.kms.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Key Management Server TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Key Management Server is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Key Management Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Key Management Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.server.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Key Management Server TLS/SSL Server Keystore File Password

Description

The password for the Key Management Server keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

`stacks_collection_enabled`**Required**`true`**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

Related Name`stacks_collection_frequency`**Default Value**`5.0 second(s)`**API Name**`stacks_collection_frequency`**Required**`false`**Stacks Collection Method****Description**

The method used to collect stacks. The `jstack` option involves periodically running the `jstack` command against the role's daemon process. The `servlet` method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the `servlet` method is selected, that HTTP endpoint is periodically scraped.

Related Name`stacks_collection_method`**Default Value**`jstack`**API Name**`stacks_collection_method`**Required**`false`**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_cdh_version_validator`**Required**`true`

Suppress Parameter Validation: Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Management Server Advanced Configuration Snippet (Safety Valve) for core-site.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_core-site.xml_role_safety_valve

Required

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kms_kms_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kms_kms_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kms_kms_otelcol_health

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kms_kms_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kms_kms_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kms_kms_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kms_kms_unexpected_exits

Monitoring**Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "I`

F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}}See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

false

Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Kafka Broker Advanced Configuration Snippet (Safety Valve) for oauth_jwks.json**Description**

For advanced use only. A string to be inserted into oauth_jwks.json for this role only.

Related Name**Default Value****API Name**

oauth_jwks.json_role_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Other

Enable Auditing to Atlas

Description

When enabled, Kafka will audit Kafka Topics, Producers and Consumers to Atlas

Related Name

	atlas.audit.enabled
Default Value	false
API Name	atlas.audit.enabled
Required	false

Authenticate Zookeeper Connection

Description	Enables authentication of SASL connections with zookeeper, if Kerberos authentication is enabled. It also allows a broker to set SASL ACL on zookeeper nodes, which locks these nodes down so that only a Kafka broker can modify it.
Related Name	authenticate.zookeeper.connection
Default Value	true
API Name	authenticate.zookeeper.connection
Required	false

Broker Heartbeat Interval

Description	The length of time in milliseconds between broker heartbeats. Used when running in KRaft mode.
Related Name	broker.heartbeat.interval.ms
Default Value	2 second(s)
API Name	broker.heartbeat.interval.ms
Required	false

Broker ID

Description	ID uniquely identifying each broker. Never set this property at the group level; it should always be overridden on instance level.
Related Name	broker.id
Default Value	
API Name	broker.id
Required	false

Broker Rack ID

Description

Specifies a user defined ID that represents the rack and/or data center that this broker is located in. For example: `Rack1`. If rack IDs are specified, the broker becomes rack aware. This means that partition replicas will be assigned among the specified racks in a fault tolerant manner. The rack IDs specified in this property override the IDs configured by the Enable Rack Awareness property. Specifying multiple levels of racks is possible. This is done by starting and separating the rack IDs with slashes. For example: `/DataCenter1/Rack1`. If you specify multi-level rack IDs, ensure that you also select the Enable multi-level rack awareness property. All Kafka brokers must have the same level of racks. Deployments that have differing rack levels per broker are not supported.

Related Name

broker.rack

Default Value

API Name

broker.rack

Required

false

Broker Session Timeout

Description

The length of time in milliseconds that a broker lease lasts if no heartbeats are made. Used when running in KRaft mode.

Related Name

broker.session.timeout.ms

Default Value

9 second(s)

API Name

broker.session.timeout.ms

Required

false

Additional Broker Java Options

API Name

broker_rolling_restart_check_kafka_topics_default_api_timeout_ms

Required

false

Cluster Health Guarantee During Rolling Restart

Description

Defines what type of checks are performed during a Rolling Restart on the restarted broker.. Each setting guarantees a different level of cluster health during Rolling Restarts. "none" no checks are performed. This setting does not guarantee any level of cluster health. "ready for requests" ensures that the restarted broker is accepting requests on its service port before restarting the next broker. "healthy partitions stay healthy" ensures that no partitions go into an under-min-isr state when a broker is stopped. This is achieved by waiting before each broker is stopped so that all other brokers can catch up with all replicas that are in an at-min-isr state. Additionally, ensures that the restarted broker is accepting requests on its service port before restarting the next broker. This setting ignores partitions which are already in an under-min-isr state. "all partitions stay healthy" ensures that no partitions are in an under-min-isr or at-min-isr state when a broker is stopped. This is achieved by waiting before each broker is stopped so that all other brokers can catch up with all replicas that are in an at-min-isr or under-min-isr state. Additionally, ensures that the restarted broker is accepting requests on its service port before the next broker is restarted. "all partitions fully replicated" ensures that all partitions are in a fully synchronized state when a broker is stopped. This is achieved by waiting before each broker is stopped so that all other brokers can catch up with all replicas that are out of sync. Additionally, ensures that the restarted broker is accepting requests on its service port before the next broker is restarted.

Password of User with read-only Access to the JMX agent

Description

Specifies the password of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.monitor.user.passwd

Default Value

API Name

jmx.monitor.user.passwd

Required

false

Enable TLS client authentication for JMX port

Description

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the Kafka JMX TLS/SSL Server Trust Store file or the global trust store.

Related Name

jmx.ssl.client.auth.enabled

Default Value

false

API Name

jmx.ssl.client.auth.enabled

Required

false

Enable TLS/SSL for Kafka JMX

Description

Encrypt communication between clients and Kafka JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

jmx.ssl.enabled

Default Value

false

API Name

jmx.ssl.enabled

Required

false

Enable HTTP Metric Report Basic Authentication

Description

Enable Basic Authentication for Kafka Metric HTTP Endpoint.

Related Name

kafka.http.metrics.authentication.enabled

Default Value

false

API Name

kafka.http.metrics.authentication.enabled

Required

false

HTTP Metric Report Host

Description

The host that the HTTP metric reporter binds to.

Related Name

kafka.http.metrics.host

Default Value

0.0.0.0

API Name

kafka.http.metrics.host

Required

false

HTTP Metric Report Password

Description

The password used for Basic Authentication.

Related Name

kafka.http.metrics.password

Default Value

API Name

kafka.http.metrics.password

Required

false

Http Metrics Report Exclude Filter

Description

Regex of MetricNames that will not be reported by the HttpMetricsReporter. Use upstream JMX-based MetricNames.

Related Name

http.metrics.exclude

Default Value

API Name

kafka.http.metrics.reporter.exclude.filter

Required

false

SSL Encryption For HTTP Metric Reporter

Description

Enable SSL Encryption for HTTP Metrics Endpoint. IMPORTANT: SSL encryption will be enabled if `ssl_enabled` config is enabled as well!

Related Name

`kafka.http.metrics.ssl.enabled`

Default Value

`false`

API Name

`kafka.http.metrics.ssl.enabled`

Required

`false`

HTTP Metric Report User

Description

The username used for Basic Authentication.

Related Name

`kafka.http.metrics.user`

Default Value**API Name**

`kafka.http.metrics.user`

Required

`false`

Kafka Broker Load Balancer Host

Description

The host of the load balancer that is used to balance connection bootstraps between multiple brokers. If you set this value, a listener will be automatically configured that can accept forwarded connections from a load balancer in a kerberized environment. You can change the default listener port by setting another value for `kafka_broker_load_balancer_listener_port`.

Related Name

`kafka_broker_load_balancer_host`

Default Value**API Name**

`kafka_broker_load_balancer_host`

Required

`false`

Data Directories

Description

A list of one or more directories in which Kafka data is stored.. Each new partition created is placed in the directory that currently has the least amount of partitions.. Each directory should be on its own separate drive.

Related Name

`log.dirs`

Default Value

`/var/local/kafka/data`

API Name

log.dirs

Required

true

Data Retention Size**Description**

The amount of data to retain in the log for each topic-partition. This is the limit per partition. Multiply it by the number of partitions to get the total amount of data retained for the topic. This property can take -1 as a value, which is interpreted as unlimited. If both log.retention.ms and log.retention.bytes are set, a segment is deleted when either limit is exceeded.

Related Name

log.retention.bytes

Default Value

-1 B

API Name

log.retention.bytes

Required

false

Data Retention Check Interval**Description**

The frequency, in milliseconds, that the log cleaner checks whether any log segment is eligible for deletion, per retention policies.

Related Name

log.retention.check.interval.ms

Default Value

5 minute(s)

API Name

log.retention.check.interval.ms

Required

false

Data Retention Time**Description**

The maximum time before a new log segment is rolled out. If both log.retention.ms and log.retention.bytes are set, a segment is deleted when either limit is exceeded. This property can take -1 as a value, which is interpreted as unlimited.

Related Name

log.retention.ms

Default Value

7 day(s)

API Name

log.retention.ms

Required

true

Data Log Roll Time

Description

The maximum time before a new log segment is rolled out.

Related Name

log.roll.ms

Default Value**API Name**

log.roll.ms

Required

false

Segment File Size

Description

The log for a topic partition is stored as a directory of segment files. This setting controls the size to which a segment file can grow before a new segment is rolled over in the log. This value has to be larger than message.max.bytes.

Related Name

log.segment.bytes

Default Value

1 GiB

API Name

log.segment.bytes

Required

false

Maximum Connections per IP Address

Description

Maximum number of connections allowed from each IP address.

Related Name

max.connections.per.ip

Default Value**API Name**

max.connections.per.ip

Required

false

Kafka Metadata Store Service

Description

Metadata service to use. Can be either Zookeeper or KRaft.

Related Name

metadata.store

Default Value

Zookeeper

API Name

`metadata.store`**Required**`false`**Number of I/O Threads****Description**

The number of I/O threads that the server uses for executing requests. You should have at least as many threads as you have disks.

Related Name`num.io.threads`**Default Value**`8`**API Name**`num.io.threads`**Required**`false`**Number of Network Threads****Description**

Number of threads that the server uses to handle incoming requests and outgoing responses.

Related Name`num.network.threads`**Default Value**`8`**API Name**`num.network.threads`**Required**`false`**Number of Recovery Threads per data directory****Description**

Number of threads per data directory that the server uses for log recovery during startup and log flushing during shutdown. Increasing this value may improve broker startup performance if you have a high number of segments. The total number of recovery threads (number of threads per data dir * number of data dirs) should not exceed the number of CPU cores. The default value is 1.

Related Name`num.recovery.threads.per.data.dir`**Default Value**`1`**API Name**`num.recovery.threads.per.data.dir`**Required**`false`**Number of Alter Log Dir Threads****Description**

Number of threads that the server uses to move data between log directories. The default value of this property is the same as the number of log directories.

Related Name

num.replica.alter.log.dirs.threads

Default Value**API Name**

num.replica.alter.log.dirs.threads

Required

false

Ranger Kafka Plugin Audit Hdfs Spool Directory Path**Description**

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/kafka/audit/hdfs/spool

API Name

ranger_audit_hdfs_spool_dir

Required

true

Ranger Kafka Plugin Audit Solr Spool Directory Path**Description**

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/kafka/audit/solr/spool

API Name

ranger_audit_solr_spool_dir

Required

true

Ranger Kafka Plugin Conf Path**Description**

Staging directory for Ranger Kafka Plugin Configuration. This should generally not be changed.

Related Name

ranger_kafka_plugin_conf_path

Default Value

/etc/ranger/kafka-plugin

API Name

ranger_kafka_plugin_conf_path

Required

true

Ranger Kafka Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.kafka.policy.cache.dir

Default Value

/var/lib/ranger/kafka/policy-cache

API Name

ranger_kafka_plugin_policy_cache_directory

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.kafka.trusted.proxy.ipaddress

Default Value**API Name**

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.kafka.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Inter Broker Protocol

Description

Protocol to be used for inter-broker communication. INFERRED uses the same protocol that is configured for external clients.

Related Name

security.inter.broker.protocol

Default Value

INFERRED

API Name

security.inter.broker.protocol

Required

false

Service Safe Stop timeout

Description

Maximum time allowed for safe-stopping the role. Safe-stop will ensure the service maintains cluster integrity and consistency.

Related Name

Default Value

17 minute(s)

API Name

service_safe_stop_timeout

Required

false

Socket receive buffer size.

Description

The SO_RCVBUF buffer of the socket server sockets. If the value is -1, the OS default will be used.

Related Name

socket.receive.buffer.bytes

Default Value

100 KiB

API Name

socket.receive.buffer.bytes

Required

false

Socket receive buffer size.

Description

The maximum number of bytes in a socket request

Related Name

socket.request.max.bytes

Default Value

100 MiB

API Name

socket.request.max.bytes

Required

false

Socket send buffer size.

Description

The SO_SNDBUF buffer of the socket server sockets. If the value is -1, the OS default will be used.

Related Name

socket.send.buffer.bytes

Default Value

100 KiB

API Name

socket.send.buffer.bytes

Required

false

SSL Client Authentication**Description**

Client authentication mode for SSL connections. This configuration has three valid values, "required", "requested" and "none". If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

Related Name

ssl.client.auth

Default Value

none

API Name

ssl.client.auth

Required

false

Enable Zookeeper ACL**Description**

Enables brokers to set SASL ACL on zookeeper nodes if `authenticate.zookeeper.connection` is enabled.

Related Name

zookeeper.set.acl

Default Value

true

API Name

zookeeper.set.acl

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value**

API Name

rlimit_fds

Required

false

Ports and Addresses

JMX Port

Description

Port for JMX.

Related Name

jmx_port

Default Value

9393

API Name

jmx_port

Required

false

HTTP Metric Report Port

Description

The port that the HTTP metric reporter listens on.

Related Name

kafka.http.metrics.port

Default Value

24042

API Name

kafka.http.metrics.port

Required

false

Kafka Broker Load Balancer Listener Port

Description

Port for the load balancer listener of the kafka brokers.

Related Name

kafka_broker_load_balancer_listener_port

Default Value

9094

API Name

kafka_broker_load_balancer_listener_port

Required

false

TCP Port

Description

Kafka broker port.

Related Name

port

Default Value

9092

API Name

port

Required

false

TLS/SSL Port

Description

Kafka broker secure port.

Related Name

ssl_port

Default Value

9093

API Name

ssl_port

Required

false

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares
Default Value
1024
API Name
rm_cpu_shares
Required
true

Cgroup V2 CPU Weight

Description
Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.
Related Name
cpu.weight
Default Value
100
API Name
rm_cpu_weight
Required
true

Custom Control Group Resources (overrides Cgroup settings)

Description
Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path' ***These settings override other cgroup settings.***
Related Name
custom.cgroups
Default Value
API Name
rm_custom_resources
Required
false

Cgroup V2 I/O Weight

Description
Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.
Related Name
io.weight
Default Value
100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v1`**Required**`true`**Cgroup V2 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.high`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v2`**Required**`true`**Security****Kafka Broker TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka Broker might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`ssl.truststore.location`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Kafka Broker TLS/SSL Trust Store Password****Description**

The password for the Kafka Broker TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Kafka Broker

Description

Encrypt communication between clients and Kafka Broker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Kafka Broker TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Kafka Broker is acting as a TLS/SSL server.

Related Name

ssl.key.password.generator

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Kafka Broker TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka Broker is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Kafka Broker TLS/SSL Server Keystore File Password

Description

The password for the Kafka Broker keystore file.

Related Name

ssl.keystore.password.generator

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_atlas-application.properties_role_safety_valve`**Required**`true`**Suppress Parameter Validation: Broker ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Broker ID parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_broker.id`**Required**`true`**Suppress Parameter Validation: Broker Rack ID****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Broker Rack ID parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_broker.rack`**Required**`true`**Suppress Parameter Validation: Additional Broker Java Options****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Broker Java Options parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_broker_java_opts`**Required**`true`**Suppress Parameter Validation: Java Heap Size of Broker****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Broker parameter.

Related Name

Default Value

false

API Name

role_config_suppression_broker_max_heap_size

Required

true

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.control.user

Required

true

Suppress Parameter Validation: Password of user with read-write access to the JMX agent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.control.user.passwd

Required

true

Suppress Parameter Validation: Name of User with read-only access to the JMX Agent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with read-only access to the JMX Agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.monitor.user

Required

true

Suppress Parameter Validation: Password of User with read-only Access to the JMX agent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with read-only Access to the JMX agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.monitor.user.passwd

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: JMX Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_port

Required

true

Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka-monitoring.properties_role_safety_valve

Required

true

Suppress Parameter Validation: HTTP Metric Report Host

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metric Report Host parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.http.metrics.host

Required

true

Suppress Parameter Validation: HTTP Metric Report Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metric Report Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.http.metrics.password

Required

true

Suppress Parameter Validation: HTTP Metric Report Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metric Report Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.http.metrics.port

Required

true

Suppress Parameter Validation: Http Metrics Report Exclude Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Http Metrics Report Exclude Filter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.http.metrics.reporter.exclude.filter

Required

true

Suppress Parameter Validation: HTTP Metric Report User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the HTTP Metric Report User parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.http.metrics.user

Required

true

Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Kafka Broker Load Balancer Host**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Load Balancer Host parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_broker_load_balancer_host

Required

true

Suppress Parameter Validation: Kafka Broker Load Balancer Listener Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Load Balancer Listener Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_broker_load_balancer_listener_port

Required

true

Suppress Parameter Validation: Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_broker_role_env_safety_valve

Required

true

Suppress Parameter Validation: Data Directories**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Data Directories parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log.dirs

Required

true

Suppress Parameter Validation: Segment File Size**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Segment File Size parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log.segment.bytes

Required

true

Suppress Parameter Validation: Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Kafka Broker Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Number of I/O Threads**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of I/O Threads parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_num.io.threads

Required

true

Suppress Parameter Validation: Number of Network Threads**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Network Threads parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_num.network.threads

Required

true

Suppress Parameter Validation: Number of Recovery Threads per data directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Recovery Threads per data directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_num.recovery.threads.per.data.dir

Required

true

Suppress Parameter Validation: Number of Alter Log Dir Threads**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Alter Log Dir Threads parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_num.replica.alter.log.dirs.threads

Required

true

Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for oauth_jwks.json

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for oauth_jwks.json parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oauth_jwks.json_role_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Kafka Connect

Advanced

Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

Description

For advanced use only. A string to be inserted into connect-distributed.properties for this role only.

Related Name**Default Value****API Name**

connect-distributed.properties_role_safety_valve

Required

false

Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KAFKA_CONNECT_role_env_safety_valve

Required

false

Kafka Connect Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name**Default Value****API Name**

`log4j_safety_valve`**Required**`false`**Enable auto refresh for metric configurations****Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**`false`**API Name**`metric_config_auto_refresh`**Required**`false`**Heap Dump Directory****Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name`oom_heap_dump_dir`**Default Value**`/tmp`**API Name**`oom_heap_dump_dir`**Required**`false`**Dump Heap When Out of Memory****Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**`false`**API Name**`oom_heap_dump_enabled`**Required**`true`**Kill When Out of Memory****Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-audit.xml

Description

For advanced use only. A string to be inserted into ranger-kafka-connect-audit.xml for this role only.

Related Name

Default Value

API Name

ranger-kafka-connect-audit.xml_role_safety_valve

Required

false

Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-policymgr-ssl.xml

Description

For advanced use only. A string to be inserted into ranger-kafka-connect-policymgr-ssl.xml for this role only.

Related Name

Default Value

API Name

ranger-kafka-connect-policymgr-ssl.xml_role_safety_valve

Required

Default Value

API Name

ranger-kafka-connect-security.xml_role_safety_valve

Required

false

Logs

Kafka Connect Log Directory

Description

The log directory for log files of the role Kafka Connect.

Related Name

kafka_connect.log4j.dir

Default Value

/var/log/kafka

API Name

log_dir

Required

false

Kafka Connect Logging Threshold

Description

The minimum log level for Kafka Connect logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Kafka Connect Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Kafka Connect logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Kafka Connect Max Log Size

Description

The maximum size, in megabytes, per log file for Kafka Connect logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name

Default Value

API Name

jmx_exporter_yaml

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

kafka_connect_fd_thresholds

Required

false

Kafka Connect Host Health Test

Description

When computing the overall Kafka Connect health, consider the host's health.

Related Name

Default Value

true

API Name

kafka_connect_host_health_enabled

Required

false

Kafka Connect Process Health Test

Description

Enables the health test that the Kafka Connect's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

kafka_connect_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

`otelcol_extensions`

Required

`false`

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value****API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify \$INFRA(cdp_request_signer_password) when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

\$INFRA(cdp_request_signer_url)

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_exporters

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_extensions

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_processors

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name

Default Value

API Name

otelcol_rtm_logs_receivers

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_service

Required

false

OpenTelemetry Collector Service Section

Description

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.

- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `{ "triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true" }` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Bootstrap Servers

Description

A comma-separated list of IP:port or hostname:port pairs of the brokers that Kafka Connect should connect to. If this config is left empty, Kafka Connect will connect to co-located Kafka Brokers.

Related Name

bootstrap.servers

Default Value**API Name**

bootstrap.servers

Required

false

Configuration Storage Topic Replication Factor**Description**

Replication factor used when creating the configuration storage topic.

Related Name

config.storage.replication.factor

Default Value

3

API Name

config.storage.replication.factor

Required

true

Configuration Storage Topic Name**Description**

The name of the Kafka topic which stores connector and task configurations.

Related Name

config.storage.topic

Default Value

connect-configs

API Name

config.storage.topic

Required

true

Retry Interval For Kafka Connect Rolling Restart Check**Description**

Specifies the interval (in seconds) at which the Kafka Connect Rolling Restart Check tests the Kafka Connect instance's availability.

Related Name

connect_rolling_restart_check_retry_interval_sec

Default Value

5 second(s)

API Name

connect_rolling_restart_check_retry_interval_sec

Required

false

Maximum Allowed Runtime For Kafka Connect Rolling Restart Check

Description

Specifies the maximum amount of time (in seconds) that a Kafka Connect Rolling Restart Check can take.

Related Name

connect_rolling_restart_check_time_limit_sec

Default Value

2 minute(s)

API Name

connect_rolling_restart_check_time_limit_sec

Required

false

Connector Kafka Client Configuration Override Policy

Description

The class name or alias of the ConnectorClientConfigOverridePolicy implementation. Defines what client configurations can be overridden by the connector. The default implementation is `None`. The other possible policies in the framework include `All` and `Principal`. 'None' forbids any kind of overrides for the Connect-managed consumers, producers or admins, 'Principal' allows overriding the sasl configurations, 'All' allows overriding any configurations. After changing this property, existing Connectors that violate the new policy will fail to start.

Related Name

connector.client.config.override.policy

Default Value

None

API Name

connector.client.config.override.policy

Required

false

Kafka Connect Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name**Default Value**

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

JDBC Driver Jars Path For Debezium

Description

Path to directory containing JDBC driver jars for Debezium connectors (required jar names: mysql-connector-java.jar, postgresql-connector-java.jar, oracle-connector-java.jar, xstreams.jar, mssql-connector-java.jar, db2-connector-java.jar).

Related Name

debezium.jdbc.jars.path

Default Value

/var/lib/kafka_connect_jdbc

API Name

debezium.jdbc.jars.path

Required

false

Non-Modifiable directory of Kafka Connect**Description**

Do not modify the default value: /etc/kafka_connect_ext

Related Name

etc.kafka_connect_ext.dir

Default Value

/etc/kafka_connect_ext

API Name

etc.kafka_connect_ext.dir

Required

false

Exactly-once support for source connectors in the cluster**Description**

Whether to enable exactly-once support for source connectors in the cluster by writing source records and their offsets in a Kafka transaction, and by proactively fencing out old task generations before bringing up new ones. Permitted values are 'disabled', 'preparing', and 'enabled'. In order to safely enable exactly-once support for source connectors, all workers in the cluster must first be updated to use the 'preparing' value for this property. Once this has been done, a second update of all of the workers in the cluster should be performed to change the value of this property to 'enabled'. Note that some source connectors may still not be able to provide exactly-once delivery guarantees even with this support enabled.

Related Name

exactly.once.source.support

Default Value

disabled

API Name

exactly.once.source.support

Required

false

Cluster Group Id**Description**

A unique name used to identify the Connect cluster group. The name specified here cannot conflict with consumer group IDs.

Related Name

group.id

Default Value

connect-cluster

API Name

group.id

Required

true

Include Connector Context In Logs**Description**

If this is enabled, the log layout includes connector-specific and task-specific information in the log message, where appropriate. This makes it easier to identify those log messages that apply to a specific connector.

Related Name

include.connector.context

Default Value

true

API Name

include.connector.context

Required

false

List Of Allowed Nexus Repository Urls**Description**

Defines a list of allowed nexus repository urls for Stateless Nifi connectors. The nexus.url set for the connector will be validated against this list.

Related Name

kafka.connect.allowed.nexus.urls

Default Value**API Name**

kafka.connect.allowed.nexus.urls

Required

false

Require Connectors To Override Kafka Client JAAS Configuration**Description**

Specifies whether Connector configurations should override the sasl.jaas.config property of the Kafka clients used by the Connector. If set to true, Connector configurations must override the client's sasl.jaas.config property. The override must also not match the Kerberos credentials of the Connect Worker. Additionally, if set to true, a 'UnionComposite' policy is installed under the 'connector.client.config.override.policy' configuration. If the existing policy configuration is 'None', it is upgraded to 'Principal'. Otherwise, the existing policy is also applied by the composite policy. After enabling this property, existing Connectors that violate the new policy will fail to start. Enabling this property will only take effect in secured clusters. Enabling this property will randomize the keytab file name and will make all \${cm-agent:keytab} references in the Connector configurations invalid. Enabling this policy will omit the producer.sasl.* and consumer.sasl.* prefixed authentication configs.

Related Name

kafka.connect.jaas.policy.restrict.connector.jaas

Default Value

true

API Name

kafka.connect.jaas.policy.restrict.connector.jaas

Required

false

Java Home Path Override

Description

Java Home Path Override for Kafka Connect.

Related Name

kafka.connect.jdk.home

Default Value

API Name

kafka.connect.jdk.home

Required

false

Enable Kafka Connect Secrets Storage

Description

Enables the Kafka Connect Secrets Storage feature. If this property is enabled, Kafka Connect Connector configurations will be able to store and reference sensitive information (secrets) in a secure manner.

Related Name

kafka.connect.secret.enabled

Default Value

true

API Name

kafka.connect.secret.enabled

Required

false

Kafka Connect Secrets Storage Global Key Local Location

Description

The local path where the global key is saved.

Related Name

kafka.connect.secret.global.key.location

Default Value

/var/local/kafka-connect/global-keys

API Name

kafka.connect.secret.global.key.location

Required

false

Kafka Connect Secrets Storage Global Password

Description

The global password for the Kafka Connect secrets storage. The default password is randomly generated. The password can be changed at any time to re-wrap the encryption key with the new global key.

Related Name

kafka.connect.secret.global.password

Default Value

API Name

kafka.connect.secret.global.password

Required

false

Kafka Connect Secrets Storage PBE Salt

Description

The salt value used during password based global key derivation. The default salt value is randomly generated. The salt can be changed at any time to re-wrap the encryption key with the new global key. Must be at least 20 characters long.

Related Name

kafka.connect.secret.pbe.salt

Default Value

SECRET_STORAGE_DEFAULT_PBE_SALT

API Name

kafka.connect.secret.pbe.salt

Required

false

Kafka Connect Secrets Storage Topic Name

Description

The name of the Kafka topic that the Kafka Connect Secrets Storage feature uses to store sensitive information (secrets). Changing the topic after the feature has been set up and enabled results in a creation of new topic which is empty. Existing secrets are not automatically migrated to the new topic.

Related Name

kafka.connect.secret.storage.topic

Default Value

connect-secrets

API Name

kafka.connect.secret.storage.topic

Required

false

Kafka Connect Secrets Storage Topic Minimum In-Sync Replicas

Description

The minimum in-sync replicas (ISR) of the topic specified in the 'Kafka Connect Secrets Storage Topic Name' property. Cloudera recommends that you set this property to 'replication factor divided by 2 (rounded down to the nearest whole number) + 1'. For example, if the replication factor of the secrets storage topic is 7, the recommended minimum ISR is 4. This configuration is applied when the topic is created. The topic configuration is not updated if you change this value after the topic was created.

Related Name

kafka.connect.secret.storage.topic.configs.min.insync.replicas

Default Value

2

API Name

kafka.connect.secret.storage.topic.configs.min.insync.replicas

Required

false

Kafka Connect Secrets Storage Topic Replication Factor**Description**

The replication factor of the topic specified in the 'Kafka Connect Secrets Storage Topic Name' property. This configuration is applied when the topic is created. The topic configuration is not updated if you change this value after the topic was created.

Related Name

kafka.connect.secret.storage.topic.replication.factor

Default Value

3

API Name

kafka.connect.secret.storage.topic.replication.factor

Required

false

Enable SPNEGO Authentication For Kafka Connect**Description**

If this is enabled, Kafka Connect Rest Server will use SPNEGO to authenticate clients. This requires Kerberos to be enabled.

Related Name

kafka.connect.spnego.enabled

Default Value

true

API Name

kafka.connect.spnego.enabled

Required

false

Kafka Connect SPNEGO Auth To Local Rules**Description**

SPNEGO name rules for Kafka Connect to transform full Kerberos principal names to usernames. If left empty, the cluster wide rules will be applied.

Related Name`kafka.connect.spnego.kerberos.principal.to.local.rules`**Default Value****API Name**`kafka.connect.spnego.kerberos.principal.to.local.rules`**Required**`false`**List Of Trusted Proxy Services****Description**

Defines a list of trusted proxy services for Kafka Connect SPNEGO authentication. These services are identified by their kerberos short principal name. If left empty, the Knox and the Streams Messaging Manager principal will be automatically added.

Related Name`kafka.connect.spnego.trusted.proxies`**Default Value****API Name**`kafka.connect.spnego.trusted.proxies`**Required**`false`**Kafka Connect Heap Java Options****Description**

Memory heap params while using Kafka Connect.

Related Name`KAFKA_HEAP_OPTS`**Default Value**`-Xms256M -Xmx2G`**API Name**`KAFKA_HEAP_OPTS`**Required**`false`**Key Converter****Description**

The key converter class used to convert between the Kafka Connect format and the serialized form that is written to Kafka. The key converter controls the format of the keys in the messages written to or read from Kafka. Since the key converter is independent of the connectors, it allows any connector to work with any serialization format. Examples of common formats include JSON and Avro.

Related Name`key.converter`**Default Value**`org.apache.kafka.connect.json.JsonConverter`**API Name**

key.converter

Required

true

Enable Key Converter Schema

Description

Enables the key converter to include schemas within each of the serialized keys.

Related Name

key.converter.schemas.enable

Default Value

true

API Name

key.converter.schemas.enable

Required

true

Jetty Metrics Password

Description

Password used for the authentication on HTTP(S) metrics reporter endpoint.

Related Name

metrics.jetty.server.auth.password

Default Value

API Name

metrics.jetty.server.auth.password

Required

false

Jetty Metrics User Name

Description

User name used for the authentication on HTTP(S) metrics reporter endpoint.

Related Name

metrics.jetty.server.auth.username

Default Value

API Name

metrics.jetty.server.auth.username

Required

false

Enable Basic Authentication for Metrics Reporter

Description

Enable HTTP basic authentication for Kafka Connect's metrics reporter HTTP(S) endpoint.

Related Name

metrics.jetty.server.authentication.enabled

Default Value

	false
API Name	metrics.jetty.server.authentication.enabled
Required	false

Offset Flush Interval

Description	The interval, in milliseconds, at which Kafka Connect attempts to commit task offsets.
Related Name	offset.flush.interval.ms
Default Value	1 minute(s)
API Name	offset.flush.interval.ms
Required	true

Offset Storage Topic Replication Factor

Description	Replication factor used when creating the offset storage topic.
Related Name	offset.storage.replication.factor
Default Value	3
API Name	offset.storage.replication.factor
Required	true

Offset Storage Topic Name

Description	The name of the Kafka topic which stores connector offsets. If this topic does not exist, Kafka Connect will attempt to create it. Alternatively, you can also choose to create the topic manually before starting Kafka Connect.
Related Name	offset.storage.topic
Default Value	connect-offsets
API Name	offset.storage.topic
Required	true

Plugin Path

Description

Path to directories immediately containing jars with plugins and their dependencies, uber-jars with plugins and their dependencies and classes of plugins and their dependencies.

Related Name

plugin.path

Default Value

/var/lib/kafka

API Name

plugin.path

Required

false

Ranger Kafka Connect Plugin Hdfs Audit Directory

Description

The DFS path on which Ranger audits are written.

Related Name

ranger_kafka_connect_plugin_hdfs_audit_directory

Default Value

\$ranger_base_audit_url/kafka

API Name

ranger_kafka_connect_plugin_hdfs_audit_directory

Required

false

Ranger Kafka Connect Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/kafka/audit/hdfs/spool

API Name

ranger_kafka_connect_plugin_hdfs_audit_spool_directory

Required

true

Ranger Kafka Connect Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/kafka/audit/solr/spool

API Name

ranger_kafka_connect_plugin_solr_audit_spool_directory

Required

true

Ranger Kafka Plugin Policy Cache Directory Path**Description**

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.kafka-connect.policy.cache.dir

Default Value

/var/lib/ranger/kafka-connect/policy-cache

API Name

ranger_plugin_kafka_connect_policy_cache_directory

Required

true

Ranger Kafka Connect Plugin Policy Rest Client Max Retry Attempts**Description**

Kafka Connect Ranger Plugin Rest client max retry attempts count.

Related Name

ranger.plugin.kafka-connect.policy.rest.client.max.retry.attempts

Default Value

12

API Name

ranger_plugin_kafka_connect_policy_rest_client_max_retry_attempts

Required

false

Ranger Kafka Connect Plugin Policy Rest Client Retry Interval Ms**Description**

Kafka Connect Ranger Plugin Rest client retry wait interval in milliseconds.

Related Name

ranger.plugin.kafka-connect.policy.rest.client.retry.interval.ms

Default Value

10 second(s)

API Name

ranger_plugin_kafka_connect_policy_rest_client_retry_interval_ms

Required

false

'Ranger service' name for the Kafka Connect service**Description**

Name of the 'Ranger service', that is used for authorization by this Kafka Connect service. If this parameter is set to the placeholder value '{{GENERATED_RANGER_SERVICE_NAME}}', a generated service name will be used, and if necessary, created. The generated service name will

refer to the name of the cluster and the name of this Kafka Connect service. The name can consist of alphanumeric and '_' characters.

Related Name

ranger.plugin.kafka-connect.service.name

Default Value

cm_kafka_connect

API Name

ranger_plugin_kafka_connect_service_name

Required

false

Ranger Plugin Trusted Proxy IP Address**Description**

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.kafka-connect.trusted.proxy.ipaddress

Default Value**API Name**

ranger_plugin_kafka_connect_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address**Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.kafka-connect.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_kafka_connect_use_x_forwarded_for_ipaddress

Required

false

Rest Extension Classes**Description**

Comma-separated names of ConnectRestExtension classes, loaded and called in the order specified. Typically used to add custom capability like logging, security, etc.

Related Name

rest.extension.classes

Default Value

com.cloudera.dim.kafka.metrics.JmxJsonMetricsRestExtension

API Name

rest.extension.classes

Required

true

Kafka Connect Rest Port**Description**

The port that the REST API listens on for connection requests. This port is used by Kafka Connect if TLS/SSL is disabled.

Related Name

rest.port

Default Value

28083

API Name

rest.port

Required

true

Secure Kafka Connect Rest Port**Description**

The secure port that the REST API listens on for connection requests. This port is used by Kafka Connect if TLS/SSL is enabled.

Related Name

secure.rest.port

Default Value

28085

API Name

secure.rest.port

Required

true

SSL Client Authentication**Description**

Client authentication mode for SSL connections. If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

Related Name

ssl.client.auth

Default Value

none

API Name

ssl.client.auth

Required

false

Status Storage Topic Replication Factor**Description**

Replication factor used when creating the offset storage topic.

Related Name

status.storage.replication.factor

Default Value

3

API Name

status.storage.replication.factor

Required

true

Status Storage Topic Name**Description**

The name of the Kafka topic which stores connector and task status.

Related Name

status.storage.topic

Default Value

connect-status

API Name

status.storage.topic

Required

true

Add Use Subject Credentials Only JVM Option With True Value**Description**

Enable -Djavax.security.auth.useSubjectCredsOnly=true JVM flag or leave it as cluster default (in this case, the flag will be not added to the JVM options).

Related Name

use.subject.creds.only

Default Value

true

API Name

use.subject.creds.only

Required

false

Value Converter**Description**

The value converter class used to convert between the Kafka Connect format and the serialized form that is written to Kafka. The value converter controls the format of the values in the messages written to or read from Kafka. Since the value converter is independent of the connectors, it allows any connector to work with any serialization format. Examples of common formats include JSON and Avro.

Related Name

value.converter

Default Value

org.apache.kafka.connect.json.JsonConverter

API Name

value.converter

Required

true

Enable Value Converter Schema

Description

Enables the value converter to include schemas within each of the serialized values.

Related Name

value.converter.schemas.enable

Default Value

true

API Name

value.converter.schemas.enable

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Jetty Metrics Port

Description

Jetty Metrics port to expose JMX Json.

Related Name

metrics.jetty.server.port

Default Value

28084

API Name

metrics.jetty.server.port

Required

true

Secure Jetty Metrics Port

Description

Secure Jetty Metrics port to expose JMX Json.

Related Name

metrics.jetty.server.secureport

Default Value

28087

API Name

metrics.jetty.server.secureport

Required

true

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

`memory.limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit_v1`**Required**`true`**Cgroup V2 Memory Hard Limit****Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.max`**Default Value**`-1 MiB`**API Name**`rm_memory_hard_limit_v2`**Required**`true`**Cgroup V1 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v1`**Required**`true`**Cgroup V2 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page

cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Kafka Connect TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka Connect might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Kafka Connect TLS/SSL Trust Store Password**Description**

The password for the Kafka Connect TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Kafka Connect**Description**

Encrypt communication between clients and Kafka Connect using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

	ssl_enabled
Default Value	false
API Name	ssl_enabled
Required	false

Kafka Connect TLS/SSL Server Keystore Key Password

Description	The password that protects the private key contained in the keystore used when Kafka Connect is acting as a TLS/SSL server.
Related Name	ssl.key.password.generator
Default Value	
API Name	ssl_server_keystore_keypassword
Required	false

Kafka Connect TLS/SSL Server Keystore File Location

Description	The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka Connect is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.
Related Name	ssl.keystore.location
Default Value	
API Name	ssl_server_keystore_location
Required	false

Kafka Connect TLS/SSL Server Keystore File Password

Description	The password for the Kafka Connect keystore file.
Related Name	ssl.keystore.password.generator
Default Value	
API Name	ssl_server_keystore_password
Required	false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

`stacks_collection_frequency`**Default Value**

5.0 second(s)

API Name`stacks_collection_frequency`**Required**

false

Stacks Collection Method**Description**

The method used to collect stacks. The `jstack` option involves periodically running the `jstack` command against the role's daemon process. The `servlet` method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the `servlet` method is selected, that HTTP endpoint is periodically scraped.

Related Name`stacks_collection_method`**Default Value**`jstack`**API Name**`stacks_collection_method`**Required**

false

Suppressions**Suppress Parameter Validation: Bootstrap Servers****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Bootstrap Servers parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_bootstrap.servers`**Required**

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Configuration Storage Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Configuration Storage Topic Replication Factor parameter.

Related Name

Default Value

false

API Name

role_config_suppression_config.storage.replication.factor

Required

true

Suppress Parameter Validation: Configuration Storage Topic Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Configuration Storage Topic Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_config.storage.topic

Required

true

Suppress Parameter Validation: Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_connect-distributed.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Connector Kafka Client Configuration Override Policy

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Connector Kafka Client Configuration Override Policy parameter.

Related Name

Default Value

false

API Name

role_config_suppression_connector.client.config.override.policy

Required

true

Suppress Parameter Validation: JDBC Driver Jars Path For Debezium

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JDBC Driver Jars Path For Debezium parameter.

Related Name

Default Value

false

API Name

role_config_suppression_debezium.jdbc.jars.path

Required

true

Suppress Parameter Validation: Non-Modifiable directory of Kafka Connect

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Non-Modifiable directory of Kafka Connect parameter.

Related Name

Default Value

false

API Name

role_config_suppression_etc.kafka_connect_ext.dir

Required

true

Suppress Parameter Validation: Cluster Group Id

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cluster Group Id parameter.

Related Name

Default Value

false

API Name

role_config_suppression_group.id

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: List Of Allowed Nexus Repository Urls

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the List Of Allowed Nexus Repository Urls parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.allowed.nexus.urls

Required

true

Suppress Parameter Validation: Java Home Path Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.jdk.home

Required

true

Suppress Parameter Validation: Kafka Connect Secrets Storage Global Key Local Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Secrets Storage Global Key Local Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.secret.global.key.location

Required

true

Suppress Parameter Validation: Kafka Connect Secrets Storage Global Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Secrets Storage Global Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.secret.global.password

Required

true

Suppress Parameter Validation: Kafka Connect Secrets Storage PBE Salt

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Secrets Storage PBE Salt parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.secret.pbe.salt

Required

true

Suppress Parameter Validation: Kafka Connect Secrets Storage Topic Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Secrets Storage Topic Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.secret.storage.topic

Required

true

Suppress Parameter Validation: Kafka Connect SPNEGO Auth To Local Rules

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect SPNEGO Auth To Local Rules parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.spnego.kerberos.principal.to.local.rules

Required

true

Suppress Parameter Validation: List Of Trusted Proxy Services**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the List Of Trusted Proxy Services parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.spnego.trusted.proxies

Required

true

Suppress Parameter Validation: Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_connect_role_env_safety_valve

Required

true

Suppress Parameter Validation: Kafka Connect Heap Java Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Heap Java Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_heap_opts

Required

true

Suppress Parameter Validation: Key Converter**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Converter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_key.converter

Required

true

Suppress Parameter Validation: Kafka Connect Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Kafka Connect Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Jetty Metrics Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Jetty Metrics Password parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_metrics.jetty.server.auth.password`**Required**

true

Suppress Parameter Validation: Jetty Metrics User Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Jetty Metrics User Name parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_metrics.jetty.server.auth.username`**Required**

true

Suppress Parameter Validation: Jetty Metrics Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Jetty Metrics Port parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_metrics.jetty.server.port`**Required**

true

Suppress Parameter Validation: Secure Jetty Metrics Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Jetty Metrics Port parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_metrics.jetty.server.secureport`**Required**

true

Suppress Parameter Validation: Offset Storage Topic Replication Factor**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Storage Topic Replication Factor parameter.

Related Name

Default Value

false

API Name

role_config_suppression_offset.storage.replication.factor

Required

true

Suppress Parameter Validation: Offset Storage Topic Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Storage Topic Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_offset.storage.topic

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name**Default Value**

	false
API Name	role_config_suppression_otelcol_rtm_logs_exporters
Required	true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_rtm_logs_extensions
Required	true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_rtm_logs_processors
Required	true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_rtm_logs_receivers
Required	true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Parameter Validation: Plugin Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Plugin Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_plugin.path

Required

true

Suppress Parameter Validation: Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-audit.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-audit.xml parameter.

Related Name

Default Value

	false
API Name	role_config_suppression_ranger-kafka-connect-audit.xml_role_safety_valve
Required	true

Suppress Parameter Validation: Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-policymgr-ssl.xml

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-policymgr-ssl.xml parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_ranger-kafka-connect-policymgr-ssl.xml_role_safety_valve
Required	true

Suppress Parameter Validation: Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-security.xml

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-security.xml parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_ranger-kafka-connect-security.xml_role_safety_valve
Required	true

Suppress Parameter Validation: Ranger Kafka Connect Plugin Hdfs Audit Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Connect Plugin Hdfs Audit Directory parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_ranger_kafka_connect_plugin_hdfs_audit_directory
Required	true

Suppress Parameter Validation: Ranger Kafka Connect Plugin Audit Hdfs Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Connect Plugin Audit Hdfs Spool Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_kafka_connect_plugin_hdfs_audit_spool_directory

Required

true

Suppress Parameter Validation: Ranger Kafka Connect Plugin Audit Solr Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Connect Plugin Audit Solr Spool Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_kafka_connect_plugin_solr_audit_spool_directory

Required

true

Suppress Parameter Validation: Ranger Kafka Plugin Policy Cache Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Policy Cache Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_plugin_kafka_connect_policy_cache_directory

Required

true

Suppress Parameter Validation: 'Ranger service' name for the Kafka Connect service**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the 'Ranger service' name for the Kafka Connect service parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_plugin_kafka_connect_service_name

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_plugin_kafka_connect_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Rest Extension Classes

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rest Extension Classes parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rest.extension.classes

Required

true

Suppress Parameter Validation: Kafka Connect Rest Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Rest Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rest.port

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Secure Kafka Connect Rest Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Kafka Connect Rest Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_secure.rest.port

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Server Keystore Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server Keystore Key Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Status Storage Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Status Storage Topic Replication Factor parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_status.storage.replication.factor

Required

true

Suppress Parameter Validation: Status Storage Topic Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Status Storage Topic Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_status.storage.topic

Required

true

Suppress Parameter Validation: Value Converter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Value Converter parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_value.converter

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_connect_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_connect_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_connect_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_connect_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health

Description

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_connect_otelcol_health

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_kafka_kafka_connect_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_unexpected_exits

Required

true

Kafka MirrorMaker

Advanced

Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

KAFKA_MIRROR_MAKER_role_env_safety_valve

Required

false

Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties

Description

For advanced use only. A string to be inserted into mirror_maker_consumers.properties for this role only.

Related Name

Default Value

API Name

mirror_maker_consumers.properties_role_safety_valve

Required

false

Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties

Description

For advanced use only. A string to be inserted into mirror_maker_producers.properties for this role only.

Related Name

Default Value

API Name

mirror_maker_producers.properties_role_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name**Default Value**

kafka

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

false

Logs

Kafka MirrorMaker Log Directory

Description

The log directory for log files of the role Kafka MirrorMaker.

Related Name

kafka_mirrormaker.log4j.dir

Default Value

/var/log/kafka

API Name

log_dir

Required

false

Kafka MirrorMaker Logging Threshold

Description

The minimum log level for Kafka MirrorMaker logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Kafka MirrorMaker Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Kafka MirrorMaker logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Kafka MirrorMaker Max Log Size

Description

The maximum size, in megabytes, per log file for Kafka MirrorMaker logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

kafka_mirror_maker_fd_thresholds

Required

false

Kafka MirrorMaker Host Health Test**Description**

When computing the overall Kafka MirrorMaker health, consider the host's health.

Related Name**Default Value**

true

API Name

kafka_mirror_maker_host_health_enabled

Required

false

Kafka MirrorMaker Process Health Test**Description**

Enables the health test that the Kafka MirrorMaker's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

`kafka_mirror_maker_scm_health_enabled`**Required**

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name`log_directory_free_space_absolute_thresholds`**Required**

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name`log_directory_free_space_percentage_thresholds`**Required**

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.

- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Other**Abort on Send Failure****Description**

Stop the entire mirror maker when a send failure occurs.

Related Name

abort.on.send.failure

Default Value

true

API Name

abort.on.send.failure

Required

false

Producer Batch Size**Description**

This configuration controls the batch size in bytes. The producer will attempt to batch records together into fewer requests whenever multiple records are being sent to the same partition. This helps performance on both the client and the server.

Related Name

batch.size

Default Value

16 KiB

API Name

batch.size

Required

false

Destination Broker List**Description**

Comma-separated list of IP:port (or hostname:port) pairs of brokers on destination cluster. This should be more than one, for high availability, but there's no need to list all brokers.

Related Name

bootstrap.servers

Default Value**API Name**

bootstrap.servers

Required

true

Producer Buffer Memory**Description**

The total bytes of memory the producer can use to buffer records waiting to be sent to the server.

Related Name

buffer.memory

Default Value

32 MiB

API Name

buffer.memory

Required

false

Producer Compression Type

Description

The compression type for all data generated by the producer.

Related Name

compression.type

Default Value

none

API Name

compression.type

Required

false

MirrorMaker Consumer Rebalance Listener

Description

A consumer rebalance listener of the ConsumerRebalanceListener type. Invoked when MirrorMaker's consumer rebalances.

Related Name

consumer.rebalance.listener

Default Value**API Name**

consumer.rebalance.listener

Required

false

MirrorMaker Consumer Rebalance Listener Arguments

Description

Arguments used by MirrorMaker consumer rebalance listener.

Related Name

Required

false

Destination Kafka Cluster's Security Protocol

Description

Protocol used for communication with destination Kafka cluster.

Related Name

destination.security.protocol

Default Value

PLAINTEXT

API Name

destination.security.protocol

Required

false

Destination Kafka Cluster's Client Auth

Description

Only required if destination Kafka cluster requires client authentication.

Related Name

destination.ssl.client.auth

Default Value

false

API Name

destination.ssl.client.auth

Required

false

Consumer Minimum Fetch Size

Description

The minimum amount of data the server should return for a fetch request. If insufficient data is available, the request will wait for that much data to accumulate before answering the request. Setting this property to something greater than 1 will cause the server to wait for larger amounts of data to accumulate which can improve server throughput a bit at the cost of some additional latency.

Related Name

fetch.min.bytes

Default Value

1 B

API Name

fetch.min.bytes

Required

false

Consumer Group ID

Description

Name of the consumer group used by MirrorMaker. When multiple role instances are configured with the same topics and same group ID, the role instances load-balance replication for the topics. When multiple role instances are configured with the same topics but different group ID, each role instance replicates all the events for those topics - this can be used to replicate the source cluster into multiple destination clusters.

Related Name

Enable Authenticated Communication with the JMX Agent**Description**

Enables Authenticated Communication with the JMX Agent.

Related Name

jmx.auth.enabled

Default Value

false

API Name

jmx.auth.enabled

Required

false

Name of User with Read-Write Access to the JMX Agent**Description**

Specifies the name of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.control.user

Default Value

controlRole

API Name

jmx.control.user

Required

false

Password of user with read-write access to the JMX agent**Description**

Specifies the password of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.control.user.passwd

Default Value

API Name

jmx.control.user.passwd

Required

false

Name of User with read-only access to the JMX Agent

Description

Specifies the name of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.monitor.user

Default Value

monitorRole

API Name

jmx.monitor.user

Required

false

Password of User with read-only Access to the JMX agent

Description

Specifies the password of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.monitor.user.passwd

Default Value

API Name

jmx.monitor.user.passwd

Required

false

Enable TLS client authentication for JMX port

Description

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the ZooKeeper JMX TLS/SSL Server Trust Store file or the global trust store.

Related Name

jmx.ssl.client.auth.enabled

Default Value

false

API Name

jmx.ssl.client.auth.enabled

Required

false

Enable TLS/SSL for Kafka JMX

Description

Encrypt communication between clients and Kafka JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

jmx.ssl.enabled

Default Value

false

API Name

jmx.ssl.enabled

Required

false

Producer Linger Time

Description

The upper bound on the delay for batching. Once the producer gets a batch.size worth of records for a partition it will be sent immediately regardless of this setting. However, if fewer than this many bytes accumulated for this partition the producer will 'linger' for the specified time waiting for more records to show up.

Related Name

linger.ms

Default Value

0 second(s)

API Name

linger.ms

Required

false

MirrorMaker Message Handler

Description

A MirrorMaker message handler of the MirrorMakerMessageHandler type that will process every record in-between producer and consumer.

Related Name

message.handler

Default Value**API Name**

message.handler

Required

false

MirrorMaker Message Handler Arguments

Description

Arguments used by MirrorMaker message handler.

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing

memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Kafka MirrorMaker roles.

Related Name**Default Value**

kafka_mirror_maker

API Name

kerberos_role_princ_name

Required

true

Kafka MirrorMaker TLS/SSL Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka MirrorMaker might connect to. This trust store must contain the certificate(s)

used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Kafka MirrorMaker TLS/SSL Trust Store Password**Description**

The password for the Kafka MirrorMaker TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Kafka MirrorMaker**Description**

Encrypt communication between clients and Kafka MirrorMaker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Kafka MirrorMaker TLS/SSL Server Keystore Key Password**Description**

The password that protects the private key contained in the keystore used when Kafka MirrorMaker is acting as a TLS/SSL server.

Related Name

ssl.key.password.generator

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Kafka MirrorMaker TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka MirrorMaker is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Kafka MirrorMaker TLS/SSL Server Keystore File Password

Description

The password for the Kafka MirrorMaker keystore file.

Related Name

ssl.keystore.password.generator

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Parameter Validation: Destination Broker List****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Destination Broker List parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_bootstrap.servers

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: MirrorMaker Consumer Rebalance Listener**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Consumer Rebalance Listener parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_consumer.rebalance.listener

Required

true

Suppress Parameter Validation: MirrorMaker Consumer Rebalance Listener Arguments**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the MirrorMaker Consumer Rebalance Listener Arguments parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_consumer.rebalance.listener.args

Required

true

Suppress Parameter Validation: Consumer Group ID**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Consumer Group ID parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_group.id

Required

true

Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.control.user

Required

true

Suppress Parameter Validation: Password of user with read-write access to the JMX agent**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.control.user.passwd

Required

true

Suppress Parameter Validation: Name of User with read-only access to the JMX Agent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with read-only access to the JMX Agent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.monitor.user

Required

true

Suppress Parameter Validation: Password of User with read-only Access to the JMX agent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with read-only Access to the JMX agent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.monitor.user.passwd

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: JMX Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_port

Required

true

Suppress Parameter Validation: Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_mirror_maker_role_env_safety_valve

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

KRaft Controller

Advanced

KRaft Controller Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties

Description

For advanced use only. A string to be inserted into kafka-monitoring.properties for this role only.

Related Name**Default Value****API Name**

kafka-monitoring.properties_role_safety_valve

Required

false

KRaft Controller Advanced Configuration Snippet (Safety Valve) for kraft.properties

Description

For advanced use only. A string to be inserted into kraft.properties for this role only.

Related Name**Default Value**

API Name

kraft.properties_role_safety_valve

Required

false

KRaft Controller Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

KRAFT_role_env_safety_valve

Required

false

KRaft Controller Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions

and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name**Default Value**

kraft

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Role Specific System User**Description**

The user that this role's processes should run as.

Related Name**Default Value**

kraft

API Name

process_username

Required

true

KRaft Controller Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml**Description**

For advanced use only. A string to be inserted into ranger-kafka-audit.xml for this role only.

Related Name**Default Value****API Name**

ranger-kafka-audit.xml_role_safety_valve

Required

false

KRaft Controller Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml**Description**

For advanced use only. A string to be inserted into ranger-kafka-policymgr-ssl.xml for this role only.

Related Name**Default Value****API Name**

ranger-kafka-policymgr-ssl.xml_role_safety_valve

Required

false

KRaft Controller Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml**Description**

For advanced use only. A string to be inserted into ranger-kafka-security.xml for this role only.

Related Name

Default Value

API Name

ranger-kafka-security.xml_role_safety_valve

Required

false

KRaft Controller Advanced Configuration Snippet (Safety Valve) for ssl.properties

Description

For advanced use only. A string to be inserted into ssl.properties for this role only.

Related Name

Default Value

API Name

ssl.properties_role_safety_valve

Required

false

Logs

KRaft Controller Log Directory

Description

The log directory for log files of the role KRaft Controller.

Related Name

kafka.log4j.dir

Default Value

/var/log/kraft

API Name

log_dir

Required

false

KRaft Controller Logging Threshold

Description

The minimum log level for KRaft Controller logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

KRaft Controller Maximum Log File Backups

Description

The maximum number of rolled log files to keep for KRaft Controller logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

KRaft Controller Max Log Size**Description**

The maximum size, in megabytes, per log file for KRaft Controller logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

kraft_fd_thresholds

Required

false

KRaft Controller Host Health Test

Description

When computing the overall KRaft Controller health, consider the host's health.

Related Name**Default Value**

true

API Name

kraft_host_health_enabled

Required

false

KRaft Controller Process Health Test

Description

Enables the health test that the KRaft Controller's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

kraft_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- **Default Dashboard Metric Set** - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- **Include/Exclude Custom Metrics** - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- **Metric Name** - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- **Include only Health Test Metric Set:** Selected.
- **Include/Exclude Custom Metrics:** Set to Include.
- **Metric Name:** `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name

Default Value

API Name

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

otelcol_extensions

Required

false

OpenTelemetry Collector Helper Port

Description

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name

Default Value

API Name

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name

Default Value

API Name

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password

Description

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_password)` expression. Specify `$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_url)` expression. Specify `$INFRA(cdp_request_signer_url)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**`$INFRA(cdp_request_signer_url)`**API Name**

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_user)` expression. Specify `$INFRA(cdp_request_signer_username)` when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**`$INFRA(cdp_request_signer_username)`**API Name**

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Required

false

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Enable TLS client authentication for JMX port

Description

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the KRaft JMX TLS/SSL Server Trust Store file or the global trust store.

Related Name

jmx.ssl.client.auth.enabled

Default Value

	false
API Name	jmx.ssl.client.auth.enabled
Required	false

Enable TLS/SSL for KRaft JMX

Description	Encrypt communication between clients and KRaft JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).
Related Name	jmx.ssl.enabled
Default Value	false
API Name	jmx.ssl.enabled
Required	false

Enable HTTP Metric Report Basic Authentication

Description	Enable Basic Authentication for Kafka Metric HTTP Endpoint.
Related Name	kafka.http.metrics.authentication.enabled
Default Value	false
API Name	kafka.http.metrics.authentication.enabled
Required	false

HTTP Metric Report Host

Description	The host that the HTTP metric reporter binds to.
Related Name	kafka.http.metrics.host
Default Value	0.0.0.0
API Name	kafka.http.metrics.host
Required	false

HTTP Metric Report Password

Description	
--------------------	--

The password used for Basic Authentication.

Related Name

kafka.http.metrics.password

Default Value**API Name**

kafka.http.metrics.password

Required

false

Http Metrics Report Exclude Filter**Description**

Regex of MetricNames that will not be reported by the HttpMetricsReporter. Use upstream JMX-based MetricNames.

Related Name

http.metrics.exclude

Default Value**API Name**

kafka.http.metrics.reporter.exclude.filter

Required

false

SSL Encryption For HTTP Metric Reporter**Description**

Enable SSL Encryption for HTTP Metrics Endpoint. IMPORTANT: SSL encryption will be enabled if ssl_enabled config is enabled as well!

Related Name

kafka.http.metrics.ssl.enabled

node.id

Required

false

Ranger KRaft Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/kraft/audit/hdfs/spool

API Name

ranger_kraft_plugin_hdfs_audit_spool_directory

Required

true

Ranger KRaft Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.kraft.policy.cache.dir

Default Value

/var/lib/ranger/kraft/policy-cache

API Name

ranger_kraft_plugin_policy_cache_directory

Required

true

Ranger KRaft Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/kraft/audit/solr/spool

API Name

ranger_kraft_plugin_solr_audit_spool_directory

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.kafka.trusted.proxy.ipaddress

Default Value

API Name

ranger_plugin_kraft_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.kafka.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_kraft_use_x_forwarded_for_ipaddress

Required

false

Inter Broker Protocol**Description**

Protocol to be used for inter-broker communication. INFERRED uses the same protocol that is configured for external clients.

Related Name

security.inter.broker.protocol

Default Value

INFERRED

API Name

security.inter.broker.protocol

Required

false

SSL Client Authentication**Description**

Client authentication mode for SSL connections. This configuration has three valid values, "required", "requested" and "none". If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

Related Name

ssl.client.auth

Default Value

none

API Name

ssl.client.auth

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no

limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

Required

false

KRaft Controller TLS/SSL Server Keystore Key Password**Description**

The password that protects the private key contained in the keystore used when KRaft Controller is acting as a TLS/SSL server.

Related Name

ssl.key.password.generator

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

KRaft Controller TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when KRaft Controller is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

KRaft Controller TLS/SSL Server Keystore File Password

Description

The password for the KRaft Controller keystore file.

Related Name

ssl.keystore.password.generator

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

`stacks_collection_enabled`**Default Value**`false`**API Name**`stacks_collection_enabled`**Required**`true`**Stacks Collection Frequency****Description**

The frequency with which stacks are collected.

Related Name`stacks_collection_frequency`**Default Value**`5.0 second(s)`**API Name**`stacks_collection_frequency`**Required**`false`**Stacks Collection Method****Description**

The method used to collect stacks. The `jstack` option involves periodically running the `jstack` command against the role's daemon process. The `servlet` method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the `servlet` method is selected, that HTTP endpoint is periodically scraped.

Related Name`stacks_collection_method`**Default Value**`jstack`**API Name**`stacks_collection_method`**Required**`false`**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**`false`**API Name**

`role_config_suppression_cdh_version_validator`**Required**`true`**Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_jmx.control.user`**Required**`true`**Suppress Parameter Validation: Password of user with read-write access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_jmx.control.user.passwd`**Required**`true`**Suppress Parameter Validation: Name of User with read-only access to the JMX Agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with read-only access to the JMX Agent parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_jmx.monitor.user`**Required**`true`**Suppress Parameter Validation: Password of User with read-only Access to the JMX agent****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with read-only Access to the JMX agent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.monitor.user.passwd

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: JMX Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Port parameter.

Related Name

enable_config_alerts

Required

false

Healthy Kafka Broker Monitoring Thresholds

Description

The health test thresholds of the overall Kafka Broker health. The check returns "Concerning" health if the percentage of "Healthy" Kafka Brokers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Kafka Brokers falls below the critical threshold.

Related Name

Default Value

Warning: 94.99 %, Critical: 49.99 %

API Name

KAFKA_KAFKA_BROKER_healthy_thresholds

Required

false

Healthy Kafka Connect Monitoring Thresholds

Description

The health test thresholds of the overall Kafka Connect health. The check returns "Concerning" health if the percentage of "Healthy" Kafka Connects falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Kafka Connects falls below the critical threshold.

Related Name

Default Value

Warning: 94.99 %, Critical: 49.99 %

API Name

KAFKA_KAFKA_CONNECT_healthy_thresholds

Required

false

Healthy KRaft Controller Monitoring Thresholds**Description**

The health test thresholds of the overall KRaft Controller health. The check returns "Concerning" health if the percentage of "Healthy" KRaft Controllers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" KRaft Controllers falls below the critical threshold.

Related Name**Default Value**

Warning: 94.99 %, Critical: 50.0 %

API Name

KAFKA_KRAFT_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other**Atlas metadata namespace for Kafka Clients****Description**

Metadata Namespace used in Atlas for Kafka clients (Producers, Consumers). It may be different from the topic namespace when clients used across clusters.

Related Name

atlas.metadata.namespace.client

Default Value

cm

API Name

atlas.metadata.namespace.client

Required

false

Atlas metadata namespace for Kafka Topics**Description**

Metadata Namespace used in Atlas for Kafka topics.

Related Name

atlas.metadata.namespace.topic

Default Value

cm

API Name

atlas.metadata.namespace.topic

Required

false

Topic Auto Creation**Description**

Enables auto creation of topics on the server. If set to true, it attempts to produce, consume, or fetch metadata for a non-existent topic automatically create the topic with the default replication factor and number of partitions.

Related Name

auto.create.topics.enable

Default Value

true

API Name

auto.create.topics.enable

Required

false

Enable Automatic Leader Rebalancing

Description

If automatic leader rebalancing is enabled, the controller tries to balance leadership for partitions among the brokers by periodically returning leadership for each partition to the preferred replica, if that replica is available.

Related Name

auto.leader.rebalance.enable

Default Value

true

API Name

auto.leader.rebalance.enable

Required

false

Enable Controlled Shutdown

Description

Enables controlled shutdown of the broker. If enabled, the broker moves all leaders on it to other brokers before shutting itself down. This reduces the unavailability window during shutdown.

Related Name

controlled.shutdown.enable

Default Value

true

API Name

controlled.shutdown.enable

Required

false

Controlled Shutdown Maximum Attempts

Description

Number of unsuccessful controlled shutdown attempts before executing an unclean shutdown. For example, the default value of 3 means that the system will attempt a controlled shutdown 3 times before executing an unclean shutdown.

Related Name

controlled.shutdown.max.retries

Default Value

3

API Name

controlled.shutdown.max.retries

Required

false

Default Replication Factor**Description**

The default replication factor for automatically created topics.

Related Name

default.replication.factor

Default Value

1

API Name

default.replication.factor

Required

false

Enable Delegation Tokens**Description**

Enables authentication with delegation tokens for this Kafka service. When enabled, a secure password is automatically generated and used as the "delegation.token.secret.key" property for Kafka Brokers. Only allowed if Kerberos authentication is enabled.

Related Name

delegation.token.enable

Default Value

true

API Name

delegation.token.enable

Required

false

Delegation Token Expiry Time**Description**

The expiry time of a delegation token. A delegation token can be renewed before its expiry time to extend its validity up to its maximum lifetime. If it is not renewed, it will expire even if it has time remaining from its maximum lifetime.

Related Name

delegation.token.expiry.time.ms

Default Value

1 day(s)

API Name

delegation.token.expiry.time.ms

Required

false

Delegation Token Maximum Lifetime

Description

The maximum amount of time that a delegation token can be valid for.

Related Name

delegation.token.max.lifetime.ms

Default Value

7 day(s)

API Name

delegation.token.max.lifetime.ms

Required

false

Enable Delete Topic

Description

Enables topic deletion using admin tools. When delete topic is disabled, deleting topics through the admin tools has no effect.

Related Name

delete.topic.enable

Default Value

true

API Name

delete.topic.enable

Required

false

Consumer Group Maximum Session Timeout

Description

The minimum allowed session timeout for registered consumers. Shorter timeouts result in quicker failure detection at the cost of more frequent consumer heartbeating, which can overwhelm broker resources.

Related Name

group.max.session.timeout.ms

Default Value

30 minute(s)

API Name

group.max.session.timeout.ms

Required

false

Consumer Group Minimum Session Timeout

Description

The minimum allowed session timeout for registered consumers. Shorter timeouts result in quicker failure detection at the cost of more frequent consumer heartbeating, which can overwhelm broker resources.

Related Name

group.min.session.timeout.ms

Default Value

6 second(s)

API Name

group.min.session.timeout.ms

Required

false

HDFS Service

Description

Name of the HDFS service that this Kafka service instance depends on

Related Name

Default Value

API Name

hdfs_service

Required

false

Enable Kafka Decommission

Description

Kafka decommission flag only takes affect when there is no Cruise Control. In other case the decommission will be always enabled.

Related Name

kafka.decommission.hook.enabled

Default Value

false

API Name

kafka.decommission.hook.enabled

Required

false

List of Metric Reporters

Description

List of metric reporter class names. HTTP reporter is included by default.

Related Name

kafka.metrics.reporters

Default Value

nl.techop.kafka.KafkaHttpMetricsReporter

API Name

kafka.metrics.reporters

Required

false

Enable Kerberos Authentication

Description

Enables Kerberos authentication for this Kafka service.

Related Name

kerberos.auth.enable

Default Value

false

API Name

kerberos.auth.enable

Required

false

LDAP URL

Description

The URL of LDAP for authenticating Kafka clients.

Related Name

ldap.auth.url

Default Value

API Name

ldap.auth.url

Required

false

LDAP User DN Template

Description

The LDAP user DN template for authenticating Kafka clients.

Related Name

ldap.auth.user.dn.template

Default Value

API Name

ldap.auth.user.dn.template

Required

false

Leader Imbalance Check Interval

Description

Defines the frequency of leader imbalance checks.

Related Name

leader.imbalance.check.interval.seconds

Default Value

5 minute(s)

API Name

leader.imbalance.check.interval.seconds

Required

false

Leader Imbalance Allowed Per Broker

Description

The percentage of leader imbalance allowed per broker. The controller rebalances leadership if the leader imbalance ratio goes above the configured value per broker.

Related Name

leader.imbalance.per.broker.percentage

Default Value

10 %

API Name

leader.imbalance.per.broker.percentage

Required

false

Log Cleaner Deduplication Buffer Size

Description

The total memory used for log deduplication across all cleaner threads. This memory is statically allocated and will not cause GC problems.

Related Name

log.cleaner.dedupe.buffer.size

Default Value

128 MiB

API Name

log.cleaner.dedupe.buffer.size

Required

false

Log Compaction Delete Record Retention Time

Description

The amount of time to retain delete messages for log compacted topics. Once a consumer has seen an original message, it has to be ensured that it also sees the delete message. If the delete message is removed too quickly, this might not happen. The configurable delete retention time helps to circumvent this issue.

Related Name

log.cleaner.delete.retention.ms

Default Value

7 day(s)

API Name

log.cleaner.delete.retention.ms

Required

false

Enable Log Compaction

Description

Enables the log cleaner to compact topics with cleanup.policy=compact on this cluster.

Related Name

log.cleaner.enable

Default Value

true

API Name

log.cleaner.enable

Required

false

Log Cleaner Clean Ratio**Description**

Controls how frequently the log cleaner will attempt to clean the log. This ratio restricts the maximum space wasted by duplicates in the log. For example, if set to 0.5, then at most 50% of the log can be populated by duplicates. A higher ratio results in fewer, more efficient cleaning processes, but more wasted space in the log.

Related Name

log.cleaner.min.cleanable.ratio

Default Value

0.5

API Name

log.cleaner.min.cleanable.ratio

Required

false

Number of Log Cleaner Threads**Description**

The number of background threads used for log cleaning.

Related Name

log.cleaner.threads

Default Value

1

API Name

log.cleaner.threads

Required

false

Log Flush Message Interval**Description**

The number of messages written to a log partition before triggering an fsync on the log. Setting this property to a low value results in more frequent data to disk synchronization, but also has major impact on performance. For durability, Cloudera recommends the use of replication rather than depending on a single-server fsync. However, this setting can be used as an extra safety measure. If used in conjunction with log.flush.interval.ms, the log is flushed when either criteria is met.

Related Name

log.flush.interval.messages

Default Value**API Name**

log.flush.interval.messages

Required

false

Log Flush Time Interval**Description**

The maximum time between fsync calls on the log. If used in conjunction with `log.flush.interval.messages`, the log is flushed when either criteria is met.

Related Name`log.flush.interval.ms`**Default Value****API Name**`log.flush.interval.ms`**Required**

false

Log Flush Scheduler Interval**Description**

The frequency, in milliseconds, with which the log flusher checks whether any log is eligible to be flushed to disk.

Related Name`log.flush.scheduler.interval.ms`**Default Value****API Name**`log.flush.scheduler.interval.ms`**Required**

false

Maximum Message Size**Description**

The maximum size of a message that the server can receive. This property has to be in sync with the maximum fetch size the consumers use. Otherwise, an unruly producer could publish messages that are too large for consumption.

Related Name`message.max.bytes`**Default Value**

1000000 B

API Name`message.max.bytes`**Required**

false

Cruise Control Metric Reporter Principal Name**Description**

Principal name of the Cruise Control metric reporter to authenticate with the Kafka cluster.

Related Name

metric.reporter.principal.name

Default Value

cc_metric_reporter

API Name

metric.reporter.principal.name

Required

true

Minimum Number of Replicas in ISR

Description

The minimum number of replicas in the in-sync replica needed to satisfy a produce request where required.acks=-1 (that is, all).

Related Name

min.insync.replicas

Default Value

1

API Name

min.insync.replicas

Required

false

Enable Kafka Monitoring

Description

Enables Kafka monitoring.

Related Name

monitoring.enabled

Default Value

true

API Name

monitoring.enabled

Required

false

Default Number of Partitions

Description

The default number of partitions for automatically created topics.

Related Name

num.partitions

Default Value

1

API Name

num.partitions

Required

false

Number of Replica Fetchers

Description

Number of threads used to replicate messages from leaders. Increasing this value increases the degree of I/O parallelism in the follower broker.

Related Name

num.replica.fetchers

Default Value

4

API Name

num.replica.fetchers

Required

false

Enable OAuth Authentication

Description

Enables authentication using the SASL OAUTHBEARER mechanism for this Kafka service. Clients must present a signed JSON Web Token (JWT) when authenticating with OAuth2. This feature requires Kerberos to be enabled as well.

Related Name

oauth.enabled

Default Value

false

API Name

oauth.enabled

Required

false

JWT Expected Audience For OAuth2

Description

The JWT token can optionally contain an audience aud claim. When this claim is present then the same audience value needs to be expected on the server side, otherwise the token will be considered invalid.

Related Name

oauth.expected.audience

Default Value**API Name**

oauth.expected.audience

Required

false

JWT Expected Issuer For OAuth2

Description

The JWT token can optionally contain an issuer iss claim. We can configure the broker to only accept tokens issued by a specific issuer.

Related Name

oauth.expected.issuer

Default Value**API Name**

oauth.expected.issuer

Required

false

JWKS URL For OAuth2**Description**

The endpoint URL that returns the authorization server's public keys in JSON Web Key Set format. The public keys are used to verify the JSON Web Tokens issued by the authorization server. Note that this can also be a local file if the URL starts with file://.

Related Name

oauth.jwks.url

Default Value**API Name**

oauth.jwks.url

Required

false

JWT Principal Claim Name For OAuth2**Description**

A JSON Web Token (JWT) must contain a user ID (principal) that can be used for Ranger authorization. This property specifies the name (or key) of the claim in the JWT that contains the user ID. The 'sub' claim is used if this property is left empty.

Related Name

oauth.principal.claim.name

Default Value**API Name**

oauth.principal.claim.name

Required

false

Offset Retention Time**Description**

After a consumer group loses all its consumers (i.e. becomes empty) its offsets will be kept for this retention period before getting discarded. For standalone consumers (using manual assignment), offsets will be expired after the time of last commit plus this retention period.

Related Name

offsets.retention.minutes

Default Value

7 day(s)

API Name

offsets.retention.minutes

Required

false

Offset Commit Topic Number of Partitions

Description

The number of partitions for the offset commit topic. Changing this value after deployment is currently unsupported, therefore, Cloudera recommends using a higher number of partitions (for example, 100-200) for production.

Related Name

offsets.topic.num.partitions

Default Value

50

API Name

offsets.topic.num.partitions

Required

false

Offset Commit Topic Replication Factor

Description

The replication factor for the offset commit topic. A higher setting (for example, 3 or 4) is recommended in order to ensure higher availability. If the offsets topic is created when there are fewer brokers than the replication factor, then the offsets topic is created with fewer replicas.

Related Name

offsets.topic.replication.factor

Default Value

3

API Name

offsets.topic.replication.factor

Required

false

PAM Service

Description

The PAM service name for authenticating Kafka clients. This corresponds to the service name in the PAM configuration.

Related Name

pam.auth.service

Default Value

login

API Name

pam.auth.service

Required

false

Enable Producer Metrics

Description

Enables producer metrics

Related Name

producer.metrics.enable

Default Value

true

API Name

producer.metrics.enable

Required

false

Ranger Kafka Plugin Hdfs Audit Directory

Description

The DFS path on which Ranger audits are written.

Related Name

ranger_kafka_plugin_hdfs_audit_directory

Default Value

\$ranger_base_audit_url/kafka

API Name

ranger_kafka_plugin_hdfs_audit_directory

Required

false

Ranger Kafka Plugin Policy Rest Client Max Retry Attempts

Description

Kafka Ranger Plugin Rest client max retry attempts count.

Related Name

ranger.plugin.kafka.policy.rest.client.max.retry.attempts

Default Value

12

API Name

ranger_plugin_kafka_policy_rest_client_max_retry_attempts

Required

false

Ranger Kafka Plugin Policy Rest Client Retry Interval Ms

Description

Kafka Ranger Plugin Rest client retry wait interval in milliseconds.

Related Name

ranger.plugin.kafka.policy.rest.client.retry.interval.ms

Default Value

10 second(s)

API Name

ranger_plugin_kafka_policy_rest_client_retry_interval_ms

Required

false

'Ranger service' name for this Kafka service

Description

Name of the 'Ranger service', that is used for authorization by this Kafka service. If this parameter is set to the placeholder value '{GENERATED_RANGER_SERVICE_NAME}', a generated service name will be used, and if necessary, created. The generated service name will refer to the name of the cluster and the name of this Kafka service. The name can consist of alphanumeric and '_' characters.

Related Name

ranger.plugin.kafka.service.name

Default Value

cm_kafka

API Name

ranger_plugin_kafka_service_name

Required

false

RANGER Service**Description**

Name of the RANGER service that this Kafka service instance depends on

Related Name**Default Value****API Name**

ranger_service

Required

false

Replica Maximum Fetch Size**Description**

The maximum number of bytes to fetch for each partition in fetch requests that replicas send to the leader. This value should be larger than message.max.bytes.

Related Name

replica.fetch.max.bytes

Default Value

1 MiB

API Name

replica.fetch.max.bytes

Required

false

Allowed Replica Time Lag**Description**

If a follower has not sent any fetch requests, nor has it consumed up to the leader's log end offset during this time, the leader removes the follower from the ISR set.

Related Name

replica.lag.time.max.ms

Default Value

30 second(s)

API Name

replica.lag.time.max.ms

Required

false

SASL/PLAIN Authentication

Description

Authentication method that the SASL/PLAIN mechanism uses to authenticate clients.

Related Name

sasl.plain.auth

Default Value

none

API Name

sasl.plain.auth

Required

false

Minimum Number of Replicas in ISR for Transaction State Log

Description

Overridden min.insync.replicas config for the transaction topic.

Related Name

transaction.state.log.min.isr

Default Value

2

API Name

transaction.state.log.min.isr

Required

false

Transaction State Log Replication Factor

Description

The replication factor for the transaction topic (set higher to ensure availability). Internal topic creation will fail until the cluster size meets this replication factor requirement.

Related Name

transaction.state.log.replication.factor

Default Value

3

API Name

transaction.state.log.replication.factor

Required

false

Enable Unclean Leader Election

Description

Enables replicas not in the ISR set to be elected as leader as a last resort, even though doing so might result in data loss.

Related Name

unclean.leader.election.enable

Default Value

false

API Name

unclean.leader.election.enable

Required

false

ZooKeeper Root

Description

The znode in ZooKeeper used as a root for this Kafka cluster. **WARNING:** Do not change this property following the initial launch of the Kafka service. Only configure this property during the initial setup phase, before starting the Kafka service for the first time. Updating the root znode on a Kafka service that has already been started does not copy over the original znodes to the new root. This causes Kafka to lose its operational metadata.

Related Name

zookeeper.chroot

Default Value

/kafka

API Name

zookeeper.chroot

Required

false

Enable Secure Connection to ZooKeeper

Description

Enables SSL/TLS for all connections to ZooKeeper. This applies only if 'Enable TLS/SSL for ZooKeeper' is enabled on the ZooKeeper service.

Related Name

zookeeper.secure.connection.enable

Default Value

true

API Name

zookeeper.secure.connection.enable

Required

false

ZooKeeper Session Timeout

Description

If the server fails to send a heartbeat to ZooKeeper within this period of time, it is considered dead. If set to a too low value, ZooKeeper might falsely consider a server dead. If set to a too high value, ZooKeeper might take too long to recognize a dead server.

Related Name

zookeeper.session.timeout.ms

Default Value

18 second(s)

API Name

zookeeper.session.timeout.ms

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Kafka service instance depends on

Related Name

Default Value

API Name

zookeeper_service

Required

false

Security

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name

Default Value

kafka

API Name

kerberos_princ_name

Required

true

Suppressions

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_atlas-application.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Destination Broker List

Description

Whether to suppress configuration warnings produced by the Destination Broker List configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_bootstrap.servers

Required

true

Suppress Configuration Validator: Broker ID

Description

Whether to suppress configuration warnings produced by the Broker ID configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_broker.id

Required

true

Suppress Configuration Validator: Broker Rack ID

Description

Whether to suppress configuration warnings produced by the Broker Rack ID configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_broker.rack

Required

true

Suppress Configuration Validator: Additional Broker Java Options

Description

Whether to suppress configuration warnings produced by the Additional Broker Java Options configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_broker_java_opts

Required

true

Suppress Configuration Validator: Java Heap Size of Broker**Description**

Whether to suppress configuration warnings produced by the Java Heap Size of Broker configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_broker_max_heap_size

Required

true

Suppress Configuration Validator: CDH Version Validator**Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: Configuration Storage Topic Replication Factor**Description**

Whether to suppress configuration warnings produced by the Configuration Storage Topic Replication Factor configuration validator.

Related Name**Default Value**

	false
API Name	role_config_suppression_config.storage.replication.factor
Required	true

Suppress Configuration Validator: Configuration Storage Topic Name

Description	Whether to suppress configuration warnings produced by the Configuration Storage Topic Name configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_config.storage.topic
Required	true

Suppress Configuration Validator: Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

Description	Whether to suppress configuration warnings produced by the Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_connect-distributed.properties_role_safety_valve
Required	true

Suppress Configuration Validator: Connector Kafka Client Configuration Override Policy

Description	Whether to suppress configuration warnings produced by the Connector Kafka Client Configuration Override Policy configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_connector.client.config.override.policy
Required	true

Suppress Configuration Validator: MirrorMaker Consumer Rebalance Listener

Description	
--------------------	--

Whether to suppress configuration warnings produced by the MirrorMaker Consumer Rebalance Listener configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_consumer.rebalance.listener

Required

true

Suppress Configuration Validator: MirrorMaker Consumer Rebalance Listener Arguments**Description**

Whether to suppress configuration warnings produced by the MirrorMaker Consumer Rebalance Listener Arguments configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_consumer.rebalance.listener.args

Required

true

Suppress Configuration Validator: JDBC Driver Jars Path For Debezium**Description**

Whether to suppress configuration warnings produced by the JDBC Driver Jars Path For Debezium configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_debezium.jdbc.jars.path

Required

true

Suppress Configuration Validator: Non-Modifiable directory of Kafka Connect**Description**

Whether to suppress configuration warnings produced by the Non-Modifiable directory of Kafka Connect configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_etc.kafka_connect_ext.dir

Required

true

Suppress Configuration Validator: Consumer Group ID

Description

Whether to suppress configuration warnings produced by the Consumer Group ID configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_group.id

Required

true

Suppress Configuration Validator: Name of User with Read-Write Access to the JMX Agent

Description

Whether to suppress configuration warnings produced by the Name of User with Read-Write Access to the JMX Agent configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.control.user

Required

true

Suppress Configuration Validator: Password of user with read-write access to the JMX agent

Description

Whether to suppress configuration warnings produced by the Password of user with read-write access to the JMX agent configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.control.user.passwd

Required

true

Suppress Configuration Validator: Name of User with read-only access to the JMX Agent

Description

Whether to suppress configuration warnings produced by the Name of User with read-only access to the JMX Agent configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx.monitor.user

Required

true

Suppress Configuration Validator: Password of User with read-only Access to the JMX agent

Description

Whether to suppress configuration warnings produced by the Password of User with read-only Access to the JMX agent configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.monitor.user.passwd

Required

true

Suppress Configuration Validator: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the JMX Exporter configuration YAML configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Configuration Validator: JMX Port

Description

Whether to suppress configuration warnings produced by the JMX Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_port

Required

true

Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf

Description

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka-conf/kafka-client.conf_client_config_safety_valve

Required

true

Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties

Description

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka-conf/kafka-ranger-repo.properties_client_config_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka-monitoring.properties_role_safety_valve

Required

true

Suppress Configuration Validator: List Of Allowed Nexus Repository Urls

Description

Whether to suppress configuration warnings produced by the List Of Allowed Nexus Repository Urls configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.allowed.nexus.urls

Required

true

Suppress Configuration Validator: Java Home Path Override

Description

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.jdk.home

Required

true

Suppress Configuration Validator: Kafka Connect Secrets Storage Global Key Local Location

Description

Whether to suppress configuration warnings produced by the Kafka Connect Secrets Storage Global Key Local Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.secret.global.key.location

Required

true

Suppress Configuration Validator: Kafka Connect Secrets Storage Global Password

Description

Whether to suppress configuration warnings produced by the Kafka Connect Secrets Storage Global Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.secret.global.password

Required

true

Suppress Configuration Validator: Kafka Connect Secrets Storage PBE Salt

Description

Whether to suppress configuration warnings produced by the Kafka Connect Secrets Storage PBE Salt configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.connect.secret.pbe.salt

Required

true

Suppress Configuration Validator: Kafka Connect Secrets Storage Topic Name

Description

Whether to suppress configuration warnings produced by the Kafka Connect Secrets Storage Topic Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.secret.storage.topic

Required

true

Suppress Configuration Validator: Kafka Connect SPNEGO Auth To Local Rules

Description

Whether to suppress configuration warnings produced by the Kafka Connect SPNEGO Auth To Local Rules configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.spnego.kerberos.principal.to.local.rules

Required

true

Suppress Configuration Validator: List Of Trusted Proxy Services

Description

Whether to suppress configuration warnings produced by the List Of Trusted Proxy Services configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.spnego.trusted.proxies

Required

true

Suppress Configuration Validator: HTTP Metric Report Host

Description

Whether to suppress configuration warnings produced by the HTTP Metric Report Host configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.http.metrics.host

Required

true

Suppress Configuration Validator: HTTP Metric Report Password**Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.http.metrics.password

Required

true

Suppress Configuration Validator: HTTP Metric Report Port**Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.http.metrics.port

Required

true

Suppress Configuration Validator: Http Metrics Report Exclude Filter**Description**

Whether to suppress configuration warnings produced by the Http Metrics Report Exclude Filter configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.http.metrics.reporter.exclude.filter

Required

true

Suppress Configuration Validator: HTTP Metric Report User**Description**

Whether to suppress configuration warnings produced by the HTTP Metric Report User configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.http.metrics.user

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Load Balancer Host**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Load Balancer Host configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_broker_load_balancer_host

Required

true

Suppress Configuration Validator: Kafka Broker Load Balancer Listener Port**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Load Balancer Listener Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kafka_broker_load_balancer_listener_port

Required

true

Suppress Configuration Validator: Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Kafka Broker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_broker_role_env_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Kafka Connect Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_connect_role_env_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Heap Java Options

Description

Whether to suppress configuration warnings produced by the Kafka Connect Heap Java Options configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_heap_opts

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_mirror_maker_role_env_safety_valve

Required

true

Suppress Configuration Validator: Role-Specific Kerberos Principal

Description

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Configuration Validator: Key Converter

Description

Whether to suppress configuration warnings produced by the Key Converter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_key.converter

Required

true

Suppress Configuration Validator: KRaft Controller Advanced Configuration Snippet (Safety Valve) for kraft.properties

Description

Whether to suppress configuration warnings produced by the KRaft Controller Advanced Configuration Snippet (Safety Valve) for kraft.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kraft.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Additional KRaft Controller Java Options**Description**

Whether to suppress configuration warnings produced by the Additional KRaft Controller Java Options configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kraft_java_opts

Required

true

Suppress Configuration Validator: KRaft Controller Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the KRaft Controller Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kraft_role_env_safety_valve

Required

true

Suppress Configuration Validator: Data Directories**Description**

Whether to suppress configuration warnings produced by the Data Directories configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dirs

Required

true

Suppress Configuration Validator: Segment File Size**Description**

Whether to suppress configuration warnings produced by the Segment File Size configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log.segment.bytes

Required

true

Suppress Configuration Validator: Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Kafka Broker Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Log Directory

Description

Whether to suppress configuration warnings produced by the Kafka Broker Log Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: MirrorMaker Message Handler

Description

Whether to suppress configuration warnings produced by the MirrorMaker Message Handler configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_message.handler

Required

true

Suppress Configuration Validator: MirrorMaker Message Handler Arguments

Description

Whether to suppress configuration warnings produced by the MirrorMaker Message Handler Arguments configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_message.handler.args

Required

true

Suppress Configuration Validator: Metadata Log Directory

Description

Whether to suppress configuration warnings produced by the Metadata Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_metadata.log.dir

Required

true

Suppress Configuration Validator: Jetty Metrics Password

Description

Whether to suppress configuration warnings produced by the Jetty Metrics Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.jetty.server.auth.password

Required

true

Suppress Configuration Validator: Jetty Metrics User Name

Description

Whether to suppress configuration warnings produced by the Jetty Metrics User Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_metrics.jetty.server.auth.username

Required

true

Suppress Configuration Validator: Jetty Metrics Port

Description

Whether to suppress configuration warnings produced by the Jetty Metrics Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.jetty.server.port

Required

true

Suppress Configuration Validator: Secure Jetty Metrics Port

Description

Whether to suppress configuration warnings produced by the Secure Jetty Metrics Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.jetty.server.secureport

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_mirror_maker_consumers.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Additional MirrorMaker Java Options

Description

Whether to suppress configuration warnings produced by the Additional MirrorMaker Java Options configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_mirror_maker_java_opts

Required

true

Suppress Configuration Validator: Java Heap Size of MirrorMaker

Description

Whether to suppress configuration warnings produced by the Java Heap Size of MirrorMaker configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_mirror_maker_max_heap_size

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_mirror_maker_producers.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Node ID

Description

Whether to suppress configuration warnings produced by the Node ID configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_node.id

Required

true

Suppress Configuration Validator: Number of I/O Threads**Description**

Whether to suppress configuration warnings produced by the Number of I/O Threads configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_num.io.threads

Required

true

Suppress Configuration Validator: Number of Network Threads**Description**

Whether to suppress configuration warnings produced by the Number of Network Threads configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_num.network.threads

Required

true

Suppress Configuration Validator: Number of Recovery Threads per data directory**Description**

Whether to suppress configuration warnings produced by the Number of Recovery Threads per data directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_num.recovery.threads.per.data.dir

Required

true

Suppress Configuration Validator: Number of Alter Log Dir Threads**Description**

Whether to suppress configuration warnings produced by the Number of Alter Log Dir Threads configuration validator.

Related Name**Default Value**

	false
API Name	role_config_suppression_num.replica.alter.log.dirs.threads
Required	true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for oauth_jwks.json

Description	Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for oauth_jwks.json configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_oauth_jwks.json_role_safety_valve
Required	true

Suppress Configuration Validator: Offset Storage Topic Replication Factor

Description	Whether to suppress configuration warnings produced by the Offset Storage Topic Replication Factor configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_offset.storage.replication.factor
Required	true

Suppress Configuration Validator: Offset Storage Topic Name

Description	Whether to suppress configuration warnings produced by the Offset Storage Topic Name configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_offset.storage.topic
Required	true

Suppress Configuration Validator: Heap Dump Directory

Description	
--------------------	--

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Helper Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Processors Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Receivers Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write URL configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Service Section configuration validator.

Related Name**Default Value**

	false
API Name	role_config_suppression_otelcol_service
Required	true

Suppress Configuration Validator: Plugin Path

Description	Whether to suppress configuration warnings produced by the Plugin Path configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_plugin.path
Required	true

Suppress Configuration Validator: TCP Port

Description	Whether to suppress configuration warnings produced by the TCP Port configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_port
Required	true

Suppress Configuration Validator: Role Specific System Group

Description	Whether to suppress configuration warnings produced by the Role Specific System Group configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_process_groupname
Required	true

Suppress Configuration Validator: Role Specific System User

Description	Whether to suppress configuration warnings produced by the Role Specific System User configuration validator.
--------------------	---

Related Name

Default Value

false

API Name

role_config_suppression_process_username

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-audit.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-audit.xml

Description

Whether to suppress configuration warnings produced by the Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-audit.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-connect-audit.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-policymgr-ssl.xml

Description

Whether to suppress configuration warnings produced by the Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-policymgr-ssl.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-connect-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-security.xml**Description**

Whether to suppress configuration warnings produced by the Kafka Connect Advanced Configuration Snippet (Safety Valve) for ranger-kafka-connect-security.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger-kafka-connect-security.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger-kafka-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml**Description**

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger-kafka-security.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Ranger Kafka Plugin Audit Hdfs Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Audit Hdfs Spool Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Configuration Validator: Ranger Kafka Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Audit Solr Spool Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Configuration Validator: Ranger Kafka Connect Plugin Hdfs Audit Directory

Description

Whether to suppress configuration warnings produced by the Ranger Kafka Connect Plugin Hdfs Audit Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kafka_connect_plugin_hdfs_audit_directory

Required

true

Suppress Configuration Validator: Ranger Kafka Connect Plugin Audit Hdfs Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Kafka Connect Plugin Audit Hdfs Spool Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kafka_connect_plugin_hdfs_audit_spool_directory

Required

true

Suppress Configuration Validator: Ranger Kafka Connect Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Kafka Connect Plugin Audit Solr Spool Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_kafka_connect_plugin_solr_audit_spool_directory

Required

true

Suppress Configuration Validator: Ranger Kafka Plugin Conf Path

Description

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Conf Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_kafka_plugin_conf_path

Required

true

Suppress Configuration Validator: Ranger Kafka Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Policy Cache Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_kafka_plugin_policy_cache_directory

Required

true

Suppress Configuration Validator: Ranger KRaft Plugin Audit Hdfs Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger KRaft Plugin Audit Hdfs Spool Directory Path configuration validator.

Related Name**Default Value**

false

API Name

`role_config_suppression_ranger_kraft_plugin_hdfs_audit_spool_directory`**Required**

true

Suppress Configuration Validator: Ranger KRaft Plugin Policy Cache Directory Path**Description**

Whether to suppress configuration warnings produced by the Ranger KRaft Plugin Policy Cache Directory Path configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_ranger_kraft_plugin_policy_cache_directory`**Required**

true

Suppress Configuration Validator: Ranger KRaft Plugin Audit Solr Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the Ranger KRaft Plugin Audit Solr Spool Directory Path configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_ranger_kraft_plugin_solr_audit_spool_directory`**Required**

true

Suppress Configuration Validator: Ranger Kafka Plugin Policy Cache Directory Path**Description**

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Policy Cache Directory Path configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_ranger_plugin_kafka_connect_policy_cache_directory`**Required**

true

Suppress Configuration Validator: 'Ranger service' name for the Kafka Connect service**Description**

Whether to suppress configuration warnings produced by the 'Ranger service' name for the Kafka Connect service configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_plugin_kafka_connect_service_name

Required

true

Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_plugin_kafka_connect_trusted_proxy_ipaddress

Required

true

Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_plugin_kraft_trusted_proxy_ipaddress

Required

true

Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Configuration Validator: Rest Extension Classes

Description

Whether to suppress configuration warnings produced by the Rest Extension Classes configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rest.extension.classes

Required

true

Suppress Configuration Validator: Kafka Connect Rest Port

Description

Whether to suppress configuration warnings produced by the Kafka Connect Rest Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rest.port

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for rolling_restart_check_after_start_admin_client_configs.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for rolling_restart_check_after_start_admin_client_configs.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rolling_restart_check_after_start_admin_client_configs.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for rolling_restart_check_before_stop_admin_client_configs.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for rolling_restart_check_before_stop_admin_client_configs.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rolling_restart_check_before_stop_admin_client_configs.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Secure Kafka Connect Rest Port

Description

Whether to suppress configuration warnings produced by the Secure Kafka Connect Rest Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_secure.rest.port

Required

true

Suppress Configuration Validator: Source Broker List

Description

Whether to suppress configuration warnings produced by the Source Broker List configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_source.bootstrap.servers

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: TLS/SSL Port

Description

Whether to suppress configuration warnings produced by the TLS/SSL Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_port

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Server Keystore Key Password

Description

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server Keystore Key Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Status Storage Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the Status Storage Topic Replication Factor configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_status.storage.replication.factor

Required

true

Suppress Configuration Validator: Status Storage Topic Name

Description

Whether to suppress configuration warnings produced by the Status Storage Topic Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_status.storage.topic

Required

true

Suppress Configuration Validator: Value Converter

Description

Whether to suppress configuration warnings produced by the Value Converter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_value.converter

Required

true

Suppress Configuration Validator: Topic Whitelist

Description

Whether to suppress configuration warnings produced by the Topic Whitelist configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_whitelist

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for zookeeper-ssl.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for zookeeper-ssl.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_zookeeper-ssl.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Atlas metadata namespace for Kafka Clients

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas metadata namespace for Kafka Clients parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_atlas.metadata.namespace.client

Required

true

Suppress Parameter Validation: Atlas metadata namespace for Kafka Topics

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas metadata namespace for Kafka Topics parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_atlas.metadata.namespace.topic

Required

true

Suppress Parameter Validation: Controlled Shutdown Maximum Attempts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Controlled Shutdown Maximum Attempts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_controlled.shutdown.max.retries

Required

true

Suppress Parameter Validation: Default Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Replication Factor parameter.

Related Name

Default Value

false

API Name

service_config_suppression_default.replication.factor

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Kafka Service Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Service Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kafka-monitoring.properties_service_safety_valve

Required

true

Suppress Parameter Validation: List of Metric Reporters

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the List of Metric Reporters parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kafka.metrics.reporters

Required

true

Suppress Configuration Validator: Kafka Broker Count Validator

Description

Whether to suppress configuration warnings produced by the Kafka Broker Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_kafka_broker_count_validator

Required

true

Suppress Configuration Validator: Kafka Connect Count Validator

Description

Whether to suppress configuration warnings produced by the Kafka Connect Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_kafka_connect_count_validator

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Count Validator

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_kafka_mirror_maker_count_validator

Required

true

Suppress Parameter Validation: Kafka Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kafka_service_env_safety_valve

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Configuration Validator: KRaft Controller Count Validator

Description

Whether to suppress configuration warnings produced by the KRaft Controller Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_kraft_count_validator

Required

true

Suppress Parameter Validation: LDAP URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name**Default Value**

	false
API Name	service_config_suppression_ldap.auth.url
Required	true

Suppress Parameter Validation: LDAP User DN Template

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User DN Template parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_ldap.auth.user.dn.template
Required	true

Suppress Parameter Validation: Leader Imbalance Check Interval

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Leader Imbalance Check Interval parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_leader.imbalance.check.interval.seconds
Required	true

Suppress Parameter Validation: Leader Imbalance Allowed Per Broker

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Leader Imbalance Allowed Per Broker parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_leader.imbalance.per.broker.percentage
Required	true

Suppress Parameter Validation: Maximum Message Size

Description	
--------------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Message Size parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_message.max.bytes

Required

true

Suppress Parameter Validation: Cruise Control Metric Reporter Principal Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cruise Control Metric Reporter Principal Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_metric.reporter.principal.name

Required

true

Suppress Parameter Validation: Minimum Number of Replicas in ISR**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Minimum Number of Replicas in ISR parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_min.insync.replicas

Required

true

Suppress Parameter Validation: Default Number of Partitions**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Number of Partitions parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_num.partitions

Required

true

Suppress Parameter Validation: Number of Replica Fetchers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Replica Fetchers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_num.replica.fetchers

Required

true

Suppress Parameter Validation: JWT Expected Audience For OAuth2

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JWT Expected Audience For OAuth2 parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oauth.expected.audience

Required

true

Suppress Parameter Validation: JWT Expected Issuer For OAuth2

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JWT Expected Issuer For OAuth2 parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oauth.expected.issuer

Required

true

Suppress Parameter Validation: JWKS URL For OAuth2

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JWKS URL For OAuth2 parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oauth.jwks.url

Required

true

Suppress Parameter Validation: JWT Principal Claim Name For OAuth2

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JWT Principal Claim Name For OAuth2 parameter.

Related Name

Default Value

false

API Name

service_config_suppression_oauth.principal.claim.name

Required

true

Suppress Parameter Validation: Offset Commit Topic Number of Partitions

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Commit Topic Number of Partitions parameter.

Related Name

Default Value

false

API Name

service_config_suppression_offsets.topic.num.partitions

Required

true

Suppress Parameter Validation: Offset Commit Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Commit Topic Replication Factor parameter.

Related Name

Default Value

false

API Name

service_config_suppression_offsets.topic.replication.factor

Required

true

Suppress Parameter Validation: PAM Service

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the PAM Service parameter.

Related Name

Default Value

false

API Name

service_config_suppression_pam.auth.service

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Kafka Service Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Service Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger-kafka-audit.xml_service_safety_valve

Required

true

Suppress Parameter Validation: Kafka Service Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Service Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger-kafka-policymgr-ssl.xml_service_safety_valve

Required

true

Suppress Parameter Validation: Kafka Service Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Service Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger-kafka-security.xml_service_safety_valve

Required

true

Suppress Parameter Validation: Ranger Kafka Plugin Hdfs Audit Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Hdfs Audit Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kafka_plugin_hdfs_audit_directory

Required

true

Suppress Parameter Validation: 'Ranger service' name for this Kafka service

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the 'Ranger service' name for this Kafka service parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_plugin_kafka_service_name

Required

true

Suppress Parameter Validation: Replica Maximum Fetch Size

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replica Maximum Fetch Size parameter.

Related Name

Default Value

false

API Name

service_config_suppression_replica.fetch.max.bytes

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Kafka Service Advanced Configuration Snippet (Safety Valve) for ssl.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Service Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_ssl.properties_service_safety_valve

Required

true

Suppress Parameter Validation: Transaction State Log Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Transaction State Log Replication Factor parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_transaction.state.log.replication.factor

Required

true

Suppress Parameter Validation: ZooKeeper Root

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Root parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper.chroot

Required

true

Suppress Parameter Validation: ZooKeeper Session Timeout

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Session Timeout parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_zookeeper.session.timeout.ms

Required

true

Suppress Health Test: Kafka Broker Health**Description**

Whether to suppress the results of the Kafka Broker Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_kafka_kafka_broker_healthy

Required

true

Suppress Health Test: Kafka Connect Health**Description**

Whether to suppress the results of the Kafka Connect Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_kafka_kafka_connect_healthy

Required

true

Suppress Health Test: KRaft Controller Health**Description**

Whether to suppress the results of the KRaft Controller Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_kafka_kraft_healthy

Required

true

Key-Value Store Indexer Properties in Cloudera Runtime 7.3.1

Role groups:

Lily HBase Indexer

Advanced

Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml

Description

For advanced use only. A string to be inserted into hbase-indexer-site.xml for this role only.

Related Name**Default Value****API Name**

hbase_indexer_config_safety_valve

Required

false

Java Configuration Options for Lily HBase Indexer

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

JAVA_GC_ARGS

API Name

hbase_indexer_java_opts

Required

false

System Group

Description

The group that the HBase Indexer process should run as.

Related Name**Default Value**

hbase

API Name

hbase_indexer_process_groupname

Required

true

System User

Description

The user that the HBase Indexer process should run as.

Related Name**Default Value**

hbase

API Name

hbase_indexer_process_username

Required

true

Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

HBASE_INDEXER_role_env_safety_valve

Required

false

HBase Indexer ZooKeeper Session Timeout**Description**

ZooKeeper session timeout. Controls the amount of time the HBase Indexer will attempt to connect to ZooKeeper before timing out.

Related Name

hbaseindexer.zookeeper.session.timeout

Default Value

1 minute(s)

API Name

hbase_indexer_zk_session_timeout

Required

false

Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

HBase Indexer Log Directory

Description

Directory where HBase Indexer will place its log files.

Related Name**Default Value**

/var/log/hbase-solr

API Name

hbase_indexer_log_dir

Required

true

Lily HBase Indexer Logging Threshold

Description

The minimum log level for Lily HBase Indexer logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Lily HBase Indexer Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Lily HBase Indexer logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Lily HBase Indexer Max Log Size**Description**

The maximum size, in megabytes, per log file for Lily HBase Indexer logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

hbase_indexer_fd_thresholds

Required

false

Lily HBase Indexer Host Health Test**Description**

When computing the overall Lily HBase Indexer health, consider the host's health.

Related Name**Default Value**

true

API Name

hbase_indexer_host_health_enabled

Required

false

Lily HBase Indexer Process Health Test**Description**

Enables the health test that the Lily HBase Indexer's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

hbase_indexer_scm_health_enabled

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

false

Other**Netty native library working directory****Description**

The local working directory used for Netty native libraries.

Related Name**Default Value**

/var/hbase-solr/netty-workdir

API Name

keystore_indexer_netty_native_workdir

Required

false

Snappy temporary directory**Description**

The local temporary directory used for Snappy.

Related Name**Default Value**

/var/hbase-solr/snappy-tempdir

API Name

keystore_indexer_snappy_tempdir

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**HBase Indexer HTTP Port****Description**

HTTP port used by HBase Indexer.

Related Name

hbaseindexer.http.port

Default Value

11060

API Name

hbase_indexer_http_port

Required

true

Resource Management**Java Heap Size of Lily HBase Indexer in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name

hbase_indexer_java_heapsize

Required

false

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the Lily HBase Indexer roles.

Related Name

Default Value

hbase

API Name

kerberos_role_princ_name

Required

true

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hbase_indexer_config_safety_valve
Required	true

Suppress Parameter Validation: HBase Indexer HTTP Port

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Indexer HTTP Port parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hbase_indexer_http_port
Required	true

Suppress Parameter Validation: Java Configuration Options for Lily HBase Indexer

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Lily HBase Indexer parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hbase_indexer_java_opts
Required	true

Suppress Parameter Validation: HBase Indexer Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HBase Indexer Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_indexer_log_dir

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_indexer_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hbase_indexer_process_username

Required

true

Suppress Parameter Validation: Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Lily HBase Indexer Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_hbase_indexer_role_env_safety_valve`**Required**`true`**Suppress Parameter Validation: JMX Exporter configuration YAML****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_jmx_exporter_yaml`**Required**`true`**Suppress Parameter Validation: Role-Specific Kerberos Principal****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_kerberos_role_princ_name`**Required**`true`**Suppress Parameter Validation: Netty native library working directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Netty native library working directory parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_keystore_indexer_netty_native_workdir`**Required**`true`**Suppress Parameter Validation: Snappy temporary directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Snappy temporary directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_keystore_indexer_snappy_tempdir

Required

true

Suppress Parameter Validation: Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Lily HBase Indexer Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Service-Wide

Advanced

Key-Value Store Indexer Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ks_indexer_env_safety_valve

Required

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Healthy Lily HBase Indexer Monitoring Thresholds**Description**

The health test thresholds of the overall Lily HBase Indexer health. The check returns "Concerning" health if the percentage of "Healthy" Lily HBase Indexers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Lily HBase Indexers falls below the critical threshold.

Related Name**Default Value**

Warning: 95.0 %, Critical: 90.0 %

API Name

ks_indexer_indexers_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Morphlines**Custom Mime-types File****Description**

Text that goes verbatim into custom-mimetypes.xml file used by HBase Indexers.

```

API Name

grok_dictionary_conf_file

Required

false

Morphlines File

Description

Text that goes into morphlines.conf file used by HBase Indexers. The text goes verbatim into the config file except that \$ZK_HOST is replaced by the ZooKeeper quorum of the Solr service.

Related Name

Default Value

```
SOLR_LOCATOR : # Name of solr collection collection : collection # ZooKeeper ensemble
zkHost : $ZK_HOST morphlines : [ id : morphline importCommands : [org.kitesdk.**
com.ngdata.**] commands : [ extractHBaseCells mappings : [ inputColumn : data:* outputField :
data type : string source : value ] logDebug format : output record: , args : [ @ ] ] ]
```

API Name

morphlines_conf_file

Required

false

Other

HBase Service

Description

Name of the HBase service that this Key-Value Store Indexer service instance depends on

Related Name

Security

HBase Indexer Secure Authentication

Description

Authentication mechanism used by HBase Indexer.

Related Name

hbaseindexer.authentication.type

Default Value

simple

API Name

hbase_indexer_security_authentication

Required

false

Enable TLS/SSL for HBase Indexer Zookeeper**Description**

Encrypt communication between clients and HBase Indexer Zookeeper using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

hbaseindexer.zookeeper.ssl.client.enable

Default Value

false

API Name

hbaseindexer_zookeeper_ssl_enable

Required

false

HBase Indexer TLS/SSL Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HBase Indexer might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**

keystore_indexer_truststore_file

Required

false

HBase Indexer TLS/SSL Trust Store Password**Description**

The password for the HBase Indexer TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

keystore_indexer_truststore_password

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Lily HBase Indexer Advanced Configuration Snippet (Safety Valve) for hbase-indexer-site.xml

Description

conf/ranger-knox-audit.xml_role_safety_valve

Required

false

Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml**Description**

For advanced use only. A string to be inserted into conf/ranger-knox-policymgr-ssl.xml for this role only.

Related Name**Default Value**

API Name`conf/ranger-knox-policymgr-ssl.xml_role_safety_valve`**Required**

false

Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml**Description**

For advanced use only. A string to be inserted into `conf/ranger-knox-security.xml` for this role only.

Related Name**Default Value****API Name**`conf/ranger-knox-security.xml_role_safety_valve`**Required**

false

Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**`KNOX_GATEWAY_role_env_safety_valve`**Required**

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name`metric_config_auto_refresh`**Required**

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions

and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

Knox Gateway Log Directory

Description

The log directory for log files of the role Knox Gateway.

Related Name

log_dir

Default Value

/var/log/knox/gateway

API Name

log_dir

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

knox_gateway_fd_thresholds

Required

false

Knox Gateway Host Health Test**Description**

When computing the overall Knox Gateway health, consider the host's health.

Related Name**Default Value**

true

API Name

knox_gateway_host_health_enabled

Required

false

Knox Gateway Process Health Test**Description**

Enables the health test that the Knox Gateway's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

`knox_gateway_scm_health_enabled`**Required**

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name`log_directory_free_space_absolute_thresholds`**Required**

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name`log_directory_free_space_percentage_thresholds`**Required**

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.

- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name

Default Value**API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: `$HOST_NAME`, `$CLUSTER_NAME`, `$CLUSTER_ID`, `$SERVICE_TYPE`, `$SERVICE_NAME`, `$ROLE_NAME`, `$ROLE_TYPE`, `$ROLE_PARAM(my_parameter_name)` - e.g.: a port parameter for the role's metrics, `$DECODE_B64(...)` and `$DECODE_URL(...)` to decode encoded parameters, `$ENV_PARAM(name)` to fetch params from the process' environment, `$SYS_PARAM(name)` to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_password)` expression. Specify `$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

\$INFRA(cdp_request_signer_url)

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_exporters

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_extensions

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_processors

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_service

Required

false

OpenTelemetry Collector Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Enable Spool Directory Metric Usage for Knox Gateway**Description**

Enables the health test for monitoring the Ranger Plugin Spool directory usage.

Related Name**Default Value**

true

API Name

spool_directory_usage_enabled

Required

false

Ranger Plugin Spool Directory Usage Thresholds for Knox Gateway**Description**

The health test thresholds for monitoring the the Ranger Plugin Spool directory usage.

Related Name**Default Value**

1 GiB

API Name

spool_directory_usage_threshold

Required

false

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Knox Gateway Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Knox Simplified Topology Management - API Authentication Provider

Description

Authentication provider declaration used by pre-deinfed topologies such as admin, metadata or cdp-proxy-api.

Related Name

gateway_api_authentication_provider

Default Value

role=authentication authentication.name=ShiroProvider authentication.param.sessionTimeout=30

Enable Auto Discovery (cdp-proxy-api) - Hive Server

Description

Enables Knox auto-discovery for the Hive Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.hive

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_hive

Required

false

Enable Auto Discovery (cdp-proxy-api) - Impala Catalog Server

Description

Enables Knox auto-discovery for the Impala Catalog Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.impala

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_impala

Required

false

Enable Auto Discovery (cdp-proxy-api) - Apache Kafka Connect API

Description

Enables Knox auto-discovery for the Apache Kafka Connect API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.kafka_connect

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_kafka_connect

Required

false

Enable Auto Discovery (cdp-proxy-api) - Livy Server For Spark3 API**Description**

Enables Knox auto-discovery for the Livy Server For Spark3 API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.livy_for_spark3

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_livy_for_spark3

Required

false

Enable Auto Discovery (cdp-proxy-api) - Livy Server API**Description**

Enables Knox auto-discovery for the Livy Server API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.livyserver

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_livyserver

Required

false

Enable Auto Discovery (cdp-proxy-api) - NameNode**Description**

Enables Knox auto-discovery for the NameNode in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.namenode

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_namenode

Required

false

Enable Auto Discovery (cdp-proxy-api) - NiFi**Description**

Enables Knox auto-discovery for the NiFi in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.nifi

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_nifi

Required

false

Enable Auto Discovery (cdp-proxy-api) - NiFi Registry**Description**

Enables Knox auto-discovery for the NiFi Registry in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.nifi-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_nifi_registry

Required

false

Enable Auto Discovery (cdp-proxy-api) - Oozie Server**Description**

Enables Knox auto-discovery for the Oozie Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.oozie

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_oozie

Required

false

Enable Auto Discovery (cdp-proxy-api) - OpDB Agent**Description**

Enables Knox auto-discovery for the OpDB Agent API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.opdb_agent

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_opdb_agent

Required

false

Enable Auto Discovery (cdp-proxy-api) - Ozone Httpfs**Description**

Enables Knox auto-discovery for the Ozone Httpfs Gateway in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.ozone-httpfs

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_ozone_httpfs

Required

false

Enable Auto Discovery (cdp-proxy-api) - Profiler Admin API**Description**

Enables Knox auto-discovery for the Profiler Admin API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-admin-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_profiler_admin_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Profiler Metrics API**Description**

Enables Knox auto-discovery for the Profiler Metrics API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-metrics-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_profiler_metrics_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Profiler Scheduler API**Description**

Enables Knox auto-discovery for the Profiler Scheduler API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-scheduler-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_profiler_scheduler_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Ranger Admin

Description

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.ranger

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_ranger

Required

false

Enable Auto Discovery (cdp-proxy-api) - ResourceManager

Description

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.resourcemanager

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_resourcemanager

Required

false

Enable Auto Discovery (cdp-proxy-api) - ResourceManager API

Description

Enables Knox auto-discovery for the ResourceManager API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.resourcemanagerapi

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_resourcemanager_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Schema Registry

Description

Enables Knox auto-discovery for the Schema Registry in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.schema-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_schema_registry

Required

false

Enable Auto Discovery (cdp-proxy-api) - Stream Messaging Manager API

Description

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.smm-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_smm

Required

false

Enable Auto Discovery (cdp-proxy-api) - Solr Server

Description

Enables Knox auto-discovery for the Solr Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.solr

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_solr

Required

false

Enable Auto Discovery (cdp-proxy-api) - SQL Streaming Builder - Materialized View Engine API

Description

Enables Knox auto-discovery for the SQL Streaming Builder - Materialized View Engine API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.ssb-mve-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_ssb_mve_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - SQL Streaming Builder - Materialized View Engine API (LB)

Description

Enables Knox auto-discovery for the SQL Streaming Builder - Materialized View Engine API (LB) in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.ssb-mve-api-lb

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_ssb_mve_api_lb

Required

false

Enable Auto Discovery (cdp-proxy-api) - SQL Streaming Builder - Streaming SQL Engine API

Description

Enables Knox auto-discovery for the SQL Streaming Builder - Streaming SQL Engine API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.ssb-sse-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_ssb_sse_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - SQL Streaming Builder - Streaming SQL Engine API (LB)

Description

Enables Knox auto-discovery for the SQL Streaming Builder - Streaming SQL Engine API (LB) in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.ssb-sse-api-lb

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_ssb_sse_api_lb

Required

false

Enable Auto Discovery (cdp-proxy-api) - HBase Master API

Description

Enables Knox auto-discovery for the HBase Master API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.webhbase

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_webhbase

Required

Enable Auto Discovery (cdp-proxy) - Ranger Admin

Description

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.ranger

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_ranger

Required

false

Enable Auto Discovery (cdp-proxy) - Ranger Admin Web UI

Description

Enables Knox auto-discovery for the Ranger Admin Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.rangerui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_ranger_ui

Required

false

Enable Auto Discovery (cdp-proxy) - ResourceManager

Description

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.resourcemanager

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_resourcemanager

Required

false

Enable Auto Discovery (cdp-proxy) - Schema Registry

Description

Enables Knox auto-discovery for the Schema Registry in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.schema-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_schema_registry

Required

false

Enable Auto Discovery (cdp-proxy) - Stream Messaging Manager API

Description

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.smm-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_smm

Required

false

Enable Auto Discovery (cdp-proxy) - Stream Messaging Manager Web UI

Description

Enables Knox auto-discovery for the Stream Messaging Manager Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.smm-ui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_smm_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Solr Server**Description**

Enables Knox auto-discovery for the Solr Server in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.solr

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_solr

Required

false

Enable Auto Discovery (cdp-proxy) - Spark 3 History Server Web UI**Description**

Enables Knox auto-discovery for the Spark 3 History Server Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.spark3historyui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_spark3history_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Spark History Server Web UI**Description**

Enables Knox auto-discovery for the Spark History Server Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.sparkhistoryui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_sparkhistory_ui

Required

false

Enable Auto Discovery (cdp-proxy) - SQL Streaming Builder Web Console

Description

Enables Knox auto-discovery for the SQL Streaming Builder Web Console in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.ssb-ssc-ui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_ssb_ssc_ui

Required

false

Enable Auto Discovery (cdp-proxy) - SQL Streaming Builder WebSocket

Description

Enables Knox auto-discovery for the SQL Streaming Builder WebSocket in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.ssb-ssc-ws

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_ssb_ssc_ws

Required

false

Enable Auto Discovery (cdp-proxy) - SQL Streaming Builder - Streaming SQL Engine UI

Description

Enables Knox auto-discovery for the SQL Streaming Builder - Streaming SQL Engine UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.ssb-sse-ui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_ssb_sse_ui

Required

false

Enable Auto Discovery (cdp-proxy) - SQL Streaming Builder - Streaming SQL Engine UI (LB)

Description

Enables Knox auto-discovery for the SQL Streaming Builder - Streaming SQL Engine UI (LB) in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.ssb-sse-ui-lb

Default Value

	true
API Name	gateway_auto_discovery_cdp_proxy_enabled_ssb_sse_ui_lb
Required	false

Enable Auto Discovery (cdp-proxy) - SQL Streaming Builder - Streaming SQL Engine WebSocket

Description	Enables Knox auto-discovery for the SQL Streaming Builder - Streaming SQL Engine WebSocket in the cdp-proxy topology.
Related Name	gateway.auto.discovery.cdp-proxy.enabled.ssb-sse-ws
Default Value	true
API Name	gateway_auto_discovery_cdp_proxy_enabled_ssb_sse_ws
Required	false

Enable Auto Discovery (cdp-proxy) - SQL Streaming Builder - Streaming SQL Engine WebSocket (LB)

Description	Enables Knox auto-discovery for the SQL Streaming Builder - Streaming SQL Engine WebSocket (LB) in the cdp-proxy topology.
Related Name	gateway.auto.discovery.cdp-proxy.enabled.ssb-sse-ws-lb
Default Value	true
API Name	gateway_auto_discovery_cdp_proxy_enabled_ssb_sse_ws_lb
Required	false

Enable Auto Discovery (cdp-proxy) - WebHDFS API

Description	Enables Knox auto-discovery for the WebHDFS API in the cdp-proxy topology.
Related Name	gateway.auto.discovery.cdp-proxy.enabled.webhdfs
Default Value	true
API Name	gateway_auto_discovery_cdp_proxy_enabled_webhdfs
Required	false

Enable Auto Discovery (cdp-proxy) - ResourceManager Web UI

Description

Enables Knox auto-discovery for the ResourceManager Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.yarnui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_yarn_ui

Required

false

Enable Auto Discovery (cdp-proxy) - ResourceManager Web UI V2

Description

Enables Knox auto-discovery for the ResourceManager Web UI V2 in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.yarnuiv2

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_yarn_ui_v2

Required

false

Enable Auto Discovery (cdp-proxy) - Zeppelin Server Web UI

Description

Enables Knox auto-discovery for the Zeppelin Server Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.zeppelinui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_zeppelin_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Zeppelin Server

Description

Enables Knox auto-discovery for the Zeppelin Server in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.zeppelinws

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_zeppelin_ws

Required

false

Enable Auto Discovery (cdp-proxy-token) - Atlas API**Description**

Enables Knox auto-discovery for the Atlas API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.atlas-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_atlas

Required

false

Enable Auto Discovery (cdp-proxy-token) - Phoenix/Avatica**Description**

Enables Knox auto-discovery for the Phoenix/Avatica API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.avatica

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_avatica

Required

false

Enable Auto Discovery (cdp-proxy-token) - Cloudera Manager API**Description**

Enables Knox auto-discovery for the Cloudera Manager API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.cm-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_cm_api

Required

false

Enable Auto Discovery (cdp-proxy-token) - Cruise Control API**Description**

Enables Knox auto-discovery for the Cruise Control API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.cruise-control-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_cruise_control

Required

false

Enable Auto Discovery (cdp-proxy-token) - Hive Server**Description**

Enables Knox auto-discovery for the Hive Server in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.hive

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_hive

Required

false

Enable Auto Discovery (cdp-proxy-token) - Impala Catalog Server**Description**

Enables Knox auto-discovery for the Impala Catalog Server in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.impala

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_impala

Required

false

Enable Auto Discovery (cdp-proxy-token) - Apache Kafka Connect API**Description**

Enables Knox auto-discovery for the Apache Kafka Connect API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.kafka_connect

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_kafka_connect

Required

false

Enable Auto Discovery (cdp-proxy-token) - Livy Server For Spark3 API**Description**

Enables Knox auto-discovery for the Livy Server For Spark3 API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.livy_for_spark3

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_livy_for_spark3

Required

false

Enable Auto Discovery (cdp-proxy-token) - Livy Server API

Description

Enables Knox auto-discovery for the Livy Server API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.livyserver

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_livyserver

Required

false

Enable Auto Discovery (cdp-proxy-token) - NameNode

Description

Enables Knox auto-discovery for the NameNode in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.namenode

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_namenode

Required

false

Enable Auto Discovery (cdp-proxy-token) - NiFi

Description

Enables Knox auto-discovery for the NiFi in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.nifi

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_nifi

Required

false

Enable Auto Discovery (cdp-proxy-token) - NiFi Registry

Description

Enables Knox auto-discovery for the NiFi Registry in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.nifi-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_nifi_registry

Required

false

Enable Auto Discovery (cdp-proxy-token) - Oozie Server

Description

Enables Knox auto-discovery for the Oozie Server in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.oozie

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_oozie

Required

false

Enable Auto Discovery (cdp-proxy-token) - Profiler Admin API

Description

Enables Knox auto-discovery for the Profiler Admin API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.profiler-admin-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_profiler_admin_api

Required

false

Enable Auto Discovery (cdp-proxy-token) - Profiler Metrics API

Description

Enables Knox auto-discovery for the Profiler Metrics API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.profiler-metrics-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_profiler_metrics_api

Required

false

Enable Auto Discovery (cdp-proxy-token) - Profiler Scheduler API

Description

Enables Knox auto-discovery for the Profiler Scheduler API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.profiler-scheduler-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_profiler_scheduler_api

Required

false

Enable Auto Discovery (cdp-proxy-token) - Ranger Admin

Description

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.ranger

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_ranger

Required

false

Enable Auto Discovery (cdp-proxy-token) - ResourceManager

Description

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.resourcemanager

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_resourcemanager

Required

false

Enable Auto Discovery (cdp-proxy-token) - ResourceManager API

Description

Enables Knox auto-discovery for the ResourceManager API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.resourcemanagerapi

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_resourcemanager_api

Required

false

Enable Auto Discovery (cdp-proxy-token) - Schema Registry

Description

Enables Knox auto-discovery for the Schema Registry in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.schema-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_schema_registry

Required

false

Enable Auto Discovery (cdp-proxy-token) - Stream Messaging Manager API

Description

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.smm-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_smm

Required

false

Enable Auto Discovery (cdp-proxy-token) - Solr Server

Description

Enables Knox auto-discovery for the Solr Server in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.solr

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_solr

Required

false

Enable Auto Discovery (cdp-proxy-token) - SQL Streaming Builder - Materialized View Engine API

Description

Enables Knox auto-discovery for the SQL Streaming Builder - Materialized View Engine API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.ssb-mve-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_ssb_mve_api

Required

false

Enable Auto Discovery (cdp-proxy-token) - SQL Streaming Builder - Materialized View Engine API (LB)

Description

Enables Knox auto-discovery for the SQL Streaming Builder - Materialized View Engine API (LB) in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.ssb-mve-api-lb

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_ssb_mve_api_lb

Required

false

Enable Auto Discovery (cdp-proxy-token) - SQL Streaming Builder - Streaming SQL Engine API

Description

Enables Knox auto-discovery for the SQL Streaming Builder - Streaming SQL Engine API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.ssb-sse-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_ssb_sse_api

Required

false

Enable Auto Discovery (cdp-proxy-token) - SQL Streaming Builder - Streaming SQL Engine API (LB)

Description

Enables Knox auto-discovery for the SQL Streaming Builder - Streaming SQL Engine API (LB) in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.ssb-sse-api-lb

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_ssb_sse_api_lb

Required

false

Enable Auto Discovery (cdp-proxy-token) - HBase Master API**Description**

Enables Knox auto-discovery for the HBase Master API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.webhbase

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_webhbase

Required

false

Enable Auto Discovery (cdp-proxy-token) - WebHDFS API**Description**

Enables Knox auto-discovery for the WebHDFS API in the cdp-proxy-token topology.

Related Name

gateway.auto.discovery.cdp-proxy-token.enabled.webhdfs

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_token_enabled_webhdfs

Required

false

Enable/Disable Service Auto-Discovery**Description**

Whether Knox's service auto-discovery feature is enabled

Related Name

gateway.auto.discovery.enabled

Default Value

true

API Name

gateway_auto_discovery_enabled

Required

false

Knox Simplified Topology Management - Monitoring Interval

Description

Defines the frequency of Cloudera Manager resources (descriptors and shared providers) file (cdp-resources.xml) monitoring.

Related Name

gateway.cloudera.manager.descriptors.monitor.interval

Default Value

10 second(s)

API Name

gateway_cloudera_manager_descriptors_monitor_interval

Required

false

Auto Discovery - Cluster Configuration Monitoring Interval

Description

Defines the frequency of cluster configuration monitoring.

Related Name

gateway.cluster.config.monitor.cm.interval

Default Value

1 minute(s)

API Name

gateway_cluster_configuration_monitor_interval

Required

false

Knox Gateway Configuration Directory

Description

Contains configuration files that apply to the gateway globally (i.e. not cluster specific).

Related Name

gateway_conf_dir

Default Value

/var/lib/knox/gateway/conf

API Name

gateway_conf_dir

Required

false

Knox Gateway Data Directory

Description

Contains security and topology specific artifacts as well as important applications for admin-ui

Related Name

gateway_data_dir

Default Value

/var/lib/knox/gateway/data

API Name

gateway_data_dir

Required

false

Knox Gateway Database - SSL Enabled

Description

Knox Gateway Database SSL enabled.

Related Name

gateway.database.ssl.enabled

Default Value

false

API Name

gateway_database_ssl_enabled

Required

false

Knox Gateway Database - SSL Certificate File

Description

Specifies database certificate file location.

Related Name

gateway.database.ssl.truststore.file

Default Value

API Name

gateway_database_ssl_truststore_file

Required

false

Knox Gateway Database - SSL Certificate File Password

Description

The password for Knox Gateway SSL certificate file.

Related Name

gateway_database_ssl_truststore_file_password

Default Value

API Name

gateway_database_ssl_truststore_file_password

Required

false

Knox Gateway Database - SSL Verify Server Certificate

Description

Verify Knox Gateway Database SSL server certificate.

Related Name

gateway.database.ssl.verify.server.cert

Default Value

	false
API Name	gateway_database_ssl_verify_server_cert
Required	false

Gateway - Default API Topology Name

Description	The default API Knox topology name.
Related Name	default.api.topology.name
Default Value	cdp-proxy-api
API Name	gateway_default_api_topology_name
Required	false

Gateway - Default App Topology Name

Description	When a topology file is deployed with a file name that matches the configured default topology name, a specialized mapping for URLs is installed for that particular topology. This allows the URLs that are expected by the existing Hadoop CLIs for WebHDFS to be used in interacting with the specific Hadoop cluster that is represented by the default topology file.
Related Name	default.app.topology.name
Default Value	cdp-proxy
API Name	gateway_default_topology_name
Required	false

Knox Simplified Topology Management - cdp-proxy

Description	Knox descriptor block for 'cdp-proxy' topology. 'providerConfigRef' indicates the name of shared-provider the given descriptor would like to use. The rest of the entries hold service information. The structure of an service information entry is: \$SERVICE_NAME[: \$PARAMETER_NAME=\$PARAMETER_VALUE]. The 'url' and 'version' parameter names are preserved keywords to set the given service's URL and version. For instance: HIVE:url=http://localhost:123, HIVE:version:3.0.0, HIVE:httpclient.socketTimeout=5m, HIVE:test.pramameter.name=test.parameter.value
Related Name	cdp-proxy
Default Value	providerConfigRef=sso provisionEncryptQueryStringCredential=false

API Name

gateway_descriptor_cdp_proxy

Required

false

Knox Simplified Topology Management - cdp-proxy-api**Description**

Knox descriptor block for 'cdp-proxy-api topology. 'providerConfigRef' indicates the name of shared-provider the given descriptor would like to use. The rest of the entries hold service information. The structure of an service information entry is: \$SERVICE_NAME[: \$PARAMETER_NAME=\$PARAMETER_VALUE]. The 'url' and 'version' parameter names are preserved keywords to set the given service's URL and version. For instance: NIFI, HIVE:url=http://localhost:123, HIVE:version:3.0.0, HIVE:httpclient.socketTimeout=5m, HIVE:test.pramameter.name=test.parameter.value

Related Name

cdp-proxy-api

Default Value

providerConfigRef=pam provisionEncryptQueryStringCredential=false

API Name

gateway_descriptor_cdp_proxy_api

Required

false

Knox Simplified Topology Management - cdp-proxy-token**Description**

Knox descriptor block for 'cdp-proxy-token topology. 'providerConfigRef' indicates the name of shared-provider the given descriptor would like to use. The rest of the entries hold service information. The structure of an service information entry is: \$SERVICE_NAME[: \$PARAMETER_NAME=\$PARAMETER_VALUE]. The 'url' and 'version' parameter names are preserved keywords to set the given service's URL and version. For instance: NIFI, HIVE:url=http://localhost:123, HIVE:version:3.0.0, HIVE:httpclient.socketTimeout=5m, HIVE:test.pramameter.name=test.parameter.value

Related Name

cdp-proxy-token

Default Value

providerConfigRef=tokenbased provisionEncryptQueryStringCredential=false

API Name

gateway_descriptor_cdp_proxy_token

Required

false

Knox Gateway Dispatch Whitelist**Description**

The whitelist to be applied for dispatches associated with the service roles specified by gateway.dispatch.whitelist.services. By default this is replaced with DEFAULT or HTTPS_ONLY based on if TLS is enabled.

Related Name

gateway.dispatch.whitelist

Default Value

WHITELIST_CONFIG_REPLACEME

API Name

gateway_dispatch_whitelist

Required

false

Knox Gateway Dispatch Whitelist Services**Description**

The comma-delimited list of service roles for which the 'gateway.dispatch.whitelist' should be applied

Related Name

gateway.dispatch.whitelist.services

Default Value

DATANODE, HBASEUI, HDFSUI, IMPALAUUI, JOBHISTORYUI, KUDUUI, NODEUI, YARNUI, YARNUIV2, knoxauth

API Name

gateway_dispatch_whitelist_services

Required

false

Gateway Config Directory**Description**

The directory within 'gateway_data_dir' that contains gateway topology files and deployments.

Related Name

gateway.gateway.conf.dir

Default Value

deployments

API Name

gateway_gateway_conf_dir

Required

false

Knox Gateway Initial/Max Heapsize**Description**

Initial/Maximum size for the Java Process heap. Passed to Java -Xmx/-Xms. Measured in megabytes.

Related Name

gateway_heap_size

Default Value

1 GiB

API Name

gateway_heap_size

Required

true

Additional Gateway Java Options

Description

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here. -Xmx/-Xms should not be specified here: to set the heapsize use the 'Knox Gateway Initial/Max Heapsize' parameter

Related Name

gateway_java_opts

Default Value**API Name**

gateway_java_opts

Required

false

Admin Groups

Description

Admin groups for Knox

Related Name

gateway.knox.admin.groups

Default Value**API Name**

gateway_knox_admin_groups

Required

false

Knox Token Integration - Allowed JWS Types

Description

This is an optional configuration parameter to allow a comma-separated list of token types Knox will allow while validating JSON Web Signature (JWS) using JWKS URLs. Defaults to 'JWT'. Typical customized value is 'at+jwt, JWT'.

Related Name

gateway_knox_token_allowed_jws_types

Default Value

JWT

API Name

gateway_knox_token_allowed_jws_types

Required

false

Knox Token Integration - Eviction Grace Period

Description

Defines the grace period for which an expired token's state will avoid eviction. Setting this to zero means there is no grace period, and token state is evicted based on expiration only. See `idbroker_knox_token_eviction_interval` for more information.

Related Name

gateway.knox.token.eviction.grace.period

Default Value

0 second(s)

API Name

gateway_knox_token_eviction_grace_period

Required

false

Knox Token Integration - Expected JWT Issuer

Description

Indicates the expected issuer of a received token must match. If not defined, Knox will use 'KNOXSSO'.

Related Name

gateway_knox_token_expected_jwt_issuer

Default Value

API Name

gateway_knox_token_expected_jwt_issuer

Required

false

Knox Token Integration - Expected JWT Signature Algorithm

Description

Indicates the expected signature algorithm Knox should use to verify the submitted JWT's signature. If not defined, Knox will use 'RS256'.

Related Name

gateway_knox_token_expected_jwt_signature_algorithm

Default Value

API Name

gateway_knox_token_expected_jwt_signature_algorithm

Required

false

Knox Token Integration - Expected Principal Claim

Description

If that configuration parameter is defined, Knox will use this to get the value of this claim from the submitted JWT upon verification instead of using the default principal.

Related Name

gateway_knox_token_expected_principal_claim

Default Value

API Name

gateway_knox_token_expected_principal_claim

Required

false

Knox Token Integration - JWKS URL

Description

This optional configuration parameter enables end-users to declare their JWKS URL. The JSON Web Key Set (JWKS) is a set of keys containing the public keys used to verify any JSON Web Token (JWT) issued by the authorization server and signed using the RS256 signing algorithm.

Related Name

gateway_knox_token_jwks_url

Default Value**API Name**

gateway_knox_token_jwks_url

Required

false

Knox Token Integration - User Limit**Description**

The number of tokens a user is allowed to manage. Setting this to -1 indicates unlimited token management.

Related Name

gateway.knox.token.limit.per.user

Default Value

10

API Name

gateway_knox_token_limit_per_user

Required

false

Knox Token Integration - Users Who Can See All Tokens**Description**

A comma-separated list of user names who can see all tokens on the Token Management page.

Related Name

gateway.knox.token.management.users.can.see.all.tokens

Default Value**API Name**

gateway_knox_token_management_user_can_see_all_tokens

Required

false

Knox Token Integration - Renewer Whitelist**Description**

This is an optional configuration parameter to authorize the comma-separated list of users to invoke the associated token renewal and/or revocation APIs.

Related Name

gateway_knox_token_renewer_whitelist

Default Value**API Name**

gateway_knox_token_renewer_whitelist

Required

false

Knox Token Integration - Token Type**Description**

This is an optional configuration parameter to indicate the type of the JWT token that Knox generates.

Related Name

gateway_knox_token_type

Default Value

JWT

API Name

gateway_knox_token_type

Required

false

Knox Token Integration - User Limit Exceeded Action**Description**

The action Knox will take if user limit is exceeded while trying to create a new Knox Token. If REMOVE_OLDEST is selected then the oldest token of the user, who the token is being generated for, will be removed. Otherwise, if RETURN_ERROR is selected, Knox will return an error response with 403 error code.

Related Name

gateway.knox.token.user.limit.exceeded.action

Default Value

RETURN_ERROR

API Name

gateway_knox_token_user_limit_exceeded_action

Required

false

Knox Gateway Logger Configuration (Safety Valve)**Description**

Knox Gateway Logger Configuration Safety Valve for loggers in log4j2 configuration file.

Related Name

gateway_loggers_safety_valve

Default Value

org.apache.knox.gateway=INFO

API Name

gateway_loggers_safety_valve

Required

false

Knox Master Secret**Description**

The master secret is used to access secured artifacts by the gateway instance. Keystore, trust stores and credential stores are all protected with the master secret. NOTE: changing the master secret will require you to change passwords protecting the keystores for the gateway, identity keystores and all credential stores

Related Name

gateway_master_secret

Default Value

API Name

gateway_master_secret

Required

true

Gateway Path

Description

The default context path for the gateway.

Related Name

gateway.path

Default Value

gateway

API Name

gateway_path

Required

true

Ranger Knox Plugin Conf Path

Description

Staging directory for Ranger Knox Plugin Configuration. This should generally not be changed.

Related Name

gateway_ranger_knox_plugin_conf_path

Default Value

/var/lib/knox/ranger-knox-plugin

API Name

gateway_ranger_knox_plugin_conf_path

Required

true

Ranger Knox Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.knox.policy.cache.dir

Default Value

/var/lib/ranger/knox/gateway/policy-cache

API Name

gateway_ranger_knox_plugin_policy_cache_directory

Required

true

Ranger Plugin Trusted Proxy IP Address**Description**

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.knox.trusted.proxy.ipaddress

Default Value**API Name**

gateway_ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address**Description**

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.knox.use.x-forwarded-for.ipaddress

Default Value

false

API Name

gateway_ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Cookie Scoping Enabled**Description**

Enable/Disable cookie scoping feature.

Related Name

gateway.scope.cookies.feature.enabled

Default Value

false

API Name

gateway_scope_cookies_feature_enabled

Required

false

Knox Gateway Security Directory**Description**

Contains security specific artifacts such as the persisted master secret, signing material and credential stores

Related Name

gateway.security.dir

Default Value

/var/lib/knox/gateway/data/security

API Name

gateway_security_dir

Required

false

Session Verification - Service Implementation

Description

Knox's internal implementation of its own session verification service.

Related Name

gateway.service.concurrentsessionverifier.impl

Default Value

org.apache.knox.gateway.session.control.EmptyConcurrentSessionVerifier

API Name

gateway_service_concurrentsessionverifier_impl

Required

false

Knox Token Integration - Token State Service Implementation

Description

Knox's internal implementation of its own token state service.

Related Name

gateway.service.tokenstate.impl

Default Value

org.apache.knox.gateway.services.token.impl.AliasBasedTokenStateService

API Name

gateway_service_tokenstate_impl

Required

false

Session Verification - Non-privileged User Limit

Description

The number of UI sessions a 'non-privileged' user can have

Related Name

gateway.session.verification.non.privileged.user.limit

Default Value

2

API Name

gateway_session_verification_non_privileged_user_limit

Required

false

Session Verification - Privileged User Limit

Description

The number of UI sessions a 'privileged' user can have

Related Name

gateway.session.verification.privileged.user.limit

Default Value

3

API Name

gateway_session_verification_privileged_user_limit

Required

false

Session Verification - Privileged Users

Description

Indicates a list of users that are qualified 'privileged'.

Related Name

gateway.session.verification.privileged.users

Default Value**API Name**

gateway_session_verification_privileged_users

Required

false

Session Verification - Unlimited Users

Description

Indicates a list of (super) users that can have as many UI sessions as they want.

Related Name

gateway.session.verification.unlimited.users

Default Value**API Name**

gateway_session_verification_unlimited_users

Required

false

Security - Signing Key Alias

Description

The alias for the signing keypair within the keystore specified via gateway_signing_keystore_name

Related Name

gateway.signing.key.alias

Default Value**API Name**

gateway_signing_key_alias

Required

false

Security - Signing Keystore Name

Description

The filename of keystore file that contains the signing keypair

Related Name

gateway.signing.keystore.name

Default Value

API Name

gateway_signing_keystore_name

Required

false

Security - Signing Keystore Type

Description

The type of the keystore file where the signing keypair is stored. See gateway_signing_keystore_name

Related Name

gateway.signing.keystore.type

Default Value

API Name

gateway_signing_keystore_type

Required

false

Knox Simplified Topology Management - SSO Authentication Provider

Description

Authentication provider declaration used by the UIs using the Knox SSO capabilities such as the Admin and Home Page UIs.

Related Name

gateway_sso_authentication_provider

Default Value

role=authentication authentication.name=ShiroProvider authentication.param.sessionTimeout=30 authentication.param.redirectToUrl=/\$GATEWAY_PATH/knox_sso/knoxauth/login.html authentication.param.restrictedCookies=rememberme, WWW-Authenticate authentication.param.main.pamRealm=org.apache.knox.gateway.shirorealm.KnoxPamRealm authentication.param.main.pamRealm.service=login authentication.param.urls./**=authcBasic

API Name

gateway_sso_authentication_provider

Required

false

Security - TLS Certificate Alias (Optional)

Description

The alias for the Gateway's TLS certificate and keypair within the default keystore or the keystore specified via gateway.tls.keystore.path

Related Name

gateway_tls_certificate_alias

Default Value

API Name

gateway_tls_certificate_alias

Required

false

Security - Use FQDN as TLS Certificate Alias

Description

If enabled, the FQDN will be used as gateway.tls.key.alias in gateway-site.xml; otherwise the UQDN is used. This behavior is overwritten if gateway_tls_certificate_alias is set. In this case the value in gateway_tls_certificate_alias is used as alias.

Related Name

gateway_tls_certificate_alias_use_fqdn

Default Value

true

API Name

gateway_tls_certificate_alias_use_fqdn

Required

false

Security - TLS Certificate Path (Optional)

Description

The path for the TLS certificate which Knox will import in the CM generated/distributed keystore in case SSL is enabled (if any).

Related Name

gateway_tls_certificate_path

Default Value

API Name

gateway_tls_certificate_path

Required

false

Knox Token Integration - Allowed Token Management Implementations

Description

A list implementation names that Knox considers allowed on its own token generation page.

Related Name

gateway_token_generation_allowed_tss_backends

Default Value

JDBCTokenStateService, AliasBasedTokenStateService

API Name

gateway_token_generation_allowed_tss_backends

Required

false

Knox Token Integration - Enable Impersonation

Description

Indicates if Knox Token impersonation is enabled.

Related Name

gateway_token_generation_enable_impersonation

Default Value

false

API Name

gateway_token_generation_enable_impersonation

Required

false

Knox Token Integration - Enable Lifespan Input

Description

Whether the lifespan input fields are enabled on Knox's token generation page.

Related Name

gateway_token_generation_enable_lifespan_input

Default Value

false

API Name

gateway_token_generation_enable_lifespan_input

Required

false

Knox Token Integration - Configured Token TTL

Description

The value of 'knox.token.ttl' in the homepage topology.

Related Name

gateway_token_generation_knox_token_ttl

Default Value

1 hour(s)

API Name

gateway_token_generation_knox_token_ttl

Required

false

Topology Deployment Check - Delay

Description

Indicates the delay between two subsequent attempts while topology deployment check is in progress.

Related Name

gateway_topology_deployment_check_delay

Default Value

3 second(s)

API Name

gateway_topology_deployment_check_delay

Required

false

Topology Deployment Check - Time Limit

Description

The time limit until topology deployment check will run before it reports an error.

Related Name

gateway_topology_deployment_check_time_limit

Default Value

10 minute(s)

API Name

gateway_topology_deployment_check_time_limit

Required

false

Websockets Enabled

Description

Enable/Disable websocket feature.

Related Name

gateway.websocket.feature.enabled

Default Value

true

API Name

gateway_websocket_feature_enabled

Required

false

X-Forwarded Header Context Service Name

Description

The service name to be added in x-forward-context header.

Related Name

gateway.xforwarded.header.context.append.servicename

Default Value

LIVYSERVER, LIVY_FOR_SPARK3

API Name

gateway_xforwarded_header_context_append_servicename

Required

false

Admin Group Mapping - Class Name

Description

The class name used for Hadoop admin group mapping

Related Name

gateway.group.config.hadoop.security.group.mapping

Default Value

org.apache.hadoop.security.ShellBasedUnixGroupsMapping

API Name

hadoop_security_group_mapping_class

Required

false

Hadoop Group Mapping - Negative Cache Expiration

Description

The Hadoop group mapping negative cache expiration in seconds

Related Name

gateway.group.config.hadoop.security.groups.negative-cache.secs

Default Value

5 second(s)

API Name

hadoop_security_group_negative_cache_expiration_seconds

Required

false

Hadoop Group Mapping - Positive Cache Expiration

Description

The Hadoop group mapping positive cache expiration in seconds

Related Name

gateway.group.config.hadoop.security.groups.cache.secs

Default Value

10 second(s)

API Name

hadoop_security_group_positive_cache_expiration_seconds

Required

false

krb5.conf Location

Description

Absolute path to krb5.conf file

Related Name

java.security.krb5.conf

Default Value

/etc/krb5.conf

API Name

java_security_krb5_conf

Required

false

Knox Gateway Root Logger Threshold

Description

The minimum log level for Knox Gateway root level logs

Related Name

log_threshold

Default Value

INFO

API Name

log_threshold

Required

false

Knox Gateway Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Knox Gateway logs. Typically used by log4j or logback.

Related Name

max_log_backup_index

Default Value

10

API Name

max_log_backup_index

Required

false

Knox Gateway Max Log Size**Description**

The maximum size, in megabytes, per log file for Knox Gateway logs. Typically used by log4j or logback.

Related Name

max_log_size

Default Value

200 MiB

API Name

max_log_size

Required

false

Ranger Knox Plugin Audit Hdfs Spool Directory Path**Description**

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/knox/gateway/audit/hdfs/spool

API Name

ranger_audit_hdfs_spool_dir

Required

true

Ranger Knox Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/knox/gateway/audit/solr/spool

API Name

ranger_audit_solr_spool_dir

Required

true

KRB5 Debug

Description

Boolean flag indicating whether to enable debug messages for krb5 authentication

Related Name

sun.security.krb5.debug

Default Value

false

API Name

sun_security_krb5_debug

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Gateway HTTP Port

Description

The HTTP port for the Gateway.

Related Name

gateway.port

Default Value

8443

API Name

gateway_port

Required

true

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Knox Gateway TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Knox Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

gateway.httpclient.truststore.path

Default Value**API Name**

ssl_client_truststore_location

Required

false

Knox Gateway TLS/SSL Trust Store Password**Description**

The password for the Knox Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Knox Gateway**Description**

Encrypt communication between clients and Knox Gateway using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

knox.enableTLS

Default Value

false

API Name

ssl_enabled

Required

false

Knox Gateway TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Knox Gateway is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

gateway.tls.keystore.path

Default Value

API Name

ssl_server_keystore_location

Required

false

Knox Gateway TLS/SSL Server Keystore File Password

Description

The password for the Knox Gateway keystore file.

Related Name

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

	jstack
API Name	stacks_collection_method
Required	false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description	Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties_role_safety_valve
Required	true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-token.properties

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-token.properties parameter.
Related Name	
Default Value	false
API Name	

role_config_suppression_conf/auto-discovery-advanced-configuration-cdp-proxy-token.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/auto-discovery-advanced-configuration-cdp-proxy.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/cdp-resources.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/gateway-site.xml_role_safety_valve

Required

Suppress Parameter Validation: Knox Gateway Data Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Data Directory parameter.

Related Name

Default Value

	false
API Name	role_config_suppression_gateway_data_dir
Required	true

Suppress Parameter Validation: Knox Gateway Database - SSL Certificate File

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Database - SSL Certificate File parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_gateway_database_ssl_truststore_file
Required	true

Suppress Parameter Validation: Knox Gateway Database - SSL Certificate File Password

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Database - SSL Certificate File Password parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_gateway_database_ssl_truststore_file_password
Required	true

Suppress Parameter Validation: Gateway - Default API Topology Name

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway - Default API Topology Name parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_gateway_default_api_topology_name
Required	true

Suppress Parameter Validation: Gateway - Default App Topology Name

Description	
--------------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway - Default App Topology Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_default_topology_name

Required

true

Suppress Parameter Validation: Knox Simplified Topology Management - cdp-proxy

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - cdp-proxy parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_descriptor_cdp_proxy

Required

true

Suppress Parameter Validation: Knox Simplified Topology Management - cdp-proxy-api

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - cdp-proxy-api parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_descriptor_cdp_proxy_api

Required

true

Suppress Parameter Validation: Knox Simplified Topology Management - cdp-proxy-token

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - cdp-proxy-token parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_descriptor_cdp_proxy_token

Required

Suppress Parameter Validation: Knox Gateway Dispatch Whitelist

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Dispatch Whitelist parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_dispatch_whitelist

Required

true

Suppress Parameter Validation: Knox Gateway Dispatch Whitelist Services

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Dispatch Whitelist Services parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_dispatch_whitelist_services

Required

true

Suppress Parameter Validation: Gateway Config Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Config Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_gateway_conf_dir

Required

true

Suppress Parameter Validation: Knox Gateway Initial/Max Heapsizes

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Initial/Max Heapsizes parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_heap_size

Required

true

Suppress Parameter Validation: Additional Gateway Java Options**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Gateway Java Options parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_java_opts

Required

true

Suppress Parameter Validation: Admin Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Groups parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_knox_admin_groups

Required

true

Suppress Parameter Validation: Knox Token Integration - Allowed JWS Types**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Token Integration - Allowed JWS Types parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_knox_token_allowed_jws_types

Required

true

Suppress Parameter Validation: Knox Token Integration - Expected JWT Issuer**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Token Integration - Expected JWT Issuer parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_knox_token_expected_jwt_issuer

Required

true

Suppress Parameter Validation: Knox Token Integration - Expected JWT Signature Algorithm

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Token Integration - Expected JWT Signature Algorithm parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_knox_token_expected_jwt_signature_algorithm

Required

true

Suppress Parameter Validation: Knox Token Integration - Expected Principal Claim

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Token Integration - Expected Principal Claim parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_knox_token_expected_principal_claim

Required

true

Suppress Parameter Validation: Knox Token Integration - JWKS URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Token Integration - JWKS URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_knox_token_jwks_url

Required

true

Suppress Parameter Validation: Knox Token Integration - Users Who Can See All Tokens

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Token Integration - Users Who Can See All Tokens parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_knox_token_management_user_can_see_all_tokens

Required

true

Suppress Parameter Validation: Knox Token Integration - Renewer Whitelist

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Token Integration - Renewer Whitelist parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_knox_token_renewer_whitelist

Required

true

Suppress Parameter Validation: Knox Token Integration - Token Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Token Integration - Token Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_knox_token_type

Required

true

Suppress Parameter Validation: Knox Gateway Logger Configuration (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Logger Configuration (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_loggers_safety_valve

Required

true

Suppress Parameter Validation: Knox Master Secret

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Master Secret parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_master_secret

Required

true

Suppress Parameter Validation: Gateway Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_path

Required

true

Suppress Parameter Validation: Gateway HTTP Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway HTTP Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_port

Required

true

Suppress Parameter Validation: Ranger Knox Plugin Conf Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Conf Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_conf_path

Required

true

Suppress Parameter Validation: Ranger Knox Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Policy Cache Directory Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_policy_cache_directory

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Knox Gateway Security Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Security Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_security_dir

Required

true

Suppress Parameter Validation: Session Verification - Privileged Users

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Session Verification - Privileged Users parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_session_verification_privileged_users

Required

true

Suppress Parameter Validation: Session Verification - Unlimited Users

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Session Verification - Unlimited Users parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_session_verification_unlimited_users

Required

true

Suppress Parameter Validation: Security - Signing Key Alias

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Key Alias parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_signing_key_alias

Required

true

Suppress Parameter Validation: Security - Signing Keystore Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_signing_keystore_name

Required

true

Suppress Parameter Validation: Security - Signing Keystore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Type parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_signing_keystore_type

Required

true

Suppress Parameter Validation: Knox Simplified Topology Management - SSO Authentication Provider

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - SSO Authentication Provider parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_sso_authentication_provider

Required

true

Suppress Parameter Validation: Security - TLS Certificate Alias (Optional)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - TLS Certificate Alias (Optional) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_tls_certificate_alias

Required

true

Suppress Parameter Validation: Security - TLS Certificate Path (Optional)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - TLS Certificate Path (Optional) parameter.

Related Name**Default Value**

false

API Name
role_config_suppression_gateway_tls_certificate_path

Required
true

Suppress Parameter Validation: Knox Token Integration - Allowed Token Management Implementations

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Token Integration - Allowed Token Management Implementations parameter.

Related Name

Default Value
false

API Name
role_config_suppression_gateway_token_generation_allowed_tss_backends

Required
true

Suppress Parameter Validation: X-Forwarded Header Context Service Name

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the X-Forwarded Header Context Service Name parameter.

Related Name

Default Value
false

API Name
role_config_suppression_gateway_xforwarded_header_context_append_servicename

Required
true

Suppress Parameter Validation: Admin Group Mapping - Class Name

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Group Mapping - Class Name parameter.

Related Name

Default Value
false

API Name
role_config_suppression_hadoop_security_group_mapping_class

Required
true

Suppress Parameter Validation: krb5.conf Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the krb5.conf Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_java_security_krb5_conf

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_knox_gateway_role_env_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Suppress Health Test: Ranger Plugin Solr Spool Directory Size**Description**

Whether to suppress the results of the Ranger Plugin Solr Spool Directory Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_knox_gateway_ranger_plugin_solr_spool_directory_size_health

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_knox_gateway_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_knox_gateway_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_knox_gateway_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_knox_knox_gateway_unexpected_exits

Required

true

Knox IDBroker

Advanced

Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml

Description

For advanced use only. A string to be inserted into conf/cdp-resources.xml for this role only.

Related Name**Default Value****API Name**

conf/cdp-resources.xml_role_safety_valve

Required

false

Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-reloadable.xml**Description**

For advanced use only. A string to be inserted into conf/gateway-reloadable.xml for this role only.

Related Name**Default Value****API Name**

conf/gateway-reloadable.xml_role_safety_valve

Required

false

Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml**Description**

For advanced use only. A string to be inserted into conf/gateway-site.xml for this role only.

Related Name**Default Value****API Name**

conf/gateway-site.xml_role_safety_valve

Required

false

Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/kerberos_auth_to_local_rules.properties**Description**

For advanced use only. A string to be inserted into conf/kerberos_auth_to_local_rules.properties for this role only.

Related Name**Default Value****API Name**

conf/kerberos_auth_to_local_rules.properties_role_safety_valve

Required

false

Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

IDBROKER_role_env_safety_valve

Required

false

Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs**Knox IDBroker Log Directory****Description**

The log directory for log files of the role Knox IDBroker.

Related Name

log_dir

Default Value

/var/log/knox/idbroker

API Name

log_dir

Required

false

Knox IDBroker Logging Threshold

Description

The minimum log level for Knox IDBroker logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Knox IDBroker Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Knox IDBroker logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Knox IDBroker Max Log Size

Description

The maximum size, in megabytes, per log file for Knox IDBroker logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

idbroker_fd_thresholds

Required

false

Knox IDBroker Host Health Test

Description

When computing the overall Knox IDBroker health, consider the host's health.

Related Name

Default Value

true

API Name

idbroker_host_health_enabled

Required

false

Knox IDBroker Process Health Test

Description

Enables the health test that the Knox IDBroker's process state is consistent with the role configuration

Related Name

Default Value

	true
API Name	idbroker_scm_health_enabled
Required	false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name

Default Value

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name

Default Value

API Name

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

otelcol_exporters

Required

false

OpenTelemetry Collector Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

otelcol_extensions

Required

false

OpenTelemetry Collector Helper Port

Description

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name

Default Value

API Name

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: `$HOST_NAME`, `$CLUSTER_NAME`, `$CLUSTER_ID`, `$SERVICE_TYPE`, `$SERVICE_NAME`, `$ROLE_NAME`, `$ROLE_TYPE`, `$ROLE_PARAM(my_parameter_name)` - e.g.: a port parameter for the role's metrics, `$DECODE_B64(...)` and `$DECODE_URL(...)` to decode encoded parameters, `$ENV_PARAM(name)` to fetch params from the process' environment, `$SYS_PARAM(name)` to fetch java system properties.

Related Name

Default Value

API Name

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password

Description

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_password)` expression. Specify `$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name

Default Value

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_url)` expression. Specify `$INFRA(cdp_request_signer_url)` when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

`$INFRA(cdp_request_signer_url)`

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_exporters

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_extensions

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_processors

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_rtm_logs_receivers

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_service

Required

false

OpenTelemetry Collector Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other**Knox IDBroker Diagnostics Collection Timeout****Description**

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name**Default Value**

5 minute(s)

API Name

`csd_role_diagnostics_timeout`

Required

false

Knox IDBroker AWS Credentials Key**Description**

The AWS credentials key

Related Name

`idbroker_aws_credentials_key`

Default Value**API Name**

`idbroker_aws_credentials_key`

Required

false

Knox IDBroker AWS Credentials Secret

Description

The AWS credentials secret

Related Name

idbroker_aws_credentials_secret

Default Value**API Name**

idbroker_aws_credentials_secret

Required

false

Knox IDBroker AWS Group Mapping

Description

The list of AWS group-role mappings in 'group=role[:group=role]...[:group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=arn:aws:iam:XYZ:role/s3full;audit=arn:aws:iam:XYZ:role/s3Read

Related Name

idbroker.aws.group.role.mapping

Default Value**API Name**

idbroker_aws_group_mapping

Required

false

Knox IDBroker AWS User Default Group Mapping

Description

The list of AWS user default group mappings in 'user=group[:user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

Related Name

idbroker.aws.user.default.group.mapping

Default Value**API Name**

idbroker_aws_user_default_group_mapping

Required

false

Knox IDBroker AWS User Mapping

Description

The list of AWS user-role mappings in 'user=role[:user=role]...[:user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=arn:aws:iam:XYZ:role/s3full;guest=arn:aws:iam:XYZ:role/s3Read

Related Name

idbroker.aws.user.role.mapping

Default Value**API Name**

idbroker_aws_user_mapping

Required

false

Knox IDBroker AZURE ADLS2 Tenant Name**Description**

The name of the AZURE AD tenant. A tenant is a representation of an organization. It's a dedicated instance of Azure AD that an organization or application developer receives when the organization or application developer creates a relationship with Microsoft

Related Name

idbroker_azure_adls2_tenant_name

Default Value**API Name**

idbroker_azure_adls2_tenant_name

Required

false

Knox IDBroker AZURE 'blob-contributor' ClientID**Description**

The client ID credential for 'blob-contributor' role

Related Name

idbroker_azure_blob_contributor_clientid

Default Value**API Name**

idbroker_azure_blob_contributor_clientid

Required

false

Knox IDBroker AZURE 'blob-contributor' Secret**Description**

The secret credential for 'blob-contributor' role

Related Name

idbroker_azure_blob_contributor_secret

Default Value**API Name**

idbroker_azure_blob_contributor_secret

Required

false

Knox IDBroker AZURE 'blob-reader' ClientID**Description**

The client ID credential for 'blob-reader' role

Related Name

idbroker_azure_blob_reader_clientid

Default Value**API Name**

idbroker_azure_blob_reader_clientid

Required

false

Knox IDBroker AZURE 'blob-reader' Secret**Description**

The secret credential for 'blob-reader' role

Related Name

idbroker_azure_blob_reader_secret

Default Value**API Name**

idbroker_azure_blob_reader_secret

Required

false

Knox IDBroker AZURE Group Mapping**Description**

The list of AZURE group-role mappings in 'group=role[;group=role]...[;group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=blob-contributor

Related Name

idbroker.adls2.group.role.mapping

Default Value**API Name**

idbroker_azure_group_mapping

Required

false

Knox IDBroker AZURE User Default Group Mapping**Description**

The list of AZURE user default group mappings in 'user=group[;user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

Related Name

idbroker.azure.user.default.group.mapping

Default Value**API Name**

idbroker_azure_user_default_group_mapping

Required

false

Knox IDBroker AZURE User Mapping

Description

The list of AZURE user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=blob-contributor

Related Name

idbroker.adls2.user.role.mapping

Default Value**API Name**

idbroker_azure_user_mapping

Required

false

Knox IDBroker AZURE VM Assumer Identity

Description

A user assigned managed identity that has Virtual Machine Contributor and Managed Identity Operator roles scoped at the resource group where IDBroker Virtual Machine is running.

Related Name

idbroker_azure_vm_assumer_identity

Default Value**API Name**

idbroker_azure_vm_assumer_identity

Required

false

Knox IDBroker Configuration Directory

Description

Contains configuration files that apply to the gateway globally (i.e. not cluster specific).

Related Name

idbroker_conf_dir

Default Value

/var/lib/knox/idbroker/conf

API Name

idbroker_conf_dir

Required

false

Knox IDBroker Data Directory

Description

Contains security and topology specific artifacts as well as important applications for admin-ui

Related Name

idbroker_data_dir

Default Value

/var/lib/knox/idbroker/data

API Name

`idbroker_data_dir`**Required**`false`**Gateway - Default API Topology Name****Description**

The default API Knox topology name.

Related Name`default.api.topology.name`**Default Value**`cdp-proxy-api`**API Name**`idbroker_default_api_topology_name`**Required**`false`**Gateway - Default App Topology Name****Description**

When a topology file is deployed with a file name that matches the configured default topology name, a specialized mapping for URLs is installed for that particular topology. This allows the URLs that are expected by the existing Hadoop CLIs for WebHDFS to be used in interacting with the specific Hadoop cluster that is represented by the default topology file.

Related Name`default.app.topology.name`**Default Value****API Name**`idbroker_default_topology_name`**Required**`false`**Gateway Config Directory****Description**

The directory within 'idbroker_data_dir' that contains gateway topology files and deployments.

Related Name`gateway.gateway.conf.dir`**Default Value**`deployments`**API Name**`idbroker_gateway_gateway_conf_dir`**Required**`false`**Admin Groups****Description**

Admin groups for Knox

Related Name

gateway.knox.admin.groups

Default Value**API Name**

idbroker_gateway_knox_admin_groups

Required

false

Gateway Path**Description**

The default context path for the gateway.

Related Name

gateway.path

Default Value

gateway

API Name

idbroker_gateway_path

Required

true

Cookie Scoping Enabled**Description**

Enable/Disable cookie scoping feature.

Related Name

gateway.scope.cookies.feature.enabled

Default Value

false

API Name

idbroker_gateway_scope_cookies_feature_enabled

Required

false

Security - Signing Key Alias**Description**

The alias for the signing keypair within the keystore specified via
idbroker_gateway_signing_keystore_name

Related Name

gateway.signing.key.alias

Default Value**API Name**

idbroker_gateway_signing_key_alias

Required

false

Security - Signing Keystore Name

Description

The filename of keystore file that contains the signing keypair

Related Name

gateway.signing.keystore.name

Default Value**API Name**

idbroker_gateway_signing_keystore_name

Required

false

Security - Signing Keystore Type

Description

The type of the keystore file where the signing keypair is stored. See
idbroker_gateway_signing_keystore_name

Related Name

gateway.signing.keystore.type

Default Value**API Name**

idbroker_gateway_signing_keystore_type

Required

false

Knox IDBroker GCP Credential Key

Description

The GCP Credential Key

Related Name

idbroker_gcp_credential_key

Default Value**API Name**

idbroker_gcp_credential_key

Required

false

Knox IDBroker GCP Credential Secret

Description

The GCP Credential Secret

Related Name

idbroker_gcp_credential_secret

Default Value**API Name**

idbroker_gcp_credential_secret

Required

false

Knox IDBroker GCP Group Mapping

Description

The list of GCP group-role mappings in 'group=role[:group=role]...[:group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=storage-admin@XYZ.iam.gserviceaccount.com;audit=storage-read-only@XYZ.iam.gserviceaccount.com

Related Name

idbroker.gcp.group.role.mapping

Default Value**API Name**

idbroker_gcp_group_mapping

Required

false

Knox IDBroker GCP User Default Group Mapping

Description

The list of GCP user default group mappings in 'user=group[:user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

Related Name

idbroker.gcp.user.default.group.mapping

Default Value**API Name**

idbroker_gcp_user_default_group_mapping

Required

false

Knox IDBroker GCP User Mapping

Description

The list of GCP user-role mappings in 'user=role[:user=role]...[:user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=storage-admin@XYZ.iam.gserviceaccount.com;guest=storage-read-only@XYZ.iam.gserviceaccount.com

Related Name

idbroker.gcp.user.role.mapping

Default Value**API Name**

idbroker_gcp_user_mapping

Required

false

Admin Group Mapping - Class Name

Description

The class name used for Hadoop admin group mapping

Related Name

gateway.group.config.hadoop.security.group.mapping

Default Value`org.apache.hadoop.security.ShellBasedUnixGroupsMapping`**API Name**`idbroker_hadoop_security_group_mapping_class`**Required**`false`**IDBroker Initial/Max Heapsize****Description**

Initial/Maximum size for the Java Process heap. Passed to Java `-Xmx/-Xms`. Measured in megabytes.

Related Name`idbroker_heap_size`**Default Value**`1 GiB`**API Name**`idbroker_heap_size`**Required**`true`**Additional IDBroker Java Options****Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here. `-Xmx/-Xms` should not be specified here: to set the heapsize use the 'Knox Gateway Initial/Max Heapsize' parameter

Related Name`idbroker_java_opts`**Default Value****API Name**`idbroker_java_opts`**Required**`false`**krb5.conf Location****Description**

Absolute path to `krb5.conf` file

Related Name`java.security.krb5.conf`**Default Value**`/etc/krb5.conf`**API Name**`idbroker_java_security_krb5_conf`**Required**`false`

Kerberos Proxyuser Block

Description

Proxyuser configuration used in Knox's 'dt' topology in case Kerberos is enabled. Must conform a valid JSON key-value format!

Related Name

idbroker_kerberos_dt_proxyuser_block

Default Value

hadoop.proxyuser.livy.hosts: * hadoop.proxyuser.livy.groups: * hadoop.proxyuser.hive.hosts: *
hadoop.proxyuser.hive.groups: * hadoop.proxyuser.httpfs.hosts: * hadoop.proxyuser.httpfs.groups:
* hadoop.proxyuser.hue.hosts: * hadoop.proxyuser.hue.groups: * hadoop.proxyuser.oozie.hosts:
* hadoop.proxyuser.oozie.groups: * hadoop.proxyuser.impala.hosts: *
hadoop.proxyuser.impala.groups: *

API Name

idbroker_kerberos_dt_proxyuser_block

Required

false

IDBroker Knox Token Eviction Grace Period

Description

Defines the grace period for which an expired token's state will avoid eviction. Setting this to zero means there is no grace period, and token state is evicted based on expiration only. See `idbroker_knox_token_eviction_interval` for more information.

Related Name

gateway.knox.token.eviction.grace.period

Default Value

1 day(s)

API Name

idbroker_knox_token_eviction_grace_period

Required

false

IDBroker Knox Token Eviction Interval

Description

Defines the interval on which Knox will check for expired token state which should be evicted. If the value is equal to zero, Knox will not perform this check.

Related Name

gateway.knox.token.eviction.interval

Default Value

1 minute(s)

API Name

idbroker_knox_token_eviction_interval

Required

false

IDBroker Knox Token Permissive Validation

Description

When enabled, Knox will verify tokens for which there is no server-managed state based only on the contents of the tokens themselves, rather than throwing UnknownToken exceptions.

Related Name

gateway.knox.token.permissive.validation

Default Value

false

API Name

idbroker_knox_token_permissive_validation

Required

false

IDBroker Knox Token Renew Interval**Description**

The amount of time to be added to a token's TTL when a renewal request is approved.

Related Name

idbroker_knox_token_renew_interval

Default Value

1 day(s)

API Name

idbroker_knox_token_renew_interval

Required

false

IDBroker Knox Token Renewer Whitelist**Description**

This is an optional configuration parameter to authorize the comma-separated list of users to invoke the associated token renewal and revocation APIs.

Related Name

idbroker_knox_token_renewer_whitelist

Default Value

yarn

API Name

idbroker_knox_token_renewer_whitelist

Required

false

Enable IDBroker Knox Token State Server**Description**

Whether the Knox token state server is enabled for IDBroker

Related Name

idbroker_knox_token_state_enabled

Default Value

false

API Name

idbroker_knox_token_state_enabled

Required

false

IDBroker Knox Token TTL**Description**

This indicates the lifespan of the token. Once it expires a new token must be acquired from KnoxToken service.

Related Name

idbroker_knox_token_ttl_ms

Default Value

7 day(s)

API Name

idbroker_knox_token_ttl_ms

Required

false

IDBroker Master Secret**Description**

The master secret is used to access secured artifacts by the gateway instance. Keystore, trust stores and credential stores are all protected with the master secret. NOTE: changing the master secret will require you to change passwords protecting the keystores for the gateway, identity keystores and all credential stores

Related Name

idbroker_master_secret

Default Value**API Name**

idbroker_master_secret

Required

true

Gateway Config Refresh Interval**Description**

Defines the frequency of gateway configuration refresh.

Related Name

gateway.config.refresh.interval

Default Value

10 second(s)

API Name

idbroker_relaodable_refresh_interval_ms

Required

false

Save Cloud Vendor Specific Configs in core-site.xml**Description**

A boolean flag indicating if IDBroker-related config should be persisted in core-sitexml automatically by Cloudera Manager.

Related Name

idbroker_save_core_site_configs

Default Value

true

API Name

idbroker_save_core_site_configs

Required

false

Knox IDBroker Security Directory

Description

Contains security specific artifacts such as the persisted master secret, signing material and credential stores

Related Name

gateway.security.dir

Default Value

/var/lib/knox/idbroker/data/security

API Name

idbroker_security_dir

Required

false

KRB5 Debug

Description

Boolean flag indicating whether to enable debug messages for krb5 authentication

Related Name

sun.security.krb5.debug

Default Value

false

API Name

idbroker_sun_security_krb5_debug

Required

false

Topology Deployment Check - Delay

Description

Indicates the delay between two subsequent attempts while topology deployment check is in progress.

Related Name

idbroker_topology_deployment_check_delay

Default Value

3 second(s)

API Name

idbroker_topology_deployment_check_delay

Required

false

Topology Deployment Check - Time Limit

Description

The time limit until topology deployment check will run before it reports an error.

Related Name

idbroker_topology_deployment_check_time_limit

Default Value

5 minute(s)

API Name

idbroker_topology_deployment_check_time_limit

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses

Gateway HTTP Port

Description

The HTTP port for the Gateway.

Related Name

gateway.port

Default Value

8444

API Name

idbroker_gateway_port

Required

true

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/

O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Knox IDBroker TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Knox IDBroker might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

gateway.httpclient.truststore.path

Default Value**API Name**

ssl_client_truststore_location

Required

false

Knox IDBroker TLS/SSL Trust Store Password**Description**

The password for the Knox IDBroker TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Knox IDBroker**Description**

Encrypt communication between clients and Knox IDBroker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

knox.enableTLS

Default Value

false

API Name

ssl_enabled

Required

false

Knox IDBroker TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Knox IDBroker is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

gateway.tls.keystore.path

Default Value

API Name

ssl_server_keystore_location

Required

false

Knox IDBroker TLS/SSL Server Keystore File Password

Description

The password for the Knox IDBroker keystore file.

Related Name

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

	false
API Name	role_config_suppression_cdh_version_validator
Required	true

Suppress Parameter Validation: Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox IDBroker Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_conf/cdp-resources.xml_role_safety_valve
Required	true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Healthy Knox IDBroker Monitoring Thresholds**Description**

The health test thresholds of the overall Knox IDBroker health. The check returns "Concerning" health if the percentage of "Healthy" Knox IDBrokers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Knox IDBrokers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 49.0 %

API Name

KNOX_IDBROKER_healthy_thresholds

Required

false

Healthy Knox Gateway Monitoring Thresholds**Description**

The health test thresholds of the overall Knox Gateway health. The check returns "Concerning" health if the percentage of "Healthy" Knox Gateways falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Knox Gateways falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 49.0 %

API Name

KNOX_KNOX_GATEWAY_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

`smon_derived_configs_safety_valve`

Required

false

Other

Automatic Restart on Stop

Description

Automatically restart the service when a stop is issued.

Related Name

`autorestart_on_stop`

Default Value

false

API Name

autorestart_on_stop

Required

false

Hadoop Proxyuser Block

Description

Proxyuser configuration used in the 'homepage' and 'kerberos-providers' topologies for impersonation purposes. Must conform a valid JSON key-value format!

Related Name

hadoop_proxyuser_block

Default Value

hadoop.proxyuser.changeme.hosts: NONE hadoop.proxyuser.changeme.groups: NONE

API Name

hadoop_proxyuser_block

Required

false

HDFS Service

Description

Name of the HDFS service that this Knox service instance depends on

Related Name

Default Value

API Name

hdfs_service

Required

false

Enable Kerberos Authentication

Description

Boolean flag indicating whether the Hadoop cluster protected by Gateway is secured with Kerberos

Related Name

gateway.hadoop.kerberos.secured

Default Value

false

API Name

kerberos.auth.enabled

Required

false

Knox Home Page - Global Logout Page URL

Description

The URL for logging out of CDP. If defined, Knox will display an additional link based on this value on its own logout landing page.

Related Name

knox.global.logout.page.url

Default Value**API Name**

knox_global_logout_page_url

Required

false

Knox Home Page - Hidden Topologies**Description**

A comma-separated list of topology names that should not be listed in the Topologies section on the Knox Home page.

Related Name

knox.homepage.hidden.topologies

Default Value

admin manager KnoxSSO metadata homepage

API Name

knox_homepage_hidden_topologies

Required

false

Knox Home Page - Enable Logout**Description**

Whether logout from the Knox Home page is enabled or not.

Related Name

knox.homepage.logout.enabled

Default Value

false

API Name

knox_homepage_logout_enabled

Required

false

Knox Home Page - Pinned Topologies**Description**

A comma-separated list of topology names that should be auto-expanded on the Knox Home page.

Related Name

knox.homepage.pinned.topologies

Default Value

cdp-proxy cdp-proxy-token

API Name

knox_homepage_pinned_topologies

Required

false

Knox Home Page - Default Profile**Description**

The Home Page profiles allow end-users to control of what is being displayed in the General Proxy Information section. Please note that the 'full' profile comes with the Admin UI link that is not certified by Cloudera.

Related Name

knox_homepage_profile

Default Value

token

API Name

knox_homepage_profile

Required

false

Knox Jetty Server - Max Form Content Size**Description**

Jetty limits the amount of data that can post back from a browser or other client to the server. This helps protect the server against denial of service attacks by malicious clients sending huge amounts of data. The default maximum size Jetty permits is 200000 bytes.

Related Name

gateway.jetty.max.form.content.size

Default Value

200000

API Name

knox_jetty_max_form_content_size

Required

false

Knox Jetty Server - Max Form Keys**Description**

Jetty limits the number of form keys that can post back from a browser or other client to the server. This helps protect the server against denial of service attacks by malicious clients sending huge number of form keys. The default maximum size Jetty permits is 1000.

Related Name

gateway.jetty.max.form.keys

Default Value

1000

API Name

knox_jetty_max_form_keys

Required

false

Knox PAM Realm - Service Name

Description

Using KnoxPamRealm requires a PAM service name. This is the name of the file under '/etc/pam.d' that is used to initialize and configure the PAM subsystem. Normally, this file reflects the application using it. For example 'login', 'sshd', 'su', etc...

Related Name

knox_pam_realm_service

Default Value

login

API Name

knox_pam_realm_service

Required

false

Knox TLS - Cipher Suites (Only in FIPS environments)

Description

A comma separated list of ciphers to accept for SSL. See the JSSE Provider documents for possible ciphers. These can also contain regular expressions as shown in the Jetty documentation.

Related Name

knox_tls_cipher_suites

Default Value

TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384
TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384
TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256
TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256
TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384
TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256
TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384
TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256

API Name

knox_tls_cipher_suites

Required

false

Knox TLS - Protocols (Only in FIPS environments)

Description

A comma separated list of protocols to accept for SSL. See the JSSE Provider documents for possible protocols. These can also contain regular expressions as shown in the Jetty documentation.

Related Name

knox_tls_protocols

Default Value

SSLv2Hello TLSv1.2

API Name

knox_tls_protocols

Required

false

Knox Token Kerberos - Allow Groups In JWT

Description

When enabled, Knox will allow group membership information to be added in the issued Knox Token JWTs when clients request that information.

Related Name

knox_token_kerberos_include_groups_allowed

Default Value

true

API Name

knox_token_kerberos_include_groups_allowed

Required

false

Knox Token Kerberos - TTL

Description

This indicates the lifespan of the token. Once it expires a new token must be acquired from KnoxToken service.

Related Name

knox_token_kerberos_ttl_ms

Default Value

10 minute(s)

API Name

knox_token_kerberos_ttl_ms

Required

false

Knox Topology Management - Changes Required For Redeployment

Description

Whether topology re-deployment requires an actual change or updating the topology file's timestamp is enough.

Related Name

gateway.topology.redeploy.requires.changes

Default Value

true

API Name

knox_topology_redeploy_requires_changes

Required

false

Knox SSO - Cookie Management Enabled

Description

Whether KnoxSSO Cookie management is enabled. If this is turned on, KnoxSSO Cookie Invalidation can be utilized.

Related Name

knoxssso_cookie_management_enabled

Default Value

false

API Name

knoxssso_cookie_management_enabled

Required

false

Knox SSO - Cookie SameSite Attribute**Description**

The SameSite attribute of the generated Knox SSO Cookie (hadoop-jwt).

Related Name

knoxssso_cookie_samesite

Default Value

Lax

API Name

knoxssso_cookie_samesite

Required

false

Knox SSO - Redirect Whitelist Regular Expression**Description**

A semicolon-delimited list of regular expressions. The incoming originalUrl must match one of the expressions in order for KnoxSSO to redirect to it after authentication. You can use the KNOX_GW_DOMAIN placeholder in your own regular expression. In that case, that placeholder will be replaced with the actual domain name of the host where the given Knox Gateway is running.

Related Name

knoxssso_redirect_whitelist_regex

Default Value

^https?:\v{(. *KNOX_GW_DOMAIN)(?:[0-9]+)?(?:\v{.})*}\$

API Name

knoxssso_redirect_whitelist_regex

Required

false

Knox SSO - Token TTL**Description**

Knox SSO token time-to-live value in milliseconds.

Related Name

knoxssso_token_ttl

Default Value

86400000

API Name

knoxssso_token_ttl

Required

false

Ranger Knox Plugin Hdfs Audit Directory

Description

The HDFS path on which Ranger audits are written.

Related Name

ranger_knox_plugin_hdfs_audit_directory

Default Value

\$ranger_base_audit_url/knox

API Name

ranger_knox_plugin_hdfs_audit_directory

Required

false

RANGER Service

Description

Name of the RANGER service that this Knox service instance depends on

Related Name**Default Value****API Name**

Required

true

Suppress Configuration Validator: X-Forwarded Header Context Service Name**Description**

Whether to suppress configuration warnings produced by the X-Forwarded Header Context Service Name configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_gateway_xforwarded_header_context_append_servicename

Required

true

Suppress Configuration Validator: Admin Group Mapping - Class Name

Description

Whether to suppress configuration warnings produced by the Admin Group Mapping - Class Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_security_group_mapping_class

Required

true

Suppress Configuration Validator: Knox IDBroker AWS Credentials Key

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Credentials Key configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_aws_credentials_key

Required

true

Suppress Configuration Validator: Knox IDBroker AWS Credentials Secret

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Credentials Secret configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_aws_credentials_secret

Required

true

Suppress Configuration Validator: Knox IDBroker AWS Group Mapping

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Group Mapping configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_aws_group_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker AWS User Default Group Mapping

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AWS User Default Group Mapping configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_aws_user_default_group_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker AWS User Mapping

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AWS User Mapping configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_aws_user_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE ADLS2 Tenant Name

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE ADLS2 Tenant Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_azure_adls2_tenant_name

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE 'blob-contributor' ClientID

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-contributor' ClientID configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_azure_blob_contributor_clientid

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE 'blob-contributor' Secret

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-contributor' Secret configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_azure_blob_contributor_secret

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE 'blob-reader' ClientID

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-reader' ClientID configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_azure_blob_reader_clientid

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE 'blob-reader' Secret

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE 'blob-reader' Secret configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_azure_blob_reader_secret

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE Group Mapping

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE Group Mapping configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_group_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE User Default Group Mapping

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE User Default Group Mapping configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_user_default_group_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE User Mapping

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE User Mapping configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_user_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker AZURE VM Assumer Identity

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AZURE VM Assumer Identity configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_azure_vm_assumer_identity

Required

true

Suppress Configuration Validator: Knox IDBroker Configuration Directory

Description

Whether to suppress configuration warnings produced by the Knox IDBroker Configuration Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_conf_dir

Required

true

Suppress Configuration Validator: Knox IDBroker Data Directory

Description

Whether to suppress configuration warnings produced by the Knox IDBroker Data Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_data_dir

Required

true

Suppress Configuration Validator: Gateway - Default API Topology Name

Description

Whether to suppress configuration warnings produced by the Gateway - Default API Topology Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_default_api_topology_name

Required

true

Suppress Configuration Validator: Gateway - Default App Topology Name

Description

Whether to suppress configuration warnings produced by the Gateway - Default App Topology Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_default_topology_name

Required

true

Suppress Configuration Validator: Gateway Config Directory

Description

Whether to suppress configuration warnings produced by the Gateway Config Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_gateway_gateway_conf_dir

Required

true

Suppress Configuration Validator: Admin Groups

Description

Whether to suppress configuration warnings produced by the Admin Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_gateway_knox_admin_groups

Required

true

Suppress Configuration Validator: Gateway Path

Description

Whether to suppress configuration warnings produced by the Gateway Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_gateway_path

Required

true

Suppress Configuration Validator: Gateway HTTP Port

Description

Whether to suppress configuration warnings produced by the Gateway HTTP Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_gateway_port

Required

true

Suppress Configuration Validator: Security - Signing Key Alias

Description

Whether to suppress configuration warnings produced by the Security - Signing Key Alias configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_gateway_signing_key_alias

Required

true

Suppress Configuration Validator: Security - Signing Keystore Name

Description

Whether to suppress configuration warnings produced by the Security - Signing Keystore Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_gateway_signing_keystore_name

Required

true

Suppress Configuration Validator: Security - Signing Keystore Type

Description

Whether to suppress configuration warnings produced by the Security - Signing Keystore Type configuration validator.

Related Name

Default Value

false

API Name

`role_config_suppression_idbroker_gateway_signing_keystore_type`**Required**`true`**Suppress Configuration Validator: Knox IDBroker GCP Credential Key****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP Credential Key configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_idbroker_gcp_credential_key`**Required**`true`**Suppress Configuration Validator: Knox IDBroker GCP Credential Secret****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP Credential Secret configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_idbroker_gcp_credential_secret`**Required**`true`**Suppress Configuration Validator: Knox IDBroker GCP Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP Group Mapping configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_idbroker_gcp_group_mapping`**Required**`true`**Suppress Configuration Validator: Knox IDBroker GCP User Default Group Mapping****Description**

Whether to suppress configuration warnings produced by the Knox IDBroker GCP User Default Group Mapping configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_gcp_user_default_group_mapping

Required

true

Suppress Configuration Validator: Knox IDBroker GCP User Mapping

Description

Whether to suppress configuration warnings produced by the Knox IDBroker GCP User Mapping configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_gcp_user_mapping

Required

true

Suppress Configuration Validator: Admin Group Mapping - Class Name

Description

Whether to suppress configuration warnings produced by the Admin Group Mapping - Class Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_hadoop_security_group_mapping_class

Required

true

Suppress Configuration Validator: IDBroker Initial/Max Heapsize

Description

Whether to suppress configuration warnings produced by the IDBroker Initial/Max Heapsize configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_heap_size

Required

true

Suppress Configuration Validator: Additional IDBroker Java Options

Description

Whether to suppress configuration warnings produced by the Additional IDBroker Java Options configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_java_opts

Required

true

Suppress Configuration Validator: krb5.conf Location

Description

Whether to suppress configuration warnings produced by the krb5.conf Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_java_security_krb5_conf

Required

true

Suppress Configuration Validator: Kerberos Proxyuser Block

Description

Whether to suppress configuration warnings produced by the Kerberos Proxyuser Block configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_kerberos_dt_proxyuser_block

Required

true

Suppress Configuration Validator: IDBroker Knox Token Renewer Whitelist

Description

Whether to suppress configuration warnings produced by the IDBroker Knox Token Renewer Whitelist configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_knox_token_renewer_whitelist

Required

true

Suppress Configuration Validator: IDBroker Master Secret

Description

Whether to suppress configuration warnings produced by the IDBroker Master Secret configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_master_secret

Required

true

Suppress Configuration Validator: Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Knox IDBroker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_role_env_safety_valve

Required

true

Suppress Configuration Validator: Knox IDBroker Security Directory

Description

Whether to suppress configuration warnings produced by the Knox IDBroker Security Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_idbroker_security_dir

Required

true

Suppress Configuration Validator: krb5.conf Location

Description

Whether to suppress configuration warnings produced by the krb5.conf Location configuration validator.

Related Name**Default Value**

	false
API Name	role_config_suppression_java_security_krb5_conf
Required	true

Suppress Configuration Validator: JMX Exporter configuration YAML

Description	Whether to suppress configuration warnings produced by the JMX Exporter configuration YAML configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_jmx_exporter_yaml
Required	true

Suppress Configuration Validator: Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the Knox Gateway Environment Advanced Configuration Snippet (Safety Valve) configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_knox_gateway_role_env_safety_valve
Required	true

Suppress Configuration Validator: Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the Knox IDBroker Logging Advanced Configuration Snippet (Safety Valve) configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_log4j_safety_valve
Required	true

Suppress Configuration Validator: Knox Gateway Log Directory

Description

Whether to suppress configuration warnings produced by the Knox Gateway Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Exporters Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Extensions Section configuration validator.

Related Name**Default Value**

false

API Name

`role_config_suppression_otelcol_extensions`**Required**`true`**Suppress Configuration Validator: OpenTelemetry Collector Helper Port****Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Helper Port configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_helper_port`**Required**`true`**Suppress Configuration Validator: OpenTelemetry Collector Processors Section****Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Processors Section configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_processors`**Required**`true`**Suppress Configuration Validator: OpenTelemetry Collector Receivers Section****Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Receivers Section configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_receivers`**Required**`true`**Suppress Configuration Validator: OpenTelemetry Collector Remote Write Password****Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write URL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Configuration Validator: Ranger Knox Plugin Audit Hdfs Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Audit Hdfs Spool Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_audit_hdfs_spool_dir

Required

true

Suppress Configuration Validator: Ranger Knox Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Audit Solr Spool Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_audit_solr_spool_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Knox Gateway TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Knox Gateway TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Knox Gateway TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Server Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Knox Gateway TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Knox Service Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Service Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_conf/cdp-resources.xml_service_safety_valve

Required

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Hadoop Proxyuser Block**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hadoop Proxyuser Block parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop_proxyuser_block

Required

true

Suppress Configuration Validator: Knox IDBroker Count Validator**Description**

Whether to suppress configuration warnings produced by the Knox IDBroker Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_idbroker_count_validator

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Configuration Validator: Knox Gateway Count Validator**Description**

Whether to suppress configuration warnings produced by the Knox Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

`service_config_suppression_knox_gateway_count_validator`**Required**`true`**Suppress Parameter Validation: Knox Gateway Database Host****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Database Host parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_knox_gateway_database_host`**Required**`true`**Suppress Parameter Validation: Knox Gateway JDBC Url Override****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway JDBC Url Override parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_knox_gateway_database_jdbc_url`**Required**`true`**Suppress Parameter Validation: Knox Gateway Database Name****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Database Name parameter.

Related Name**Default Value**`false`**API Name**`service_config_suppression_knox_gateway_database_name`**Required**`true`**Suppress Parameter Validation: Knox Gateway Database User Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Database User Password parameter.

Related Name

Default Value

false

API Name

service_config_suppression_knox_gateway_database_password

Required

true

Suppress Parameter Validation: Knox Gateway Database Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Database Port parameter.

Related Name

Default Value

false

API Name

service_config_suppression_knox_gateway_database_port

Required

true

Suppress Parameter Validation: Knox Gateway Database User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Database User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_knox_gateway_database_user

Required

true

Suppress Parameter Validation: Knox Home Page - Global Logout Page URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Home Page - Global Logout Page URL parameter.

Related Name

Default Value

false

API Name

service_config_suppression_knox_global_logout_page_url

Required

true

Suppress Parameter Validation: Knox Home Page - Hidden Topologies

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Home Page - Hidden Topologies parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knox_homepage_hidden_topologies

Required

true

Suppress Parameter Validation: Knox Home Page - Pinned Topologies**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Home Page - Pinned Topologies parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knox_homepage_pinned_topologies

Required

true

Suppress Parameter Validation: Knox PAM Realm - Service Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox PAM Realm - Service Name parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knox_pam_realm_service

Required

true

Suppress Parameter Validation: Knox Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knox_service_env_safety_valve

Required

Suppress Parameter Validation: Knox TLS - Cipher Suites (Only in FIPS environments)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox TLS - Cipher Suites (Only in FIPS environments) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knox_tls_cipher_suites

Required

true

Suppress Parameter Validation: Knox TLS - Protocols (Only in FIPS environments)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox TLS - Protocols (Only in FIPS environments) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knox_tls_protocols

Required

true

Suppress Parameter Validation: Knox SSO - Redirect Whitelist Regular Expression**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox SSO - Redirect Whitelist Regular Expression parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_knoxssso_redirect_whitelist_regex

Required

true

Suppress Parameter Validation: Knox SSO - Token TTL**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox SSO - Token TTL parameter.

Related Name**Default Value**

	false
API Name	service_config_suppression_knoxsso_token_ttl
Required	true

Suppress Parameter Validation: System Group

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value
false

API Name
service_config_suppression_process_groupname

Required
true

Suppress Parameter Validation: System User

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value
false

API Name
service_config_suppression_process_username

Required
true

Suppress Parameter Validation: Ranger Knox Plugin Hdfs Audit Directory

Description
Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Hdfs Audit Directory parameter.

Related Name

Default Value
false

API Name
service_config_suppression_ranger_knox_plugin_hdfs_audit_directory

Required
true

Suppress Parameter Validation: Save Alias Command Input

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Save Alias Command Input parameter.

Related Name

Default Value

false

API Name

service_config_suppression_save_alias_command_input_password

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Knox IDBroker Health

Description

Whether to suppress the results of the Knox IDBroker Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_knox_idbroker_healthy

Required

true

Suppress Health Test: Knox Gateway Health**Description**

Whether to suppress the results of the Knox Gateway Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_knox_knox_gateway_healthy

Required

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

50

API Name

client_config_priority

Required

true

Security

Gateway TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

livy.truststore

Default Value**API Name**

ssl_client_truststore_location

Required

false

Gateway TLS/SSL Trust Store Password

Description

The password for the Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

livy.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf parameter.

Related Name**Default Value**

	false
API Name	role_config_suppression_livy-conf/livy-client.conf_client_config_safety_valve
Required	true

Suppress Parameter Validation: Gateway TLS/SSL Trust Store File

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store File parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_ssl_client_truststore_location
Required	true

Suppress Parameter Validation: Gateway TLS/SSL Trust Store Password

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store Password parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_ssl_client_truststore_password
Required	true

Livy Server

Advanced

Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf

Description	For advanced use only. A string to be inserted into livy-conf/livy.conf for this role only.
Related Name	
Default Value	
API Name	livy-conf/livy.conf_role_safety_valve
Required	false

Livy Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

LIVY_SERVER_role_env_safety_valve

Required

false

Livy Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Livy Server Log Directory

Description

The log directory for log files of the role Livy Server.

Related Name

log_dir

Default Value

/var/log/livy

API Name

log_dir

Required

false

Livy Server Logging Threshold**Description**

The minimum log level for Livy Server logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Livy Server Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Livy Server logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Livy Server Max Log Size**Description**

The maximum size, in megabytes, per log file for Livy Server logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name

Default Value

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name

Default Value

API Name

jmx_exporter_yaml

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

livy_server_fd_thresholds

Required

false

Livy Server Host Health Test

Description

When computing the overall Livy Server health, consider the host's health.

Related Name**Default Value**

true

API Name

livy_server_host_health_enabled

Required

false

Livy Server Process Health Test

Description

Enables the health test that the Livy Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

livy_server_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

exporters: prometheusremotewrite/\$ROLE_NAME: endpoint:
\$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/\$ROLE_NAME tls:

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

`rm_memory_soft_limit_v2`**Required**`true`**Security****Livy Server TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Livy Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Livy Server TLS/SSL Trust Store Password****Description**

The password for the Livy Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name**Default Value****API Name**`ssl_client_truststore_password`**Required**`false`**Enable TLS/SSL for Livy Server****Description**

Encrypt communication between clients and Livy Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name`livy.tls.enabled`**Default Value**`false`**API Name**`ssl_enabled`**Required**`false`**Livy Server TLS/SSL Server Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Livy Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

livy.keystore

Default Value**API Name**

ssl_server_keystore_location

Required

false

Livy Server TLS/SSL Server Keystore File Password**Description**

The password for the Livy Server keystore file.

Related Name

livy.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Supported SSL/TLS versions**Description**

The SSL/TLS protocol versions to accept HTTPS connections from. Note that the available cipher suites also affect which protocol versions can be negotiated, and some cipher suites are only available in higher versions.

Related Name

livy.ssl.ui.includedProtocols

Default Value

TLSv1.2

API Name

supported_tls_versions

Required

false

SSL/TLS Cipher Suite**Description**

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

Default Value

modern2018

API Name

tls_ciphers

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

Healthy Livy Server Monitoring Thresholds

Description

The health test thresholds of the overall Livy Server health. The check returns "Concerning" health if the percentage of "Healthy" Livy Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Livy Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 90.0 %

API Name

LIVY_LIVY_SERVER_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Configuration Validator: Livy Server TLS/SSL Server Keystore File Location**Description**

Whether to suppress configuration warnings produced by the Livy Server TLS/SSL Server Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Livy Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Livy Server TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

	false
API Name	service_config_suppression_kerberos Princ_name
Required	true

Suppress Parameter Validation: Recovery Directory (HDFS)

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Recovery Directory (HDFS) parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_livy_recovery_dir
Required	true

Suppress Configuration Validator: Livy Server Count Validator

Description	Whether to suppress configuration warnings produced by the Livy Server Count Validator configuration validator.
Related Name	
Default Value	false
API Name	service_config_suppression_livy_server_count_validator
Required	true

Suppress Parameter Validation: Livy Service Environment Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Service Environment Advanced Configuration Snippet (Safety Valve) parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_livy_service_env_safety_valve
Required	true

Suppress Parameter Validation: System Group

Description	
--------------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Livy Server Health

Description

Whether to suppress the results of the Livy Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_livy_livy_server_healthy

Required

true

Livy for Spark 3 Properties in Cloudera Runtime 7.3.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name

Default Value

/etc/livy3

API Name

client_config_root_dir

Required

true

Livy for Spark 3 Client Advanced Configuration Snippet (Safety Valve) for livy3-conf/livy-client.conf

Description

For advanced use only, a string to be inserted into the client configuration for livy3-conf/livy-client.conf.

Related Name

Default Value

API Name

livy3-conf/livy-client.conf_client_config_safety_valve

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

50

API Name

client_config_priority

Required

true

Security

Gateway TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

livy.truststore

Default Value**API Name**

ssl_client_truststore_location

Required

false

Gateway TLS/SSL Trust Store Password

Description

The password for the Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

livy.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Livy for Spark 3 Client Advanced Configuration Snippet (Safety Valve) for livy3-conf/livy-client.conf**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy for Spark 3 Client Advanced Configuration Snippet (Safety Valve) for livy3-conf/livy-client.conf parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_livy3-conf/livy-client.conf_client_config_safety_valve

Required

true

Suppress Parameter Validation: Gateway TLS/SSL Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Gateway TLS/SSL Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Livy Server for Spark 3

Advanced**Livy Server for Spark 3 Advanced Configuration Snippet (Safety Valve) for livy3-conf/livy.conf****Description**

For advanced use only. A string to be inserted into livy3-conf/livy.conf for this role only.

Related Name**Default Value****API Name**

livy3-conf/livy.conf_role_safety_valve

Required

false

Livy Server for Spark 3 Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

LIVY_SERVER_FOR_SPARK3_role_env_safety_valve

Required

false

Livy Server for Spark 3 Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j2.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Logs

Livy Server for Spark 3 Log Directory

Description

The log directory for log files of the role Livy Server for Spark 3.

Related Name

log_dir

Default Value

/var/log/livy3

API Name

log_dir

Required

false

Livy Server for Spark 3 Logging Threshold**Description**

The minimum log level for Livy Server for Spark 3 logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Livy Server for Spark 3 Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Livy Server for Spark 3 logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Livy Server for Spark 3 Max Log Size**Description**

The maximum size, in megabytes, per log file for Livy Server for Spark 3 logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

livy_server_for_spark3_fd_thresholds

Required

false

Livy Server for Spark 3 Host Health Test

Description

When computing the overall Livy Server for Spark 3 health, consider the host's health.

Related Name**Default Value**

true

API Name

livy_server_for_spark3_host_health_enabled

Required

false

Livy Server for Spark 3 Process Health Test

Description

Enables the health test that the Livy Server for Spark 3's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

livy_server_for_spark3_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

exporters: prometheusremotewrite/\$ROLE_NAME: endpoint:
\$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/\$ROLE_NAME tls:

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify \$INFRA(cdp_request_signer_password) when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL**Description**

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_url)

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username**Description**

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other

Enable Access Control

Description

Perform access control when processing user requests.

Related Name

`livy.server.access-control.enabled`

Default Value

true

API Name

`livy_access_control_enabled`

Required

false

Admin Users

Description

List of users with admin permissions (can view and modify any session).

Related Name

`livy.superusers`

Default Value

knox zeppelin

API Name

livy_admin_users

Required

false

Extra JVM Options**Description**

Command line options to add to the Livy Server JVM. May be used also to override options automatically added by CM.

Related Name

livy_extra_java_opts

Default Value**API Name**

livy_extra_java_opts

Required

false

Enable active-passive HA mode**Description**

Enables active-passive HA mode detection. HA is only enabled if more than one Livy Server instance is found. Disable this setting to prevent HA mode even if there are multiple Livy Server instances.

Related Name

livy_ha_enabled_if_possible

Default Value

true

API Name

livy_ha_enabled_if_possible

Required

false

Enable User Impersonation**Description**

Start applications as the requesting user, instead of using the Livy account.

Related Name

livy.impersonation.enabled

Default Value

true

API Name

livy_impersonation_enabled

Required

false

Max Header Size**Description**

Maximum size of a header field accepted by the Livy server. May need to be increased in certain environments where SPNEGO is enabled.

Related Name

livy.server.request-header.size

Default Value

128 KiB

API Name

livy_max_header_size

Required

false

Java Heap Size of Livy Server

Description

Maximum size for the Java process heap memory.

Related Name

livy_max_heapsize

Default Value

512 MiB

API Name

livy_max_heapsize

Required

false

Enable RPC Encryption

Description

Enable encryption of communication between the Livy session and managed Spark sessions.

Related Name

livy_rpc_encryption_enabled

Default Value

true

API Name

livy_rpc_encryption_enabled

Required

false

Enable Livy Thrift Server

Description

Enables the Livy Thrift server

Related Name

livy.server.thrift.enabled

Default Value

false

API Name

livy_server_thrift_enabled

Required

false

Livy Thrift Server Transport Mode**Description**

Transport mode used by the Livy Thrift server

Related Name

livy.server.thrift.transport.mode

Default Value

binary

API Name

livy_server_thrift_transport_mode

Required

false

Enable Session Recovery**Description**

Enable recovery of live sessions when the Livy server restarts. Uses HDFS to store recovery information.

Related Name

livy_session_recovery_enabled

Default Value

true

API Name

livy_session_recovery_enabled

Required

false

Enable User Authentication**Description**

Enables user authentication using SPNEGO when Kerberos is enabled.

Related Name

livy_spnego_enabled

Default Value

true

API Name

livy_spnego_enabled

Required

false

Zookeeper Path**Description**

The path in zookeeper to store the data about HA leadership, sessions, locks and cluster membership.

Related Name

livy.server.zk.key-prefix

Default Value

livy3

API Name

livy_zk_key_prefix

Required

false

Enable Secure Connection to ZooKeeper**Description**

Enables SSL/TLS for all connections to ZooKeeper. This applies only if 'Enable TLS/SSL for ZooKeeper' is enabled on the ZooKeeper service.

Related Name

zookeeper.secure.connection.enable

Default Value

true

API Name

zookeeper.secure.connection.enable

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Livy Server Port****Description**

The port of the Livy server

Related Name

livy.server.port

Default Value

API Name

livy_server_thrift_port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security

Livy Server for Spark 3 TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Livy Server for Spark 3 might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

Default Value

API Name

ssl_client_truststore_location

Required

false

Livy Server for Spark 3 TLS/SSL Trust Store Password

Description

The password for the Livy Server for Spark 3 TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Livy Server for Spark 3

Description

Encrypt communication between clients and Livy Server for Spark 3 using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

livy.tls.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Livy Server for Spark 3 TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Livy Server for Spark 3 is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

livy.keystore

Default Value**API Name**

ssl_server_keystore_location

Required

false

Livy Server for Spark 3 TLS/SSL Server Keystore File Password

Description

The password for the Livy Server for Spark 3 keystore file.

Related Name

livy.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Supported SSL/TLS versions

Description

The SSL/TLS protocol versions to accept HTTPS connections from. Note that the available cipher suites also affect which protocol versions can be negotiated, and some cipher suites are only available in higher versions.

Related Name

livy.ssl.ui.includedProtocols

Default Value

TLSv1.2

API Name

supported_tls_versions

Required

false

SSL/TLS Cipher Suite**Description**

The SSL/TLS cipher suites to use. "Modern 2018" is a modern set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. These cipher suites use strong cryptography and are preferred unless interaction with older clients is required. These modern cipher suites are compatible with Firefox 27, Chrome 22, Internet Explorer 11, Opera 14, Safari 7, Android 4.4, and Java 8. "Intermediate 2018" is an intermediate set of cipher suites as of 2018, according to the Mozilla server-side TLS recommendations. Select the Intermediate 2018 cipher suites if you require compatibility with a wider range of clients, legacy browsers, or older Linux tools.

Related Name

livy.ssl.ui.enabledAlgorithms

Default Value

modern2018

API Name

tls_ciphers

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

Healthy Livy Server for Spark 3 Monitoring Thresholds**Description**

The health test thresholds of the overall Livy Server for Spark 3 health. The check returns "Concerning" health if the percentage of "Healthy" Livy Server for Spark 3s falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Livy Server for Spark 3s falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 90.0 %

API Name

LIVY_FOR_SPARK3_LIVY_SERVER_FOR_SPARK3_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Livy Server for Spark 3 Health

Description

Whether to suppress the results of the Livy Server for Spark 3 Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_livy_for_spark3_livy_server_for_spark3_healthy

Required

true

Omid Properties in Cloudera Runtime 7.3.1

Role groups:

Omid tso server

Advanced

Omid tso server Advanced Configuration Snippet (Safety Valve) for hbase-conf/omid-server-configuration.yml

Description

For advanced use only. A string to be inserted into hbase-conf/omid-server-configuration.yml for this role only.

Related Name

Default Value

API Name

hbase-conf/omid-server-configuration.yml_role_safety_valve

Required

false

Omid tso server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Omid tso server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

OMID_TSO_role_env_safety_valve

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

Omid tso server Log Directory

Description

The log directory for log files of the role Omid tso server.

Related Name

log_dir

Default Value

/var/log/omid

API Name

log_dir

Required

false

Omid tso server Logging Threshold

Description

The minimum log level for Omid tso server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Omid tso server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Omid tso server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Omid tso server Max Log Size

Description

The maximum size, in megabytes, per log file for Omid tso server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

omid_tso_fd_thresholds

Required

false

Omid tso server Host Health Test

Description

When computing the overall Omid tso server health, consider the host's health.

Related Name

Default Value

true

API Name

omid_tso_host_health_enabled

Required

false

Omid tso server Process Health Test

Description

Enables the health test that the Omid tso server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

omid_tso_scm_health_enabled

Required

false

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Description

Omid High Availability TSO server lease path on zookeeper. Applicable only when omid tso HA is enabled.

Related Name

omid_ha_tso_lease_path

Default Value

/tso-lease

API Name

omid_ha_tso_lease_path

Required

false

Omid HA zookeeper namespace

Description

Zookeeper namespace used by Omid. Applicable only when omid tso HA is enabled.

Related Name

omid_ha_zk_namespace

Default Value

omid

API Name

omid_ha_zk_namespace

Required

false

OMID HBase Client Retries Number

Description

Omid-specific configuration for hbase.client.retries.number which controls the number of implicit HBase client retries. If set to 0, the current HBase service configuration value is used instead.

Related Name

omid_hbase_client_retries_number

Default Value

20

API Name

omid_hbase_client_retries_number

Required

false

Additional Omid JVM Options**Description**

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

Related Name

omid_java_opts

Default Value**API Name**

omid_java_opts

Required

false

Omid Max Heapsize**Description**

Maximum size for the Omid Java Process heap. Passed to Java -Xmx.

Related Name

omid_max_heap_size

Default Value

3 GiB

API Name

omid_max_heap_size

Required

true

OMID tls support plain text**Description**

OMID server support plain text

Related Name

omid.server.tls.support.plain.text

Default Value

true

API Name

omid_tls_support_plain_text

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security

Omid tso server TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Omid tso server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl_client_truststore_location

Default Value

API Name

ssl_client_truststore_location

Required

false

Omid tso server TLS/SSL Trust Store Password

Description

The password for the Omid tso server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl_client_truststore_password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Omid tso server

Description

Encrypt communication between clients and Omid tso server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Omid tso server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Omid tso server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl_server_keystore_location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Omid tso server TLS/SSL Server Keystore File Password

Description

The password for the Omid tso server keystore file.

Related Name

ssl_server_keystore_password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

Healthy Omid tso server Monitoring Thresholds**Description**

The health test thresholds of the overall Omid tso server health. The check returns "Concerning" health if the percentage of "Healthy" Omid tso servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Omid tso servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 90.0 %

API Name

OMID_OMID_TSO_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Configuration Validator: Omid HA TSO lease path**Description**

Whether to suppress configuration warnings produced by the Omid HA TSO lease path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_omid_ha_tso_lease_path

Required

true

Suppress Configuration Validator: Omid HA zookeeper namespace**Description**

Whether to suppress configuration warnings produced by the Omid HA zookeeper namespace configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_omid_ha_zk_namespace

Required

true

Suppress Configuration Validator: Additional Omid JVM Options**Description**

Whether to suppress configuration warnings produced by the Additional Omid JVM Options configuration validator.

Related Name**Default Value**

	false
API Name	role_config_suppression_omid_java_opts
Required	true

Suppress Configuration Validator: Omid tso server Environment Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the Omid tso server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_omid_tso_role_env_safety_valve
Required	true

Suppress Configuration Validator: Heap Dump Directory

Description	Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_oom_heap_dump_dir
Required	true

Suppress Configuration Validator: OpenTelemetry Collector Exporters Section

Description	Whether to suppress configuration warnings produced by the OpenTelemetry Collector Exporters Section configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_exporters
Required	true

Suppress Configuration Validator: OpenTelemetry Collector Extensions Section

Description	
--------------------	--

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Helper Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write URL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section configuration validator.

Related Name

Default Value

	false
API Name	role_config_suppression_otelcol_rtm_logs_exporters
Required	true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description	Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_rtm_logs_extensions
Required	true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description	Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_rtm_logs_processors
Required	true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description	Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_rtm_logs_receivers
Required	true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

`role_config_suppression_role_triggers`**Required**`true`**Suppress Configuration Validator: Omid tso server TLS/SSL Trust Store File****Description**

Whether to suppress configuration warnings produced by the Omid tso server TLS/SSL Trust Store File configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ssl_client_truststore_location`**Required**`true`**Suppress Configuration Validator: Omid tso server TLS/SSL Trust Store Password****Description**

Whether to suppress configuration warnings produced by the Omid tso server TLS/SSL Trust Store Password configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ssl_client_truststore_password`**Required**`true`**Suppress Configuration Validator: Omid tso server TLS/SSL Server Keystore File Location****Description**

Whether to suppress configuration warnings produced by the Omid tso server TLS/SSL Server Keystore File Location configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ssl_server_keystore_location`**Required**`true`**Suppress Configuration Validator: Omid tso server TLS/SSL Server Keystore File Password****Description**

Whether to suppress configuration warnings produced by the Omid tso server TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Omid Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Omid Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_omid_service_env_safety_valve

Required

true

Suppress Configuration Validator: Omid tso server Count Validator

Description

Whether to suppress configuration warnings produced by the Omid tso server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_omid_tso_count_validator

Required

true

Suppress Parameter Validation: OMID TSO server port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OMID TSO server port parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_omid_tso_server_port

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Omid tso server Health

Description

Whether to suppress the results of the Omid tso server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_omid_omid_tso_healthy

Required

true

Oozie Properties in Cloudera Runtime 7.3.1

Role groups:

Oozie Server

Advanced

Oozie Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties

Description

For advanced use only, a string to be inserted into atlas-application.properties. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

application_properties_safety_valve

Required

false

Oozie Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml**Description**

For advanced use only. A string to be inserted into action-conf/default.xml for this role only.

Related Name**Default Value****API Name**

oozie_action_config_default_safety_valve

Required

false

Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml**Description**

For advanced use only. A string to be inserted into oozie-site.xml for this role only.

Related Name**Default Value****API Name**

oozie_config_safety_valve

Required

false

Oozie ActionService Executor Extension Classes

Description

Comma-separated list of ActionService executor extension classes. Only action types with associated executors can be used in workflows. For CDH 5.4 and higher, this parameter is used only to specify additional classes for workflows. All executor extension classes included in that release will be added automatically and do not need to be specified.

Related Name

oozie.service.ActionService.executor.ext.classes

Default Value**API Name**

oozie_executor_extension_classes

Required

false

Java Configuration Options for Oozie Server

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name**Default Value**

-XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -
XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -XX:MaxMetaspaceFreeRatio=80
-XX:+DisableExplicitGC

API Name

oozie_java_opts

Required

false

Directory For JSP Temp Files

Description

Directory to use to for temporary JSP file storage.

Related Name

oozie.jsp.tmp.dir

Default Value

/tmp

API Name

oozie_jsp_tmp_dir

Required

false

Default Launcher Max Attempts**Description**

The default YARN maximal attempt count of the Launcher ApplicationMaster.

Related Name

oozie.launcher.default.max.attempts

Default Value

2

API Name

oozie_launcher_default_max_attempts

Required

false

Default Launcher Memory**Description**

The default amount of memory in MiB that is allocated for the Launcher ApplicationMasters.

Related Name

oozie.launcher.default.memory.mb

Default Value

2 GiB

API Name

oozie_launcher_default_memory

Required

false

Default Launcher Queue**Description**

The default YARN pool where the Launcher ApplicationMaster is placed.

Related Name

oozie.launcher.default.queue

Default Value

default

API Name

oozie_launcher_default_queue

Required

false

Oozie Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

OOZIE_SERVER_role_env_safety_valve

Required

false

Oozie HTTP Request Header Size**Description**

Controls the size of the HTTP request header.

Related Name

oozie.http.request.header.size

Default Value

64 KiB

API Name

oozie_service_http_request_header_size

Required

false

Oozie HTTP Response Header Size**Description**

Controls the size of the HTTP response header.

Related Name

oozie.http.response.header.size

Default Value

64 KiB

API Name

oozie_service_http_response_header_size

Required

false

Oozie SchemaService Workflow Extension Schemas**Description**

Comma-separated list of SchemaService workflow extension schemas for additional action types. From CDH 5.4 and higher, this parameter is used only to specify additional schemas for workflows. All schemas included in that release will be added automatically and do not need to be specified.

Related Name

oozie.service.SchemaService.wf.ext.schemas

Default Value**API Name**

oozie_workflow_extension_schemas

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Database**Oozie Server Data Directory****Description**

Directory where the Oozie Server places its data. Only applicable when using Derby as the database type.

Related Name**Default Value**

/var/lib/oozie/data

API Name

oozie_data_dir

Required

false

Oozie Database Connection Properties**Description**

Properties to set on the database connection directly. See `oozie_datasource_properties` for setting properties on the `Datasource` object.

Related Name**Default Value****API Name**

oozie_database_connection_properties

Required

false

Oozie Server Database Host**Description**

Hostname of the database used by Oozie Server. If the port is non-default for your database type, use `host:port` notation. Does not apply if you are using Derby as the database type.

Related Name**Default Value**

localhost

API Name

oozie_database_host

Required

false

Oozie Server Database Is Secure

Description

Whether Oozie should connect to its database through a secure connection or not

Related Name**Default Value**

false

API Name

oozie_database_is_secure

Required

false

Oozie Server Database Name

Description

Name of the database used by Oozie Server.

Related Name**Default Value**

oozie

API Name

oozie_database_name

Required

false

Oozie Server Database Password

Description

Password for connecting to the database used by Oozie Server. Does not apply if you are using Derby as the database type.

Related Name

oozie.service.JPIService.jdbc.password

Default Value**API Name**

oozie_database_password

Required

false

Oozie Server Database Type

Description

Type of the database used by Oozie Server.

Related Name**Default Value**

derby

API Name

oozie_database_type

Required

false

Oozie Server Database User

Description

Username for connecting to the database used by Oozie Server. Does not apply if you are using Derby as the database type.

Related Name

oozie.service.JPAService.jdbc.username

Default Value

sa

API Name

oozie_database_user

Required

false

Oozie Datasource Properties

Description

Properties to set on the Datasource object (e.g.: lock timeout). NOTE: This will not be set on the database connection, but on the Datasource object wrapping the connection. See also: oozie_database_connection_properties.

Related Name

Default Value

API Name

oozie_datasource_properties

Required

false

Logs

Oozie Server Logging Threshold

Description

The minimum log level for Oozie Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Oozie Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Oozie Server logs. Typically used by log4j or logback.

Related Name

Default Value

720

API Name

max_log_backup_index

Required

false

Oozie Server Log Directory

Description

Directory where Oozie Server will place its log files.

Related Name

Default Value

/var/log/oozie

API Name

oozie_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Workflow Status Metrics Collection Interval

Description

Workflow Status metrics collection interval.

Related Name

oozie.service.DBLiteWorkflowStoreService.status.metrics.collection.interval

Default Value

1 minute(s)

API Name

oozie_job_metric_collection_interval

Required

false

Oozie Server Callable Queue Monitoring Threshold

Description

The health test thresholds of the weighted average size of the Oozie Server callable queue over a recent period. See also Oozie Server Callable Queue Monitoring Period.

Related Name

Default Value

Warning: 80.0 %, Critical: 95.0 %

API Name

oozie_server_callable_queue_threshold

Required

false

Oozie Server Callable Queue Monitoring Period

Description

The period over which to compute the moving average of the callable queue size.

Related Name

Default Value

5 minute(s)

API Name

oozie_server_callable_queue_window

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

oozie_server_fd_thresholds

Required

false

Oozie Server Host Health Test**Description**

When computing the overall Oozie Server health, consider the host's health.

Related Name**Default Value**

true

API Name

oozie_server_host_health_enabled

Required

false

Pause Duration Thresholds**Description**

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name**Default Value**

Warning: 30.0, Critical: 60.0

API Name

oozie_server_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period**Description**

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name**Default Value**

5 minute(s)

API Name

oozie_server_pause_duration_window

Required

false

Oozie Server Process Health Test

Description

Enables the health test that the Oozie Server's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

oozie_server_scm_health_enabled

Required

false

Enable Oozie Server Shared Libraries Version Check

Description

If true, enables version check for Oozie Server and installed shared libraries.

Related Name**Default Value**

true

API Name

oozie_server_shared_lib_version_check_enabled

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name**Default Value**

true

API Name

oozie_server_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name**Default Value**

Warning: 10 second(s), Critical: Never

API Name

oozie_server_web_metric_collection_thresholds

Required

false

OpenTelemetry Collector Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

otelcol_exporters

Required

false

OpenTelemetry Collector Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

otelcol_extensions

Required

false

OpenTelemetry Collector Helper Port

Description

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value****API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value**API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password**Description**

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify \$INFRA(cdp_request_signer_password) when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL**Description**

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

`$INFRA(cdp_request_signer_url)`

API Name

`otelcol_remote_write_url`

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_user)` expression. Specify `$INFRA(cdp_request_signer_username)` when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

`$INFRA(cdp_request_signer_username)`

API Name

`otelcol_remote_write_user`

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

`otelcol_rtm_logs_exporters`

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

`otelcol_rtm_logs_extensions`

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_processors

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_rtm_logs_receivers

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_service

Required

false

OpenTelemetry Collector Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)

Description

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Oozie Email Action From Address****Description**

The from address to be used for mailing all emails for Oozie email action

Related Name

oozie.email.from.address

Default Value

oozie@localhost

API Name

oozie_email_from_address

Required

false

Oozie Email Action SMTP Authentication Enabled**Description**

Enable SMTP authentication for Oozie email action

Related Name

oozie.email.smtp.auth

Default Value

false

API Name

oozie_email_smtp_auth

Required

false

Oozie Email Action SMTP Host

Description

The SMTP server host to use for Oozie email action

Related Name

oozie.email.smtp.host

Default Value

localhost

API Name

oozie_email_smtp_host

Required

false

Oozie Email Action SMTP Authentication Password

Description

SMTP password for Oozie email action

Related Name

oozie.email.smtp.password

Default Value

API Name

oozie_email_smtp_password

Required

false

Oozie Email Action SMTP Authentication Username

Description

SMTP username for Oozie email action

Related Name

oozie.email.smtp.username

Default Value

API Name

oozie_email_smtp_username

Required

false

Oozie Server Plugins

Description

Comma-separated list of Oozie plug-ins to be activated. If one plugin cannot be loaded, all the plugins are ignored.

Related Name

oozie.services.ext

Default Value

API Name

oozie_plugins_list

Required

false

Maximum concurrency for a given callable type

Description

Maximum concurrency for a given callable type.. Each command is a callable type: submit, start, run, etc.. Each action type is a callable type: MapReduce, SSH, sub-workflow, etc. All commands that use action executors (action-start, action-end. etc.) use the action type as the callable type.

Related Name

oozie.service.CallableQueueService.callable.concurrency

Default Value

10

API Name

oozie_service_callablequeueservice_callable_concurrency

Required

false

Maximum Callable Queue Size

Description

Maximum callable queue size

Related Name

oozie.service.CallableQueueService.queue.size

Default Value

10000

API Name

oozie_service_callablequeueservice_queue_size

Required

false

Number Threads For Executing Callables

Description

Number of threads used for executing callables

Related Name

oozie.service.CallableQueueService.threads

Default Value

50

API Name

oozie_service_callablequeueservice_threads

Required

false

Enable The Metrics Instrumentation Service**Description**

Whether to use the Codehale-based metrics for instrumentation. Enabling this disables the 'instrumentation' REST endpoint and enables the 'metrics' REST endpoint (*hostname:port*/v2/admin/metrics).

Related Name**Default Value**

true

API Name

oozie_use_metric_instrumentation

Required

false

Process Sqoop Connectors**Description**

When enabled, Oozie will make an effort to handle additional Sqoop connector parcels, such as Teradata. If any of these parcels are distributed and activated, their respective driver Jar will be uploaded to Yarn for utilization in each Sqoop action. Additionally, the corresponding connection factory settings will be accessible for each Sqoop action as well.

Related Name

oozie.service.SqoopConfigurationService.processSqoopConnectors

Default Value

true

API Name

process_sqoop_connectors

Required

false

Days to Keep Completed Bundle Jobs**Description**

Completed bundle jobs older than this value, in days, will be purged by the PurgeService.

Related Name

oozie.service.PurgeService.bundle.older.than

Default Value

7 day(s)

API Name

purgeservice_bundle_older_than

Required

false

Days to Keep Completed Coordinator Jobs**Description**

Completed coordinator jobs older than this value, in days, will be purged by the PurgeService.

Related Name`oozie.service.PurgeService.coord.older.than`**Default Value**`7 day(s)`**API Name**`purgeservice_coord_older_than`**Required**`false`**Days to Keep Completed Workflow Jobs****Description**

Completed workflow jobs older than this value, in days, will be purged by the PurgeService.

Related Name`oozie.service.PurgeService.older.than`**Default Value**`30 day(s)`**API Name**`purgeservice_older_than`**Required**`false`**Enable Purge for Long-Running Coordinator Jobs****Description**

Whether to purge completed workflows and their corresponding coordinator actions of long-running coordinator jobs if the completed workflow jobs are older than the value specified in `oozie.service.PurgeService.older.than`.

Related Name`oozie.service.PurgeService.purge.old.coord.action`**Default Value**`true`**API Name**`purgeservice_purge_old_coord_action`**Required**`false`**Performance****Default Launcher Virtual CPU Cores****Description**

The default number of Virtual CPU Cores that are allocated for the Launcher ApplicationMasters.

Related Name`oozie.launcher.default.vcores`**Default Value**`1`**API Name**

oozie_launcher_default_vcores

Required

false

Oozie Server Threadpool Size**Description**

Controls the threadpool size for the Oozie Server (both Jetty and Tomcat).

Related Name

oozie.server.threadpool.max.threads

Default Value

150

API Name

oozie_service_threadpool_max_threads

Required

false

Maximum Process File Descriptors**Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Oozie Email Action SMTP Port****Description**

The SMTP server port to use for Oozie email action

Related Name

oozie.email.smtp.port

Default Value

25

API Name

oozie_email_smtpprt

Required

false

Oozie HTTP Port**Description**

Port of Oozie Server

Related Name

`oozie.http.port`**Default Value**

11000

API Name`oozie_http_port`**Required**

false

Oozie HTTPS Port**Description**

Port of the Oozie Server when using TLS/SSL.

Related Name`oozie.https.port`**Default Value**

11443

API Name`oozie_https_port`**Required**

false

Resource Management**Java Heap Size of Oozie Server in Bytes****Description**

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name**Default Value**

1 GiB

API Name`oozie_java_heapsize`**Required**

false

Cgroup V1 BLKIO Weight**Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name`blkio.weight`**Default Value**

500

API Name`rm_blkio_weight`

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

rm_memory_soft_limit_v2

Required

true

Security

Excluded Cipher Suites

Description

List of cipher suite names that should be excluded.

Related Name

oozie.https.exclude.cipher.suites

Default Value

TLS_ECDHE_RSA_WITH_RC4_128_SHA
SSL_DHE_RSA_EXPORT_WITH_DES40_CBC_SHA SSL_RSA_WITH_DES_CBC_SHA
SSL_DHE_RSA_WITH_DES_CBC_SHA SSL_RSA_EXPORT_WITH_RC4_40_MD5
SSL_RSA_EXPORT_WITH_DES40_CBC_SHA SSL_RSA_WITH_RC4_128_MD5

API Name

oozie_https_exclude_cipher_suites

Required

false

Enabled TLS Protocols**Description**

TLS protocols accepted by the Oozie Server.

Related Name

oozie.https.include.protocols

Default Value

SSLv2Hello, TLSv1.2

API Name

oozie_https_include_protocols

Required

false

Oozie TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Oozie is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

oozie.https.keystore.file

Default Value

/var/lib/oozie/.keystore

API Name

oozie_https_keystore_file

Required

false

Oozie TLS/SSL Server Keystore File Password**Description**

The password for the Oozie keystore file.

Related Name

oozie.https.keystore.pass

Default Value**API Name**

oozie_https_keystore_password

Required

false

Oozie TLS/SSL Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Oozie might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

oozie.https.truststore.file

Default Value**API Name**

oozie_https_truststore_file

Required

false

Oozie TLS/SSL Trust Store Password**Description**

The password for the Oozie TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

oozie.https.truststore.pass

Default Value**API Name**

oozie_https_truststore_password

Required

false

Oozie ZooKeeper TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Oozie ZooKeeper is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

oozie.zookeeper.https.keystore.file

Default Value**API Name**

oozie_zookeeper_https_keystore_file

Required

false

Oozie ZooKeeper TLS/SSL Server Keystore File Password**Description**

The password for the Oozie ZooKeeper keystore file.

Related Name

oozie.zookeeper.https.keystore.pass

Default Value**API Name**

oozie_zookeeper_https_keystore_password

Required

false

Oozie ZooKeeper TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Oozie ZooKeeper might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

oozie_zookeeper_https_truststore_file

Required

false

Oozie ZooKeeper TLS/SSL Trust Store Password

Description

The password for the Oozie ZooKeeper TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

oozie.zookeeper.https.truststore.pass

Default Value**API Name**

oozie_zookeeper_https_truststore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user

with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

Suppress Parameter Validation: Oozie TLS/SSL Server Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Server Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_keystore_password

Required

true

Suppress Parameter Validation: Oozie HTTPS Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie HTTPS Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_port

Required

true

Suppress Parameter Validation: Oozie TLS/SSL Trust Store File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_truststore_file

Required

true

Suppress Parameter Validation: Oozie TLS/SSL Trust Store Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie TLS/SSL Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_truststore_password

Required

true

Suppress Parameter Validation: Java Configuration Options for Oozie Server**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Configuration Options for Oozie Server parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_java_opts

Required

true

Suppress Parameter Validation: Directory For JSP Temp Files**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Directory For JSP Temp Files parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_oozie_jsp_tmp_dir`**Required**`true`**Suppress Parameter Validation: Default Launcher Queue****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Launcher Queue parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_oozie_launcher_default_queue`**Required**`true`**Suppress Parameter Validation: Oozie Server Log Directory****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Log Directory parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_oozie_log_dir`**Required**`true`**Suppress Parameter Validation: Oozie Server Plugins****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Plugins parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_oozie_plugins_list`**Required**`true`**Suppress Parameter Validation: Oozie Server Environment Advanced Configuration Snippet (Safety Valve)****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_oozie_server_audit_health

Required

true

Suppress Health Test: Callable Queue Size**Description**

Whether to suppress the results of the Callable Queue Size health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_oozie_server_callablequeue_size_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

`role_health_suppression_oozie_server_file_descriptor`**Required**`true`**Suppress Health Test: Heap Dump Directory Free Space****Description**

Whether to suppress the results of the Heap Dump Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_oozie_server_heap_dump_directory_free_space`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_oozie_server_host_health`**Required**`true`**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_oozie_server_log_directory_free_space`**Required**`true`**Suppress Health Test: Otelcol Health****Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_oozie_server_otelcol_health

Required

true

Suppress Health Test: Pause Duration**Description**

Whether to suppress the results of the Pause Duration health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_oozie_server_pause_duration

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_oozie_server_scm_health

Required

true

Suppress Health Test: Oozie Server Shared Library Check**Description**

Whether to suppress the results of the Oozie Server Shared Library Check health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_oozie_server_shared_lib_version_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_oozie_server_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_oozie_server_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_oozie_server_unexpected_exits

Required

true

Suppress Health Test: Web Server Status

Description

Whether to suppress the results of the Web Server Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_oozie_server_web_metric_collection

Required

true

Service-Wide

Advanced

Oozie Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

oozie_env_safety_valve

Required

false

System Group

Description

The group that this service's processes should run as.

Related Name**Default Value**

oozie

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name**Default Value**

oozie

API Name

process_username

Required

true

Database

Database Dump File

Description

File where the database gets dumped to or loaded from.

Related Name

Default Value

/tmp/oozie_database_dump.zip

API Name

database_dump_file

Required

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Healthy Oozie Server Monitoring Thresholds

Description

The health test thresholds of the overall Oozie Server health. The check returns "Concerning" health if the percentage of "Healthy" Oozie Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Oozie Servers falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 51.0 %

API Name

oozie_servers_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value**

API Name

smon_derived_configs_safety_valve

Required

false

Other

Atlas Service

Description

Name of the Atlas service that this Oozie service instance depends on. This is used to configure Atlas Hook properties.

Related Name

Default Value

API Name

atlas_service

Required

false

HBase Service

Description

Name of the HBase service that this Oozie service instance depends on. This is used to configure Oozie HBase integration.

Related Name

Default Value

API Name

hbase_service

Required

false

Hive Service

Description

Name of the Hive service that this Oozie service instance depends on. This is used to configure Oozie HCat integration.

Related Name

Default Value

API Name

hive_service

Required

false

MapReduce Service

Description

Service to run MapReduce jobs against

Related Name

Default Value

API Name

mapreduce_yarn_service

Required

true

Oozie Event Listeners

Description

List of event listeners used by the Oozie service. Listeners needed for JMS or SLA integration are automatically emitted if they are enabled.

Related Name

oozie.service.EventHandlerService.event.listeners

Default Value

API Name

oozie_event_listeners

Required

false

JMS Broker

Description

URL of the JMS Broker used by the Oozie service in JMS integration is enabled.

Related Name

oozie.jms.producer.connection.properties

Default Value

tcp://localhost:61616

API Name

oozie_jms_broker

Required

false

Oozie Load Balancer Hostname

Description

Hostname of the load balancer used if Oozie HA is enabled.

Related Name

Default Value

API Name

oozie_load_balancer

Required

false

Coordinator Job Lookup Interval

Description

Coordinator Job Lookup trigger command is scheduled at this interval (in seconds).

Related Name

oozie.service.CoordMaterializeTriggerService.lookup.interval

Default Value

5 minute(s)

API Name

oozie_service_coord_lookup_interval

Required

false

Coordinator Action Input Check Default Timeout**Description**

Default timeout for a Coordinator Action input check (in minutes) for a Coordinator Job.

Related Name

oozie.service.coord.normal.default.timeout

Default Value

2 hour(s)

API Name

oozie_service_coord_normal_default_timeout

Required

false

Oozie Callback Servlet Authentication**Description**

If enabled, and Oozie runs in a Kerberos environment, the callback endpoint will require authentication like all the other endpoints.

Related Name

oozie.servlet.CallbackServlet.authentication.required

Default Value

false

API Name

oozie_servlet_callbackservlet_authentication_required

Required

false

ShareLib Root Directory**Description**

Root of the directory in HDFS where the Oozie ShareLibs are stored. The libraries are stored in the share/lib subdirectory under the specified root directory.

Related Name

oozie.service.WorkflowAppService.system.libpath

Default Value

/user/oozie

API Name

oozie_sharelib_rootdir

Required

true

Oozie UI Enabled

Description

If disabled, the Oozie UI will not be available.

Related Name

oozie.ui.enabled

Default Value

true

API Name

oozie_ui_enabled

Required

false

Oozie Upload ShareLib Command Timeout

Description

The timeout in seconds used for the Oozie Upload ShareLib command. When the value is zero, there is no timeout for the command.

Related Name**Default Value**

270

API Name

oozie_upload_sharelib_cmd_timeout

Required

false

Oozie Upload ShareLib Command Concurrency Level

Description

The number of threads that Oozie will use for the Upload ShareLib command.

Related Name**Default Value**

8

API Name

oozie_upload_sharelib_concurrency

Required

false

Enable JMS Integration

Description

Whether to configure Oozie properties needed for JMS integration

Related Name**Default Value**

false

API Name

oozie_use_jms

Required

false

Enable SLA Integration

Description

Whether to configure Oozie properties needed for SLA integration

Related Name**Default Value**

false

API Name

oozie_use_sla

Required

false

Use ACLs on Znode

Description

Use ACLs on Znode while a secure ZooKeeper is used for Oozie High Availability. Note: This config is not emitted if ZooKeeper is not secure.

Related Name

oozie.zookeeper.secure

Default Value

true

API Name

oozie_zk_secure

Required

false

ZooKeeper Namespace

Description

Namespace used by this Oozie service in ZooKeeper when High Availability is enabled.

Related Name

oozie.zookeeper.namespace

Default Value

oozie

API Name

oozie_zookeeper_namespace

Required

false

Ozone Service

Description

Name of the Ozone service that this Oozie service instance depends on

Related Name**Default Value****API Name**

`ozone_service`**Required**`false`**Spark3 on Yarn service****Description**

Name of the Spark3 on Yarn service that this Oozie service instance depends on.

Related Name**Default Value****API Name**`spark3_on_yarn_service`**Required**`false`**Python Executable for Spark3 Actions****Description**

Custom Python executable that is intended to be used with Oozie's Spark3 actions. The value should represent the absolute path to the Python executable, such as `"/opt/python-for-spark3/python3.8/bin/python3"`. The presence of the specified Python executable is required on all NodeManager Hosts. If you leave this field blank, Oozie won't replace the default Python executable used with Spark3. To understand how Spark3 selects its Python executable, please consult the official Spark3 documentation.

Related Name`oozie.service.Spark3ConfigurationService.spark.pyspark.python`**Default Value****API Name**`spark3_python_executable`**Required**`false`**Sqoop Service****Description**

Name of the Sqoop service that this Oozie service instance depends on. This is used to configure Oozie Sqoop integration.

Related Name**Default Value****API Name**`sqoop_client`**Required**`false`**ZooKeeper Service****Description**

Name of the ZooKeeper service that this Oozie service instance depends on

Related Name

Default Value**API Name**

zookeeper_service

Required

false

Ports and Addresses**Oozie Load Balancer HTTP Port****Description**

HTTP port of the load balancer used if Oozie HA is enabled and SSL is disabled.

Related Name**Default Value****API Name**

oozie_load_balancer_http_port

Required

false

Oozie Load Balancer HTTPS Port**Description**

HTTPS port of the load balancer used if Oozie HA is enabled and SSL is enabled.

Related Name**Default Value****API Name**

oozie_load_balancer_https_port

Required

false

Security**Kerberos Principal****Description**

Kerberos principal short name used by all roles of this service.

Related Name**Default Value**

oozie

API Name

kerberos_princ_name

Required

true

Oozie Credential Classes**Description**

A list of credential class mappings for CredentialsProvider.

Related Name`oozie.credentials.credentialclasses`**Default Value**`hcat=org.apache.oozie.action.hadoop.HCatCredentials
hbase=org.apache.oozie.action.hadoop.HbaseCredentials
hive2=org.apache.oozie.action.hadoop.Hive2Credentials`**API Name**`oozie_credential_classes`**Required**`false`**Enable TLS/SSL for Oozie****Description**

Encrypt communication between clients and Oozie using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name`oozie.https.enabled`**Default Value**`false`**API Name**`oozie_use_ssl`**Required**`false`**Suppressions****Suppress Configuration Validator: Oozie Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties****Description**

Whether to suppress configuration warnings produced by the Oozie Service Advanced Configuration Snippet (Safety Valve) for atlas-application.properties configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_application_properties_safety_valve`**Required**`true`**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**`false`

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the JMX Exporter configuration YAML configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Configuration Validator: Oozie Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Oozie Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml

Description

Whether to suppress configuration warnings produced by the Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_action_config_default_safety_valve

Required

true

Suppress Configuration Validator: Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml**Description**

Whether to suppress configuration warnings produced by the Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_config_safety_valve

Required

true

Suppress Configuration Validator: Oozie Server Data Directory**Description**

Whether to suppress configuration warnings produced by the Oozie Server Data Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_data_dir

Required

true

Suppress Configuration Validator: Oozie Database Connection Properties**Description**

Whether to suppress configuration warnings produced by the Oozie Database Connection Properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_database_connection_properties

Required

true

Suppress Configuration Validator: Oozie Server Database Host

Description

Whether to suppress configuration warnings produced by the Oozie Server Database Host configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_database_host

Required

true

Suppress Configuration Validator: Oozie Server Database Name

Description

Whether to suppress configuration warnings produced by the Oozie Server Database Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_database_name

Required

true

Suppress Configuration Validator: Oozie Server Database Password

Description

Whether to suppress configuration warnings produced by the Oozie Server Database Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_database_password

Required

true

Suppress Configuration Validator: Oozie Server Database User

Description

Whether to suppress configuration warnings produced by the Oozie Server Database User configuration validator.

Related Name

Default Value

	false
API Name	role_config_suppression_oozie_database_user
Required	true

Suppress Configuration Validator: Oozie Datasource Properties

Description
Whether to suppress configuration warnings produced by the Oozie Datasource Properties configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_oozie_datasource_properties

Required
true

Suppress Configuration Validator: Oozie Email Action From Address

Description
Whether to suppress configuration warnings produced by the Oozie Email Action From Address configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_oozie_email_from_address

Required
true

Suppress Configuration Validator: Oozie Email Action SMTP Host

Description
Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Host configuration validator.

Related Name

Default Value
false

API Name
role_config_suppression_oozie_email_smtp_host

Required
true

Suppress Configuration Validator: Oozie Email Action SMTP Authentication Password

Description

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Authentication Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_email_smtp_password

Required

true

Suppress Configuration Validator: Oozie Email Action SMTP Port

Description

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_email_smtp prt

Required

true

Suppress Configuration Validator: Oozie Email Action SMTP Authentication Username

Description

Whether to suppress configuration warnings produced by the Oozie Email Action SMTP Authentication Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_email_smtp_username

Required

true

Suppress Configuration Validator: Oozie ActionService Executor Extension Classes

Description

Whether to suppress configuration warnings produced by the Oozie ActionService Executor Extension Classes configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_executor_extension_classes

Required

true

Suppress Configuration Validator: Oozie HTTP Port

Description

Whether to suppress configuration warnings produced by the Oozie HTTP Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_http_port

Required

true

Suppress Configuration Validator: Excluded Cipher Suites

Description

Whether to suppress configuration warnings produced by the Excluded Cipher Suites configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_exclude_cipher_suites

Required

true

Suppress Configuration Validator: Oozie TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Server Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_keystore_file

Required

true

Suppress Configuration Validator: Oozie TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Server Keystore File Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_https_keystore_password

Required

true

Suppress Configuration Validator: Oozie HTTPS Port

Description

Whether to suppress configuration warnings produced by the Oozie HTTPS Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_https_port

Required

true

Suppress Configuration Validator: Oozie TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_https_truststore_file

Required

true

Suppress Configuration Validator: Oozie TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Oozie TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_https_truststore_password

Required

true

Suppress Configuration Validator: Java Configuration Options for Oozie Server

Description

Whether to suppress configuration warnings produced by the Java Configuration Options for Oozie Server configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_java_opts

Required

true

Suppress Configuration Validator: Directory For JSP Temp Files

Description

Whether to suppress configuration warnings produced by the Directory For JSP Temp Files configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_jsp_tmp_dir

Required

true

Suppress Configuration Validator: Default Launcher Queue

Description

Whether to suppress configuration warnings produced by the Default Launcher Queue configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_launcher_default_queue

Required

true

Suppress Configuration Validator: Oozie Server Log Directory

Description

Whether to suppress configuration warnings produced by the Oozie Server Log Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_log_dir

Required

true

Suppress Configuration Validator: Oozie Server Plugins**Description**

Whether to suppress configuration warnings produced by the Oozie Server Plugins configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_plugins_list

Required

true

Suppress Configuration Validator: Oozie Server Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Oozie Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Oozie SchemaService Workflow Extension Schemas**Description**

Whether to suppress configuration warnings produced by the Oozie SchemaService Workflow Extension Schemas configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_workflow_extension_schemas

Required

true

Suppress Configuration Validator: Oozie ZooKeeper TLS/SSL Server Keystore File Location**Description**

Whether to suppress configuration warnings produced by the Oozie ZooKeeper TLS/SSL Server Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_oozie_zookeeper_https_keystore_file

Required

true

Suppress Configuration Validator: Oozie ZooKeeper TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Oozie ZooKeeper TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_zookeeper_https_keystore_password

Required

true

Suppress Configuration Validator: Oozie ZooKeeper TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Oozie ZooKeeper TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_zookeeper_https_truststore_file

Required

true

Suppress Configuration Validator: Oozie ZooKeeper TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Oozie ZooKeeper TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oozie_zookeeper_https_truststore_password

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Exporters Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Extensions Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Helper Port

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Helper Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Processors Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write URL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Database Dump File**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Dump File parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_database_dump_file

Required

true

Suppress Parameter Validation: Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Oozie Credential Classes**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Credential Classes parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_credential_classes

Required

true

Suppress Parameter Validation: Oozie Service Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_env_safety_valve

Required

true

Suppress Parameter Validation: Oozie Event Listeners**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Event Listeners parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_event_listeners

Required

true

Suppress Parameter Validation: JMS Broker**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMS Broker parameter.

Related Name

Default Value

false

API Name

service_config_suppression_oozie_jms_broker

Required

true

Suppress Parameter Validation: Oozie Load Balancer Hostname

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer Hostname parameter.

Related Name

Default Value

false

API Name

service_config_suppression_oozie_load_balancer

Required

true

Suppress Parameter Validation: Oozie Load Balancer HTTP Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer HTTP Port parameter.

Related Name

Default Value

false

API Name

service_config_suppression_oozie_load_balancer_http_port

Required

true

Suppress Parameter Validation: Oozie Load Balancer HTTPS Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oozie Load Balancer HTTPS Port parameter.

Related Name

Default Value

false

API Name

service_config_suppression_oozie_load_balancer_https_port

Required

true

Suppress Configuration Validator: Oozie Server Count Validator

Description

Whether to suppress configuration warnings produced by the Oozie Server Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_server_count_validator

Required

true

Suppress Parameter Validation: ShareLib Root Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ShareLib Root Directory parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_sharelib_rootdir

Required

true

Suppress Parameter Validation: ZooKeeper Namespace**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Namespace parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_oozie_zookeeper_namespace

Required

true

Suppress Parameter Validation: System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Python Executable for Spark3 Actions

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Python Executable for Spark3 Actions parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_spark3_python_executable

Required

true

Suppress Health Test: Oozie Server Health**Description**

Whether to suppress the results of the Oozie Server Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_oozie_oozie_servers_healthy

Required

true

Ozone Properties in Cloudera Runtime 7.3.1

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name**Default Value**

/etc/ozone

API Name

client_config_root_dir

Required

true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only, a string to be inserted into the client configuration for ozone-conf/ozone-site.xml.

Related Name

Default Value

API Name

ozone-conf/ozone-site.xml_client_config_safety_valve

Required

false

Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only, a string to be inserted into the client configuration for ozone-conf/ssl-client.xml.

Related Name

Default Value

API Name

ozone-conf/ssl-client.xml_client_config_safety_valve

Required

false

Logs

Gateway Logging Threshold

Description

The minimum log level for Gateway logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other**Alternatives Priority****Description**

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name**Default Value**

50

API Name

client_config_priority

Required

true

Security**Gateway TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Gateway TLS/SSL Trust Store Password**Description**

The password for the Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ozone-site.xml_client_config_safety_valve

Required

true

Suppress Parameter Validation: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ssl-client.xml_client_config_safety_valve

Required

true

Suppress Parameter Validation: Gateway TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Gateway TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

`role_config_suppression_ssl_client_truststore_password`**Required**`true`

HttpFS Gateway

Advanced

HttpFS Gateway Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**`HTTPFS_GATEWAY_role_env_safety_valve`**Required**`false`

HttpFS Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**`log4j_safety_valve`**Required**`false`

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**`false`**API Name**`metric_config_auto_refresh`**Required**`false`

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists,

it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

HttpFS Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/httpfs-site.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/httpfs-site.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/httpfs-site.xml_role_safety_valve

Required

false

HttpFS Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

HttpFS Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

HttpFS Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process_username

Required

true

Logs

HttpFS Gateway Log Directory

Description

The log directory for log files of the role HttpFS Gateway.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

HttpFS Gateway Logging Threshold

Description

The minimum log level for HttpFS Gateway logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

HttpFS Gateway Maximum Log File Backups

Description

The maximum number of rolled log files to keep for HttpFS Gateway logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

HttpFS Gateway Max Log Size**Description**

The maximum size, in megabytes, per log file for HttpFS Gateway logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

httpfs_gateway_fd_thresholds

Required

false

HttpFS Gateway Host Health Test**Description**

When computing the overall HttpFS Gateway health, consider the host's health.

Related Name**Default Value**

true

API Name

httpfs_gateway_host_health_enabled

Required

false

HttpFS Gateway Process Health Test**Description**

Enables the health test that the HttpFS Gateway's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

httpfs_gateway_scm_health_enabled

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

	true
API Name	jmx_exporter_enabled
Required	true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name

Default Value

API Name	jmx_exporter_yaml
Required	false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

	log_directory_free_space_absolute_thresholds
Required	false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

	log_directory_free_space_percentage_thresholds
Required	false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Java Heap Size of HttpFS Gateway**Description**

Maximum size for the Java process heap memory.

Related Name

ozone_httpfs_gateway_max_heap_size

Default Value

1 GiB

API Name

ozone_httpfs_gateway_max_heap_size

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Ozone HttpFS Gateway HTTP Web UI Port****Description**

The base port that the HttpFS Gateway web user interface listens on. The host name of the HttpFS Gateway is combined with this port to form the 'ozone.httpfs.http-address'.

Related Name

ozone.httpfs.http-port

Default Value

9778

API Name

ozone.httpfs.http-port

Required

true

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100	
API Name	rm_io_weight
Required	true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

Ozone DataNode

Advanced

Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions

and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties**Description**

For advanced use only. A string to be inserted into ozone-conf/dn-audit-log4j2.properties for this role only.

Related Name**Default Value****API Name**

ozone-conf/dn-audit-log4j2.properties_role_safety_valve

Required

false

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-container-log4j2.properties

Description

For advanced use only. A string to be inserted into ozone-conf/dn-container-log4j2.properties for this role only.

Related Name**Default Value****API Name**

ozone-conf/dn-container-log4j2.properties_role_safety_valve

Required

false

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

OZONE_DATANODE_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User**Description**

The user that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_username

Required

true

Logs**Ozone DataNode Log Directory****Description**

The log directory for log files of the role Ozone DataNode.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

Ozone DataNode Logging Threshold**Description**

The minimum log level for Ozone DataNode logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Ozone DataNode Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Ozone DataNode logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Ozone DataNode Max Log Size**Description**

The maximum size, in megabytes, per log file for Ozone DataNode logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

`jmx_exporter_yaml`**Required**

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name`log_directory_free_space_absolute_thresholds`**Required**

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name`log_directory_free_space_percentage_thresholds`**Required**

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.

- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ozone_datanode_fd_thresholds

Required

false

Ozone DataNode Host Health Test**Description**

When computing the overall Ozone DataNode health, consider the host's health.

Related Name**Default Value**

true

API Name

ozone_datanode_host_health_enabled

Required

false

Ozone DataNode Process Health Test**Description**

Enables the health test that the Ozone DataNode's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ozone_datanode_scm_health_enabled

Required

false

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period**Description**

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other**Datanode Ratis Metadata Directory****Description**

One or more directories used for storing Datanode Ratis metadata. Ideally, this should be mapped to a fast disk like an SSD.

Related Name

dfs.container.ratis.datanode.storage.dir

Default Value

/var/lib/hadoop-ozone/datanode/ratis/data

API Name

dfs.container.ratis.datanode.storage.dir

Required

true

Number of Disks where Blocks are Stored that are Allowed to Fail**Description**

The number of disks where blocks are stored that are allowed to fail before a datanode stops offering service. Set this property to -1 to specify that an unlimited number of disks can fail. If set to -1, there must be at least one good disk remaining on which to store blocks.

Related Name

failed.data.volumes.tolerated

Default Value

-1

API Name

failed.data.volumes.tolerated

Required

false

Number of Disks that Store Block Metadata that are Allowed to Fail**Description**

The number of disks that store block metadata that are allowed to fail before a datanode stops offering service. Set this property to -1 to specify that an unlimited number of disks can fail. If set to -1, there must be at least one good disk remaining on which to store block metadata.

Related Name

failed.metadata.volumes.tolerated

Default Value

-1

API Name

failed.metadata.volumes.tolerated

Required

false

Graceful Shutdown Timeout**Description**

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name**Default Value**

2 minute(s)

API Name

graceful_stop_timeout

Required

false

Datanode Data Directory**Description**

Determines where on the local filesystem HDDS data will be stored.

Related Name

hdds.datanode.dir

Default Value

/var/lib/hadoop-ozon/datanode/data

API Name

`hdds.datanode.dir`**Required**`true`**Datanode Out-Of-Service Replication Limit Factor****Description**

Decommissioning and maintenance nodes can handle more replication commands than in-service nodes due to reduced load. This multiplier determines the increased queue capacity and executor pool size. The current default is 2.0

Related Name`hdds.datanode.replication.outofservice.limit.factor`**Default Value****API Name**`hdds.datanode.replication.outofservice.limit.factor`**Required**`false`**Datanode Replication Streams Limit****Description**

The maximum number of replication commands a single datanode can execute simultaneously. The current default is 10.

Related Name`hdds.datanode.replication.streams.limit`**Default Value****API Name**`hdds.datanode.replication.streams.limit`**Required**`false`**Ozone Datanode HTTP Bind Hostname****Description**

The actual address the Ozone Datanode web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.datanode.http-address'.

Related Name`ozone.datanode.http-bind-host`**Default Value**`0.0.0.0`**API Name**`ozone.datanode.http-bind-host`**Required**`false`**Secure Ozone Datanode HTTPS Bind Hostname****Description**

The actual address the Ozone Datanode web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.datanode.https-address'.

Related Name

ozone.datanode.https-bind-host

Default Value

0.0.0.0

API Name

ozone.datanode.https-bind-host

Required

false

HSTS Header for DataNode UI**Description**

HSTS Header (Strict-Transport-Security) value to use

Related Name

ozone.http.header.Strict-Transport-Security

Default Value

max-age=63072000; includeSubDomains;

API Name

ozone.http.header.Strict-Transport-Security

Required

false

Datanode Metadata Directory**Description**

Determines where on the local filesystem datanode security certificates will be stored.

Related Name

ozone.metadata.dirs

Default Value

/var/lib/hadoop-ozone/datanode/ozone-metadata

API Name

ozone.metadata.dirs

Required

true

Datanode ID Directory**Description**

Ozone Datanode ID Directory

Related Name

ozone.scm.datanode.id.dir

Default Value

/var/lib/hadoop-ozone/datanode

API Name

ozone.scm.datanode.id.dir

Required

true

Java Heap Size of DataNode**Description**

Maximum size for the Java process heap memory.

Related Name

ozone_datanode_heap_size

Default Value

4 GiB

API Name

ozone_datanode_heap_size

Required

false

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Datanode Ratis IPC Port for Admin Requests****Description**

The container IPC port number for admin requests.

Related Name

dfs.container.ratis.admin.port

Default Value

9857

API Name

dfs.container.ratis.admin.port

Required

true

Datanode Ratis IPC Port for Server-to-Server Communication**Description**

The container IPC port number for server-to-server communication.

Related Name

	dfs.container.ratis.server.port
Default Value	9856
API Name	dfs.container.ratis.server.port
Required	true

Ozone Datanode HTTP Web UI Port

Description

The base port that the Ozone Datanode web user interface listens on. The host name is combined with this port to form the 'hdds.datanode.http-address'.

Related Name

ozone.datanode.http-port

Default Value

9882

API Name

ozone.datanode.http-port

Required

true

Ozone Datanode Port (TLS/SSL)

Description

The base port that the Ozone Datanode web user interface listens on when using HTTPS. The host name is combined with this port to form the 'hdds.datanode.https-address'.

Related Name

ozone.datanode.https-port

Default Value

9883

API Name

ozone.datanode.https-port

Required

false

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

`rm_memory_hard_limit_v2`**Required**`true`**Cgroup V1 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name`memory.soft_limit_in_bytes`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v1`**Required**`true`**Cgroup V2 Memory Soft Limit****Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name`memory.high`**Default Value**`-1 MiB`**API Name**`rm_memory_soft_limit_v2`**Required**`true`**Security****Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Ozone DataNode roles.

Related Name**Default Value**`dn`**API Name**

`kerberos_role_princ_name`**Required**`true`**Ozone DataNode TLS/SSL Trust Store File****Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone DataNode might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name`ssl.client.truststore.location`**Default Value****API Name**`ssl_client_truststore_location`**Required**`false`**Ozone DataNode TLS/SSL Trust Store Password****Description**

The password for the Ozone DataNode TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name`ssl.client.truststore.password`**Default Value****API Name**`ssl_client_truststore_password`**Required**`false`**Enable TLS/SSL for Ozone DataNode****Description**

Encrypt communication between clients and Ozone DataNode using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name`ozone.ssl.enabled`**Default Value**`false`**API Name**`ssl_enabled`**Required**`false`**Ozone DataNode TLS/SSL Server Keystore Key Password****Description**

The password that protects the private key contained in the keystore used when Ozone DataNode is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Ozone DataNode TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone DataNode is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ozone DataNode TLS/SSL Server Keystore File Password**Description**

The password for the Ozone DataNode keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method**Description**

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions**Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Datanode Ratis IPC Port for Admin Requests**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis IPC Port for Admin Requests parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_dfs.container.ratis.admin.port

Required

true

Suppress Parameter Validation: Datanode Ratis Metadata Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis Metadata Directory parameter.

Related Name**Default Value**

	false
API Name	role_config_suppression_dfs.container.ratis.datanode.storage.dir
Required	true

Suppress Parameter Validation: Datanode Ratis IPC Port for Server-to-Server Communication

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis IPC Port for Server-to-Server Communication parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_dfs.container.ratis.server.port
Required	true

Suppress Parameter Validation: Datanode Data Directory

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Data Directory parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_hdds.datanode.dir
Required	true

Suppress Parameter Validation: JMX Exporter configuration YAML

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_jmx_exporter_yaml
Required	true

Suppress Parameter Validation: Role-Specific Kerberos Principal

Description	
--------------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Ozone DataNode Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name**Default Value**

	false
API Name	role_config_suppression_otelcol_processors
Required	true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_receivers
Required	true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_remote_write_password
Required	true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_remote_write_url
Required	true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description	
--------------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_datanode_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_datanode_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozon_ozon_datanode_unexpected_exits

Required

true

Ozone Manager

Advanced

Ozone Manager Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions

and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties**Description**

For advanced use only. A string to be inserted into ozone-conf/om-audit-log4j2.properties for this role only.

Related Name**Default Value****API Name**

ozone-conf/om-audit-log4j2.properties_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozon-site.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ozon-site.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ozon-site.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozon-audit.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ranger-ozon-audit.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ranger-ozon-audit.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozon-policymgr-ssl.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ranger-ozon-policymgr-ssl.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ranger-ozon-policymgr-ssl.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozon-security.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ranger-ozon-security.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ranger-ozone-security.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

OZONE_MANAGER_role_env_safety_valve

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

`process_auto_restart`**Required**`true`**Role Specific System Group****Description**

The group that this role's processes should run as.

Related Name**Default Value**`hdfs`**API Name**`process_groupname`**Required**`true`**Enable Metric Collection****Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**`true`**API Name**`process_should_monitor`**Required**`true`**Process Start Retry Attempts****Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**`3`**API Name**`process_start_retries`**Required**`false`**Process Start Wait Timeout****Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User**Description**

The user that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_username

Required

true

Logs**Ozone Manager Log Directory****Description**

The log directory for log files of the role Ozone Manager.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

Ozone Manager Logging Threshold**Description**

The minimum log level for Ozone Manager logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Ozone Manager Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Ozone Manager logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Ozone Manager Max Log Size**Description**

The maximum size, in megabytes, per log file for Ozone Manager logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

otelcol_exporters

Required

false

OpenTelemetry Collector Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

otelcol_extensions

Required

false

OpenTelemetry Collector Helper Port

Description

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name

Default Value

API Name

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: `$HOST_NAME`, `$CLUSTER_NAME`, `$CLUSTER_ID`, `$SERVICE_TYPE`, `$SERVICE_NAME`, `$ROLE_NAME`, `$ROLE_TYPE`, `$ROLE_PARAM(my_parameter_name)` - e.g.: a port parameter for the role's metrics, `$DECODE_B64(...)` and `$DECODE_URL(...)` to decode encoded parameters, `$ENV_PARAM(name)` to fetch params from the process' environment, `$SYS_PARAM(name)` to fetch java system properties.

Related Name

Default Value

API Name

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password

Description

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_password)` expression. Specify `$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name

Default Value

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_url)` expression. Specify `$INFRA(cdp_request_signer_url)` when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

`$INFRA(cdp_request_signer_url)`

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_exporters

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**`otelcol_rtm_logs_service`**Required**

false

OpenTelemetry Collector Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**`otelcol_service`**Required**

false

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ozone_manager_fd_thresholds

Required

false

Ozone Manager Host Health Test

Description

When computing the overall Ozone Manager health, consider the host's health.

Related Name

Default Value

true

API Name

ozone_manager_host_health_enabled

Required

false

Ozone Manager Process Health Test**Description**

Enables the health test that the Ozone Manager's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ozone_manager_scm_health_enabled

Required

false

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name**Default Value**

2 minute(s)

API Name

graceful_stop_timeout

Required

false

OM ID

Description

ID uniquely identifying each broker or controller. Never set this property at the group level; it should always be overridden on instance level.

Related Name

om.id

Default Value**API Name**

om.id

Required

Ozone Filesystem Trash Checkpoint Interval

Description

Number of minutes between trash checkpoints

Related Name

ozone.fs.trash.checkpoint.interval

Default Value

1 hour(s)

API Name

ozone.fs.trash.checkpoint.interval

Required

false

Ozone Filesystem Trash Interval

Description

Controls the number of minutes after which a trash checkpoint directory is deleted permanently

Related Name

ozone.fs.trash.interval

Default Value

1 day(s)

API Name

ozone.fs.trash.interval

Required

false

HSTS Header for Ozone Manager UI

Description

HSTS Header (Strict-Transport-Security) value to use

Related Name

ozone.http.header.Strict-Transport-Security

Default Value

max-age=63072000; includeSubDomains;

API Name

ozone.http.header.Strict-Transport-Security

Required

false

Ozone Manager Metadata Directory

Description

Determines where on the local filesystem Ozone Manager security certificates will be stored.

Related Name

ozone.metadata.dirs

Default Value

/var/lib/hadoop-ozone/om/ozone-metadata

API Name

ozone.metadata.dirs

Required

true

Ozone Manager Data Directory

Description

Directory where the OzoneManager stores its metadata.

Related Name

ozone.om.db.dirs

Default Value

/var/lib/hadoop-ozone/om/data

API Name

ozone.om.db.dirs

Required

true

Ozone Manager HTTP Bind Hostname

Description

The actual address the OM web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.om.http-address'.

Related Name

ozone.om.http-bind-host

Default Value

0.0.0.0

API Name

ozone.om.http-bind-host

Required

false

Secure Ozone Manager HTTPS Bind Hostname

Description

The actual address the OM web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.om.https-address'.

Related Name

ozone.om.https-bind-host

Default Value

0.0.0.0

API Name

ozone.om.https-bind-host

Required

false

Enable Ozone S3 Multi-Tenancy feature

Description

Enable Ozone S3 Multi-Tenancy feature in Ozone Manager. This feature requires Kerberos Authentication to be enabled.

Related Name

ozone.om.multitenancy.enabled

Default Value

false

API Name

ozone.om.multitenancy.enabled

Required

false

New Ozone Manager Nodes

Description

Hostnames of newly added ozone manager nodes. If more than one hostname is to be added then put a ',' between hostnames, e.g, [hostname1,hostname2,hostname3]'.

Related Name

ozone.om.new.added.nodes

Default Value**API Name**

ozone.om.new.added.nodes

Required

false

Ozone Manager Ratis Storage Directory

Description

This directory is used for storing Ozone Manager's Ratis metadata like logs. Ideally, this should be mapped to a fast disk like an SSD.

Related Name

ozone.om.ratis.storage.dir

Default Value

```
/var/lib/hadoop-ozone/om/ratis
```

API Name

```
ozone.om.ratis.storage.dir
```

Required

```
true
```

Ozone Manager Snapshot Diff Directory**Description**

Directory where the Ozone Manager stores the Snapshot Diff related data.

Related Name

```
ozone.om.snapshot.diff.db.dir
```

Default Value

```
/var/lib/hadoop-ozone/om/ozone-metadata
```

API Name

```
ozone.om.snapshot.diff.db.dir
```

Required

```
true
```

Ozone Server Replication Factor**Description**

The default value of the replication factor for objects. The default is used if replication is not specified when creating a key or if no default replication is set at the bucket. Supported values for RATIS are 1, 3. Supported values for EC are rs-3-2-1024k, rs-6-3-1024k, rs-10-4-1024k, XOR-3-2-1024k, XOR-6-3-1024k, XOR-10-4-4096K (i.e XOR-3-2-`{CHUNK_SIZE}`)

Related Name

```
ozone.server.default.replication
```

Default Value

```
3
```

API Name

```
ozone.server.default.replication
```

Required

```
true
```

Ozone Server Replication Type**Description**

The default replication type to be used for Objects. The default is used when a type is not specified when creating an Object or no default value is set for the bucket. Supported values are RATIS, STAND_ALONE, and EC.

Related Name

```
ozone.server.default.replication.type
```

Default Value

```
RATIS
```

API Name

```
ozone.server.default.replication.type
```

Required

true

Ozone Manager Upgrade Need Finalization Canary Enabled

Description

Determines if the Ozone Manager Upgrade Need Finalization Canary is enabled.

Related Name

ozone_om_upgrade_need_finalization_canary_enabled

Default Value

true

API Name

ozone_om_upgrade_need_finalization_canary_enabled

Required

false

Ozone Manager Upgrade Need Finalization Canary Timeout

Description

Sets Ozone Manager Upgrade Need Finalization Canary's timeout.

Related Name

ozone_om_upgrade_need_finalization_canary_timeout

Default Value

30 second(s)

API Name

ozone_om_upgrade_need_finalization_canary_timeout

Required

false

Ranger Ozone Plugin Conf Path

Description

Staging directory for Ranger Ozone Plugin Configuration. This should generally not be changed.

Related Name

ranger_ozone_plugin_conf_path

Default Value

/etc/ranger/ozone-plugin

API Name

ranger_ozone_plugin_conf_path

Required

true

Ranger Ozone Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.ozone.policy.cache.dir

Default Value

/var/lib/ranger/ozone/policy-cache

API Name

ranger_ozone_plugin_policy_cache_directory

Required

true

Ranger Ozone Plugin Audit Solr Spool Directory Path**Description**

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/hadoop-ozone/ranger-audit/solr/spool

API Name

ranger_ozone_plugin_solr_audit_spool_directory

Required

true

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Ozone Manager HTTP Web UI Port****Description**

The base port that the Ozone Manager HTTP web user interface listens on. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.http-address'.

Related Name

ozone.om.http-port

Default Value

9874

API Name

ozone.om.http-port

Required

true

Secure Ozone Manager Web UI Port (TLS/SSL)

Description

The base port that the Ozone Manager HTTP web user interface listens on when using HTTPS. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.https-address'.

Related Name

ozone.om.https-port

Default Value

9875

API Name

ozone.om.https-port

Required

false

Ozone Manager Ratis port

Description

The base port that Ozone Manager's Ratis Server listens on if multiple Ozone Manager's are configured.

Related Name

ozone.om.ratis-port

Default Value

9872

API Name

ozone.om.ratis-port

Required

false

Ozone Manager RPC port

Description

The base port that Ozone Manager listens on when serving RPCs. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.address'.

Related Name

ozone.om.rpc-port

Default Value

9862

API Name

ozone.om.rpc-port

Required

false

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/

O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.high

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v2

Required

true

Security**Role-Specific Kerberos Principal****Description**

Kerberos principal used by the Ozone Manager roles.

Related Name**Default Value**

om

API Name

kerberos_role_princ_name

Required

true

Ozone Manager TLS/SSL Trust Store File**Description**

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone Manager might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ozone Manager TLS/SSL Trust Store Password**Description**

The password for the Ozone Manager TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ozone Manager**Description**

Encrypt communication between clients and Ozone Manager using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

`ssl_enabled`**Required**`false`**Ozone Manager TLS/SSL Server Keystore Key Password****Description**

The password that protects the private key contained in the keystore used when Ozone Manager is acting as a TLS/SSL server.

Related Name`ssl.server.keystore.keypassword`**Default Value****API Name**`ssl_server_keystore_keypassword`**Required**`false`**Ozone Manager TLS/SSL Server Keystore File Location****Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone Manager is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name`ssl.server.keystore.location`**Default Value****API Name**`ssl_server_keystore_location`**Required**`false`**Ozone Manager TLS/SSL Server Keystore File Password****Description**

The password for the Ozone Manager keystore file.

Related Name`ssl.server.keystore.password`**Default Value****API Name**`ssl_server_keystore_password`**Required**`false`**Stacks Collection****Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled**Description**

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency**Description**

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: Ozone Manager Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: OM ID

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OM ID parameter.

Related Name

Default Value

false

API Name

role_config_suppression_om.id

Required

true

Suppress Parameter Validation: Java Heap Size of Ozone Manager**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Ozone Manager parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_om_max_heap_size

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name**Default Value**

	false
API Name	role_config_suppression_otelcol_extensions
Required	true

Suppress Parameter Validation: OpenTelemetry Collector Helper Port

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_helper_port
Required	true

Suppress Parameter Validation: OpenTelemetry Collector Processors Section

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_processors
Required	true

Suppress Parameter Validation: OpenTelemetry Collector Receivers Section

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.
Related Name	
Default Value	false
API Name	role_config_suppression_otelcol_receivers
Required	true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password

Description	
--------------------	--

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/om-audit-log4j2.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ozone-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ranger-ozone-audit.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ranger-ozone-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ranger-ozone-security.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-client.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-server.xml_role_safety_valve

Required

true

Suppress Parameter Validation: HSTS Header for Ozone Manager UI**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HSTS Header for Ozone Manager UI parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.http.header.strict-transport-security

Required

true

Suppress Parameter Validation: Ozone Manager Metadata Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Metadata Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.metadata.dirs

Required

true

Suppress Parameter Validation: Ozone Manager Data Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Data Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.db.dirs

Required

true

Suppress Parameter Validation: Ozone Manager HTTP Bind Hostname

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager HTTP Bind Hostname parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.http-bind-host

Required

true

Suppress Parameter Validation: Ozone Manager HTTP Web UI Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager HTTP Web UI Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.http-port

Required

true

Suppress Parameter Validation: Secure Ozone Manager HTTPS Bind Hostname

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone Manager HTTPS Bind Hostname parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.https-bind-host

Required

true

Suppress Parameter Validation: Secure Ozone Manager Web UI Port (TLS/SSL)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone Manager Web UI Port (TLS/SSL) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.https-port

Required

true

Suppress Parameter Validation: New Ozone Manager Nodes

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the New Ozone Manager Nodes parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.new.added.nodes

Required

true

Suppress Parameter Validation: Ozone Manager Ratis port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Ratis port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.ratis-port

Required

true

Suppress Parameter Validation: Ozone Manager Ratis Storage Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Ratis Storage Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.ratis.storage.dir

Required

true

Suppress Parameter Validation: Ozone Manager RPC port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager RPC port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.rpc-port

Required

true

Suppress Parameter Validation: Ozone Manager Snapshot Diff Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Snapshot Diff Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.snapshot.diff.db.dir

Required

true

Suppress Parameter Validation: Ozone Server Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Server Replication Factor parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.server.default.replication

Required

true

Suppress Parameter Validation: Ozone Server Replication Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Server Replication Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.server.default.replication.type

Required

true

Suppress Parameter Validation: Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_manager_role_env_safety_valve

Required

true

Suppress Parameter Validation: Role Specific System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

Related Name

Default Value

false

API Name

role_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: Role Specific System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Ozone Plugin Conf Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Conf Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ozone_plugin_conf_path

Required

true

Suppress Parameter Validation: Ranger Ozone Plugin Policy Cache Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Policy Cache Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ozone_plugin_policy_cache_directory

Required

true

Suppress Parameter Validation: Ranger Ozone Plugin Audit Solr Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Audit Solr Spool Directory Path parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ozone_plugin_solr_audit_spool_directory

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Ozone Manager TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Trust Store File parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Ozone Manager TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Trust Store Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Ozone Manager TLS/SSL Server Keystore Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server Keystore Key Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Ozone Manager TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Ozone Manager TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Manager TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Ozone Manager Upgrade Need Finalization Canary**Description**

Whether to suppress the results of the Ozone Manager Upgrade Need Finalization Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_om_upgrade_need_finalization_canary

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_manager_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_ozone_manager_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ozone_ozone_manager_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ozone_ozone_manager_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health

Description

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ozone_ozone_manager_otelcol_health

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_manager_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_manager_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_manager_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_manager_unexpected_exits

Required

```
true
```

Ozone Prometheus

Advanced

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

```
false
```

API Name

```
metric_config_auto_refresh
```

Required

```
false
```

Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-prometheus.yml for this role only.

Related Name**Default Value****API Name**

```
ozone-conf/ozone-prometheus.yml_role_safety_valve
```

Required

```
false
```

Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/prometheus-token

Description

For advanced use only. A string to be inserted into ozone-conf/prometheus-token for this role only.

Related Name**Default Value****API Name**

```
ozone-conf/prometheus-token_role_safety_valve
```

Required

```
false
```

Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

OZONE_PROMETHEUS_role_env_safety_valve

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group**Description**

The group that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_username

Required

true

Logs

Ozone Prometheus Log Directory

Description

The log directory for log files of the role Ozone Prometheus.

Related Name

log.dir

Default Value

```
/var/log/hadoop-ozone
```

API Name

```
log_dir
```

Required

```
false
```

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

```
true
```

API Name

```
enable_alerts
```

Required

```
false
```

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

```
false
```

API Name

```
enable_config_alerts
```

Required

```
false
```

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

```
Warning: 10 GiB, Critical: 5 GiB
```

API Name

```
log_directory_free_space_absolute_thresholds
```

Required

```
false
```

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:  
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:

Ozone Prometheus Host Health Test

Description

When computing the overall Ozone Prometheus health, consider the host's health.

Related Name

Default Value

true

API Name

ozone_prometheus_host_health_enabled

Required

false

Ozone Prometheus Process Health Test**Description**

Enables the health test that the Ozone Prometheus's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ozone_prometheus_scm_health_enabled

Required

false

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

Performance**Maximum Process File Descriptors****Description**

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name**Default Value****API Name**

rlimit_fds

Required

false

Ports and Addresses**Prometheus HTTP Port****Description**

The base port that the prometheus web user interface listens on.

Related Name

ozone.prometheus.http-port

Default Value

9094

API Name

ozone.prometheus.http-port

Required

true

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

`role_config_suppression_ozone.prometheus.data.retention.time`**Required**

true

Suppress Parameter Validation: Prometheus Data Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus Data Directory parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_ozone.prometheus.db.dir`**Required**

true

Suppress Parameter Validation: Prometheus server extra flags.**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus server extra flags. parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_ozone.prometheus.extra.flags`**Required**

true

Suppress Parameter Validation: Prometheus HTTP Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus HTTP Port parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_ozone.prometheus.http-port`**Required**

true

Suppress Parameter Validation: Prometheus server log level.**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus server log level. parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.prometheus.log.level

Required

true

Suppress Parameter Validation: Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_prometheus_role_env_safety_valve

Required

true

Suppress Parameter Validation: Role Specific System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

Related Name

Default Value

false

API Name

role_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: Role Specific System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

Related Name

Default Value

false

API Name

role_config_suppression_process_username

Required

true

Suppress Parameter Validation: Prometheus Binary Location**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Prometheus Binary Location parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_prometheus.location

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

`role_health_suppression_ozone_ozone_prometheus_audit_health`**Required**`true`**Suppress Health Test: File Descriptors****Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_ozone_ozone_prometheus_file_descriptor`**Required**`true`**Suppress Health Test: Host Health****Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_ozone_ozone_prometheus_host_health`**Required**`true`**Suppress Health Test: Log Directory Free Space****Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**`false`**API Name**`role_health_suppression_ozone_ozone_prometheus_log_directory_free_space`**Required**`true`**Suppress Health Test: Otelcol Health****Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_prometheus_otelcol_health

Required

true

Suppress Health Test: Process Status**Description**

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_prometheus_scm_health

Required

true

Suppress Health Test: Swap Memory Usage**Description**

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_prometheus_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta**Description**

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_prometheus_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits**Description**

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozzone_ozzone_prometheus_unexpected_exits

Required

true

Ozone Recon**Advanced****Ozone Recon Logging Advanced Configuration Snippet (Safety Valve)****Description**

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations**Description**

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when `java.lang.OutOfMemoryError` error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

`oom_heap_dump_dir`

Default Value

`/tmp`

API Name

`oom_heap_dump_dir`

Required

`false`

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

`false`

API Name

`oom_heap_dump_enabled`

Required

`true`

Kill When Out of Memory

Description

When set, a `SIGKILL` signal is sent to the role process when `java.lang.OutOfMemoryError` is thrown.

Related Name**Default Value**

`true`

API Name

`oom_sigkill_enabled`

Required

`true`

Ozone Recon Advanced Configuration Snippet (Safety Valve) for `ozone-conf/ozone-site.xml`

Description

For advanced use only. A string to be inserted into `ozone-conf/ozone-site.xml` for this role only.

Related Name**Default Value**

API Name

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

Ozone Recon Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Ozone Recon Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

OZONE_RECON_role_env_safety_valve

Required

false

Automatically Restart Process**Description**

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group**Description**

The group that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User**Description**

The user that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_username

Required

true

Logs**Ozone Recon Log Directory****Description**

The log directory for log files of the role Ozone Recon.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

Ozone Recon Logging Threshold**Description**

The minimum log level for Ozone Recon logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

Ozone Recon Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for Ozone Recon logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

Ozone Recon Max Log Size**Description**

The maximum size, in megabytes, per log file for Ozone Recon logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring**Enable Health Alerts for this Role****Description**

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

monitoring_metric_filter

Required

false

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:  
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:  
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s  
max_elapsed_time: 300s
```

API Name

otelcol_exporters

Required

false

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:  
$ROLE_PARAM(otelcol_remote_write_user) password:  
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

otelcol_extensions

Required

false

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name**Default Value****API Name**

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: `$HOST_NAME`, `$CLUSTER_NAME`, `$CLUSTER_ID`, `$SERVICE_TYPE`, `$SERVICE_NAME`, `$ROLE_NAME`, `$ROLE_TYPE`, `$ROLE_PARAM(my_parameter_name)` - e.g.: a port parameter for the role's metrics, `$DECODE_B64(...)` and `$DECODE_URL(...)` to decode encoded parameters, `$ENV_PARAM(name)` to fetch params from the process' environment, `$SYS_PARAM(name)` to fetch java system properties.

Related Name

Default Value

API Name

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password

Description

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_password)` expression. Specify `$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name

Default Value

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_url)` expression. Specify `$INFRA(cdp_request_signer_url)` when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

`$INFRA(cdp_request_signer_url)`

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_exporters

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name

Default Value

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry

Description

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name

Default Value

false

API Name

otelcol_should_collect_rtm_logs

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ozone_recon_fd_thresholds

Required

false

Ozone Recon Host Health Test

Description

When computing the overall Ozone Recon health, consider the host's health.

Related Name

Default Value

true

API Name

ozone_recon_host_health_enabled

Required

false

Ozone Recon Process Health Test**Description**

Enables the health test that the Ozone Recon's process state is consistent with the role configuration

Related Name**Default Value**

true

API Name

ozone_recon_scm_health_enabled

Required

false

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds**Description**

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

true

Cgroup V2 CPU Weight**Description**

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)**Description**

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command:

resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2'
These settings override other cgroup settings.

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight**Description**

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no

limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the Ozone Recon roles.

Related Name**Default Value**

recon

API Name

kerberos_role_princ_name

Required

true

Ozone Recon TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone Recon might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

Ozone Recon TLS/SSL Trust Store Password

Description

The password for the Ozone Recon TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ozone Recon

Description

Encrypt communication between clients and Ozone Recon using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ozone Recon TLS/SSL Server Keystore Key Password**Description**

The password that protects the private key contained in the keystore used when Ozone Recon is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Ozone Recon TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone Recon is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Ozone Recon TLS/SSL Server Keystore File Password**Description**

The password for the Ozone Recon keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

`stacks_collection_frequency`**Default Value**`5.0 second(s)`**API Name**`stacks_collection_frequency`**Required**`false`**Stacks Collection Method****Description**

The method used to collect stacks. The `jstack` option involves periodically running the `jstack` command against the role's daemon process. The `servlet` method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the `servlet` method is selected, that HTTP endpoint is periodically scraped.

Related Name`stacks_collection_method`**Default Value**`jstack`**API Name**`stacks_collection_method`**Required**`false`**Suppressions****Suppress Configuration Validator: CDH Version Validator****Description**

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_cdh_version_validator`**Required**`true`**Suppress Parameter Validation: JMX Exporter configuration YAML****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**`false`**API Name**

`role_config_suppression_jmx_exporter_yaml`**Required**

true

Suppress Parameter Validation: Role-Specific Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name**Default Value**

false

API Name`role_config_suppression_kerberos_role_princ_name`**Required**

true

Suppress Parameter Validation: Ozone Recon Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Logging Advanced Configuration Snippet (Safety Valve) parameter.

S3 Gateway

Advanced

S3 Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory**Description**

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/s3g-audit-log4j2.properties

Description

For advanced use only. A string to be inserted into ozone-conf/s3g-audit-log4j2.properties for this role only.

Related Name**Default Value****API Name**

ozone-conf/s3g-audit-log4j2.properties_role_safety_valve

Required

false

S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name**Default Value**

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout**Description**

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User**Description**

The user that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_username

Required

true

S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

S3_GATEWAY_role_env_safety_valve

Required

false

Logs**S3 Gateway Log Directory****Description**

The log directory for log files of the role S3 Gateway.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

S3 Gateway Logging Threshold**Description**

The minimum log level for S3 Gateway logs

Related Name**Default Value**

INFO

API Name

log_threshold

Required

false

S3 Gateway Maximum Log File Backups**Description**

The maximum number of rolled log files to keep for S3 Gateway logs. Typically used by log4j or logback.

Related Name**Default Value**

10

API Name

max_log_backup_index

Required

false

S3 Gateway Max Log Size**Description**

The maximum size, in megabytes, per log file for S3 Gateway logs. Typically used by log4j or logback.

Related Name**Default Value**

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)

Description

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML

Description

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.

- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking [View as JSON](#). In this example, the JSON looks like this: `{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }`

Related Name**Default Value****API Name**

`monitoring_metric_filter`

Required

`false`

OpenTelemetry Collector Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
exporters: prometheusremotewrite/$ROLE_NAME: endpoint:
$ROLE_PARAM(otelcol_remote_write_url) auth: authenticator: basicauth/$ROLE_NAME tls:
insecure_skip_verify: true retry_on_failure: enabled: true initial_interval: 10s max_interval: 40s
max_elapsed_time: 300s
```

API Name

`otelcol_exporters`

Required

`false`

OpenTelemetry Collector Extensions Section**Description**

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value**

```
extensions: basicauth/$ROLE_NAME: client_auth: username:
$ROLE_PARAM(otelcol_remote_write_user) password:
'$ROLE_PARAM(otelcol_remote_write_password)'
```

API Name

`otelcol_extensions`

Required

`false`

OpenTelemetry Collector Helper Port**Description**

This port can be used for JMX Exporter to implement a Prometheus exporter or for other OpenTelemetry Collector related purposes

Related Name

Default Value

API Name

otelcol_helper_port

Required

false

OpenTelemetry Collector Processors Section

Description

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_processors

Required

false

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: \$HOST_NAME, \$CLUSTER_NAME, \$CLUSTER_ID, \$SERVICE_TYPE, \$SERVICE_NAME, \$ROLE_NAME, \$ROLE_TYPE, \$ROLE_PARAM(my_parameter_name) - e.g.: a port parameter for the role's metrics, \$DECODE_B64(...) and \$DECODE_URL(...) to decode encoded parameters, \$ENV_PARAM(name) to fetch params from the process' environment, \$SYS_PARAM(name) to fetch java system properties.

Related Name

Default Value

API Name

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password

Description

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_password) expression. Specify \$INFRA(cdp_request_signer_password) when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name

Default Value

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL**Description**

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_url)

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username**Description**

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name**Default Value**

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section**Description**

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_exporters

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_rtm_logs_service

Required

false

OpenTelemetry Collector Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: [{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=\$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}] See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name**Default Value**

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds**Description**

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name**Default Value**

Warning: 50.0 %, Critical: 70.0 %

API Name

s3_gateway_fd_thresholds

Required

false

S3 Gateway Host Health Test**Description**

When computing the overall S3 Gateway health, consider the host's health.

Related Name**Default Value**

true

API Name

s3_gateway_host_health_enabled

Required

false

S3 Gateway Process Health Test**Description**

Enables the health test that the S3 Gateway's process state is consistent with the role configuration

Related Name**Default Value**

Description

The base port that the S3 Gateway web user interface listens on when using HTTPS. The host name of the S3 Gateway is combined with this port to form the 'ozone.s3g.https-address'.

Related Name

ozone.s3g.https-port

Default Value

9879

API Name

ozone.s3g.https-port

Required

false

Resource Management

Cgroup V1 BLKIO Weight

Description

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares

Description

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

S3 Gateway TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that S3 Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value**API Name**

ssl_client_truststore_location

Required

false

S3 Gateway TLS/SSL Trust Store Password

Description

The password for the S3 Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for S3 Gateway

Description

Encrypt communication between clients and S3 Gateway using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

S3 Gateway TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when S3 Gateway is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

S3 Gateway TLS/SSL Server Keystore File Location**Description**

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when S3 Gateway is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

S3 Gateway TLS/SSL Server Keystore File Password**Description**

The password for the S3 Gateway keystore file.

Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ozone-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/s3g-audit-log4j2.properties**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/s3g-audit-log4j2.properties parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/s3g-audit-log4j2.properties_role_safety_valve

Required

true

Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-client.xml_role_safety_valve

Required

true

Suppress Parameter Validation: S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/ssl-server.xml_role_safety_valve

Required

true

Suppress Parameter Validation: HSTS Header for S3G HTTPS Endpoint**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the HSTS Header for S3G HTTPS Endpoint parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.http.header.strict-transport-security

Required

true

Suppress Parameter Validation: Ozone S3 Gateway HTTP Bind Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone S3 Gateway HTTP Bind Hostname parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.s3g.http-bind-host

Required

true

Suppress Parameter Validation: Ozone S3 Gateway HTTP Web UI Port**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone S3 Gateway HTTP Web UI Port parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.s3g.http-port

Required

true

Suppress Parameter Validation: Secure Ozone S3 Gateway HTTPS Bind Hostname**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone S3 Gateway HTTPS Bind Hostname parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.s3g.https-bind-host

Required

true

Suppress Parameter Validation: Secure Ozone S3 Gateway Web UI Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Ozone S3 Gateway Web UI Port (TLS/SSL) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.s3g.https-port

Required

true

Suppress Parameter Validation: Java Heap Size of S3 Gateway**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of S3 Gateway parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone_s3_gateway_max_heap_size

Required

true

Suppress Parameter Validation: Role Specific System Group**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: Role Specific System User**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_process_username

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_s3_gateway_role_env_safety_valve

Required

Suppress Parameter Validation: S3 Gateway TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: S3 Gateway TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: S3 Gateway TLS/SSL Server Keystore Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server Keystore Key Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: S3 Gateway TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: S3 Gateway TLS/SSL Server Keystore File Password**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the S3 Gateway TLS/SSL Server Keystore File Password parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test**Description**

Whether to suppress the results of the Audit Pipeline Test health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozon_s3_gateway_audit_health

Required

true

Suppress Health Test: File Descriptors**Description**

Whether to suppress the results of the File Descriptors health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_file_descriptor

Required

true

Suppress Health Test: Host Health**Description**

Whether to suppress the results of the Host Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_host_health

Required

true

Suppress Health Test: Log Directory Free Space**Description**

Whether to suppress the results of the Log Directory Free Space health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_log_directory_free_space

Required

true

Suppress Health Test: Otelcol Health**Description**

Whether to suppress the results of the Otelcol Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_otelcol_health

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

role_health_suppression_ozone_s3_gateway_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ozone_s3_gateway_unexpected_exits

Required

true

Service-Wide

Advanced

Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only, a string to be inserted into ozone-conf/ozone-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ozone-conf/ozone-site.xml_service_safety_valve

Required

false

Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only, a string to be inserted into ozone-conf/ssl-client.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ozone-conf/ssl-client.xml_service_safety_valve

Required

false

Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only, a string to be inserted into ozone-conf/ssl-server.xml. Applies to configurations of all roles in this service except client configuration.

Related Name**Default Value****API Name**

ozone-conf/ssl-server.xml_service_safety_valve

Required

false

Ozone Replication Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only, a string to be inserted into core-site.xml. Applies to all Ozone Replication jobs.

Related Name

ozone_replication_core_site_safety_valve

Default Value

```
<property> <name>fs.s3a.impl</name> <value>org.apache.hadoop.fs.s3a.S3AFileSystem</value>
</property> <property> <name>fs.s3a.bucket.probe</name> <value>0</value> </property>
<property> <name>fs.s3a.change.detection.version.required</name> <value>>false</value> </
property> <property> <name>fs.s3a.change.detection.mode</name> <value>none</value> </
property> <property> <name>fs.s3a.path.style.access</name> <value>>true</value> </property>
```

API Name

ozone_replication_core_site_safety_valve

Required

false

Ozone Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

OZONE_service_env_safety_valve

Required

false

System Group

Description

The group that this service's processes should run as.

Related Name

Default Value

hdfs

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name

Default Value

hdfs

API Name

process_username

Required

true

Monitoring**Enable Service Level Health Alerts****Description**

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting `eventserver_health_events_alert_threshold`

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Healthy Ozone DataNode Monitoring Thresholds**Description**

The health test thresholds of the overall Ozone DataNode health. The check returns "Concerning" health if the percentage of "Healthy" Ozone DataNodes falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ozone DataNodes falls below the critical threshold.

Related Name**Default Value**

Warning: 99.0 %, Critical: 90.0 %

API Name

OZONE_OZONE_DATANODE_healthy_thresholds

Required

false

Healthy Ozone Manager Monitoring Thresholds**Description**

The health test thresholds of the overall Ozone Manager health. The check returns "Concerning" health if the percentage of "Healthy" Ozone Managers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ozone Managers falls below the critical threshold.

Related Name**Default Value**

Warning: 75.0 %, Critical: 50.0 %

API Name

OZONE_OZONE_MANAGER_healthy_thresholds

Required

false

Healthy Storage Container Manager Monitoring Thresholds**Description**

The health test thresholds of the overall Storage Container Manager health. The check returns "Concerning" health if the percentage of "Healthy" Storage Container Managers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Storage Container Managers falls below the critical threshold.

Related Name**Default Value**

Warning: 75.0 %, Critical: 50.0 %

API Name

OZONE_STORAGE_CONTAINER_MANAGER_healthy_thresholds

Required

false

Service Triggers**Description**

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific service.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]` See the trigger rules documentation for more details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name**Default Value****API Name**

smon_derived_configs_safety_valve

Required

false

Other**CM API Bucket Owner****Description**

Name of the role to use to get credentials for the kerberos principal to set the owner when creating a bucket via CM APIs. If no role name is specified, the Hive kerberos principal is used by default.

Related Name

cm.api.bucket.owner

Default Value**API Name**

cm.api.bucket.owner

Required

false

Ozone HttpFS Gateway Proxy User Groups**Description**

Comma-delimited list of groups to allow the Ozone HttpFS Gateway to impersonate. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'

Related Name

hadoop.proxyuser.httpfs.groups

Default Value

*

API Name

hadoop.proxyuser.httpfs.groups

Required

true

Ozone HttpFS Gateway Proxy User Hosts

Description

Comma-delimited list of hosts to allow the Ozone HttpFS Gateway to impersonate. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'

Related Name

hadoop.proxyuser.httpfs.hosts

Default Value

*

API Name

hadoop.proxyuser.httpfs.hosts

Required

true

Hue Proxy User Groups

Description

Comma-delimited list of groups to allow the Hue user to impersonate. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'

Related Name

hadoop.proxyuser.hue.groups

Default Value

*

API Name

hadoop.proxyuser.hue.groups

Required

true

Hue Proxy User Hosts

Description

Comma-delimited list of hosts to allow the Hue user to impersonate. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'

Related Name

hadoop.proxyuser.hue.hosts

Default Value

*

API Name

hadoop.proxyuser.hue.hosts

Required

true

Ozone Proxy User Groups

Description

Comma-delimited list of groups to allow the Ozone user to impersonate. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'

Related Name

hadoop.proxyuser.om.groups

Default Value

*

API Name

hadoop.proxyuser.om.groups

Required

true

Ozone Proxy User Hosts**Description**

Comma-delimited list of hosts to allow the Ozone user to impersonate. To disable entirely, use a string that does not correspond to a group name, such as '_no_group_'

Related Name

hadoop.proxyuser.om.hosts

Default Value

*

API Name

hadoop.proxyuser.om.hosts

Required

true

Choose RocksDB profile**Description**

This property allows user to pick a configuration that tunes the RocksDB settings for the hardware it is running on. Right now, we have SSD and DISK as profile options.

Related Name

hdds.db.profile

Default Value

DISK

API Name

hdds.db.profile

Required

false

Ozone Prometheus Endpoint Token**Description**

Enables token based authentication for Prometheus servlet endpoints. This will disable SPNEGO based authentication on the endpoints.

Related Name

hdds.prometheus.endpoint.token

Default Value**API Name**

hdds.prometheus.endpoint.token

Required

false

HDFS Service

Description

Name of the HDFS service that this Ozone service instance depends on

Related Name**Default Value****API Name**

hdfs_service

Required

false

Ozone Administrators

Description

A comma separated list of Kerberos principals of Ozone Administrators. This will be effective only when security is enabled.

Related Name

ozone.administrators

Default Value**API Name**

ozone.administrators

Required

false

OM Decommissioning Property

Description

Property use to define and inform other OM's about the OM which is going to be decommissioned using it's OM ID.

Related Name

ozone.om.decommissioned.nodes

Default Value**API Name**

ozone.om.decommissioned.nodes

Required

false

Ozone Replication Factor

Description

Default replication factor value for keys stored in Ozone. The actual number of replications can be specified when writing the key. The default is used if replication value is not specified. Supported values: 1 and 3.

Related Name

ozone.replication

Default Value

3

API Name

`ozone.replication`**Required**`true`**Ozone Incremental Replication Allow Safe to Merge Target Side Changes****Description**

When enabled safe to merge target side changes will be allowed by Ozone incremental replication.

Related Name`ozone.replication.incremental.allow_safe_to_merge_target_side_changes`**Default Value**`false`**API Name**`ozone.replication.incremental.allow_safe_to_merge_target_side_changes`**Required**`false`**Ozone Incremental Replication Extra Snapshots to Keep****Description**

How many extra snapshots to keep that have been created by incremental Ozone replication on source and target clusters. By using the default value (0) only the snapshot from the latest incremental replication will be kept.

Related Name`ozone.replication.incremental.snapshots.keep`**Default Value**`0`**API Name**`ozone.replication.incremental.snapshots.keep`**Required**`false`**Ozone SCM Primordial Node ID****Description**

SCM Primordial Node ID is the hostname of the SCM which should act as a Root Certificate Authority(CA) for Ozone during security initialization. It is mandatory to have a Primordial Node ID when there is more than one SCM instance configured.

Related Name`ozone.scm.primordial.node.id`**Default Value****API Name**`ozone.scm.primordial.node.id`**Required**`false`**Ozone SCM Service ID****Description**

A final alphanumeric name to identify this Ozone service. The value is configured during installation, and should not be modified after that, as any change in the service id may cause service disruption.

Related Name

ozone.scm.service.id

Default Value

scm1

API Name

ozone.scm.service.id

Required

true

Enable Kerberos Authentication**Description**

Enables Kerberos authentication for Ozone.

Related Name

ozone.security.enabled

Default Value

false

API Name

ozone.security.enabled

Required

false

Enable Kerberos Authentication for HTTP web consoles**Description**

Enables Kerberos authentication for Ozone HTTP web consoles for all roles of this service using the SPNEGO protocol. Note: This is effective only if Kerberos is enabled for the Ozone service.

Related Name

ozone.security.http.kerberos.enabled

Default Value

false

API Name

ozone.security.http.kerberos.enabled

Required

false

Ozone Service ID**Description**

A final alphanumeric name to identify this Ozone service. The value is configured during installation, and should not be modified after that, as any change in the service id may cause service disruption.

Related Name

ozone.service.id

Default Value

API Name

ozone.service.id

Required

true

Ozone Basic Health Check Enabled

Description

Determines if the Ozone Basic health check is enabled.

Related Name

Suppress Configuration Validator: Maximum Size Leaving Source**Description**

Whether to suppress configuration warnings produced by the Maximum Size Leaving Source configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.size.leaving.source.max

Required

true

Suppress Configuration Validator: Maximum Size to Move in Balancing**Description**

Whether to suppress configuration warnings produced by the Maximum Size to Move in Balancing configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.size.moved.max.per.iteration

Required

true

Suppress Configuration Validator: Datanode Data Directory

Description

Whether to suppress configuration warnings produced by the Datanode Data Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.datanode.dir

Required

true

Suppress Configuration Validator: Over Replication Processing Interval

Description

Whether to suppress configuration warnings produced by the Over Replication Processing Interval configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.scm.replication.over.replicated.interval

Required

true

Suppress Configuration Validator: Replication Thread Interval

Description

Whether to suppress configuration warnings produced by the Replication Thread Interval configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.scm.replication.thread.interval

Required

true

Suppress Configuration Validator: Under Replication Processing Interval

Description

Whether to suppress configuration warnings produced by the Under Replication Processing Interval configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.scm.replication.under.replicated.interval

Required

true

Suppress Configuration Validator: Datanode Container Protocol ACL

Description

Whether to suppress configuration warnings produced by the Datanode Container Protocol ACL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.security.client.datanode.container.protocol.acl

Required

true

Suppress Configuration Validator: SCM Client Certificate Protocol ACL

Description

Whether to suppress configuration warnings produced by the SCM Client Certificate Protocol ACL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.security.client.scm.certificate.protocol.acl

Required

true

Suppress Configuration Validator: Hive Proxy User Groups for Ozone HttpFS

Description

Whether to suppress configuration warnings produced by the Hive Proxy User Groups for Ozone HttpFS configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_httpfs.proxyuser.hive.groups

Required

true

Suppress Configuration Validator: Hive Proxy User Hosts for Ozone HttpFS

Description

Whether to suppress configuration warnings produced by the Hive Proxy User Hosts for Ozone HttpFS configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs.proxyuser.hive.hosts

Required

true

Suppress Configuration Validator: Hue Proxy User Groups for Ozone HttpFS**Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Groups for Ozone HttpFS configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs.proxyuser.hue.groups

Required

true

Suppress Configuration Validator: Hue Proxy User Hosts for Ozone HttpFS**Description**

Whether to suppress configuration warnings produced by the Hue Proxy User Hosts for Ozone HttpFS configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs.proxyuser.hue.hosts

Required

true

Suppress Configuration Validator: HttpFS Gateway Environment Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the HttpFS Gateway Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_httpfs_gateway_role_env_safety_valve

Required

true

Suppress Configuration Validator: JMX Exporter configuration YAML**Description**

Whether to suppress configuration warnings produced by the JMX Exporter configuration YAML configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Configuration Validator: Role-Specific Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the Role-Specific Kerberos Principal configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Configuration Validator: Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Storage Container Manager Log Directory**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Log Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: Topology Script File Name

Description

Whether to suppress configuration warnings produced by the Topology Script File Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_net.topology.script.file.name

Required

true

Suppress Configuration Validator: OM ID

Description

Whether to suppress configuration warnings produced by the OM ID configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_om.id

Required

true

Suppress Configuration Validator: Java Heap Size of Ozone Manager

Description

Whether to suppress configuration warnings produced by the Java Heap Size of Ozone Manager configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_om_max_heap_size

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Exporters Section**Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Exporters Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Extensions Section**Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Extensions Section configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_extensions

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Helper Port**Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Helper Port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_helper_port

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Processors Section**Description**

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_processors

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Receivers Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_receivers

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Password

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write URL configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Remote Write Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Configuration Validator: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section

Description

Whether to suppress configuration warnings produced by the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Configuration Validator: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the OpenTelemetry Collector Service Section configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Configuration Validator: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties**Description**

Whether to suppress configuration warnings produced by the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/dn-audit-log4j2.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-container-log4j2.properties**Description**

Whether to suppress configuration warnings produced by the Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-container-log4j2.properties configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/dn-container-log4j2.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone-conf/hadoop-policy.xml_role_safety_valve

Required

true

Suppress Configuration Validator: HttpFS Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/httpfs-site.xml**Description**

Whether to suppress configuration warnings produced by the HttpFS Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/httpfs-site.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/https-site.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties

Description

Whether to suppress configuration warnings produced by the Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/om-audit-log4j2.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml

Description

Whether to suppress configuration warnings produced by the Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ozone-prometheus.yml_role_safety_valve

Required

true

Suppress Configuration Validator: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

Whether to suppress configuration warnings produced by the Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ozone-site.xml_client_config_safety_valve

Required

true

Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ozone-site.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/prometheus-token

Description

Whether to suppress configuration warnings produced by the Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/prometheus-token configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/prometheus-token_role_safety_valve

Required

Suppress Configuration Validator: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

Whether to suppress configuration warnings produced by the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ssl-server.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Ozone Datanode HTTP Bind Hostname

Description

Whether to suppress configuration warnings produced by the Ozone Datanode HTTP Bind Hostname configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.datanode.http-bind-host

Required

true

Suppress Configuration Validator: Ozone Datanode HTTP Web UI Port

Description

Whether to suppress configuration warnings produced by the Ozone Datanode HTTP Web UI Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.datanode.http-port

Required

true

Suppress Configuration Validator: Secure Ozone Datanode HTTPS Bind Hostname

Description

Whether to suppress configuration warnings produced by the Secure Ozone Datanode HTTPS Bind Hostname configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.datanode.https-bind-host

Required

true

Suppress Configuration Validator: Ozone Datanode Port (TLS/SSL)

Description

Whether to suppress configuration warnings produced by the Ozone Datanode Port (TLS/SSL) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.datanode.https-port

Required

true

Suppress Configuration Validator: HSTS Header for Ozone SCM UI

Description

Whether to suppress configuration warnings produced by the HSTS Header for Ozone SCM UI configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.http.header.strict-transport-security

Required

true

Suppress Configuration Validator: Ozone HttpFS Gateway HTTP Bind Hostname

Description

Whether to suppress configuration warnings produced by the Ozone HttpFS Gateway HTTP Bind Hostname configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.httpfs.http-bind-host

Required

true

Suppress Configuration Validator: Ozone HttpFS Gateway HTTP Web UI Port

Description

Whether to suppress configuration warnings produced by the Ozone HttpFS Gateway HTTP Web UI Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.httpfs.http-port

Required

true

Suppress Configuration Validator: Storage Container Manager Metadata Directory**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Metadata Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.metadata.dirs

Required

true

Suppress Configuration Validator: Ozone Manager Data Directory**Description**

Whether to suppress configuration warnings produced by the Ozone Manager Data Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.db.dirs

Required

true

Suppress Configuration Validator: Ozone Manager HTTP Bind Hostname**Description**

Whether to suppress configuration warnings produced by the Ozone Manager HTTP Bind Hostname configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.om.http-bind-host

Required

true

Suppress Configuration Validator: Ozone Manager HTTP Web UI Port**Description**

Whether to suppress configuration warnings produced by the Ozone Manager HTTP Web UI Port configuration validator.

Related Name**Default Value**

false

API Name

`role_config_suppression_ozone.om.http-port`**Required**`true`**Suppress Configuration Validator: Secure Ozone Manager HTTPS Bind Hostname****Description**

Whether to suppress configuration warnings produced by the Secure Ozone Manager HTTPS Bind Hostname configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ozone.om.https-bind-host`**Required**`true`**Suppress Configuration Validator: Secure Ozone Manager Web UI Port (TLS/SSL)****Description**

Whether to suppress configuration warnings produced by the Secure Ozone Manager Web UI Port (TLS/SSL) configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ozone.om.https-port`**Required**`true`**Suppress Configuration Validator: New Ozone Manager Nodes****Description**

Whether to suppress configuration warnings produced by the New Ozone Manager Nodes configuration validator.

Related Name**Default Value**`false`**API Name**`role_config_suppression_ozone.om.new.added.nodes`**Required**`true`**Suppress Configuration Validator: Ozone Manager Ratis port****Description**

Whether to suppress configuration warnings produced by the Ozone Manager Ratis port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.ratis-port

Required

true

Suppress Configuration Validator: Ozone Manager Ratis Storage Directory

Description

Whether to suppress configuration warnings produced by the Ozone Manager Ratis Storage Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.ratis.storage.dir

Required

true

Suppress Configuration Validator: Ozone Manager RPC port

Description

Whether to suppress configuration warnings produced by the Ozone Manager RPC port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.rpc-port

Required

true

Suppress Configuration Validator: Ozone Manager Snapshot Diff Directory

Description

Whether to suppress configuration warnings produced by the Ozone Manager Snapshot Diff Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.om.snapshot.diff.db.dir

Required

true

Suppress Configuration Validator: CA File Path

Description

Whether to suppress configuration warnings produced by the CA File Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.prometheus.ca.file

Required

true

Suppress Configuration Validator: Prometheus Data Retention time.

Description

Whether to suppress configuration warnings produced by the Prometheus Data Retention time configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.prometheus.data.retention.time

Required

true

Suppress Configuration Validator: Prometheus Data Directory

Description

Whether to suppress configuration warnings produced by the Prometheus Data Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.prometheus.db.dir

Required

true

Suppress Configuration Validator: Prometheus server extra flags.

Description

Whether to suppress configuration warnings produced by the Prometheus server extra flags configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.prometheus.extra.flags

Required

true

Suppress Configuration Validator: Prometheus HTTP Port

Description

Whether to suppress configuration warnings produced by the Prometheus HTTP Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.prometheus.http-port

Required

true

Suppress Configuration Validator: Prometheus server log level.

Description

Whether to suppress configuration warnings produced by the Prometheus server log level configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.prometheus.log.level

Required

true

Suppress Configuration Validator: Recon Data Directory

Description

Whether to suppress configuration warnings produced by the Recon Data Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.recon.db.dir

Required

true

Suppress Configuration Validator: Recon HTTP Bind Hostname

Description

Whether to suppress configuration warnings produced by the Recon HTTP Bind Hostname configuration validator.

Related Name

Default Value

false

API Name

`role_config_suppression_ozone.recon.http-bind-host`**Required**

true

Suppress Configuration Validator: Recon HTTP Web UI Port**Description**

Whether to suppress configuration warnings produced by the Recon HTTP Web UI Port configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_ozone.recon.http-port`**Required**

true

Suppress Configuration Validator: Secure Recon HTTPS Bind Hostname**Description**

Whether to suppress configuration warnings produced by the Secure Recon HTTPS Bind Hostname configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_ozone.recon.https-bind-host`**Required**

true

Suppress Configuration Validator: Secure Recon Web UI Port (TLS/SSL)**Description**

Whether to suppress configuration warnings produced by the Secure Recon Web UI Port (TLS/SSL) configuration validator.

Related Name**Default Value**

false

API Name`role_config_suppression_ozone.recon.https-port`**Required**

true

Suppress Configuration Validator: Recon OzoneManager Data Directory**Description**

Whether to suppress configuration warnings produced by the Recon OzoneManager Data Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.recon.om.db.dir

Required

true

Suppress Configuration Validator: Recon RPC Port

Description

Whether to suppress configuration warnings produced by the Recon RPC Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.recon.rpc-port

Required

true

Suppress Configuration Validator: Recon StorageContainerManager Data Directory

Description

Whether to suppress configuration warnings produced by the Recon StorageContainerManager Data Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.recon.scm.db.dirs

Required

true

Suppress Configuration Validator: Ozone S3 Gateway HTTP Bind Hostname

Description

Whether to suppress configuration warnings produced by the Ozone S3 Gateway HTTP Bind Hostname configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.s3g.http-bind-host

Required

true

Suppress Configuration Validator: Ozone S3 Gateway HTTP Web UI Port

Description

Whether to suppress configuration warnings produced by the Ozone S3 Gateway HTTP Web UI Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.s3g.http-port

Required

true

Suppress Configuration Validator: Secure Ozone S3 Gateway HTTPS Bind Hostname

Description

Whether to suppress configuration warnings produced by the Secure Ozone S3 Gateway HTTPS Bind Hostname configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.s3g.https-bind-host

Required

true

Suppress Configuration Validator: Secure Ozone S3 Gateway Web UI Port (TLS/SSL)

Description

Whether to suppress configuration warnings produced by the Secure Ozone S3 Gateway Web UI Port (TLS/SSL) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.s3g.https-port

Required

true

Suppress Configuration Validator: Storage Container Manager Block Client port

Description

Whether to suppress configuration warnings produced by the Storage Container Manager Block Client port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.block.client.port

Required

true

Suppress Configuration Validator: Storage Container Manager Client port

Description

Whether to suppress configuration warnings produced by the Storage Container Manager Client port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.scm.client.port

Required

true

Suppress Configuration Validator: Datanode ID Directory

Description

Whether to suppress configuration warnings produced by the Datanode ID Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.scm.datanode.id.dir

Required

true

Suppress Configuration Validator: Storage Container Manager Datanode port

Description

Whether to suppress configuration warnings produced by the Storage Container Manager Datanode port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.scm.datanode.port

Required

true

Suppress Configuration Validator: Storage Container Manager Data Directory

Description

Whether to suppress configuration warnings produced by the Storage Container Manager Data Directory configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.scm.db.dirs

Required

true

Suppress Configuration Validator: Storage Container Manager GRPC port

Description

Whether to suppress configuration warnings produced by the Storage Container Manager GRPC port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.grpc.port

Required

true

Suppress Configuration Validator: Storage Container Manager Ratis Storage Directory

Description

Whether to suppress configuration warnings produced by the Storage Container Manager Ratis Storage Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.ha.ratis.storage.dir

Required

true

Suppress Configuration Validator: Storage Container Manager HTTP Bind Hostname

Description

Whether to suppress configuration warnings produced by the Storage Container Manager HTTP Bind Hostname configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.http-bind-host

Suppress Configuration Validator: Storage Container Manager Security Service port

Description

Whether to suppress configuration warnings produced by the Storage Container Manager Security Service port configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.scm.security.service.port

Required

true

Suppress Configuration Validator: Ozone Server Replication Factor

Description

Whether to suppress configuration warnings produced by the Ozone Server Replication Factor configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.server.default.replication

Required

true

Suppress Configuration Validator: Ozone Server Replication Type

Description

Whether to suppress configuration warnings produced by the Ozone Server Replication Type configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone.server.default.replication.type

Required

true

Suppress Configuration Validator: Java Heap Size of DataNode

Description

Whether to suppress configuration warnings produced by the Java Heap Size of DataNode configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ozone_datanode_heap_size

Required

true

Suppress Configuration Validator: Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_datanode_role_env_safety_valve

Required

true

Suppress Configuration Validator: Java Heap Size of HttpFS Gateway

Description

Whether to suppress configuration warnings produced by the Java Heap Size of HttpFS Gateway configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_httpfs_gateway_max_heap_size

Required

true

Suppress Configuration Validator: Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Ozone Manager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_manager_role_env_safety_valve

Required

true

Suppress Configuration Validator: Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_prometheus_role_env_safety_valve

Required

true

Suppress Configuration Validator: Java Heap Size of Recon

Description

Whether to suppress configuration warnings produced by the Java Heap Size of Recon configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_recon_max_heap_size

Required

true

Suppress Configuration Validator: Ozone Recon Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Ozone Recon Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_recon_role_env_safety_valve

Required

true

Suppress Configuration Validator: Java Heap Size of S3 Gateway

Description

Whether to suppress configuration warnings produced by the Java Heap Size of S3 Gateway configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_s3_gateway_max_heap_size

Required

true

Suppress Configuration Validator: Role Specific System Group

Description

Whether to suppress configuration warnings produced by the Role Specific System Group configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_process_groupname

Required

true

Suppress Configuration Validator: Role Specific System User

Description

Whether to suppress configuration warnings produced by the Role Specific System User configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_process_username

Required

true

Suppress Configuration Validator: Prometheus Binary Location

Description

Whether to suppress configuration warnings produced by the Prometheus Binary Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_prometheus.location

Required

true

Suppress Configuration Validator: Ranger Ozone Plugin Conf Path

Description

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Conf Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ozone_plugin_conf_path

Required

true

Suppress Configuration Validator: Ranger Ozone Plugin Policy Cache Directory Path**Description**

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Policy Cache Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ozone_plugin_policy_cache_directory

Required

true

Suppress Configuration Validator: Ranger Ozone Plugin Audit Solr Spool Directory Path**Description**

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Audit Solr Spool Directory Path configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ranger_ozone_plugin_solr_audit_spool_directory

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)**Description**

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers**Description**

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the S3 Gateway Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Required

true

Suppress Configuration Validator: Storage Container Manager TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Storage Container Manager TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Trust Store Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Storage Container Manager TLS/SSL Server Keystore Key Password

Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server Keystore Key Password configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: Storage Container Manager TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server Keystore File Location configuration validator.

Related Name**Default Value**

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Storage Container Manager TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server Keystore File Password configuration validator.

Related Name**Default Value**

	false
API Name	role_config_suppression_ssl_server_keystore_password
Required	true

Suppress Configuration Validator: Stacks Collection Directory

Description	Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_stacks_collection_directory
Required	true

Suppress Configuration Validator: Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)

Description	Whether to suppress configuration warnings produced by the Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.
Related Name	
Default Value	false
API Name	role_config_suppression_storage_container_manager_role_env_safety_valve
Required	true

Suppress Parameter Validation: CM API Bucket Owner

Description	Whether to suppress configuration warnings produced by the built-in parameter validation for the CM API Bucket Owner parameter.
Related Name	
Default Value	false
API Name	service_config_suppression_cm.api.bucket.owner
Required	true

Suppress Configuration Validator: Gateway Count Validator

Description	
--------------------	--

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Ozone HttpFS Gateway Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone HttpFS Gateway Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop.proxyuser.httpfs.groups

Required

true

Suppress Parameter Validation: Ozone HttpFS Gateway Proxy User Hosts**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone HttpFS Gateway Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop.proxyuser.httpfs.hosts

Required

true

Suppress Parameter Validation: Hue Proxy User Groups**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop.proxyuser.hue.groups

Required

true

Suppress Parameter Validation: Hue Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Hue Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop.proxyuser.hue.hosts

Required

true

Suppress Parameter Validation: Ozone Proxy User Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Proxy User Groups parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop.proxyuser.om.groups

Required

true

Suppress Parameter Validation: Ozone Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Proxy User Hosts parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hadoop.proxyuser.om.hosts

Required

true

Suppress Parameter Validation: Ozone Prometheus Endpoint Token

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Prometheus Endpoint Token parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_hdds.prometheus.endpoint.token

Required

true

Suppress Configuration Validator: HttpFS Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the HttpFS Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_httpfs_gateway_count_validator

Required

true

Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ozone-conf/ozone-site.xml_service_safety_valve

Required

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Ozone Plugin Hdfs Audit Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Hdfs Audit Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_ozone_plugin_hdfs_audit_directory

Required

true

Suppress Configuration Validator: S3 Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the S3 Gateway Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_s3_gateway_count_validator

Required

true

Suppress Parameter Validation: Service Triggers**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Configuration Validator: Storage Container Manager Count Validator**Description**

Whether to suppress configuration warnings produced by the Storage Container Manager Count Validator configuration validator.

Related Name**Default Value**

false

API Name

service_config_suppression_storage_container_manager_count_validator

Required

true

Suppress Health Test: Ozone Basic Canary**Description**

Whether to suppress the results of the Ozone Basic Canary health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_ozone_basic_health_check

Required

true

Suppress Health Test: Ozone DataNode Health**Description**

Whether to suppress the results of the Ozone DataNode Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_ozone_ozone_datanode_healthy

Required

Suppress Health Test: Ozone Manager Health**Description**

Whether to suppress the results of the Ozone Manager Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name**Default Value**

false

API Name

service_health_suppression_ozone_ozone_manager_healthy

Required

true

Suppress Health Test: Storage Container Manager Health**Description**

Whether to suppress the results of the Storage Container Manager Health health test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_ozonestorage_container_manager_healthy

Required

true

Storage Container Manager

Advanced

Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name**Default Value****API Name**

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name**Default Value**

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory**Description**

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name**Default Value**

false

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory**Description**

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name**Default Value**

true

API Name

oom_sigkill_enabled

Required

true

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/hadoop-policy.xml for this role only.

Related Name**Default Value****API Name**

ozone-conf/hadoop-policy.xml_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml**Description**

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name**Default Value**

API Name

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties

Description

For advanced use only. A string to be inserted into ozone-conf/scm-audit-log4j2.properties for this role only.

Related Name

Default Value

API Name

ozone-conf/scm-audit-log4j2.properties_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Role Specific System Group**Description**

The group that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection**Description**

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name**Default Value**

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts**Description**

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name**Default Value**

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name**Default Value**

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name**Default Value**

hdfs

API Name

process_username

Required

true

Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name**Default Value****API Name**

STORAGE_CONTAINER_MANAGER_role_env_safety_valve

Required

false

Logs

Storage Container Manager Log Directory

Description

The log directory for log files of the role Storage Container Manager.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

Storage Container Manager Logging Threshold

Description

The minimum log level for Storage Container Manager logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Storage Container Manager Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Storage Container Manager logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Storage Container Manager Max Log Size

Description

The maximum size, in megabytes, per log file for Storage Container Manager logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name**Default Value**

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts**Description**

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name**Default Value**

false

API Name

enable_config_alerts

Required

false

Enable JMX Exporter (beta)**Description**

JMX Exporter support is a beta feature. If enabled, CM configures the role to run JMX Exporter in agent mode with the provided port and YAML configuration. This exporter then can be used with the OpenTelemetry Collector feature. [See the JMX Exporter documentation.](#)

Related Name**Default Value**

true

API Name

jmx_exporter_enabled

Required

true

JMX Exporter configuration YAML**Description**

This configuration is passed to JMX Exporter as it is. [See the JMX Exporter documentation.](#)

Related Name**Default Value****API Name**

jmx_exporter_yaml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name**Default Value**

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds**Description**

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter**Description**

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior). For example, the following configuration enables the collection of metrics required for Health Tests and the `jvm_heap_used_mb` metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: `jvm_heap_used_mb`

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this: { "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

OpenTelemetry Collector Receivers Section

Description

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: `$HOST_NAME`, `$CLUSTER_NAME`, `$CLUSTER_ID`, `$SERVICE_TYPE`, `$SERVICE_NAME`, `$ROLE_NAME`, `$ROLE_TYPE`, `$ROLE_PARAM(my_parameter_name)` - e.g.: a port parameter for the role's metrics, `$DECODE_B64(...)` and `$DECODE_URL(...)` to decode encoded parameters, `$ENV_PARAM(name)` to fetch params from the process' environment, `$SYS_PARAM(name)` to fetch java system properties.

Related Name**Default Value****API Name**

otelcol_receivers

Required

false

OpenTelemetry Collector Remote Write Password

Description

Remote write password for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the `$ROLE_PARAM(otelcol_remote_write_password)` expression. Specify `$INFRA(cdp_request_signer_password)` when forwarding to Cloudera Observability central monitoring. (This is the default.)

Related Name**Default Value**

API Name

otelcol_remote_write_password

Required

false

OpenTelemetry Collector Remote Write URL

Description

Remote write URL for the OpenTelemetry Collector. This param is for convenience and intended to be used at the exporters section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_url) expression. Specify \$INFRA(cdp_request_signer_url) when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

\$INFRA(cdp_request_signer_url)

API Name

otelcol_remote_write_url

Required

false

OpenTelemetry Collector Remote Write Username

Description

Remote write username for the OpenTelemetry Collector. This param is for convenience and intended to be used at the extensions section of Otelcol settings using the \$ROLE_PARAM(otelcol_remote_write_user) expression. Specify \$INFRA(cdp_request_signer_username) when forwarding to Cloudera Observability central monitoring.

Related Name

Default Value

\$INFRA(cdp_request_signer_username)

API Name

otelcol_remote_write_user

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Define the exporters settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

otelcol_rtm_logs_exporters

Required

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section

Description

Define the extensions settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name

Default Value

API Name

`otelcol_rtm_logs_extensions`**Required**

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section**Description**

Define the processors settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**`otelcol_rtm_logs_processors`**Required**

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section**Description**

Define the receivers settings as a yaml snippet according to the OpenTelemetry Collector standards. A number of variables can help to use the same config everywhere. The follow strings or expressions will be substituted: `$HOST_NAME`, `$CLUSTER_NAME`, `$CLUSTER_ID`, `$SERVICE_TYPE`, `$SERVICE_NAME`, `$ROLE_NAME`, `$ROLE_TYPE`, `$ROLE_PARAM(my_parameter_name)` - e.g.: a port parameter for the role's metrics, `$DECODE_B64(...)` and `$DECODE_URL(...)` to decode encoded parameters, `$ENV_PARAM(name)` to fetch params from the process' environment, `$SYS_PARAM(name)` to fetch java system properties.

Related Name**Default Value****API Name**`otelcol_rtm_logs_receivers`**Required**

false

Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**`otelcol_rtm_logs_service`**Required**

false

OpenTelemetry Collector Service Section**Description**

Define the service settings as a yaml snippet according to the OpenTelemetry Collector standards. Variable substitution available, see the receivers' help.

Related Name**Default Value****API Name**

otelcol_service

Required

false

Enable OpenTelemetry Collector (beta)**Description**

OpenTelemetry Collector support is a new beta feature (will change without notice) which can run OpenTelemetry Collector as an agent together with the CM Agent to forward metrics to a Prometheus like storage.

Related Name**Default Value**

false

API Name

otelcol_should_collect

Required

true

Enable Real-Time Monitoring for Jobs / Queries with OpenTelemetry**Description**

This enables OpenTelemetry Collector as an agent together with the CM Agent to forward real-time monitoring data about jobs / queries to Observability backend. The configuration of the subsections shouldn't be modified manually.

Related Name**Default Value**

false

API Name

otelcol_should_collect_rtm_logs

Required

true

Swap Memory Usage Rate Thresholds**Description**

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name**Default Value**

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window**Description**

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds**Description**

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name**Default Value**

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers**Description**

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- `triggerName` (mandatory) - The name of the trigger. This value must be unique for the specific role.
- `triggerExpression` (mandatory) - A tsquery expression representing the trigger.
- `streamThreshold` (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- `enabled` (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- `expressionEditorConfig` (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened: `[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAM and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]` See the trigger rules documentation for more

details on how to write triggers using tsquery. The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

storage_container_manager_fd_thresholds

Required

false

Storage Container Manager Host Health Test

Description

When computing the overall Storage Container Manager health, consider the host's health.

Related Name

Default Value

true

API Name

storage_container_manager_host_health_enabled

Required

false

Storage Container Manager Process Health Test

Description

Enables the health test that the Storage Container Manager's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

storage_container_manager_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the `unexpected_exits_window` configuration for the role.

Related Name**Default Value**

Warning: Never, Critical: Any

API Name

`unexpected_exits_thresholds`

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name**Default Value**

5 minute(s)

API Name

`unexpected_exits_window`

Required

false

Other

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name**Default Value**

2 minute(s)

API Name

`graceful_stop_timeout`

Required

false

Balancing Interval

Description

The interval period between each iteration of Container Balancer. The current default is 70m. This means that Container Balancer will balance every 70 minutes. Units supported: d, h, m, s, ms.

Related Name

`hdds.container.balancer.balancing.iteration.interval`

Default Value**API Name**

hdds.container.balancer.balancing.iteration.interval

Required

false

Maximum Percentage of Datanodes Involved in Balancing

Description

Maximum percentage of healthy, in-service datanodes that can be involved in balancing in one iteration (for example, '20' for 20%).

Related Name

hdds.container.balancer.datanodes.involved.max.percentage.per.iteration

Default Value

20

API Name

hdds.container.balancer.datanodes.involved.max.percentage.per.iteration

Required

false

Exclude Containers from Balancing

Description

Containers to exclude from balancing. Specified as a string of Container IDs (for example, '1, 2, 3').

Related Name

hdds.container.balancer.exclude.containers

Default Value

API Name

hdds.container.balancer.exclude.containers

Required

false

Exclude Datanodes

Description

A comma separated string of Datanode hostnames or IP addresses that will be excluded from balancing.

Related Name

hdds.container.balancer.exclude.datanodes

Default Value

API Name

hdds.container.balancer.exclude.datanodes

Required

false

Include Datanodes

Description

A comma separated string of Datanode hostnames or IP addresses that will be the only participants in balancing.

Related Name

hdds.container.balancer.include.datanodes

Default Value**API Name**

hdds.container.balancer.include.datanodes

Required

false

Number of Balancing Iterations**Description**

Number of iterations that Container Balancer will run for.

Related Name

hdds.container.balancer.iterations

Default Value

10

API Name

hdds.container.balancer.iterations

Required

false

Container Move Replication Timeout**Description**

The amount of time to allow a single container's replication from source to target as part of container move. The current default is 50m. This means that if "hdds.container.balancer.move.timeout" is 65m, then out of those 65 minutes 50 minutes will be the deadline for replication to complete. The value of this configuration should always be less than "hdds.container.balancer.move.timeout". Units supported: d, h, m, s, ms.

Related Name

hdds.container.balancer.move.replication.timeout

Default Value**API Name**

hdds.container.balancer.move.replication.timeout

Required

false

Container Move Timeout**Description**

The amount of time to allow a single container to move from source to target. The current default is 65m. This means that a container is allowed a total of 65 minutes to complete its move from a source Datanode to a target Datanode, as part of container balancing. Units supported: d, h, m, s, ms.

Related Name

hdds.container.balancer.move.timeout

Default Value**API Name**

hdds.container.balancer.move.timeout

Required

false

Maximum Size Entering Target**Description**

The maximum size that can enter a target datanode in each iteration while balancing. This is the sum of data from multiple sources. Units supported: eb, pb, tb, gb, mb, kb, b.

Related Name

hdds.container.balancer.size.entering.target.max

Default Value

26gb

API Name

hdds.container.balancer.size.entering.target.max

Required

false

Maximum Size Leaving Source**Description**

The maximum size that can leave a source datanode in each iteration while balancing. This is the sum of data moving to multiple targets. Units supported: eb, pb, tb, gb, mb, kb, b.

Related Name

hdds.container.balancer.size.leaving.source.max

Default Value

26gb

API Name

hdds.container.balancer.size.leaving.source.max

Required

false

Maximum Size to Move in Balancing**Description**

The maximum size of data that will be moved by Container Balancer in one iteration. Units supported: eb, pb, tb, gb, mb, kb, b.

Related Name

hdds.container.balancer.size.moved.max.per.iteration

Default Value

500gb

API Name

hdds.container.balancer.size.moved.max.per.iteration

Required

false

Balancing Threshold**Description**

The percentage deviation from average utilization, after which a node will be rebalanced (for example, '10' for 10%).

Related Name`hdds.container.balancer.utilization.threshold`**Default Value**

10.0

API Name`hdds.container.balancer.utilization.threshold`**Required**

false

Datanode Delete Container Limit**Description**

A limit to restrict the total number of delete container commands queued on a datanode.

Related Name`hdds.scm.replication.datanode.delete.container.limit`**Default Value****API Name**`hdds.scm.replication.datanode.delete.container.limit`**Required**

false

Datanode Reconstruction Weight**Description**

When counting the number of replication commands on a datanode, the number of reconstruction commands is multiplied by this weight to ensure reconstruction commands use more of the "hdds.scm.replication.datanode.replication.limit" capacity, as they are more expensive to process. The current default is 3.

Related Name`hdds.scm.replication.datanode.reconstruction.weight`**Default Value****API Name**`hdds.scm.replication.datanode.reconstruction.weight`**Required**

false

Datanode Replication Limit**Description**

A limit to restrict the total number of replication and reconstruction commands queued on a datanode. The current default is 20.

Related Name`hdds.scm.replication.datanode.replication.limit`**Default Value****API Name**`hdds.scm.replication.datanode.replication.limit`**Required**

false

Inflight Limit Factor

Description

The overall replication task limit on a cluster is the number of healthy nodes, times the "hdds.scm.replication.datanode.replication.limit". This factor, which should be from zero through 1, scales that limit down to reduce the overall number of replicas pending creation on the cluster. A setting of zero disables global limit checking. A setting of 1 effectively disables it, by making the limit equal to the above equation. The current default is 0.75.

Related Name

hdds.scm.replication.inflight.limit.factor

Default Value

API Name

hdds.scm.replication.inflight.limit.factor

Required

false

Remaining Redundancy For Maintenance

Description

The number of redundant container replicas which must be available for a node to enter maintenance. If putting a node into maintenance reduces the redundancy below this value, the node will remain in the ENTERING_MAINTENANCE state until a new replica is created. For an EC container, redundancy is 1 if there are a total of data + 1 replicas, meaning 1 more replica can be lost before this container becomes unrecoverable. Example configurations: Consider an EC(3-2) container. If the value of this configuration is 1, then 1 Datanode hosting its replica can be put into maintenance and 4 other replicas should be available. If the value is 0, then 2 Datanodes hosting its replicas can be put into maintenance and 3 other replicas should be available. Set this to a high value to be safer but require more time for nodes to enter maintenance. The current default is 1.

Related Name

hdds.scm.replication.maintenance.remaining.redundancy

Default Value

API Name

hdds.scm.replication.maintenance.remaining.redundancy

Required

false

Over Replication Processing Interval

Description

How frequently to check if there is work to process on the over replicated queue. The current default is 30s. This means that every 30 seconds, this thread will process over replicated containers identified by Replication Manager. Units supported: d, h, m, s, ms.

Related Name

hdds.scm.replication.over.replicated.interval

Default Value

API Name

hdds.scm.replication.over.replicated.interval

Required

false

Replication Thread Interval

Description

There is a replication monitor thread running inside SCM which takes care of replicating the containers in the cluster. This property is used to configure the interval in which that thread runs. The current default is 300s. This means that the replication thread will run every 300 seconds. Units supported: d, h, m, s, ms.

Related Name

hdds.scm.replication.thread.interval

Default Value

API Name

hdds.scm.replication.thread.interval

Required

false

Under Replication Processing Interval

Description

How frequently to check if there is work to process on the under replicated queue. The current default is 30s. This means that every 30 seconds, this thread will process under replicated containers identified by Replication Manager. Units supported: d, h, m, s, ms.

Related Name

hdds.scm.replication.under.replicated.interval

Default Value

API Name

hdds.scm.replication.under.replicated.interval

Required

false

Datanode Container Protocol ACL

Description

ACLs that define which users can access the Datanode Container Protocol in SCM. It is a comma separated list of Kerberos Principals.

Related Name

hdds.security.client.datanode.container.protocol.acl

Default Value

OZONE_SERVICE_PRINCIPALS

API Name

hdds.security.client.datanode.container.protocol.acl

Required

false

SCM Client Certificate Protocol ACL

Description

ACLs that define which users can access the SCM Certificate Protocol. It is a comma separated list of Kerberos Principals.

Related Name

hdds.security.client.scm.certificate.protocol.acl

Default Value

OZONE_ADMINS, OZONE_SERVICE_PRINCIPALS

API Name

hdds.security.client.scm.certificate.protocol.acl

Required

false

Topology Script File Name**Description**

Full path to a custom topology script on the host file system. The topology script is used to determine the rack location of nodes. If left with "{{DEFAULT_TOPOLOGY_SCRIPT}}", a topology script will be provided that uses your hosts' rack information, visible in the "Hosts" page.

Related Name

net.topology.script.file.name

Default Value

DEFAULT_TOPOLOGY_SCRIPT

API Name

net.topology.script.file.name

Required

false

HSTS Header for Ozone SCM UI**Description**

HSTS Header (Strict-Transport-Security) value to use

Related Name

ozone.http.header.Strict-Transport-Security

Default Value

max-age=63072000; includeSubDomains;

API Name

ozone.http.header.Strict-Transport-Security

Required

false

Storage Container Manager Metadata Directory**Description**

Determines where on the local filesystem SCM security certificates will be stored.

Related Name

ozone.metadata.dirs

Default Value

/var/lib/hadoop-ozone/scm/ozone-metadata

API Name

ozone.metadata.dirs

Required

true

Storage Container Manager Data Directory

Description

Directory where the StorageContainerManager stores its metadata

Related Name

ozone.scm.db.dirs

Default Value

/var/lib/hadoop-ozone/scm/data

API Name

ozone.scm.db.dirs

Required

true

Storage Container Manager Ratis Storage Directory

Description

Storage directory used by SCM to write Ratis logs.

Related Name

ozone.scm.ha.ratis.storage.dir

Default Value

/var/lib/hadoop-ozone/scm/ratis

API Name

ozone.scm.ha.ratis.storage.dir

Required

true

Storage Container Manager HTTP Bind Hostname

Description

The actual address the SCM web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.scm.http-address'.

Related Name

ozone.scm.http-bind-host

Default Value

0.0.0.0

API Name

ozone.scm.http-bind-host

Required

false

Secure Storage Container Manager HTTPS Bind Hostname

Description

The actual address the SCM web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.scm.https-address'.

Related Name

ozone.scm.https-bind-host

Default Value

0.0.0.0

API Name

ozone.scm.https-bind-host

Required

false

Pipeline Per Volume Factor**Description**

Non negative number that scales the number of Erasure Coding pipelines per Erasure Coding scheme. The maximum number of pipelines will be limited to the number of healthy volumes in the cluster divided by the number of nodes required for the EC scheme, multiplied by this factor. The current default is 1.

Related Name

ozone.scm.pipeline.per.volume.factor

Default Value**API Name**

ozone.scm.pipeline.per.volume.factor

Required

false

Ozone Storage Container Manager Safemode Canary Enabled**Description**

Determines if the Ozone Storage Container Manager Safemode checker canary is enabled.

Related Name

ozone_scm_safemode_canary_enabled

Default Value

true

API Name

ozone_scm_safemode_canary_enabled

Required

false

Ozone Storage Container Manager Safemode Canary Timeout**Description**

Ozone Storage Container Manager Safemode Canary's timeout

Related Name

ozone_scm_safemode_canary_timeout

Default Value

30 second(s)

API Name

ozone_scm_safemode_canary_timeout

Required

false

Ozone Storage Container Manager Upgrade Need Finalization Canary Enabled

Description

Determines if the Ozone Storage Container Manager Upgrade Need Finalization Canary is enabled.

Related Name

ozone_scm_upgrade_need_finalization_canary_enabled

Default Value

true

API Name

ozone_scm_upgrade_need_finalization_canary_enabled

Required

false

Ozone Storage Container Manager Upgrade Need Finalization Canary Timeout

Description

Sets Ozone Storage Container Manager Upgrade Need Finalization Canary's timeout.

Related Name

ozone_scm_upgrade_need_finalization_canary_timeout

Default Value

30 second(s)

API Name

ozone_scm_upgrade_need_finalization_canary_timeout

Required

false

Java Heap Size of Storage Container Manager

Description

Maximum size for the Java process heap memory.

Related Name

scm_max_heap_size

Default Value

4 GiB

API Name

scm_max_heap_size

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Storage Container Manager Block Client port

Description

The port number of the Ozone SCM block client service.

Related Name

ozone.scm.block.client.port

Default Value

9863

API Name

ozone.scm.block.client.port

Required

false

Storage Container Manager Client port

Description

The port number of the Ozone SCM block client service.

Related Name

ozone.scm.client.port

Default Value

9860

API Name

ozone.scm.client.port

Required

false

Storage Container Manager Datanode port

Description

The port number of the Ozone SCM service.

Related Name

ozone.scm.datanode.port

Default Value

9861

API Name

ozone.scm.datanode.port

Required

false

Storage Container Manager GRPC port

Description

Port used by SCM for Grpc Server.

Related Name

ozone.scm.grpc.port

Default Value

9895

API Name

ozone.scm.grpc.port

Required

false

Storage Container Manager HTTP Web UI Port**Description**

The base port that the Storage Container Manager web user interface listens on. The host name of the Storage Container Manager is combined with this port to form the 'ozone.scm.http-address'.

Related Name

ozone.scm.http-port

Default Value

9876

API Name

ozone.scm.http-port

Required

true

Secure Storage Container Manager Web UI Port (TLS/SSL)**Description**

The base port that the Storage Container Manager web user interface listens on when using HTTPS. The host name of the Storage Container Manager is combined with this port to form the 'ozone.scm.https-address'.

Related Name

ozone.scm.https-port

Default Value

9877

API Name

ozone.scm.https-port

Required

false

Storage Container Manager Ratis port**Description**

The base port that SCM's Ratis Server listens on if multiple SCM's are configured.

Related Name

ozone.scm.ratis.port

Default Value

9894

API Name

ozone.scm.ratis.port

Required

false

Storage Container Manager Security Service port**Description**

SCM security server port.

Related Name

ozone.scm.security.service.port

Default Value

9961

API Name

ozone.scm.security.service.port

Required

false

Resource Management**Cgroup V1 BLKIO Weight****Description**

Weight for the read I/O requests issued by this role, enforced by the Linux kernel under cgroup v1. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_blkio_weight

Required

true

Cgroup V1 CPU Shares**Description**

Number of CPU shares to assign to this role, enforced by the Linux kernel under cgroup v1. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Cgroup V2 CPU Weight

Description

Weight of CPU resources to assign to this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 1 and 10000. Defaults to 100.

Related Name

cpu.weight

Default Value

100

API Name

rm_cpu_weight

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value**API Name**

rm_custom_resources

Required

false

Cgroup V2 I/O Weight

Description

Weight for the I/O requests issued by this role, enforced by the Linux kernel under cgroup v2. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 1 and 10000. Defaults to 100.

Related Name

io.weight

Default Value

100

API Name

rm_io_weight

Required

true

Cgroup V1 Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v1

Required

true

Cgroup V2 Memory Hard Limit**Description**

Hard memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Related Name

memory.max

Default Value

-1 MiB

API Name

rm_memory_hard_limit_v2

Required

true

Cgroup V1 Memory Soft Limit**Description**

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v1. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit_v1

Required

true

Cgroup V2 Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel under cgroup v2. When the limit is reached, the kernel will reclaim pages charged to the process only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous and page cache pages contribute to the limit. Use a value of 'max' to specify no limit. By default, processes not managed by Cloudera Manager will have no limit. If the value is 'max', Cloudera Manager will not monitor Cgroup memory usage, and some charts will show 'No Data'.

Storage Container Manager TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Storage Container Manager might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Storage Container Manager TLS/SSL Trust Store Password

Description

The password for the Storage Container Manager TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value**API Name**

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Storage Container Manager

Description

Encrypt communication between clients and Storage Container Manager using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Storage Container Manager TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Storage Container Manager is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value**API Name**

ssl_server_keystore_keypassword

Required

false

Storage Container Manager TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Storage Container Manager is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.server.keystore.location

Default Value**API Name**

ssl_server_keystore_location

Required

false

Storage Container Manager TLS/SSL Server Keystore File Password**Description**

The password for the Storage Container Manager keystore file.

Related Name

ssl.server.keystore.password

Default Value**API Name**

ssl_server_keystore_password

Required

false

Stacks Collection**Stacks Collection Data Retention****Description**

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory**Description**

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value**API Name**

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Balancing Interval**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Balancing Interval parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.balancing.iteration.interval

Required

true

Suppress Parameter Validation: Exclude Containers from Balancing**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Containers from Balancing parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.exclude.containers

Required

true

Suppress Parameter Validation: Exclude Datanodes**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Datanodes parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.exclude.datanodes

Required

true

Suppress Parameter Validation: Include Datanodes**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Include Datanodes parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.include.datanodes

Required

true

Suppress Parameter Validation: Container Move Replication Timeout**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Move Replication Timeout parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.move.replication.timeout

Required

true

Suppress Parameter Validation: Container Move Timeout**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Move Timeout parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.move.timeout

Required

true

Suppress Parameter Validation: Maximum Size Entering Target**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Size Entering Target parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.size.entering.target.max

Required

true

Suppress Parameter Validation: Maximum Size Leaving Source

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Size Leaving Source parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.size.leaving.source.max

Required

true

Suppress Parameter Validation: Maximum Size to Move in Balancing

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Size to Move in Balancing parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.container.balancer.size.moved.max.per.iteration

Required

true

Suppress Parameter Validation: Over Replication Processing Interval

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Over Replication Processing Interval parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.scm.replication.over.replicated.interval

Required

true

Suppress Parameter Validation: Replication Thread Interval

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replication Thread Interval parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_hdds.scm.replication.thread.interval

Required

true

Suppress Parameter Validation: Under Replication Processing Interval

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Under Replication Processing Interval parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.scm.replication.under.replicated.interval

Required

true

Suppress Parameter Validation: Datanode Container Protocol ACL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Container Protocol ACL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.security.client.datanode.container.protocol.acl

Required

true

Suppress Parameter Validation: SCM Client Certificate Protocol ACL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SCM Client Certificate Protocol ACL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.security.client.scm.certificate.protocol.acl

Required

true

Suppress Parameter Validation: JMX Exporter configuration YAML

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Exporter configuration YAML parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_jmx_exporter_yaml

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Storage Container Manager Log Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Log Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Topology Script File Name**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Topology Script File Name parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_net.topology.script.file.name

Required

true

Suppress Parameter Validation: Heap Dump Directory**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Exporters Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Exporters Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_exporters

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Extensions Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Extensions Section parameter.

Related Name**Default Value**

false

API Name

`role_config_suppression_otelcol_extensions`**Required**`true`**Suppress Parameter Validation: OpenTelemetry Collector Helper Port****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Helper Port parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_helper_port`**Required**`true`**Suppress Parameter Validation: OpenTelemetry Collector Processors Section****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Processors Section parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_processors`**Required**`true`**Suppress Parameter Validation: OpenTelemetry Collector Receivers Section****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Receivers Section parameter.

Related Name**Default Value**`false`**API Name**`role_config_suppression_otelcol_receivers`**Required**`true`**Suppress Parameter Validation: OpenTelemetry Collector Remote Write Password****Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_password

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_url

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Remote Write Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Remote Write Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_remote_write_user

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Exporters Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_exporters

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Extensions Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_extensions

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Processors Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_processors

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Receivers Section parameter.

Related Name**Default Value**

false

API Name

role_config_suppression_otelcol_rtm_logs_receivers

Required

true

Suppress Parameter Validation: Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section**Description**

Whether to suppress configuration warnings produced by the built-in parameter validation for the Real-Time Monitoring for Jobs / Queries with OpenTelemetry - Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_rtm_logs_service

Required

true

Suppress Parameter Validation: OpenTelemetry Collector Service Section

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the OpenTelemetry Collector Service Section parameter.

Related Name

Default Value

false

API Name

role_config_suppression_otelcol_service

Required

true

Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/hadoop-policy.xml_role_safety_valve

Required

true
